Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Senate report

Proliferating curriculum may unfairly burden CUS

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 5

Summary of Actions taken by the Senate on November 11, 1982 at its meeting on 11/11/82, the Senate took the following actions:

1. The Senate approved, by unanimous voice vote, the revised charge to the Committee on Undergraduate Studies (SenD#2449) submitted by the Committee on Committees, subject to Professor Ryan's friendly amendment that the paragraph on ex *officio* membership be worded as follows:

> The Vice Provost for Undergraduate Education, the Associate Dean of Humanities and Sciences for Undergraduate Programs, the Dean of Engineering, and the Registrar, or their respective designees, shall be *ex officio* members of the Committee without vote.

2. The Senate accepted, by unanimous voice vote, the Annual Report of the Committee on Undergraduate Studies (C-US) for 1981-82.

Minutes of the Fifteenth Senate of the Academic Council November 11, 1982

(Draft subject to approval by the Senate on December 2, 1982). A meeting of the Fifteenth Senate of the Academic Council was held on 11/11/82, beginning at 3:16 p.m. in Room 180 of the School of Law with Chairman A.L. Fetter presiding. Present were 34 Representatives, 8 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 10/28/82 (SenD#2444)were approved as submitted.

Report of the Steering Committee

In the Report of the Steering Committee, Chairman Fetter reminded the Senate members that the Senate would not meet in two weeks, since the next regular meeting date falls on Thanksgiving day. The next Senate meeting will be held on Thursday, December 2, 1982. It will be the last Senate meeting of Fall Quarter, and will include on the agenda a report on Determination of Indirect Costs by Vice Provost Lieberman.

By consensus, the Senate deferred consideration of a Committee on Committees report on a revised charge to the Committee on Undergraudate Studies until after the Annual Report for 1981-82 had been discussed, since the changes had been first recommended by the 1981-82 C-US.

Report of the President and the Provost

Both the President and the Provost yielded the time reserved on the agenda for their regular reports to the Senate in deference to the Preliminary Long Range Forecast report to come later in the meeting.

Annual Report of Committee on Undergraduate Studies (C-US)

Chairman Fetter called upon Professor Ellsworth (Psychology) to present the Annual Report for the 1981-82 C-US. Professor Ellsworth pointed out that the report contains an up-dated timetable for the review of undergraduate academic programs outside departments. She summarized the program reviews completed in 1981-82 and the actions taken on those programs, in addition to citing the reviews postponed until 1982-83. She also pointed out that C-US had not appointed a Subcommittee on Distribution Requirements to act for it on that matter in 1981-82, but had elected to do the work itself. While the activity was valuable in informing the C-US members about the issues involved in satisfying the distribution requirement course criteria, it was enormously time-consuming. In the process, a number of problems with the distribution criteria were identified and referred to this year's Subcommittee on Distribution Requirements for consideration. Last year's C-US also made recommendations about how best to represent the new administrative structure for undergraduate studies on this year's C-US.

Chairman Fetter called on Professor Paul Seaver, Chairman of the 1982-83 C-US, to comment on the current committee's plans on matters related to work begun by the 1981-82 committee. Professor Seaver reported that the forthcoming agenda for C-US appears to be overwhelming. C-US is now instructing its new Subcommittee on Distribution Requirements and is preparing to receive two reports from its Subcommittee on Residential Education and Advising, one on residential education (Autumn Quarter) and one on Ethnic Studies (Winter Quarter). In addition, C-US will be receiving a series of program reviews. Two have already been received: reviews of Humanities Special Programs and of Social Thought and Institutions. A number of other program reviews are to be received shortly, e.g., those on Human Biology, International Relations, Latin American Studies, and Mathematical Sciences.

After these have been reviewed, there are still others, e.g., Overseas Studies, Freshman-Sophomore Seminars, SWOPSI, SCIRE to be reviewed this year. C-US has also been requested to examine the proliferation of interdepartmental majors with what appear to be slightly different emphases, and also to consider how departments might encourage language study beyond that required by the University.

In the discussion of these reports, it was noted that Senate actions have consistently added to the work-load of this traditionally hard-working committee until the accumulated agenda threaten to become unmanageable. The suggestion was made that reviewing programs might be a separate function assigned to a subcomittee of C-US. Dean Wessells suggested that the new Curriculum Committee in the School of Humanities and Sciences might prove a useful body in exercising oversight on those interdepartmental undergraduate programs within the School. President Kennedy added that the past decade or so had seen the growth of a largely unregulated curriculum. Up to now, C-US has borne the burden of the oversight because of its fine leadership and the confidence placed in it by the Senate. Now the Senate and the Schools are beginning to worry about the proliferating curriculum. This concern should result in spreading the workload more equitably so that C-US won't be unduly burdened.

At the conclusion of this discussion, Chairman Fetter called on Chairman Mellor for a Committee on Committees' report on a revised Charge to the Committee on Undergraduate Studies. Chairman Mellor pointed out that the revised charge (SenD#2449) had originally been proposed by the 1981-82 C-US, had been later endorsed by this year's C-US and is recommended to the Senate by the Committee on Committees.

The Associate Dean of Humanities and Sciences for Undergraduate Programs asked if C-US still carries the responsibility for monitoring teaching appointments made outside a department or School. Several programs where this is still true were cited as examples. Other programs formerly under C-US have now been transferred to a department or a School; in these cases, the new administrative body is expected to exercise autonomy in the appointment of teaching staff.

After a discussion of the paragraph specifying *ex officio* membership in C-US, Professor L. Ryan moved that the words "Associate Dean of Humanities and Sciences for Undergraduate Programs" replace the words "Dean of Humanities and Sciences" both because of the importance of that membership to the image of the office and because the Associate Deanships referred to in Humanities and Sciences and Engineering are not parallel appointments. Chairman Mellor accepted the change as a friendly amendment, noting that the charge had come from C-US with the wording suggested in the Ryan amendment.

The revised charge, as amended, was approved by unanimous voice vote.

Following this vote, the Annual Report of C-US for 1981-82 was accepted by unanimous voice vote.

Preliminary Long Range Financial Forecast

At the outset of his report, Provost Hastorf thanked the Steering Committee for allotting time on the Senate agenda more than a month early for a Preliminary Long Range Financial Forecast. The signs of financial difficulties ahead should be given early attention, he said, but early attention has to be based on tentative assumptions.

About a year ago, when the first signs appeared that Stanford was beginning to live beyond its means, the Provost asked the units of the University to reduce the budget by one percent in 1981-82 and to expect to do so again for 1983-84. It now appears that larger budget reductions will be necessary.

There may well be a cycle in which an institution like Stanford operates for some years on a balanced budget and then a series of outside forces combine to push the budget off balance. That happened to Stanford some years ago and resulted in the University's Budget Adjustment Program (BAP) and the Subsequent Budget Equilibrium Program (BEP). It's happening again now. Various forces have pushed and are pushing us out of balance: inflation, energy costs, federal action (both regarding student aid and research costs), and our own initiatives in proposing new ideas and new programs.

Other institutions like ours have reported the same phenomena. They have dealt with it in different ways. Northwestern put an absolute freeze on faculty and staff salaries; MIT announced a three-year budget-cutting program to remove at least $10 million from the Operating Budget; legislators in Washington State and in Michigan have required drastic cuts in public-supported higher education; Ohio passed a faculty salary bill with insufficient funds to pay tenured faculty and with the comment that the legislators had never believed in tenure or been sure that the faculty worked long enough hours to deserve their pay.

The Provost proposes that Stanford try now to get the budget in balance, hopefully within a two-to-three year-period, and without losing our impetus to improve, e.g., Western Culture, expansion of the LOTS facility, the Humanities Center at Stanford, or the outfitting of science laboratories.

Our expenses have been on a curve of steady escalation; our income is now starting to deviate from that escalation curve. We can lower our expenditures temporarily with budget cuts and then hope to return to our earlier level and rate of increase in a few years. That's not a likely scenario.

In another possible approach to the problem, we can lower our expenditures through permanent budget cuts and return to a lower level of expenditure but maintain the same rate of escalation. That is an optimistic scenario.

Finally, we can reduce our expenditures to a lower level and adopt a reduced rate of escalation as well. This is the scenario we need to consider if we are to live within our means and, at the same time, retain some impetus.

At this point, the Provost strongly emphasized the tentative nature of the assumptious on which these early plans are based. These assumptions are necessary to long range planning, but they are not fixed. The assumptions may change, but the issues will not.

He then turned to the assumptious on which current estimates of the problem are based. The key assumptions include:

1. An estimate of inflation (based on the GNP deflator rather than the CPI) of a six percent inflation rate over the next three years.
2. Income projections
   a. An estimate of tuition increases for the next three years of 12 percent, 9 percent, and 9 percent (i.e., inflation plus six percent, inflation plus three percent, and inflation plus three percent). This estimate reflects a conscious attempt to lower the rate of escalation in tuition increases. The reasons for it are apparent, but it has obvious impact upon University income.
   b. An estimate of the rate of indirect cost recovery which will increase over the next three years: In 1983-84, the possible range is from 69 percent (the present rate) to 73 percent; in 1984-85, the range of possible rates is 75 percent-79 percent; and for 1985-86, 81 percent-85 percent. These estimates are based on the enduring notion of full recovery of the indirect costs of doing research. The rate is negotiated with the government and dependent upon our research volume. Because the volume of research declined in 1982-83, our indirect cost recovery rate was lower than expected and we now estimate a gap of $3 million which must be closed before our projected income for 1982-83 matches our projected expenditures.
   c. An estimate of research volume somewhat below the present rate of inflation, i.e., inflation minus one percent (adjusted downward from an earlier estimate of a research volume somewhat above the current rate of inflation, i.e., two percent above the present six percent estimate).

The Provost cautioned that estimated income for a given budget year is based in part on indirect cost recovery rates; those recovery rates may have to change within the ranges given for each year. If they do, such changes will affect the anticipated budget totals.

3. Projections of expenses
   a. An estimate of salary increments for the next three years of 7-8 percent (inflation plus one-two percent), reduced from an earlier projection of

continued on next page

Senate/ continued from page 16

inflation plus 2.5 percent. The University rejects the notion of a salary freeze or the weakening of its present good competitive salary position with respect to comparable institutions.

b. An estimate of about $12.2 million for student financial aid per year. There is no plan to cut that aid; we are absolutely committed to a need-blind admissions policy.
c. A general estimate of other expenses at the rate of inflation plus one-two percent, except for utility costs which run at inflation plus three percent.
d. A general estimate of consolidations and improvements at 1.5 percent of the base for each of the next three years, most of it for 1983-84 committed to ventures already begun, e.g., Western Culture, the improvement of student computing facilities, and other academic ventures.

After setting forth the assumptions in some detail, the Provost directed the Senate's attention to the anticipated budget totals and the estimated gap between income and expenditures for the years 1982-83 through 1985-86. Instead of a balanced budget in 1982-83 as expected and approved for this year, the new estimates project a $3 million gap. Two actions are currently being taken to close that gap:

1. Reducing the contribution from the Operation Budget to the Facilities Reserve by $2 million. This reserve is used to refurbish classrooms and to rebuild and re-equip laboratories.

2. Asking all units to begin, with the 1982-83 budget, to "holdback" expenses whenever possible, (e.g., to leave a vacancy unfilled, etc.), and to contribute that amount to the central core.

For the year 1983-84, a gap of $1.6 million had already been forecast and the request for a one percent budget reduction was a result of that forecast. Now it appears that the gap will be $9.6 million. The forecast proposes a number of methods for closing that gap and also anticipates budgeting a $1 million deficit. The deficit budgeting prevents unnecessary wrenching of programs to effect all the cuts simultaneously. It also allows for the possibility that the gap may have been overestimated. In the latter case, the deficit may not be so high and the reduction of the contribution from the Operating Budget to the Facilities Reserve need not be so great.

Other actions proposed to reduce the 1983-84 gap include:

1. Instituting a routine charge on all restricted gifts spent outside the Operating Budget, as is currently being done by most other comparable institutions. This is estimated to bring in $1.2 million annually.

2. Reducing the amount for consolidations and improvements. This will reduce, but not completely eliminate, the money available for new programs.

3. Exercising central initiatives to increase income or decrease expenses in a number of ways, including:

a. decreasing energy expenditures,
b. shifting from prepaid Industrial Park leases to annual leases,
c. moving sabbatical leave budgeting to the staff benefit pool.

With these and other such initiatives, it is the University's goal to achieve $2 million in savings.

4. Cutting the budget by about 2.3 percent (by present projections) of the applicable base. Such a cut would not apply, for example, to Financial Aid.

In 1984-85, the proposal is again to reduce the consolidation and improvement contribution from the Operating Budget and to count on budget cuts of about 2.8 percent along with the generation of new income to close the remainder of the $4.5 million gap.

The budget cuts total five percent. That may not be enough. It may be necessary to extend the process into 1984-85 even though the gap by then is expected to be relatively small.

Actions already taken include:

1. A letter to Deans and Directors asking them to think about how they could get a five percent reduction in their budgets. No unit will be free from this budget objective. Differences are expected, however, in the amounts various budgets contribute.

2. Several groups are already at work on these problems. One is a budget group with representatives from the Provost's staff and from the office of the Vice President for Business and Finance. The President meets with this group, as will a new University Fellow from Psychology, Professor Ewart Thomas.

The Advisory Committee on Budget Planning (C-APB), chaired by Professor R. Cannon and advised by last year's chairman, Professor H. Riggs, is also considering the problem. The aim is to get maximum faculty involvement in the hope of getting through the process with as much thought and care as possible.

In the discussion which followed the Provost's report, it was made clear that the 1982-83 gap arose from a drop in income (particularly a reduction in indirect cost recovery dollars) which was not accompanied immediately by a commensurate drop in expenditures. Only certain indirect costs are variable; others (e.g., space, utilities) remain fixed commitments and thus contribute to the size of the gap.

While inflation is somewhat less than expected this year, the long range forecast results are not very sensitive to relatively small differences in the inflation rate, e.g., six percent rather than eight percent. In fact, certain components of inflation, like energy, seem to exert greater impact on the University's budget than does the overall inflation rate itself.

It was also emphasized that failure to negotiate the higher indirect cost recovery rates with the government in future years would result in even larger gaps between income and expenses.

Stock market investments do contribute to the income picture, but are not a major factor. University policy for utilizing endowment incorporates a smoothing principle that slows the rate of change in utilization in relation to market value of the proposal. A rising market, then, gets reflected over time rather than all at once.

Gifts feature in income in several ways. The 1982-83 fund-raising year is expected to exceed the total achieved last year. Part of those funds will go directly to the Operating Budget; part will go to the endowment and will be represented in the budget only by the pay-out on the principal. A major strategy being pursued now is to shift the emphasis from restricted to unrestricted gifts in order to achieve a higher proportion of gift funds with greater flexibility. The new charge on restricted gifts will also help bear some of the operating costs of the University in support of those expenditures. There will be no dramatic changes; preserving the long-range steady flow of gifts is of the highest priority.

There was some discussion of the cyclical nature of these budget problems and the ability to forecast them, with the comment that at least the present problem seems less formidable than the last major budget crisis (BEP). The Provost agreed that there is improvement in forecasting, but pointed out that some factors probably cannot be adequately predicted, e.g., political changes at the federal level, or even local perceptions of the federal climate for research proposals in a given field.

Discussion followed concerning the link between indirect cost recovery rates and the volume of research. Projected cost recovery rates clearly are sensitive to current research volume. For the individual researcher, higher indirect cost recovery rates are a substantial limitation on productivity with the direct costs of a given grant.

There is always the question of the point of diminishing returns on indirect cost recovery rates. The Vice Provost for Research pointed out that the volume drop affecting us this year occurred last year at the old cost recovery rates.There will be more evidence to help us answer that question by the end of this year.

There was also the question of what was being planned in the direction of reducing indirect costs at Stanford, as is currently being done at MIT. The Provost indicated that Stanford, like MIT, intends to look hard for possible cuts in the services (administrative and other) which contribute to indirect costs. It is reported, however, that MIT also plans to cut academic programs in the Humanities and Sciences, putting on hold its plan to become a complete University.

Budget officers were also asked what particular restricted funds are to be newly charged, and if that decision is to be applied University-wide. The Provost responded that the formula Schools, i.e., GSB and Medicine, would retain income derived from such charges. These charges represent an attempt to spread the costs of expenditures more equitably, rather than expecting unrestricted funds to bear some of the indirect costs for projects funded by restricted gifts. Stanford is one of the last institutions of its kind to institute such a charge, though it is not done by all institutions in such a direct way.

In commenting on the politics of indirect cost recovery rates, President Kennedy responded to a suggestion that it might be inadvisable to consider raising the indirect cost recovery rates substantially at a time when NIH had recently protested current rates as too high. He pointed out that NIH did not attempt to change current rates but, rather, attempted to withhold cost recovery funds already owed at previously negotiated cost return rates. This is a very different matter.

The pervasive notion that university cost return rates are too high is contradicted by the fact that in private industry and nonprofit research centers they are very much higher. The government's policy is now full recovery of indirect costs. Whether or not the government and universities will adhere to current policy will depend on the intersection of many factors: what's happening to rates and volumes in institutions like Stanford, the perceptions of legislators and executives in the Federal Government about the appropriateness of these rates, and the perceptions of investigators about the consequences on research of high indirect cost rates.

At Stanford in the past, any investigator caught in a redistribution of direct and indirect funds at a time when the indirect cost rates change has been able to appeal for help to a special University fund. Even with the current budget problem, such a recource will be available if needed.

With respect to the Schools not covered by this preliminary financial forecast, Provost Hastorf commented that GSB has very little involvement in federally sponsored research and that the School of Medicine's research volume is holding up well.

In response to a question, the percent of expenditure expected as a charge on restricted gifts was estimated to be from 10-15 percent.

It was noted that Stanford's decline in research volume appears to be part of a secular trend in all but the health sciences. The virtual disappearance of grant support from Department of Energy sources has had a major impact in this decline here and elsewhere.

A cautionary note was sounded about using charges against restricted funds to solve the problem. Shifting funds from outside to inside the Operating Budget will spread the costs more equitably but will not produce new money overall.

The question was asked whether or not BAP and BEP actually got us to a slower rate of escalation on costs, as was originally intended. Vice Provost Bacchetti responded that indeed it had, principally in the area of consolidations and improvements. (C&I), which in the days of BAP and BEP had been one of the principal forces in escalating costs. It's expressed as a fraction of the whole base, and at that time was rising at a rate of about 3-3.5 percent annually. It is now down to about 1.5 percent. Other things have been going on, however. For example, from the early 1970s to the early 1980s, the utilities rates went up at a compound annual rate of 25 percent (from $3 million to $13 million in the budget).

The inflationary features and our efforts to keep down the real growth (C&I) probably offset each other under high inflation. If inflation can be held down, controlling C&I will help to suppress that incline of growth.

The comment was made that, over time, Stanford's administrators have maintained the practice of a low budget return from the endowment, ensuring that the endowment would, over the long term, pay a stable proportion of University expenses. The question was, without doing long-term damage to that admirable policy, could we smooth the effect of the current budget problem by taking a somewhat larger proportion of endowment funds over the next few years.

The Provost responded that the probable deficit budgeted for 1983-84, as well as the tight control of facilities expenditures, will provide some smoothing effect, especially since this budget-cutting task is not as severe as that faced with BAP and BEP.

A question was asked concerning the sensitivity of the gap to a change in percentage of salary increases. How much would a change of one percentage point cost? The response was $1 million.

Near the end of the discussion, Dean Wessells commented that a budget cut amounting to over five percent total represents nearly $2 million out of the Humanities and Sciences budget when that School's resources have already been pared thin by BAP and BEP. That's the size of a medium-sized department for Humanities and Sciences. It's going to be a painful process.

Vice Provost Bacchetti commented in response that the good news is that the cuts can be smaller than for BAP and BEP; the bad news is that it's the third time around.

The Provost closed by promising to keep the Senate informed of any changes in basic assumptions which might affect these preliminary projections.

There being no other business, the meeting adjourned at approximately 5:00 p.m.

Clara N. Bush
Academic Secretary

Statistics consulting

A free statistical consulting service, operated by Statistics Department graduate students under faculty supervision, is available to all faculty, staff, and students on Stanford business.

The service is open from 1 to 3 p.m. Tuesdays and Wednesdays, and 10 a.m. to noon on Fridays in Room 107, Sequoia Hall.

Interested people are encouraged to come by for statistical advice in the early stages of the project, so that the consultants can be helpful in the design process. People at any stage of research are welcome, however.

For more information, call Trevor Hastie at 497-2623 or 497-2620.

Current forecast: 6% inflation, 5% research growth, 12% tuition hike

continued from page 1

will focus on administrative services and on educational programs in the humanities and social sciences.

The University of Washington and the University of Michigan have "not very gracefully been asked by their state legislatures to apply the meat axe to their budgets," he added.

In Ohio, the legislature has passed a bill for faculty salaries which fails to cover the dollars needed for tenured professors. Some legislators indicated they never believed in tenure for people who "only work eight or nine hours" in class. This is "an act of considerable naivete," Hastorf observed.

Stanford currently forecasts inflation (the GNP deflator) at six percent annually for the next three years, with salaries growing one or two percent above this rate. Both estimates were higher a year ago.

Stanford has done relatively well in faculty salaries, picking up a percent or two on its competitors. But "we live in a high cost area" and "don't want to get behind," Hastorf said. "We are an institution of people."

This year there was "independent agreement" among economists consulted on the outlook for inflation for 1982-83, Hastorf said. It would not be prudent to "bet too much" on what will happen in the two subsequent years.

The current forecast for tuition is six percent above inflation in 1983-84, dropping to three percent above inflation in 1984-85 and 1985-86. This compares with a tuition increase of 15 percent which took effect this year.

No action on tuition will be taken until the February meeting of the Board of Trustees. The University hopes to lower the escalation in the rate of tuition increases "for obvious reasons," Hastorf said. But the consequences on income are substantial, since tuition provides about 45 percent of the operating budget.

The budget now includes about $8 million in University funds for undergraduate student aid and $4.2 million for graduate students. "We are absolutely committed to maintain aid-blind admissions" for undergraduates, despite "the vagaries from the banks of the Potomac," said Hastorf. "That costs us money."

Research growth slows

Where a year ago the University forecast research volume would grow about two percent above the inflation rate, it now forecasts research volume will trail inflation by about one percent.

The University's current forecasts are based "on the enduring notion of full recovery of indirect costs," Hastorf said. While he "strongly hopes" that the indirect rate will remain at 69 percent in 1983-84, "we may have to look for some increase at some time" during the year, perhaps as much as four percent.

Very preliminary estimates are that the indirect rate could rise to 75-79 percent in 1984-85 and 81-85 percent in 1985-86.

Engineering Dean William Kays suggested there is "a point of diminishing returns on the indirect rate," where further research growth would be curtailed.

Vice Provost Gerald Lieberman, dean of graduate studies and research, noted that the first signs of decline in research volume appeared before the last increase in the indirect recovery rate.

President Donald Kennedy observed that indirect cost recovery rates were "very much higher" for private industry and non-profit organizations with the same sponsoring agencies as universities.

Hastorf noted that the volume of federally sponsored research in the Graduate School of Business was "very small" while research volume in the Medical School was still "holding up very well," better than the rest of the University. Both these schools are outside the University's operating budget.

Prof. Anthony Siegman, electrical engineering, director of the Ginzton Laboratories, said that increases in indirect costs could result in "substantially less" funding for actual research purposes. He asked whether those on University general funds were "pressured to make cuts of the same magnitude."

Hastorf replied that "this is why we have to work together."

He noted that Stanford is currently considering a 10 to 15 percent charge on restricted funds to help support the operating budget, a change which would amount to about $1.2 million next year. Kennedy noted that a survey last year showed Stanford is almost alone among comparable institutions in levying such a "tax."

Prof. G.L. Bach of the Business School supported this change but said: "We shouldn't kid ourselves. This won't make a fundamental dent on the problem. It's taking money from one pocket and putting it in another." Hastorf agreed.

Improvement rate trimmed

Vice Provost Raymond F. Bacchetti, director of University budgets, noted that one major change since the major belt-tightening programs of the 1970s at Stanford has been a reduction in consolidations and improvements—additions like the Western culture program and student computing. Where these formerly were growing at a compound rate of three percent or more annually, now they average about one and a half percent. But they have a very powerful long-run impact on expenditures.

While the recent surge in the stock market may help increase endowment value, Hastorf noted, it is "very volatile." The University already uses a three-year "smoothing" technique to reduce the impact of stock market ups and downs on its income. As a result, if the market enjoys a sustained increase "it will help the long-range forecast, but not a whole lot," said Associate Vice President Kent Peterson.

Asked about gift support, Bacchetti said the University's forecast already assumes another strong year, with efforts to increase the share going to unrestricted support. On a long-term basis, Stanford ranks second only to Harvard in total gift support among private universities.

Bacchetti said that "steady initiatives" were needed to maintain this "very successful record," keeping gift support "high over the long haul." Last year gift support amounted to $70 million.

Prof. Sanford Dornbusch, sociology, suggested that the University might consider temporarily increasing the current payout from endowment to help ease the pending budget crunch.

Hastorf replied that similar results are embodied in the projected deficit for 1983-84 and in the "very tough" cutbacks on classroom renovation and other facilities improvements.

Endowment payout cut

In the 1970s, Stanford reduced the current payout from endowment to help assure that this source of funds would continue to bear its proportionate share of the budget permanently. Increasing the payout might be "a short-term benefit" but would "increase the size and frequency of future budget problems," Bacchetti said.

Earlier, Hastorf said that the one-year deficit had been considered to avoid "wrenching" changes in programs by trying to cure the budget problem "in one fell swoop." Should economic conditions improve, the deficit could be correspondingly reduced.

He said such central initiatives as increased programs to conserve energy and a shift from prepaid to annual leasing of industrial and commercial facilities might help ease pressures on the operating budget.

Overall, cuts of about 2.3 percent will be needed in 1983-84, with an additional 2.8 percent in 1984-85. "It's a good question whether that will be enough or whether we have to be more severe," he observed. By 1985-86, the problem should be "substantially smaller."

In letters asking departments to list possible cuts, he noted, "we do not expect anyone to be free of contributing but we also expect differences in what each will contribute."

On a long-run basis, the outlook is for slower growth in real terms for Stanford. In the 1950s and 1960s, the University had annual growth rates as high as 15 percent annually. Trustees prudently set aside reserves against possible deficits, which first emerged in the late 1960s. These now amount to less than one and a half percent of the annual operating budget of $207 million.

Faculty involvement

Hastorf told the Senate that Prof. Robert Cannon, head of aeronautics and astronautics, had agreed to head a faculty advisory committee on the budget. "Our goal is not to grind everyone down with committee work but to get as much involvement from participants as possible, so we can get through the budget-cutting process with as much care and thought as possible."

Prof. Ewart Thomas, psychology, a University fellow, also will examine the University's budget process.

Comparing the current outlook with the $16 million belt-tightening efforts of the mid-1970s, Bacchetti said: "The good news is that it's smaller than BAP and BEP (the Budget Adjustment Program and Budget Equilibrium Program). The bad news is that it's the third time round."

Humanities and Sciences Dean Norman K. Wessells noted that the cuts in his School alone could amount to $2 million, the equivalent of a medium-size department.

"It's going to be very painful," he said.

—Bob Beyers

Cold? Recirculate heat from house peak

On sunny days, air that usually heats up to more than 80° collects in the peaks of the roofs of most Bay Area homes. That may seem a trivial fact, but it helped save Gordon Ratliff about $100 this year, and he expects it to save him even more next year.

Ratliff, a plant officer at Stanford Linear Accelerator Center, has designed and installed a device that distributes that warm air throughout his Peninsula home, a practice that has made a considerable dent in his heating bills.

The device consists of a simple blower and a thermostat. These are placed in the attic, near the peak of the roof. They are connected by a four-foot long, eight-inch sheet metal duct which goes from the attic through a hole cut in the ceiling to a simple diffuser. The parts cost about $80.

Whenever the air around the thermostat reaches at least 80°, the blower, electrically connected to the thermostat, is activated, pushing the warm air down through the diffuser and into the rest of the house.

The system, which Ratliff installed in October, 1981, works so well that he only has to use his gas heater in the morning and on cloudy days during the winter. Even then, the thermostat is never above 68°. "On sunny days the blower comes on around noon, and by 5 p.m. the temperature in the house is about 74°," he said.

Ratliff suggests that homeowners considering the change simply take the temperature in their attic near the roof peak in mid-afternoon on a sunny day. If the roof is vented, the vent should be closed, so that warm air does not escape. The system should prove economical if the temperature rises above 80° on a sunny day, which should happen in most Bay Area homes.

From November, 1981, through September of this year, Ratliff used about 170 fewer therms, the measure of heat used by PG&E, than he did during the same period the previous year, which amounts to a saving of about $100.

He expects to save an additional 180 therms during the coming year, which represents about a $225 saving from his 1980 heating bill.

Ratliff said it took only about an hour for him to install the system, but cautions that people who are not familiar with electric wiring should hire an electrician to install it.

Still, he said, it would not cost much more than the $80 he paid for parts to have the device in most homes. The only other cost is the electricity needed to operate the blower, which is about 15 cents a day, he said.

Ratliff also referred to the federal tax law that allows individuals who use solar heating systems to deduct 55% of the cost of the system from their tax return. "With the 55% solar tax break," he said, "the system pays for itself in two months."

—Phil Taylor

Public hearing set on solar retrofits

A public hearing will be held on the Santa Clara County Solar Retrofit Ordinance at 1:30 p.m. Tuesday Nov. 23 in the County Administrative Building.

If passed, the ordinance, which would affect Stanford residents, would require a solar hot water heating system to be installed in a house without such a system if the house is sold.

There is an escape clause, which would allow an exemption if the installation is "uneconomic," but the administrative procedure is vague.

The hearing will take place in the Board of Supervisors' Chambers, located at 70 W. Hedding Street, San Jose.

Humanities Center...

continued from page 1

from external funds," he emphasizes.

"The purpose of the program is to strengthen the humanities at Stanford in a way that no one person could do.

The Center also received $2,000 from the Academy of Educational Development, in recognition of its program for attracting and retaining junior faculty.

The Center's general aims, as stated in its brochure, are "to promote humanistic studies and interests in three main ways: by operating a fellowship program mainly concerned with research; by supplementing and otherwise strengthening humanistic teaching at Stanford; and by conducting studies of problems in the area of the humanities broadly defined, and of their relationships to other disciplines."

Given the mix of 14 scholars, there is a serendipitous "interdisciplinary benefit," in Ian Watt's words. His associate director, Mort Sosna, notes that one of the requirements is that the fellows "contribute to Stanford's intellectual life."

One of the ways they do this is to meet during the week—once for lunch, and once for a late afternoon colloquium; and on other days more informally, usually at lunch time.

"At lunch," says Corn, "we take turns talking about something of interest to each of us. For the colloquium, we all read something in common, an article or part of a book. One of us is responsible for introducing the topic, then it's a free-form discussion.

"Because we're all such specialists in this academic world, the collegiality and community are extremely enticing. The center offers us an opportunity to sit down with people in other disciplines."

Kendall Walton, professor of philosophy at the University of Michigan, says the weekly colloquia "are a valuable opportunity for extended discussions among scholars in different fields."

He is teaching a course and writing a book on "Representation in the Arts," a philosophical examination of aesthetic questions concerning such topics as the nature of realism, the differences between pictorial and verbal representation, and the ontological status of fictional entities.

Cultural and social forms

"The book is intended to appeal to nonphilosophers, people in the arts with a theoretical bent, as well as to philosophers," Walton says, "so the Center discussions are especially useful to me."

Watt points out that the Autumn Quarter's Fellows' seminar theme is on the relation between cultural forms, such as music, art, and literature, and social forms and change.

Gwendolyn Wright, whose Ph.D. from UC-Berkeley is in architectural history, is teaching a new course called "Architecture, Planning & Politics in the 19th and 20th Centuries."

She is the author of two books on the social aspects and history of housing and architecture, and is working on a third. She points out that "cultural differences involve politics, and require a humanistic perspective, including political history, esthetics, social sciences, and city planning. I needed to get a variety of humanistic points of view," and added that the Center's weekly meetings are producing exactly that.

For Corn, whose course is "The Poet and Artist in American Modernism," the fellowship offered an opportunity to complete a book she began four years ago while at the same time offering to students a course that fits in perfectly with her writing project.

Other courses by the Fellows include "Models of Modernist Fiction," by Prof. Lilian R. Furst, University of Texas, Dallas; "Linguistic Change," by Prof. Joseph H. Greenberg, Stanford; and "Drama and Society in Renaissance England," by Prof. David R. Riggs, Stanford.

Ian Watt, in addition to his duties as Center Director, is teaching two courses this year: "Masterpieces of English Literature from the Englightenment to the Modern Period," an undergraduate course; and a graduate seminar on Joseph Conrad.

Conference on individualism

Watt and Sosna—who came to Stanford after nine years as a program officer at the National Endowment for the Humanities, and whose specialty is southern history—are planning a major conference for early 1984 on "The Reconstruction of Individualism."

This fall the Center helped sponsor the first annual meeting of the Humanities Institute, which focused on four topics: narratology, the concept of carnival, interpretations of "Coriolanus," and reassessments of Jean-Paul Sartre. In addition, the Center was associated with conferences at Stanford last year on "Disorder and Order," on "Women Writing Poetry in America," and "Recent Studies in the Family, Biography and Theory."

Permanent quarters

The Center, now based in temporary Quad offices, expects to move into permanent quarters in Rogers and Mariposa Houses next June.

Besides Corn, Stanford faculty fellows include Greenberg, anthropology and Riggs, English; Herbert Lindenberger, English; David E. Wellbery, German; and John Winkler, classics. The graduate fellows from Stanford are Maria Makela, art; Rush Rehm, drama; Maidi Rosenblatt, anthropology; Nancy Ruttenberg, comparative literature; and Kenneth Warren, English.

The faculty executive committee for the Center is composed of Profs. William Chace, associate dean of Humanities and Sciences; Martin Esslin, drama; John Freccero, French and Italian; Albert Gelpi, Graduate Division; Tom Heller, law; and Lee Yearley, religious studies. The Center also has an Advisory Board of 14 members, including three from outside; a selection committee; and a committee on budget and development.

—Harry Press

Two cultures...

continued from page 1

noted that "people in the two cultures have an affinity for marriage.

"Engineers, physicists, and mathematicians often find their life is all the fuller for having married someone who is verbal, visual, and perhaps not overly enamored with quantitative thinking."

Professionally, he noted, scientists, engineers, and others in the quantitative disciplines must leave the "tech" culture to some extent to grow personally, financially, and in job responsibility.

"Management certainly requires elements not strictly part of the quantitative culture," he noted. "Questions of philosophy and ethics are becoming increasingly common in engineering and in business.No senior manager can or should escape them.

"To remain in a single culture constrains one to a technician role."

Understanding technology

On the other hand, as technology has properly come under greater political control, "we have placed ourselves in the rather worrisome position of making these decisions with an electorate and a political leadership which does not understand the nature of science and technology very well.

"As a result, expectations are startlingly out of line with feasibility. Our society seems to want innovation without failure, high performance without cost, and complexity without error.

"Such things are not possible. Legislation, no matter how strangling in its complexity, cannot solve the problems, nor can litigation. We spin our wheels a great deal and frustrate ourselves repeatedly because of leaders who reside in one culture and scientists and engineers who reside in the other.

"A blurring of these two cultures would lower these costs."

And there's reason for hope such change can occur, Adams added. "Rapid changes can take place in cultural allegiance," as illustrated by the rapid growth of women in engineering. Where young women once were thought "cute" if they knew no math, now they may be regarded as "dumb" for not honing this skill.

Sharp cultural shifts affected many engineers in the so-called growth movements of the 1960s and 1970s, particularly in the Bay Area.

While it's easy to be "creatures of intellectual habit," the patterns can change rapidly, Adams suggested. When engineering and business executives in a continuing education program are asked to try writing a poem, for example, they may rediscover a talent dormant since their school day—a point he illustrated by having his audience take five minutes to compose a poem and then read it to those in adjacent seats.

"People in the verbal culture spend precious little time learning about science and engineering, and in fact the material is not available in easily useable form," Adams said. "They need help. It would be to all of our benefit if those in the quantitative culture spent a bit more effort educating those not in their tribe."

Computers bridge gap

Computers may help bridge the cultural gap. Several humanists at Stanford have become computer "cultists of the first degree" after realizing how these machines can make writing easier, he noted.

The Sloan Foundation now is trying to encourage more quantitative content in liberal education. Some 150 colleges and universities have established programs focusing on human values, technology, science, and social institutions. The largest, at MIT, involves about 30 full-time equivalent faculty.

Surveys among Stanford seniors have shown that those majoring in engineering and science take more courses in the humanities and social sciences than vice versa. The University needs a few new courses on technology, science, and mathematics for those not majoring in these fields.

"Stanford has a unique chance to break through the limitations of the two-culture philosophy because it possesses excellent science and mathematics departments and the only Big Ten style engineering school on a campus which considers itself to be pseudo-Ivy League. We have the strengths of Harvard and MIT in a single institution.

"C.P. Snow did an exquisite job of illuminating a characteristic of our culture. However, now that we recognize it, we should begin the task of stamping it out."

Straw ballot shows GSB students favored Democrats, nuclear freeze

If you thought all business school students were more politically conservative than the general populace, you might be very surprised at a straw poll taken last week at Stanford's Graduate School of Business.

In a survey of voter preferences, Stanford's MBA students clearly favored Democratic over Republican candidates, and approved by a wide margin the most controversial of California's ballot propositions 11 (bottle bill), 15 (gun control), and 12 (nuclear freeze).

The poll, which was reported in the November 5 issue of the Business School's student newspaper, the *Reporter* was based on returns from 200 of the School's 600 MBA students.

The students went against the tide in preferring Los Angeles Mayor Tom Bradley over state Attorney General and now Governor-elect George Deukmejian, 155-48, and in favoring Governor Jerry Brown over San Diego Mayor Peter Wilson 112-103. They worked with the tide in choosing Democratic Congressman Tom Lantos over Republican Bill Royer by a two-to-one ratio and in selecting Republican Ed Zschau, an alumnus and former member of the Stanford Business School faculty, over Democrat Tom Lynch, 87-21.

Although the bottle bill and gun control propositions went down to defeat, the students favored them to wide margins—78 percent and 84 percent, respectively. They voted for the nuclear freeze initiative by a two-to-one margin.

Said the *Reporter* in summary: "Last Tuesday's survey indicates that business school students do not necessarily vote conservatively when it comes to social issues, nor can they be automatically expected to vote their future pocketbooks. The biggest unanswered question concerns the two-thirds of the student body that did not return survey forms. Would they have voted differently from those who participated?"

Staff employment opportunities

Exempt

15593-DS (JCC:1480) STU SERV OFFICER III The Coord of Engrg & Sci Advising respon for counseling undergrad & grad students majoring in engrg & sci disciplines in connection w/ the develop't of their career plans & related job-hunting tech; respon for establishing & maintaining contacts w/ employers; acts as CPPC liaison w/ School of Engrg & various sci depts & works closely w/ faculty members; respon for providing approp workshops & seminars; assts in implementing the overall 1 goals of the Ctr; QUALIFICATIONS: sufficient familiarity w/ engrg & sci disciplines to discuss career objectives knowledgeable w/ engrg students & alumni; associated w/ a degree in a related field; exp as a practicing scientist or engr, or an educator helpful; ability to relate to a diverse group of students, faculty staff personnel, & reps fr business & industry is considered essential nec.; C07; $2113-2724.

Rental housing

HOUSING AVAILABLE

□**April to July '83:** Furn. campus hse, 3BR/2BA, study;. Fenced yd. $900/mo. incl. grdnr, hsecleaning. Call 858-2142 (eve & wknd).

□**Beg. Dec. 15, '82:** Avail. indef. Unfurn. 1BR lux. condo, AEK, Lndry facil. nrby, pool, sauna, gardens. Air-cond. Lincoln Green in Sharon Hgts. $650/mo. Call Ed Haertl, 497-3008 (day) or 854-6028 (day).

□**NOW, to share:** 2BR/2BA hse. Share w/1 person. W/D. Gar., basement. Must like gardening. 2 blcks to campus, El Camino, 4 blcks to Marguerite bus. $400 + util. Lv. message 858-2121.

□**NOW:** TAHOE/DONNER VACATION CONDO. Fully furn., fully equip., sleeps 8. On ski run. Clubhse w/spa. W/D. Firewood. Call Al 326-3821 (eve).

□ **Jan. 1 to July 31, '83 (flex):** Fully furn. hse, 3BR/2BA, AEK, W/D, close to campus, shops. Children ok. $850/mo. Call 327-5641 (eve), 497-9253 (day).

□ **NOW:** Unfurn. condo, 2BR/2BA in dwntwn Palo Alto. AEK, W/D, carpets, drapes. Brand new. Rent to own, equity share. $1500/mo. (tax deductible). Call 321-7820 (day) or 327-0987 (eve).

□ **Jan. to Sept. '83 (flex):** Fully furn. campus hse, 4BR/2BA, frpl, garden w/auto sprinkler, view of hills. Nonsmokers, no pets. $1400/mo. incl. grdnr. Call 497-3987 (day) or 494-0362 (eve).

□ **Beg. Dec. 10, '82:** 4BR/3BA hse, LR, FR, study, microwave in modern ktchn. 2 car gar. On quiet st. no. Palo Alto. 6 mo. lease w/option to renew till Sept. '84. Refs. req., pets nego. $1350/mo. Call 321-2247.

□ **Jan. '83 to late May:** Contemp. hillside hse w/view in Portola Valley. 4BR/3BA, fully furn; conversation pit w/frpl., 2 lge decks, spa. 5 mi. to campus. $1700/mo. Call 327-8615 (eve) or 858-4035 (day).

□ **NOW:** Alpine Meadows, Tahoe. 3BR/1½BA cabin, phone, W/D, frpl., sleeps 10. $200/wknd, $70/wknite. Call 493-4139.

□**Jan 15 to July '83:** 4 BR/1¼ BA hse. in Los Altos. Fully furn., all appliances, lge. garden. $975/mo. Call (415) 961-3079 (eve.).

□ **Thanksgiving thru Dec. '82:** Fully furn. 3BR/2BA hse. w/lge. yd. in rural setting. 3 mi. to campus, nr. Gunn Hi. $500 + care of 5 outdoor, fenced-in pets. Use of car nego. Nonsmokers. Call 948-4314.

□**NOW, HAWAII:** Haena, Kauai. 2BR/1BA hse, fully furn. Sleeps 7. Loft, laundry. Walk to beach. $280/wk. Call Nancy Scholl, 321-4407.

□**Dec. 22, '82 for 1 yr. (flex):** Fully furn. contemp. campus hse. 2BR + 2 studies (1 converts to BR), 2BA. Frpl, piano, lush atrium, wooded lot. $1350/mo. incl grdnr, water. Call 857-0479.

□**Regularly avail:** 1 & 2 BR furn. and unfurn apts. & twnhses, also 3BR/2BA hses. In Palo Alto & Menl;o Pk, good nghbrhds, close to campus. Call Shirley, 493-2321 or Jane, 968-4957.

HOUSING NEEDED

□ **Jan. to Mar. '83:** Visit prof. wishes to rent furn. rm/BA/kitchen on or nr. campus. Call Brix Eakin, 497-4186 (day).

□ **Jan. to Mar. '83:** Retired Conn. cpl visiting SU family seek 2BR hse or apt on campus/Coll. Terr./ Evergrn Pk. Frpl. pref. Will hsesit or pay reasonable rent. Call Marilyn Davidson, 857-0390.

□ **WINTER QTR.:** Visit prof. seeks furn. studio or 1BR, pref. within 3 mi. of campus (will consider further). Could hsesit. Call Elissa, 497-4977 (day).

□ **WINTER QTR:** Visit prof. seeks very quiet apt., studio or rm. w/ktchn priv., on campus or walk dist. For 3 to 4 mo. (flex). Call Feferman, 497-2439 (day), or 857-0323.

□ **NOW:** Prof. on lv. seeks rm. or 1BR furn. apt. nr campus. Nonsmoker. Call COLLECT (804) 381-5555, or write John Savarese, Dept. of Eng., Sweet Briar Coll., Sweet Briar, VA 24595.

□ **Jan. to mid-Mar. '83:** Grad. woman seeks furn. place nr. campus. Will hsesit or pay reasonable rent. Wonderful refs. Call 326-8830.

□ **Sept. '83 to June/Sept. '84:** Approx. 50 fully furn. hses. needed for Fellows & their families coming to Ctr. for Adv. Study in Behavioral Sci. Call Frances Duignan, 321-2052 (day).

□ **Sept. '83 to Aug. '84:** Fellow, spouse, 1 child coming to Behavioral Sci. Ctr. would like to EXCHANGE elegant restored brownstone in Boston, nr. Harvrd, BU & Tufts Med. Sch. for hse on campus or Palo Alto. Call Sara Lightfoot (617) 262-4629 or Frances Duignan, 321-2052 (day).

□**Jan. to Mar. '83:** Visit Prof & wife seek 1 or 2BR furn. apt. or hse within 1 mi. of campus. Homeowners, nonsmokers, local refs. Call (212) 260-8221 or write R. Lipsey, 70 E. 10th St., #3, NYC 10003.

□**Mid-Dec. to Summer '83:** Mature fac. cpl visit. Stanf. will care/sit your hse or apt. Will pay rent & provide expert care of furn., yd., pets. Exclnt refs. Call 497-0909 (day), or 324-8166 (eve).

□**Jan. to Oct. '83:** Cornell Prof. & fam. on sabbatical seek Bay Area hsng. Will EXCHANGE Ithaca 3BR hse, xtraordinary, custom design, nestled in forest. Flex. within above time. Call Vera or Dr. John Billinghamat (415) 965-5989.

□**Jan. 1 to April 15, '83:** Visit. Oxford Prof seeks hsng for self, & fam. Will EXCHANGE 4BR hse in Oxford, fullyequip., central heat. 2½ mi from city ctr. Wishes similar hsng at Stanf. Call 326-6524.

□**Dec. 1 to Jan. 29, '83:** Visit. Med. Sch. fac. seeks to rent furn. 1 BR apt. or small hse. Call COLLECT (319) 356-2551 or Dr. Angel, 325-2476 (eve).

□**NOW to April 1, '83:** House or apt. sitting. Mother of fac. mbr. seeks long to short periods. Call Lee Yearley, 497-0466 (day) or 493-6430.

□**Beg. Jan. or Feb. '83:** Stanf. alum seeks furn. hse on old campus for yr. or more, or furn twnhse in Sharon Hgts. 3BR pref. (flex). Call 857-0623.

□**JAN to July '83:** Visit Prof, wife, 16 yr. old child seek furn. hse. on or nr. campus. Call Marlene Wine 497-2444(day).

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box ????, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Premed Libaek thrives on pressure of Big Game Gaieties

For a short five weeks, the Stanford students who participate in the annual Big Game Gaieties forego schoolwork and sleep to perfect the traditional roasting of Stanford, UC-Berkeley, and Big Game traditions.

Although the demands of their showbiz life are concentrated and hectic, and at times overwhelming, for orchestral director Lita Libaek, it's life as usual.

The hard work and short time period are "exhilarating," says Libaek, who also composed the show's original score and contributed to the script and lyrics.

"It's a challenge because you've got that time pressure, and the performance reflects on you."

Ever since 1911, Ram's Head, the student drama organization, has been producing the Gaieties as the highlight of its year. The show's producer, Debbie Ingram, and director, Eric Abrams, have nearly 150 students involved, of whom only 40 are in the cast. The 1982 version, called "Waiting for Big Game," will be presented in Memorial Auditorium at 8 p.m. Thursday, Nov. 18, and at 2 and 6 p.m. Friday, Nov. 19.

For Lita Libaek, the Gaieties will be the highlight of several years of another opening, another show. She was born in Sydney, Australia, and moved with her parents to Hollywood for her high school years.

At Stanford, she has been involved in more than a dozen productions, including "West Side Story," "Side by Side by Sondheim," and "Cabaret." Prior to this year's Gaieties, Libaek has written music for "As You Like It," and the Stanford Children's Theater, for which she has been musical director for the past two years.

Gaieties is an original musical comedy, which, says Libaek, "has no other pretensions other than to make you laugh."

It all starts the previous spring when writers submit the scenes they've written to the head writer, Timothy (T-Bag) Biglow, who spends the summer putting together the final script. Meanwhile the head composer, Libaek, writes the show's song and dance numbers, and, later, the vocal arrangements and orchestrations. The show is then cast and directed by members of the artistic staff during the few short weeks of rehearsal, and the orchestra is rehearsed by Libaek.

"What I enjoy most is making order out of randomness," she says. "You have to start from scratch, and there's a thrill in seeing it all come together. It's fun to see the cast bring life to something that evolved from a bunch of comedies sitting around a table making each other laugh."

Her rich musical background gives the production a professional touch. Libaek says her father, a Juilliard graduate, who now composes, conducts, and performs in films and television, claims his daughter could read music before she could read words. She says she doesn't remember; nevertheless, she was born with perfect pitch, played the piano at age three, and entered the Sydney Conservatory of Music in grade six.

Lita Libaek

Libaek says the school was like the one in the television show "Fame": students received ear and sight training, and instruction in composing and performance. The school also taught traditional academics, which made the total experience difficult but satisfying and maturing.

Being talented wasn't enough, however. Hard work, knowledge of and an intuition about music were demanded as well.

"Once you go through that initial thing of having your ego knocked out from under you, you suddenly realize that there are so many people who are better than you are."

Libaek says this was inspiring rather than discouraging because of the Conservatory's teachers.

"When you start making progress in their eyes, it's the most satisfying thing in the world."

Libaek herself is an inspiration. She works at the Coffee House, is orchestral director of an off-campus community production in addition to Gaieties, and is double-majoring in music and microbiology. Her academic plans continue through medical school with an interest, although tentative—"I don't want to be narrow-minded—in reconstructive surgery.

She sees a close connection between her conducting and her eventual life as a physician.

"A lot of musical direction is teaching and coaching," she says. "I see myself as teaching eventually as a doctor, because it is a doctor's responsibility to educate patients, not just direct or prescribe. Patients do much better if they understand the reasoning behind the doctor's orders."

She is a person brimming with energy beneath her quiet surface, and she is able to concentrate on the production because, as she notes, "after the auditions, the competition ends and all of us begin working toward a common goal—a successful show."

Her interest in pursuing a career other than music is something she has in common with other Gaieties cast and crew members. Despite her extensive ability and experience, music nevertheless remains a hobby.

"It's almost too self-indulgent for me because I enjoy it so much as a hobby. I almost don't enjoy it as much when it's a living." Besides, she adds, "most of the time if you're organized you can do both at the same time."

How does she find time for school, music, Gaieties and her job? Characteristically, she gives a modest answer.

"I guess I'm not a disciplined enough person to get things done without pressure. I make time for those things because I just wouldn't be satisfied with myself if I wasn't doing anything."

Music, a life-long passion, is also an outlet for tension—her kind of personal escape.

"I love music and I love feeling that in my own way I'm helping to create something from nothing. You have to do it because you love doing it; there's no real reward per se."—**Amy Bernhard, News Service Student Intern.**

Police exhibit recovered loot worth $2 million

Stanford police organized the Tiffany of flea markets Monday, Nov. 15, displaying an estimated $2 million in recovered property from hundreds of Peninsula thefts.

Two racks packed with expensive furs, an exquisite antique gun collection, violins, jewels and gold dinner plates were among the items assembled in two 10 by 50 foot trailers in the Police and Fire Department compound on campus.

Six burglary victims from Stanford and Palo Alto were scheduled as the first of hundreds to view the merchandise, recovered last week from Robert O'Connor's home in La Honda, a friend's house in Montara, and large storage rooms O'Connor rented in Foster City.

The recovery is believed to be the largest of its kind in at least 20 years in this area.

Stanford Police Capt. Raoul Niemeyer, who headed the investigation which culminated in O'Connor's arrest Nov. 5, said one gun in the collection had been reported stolen in Redwood City in 1978.

Previously regarded as a suspect in 130 burglaries since early 1981, O'Connor may have been involved in a much wider range of thefts, Niemeyer said. O'Connor was paroled in Redwood City in 1978.

Dubbed the "connoisseur burglar" by Niemeyer, he may have hit commercial establishments, vacant home garages, and a wide variety of other targets, judging by "bits and pieces" of the recovered goods, the captain said.

Among the recovered items was a plain brown bag labelled—and misspelled—"Bob's Choise" which contained about two dozen derringers and vest pistols. A fine display of flintlock rifles was displayed on an adjacent shelf.

Rare coins, stamps, and gems which may have been disassembled from jewelery also were abundant. In addition to the substantial job of arranging for victims to view the property, numerous insurance adjustments may prove necessary. Disposition of unclaimed items probably will be up to the courts.

So far, nearly 400 victims have called the Stanford police at (415) 497-9639. To view the recovered goods, they must obtain a copy of the police report filed when the property was stolen and then wait to be scheduled to visit the trailer with a detective. Several jurisdictions have assigned officers to work full-time on the massive identification task.

Above is one of the photographs in Damien Kuffler's California Vignettes group, now being exhibited at the Coffee House and the second floor gallery of Tresidder Union. Kuffler, a postdoctoral research fellow in the Department of Neurobiology, has included two series in the show—California Vignettes and Views through a Natural Lens, the world as reflected in drops of water. This is Kuffler's second exhibition at Tresidder.

Amos, campus slaying suspect, surrenders in San Jose

Donald John Amos, suspect in the Oct. 22 Stanford campus slaying of Angela Dee Arvidson, turned himself in at the main Santa Clara County jail in San Jose at 8:30 a.m. Sunday, Nov. 14, according to Stanford Police Capt. Raoul Niemeyer.

Amos, 29, a San Jose deliveryman, was sought on a no-bail murder warrant issued Oct. 26 by Santa Clara County Municipal Court Judge Miriam Wolfe.

Sheriff's deputies told Niemeyer that Amos walked down the ramp at the jail and said: "I'm Don Amos. I understand you guys are looking for me."

He was taken into custody and questioned by Santa Clara County Sheriff Sgt. Tom Beck and Detective Mike Lombardo.

On Monday, Beck told reporters that Amos learned he was wanted by authorities when he read it in the newspapers.

"He said he knew he was wanted by police and didn't want to jeopardize the safety of his family by continuing to run," Beck added. "He said he doesn't remember anything about any murder. He said it's like a temporary blackout. Several hours are just missing."

Sheriff's Capt. Wes Johnson told reporters that during the period Amos was missing, he apparently stayed with friends in Salt Lake City.

Amos told investigators he fabricated a story about being attacked by a dog because he didn't know how else to explain his torn shirt and bloody jeans to his wife.

After he turned himself in, she was picked up for questioning at the couple's apartment, then released by police.

Contacted at their home in Portland, Oregon, the victim's mother and stepfather, Marlene and Michael Torrey said: "We're very relieved that the suspect has been caught."

Arvidson, 20, a junior in humanities special programs, was stabbed to death at the campus home of Prof. and Mrs. Laurence Kedes, where she had gone to do housecleaning.

She was last seen alive when Mrs. Kedes went shopping at 2:15 p.m. Her son, Todd, 16, discovered the body when he returned home from school an hour later.

Before entering the house, Todd noticed a sales slip for plastic trash can liners in the driveway, which he picked up and put in a car. This clue led to Amos, according to an affidavit filed in support of the murder complaint.

Amos worked for Tompkins Promotions, a Los Altos firm that sold the trash can liners under contract with the Horizon Home for the mentally retarded, which received part of the proceeds.

Tracing back through Horizon Home and Tompkins Promotions, police learned that Amos had been scheduled to make a delivery at the Kedes home the day of the murder.

Sheriff's detectives then obtained a search warrant for Amos' home in San Jose, where they found a bloody pair of men's blue jeans and a man's torn plaid flannel shirt, according to the affidavit.

Amos has several prior arrests, authorities said. In 1975, he was charged with rape, kidnap and assault in Santa Cruz County. The charges were reduced to assault with a deadly weapon and he was sentenced to a year in county jail.

In 1977, Amos was arrested for auto theft and drunken driving in Santa Clara County, but the charges were reduced to grand theft and he received five years probation.

Last year, San Jose police arrested Amos for selling LSD. He pleaded guilty and was sentenced to seven months in jail.

Following an autopsy of Arvidson, the Santa Clara County Coroner's Office said there were no obvious signs of sexual assault. But in a news conference Oct. 25, Santa Clara County Sheriff Robert Winter indicated sexual assault may have been the motive for the crime.

The autopsy showed Arvidson died of cut wounds of the neck and stab wounds in her chest and abdomen. No weapon has been reported found.

Auditions slated for new musical, 'CYCLOPS'

Auditions for the Drama Department production of "CYCLOPS/Nobody's Musical," a new musical, freely adapted from the Euripidean satyr play with book and lyrics by Rush Rehm and music by Francis James Brown, will be held Nov. 21-23 in Stanford's Little Theater.

"CYCLOPS" will be directed by graduate directing student and Shubert award-winning playwright, Rush Rehm. At Stanford Rehm has directed his own translation of Sophocles' *Oedipus the King* and the highly acclaimed *The Emperor Jones*. Last year he appeared as King Lear in the production directed by Geoffrey Reeves.

The composer of "CYCLOPS," Brown is a one-time student of Roger Sessions and Luigi Dallapiccola and recently composed the film score for *Priest of Love*.

Steve Ullman, a Drama Department student who last year directed *West Side Story*, is the music director and orchestrator. William S. Eddelman will design the sets and costumes for the production and John Rathman will be lighting designer.

Auditions will be held Sunday through Tuesday, Nov. 21-23, from 7 p.m. to 10:30 p.m. with afternoon auditions on Sunday, Nov. 21 from 2 to 5:30 p.m.

There are roles for 13 male singer-actors (tenors, baritones, and basses) and six to eight female dancers. Men should prepare two songs (one ballad, one up-tempo) for auditions and bring sheet music for the accompanist. All auditioners should be dressed to move. Please sign up for an audition time in the Drama Department office located in room 144 in the back hall of Memorial Auditorium.

"CYCLOPS" is a different sort of musical; Euripidean in its shifting tones, sexually charged in its satyr-play origins; and contemporary in its theatricality.

Auditions are open to everyone, but preference will be given to Stanford students. Performance dates for "CYCLOPS" are Feb. 16-26, 1983.

Student rush tickets

"The Lively Arts at Stanford has established a new ticket policy for Stanford students," said Vicky Holt, director of University Events and Services.

"The new policy 'Student Rush' allows Stanford students to purchase two tickets per student I.D. at $3.50 each for all Lively Arts concerts that are not sold out. These 'rush tickets' may be purchased just before curtain time at the performance box office," Holt added.

For more information call Tresidder Ticket Office, 497-4317.

Young artists from the Shanghai Conservatory of Music will perform on the pipa, guzheng, erhu, yangqin, and liuqin at 8 p.m. Friday, Nov. 19, in the Tresidder lounge.

Michael to discuss world development

Prof. Donald Michael, a social psychologist and emeritus professor of planning and public policy at the University of Michigan, will speak on "Global Development: Preparing for a Precarious Future" beginning at noon Nov. 23 at the International Center's Tuesday Luncheon-Lecture.

Michael has done much work in the area of social change as it relates to changes in physical and social technology. Michael's speech will cover those areas, particularly as they pertain to developing countries.

Michael is a social psychologist with a background in both the natural and social sciences with degrees from Harvard and the University of Chicago. In recent years his interests have revolved around the issues of beliefs and their effects on society and the implications of long range social planning.

No hot lunch will be served this Tuesday in recognition of Fast for World Hunger Day. For more information the I-Center at 497-1831.

Palestinian, Israeli to speak

Prof. Edward Said, a member of the Palestinian National Council, and Prof. Daniel Amit, a leading Israeli advocate of Israeli-Palestinian reconciliation, will speak at 2 p.m. Saturday, Nov. 20, in Annenberg Auditorium.

Said, a Palestinian American, is professor of comparative literature at Columbia University and author of three books: *The Question of Palestine*, *Orientalism*, and *Covering Islam*. He has published articles in the *New York Times*, *Atlantic Review*, and the *New York Review of Books* as well.

Amit is professor of physics at the Hebrew University of Jerusalem, and is presently visiting professor at the Institute of Advanced Study in Princeton, N.J. An outspoken critic of Israeli policies in the occupied territories, Amit is a cofounder of the Israeli Committee Against the War in Lebanon.

The appearance of Amit and Said at Stanford is part of "Perspectives of the Middle East Conflict," a speakers series sponsored jointly by the Associated Students Speaker Bureau and the Committee for Justice in the Middle East.

Other speakers will be Seymour Martin Lipset of the Hoover Institution, who will speak at 7:30 p.m. Mon, Nov. 29, in CERAS, Room 112, and Joseph Teicher, president of Haifa University in Israel, who will speak at 4:15 p.m. Thursday, Dec. 2, in Building 200, Room 2.

David Ng-Quinn will perform in a solo recital at 8 p.m. Saturday, Nov. 20, in the Tresidder lounge. His program includes works by Bach, Beethoven, Bartok, Debussy, and Brahms. The free concert is sponsored by the Music Department.

Athletics facilities schedule

Thanksgiving holiday Nov. 23-28

Closed for the entire recess: Roble complex and pool, Maples Pavilion.

Open for the entire recess: Tennis courts (sign up as usual), golf course (first available time after 11 a.m.) and driving range (7 a.m. to one hour before dark), Tresidder recreation center (no bowling until 10 a.m. Thursday and Friday), Olympic gamefield, Perrier Parcourse, and Angell Field.

Closed Thursday and Friday: Encina lockers and showers (open SS 11 a.m.-5 p.m.), Encina weight room (open SS noon to 3 p.m.).

deGuerre Pools: Closed from 5 p.m. Wed. through Thur.; open F, S, S, 1-5 p.m.

deGuerre Courts: Closed Thursday; open F, S, S 11 a.m.-7 p.m.

IM Fields: Reserved only, call 497-0505.

Shuttle pilot, film show set

NASA Administrator James Beggs and space shuttle pilot Dick Truly will speak at Stanford Law School's Kresge Auditorium at 8 p.m. Wednesday, Nov. 17.

Truly will narrate films featuring rare footage of the takeoff and landing of the Columbia shuttle as well as illustrations of how astronauts function aboard the spacecraft.

Truly was one of the pilots flying space shuttle approach and landing test flights from June through October of 1977.

NASA Administrator Beggs, the sixth person to head the space agency, will discuss general and technical aspects of the ongoing "industrial revolution in space," including such topics as what lies beyond the space shuttle concept; scientists conducting research while in space; and future space techniques in general. Both Beggs and Truly will answer general and technical questions when they conclude their presentation.

Mothertongue show planned Sunday

Stanford Workshops on Political and Social Issues (SWOPSI) will present the Mothertongue Reader's Theatre in "Did You Come, or Fake It?" a script on women and sexuality at 7:30 p.m. Sunday, Nov. 21, in Kresge Auditorium on the Stanford campus.

Collectively composed from the life experiences of many Mothertongue members, women friends and writers whom they admire, the script explores the diverse range of women's sexuality with candid humor and honest emotion. The fast-paced one-and-a-half-hour show presents stories, dialogue, scenarios, and testimonies, turning inside out assumptions that sexual politics means conformity or that women's sexuality is anything other than an open issue.

Mothertongue is a feminist reader's theatre and a sister group to the Women's Speakers Network and a nonprofit sponsored project of the San Francisco Women's Centers.

A sign-interpreter accompanies the performers. The free public performance will be followed by a discussion led by the members of Mothertongue.

Early music concert set

The Stanford Music Department presents the Early Music Singers and the Renaissance Wind Band at 8 p.m. Tuesday, Nov. 23, in Dinkelspiel Auditorium.

The singers, under the direction of Prof. William Mahrt, will perform German music of the late Renaissance and early Baroque, including compositions of Schutz and Praetorius in both German and Latin and German songs by Lassus and Lechner.

The Wind Band, under the direction of Herbert Myers, will perform 16th- and 17th-century works for crumhorns, a dance suite by Schein on recorders, and works for shawms and sackbuts.

The Singers and Wind Band will combine for two polychoral motets by Praetorius on Christmas subjects. Joining the Wind Band will be violins, dulcian, violone, cornett, and organ.

Berkeley sweeps Stanford in humanities faculty ranking

Stanford's faculty rankings improved since 1969 in four of nine humanities fields covered in a new national survey.

Published earlier this month, the study showed the perceived quality of faculty rose from seventeenth to a seventh place tie in Spanish; from eleventh to seventh in philosophy; from eleventh to seventh in art history; and from "good" to ninth in linguistics.

In two other fields, Stanford dropped slightly but remained among the top 10 nationally. German dropped from a tie for fifth to a tie for sixth, while English fell from a sixth place tie to tenth.

In other fields, classics dropped from fourth to fourteenth, French from eighth to twelfth, and music from tenth to a fourteenth place tie.

UC-Berkeley was higher than Stanford in all nine fields surveyed. Princeton was higher in seven fields, Yale in six, and Harvard and Columbia in five.

Overall, Stanford was about on a par with Chicago and Cornell.

Sponsored by the Conference Board of Associated Research Councils, including the American Council of Learned Societies, the American Council on Education, the National Research Council and the Social Science Research Council, the $500,000 two-year study was funded by the Mellon, Ford, and Sloan Foundations, the National Institutes of Health, the NSF and the National Academy of Sciences.

About 1,689 professors in these nine fields, an estimated 20 percent of the 8,600 humanities professors nationally, were asked to rate the universities on the scholarly quality of their faculty, among other factors. Results were based on 1,064 replies.

Results were converted into a scale of one to 99, where 50 represented the average and about two-thirds clustered between 40 and 60. Results were as follows:

Art history (41 universities rated): Yale, 75; NYU, 70; Harvard, 69; Columbia, 68; Princeton, 66; Berkeley 64; Stanford, 59; Hopkins, 58; Michigan, 58.

Classics (35 universities): Harvard, 70; Berkeley, 67; Yale, 65; Princeton, 62; Michigan, 61; North Carolina, 60; Bryn Mawr, 59; Brown, 59; Texas, 58; Columbia, 57; Chicago, 57; Penn, 57; Cornell, 56; Stanford, 55.

English (106 universities): Yale, 73; Berkeley, 71; Virginia, 70; Harvard, 69; Columbia, 68; Chicago, 68; Hopkins, 67; Princeton, 67; Cornell, 67; Stanford, 66.

French (58 universities): Yale, 74; Princeton, 73; Columbia, 70; NYU, 68; CUNY, 62; Berkeley, 61; Michigan, 61; Pennsylvania, 61; Indiana, 60; Illinois, 60; Cornell, 60; Stanford, 59; Harvard, 56.

German (48 universities): Princeton, 67; Yale, 67; Wisconsin, 67; Berkeley, 65; Indiana, 65; Stanford, 63; Cornell, 63; Texas, 63; Harvard, 59.

Linguistics (35 universities): MIT, 69; UCLA, 66; Texas, 63; Chicago, 62; San Diego, 62; Berkeley, 61; Pennsylvania, 61; Massachusetts, 60; Stanford, 58; Harvard, 55; Yale, 52.

Music (53 universities): Princeton, 67; Chicago, 67; Berkeley, 67; Yale, 66; Illinois, 63; Pennsylvania, 62; Michigan, 62; Cornell, 62; CUNY, 62; Columbia, 61; North Carolina, 60; NYU, 60; UCLA, 60; Stanford, 59; Indiana, 59.

Philosophy (77 universities): Harvard, 72; Princeton, 71; Pittsburgh, 71; Berkeley, 69; UCLA, 68; Chicago, 67; Stanford, 66; Michigan, 65; MIT, 64.

Spanish (69 universities): Harvard, 74; Pennsylvania, 72; Texas, 69; Yale, 68; Berkeley, 67; Michigan, 65; Stanford, 63; Wisconsin, 63; UCLA, 63.

Similar ratings of graduate programs in the sciences were released in September. Three more reports covering programs in other disciplines will be issued later.

The 1969 survey was conducted by the American Council on Education and published in a 115-page "Rating of Graduate Programs."

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Nov. 17, to cover the week of Mon., Nov. 29, through Sun., Dec. 5.

LATE ANNOUNCEMENTS

Fri., Nov. 19. Applied Mathematics Lecture: "Perturbation solution of some nonlinear oscillation problems using symbolic and numerical computations" by Prof. James Geere, SUNY-Binghampton. 3:15 p.m. Room 380C (Mathematics Corner Basement).

Sun., Nov. 21. SWOPSI Public Event: "Did You Come, or Fake It?" A performance about women and sexuality by the Mothertongue Reader's Theatre. A sign interpreter accompanies the performance. Discussion follows. 7:30 p.m. Kresge Aud. Public cordially invited.

MONDAY, NOVEMBER 22

Biological Sciences Dept. Seminar: "Regulation of Yeast Cell Type by the Mating Type Locus" with Dr. Ira Herskowitz, UC-San Francisco. 4:15 p.m. Room T-175 Herrin Hall. Open to the public.

Radioscience Seminars: "Dynamics Explorer Observations of Plasma Waves in the Magnetosphere" with Umran Inan, S.U. 4:15 p.m. McCullough Bldg., Room 127.

Materials Science and Engineering Dept. Special Seminar: "Amorphous Silicon Solar Cells and Other Applications" with Prof. Dr. Josef Stuke, Univ. of Marburg, West Germany. 4:15 p.m. Peterson Bldg., 550A.

Numerical Analysis Seminar: "A Variational Method for Generating Multidimensional Adaptive Grids and Its Application to 2-D Hydrodynamics" with Jeffrey Saltzman, Los Alamos National Laboratory. 4:15 p.m. Math 380C.

Energy Policy Seminar: "The Myopia Strategy for Electricity" with Chauncey Starr, vice chairman, EPRL. 4:15 p.m. Skilling Aud.

Stanford Film Society: "Strangers on a Train." 7 p.m. Kresge Aud. $1.50.

Hillel Foundation Lecture: "The State of the U.S.-Israel Relationship: A Washington Update" by Jonathan Kessler, American Israel Public Affairs Committee. 8 p.m. History Corner, Room 2. Public cordially invited.

Casa Italiana Lecture: "The Italian Mezzogiorno: Dilemmas of an Undeveloped Region in a Developed Country" by Gisele Podbielski, consultant to the Ministry for the Mezzogiorno for the promotion of foreign investments in the Italian South. 8 p.m. Casa Italiana, 562 Mayfield Avenue.

Civil Engineering Dept. Urban Planning Lecture Series: "Mitigating Impacts of the High Rise Development: Housing, Transportation, and Historic Preservation" by Dr. Randolph Rossi, planning, environmental and regulatory coordinator, Port of San Francisco. 4:15 p.m. Bldg. 300, Room 300. Public invited.

Pre-Fast Programs: "Agrarian Change in Central America" with Larry Simon of Oxfam. Noon. Meyer Forum Room. And, "No Jobs/No Budget: Domestic Food Crisis" with Nevida Butler of the Ecumenical Hunger Program. 7 p.m. Meyer Forum Room.

TUESDAY, NOVEMBER 23

Campus-Wide Fast: "Structural Causes of Starvation" with Larry Simon of Oxfam. Noon. Meyer Forum Room. And, "Where Does Our Money Go?" with Larry Simon. 8 p.m. Meyer Forum Room. Services of Prayer and Fasting: 7:15 a.m., 9 a.m., Noon, 3 p.m., 6 p.m., 9 p.m., midnight. Memorial Church.

I-Center Tuesday Lecture-Lunch Series: "Global Development: Preparing for a Precarious Future" by Donald N. Michael, emeritus prof. of planning and public policy, Univ. of Michigan. Noon. I-Center. Lunch tickets available for $2.50 one week in advance. Brown baggers welcome.

WEDNESDAY, NOVEMBER 24

Ecumenical Ministries Wednesday Lunch Discussion: "Making Democracy Happen—the Nature of Social Obligation" by Arturo Pacheco. Noon. Casa Zapata (Stern Hall) dining room. Bring bag lunch or arrange to eat at Zapata. (Final in the series.)

Latin American Studies Bag Lunch Series: "Petroleum and the Poltical Facts: Democratization in Venezuela" with Terry Karl, asst. prof. of government, Harvard Univ. Noon. Bolivar House, 582 Alvarado Row.

EE380 Computer Systems Laboratory Seminar: "The Dictionary of the Future" with Martin Kays, Xerox PARC. 4:15 p.m. Terman Aud.

Services of Prayer and Fasting: 3 a.m., 7:15 a.m. Break Fast Communion. Break Fast meal, 7:30 a.m. Bechtel International Center.

THURSDAY, NOVEMBER 26

Thanksgiving Holiday.

FRIDAY, NOVEMBER 27

STARTS Great Directors Film Series: "History Lessons" dir. by Jean Marie Straub. An adaptation of a Brecht novel in which four Roman witnesses describe Julius Caesar's "irresistible rise" to power. 8 p.m. Geology Corner, Room 320. $3.75 general, $2.75 students.

STARTS Live Entertainment: Bob Valdez. 9 p.m. Coffee House. Free.

SATURDAY, NOVEMBER 27

SUNDAY, NOVEMBER 28

University Public Worship: Student Worship Service, 8:30 a.m.; Wendy Smith, assoc. dean of the chapel, 11 a.m.; Catholic Mass, 4:30 p.m.; Evening Communion in Memorial Church Round Room, 6 p.m.

ASSU Sunday Flicks: "Fame." 7 & 9:30 p.m. Memorial Aud. $1.50.

EXHIBITS

Paul Harris—Still Life. Stanford Museum. Through January 2.

Venice in the 18th Century. Paintings, drawings, prints and decorative arts. Stanford Art Gallery. Through December 19.

Before Darwin and After. Books and other materials dealing with Charles Darwin, his theory and its impact. Second floor, West Wing, Green Library. Through November.

Wood Construction and Process Sculpture by E. David Camardo. For library environment. The Jonsson Library of Government Documents, Green Library. Through December.

Ansel Adams. Books, letters, photographs. Exhibit coordinated by the Stanford Museum and the Dept. of Special Collections. Green Library, Special Collections Gallery, second floor, West Wing. Through November 24.

The Orchid Observed. Five centuries of botanical illustration and exhibit of books from the collections of William K. Glikbarg and the university libraries. Lurie Rotunda, Dept. of Special Collections, second floor, West Wing, Green Library. November 15-January 11.

Maps Are For Use. An assortment of maps and related cartographic reference works available from the Central Map Collection. Meyer Library Lobby. Through November 19.

Acrylic on Canvas Paintings by Win Belton. Bechtel International Center. Through November.

Views Through a Natural Lens and California Vignettes. Color photographs by Damien Kuffler. Tresidder second floor gallery and the Coffee House. Month of November.

Performance Art as a High School Teaching Methodology. Documentation in film and text by Charles Garoian. Stanford Faculty Club lower entry area. Through late November.

Melange of Paintings. By several artists who have had exhibits in 1982. Faculty Club Gold Lounge.

Fiberwork by Priscilla Hextor. Faculty Club upper entry. Through late November.

VISITORS FROM OTHER COUNTRIES

Nov. 23: Group of 6—dean of the School of Medicine and faculty members and administrators, Toho University, Japan.

Nov. 24: Dr. Adnan Shihab-Eldin, director general of the Kuwait Institute for Scientific Research, Kuwait.

For further information, please call 497-1984, International Visitors, Maria Bun.

CAMPUS REPORT

Volume XV, Number 10 | A publication for Stanford University faculty & staff | November 24, 1982

Exclusive licensing reviewed

Stanford currently is reviewing the disposition of intellectual property, such as copyrights and patents, resulting from research activities, according to Vice Provost Gerald Lieberman, dean of graduate studies and research.

In a white paper distributed to the Board of Trustees and discussed earlier this month with the Committee on Research, Lieberman notes that interim, internal guidelines now require advance approval of any proposed arrangement that would give industrial sponsors of Stanford research:

1) Title to intellectual property resulting from the research;

2) Royalty-free exclusive licenses; or

3) Options to exclusive licenses to research results which are patentable or copyrightable before the results are achieved.

A key policy question, he says, is "whether Stanford should accept corporate research agreements that require giving exclusive licenses to the sponsor prior to the development of any discovery.

"The granting of an exclusive license may be necessary if development is to take place after a discovery has been made: few firms will expend large sums for development that is likely to benefit others disproportionately.

"However, difficulties may arise from corporate research agreements in which the sponsor requests the right to exclusive licenses on all discoveries made as a result of the research funded by the company.

"Some believe that such a blanket arrangement provides incentives for

continued on page 17

Faculty should disclose industry ties: GSA

Stanford faculty should make annual reports on their outside professional activities to their department heads, the Graduate Student Association's Academic Affairs Committee believes. *(Text, p. 14).*

In particular, faculty should disclose "the extent and nature of equity interests in firms with products or research activities closely allied to their own academic fields," the committee declares. It also recommends that:

1) "Companies in which a faculty member has a major equity (or equivalent) interest should be prohibited from sponsoring the faculty member's University-based research;

2) "Faculty members should be prohibited from assuming managerial functions in commercial ventures while they are full-time members of the University staff;

3) "If the University administration cannot carefully monitor dual employer-employee advisee relationships (between faculty and graduate students), they should be prohibited.

4) "Peer review should be extended to include all sponsored research, industrial as well as governmental. A peer review system is the best means available for assuring the University community and the public that University-based, industrially sponsored research will continue to be of the highest quality. This peer review process would be most effective when done in conjunction with other universities."

The committee included student entrepreneurs as well as those whose advisers are entrepreneurs. "All are convinced that the University should conduct a comprehensive review of equity and managerial participation by faculty in for-profit ventures," the report said. It was written by William J. Smith, graduate student in chemical engineering.

Earlier this year, a special committee in the Stanford School of Medicine recommended that faculty "should report their consulting activities to the department chairperson on a regular and continuing basis."

Stanford permits full-time faculty to consult one day per week, or 52 days per year. When questions arise, these ties must be disclosed "upon request" by the relevant dean, the provost or the president.

The GSA committee acknowleged that "the driving force behind this report came from a small number of students who have experienced severe problems and found present policies inadequate to deal with them.....

"At present, University policies governing relations between University personnel and outside profit-oriented ventures are generally few and poorly defined....

continued on page 17

New rule proposed on advising, outside jobs

To avoid conflict of interest, Stanford faculty members should not hire or directly supervise graduate students in jobs outside the University while continuing to serve as the student's adviser or dissertation committee member.

That's the unanimous recommendation of the Committee on Research, slated for consideration by the Faculty Senate at its next regular meeting Thursday, Dec. 2.

The only exceptions to this policy should be those made in advance by department chairmen, the committee said. It is headed by Prof. Joseph B. Keller, mathematics and mechanical engineering.

The full text of its recommendation states:

"Faculty members must be especially sensitive to potential conflicts of interest between their teaching responsibilities vis-a-vis graduate students working under their supervision and their outside consulting interests.

"To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's adviser or as a participant on that student's dissertation committee.

"Exceptions to this provision must be approved prospectively by the department chairman."

The committee also will unanimously recommend that any delay in publication of research to protect the patentability of an invention be reduced from the present maximum of one year to 90 days.

Since the present policy was adopted in 1969, the committee said, "experience...has taught us that decisions to file patent applications, and the filing process itself, can reasonably be accomplished within a three-month period."

During the past year, the committee also reviewed and approved a policy statement on tangible research property prepared by Vice Provost Gerald Lieberman, dean of graduate studies and research.

Tangible research property includes biological cell lines, computer software,

H&S groups study salaries, computing

The recently formed organization of Humanities and Sciences Department and Program Administrators has appointed two subgroups which deal with areas of concern to members: one on departmental computing equipment and procedures; and one to examine H&S exempt salary treatment.

The large group plans monthly meetings, while the subgroups meet more frequently to carry out their studies.

In addition, the Humanities and Sciences Dean's Office has expressed interest in sponsoring some of the meetings, with the first tentatively scheduled for December.

For more information on the organization, call Arlee Ellis, political science, ext. 7-1806.

Foreign student enrollment record

Foreign student enrollment at Stanford rose more than four percent to 2,052, an all-time high.

Asians accounted for nearly all the increase from last year's total of 1,967, the previous record.

Foreign students accounted for one fourth of Stanford's total graduate enrollment, with 1,569 of the 6,398 people at this level. More than a third of the University's postdoctoral students—165 of 480—likewise are foreign.

At the undergraduate level, only 266 of Stanford's 6,563 students—or four percent—came from other countries. In addition, there were 34 nonmatriculated students and 18 on attendance permits.

According to Lee Zeigler, director of the Bechtel International Center, there was "a significant increase" in foreign women students, who now total 411, or 20 percent of those from other countries.

By Stanford school, the largest concentration is in Engineering, where 771 are enrolled. This is 29 percent of the School's total enrollment. The largest single department for foreign enrollment is electrical engineering, with 219.

In the School of Humanities and Sciences, there are 500 foreign students, or 12 percent of the 4,113 enrolled.

In the Graduate School of Business, 150 of the 733 students enrolled—or 20 percent—are foreign. In Education, the proportion is somewhat higher—27 percent—with 135 of 491 from other countries.

Earth Sciences has 78 of 427, or 18 percent; Medicine 42 of 606, or seven percent; and Law four of 510, less than one percent.

The remaining foreign students have not declared their majors, are in graduate special programs, or have individually designed majors.

Students from Asia total 791; from the Americas, 475; Europe, 412; Middle East, 246; Africa, 69; and Pacific Basin, 51. Eight are stateless.

By country, Canada leads with 171, followed by Taiwan, 152; Japan, 148; Mexico, 122; Korea, 117; India, 114; United Kingdom, 109; Hong Kong, 84; Iran, 77; France, 65; Israel and China, 60 each.

Victor Fuchs

On Dec. 4, New York University College of Business and Public Administration will present **Prof. Victor Fuchs** with the John T. Madden distinguished alumni award for "outstanding character, ability, and energy," and distinguished service to the community."

Michael Jackson, assistant director of overseas studies, has been elected chairman of the Stanford Black Community Caucus for 1982-83.

He succeeds Thom Massey, associate dean of students for campus affairs.

Shelley Shaw, of development gift processing, was elected vice-chairwoman.

Four standing committees on staff affairs, finance, information and publications, and community relations will be headed respectively by Dan Crump, employee relations; Vernetta **Wilson**, personnel; **Ronald Hudson**, student affairs; and **Dorothy Webster**, personnel. **Joyce Tipps Coats** will represent the Stanford Linear Accelerator Center and **Aaron Smith** the Medical Center.

The caucus seeks to link the campus with external black communities, other minority communities, and their activities and programs. Further information may be obtained by calling Ronald Hudson at (415) 497-2733.

Henry Ramey

Prof. Henry J. Ramey, petroleum engineering, has been awarded the 1983 Anthony F. Lucas Gold Medal Award.

Given by the American Institute of Mining, Metallurgical, and Petroleum Engineers, the award recognizes Professor Ramey's contributions in the fields of thermal recovery of oil, reservoir engineering aspects of geothermal steam production, and interpretation of well pressure behavior.

Patricia Zavella, post-doctoral fellow at the Stanford Center for Chicano Research, has been appointed associate editor of *Feminist Studies* journal.

Zavella received her doctorate in anthropology from UC-Berkley this year. Her principal research interest is the impact on the family of women entering the labor force.

Marguerite pauses

Marguerite, the campus shuttle bus system, will not operate on Thursday and Friday, Nov. 25-26. It will resume service on Monday, Nov. 29.

Letters to the editor

Alumnus chastises Cohn, lauds Kennedy

Editor, *Campus Report*:

I was appalled both by the narrowness of Prof. Robert Greer Cohn's response to Donald Kennedy's speech to the University of Oregon and to the cynical tone with which it was offered.

I concur in Prof. Cohn's views that it is imperative that we continually search for universal moral values, elusive as they may be, and that the humanities are important in this search. I can see no justification in President Kennedy's speech, however, for the conclusions reached by Prof. Cohn.

The suggestion that we recognize that others may approach problems with a perspective foreign to our own is not an abdication, as Prof. Cohn indicates, of the quest for universal moral values. Even if we were to accept the premise of Prof. Cohn that "a humane leader of a great university owes it to us to remind us of these home truths occasionally," we cannot accept the premise that a particular speech into which these truths may not have been woven can lead to the conclusion that we erred "in picking a scientist for our president."

To suggest that in order to be a president of a university "as everyone knows, you have to be a politician, inclined to mouth the fashionable shibboleths, and flatter the abandoned and psychically deprived youth with their inchoate myths and opportunism" is pure and unadulterated nonsense. If Prof. Cohn's statement were correct, no one would be a suitable college president.

As an interested alumnus, I have read with great interest every speech of Donald Kennedy which has appeared in literature distributed to alumni. The total image of the man is clear beyond cavil—a humanist with a soul and a totally open mind. We are indeed privileged to have him as our president.

Reuters to fund Third World PJFs

Reuters, the British international news agency, has announced plans to fund four full academic year fellowships for "Third World" journalists, two at Oxford and two at Stanford. The two at Stanford will join the Professional Journalism Fellowship program in the Department of Communication.

Prof. Lyle Nelson is director of the program; Harry Press is managing director. Nelson will join the Board of Trustees of the Reuters Foundation set up to administer the program and its future expansion into other areas of journalism training.

Barclay meets award winners

The first two scholarship awards have been made from The Friends of Tom Barclay Fund. Emeritus Prof. Barclay meet with the recipicients at a Faculty Club luncheon on Monday, Nov. 22.

They are Ellen Nerenberg, a junior majoring in English, and Wayne Alabardo, a freshman, major undeclared.

The fund was established to honor Barclay on his 90th birthday. Those mainly responsible for getting it established are George Egan, '39, and Rudy Munzer, '40, both former students of the eminent political scientist who taught at Stanford from 1927 to 1957.

To date, 176 contributors have given $200,000. At Barclay's request, the fund has been designated for undergraduate financial awards to students in the humanities and social sciences, with special consideration for those studying political science.

Congressional Medal winner's revelation

Admiral Stockdale tells of five-year duel with commissar

BY DONALD STOKES

First of two articles

America's most decorated naval hero, James Bond Stockdale, is about to reveal the hidden story that lies behind the famous feats which won him the Congressional Medal of Honor.

Vice-Admiral Stockdale's bravery in resisting eight years of brutal torture, interrogation and isolation in a Vietnamese prison named Hao Lo (Fiery Furnace) is part of the nobler side of the documented Vietnam War.

But his long drawn-out duel of courage and wits with the enemy prison system's political commissar has never been described.

In spite of his broken bones and other wounds, and the years of torture and brutalization, Stockdale lived to win that duel, and to witness the man called The Cat defeated and broken in spirit.

Stockdale is writing a book that will reveal the strange story. The tentative title is "The Old Man and The Cat."

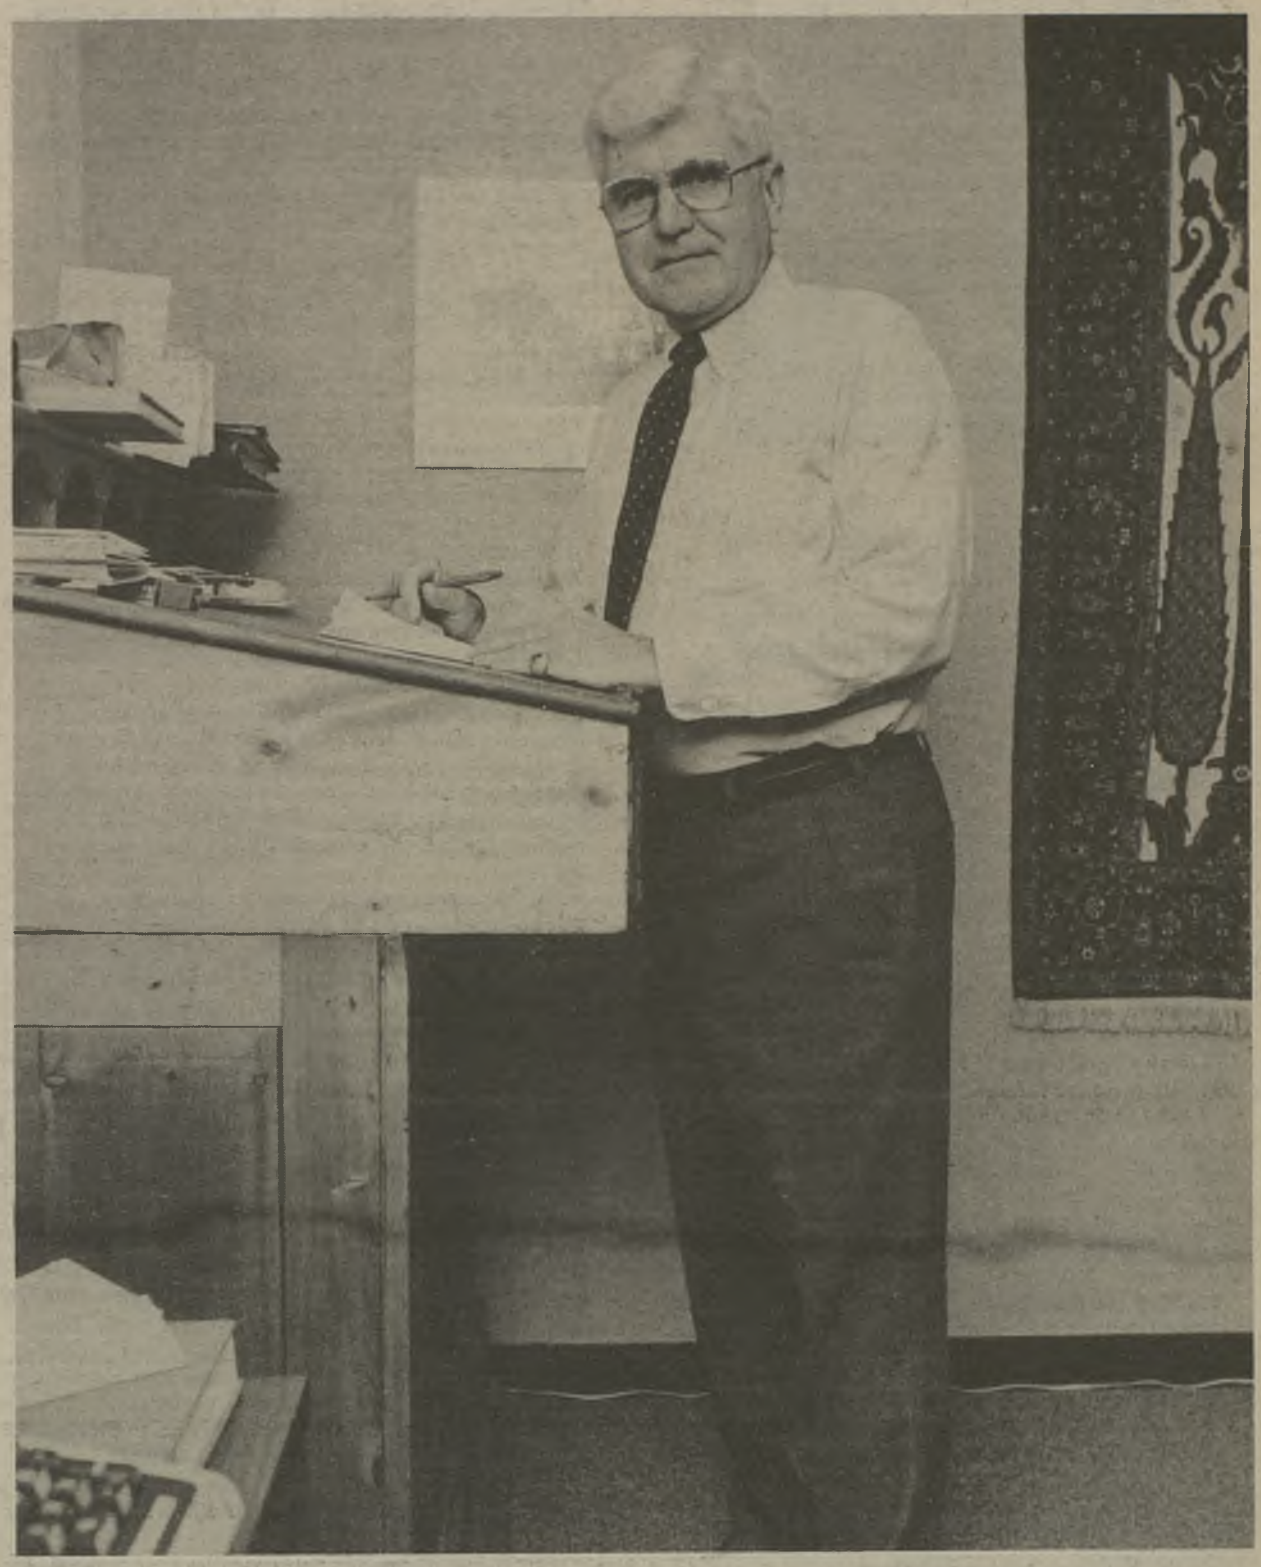
The book is incidental to Stockdale's main aim in life today. What he wants more than anything else is to teach young people the lessons to be learned from his experiences in Fiery Furnace prison.

That is what he is doing at Stanford. A senior fellow at the University's Hoover Institution, this winter he will teach sophomores a course called "Combating Coercion and Manipulation."

His Stanford students will probably react similarly to those in the classes which he taught at the U.S. Naval War College, when he was its president.

The students will find themselves comparing Stockdale to great figures from the past and in literature who suffered attempted extortion and manipulation while in prison. The students may compare Stockdale with Socrates and his choice of death over compromise; with Miguel de Cervantes who met degradation in prison before writing "Don Quixote"; with Koestler's Rubashov; with Solzhenitsyn's Ivan Denisovich; with John Bunyan writing "Pilgrim's Progress" while in jail.

And, perhaps most frequently, with the Stoic philosopher Epictetus.



The words of Epictetus surged into Stockdale's mind when, on Sept. 9, 1965, he was shot down over North Vietnam while leading a fighter-bomber squadron on his 200th mission. In those last few minutes of freedom, as he floated down on his parachute to the hell he knew awaited him at the hands of the North Vietnamese, he recalled a passage from the philosopher-slave's stern manual for the Roman warriors: "If you require me to lose my own proper good, that you may gain what is no good, consider how unreasonable and foolish you are."

His ordeal began as soon as he landed. He lay helpless under a hail of blows, with his back broken by the landing. The mob smashed one of his legs, the other sustained a bullet-wound. He was flung into a truck and for three days and nights was jolted in an agonizing journey to prison.

When he finally arrived he can vaguely remember a satisfied face looming over him, that of a senior North Vietnamese officer. Stockdale's pain made him drift off into unconsciousness. Later, perhaps hours, perhaps days, he became aware of the same smug face looming into vision.

The communist officer told him coldly what to expect: "You have medical problems and political problems. In this country we handle political problems first. If they are satisfactorily resolved—that is, if you demonstrate a proper understanding of the American war of imperialist aggression and help us take concrete action to stop it—then we will attend to your medical problems."

From that day forth it was made clear that any medical help would only be given if Stockdale bent to his captors' will.

Admiral Stockdale stands at a specially made desk because his smashed left leg is permanently straight.

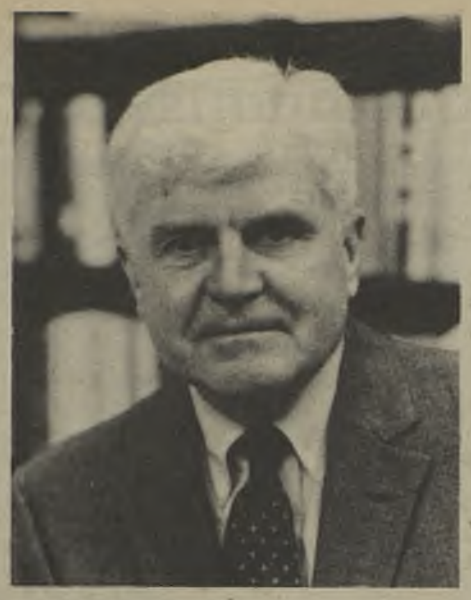
The terms of his ordeal were spelled out to him repeatedly: "You are not a prisoner of war. You are a common criminal. You are stripped of all military rights and must meet all demands made of you, or suffer severe punishment."

The voice sliced through Stockdale's daze of pain. ". . .You will never look up. . .you will bow deeply to the guards. . .you will be kept alone and out of sight of other prisoners. . .you are not allowed to speak, even to yourself."

These words to the wounded man set the scene for eight years of attempted coercion and intimidation. The cruelty had an important purpose. The Communists realized that Stockdale could be an invaluable propaganda weapon for them.

If Stockdale, the highest-ranking U.S. prisoner in North Vietnamese hands, could be induced to make a public statement about American "war guilt" it could be used all over the world and so help to sap American resolve.

What the captors planned was to break Stockdale's resistance and spirit, then get him to tape messages that could be valuable in turn to break the American public's will to support the war. Also, they wanted to produce to visiting "fact-finders," of the gullible type, a penitent senior officer who admitted America's "crimes." A very few such men were manipulated, but never Stockdale.



At Christmas 1965, when the white-bearded and crippled Stockdale had been in an isolation cell for four months, with his wounds untreated, he was made to hobble out of his cell. Blinking in the semi-tropical light, the airman was shoved into a room where the senior officer was waiting.

The face of that officer was sharp, his lips thin and tight, the eyes unblinking. It was a face Stockdale was to have imprinted on his persecuted mind.

This was Major Bai, or The Cat, as the U.S. prisoners were to call him in their forbidden communication with each other.

"I had no idea at that time that Major Bai could speak English" said Stockdale. "Perhaps he was self-

continued on next page

(When) you realize how thin and fragile our veneer of culture is, when you realize the truth that we can all become animals within weeks when cast adrift and tormented, you start having some very warm thoughts about the only life preserver within reach—that human mind, that human heart in the next cell.

—Admiral James Stockdale

Stockdale...

continued from page 3

conscious because he could not speak it fluently—and he was a very prideful man."

The officer next to The Cat was the interpreter, who was to become Stockdale's personal antagonist. But it was the third figure who riveted the prisoner's attention. He had dead eyes and the immobile facial musculature of a waxworks dummy. He had a complete lack of expression. This creature was the torturer, known to the American prisoners as Pig Eye.

Major Bai's voice was metallic and one-toned, like the clanking of chains. "You and I have much in common," he told Stockdale. "We are about the same age, we each have sons in college (clearly he had done his research on the prisoner), but we belong to different social systems.

"There is a brick wall between us," The Cat went on. "You and I can never climb that wall, but we must try to see through it, because we must stop this imperialist war of aggression. You and I will work together to do this."

Stockdale grimaced from a recurrent nightmare: "This made sweat run down my back, for from my studies and reflections I knew at once that this was one of the first signs of attempted manipulation. The stage was now set for what The Cat intended to do with me. He wanted me to help him encourage Americans to turn against the war.

"That was how my long struggle began with Major Bai.

"The rules imposed on us set up, in an intense and bizarre form, an extortion factory. Nothing new in that. It was much like those described by Dostoevsky, Solzhenitsyn, and Koestler. It was a carrot and stick operation, common to most communist prisons, but not unique to them.

"One thing they all have in common—a tripwire system designed to snare you in a violation so that the jailers can brand you guilty of moral turpitude. There is always an escape valve, a way to make amends if you repent.

"The trip-wire in Hoa Lo prison was the 'no communication' rule. Each prisoner had a choice to make, and he stood to lose either way. If he obeyed and did not communicate with his comrades he suffered the conscience pangs of betraying his fellows and at the same time sentenced himself to a desperate loneliness.

"If he communicated—and this was the only way to go for loyalty, for a feeling of self-worth, for dignity—he would periodically be caught and tortured under the charge of ingratitude for the 'humane and lenient treatment' he was being given."

Stockdale smiled in counterpoint to a recollection: "The reaction of we prisoners was to build up a high-speed network of communication. Mostly it was by wall-tapping, but we used every other opportunity as well. We used the same code that Koestler's Rubashov used."

The white-haired hero is reluctant to dwell on the tortures inflicted on the Americans. He has told the story often, and in any case he is more interested in the battle of wits with The Cat.

It is from others that one learns of the most frequent torture. It was to force the prisoner to the floor, tie his upper arms behind him, and while standing on his back cinch up the elaborate binding by jerks, pulling his shoulders together while the torturer stuffed the prisoner's head down between his feet.

Arms under contorted tension produce an excruciating pain. The longer a prisoner waited before submitting to questioning, the longer he would have to spend with arms that had lost all power, and they would dangle helplessly for weeks afterwards; 45 minutes of blood stoppage usually cost about six months of dangling.

"The torturer was called Pig Eye because of the expressionless cast to his eyes," said Stockdale. "He was a professional; he could get the ropes round you and make you submit with a minimum of physical damage.

"There was another guard we called Big Ug, who was a massive brute, very powerful, who would break bones and do all sorts of other damage. But Pig Eye knew just how to make you submit quickly.

"Soon after you had submitted there came The Cat, clawing with his mind and guile, and it needed every atom of your will to resist him, and force them to start the whole business over again."

It was not long before Stockdale had the entire group of Americans organized, close-knit, in frequent communication with each other. One prisoner transmitted a total of 10,000 words in one day.

But the punishments came ruthlessly. Stockdale was sick, reduced 50 pounds in weight, his smashed knee fused straight forever, one arm dangling uselessly.

Stockdale sustained himself by repeating the Stoic rules laid down by Epictetus. He was crippled; very well, Epictetus said "Lameness is an impediment to the leg, but not to the will."

He was dependent on his extortionists for life support, so he soon learned to avoid asking for anything, and so not be liable for demands for reciprocity: Epictetus' rule was "Whoever would be free, let him wish nothing which depends on others, else he must necessarily be a slave."

Stockdale could stop his misery at any moment by becoming a puppet; was it worth the shame? Epictetus: "If some person delivered up your body to a passer-by you would certainly be angry. Do you feel no shame in delivering up your own mind to be reviled, disconcerted and confounded?"

Hour after hour the wall-tapping went on; the prisoners constantly sustained each other. Stockdale advised and directed, developed their collective will. Day after day the punishments struck. Again and again Stockdale was delivered into the skillful hands of Pig Eye. Again and again, wracked and depleted, he faced Major Bai, who was never present at the actual torturing.

The pain and resistance to it became part of Stockdale's very being. In an ineffable way, the crippled officer willed his way to an exaltation of spirit that grew out of his suffering.

Stockdale puts it this way: "Prisons have been crucibles of both degradation and creative impulse throughout history. They seem to bring out the very best and the very worst in mankind. The main inspiration is obtained through reflection, through the opportunity provided for uninterrupted thought, time to reorder one's life while in solitude."

After each bout of torture, after each interrogation, a prisoner would summon his remaining strength to wall-tap a report to his fellows, to help them in their ordeals. The common suffering, the common will, the common victory over temptation, fused the prisoners, in spite of their individual isolation, into one loyal being.

"When you're alone and afraid and feel your culture is slipping away even though you're hanging on to your memories—memories of language, of poetry, of prayers—hanging on with your fingernails as best you can and yet, in spite of all your efforts, still seeing the bottom of the barrel coming up to meet you, and you realize how thin and fragile our veneer of culture is, when you realize the truth that we can all become animals within weeks when cast adrift and tormented, you start having some very warm thoughts about the only life preserver within reach—that human mind, that human heart in the next cell.

"You are not ashamed to wall-tap what you mean when your pal is being taken out for torture for being caught trying to get a message to you. You tap 'G.O.D. B.L.E.S.S. Y.O.U.'

Stockdale recalls that the two years he had spent at Stanford, as a post-graduate studying for his M.A., helped him to turn the communist's arguments upside down.

"Bob North, a political science professor at Stanford, taught me a course called 'Comparative Marxist Thought.' This was not an anticommunist course. It was the study of dogma and thought patterns.

"We read no criticisms of Marx, only primary sources. All year we read the works of Marx and Lenin. When I was in the prison in Hanoi I understood more about Marxist theory than my interrogator did.

"Several times I was able to say to The Cat, 'That is not what Lenin said—you are a deviationist."

Stockdale described another significant incident in prison: "One night in 1966 I was dragged out of my isolation cell. I was tortured and interrogated during the whole of one night. What they were after was to persuade me to be taken downtown and say the right things to an American visitor.

"Major Bai had a long spiel which he had prepared for me. I was ordered to say all sorts of things damaging to the American cause, nearly all of them untrue, including statements about our having sought out civilian targets for bombing. The night wore on, and the questioning and torture continued.

"I found out that there was one thing Major Bai was particularly anxious for me to say. It was that our bombing was against international law. They wanted to include in their propaganda a statement by me to that effect.

"Finally, after they had worked me over for several hours, I lost control of myself. I became a screaming creature. I upset the table and shouted 'No, I won't say that, I won't. I don't care what you do to me!'

"You would think that was a suicidal move, for the torturer was standing there holding the ropes with which he could, with one pull, shut off the circulation of my blood.

"But no, the effect on those people was to make them go to the door together, speaking rapidly to each other. I was able to make out a few words. Major Bai was saying that he had to produce a prisoner for an important visitor by 10 o'clock that

continued on next page

Stockdale...

continued from page 4

morning. Dawn was just breaking.

"It came to me in a flash that this man was under bureaucratic pressure. At that moment I saw my captors in a different light. I realized that the men who were treating me with such cruelty and violence were not political evangelists, but driven servants.

"They confronted a person with whom they could not cope. I realized that the best weapon I could use was to appear to my captors as a man liable at any moment to lose control of himself, who was capable of unpredictable explosions. I had unwittingly convinced them of this. They could not risk taking me to see the visitor."

Stockdale shifted his smashed left leg, which sticks out straight when he is seated. He looked out of the window at the placid campus: "Pressurized experiences make you concentrate all your being. Sometimes you can sense that you are undergoing what I call a 'melting' experience.

"Some of your innate fears and biases melt as you come to realize that under the gun, you must grow or fail. When you face such a situation as we in prison your resources emerge, sometimes ones you never realized you had. The human spirit has a fund of resilience that rises to the occasion in the grandest sense."

The successful resistance of the American prisoners meant disgrace for The Cat. The Vietnamese leadership made a scapegoat out of Major Bai, whose job it was to produce prisoners who had been "turned."

"Major Bai had sat in on their General Staff," said Stockdale, "and helped lay down policy for our treatment. He had never been able to get anywhere with us. He had failed. He had lost face.

"Major Bai had invested his life in a form of politics that demanded certain sacrifices and he had made them. I want you to understand that he was not a fanged monster. He was a guy with a lot of problems, a good many of which I gave him."

"I saw The Cat for the last time in June 1970. That was five years after we had met. He came to see me in my cell.

"Bai looked haggard and nervous, and he had lost weight. Ostensibly, he had come to see me because I was alleged to have 'incited a riot.' By this time he was no longer in charge, but had some sort of advisory capacity.

"Bai was calm, and said in a quiet voice: 'Things have not gone well with me.' He and I had spoken together so many hundreds of times that we were on an easy conversational basis. He went on: 'I have had to go before the people to confess my misinterpretation of the humane and lenient policy of Ho Chi Minh."

"Major Bai was still clearly very upset over what had happened to him. He came out of a reverie and said 'Do you know that I used to be on the General Staff?"

"He did not mention the charge which had been made against me, of inciting a riot. Instead, he said quietly, 'I would like you to come downtown and visit an American professor who has come to the city.'

"Well, The Cat's teeth were now drawn, and we knew each other so well that he did not look surprised when I told him 'You know I won't do that.' "

What was an American professor doing in the enemy capital during the war?

"People like that were The Cat's targets of opportunity," Stockdale explained. "If he could intimidate prisoners into telling the visitors we were treated well, and that we realized the U.S. was fighting a dirty war, if they were to take photos of us and report that we were in great shape, it would be very good propaganda for the Vietnamese.

"The Cat's job was to manipulate the prisoners into doing what he wanted."

Stockdale made a tight-lipped smile: "I never appeared before any visitor; I always refused. Producing suitable prisoners was a must for The Cat. What Major Bai wanted in particular were senior captives, men whose positions would impress the people back home in the U.S. I was a wing commander, the only prisoner held by the North Vietnamese to hold that top flying rank.

"My refusal to cooperate with The Cat was not a matter of bravery for me, for we had long ago made our respective positions quite clear. On that last visit The Cat did not rant at me. He didn't do anything except to say quietly 'I rather hoped you would. We have been in this a long time together.'

"Up till that time, whenever we met or parted, under the rules imposed I had been required to bow to him. But this time I knew instinctively that that stuff was off. The Cat called to a guard, who would take me back to the isolation cell. I knew that but I didn't care.

"As we waited Major Bai touched me on the shoulder. By this time he was speaking English to me without an interpreter, and called me 'Sto-dale.' He asked, 'How long has it been for you, Sto-dale?'

"Five years," I replied.

"The Cat looked grave: "Well, I'm afraid it is going to be several more years.' We did not shake hands, we just looked at each other. I never saw him again."

It was to be three more years before the prisoner's ordeal came to an end. But those three years were comparatively benign. The tortures ended, so did the pressures, so did many of the cruel deprivations.

The counting of the days did not end, nor the dreadful monotony. As always, it was the group's cohesiveness that helped them through.

The wall-tapping continued to be their link with each other and to their hopes for being united to those they loved and who suffered with them.

As he came to the end of his story the admiral paused, trying to find the words that summed it all up.

He spoke at last, a remarkable statement: "In a way I was always rather sorry for The Cat. He went down the tube finally because bureaucracy demands scapegoats when anything goes wrong.

"I don't know whether he is still alive or not, but if I were to meet him again I would probably buy him a drink."

The former prisoner tried to explain why he felt no bitterness toward his captors: "Prison and torture and isolation can be pressure chambers that forge the spirit. That is what happened to many of us in prison. It was almost a spiritual and intellectual transformation.

"People may find it hard to understand, but I am thankful for those years in prison. In many ways they were the most valuable years I have ever known."

He echoed Solzhenitsyn: "Bless you, prison, for having shaped my life."

Software Distribution Center to help market programs

Stanford has formed a Software Distribution Center (SDC) to help distribute University-developed scientific programs.

The purpose of the center is to enable scientic programs to get widely distributed without getting the developer bogged down in the work of assisting the people who buy the programs.

"A scientist who can send out a software program would find that he or she would be providing a lot of informal support service to people out there," says Niels Reimers, director of technology licensing.

"The alternative is to develop a very complete program which might be inappropriate for a university to do. Providing services certainly diverts our people from what they should be doing."

Reimers said the existence of these computer programs frequently is not well known. "Simple publication in the journals is inadequate for scientists elsewhere to stand on the shoulder of the Stanford scientist and advance science," Reimers says.

In the past the University would license a company to distribute and support the software, and the Stanford scientist would work with the company to help make the program easier to use.

"But that didn't take care of all the problems, so the Software Distribution Center was formed.

"At least it's a way to take the load off the scientists' backs."

The programs are sent out in an "as is" basis, Reimers says. There is usually no support. "If it runs, fine; if it doesn't run, sorry," Reimers says.

The University has set up a three-tiered system to handle the distribution.

In the first "tier", programs go to other scientists solely for the cost of distribution, usually from $50-100.

The second "tier" involves commercial companies. They receive the software and may use it for developing commercial products and processes of their own, but they cannot turn around and sell that software to anybody else.

The final "tier" uses software distributing companies as the university has in the past. If there is sufficient market for the program, the company will adopt the software and advertise it. The company would also provide the support to the users.

Reimers says that occasionally programs sent to first and second tier companies prove to be so popular that a commercial firm takes over the distribution.

A number of programs are already being distributed by SDC, including programs to assist in designing new, large-scale integrated circuits, running electronics firms, and solving complex mathematical, scientific, and medical problems. The software consists of computer tapes containing code, the zeros and ones that constitute basic computer instructions.

Lawrénce Osborn of the Office of Technology Licensing said the University had not distributed its own software in the past because it was felt that such a move would kill off the commercial market.

But tests run by the University showed that this was not the case, Osborn said. The distribution actually "created a market place."

All of the customers so far are high-technology firms. Many, such as Hewlett-Packard, can support the programs themselves.

So far Stanford has sold 25 pieces of software to 150 firms. "Most bought two or three pieces of code," Osborn said. "We had a lot of repeat business."

Fourteen of the Stanford-distributed programs "had a commercial life after the initial distribution," he said.

Since 1980, the University has earned $437,000 selling software with another $850,000 coming in the form of equipment or discounts on equipment.'

The Office of Technology Licensing has assigned Bill Osborn to act as full-time coordinator of the software center.

Facsimile questionnaire distributed

The Telecommunications Department has sent a questionnaire to deans and department heads to aid in its plans to introduce facsimile service to all departments next month.

Facsimile communication transmits copies of full pages, including drawings, pictures, and hand-written notes, to compatible terminals at other locations over standard telephone lines.

The cost of the transfer is the same as telephone charges for the duration of the call. It is much cheaper than TWX/TELEX messages, and facsimile service is especially advantageous when charts or drawings, special formatting, or signatures are important.

Telecommunications is trying to determine what volume of use would be created by a facsimile service at Stanford. The questionnaire will provide information about need, anticipated use, and contacts with compatible terminals.

The questionnaire should be returned to Telecommunications by the end of November.

Any questions about facsimile service should be directed to Telecommunications, ext. 7-1148.

Expedition to Greenland—stalking the ghost of Wegener

The answer to how the continents crack and drift apart may lie in the very land where Alfred Wegener, the pioneer who was first in modern times to suggest that continents drift, died in relative obscurity on an expedition in 1930 Greenland.

A Stanford scientist has gone back to Greenland to study this process of "rifting"—how continents pull apart.

The most difficult task of Dennis Bird's research is getting to his field area. For the past two summers, he has been studying a desolate, nearly inaccessible area on the east coast of Greenland that is cut off by Arctic pack ice for all but two months of each year.

To reach their remote camp, he and his colleagues have had to use light planes, helicopters and fishing boats, even though it was the height of the Arctic summer.

Bird has just joined the Stanford Geology Department this fall as an assistant professor specializing in theoretical geochemistry. His interest in the east coast of Greenland stems from work he undertook while he was a post-doctoral scholar at the University of Arizona at Tucson, and a graduate student at UC-Berkeley.

Setting up camp across from a Greenland glacier

Along the southeastern coast of Greenland, there are systems of fractures along an inactive "fossil rift zone" that formed about 55 million years ago when that landmass was rifted from the Eurasian continent.

By studying the hydrothermal alteration of rocks in these fractures, that is, the chemical changes in the rocks caused by circulating hydrothermal fluids, he hopes to learn what conditions of temperature, pressure and fluid composition prevailed during the initial stages of rifting.

As a theoretical geochemist, Bird has studied the thermodynamic properties of minerals in order to make predictions of how hydrothermal fluids react with rocks to form these minerals. He has also been studying the Salton Trough of Southern California, an active rift system, to see how well theoretical predictions square with what is happening in an operating rift zone.

Studying the rift

Bird's investigations in Greenland are the next step in his program of research. Having established that the thermodynamic database predicts some of the things that happen in active spreading systems, Bird wants to try to determine the temperature, pressure and chemical potential of the components in an active fossil rift system.

An ideal system for his purposes is located on the coast of East Greenland, the site of the Skaergaard Intrusion, a large body of intrusive rocks about 300 cubic kilometers in volume covering an area of 70 square miles. It is one of several that dot the coast, providing a perfect natural laboratory for testing the theoretical predictions of temperature, pressure, and fluid composition in an incipient rift zone. It is well-exposed at the surface through uplift and erosion after first being intruded at deep crustal levels.

"In east Greenland, we have the opportunity to actually walk on an outcrop that corresponds to depths of about 10 kilometers (6 miles) in hydrothermal systems that were associated with the initial rifting of Greenland from mainland Europe about 55 million years ago," he says.

The Skaergaard Intrusion is one of the best studied intrusions for its mineralogy and petrology, although no more than a dozen geologists have ever visited it. Hydrothermally altered minerals and the associated fracture systems were not discovered until 1971, however.

In 1981, Bird and Dennis Norton received a National Science Foundation grant to travel to Greenland and look for fractures. "That was essentially an exploratory expedition to do reconnaissance around and within the intrusion to see if there are fractures, which contain hydrothermal minerals, and is this investigation worth pursuing? The answer to that question is yes, definitely." They found hydrothermal minerals in fractures as closely spaced as one per meter, a number which agrees with the theoretical calculations of rifting in a continental setting.

On this first expedition, Bird and his party discovered just how difficult it is to reach East Greenland even in the summer. "The logistics in trying to get to the Skaergaard is sometimes more difficult

Word processing course available

The Departmental Information Systems Group of CIT has acquired a word processing basic skills and concepts audiovisual course for use at Stanford.

This is a videotape and cassette course acquired from Southwestern Publishing, which teaches how to operate most word processing equipment. It assumes no prior knowledge of word processing. Text processing operations are demonstrated on the equipment of several word processing vendors. After completing the course and about an hour of hands-on experience on any display-based text editor, one should be able to do productive text processing work.

This is a self-paced course which takes about seven hours to complete. Following an introductory videotape explaining word processing, the student moves through six segments of instruction each involving an audiocassette, a learning exercise, a videotape presentation, a skill inventory checking exercise and a summary of each segment. One of the course books is a manual, which then guides one to using any word or text processing system.

To enroll for the course sign up at the Information Desk in Forsythe Hall. Videotape equipment and a study room are provided at Forsythe and student course books are available from Document Sales also at Forsythe. Cost for using these materials is $5 ($2 for students).

Marriage and the young geophysicist...

Women entered the field of geophysics about six years ago, and ever since geophysicists have been marrying each other "like crazy," according to George Thompson, head of the Geophysics Department at Stanford.

Most of these married couples seem enthusiastic about sharing similar professions. "Oh, I think it's great!" Laurel Burns-Newberry, a graduate student at Stanford, says about being involved in the same field as her husband. "I would encourage others to do the same," she says firmly.

Helen Smith (who asked that her real name not be used) says, "If I am stumped on a technical question, I can ask my husband." John Smith adds, "We can understand on the same level." Helen agrees. "We have a lot in common. We can share problems," she says.

Helen works for Amoco while John works for Western Geophysics. They both are located in Houston, Texas.

"We are more likely to find work in the same city which are usually oil cities," Helen says.

She notes other conveniences. "We go to conventions together. It also allows us two circles of friends which allows a broad cross-section of people to talk with in the field," Helen comments.

Related fields

It seems that the most ideal situation is when couples work in related fields but not for the same companies. Tarin Davies, a self-employed independent consultant in hydrogeology, says, "My husband and I are in related fields but not identical. It suits us well."

Peter Davies is a Ph.D. student at Stanford. "For the past two summers I've been a technical assistant for Peter. It's wonderful to have training close enough to his to enable me to be a technical assistant for him," says Tarin.

Mary Lou and Mark Zoback both work for the same company, Geological Survey, but maintain different professional titles.

"Ideally, I wouldn't choose a spouse in the same field," says Mary Lou. "I find it limiting. It's hard to find more for external life. We go to parties and see the same people every time," she comments. To solve this problem, Mary Lou says, "Now we have made a deliberate effort to find friends outside of work."

Mary Lou does see advantages in having her husband working for the same company. Many couples face a dilemma when one spouse is transferred. "A great advantage in working for the same company is that both of us can transfer our jobs. When Mark was transferred to the Bay Area, I was able to transfer my project for Geological Survey, too," Mary Lou comments.

She cites another advantage. "We really appreciate what each other does. If we were in different fields we would not understand what the other was doing."

The Zobacks have experienced the interruption of their personal life due to similar career interests.

"One of the hardest things is writing a paper together. The biggest problem is that you can't get rid of it. You go home and talk about it. You wake up in the morning and you talk about it. I don't recommend it to anyone! But we'll

Greenland...

continued from page 6

than the work we actually do when we get there. It's really a remote area," says Bird.

The coast of Greenland is all but cut off by a thick ice pack, and is accessible for only six to eight weeks around August.

Because of the ice, the earliest Eskimo (or Greenlander) and Viking settlers could not land on the east coast. Eric the Red, the Viking adventurer, did not touch down until he reached the south tip of Greenland after traveling west from Iceland. To this day, the west Greenland coast is more heavily settled than the east coast, which holds only a few small villages.

What makes entry by seagoing vessel possible are the fjords and a phenomenon called catabatic winds. Steep glaciers from the inland ice field produce icebergs in the fjords. The icebergs and the action of tides and coastal currents help break up the pack ice. Also, strong seaward winds are generated by the imbalance between cold, dense air over the ice cap, and warm air over the ocean.

As cold air flows down through the fjords, it expands and heats up. High wind velocities develop and break up the sea ice. In spite of these effects, the southeastern coast between Kap Gustav Holm and Kap Dalton is less explored than the northeastern coast because there are fewer fjords present in the south to generate the winds and the icebergs.

To reach their destination, Bird and his colleagues first flew to Reykjavik. No planes were flying to Greenland that summer due to a telegraph strike, so they had to take a fishing boat across the Danish strait to Angmagssalik, a small fishing village on the east coast.

Geologist rows across an ice-strewn fjord.

A second vessel, an old Norwegian sealing boat called the Furenak carried them to their destination, but it had to travel a circuitous route back toward Iceland to avoid the pack ice before the crew found a channel leading to the field area, Kangerdlugsuag.

The party of six spent about one month there. "We always have to travel with Danish scientists when we do any type of work in Greenland," says Bird.

"They are extremely helpful with the difficult logistical arrangements necessary for any type of research in Greenland. It was a Danish colony for a long time, and they were just given their independence. They have tried to keep it culturally isolated. They want to try to let the Eskimos—the Greenlanders—be Greenlanders."

During the last two weeks of their stay in 1981, they met a group of four Greenland families, 27 people in all, who hunted seals for their livelihood. Later, in the 1982 expedition, Bird's party was the first group they had seen for nearly a year.

They had run out of supplies like sugar, tobacco, and alcohol months ago, and survived by eating seal meat and burning seal oil for fuel.

"They were neat people, really beautiful people," recalls Bird. By the time the expedition had come to a close, the members of the two parties had become good friends.

With the reconnaissance expedition a success, Bird obtained funds for a second expedition to map in some detail the fracture system in the intrusion's lower region. This time, getting there was even more exciting.

Flying north

Bird and his field assistant, Ralph Rogers, currently an assistant professor at the University of Oklahoma, were traveling with a large expedition of 16 people. They were from different institutions and were headed for different spots along the coast. Bird's group had permission to fly to Angmagssalik from Iceland, and to go from there by helicopter to Kangerdlugsuag.

Greenlandair has an absolute monopoly on all flights to, from and within Greenland. During the summer there are several helicopter flights up the east coast. The pilot, however, was reluctant to fly as far north as Bird's field area because of the lack of air support there, and he kept postponing their flight for days at a time.

After three weeks of delay, two scientists in an area called Sodalen near Mikis Fjord and about 20 kms from Bird's area heard of the troubles and cleared a small airstrip for them. A pilot and a Twin Otter aircraft with large balloon tires was hired from Iceland to fly them up the coast.

They were close to their destination, but not before there was another delay. Greenlandair, citing their monopoly on air traffic, refused permission for the flight. Eventually, Bird's party had to have Greenlandair contract for the pilot from Iceland to fly them to Sodalen.

The party left at 11 p.m. with plenty of daylight to spare in the long Arctic summer day. After two reconnaissance passes, the plane landed on a 250 meter (270 yard) never-before used airstrip carrying 900 kilograms (almost 2,000 pounds) including six people. It touched down in less than 200 meters (215 yards), an amazingly accurate landing considering the uncertain conditions.

"We had about 35 days on the outcrop, and we mapped extensively the fracture systems in the lower part of the intrusion, which is called the Layered Series, and found that this fracture system does extend down to the base of the intrusion."

Fracture mapping

To study the fracture system and its hydrothermal minerals requires a combination of cleverness and muscle work.

"We've been trying to develop techniques for fracture mapping," Bird said.

"Initially we go out and do some recon traverses just to establish if there are mappable fractures with hydrothermal minerals in them. If that's the case, then we have to go back and set up a tape, maybe 50 or 100 meters, (55-110 yards) in various spots, and along this tape, we will count every fracture that crosses the tape, measure its orientation, and then take systematic samples and try to observe cross-sutting relationships. This produces a spot map.

"This is also complemented by air photo-mapping, using both stereographic projections and oblique photos to map large scale features. Other times, we get down on our hands and knees and make maps. . . .

It's very much like drawing a detailed picture. This is the only way you can get geometric relationships of fractures in this type of rugged topography."

By mapping the fractures as carefully as they analyze the minerals within, they hope to determine the stress field at the time of rifting, and ultimately, how the rift itself forms and propagates.

"What we're mapping are strains—strains associated with the collapse or failure of a magma chamber. . . . My specialty has to do with how the fluids formed these minerals in the cracks. What are their characteristics in terms of temperature, pressure, and mineral composition. . . . The chemical aspect, my specialty, is very intimately entwined with the mechanics of all the rocks."

Bird's research will continue for at least two more years. He has mapped the lower intrusion, and has funding for one more expedition in the summer of 1984.

—Allan Chen

...when two work in the same field

continued from page 6

probably write more," she sighs.

Tarin Davies says that she foresaw the problems of being in identical fields. "I considered going into engineering geology (her husband's field), but decided not to. One of the major reasons why was because I didn't want us to have identical expertise. It's important for me to have separate expertise for my own individual growth."

Competition is a potential problem for couples in closely related fields and interests. Walter Lynn says, "If there are hard feelings, such as competition or threat, it's not so much because people are in the same position. It's deeper than that, perhaps a personality mismatch."

"My wife is making more money than I am right now. I don't feel threatened. Neither does she. In fact, I hope her salary increases so I'll be able to retire earlier," he adds, grinning.

No competition

Although the Zobacks have worked together, they claim that competition is not a problem. "There was no competition when writing the paper. We see it as a combination of talents," says Mary Lou.

The "Smiths" explain why they do not compete. "I'm an explorationist and deal with client relations. John is a contractor in research. He sells services for companies. In fact, I deal with client relations for my husband's company. We work for each other," Helen says.

Among the couples interviewed, home life values varied extensively. The two couples who have not yet had a child agreed that they would take equal responsibility. "We already talked about a family. We'd split it 50-50. We would both continue work," says Laurel Burns-Newberry.

John Smith also agreed to share responsibility for rearing a child.

"If we do have a child, which we hope to, I would go 50-50." Helen Smith adds, "We would probably take turns every six months."

On the other hand, the other two couples, who have experienced the reality of parenthood, take different approaches. Mary Lou Zoback is the mother of a six-month-old child and works part time. Her husband is in China for three weeks working for Geological Survey.

"I don't mind staying home from work. I planned on going back full time by now, but chose not to," says Mary Lou. "It is a little hard when he comes home from work. I hear about things going on at Geological Survey that I don't even know about because I'm only part time." She says that Mark has agreed, when he returns, to stay home one day a week to spend time with his child.

Peter and Tarin Davies decided on a more traditional alternative to parenthood. "I'm seven months pregnant right now. My first priority is the child so I'll stay home as much as required," says Tarin.

"I will spend less full time at my career than Peter will because of our child. I don't resent it at all," she says sincerely.

"We're both very family oriented. We think it's unfortunate that Peter doesn't have the opportunity to spend half his time with the baby. It's a blessing to be able to spend half my time with my child."

—Linda Kemby

Jayne Dungan dies at age 76

Jayne Dungan, who retired as coordinator of Stanford's Guide Service in 1972, died Wednesday, Nov. 17, in the Hoover Pavilion of Stanford University Hospital at the age of 76.

A memorial service will be held at 3 p.m. Saturday, Nov. 27, at Holy Trinity Episcopal Church, Menlo Park. Instead of flowers, the family prefers contributions to the Stanford University Guide Service fund, c/o Memorial Gifts, 301 Encina Hall.

Dungan, who spent several years as a library assistant in the Hoover Institution before taking over the Guide Service, received her education at Radcliffe and Oxford.

She is survived by her children, Betsy, Jay, and Michael, and three grandchildren.

Research associate posts open

Two research associate or postdoctoral fellow positions at Stanford Magnetic Resonance Laboratory will start in early 1983. Work with new 600 MHz spectrometer and an interdisciplinary team on biological applications of NMR. Must be proficient in NMR spectroscopy, electronics, hardware and software, and probe construction. Rank and salary depend on qualifications.

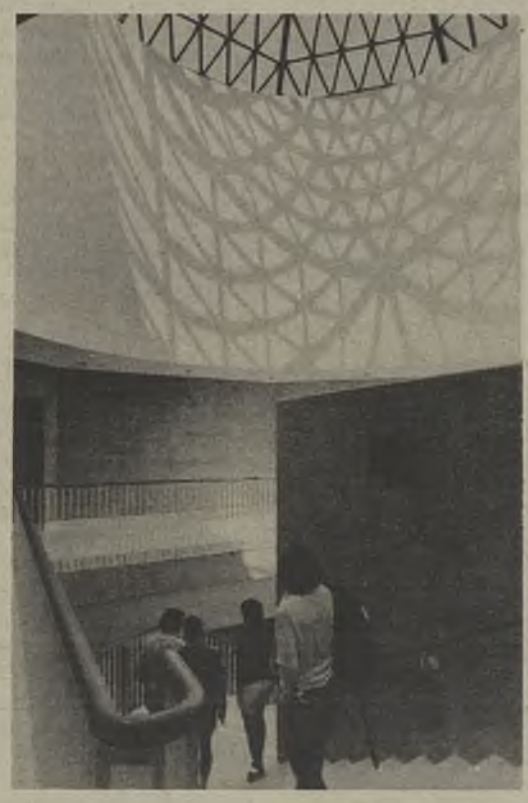
Send inquiries to Dr. Oleg Jardetzky, Stanford Magnetic Resonance Laboratory, Stanford University, Stanford, Calif. 94305, (415) 497-6270.

Stanford is committed to Equal Opportunity through Affirmative Action in Employment; we are especially eager to identify minority persons and women with appropriate qualifications.

Change accelerates, Weber says in annual libraries report

Change is inevitable and necessary. Those who are current participants can influence the direction of change, the rate of change, and the methods of change. As Justice Sandra Day O'Connor reminded us at Commencement: "... There are amazing ways in which the individual can impact on society, even as a volunteer and without reference to any governmental act at all."

The University Libraries have changed as much or more this year than in any other recent year. Considered in its totality, it has been a dynamic experience. Some change has come from internal impetus and some from external, some was long planned and some quite sudden in occurrence, some with foreseen consequences and some with consequences unforeseen—but all stimulating.



Two examples can serve to point up these currents at play. The first is the addition of glass to enclose the center well on the upper floors of the J. Henry Meyer Memorial Library. Due to the size, central location, and encouraging acoustics of this interior space, students over the past fifteen years found it a convenient location to take study breaks, sometimes with puckish motives, sometimes with disturbing consequences. Furniture rearrangements, a white sound system, and efforts at behavioral modification were all tried, but none was deemed as effective as glazing in the well. An undergraduate student on the Academic Council Committee on Libraries urged that it not be postponed until summer, so the job was done at the beginning of Spring Quarter with very salutary effects.

A second instance was the implementation by the Research Libraries Group of a vastly improved network file system for book ordering and cataloging and its unanticipated impact on the Libraries. The system's use was so immediate and heavy throughout the country that computer capacity was exceeded, resulting in poor operating conditions for a good part of this academic year. The new RLIN system was worth waiting for, yet the first, temporary consequences of this change were major perturbations in library purchasing and processing routines as well as in the provision of services to faculty and students.

An organization operates in a specific environment, and it survives and grows through changes in that environment. To do so, it must adapt to pressures, respond to demands, and make the best use of opportunities which present themselves. Adaptation is generally of an incremental nature—within a conceptual framework, an accumulation of minor steps is taken toward the organization's stated goals. The University Libraries have used such statements of goals accompanied by three-year specific objectives as a way of keeping our eyes focused on the general direction being pursued, while forces for change may at times seem to be pushing us to one side or the other of the desired course. At the beginning of this academic year, a new iteration of this goals and objectives document was compiled, aired with faculty and students on the Committee on Libraries, and provided to the University.

It is fortunate that, although this year saw many changes, none of them was overwhelming. Major, radical changes are not only difficult but generally unwise. Information on which to base decisions for change is often less than would be desirable, and accurate predictions about the future are problematic. Personnel are often wedded to prevailing patterns of behavior and can only accommodate a certain pace of change. These patterns are supported not only by formal organizational structure, but also by employee skills and personal relationships developed over extended periods of time. Furthermore, the Libraries' clientele requires a rather stable and dependable service pattern so that they can accomplish their library work without being surprised, frustrated, or required to spend extra time.

Thus, it is well for the faculty and students to be aware that electronic exit control equipment has been added recently in Meyer Library, Cubberley Education Library, and the Engineering Library, with others to follow in the years immediately ahead. It is well for our readers to know that plans are progressing for Stanford to house some of its less-used collections in a specially-designed university of California Library Facility in Richmond, which will be ready for occupancy in the fall of 1982. And it was well that

our readers have experimented this year with the direct use of an on-line catalog in the Engineering Library, Meyer Library and Green Library, which is likely to be the common method of accessing catalog records in a few years.

Even though theory points to the advisability of incrementalism, profound change can occur when some large force affects the organizational infrastructure: for example, a computerized approach to cataloging. Once such a new system is adopted, substantial changes will take place in patterns of behavior, organizational structure, employment criteria, and procedures used by staff in performance of their tasks. These will occur in a ripple effect as personnel adjust their mode of operation to the demands of the new system. While the costs of initiating and implementing such a major system may be high, maintaining an outmoded system may be just as costly. Thus the ability to change is affected by what has gone before, by the strength of argument and planning of current participants, by financial capacities, and by the time of supervisors, department chiefs, and directors to think through the options, gain confidence in the direction being proposed, communicate with their colleagues, develop procedures to implement the new direction, and inform the community served by the fifteen units comprising the Stanford University Libraries. Each decision is grounded in the results of previous decisions, the sum being progress toward a new standard of achievement or a new concept of service.

An example of a change in program that has been emerging in recent years is improved services to the science and technology community through a stronger science department. Fundraising will be undertaken to build up endowment of book funds in the sciences, a weakness of the Libraries for many years.

Another example of programmatic change is the renewed effort to provide collections and services for the social sciences comparable in effectiveness to those currently offered in the sciences and humanities. Studies have shown the need for improvements in collections, more effective bibliographic instruction and faculty contact, and suggest that there may be some unnecessary title duplication between libraries. A major program of collection analysis has been undertaken in social science disciplines in order to gain more precise and accurate identification of collection needs. Reassignment of expert staff and a significant appointment to a vacant position have provided the professional capacity needed to guide and manage the new social science effort. Meetings with faculty in half a dozen departments have helped shape the direction that should be pursued, and a review of book funds in support of those needs will lead to revised allocations. A sophisticated title-overlap study will be high on the agenda of the University Library Council subcommittee that oversees collection coordination. It is hoped that appropriate enhancement of social science book funds will follow that of the sciences and technology as the next major effort to convey to our friends the message that endowment of the collection acquisition program is a *sine qua non* for maintaining the strength of a first-rate teaching and research library in straitened financial times.

Looking at the internal circumstance of the Libraries, there are forces for change within the library itself as well as from the University at large. A major example this year is the Library program and Process Study, a year-long effort in organizational development. Its origins were in discussion with University officers in February 1981, and its intent was to seek strategies enabling the library to operate and manage itself more effectively within the prospective context of diminishing resources during this decade. The study in the Libraries looked at the quality of the work environment, the style of communication processes and decision-making, decentralization of management and delegation of authority, methods of operating in a physically decentralized system, and interaction between the academic and the business parts within the libraries as well as those same relationships in the University itself. A survey of all library staff was undertaken in the summer of 1981 to gather information on attitudes, working conditions, leadership, peer relationships, job satisfaction, and expectations. Led by a Steering Committee comprised of University and Library managers, this study reflects the importance of interrelationships between the Libraries and the University. The results of the survey and of the Program and Process Study will effect change in the Libraries which can be beneficial to staff and to operations as experienced by members of the community. While some of the library staff would press for radical change in structure, policy, or procedure, others would say that the very duration of this project illustrates that major change requires wide participation, much deliberation, and careful choices so that forward-looking moves are taken with long-term beneficial results.

Some change is easy to comprehend. This year, ground was broken for the Braun Music Center, of which one-third will be devoted to the new Music Library. A naming donor for the Music Library is being sought. Renovation of the Green Library Staff Room was completed. A Visiting Scholars' Reading Room is operational, and fundraising is under way for a more complete facility to meet the needs of those visiting scholars who cannot be accommodated in faculty studies. Early American Imprints in a large microform publication are being analyzed under a federal grant and made available nationwide through the RLIN system.

Change does not always require financial adjustment or increased budgets. Yet there are certainly consequences of budgetary change, and the one percent cut in the budget for 1982-83 will have its impact. Although library book funds were hit especially hard, concern for the continued strength of the book funds is shared with many University officers. The consequences of a change here can affect the quality of the Libraries adversely or beneficially for decades to come.

Although change is welcomed, it must be carefully monitored. The Libraries need and welcome the comments, suggestions and perceptions of faculty and students throughout the University as well as of University officers who may have a broader view and other perspectives that can benefit the shaping of change in the University Libraries for the years ahead.—**David C. Weber**

Stanford graduate student goes to China with Big Bird

Big Bird, the world-famous Sesame Streeter, has helped bring Milton Chen to Stanford for his Ph.D. studies.

Big Bird even took Chen to China, out of which trip will come a 90-minute NBC special next spring.

How a kid born in Negaunee, Mich. got to these places has a lot to do with chance, but Chen's seizing the main chance points up the importance of being ready—and able. Next June he will complete course work toward his Ph.D. in communication research, in which he is studying the impact of technology on education, especially on children.

"I'm a believer in fate and good fortune," says Chen. "Planning one's life doesn't often allow for more serendipitous things."

The key element in all of this was simple: a colleague in audience research at Children's Television Workshop (CTW) in New York where Chen had a summer job while attending Harvard left to get married. Among his Harvard courses were some in communication research, specifically formative testing of audiences.

When the research job was offered to Chen, he was ready, and he eventually became research director for a CTW science show, "3-2-1 Contact." He also was involved with the better known CTW shows for children, "Sesame Street" and "The Electric Company."

Chen's parents came to the United States in the 1940s from China. His father studied mining engineering at Penn State University and has worked for nearly 30 years as an engineer since that time. (The son was named after the then president of Penn State, Milton Eisenhower.)

Milton Chen

"I'd planned to be a civil rights lawyer, and was admitted to Harvard Law School," says Chen. "But after one year there, I found I didn't enjoy the law, and furthermore, wasn't very good at it. I got a summer job writing press material in 1976 at CTW, and a permanent job came later that summer when my colleague left to be married."

His work involved testing segments of the shows in advance on children's audiences, to enable writers and producers to learn how to improve the productions. Although he didn't consider a Ph.D. program at the time, the research proved to be good preparation for his later academic work at Stanford.

When he decided to continue his education, he applied to both the Yale School of Organization and Management and to Stanford, and was admitted to both.

He chose Stanford "because the people and courses provided the broad scope and flexibility I wanted. I already was familiar with the mass media work of Profs. Wilbur Schramm (emeritus director of Stanford's Institute for Communication Research) and Donald Roberts."

A few years before Chen began his studies at Stanford, and soon after China reopened its relationships with the rest of the world, several producers from China Central Television (CCTV) visited the New York headquarters of Sesame Street.

"They knew about CTW and were quite interested in what we were doing," says Chen. "They said it was similar to their efforts to use TV to educate."

Then, in 1980, Chen was one of the four CTW people who went to China to return the visit with CCTV, and to propose, among other projects, a two-country production: "Big Bird in China."

The story tells of Big Bird's quest to meet The Phoenix, the mythical Empress bird symbolizing good fortune to the Chinese.

"To Big Bird, she also represented something of a distant relative he wanted to track down," says Chen.

Agreement was reached, the special ultimately was sold to NBC, and intense preparation began, both in New York and Beijing.

In China, Madame Xu Jiacha, head of children's programs for CCTV, began a talent hunt for a young Chinese girl who would be Big Bird's guide to China. After screening several hundred girls, she found her star, a six-year-old named Ouyang Lianzi, daughter of a journalist and an engineer.

"She had 64 English lines and her weeks of rehearsal with her parents paid off; she did beautifully," says Chen.

CCTV's part of the coproduction was to provide all local facilities, Chinese actors and actresses, and housing and travel.

Last May, a crew of 23 Americans spent three intense weeks taping in Guilin, Suzhou and Beijing.

While at Stanford, Chen has spent 10 months studying intensive Chinese, and his knowledge during the taping was invaluable, because very few of the Chinese and American participants involved in the production spoke the other's language. At the conclusion of the taping, with the aid of the Department of Communication and the US-China Relations Program, he spent another six weeks at the Beijing Broadcasting Institute, exchanging information on television production.

Present plans are for "Big Bird in China" to be shown in the United States sometime this spring, and with Chinese dubbing, in China about the same time.

Along with his classroom work, Chen is a research assistant with the new Study of Stanford and the Schools' panel on educational technology. —Harry Press

Chemist van Tamelen develops one-step method for steroid production

Stanford chemists have solved a major mystery in the natural production of steriods and have developed the simplest possible method of steroid production in laboratories.

"It will not be possible to devise a simpler method," said Eugene E. van Tamelen, professor of chemistry and head of the research team.

Steroids are fat-like substances that include many of the hormones, including sex hormones. Their presence in organisms is vital to life.

The Stanford work may permit researchers—and perhaps pharmaceutical firms—to produce specially-altered steroids in a one-step method without the use of enzymes.

Basically the research involves a substance called lanosterol from which all steroids are produced.

Scientists had known that lanosterol came from a very simple chemical called squalene. They had a problem explaining how the transformation of squalene into lanosterol came about because it seemed to defy the known laws of organic chemistry, van Tamelen says.

Many complex organic molecules consist of rings of atoms containing the element carbon. Lanosterol contains four such rings, three of them holding six carbon atoms, one of them with just five.

Too many rings

According to chemists' understanding of such things, one of these six-carbon rings should have only five carbon atoms; no matter how they worked on the problem chemists could not explain the extra carbon atom.

The odd ring was the third ring produced in the chemical reaction, the C ring.

"Squalene is a comparatively simple but big molecule. It has 30 carbon atoms," van Tamelen says. "It's got no rings; it's very monotonous. By the time it's converted to lanosterol you've got a very complicated molecule with many geometrical or structural possibilities in terms of spatial arrangement."

In work reported in the current issue of the *Journal of the American Chemical Society*, the Stanford researchers found that the transformation from squalene to lanosterol works this way:

Research done at Stanford many years ago showed that the first step consists of squalene picking up an oxygen atom—it becomes oxidized. This triggers the "cyclization" of the chemical.

"A lot's going on during the cyclization process," van Tamelen says, "and we didn't know exactly what was happening. Is it all going on at once? Is it happening in stages? What do the intermediates look like? How does nature control certain parts of the overall reaction?"

It was found that the reaction does, indeed, happen in stages, although the stages last only a small fraction of a second.

For a short time each ring is frozen in place.

Van Tamelen found that after the formation of the second ring two of the carbon atoms are held very close together for a moment, and are therefore forced to react to each other.

The result is a six-carbon ring where normally chemists would expect only a five. This alters the rest of the reaction and the formation of the last ring. The result is lanosterol.

Eugene van Tamelen

"There are some ramifications which are very interesting.

"What we wanted to do was utilize, as closely as possible, the reactions that nature employs, translate them into laboratory test tube reactions where you don't use an enzyme, and try to build up steroids by such methods," van Tamelen says.

"If you want to make some steroids that are a little unusual, structural modifications or anything like that, then you can't use an enzyme. It's nice to use completely artificial methods. . . to see what you can do in a laboratory, or a pilot plant, or maybe in a factor. Who knows?

"It is translating biochemistry as well as you can, as closely as you can, into industrial or normal organic chemistry.

"It turns out that if you make a few changes you can employ reactions that are similar to the biosynthesis process and actually make quite complicated steroids.

"There cannot be a shorter method. The reason I'm saying this is because it's one step. It can't be shorter than that."

The process does not produce a great deal of steroid, but in one approach the Stanford researchers have been able to increase production to around 50 percent, and hope to do even better.

The work is supported by the National Institutes of Health. Van Tamelen's coworkers included Eric J. Leopold, a research associate, and former postdoctoral students Stuart A. Marson and Hans R. Waespe. —Joel Shurkin

Bellamy to speak as woman at top

Carol Bellamy, council president of New York City, will speak at Stanford Univesity in "The Women at the Top" lecture series sponsored by the Center for Research on Women.

Her free public talk will be at 8 p.m. Monday, Nov. 29, in Annenberg Auditorium. She replaces Congresswoman Pat Schroeder, who had to cancel her scheduled appearance.

The first woman to hold citywide office in New York, Bellamy is serving her second four-year term as council president, the second highest office in city government. She has been a lawyer since 1968, specializing in corporate finance and securities law with Cravath, Swaine and Moore. Earlier, she was elected to the State Senate.

Billing complaints meet freshened response in Clinics

The Stanford Faculty Practice Program is getting record numbers of patient complaints, and that's just fine—for awhile—with the program's new executive director.

"What's new and refreshing is that not only do we have personnel available to listen, but that we are able to resolve many of the difficulties and get rid of a backlog of problems," explained Donald Tower, who started as director of the faculty's group practice in September.

Nerve center for the newly zealous effort to straighten out billing complaints, Tower said, is a recently created patient relations office.

Ginger Hummer, who started work the same week as Tower, heads up a staff whose job is to resolve billing questions.

Some of the past problems, Hummer said, were bizarre:

"For example, there was really no system for taking care of refunds.

"What would happen is that no action would be taken until repeated complaints were made, and then everyone would sort of rally behind the patient to try and help him.

"Then very often a refund would be made twice. That meant that the patient would end up owing us money again. Since the accounts were old, they would sometimes be turned over to a collection agency.

"Can you imagine the anger of a patient who finally received a refund after several months of frustration, only to be sought after by a collection agency?

"Our new philosophy is that we are patient advocates. Our goal is to improve our relationship with our existing patients by eliminating the need for them to contact us. When they do call, however, our goal is to attempt to give them prompt, courteous, professional service.

"Stanford has the best medical care available," she continued, "but patients have been scared away by our billing reputation. We want to get the word out that those days are gone. We are establishing a billing system as good as the quality of our medical services."

"Our goal is to improve our relationship with our existing patients by eliminating the need for them to contact us."

—Ginger Hummer

The word seems to be spreading fast. Hummer said her office gets 200-350 phone calls each day, along with 100-150 pieces of mail, and many walk-in visits from patients. The office hours have been expanded to 8 a.m.-4:30 p.m. Monday through Friday to accommodate the increased workload, and additional phone lines are available for callers.

Currently as many as eight persons are on duty simultaneously to help callers, although Hummer and Tower both expect that the number of people assigned to this task can be cut back soon.

"When I came in September we had a backlog of 1,500 complaints," she said. "Now we have a backlog of 25. We respond to all complaints within 24 hours."

Battling the dangers of herpes in infants and fetuses

Infants born to mothers who never have had herpes simplex run a greater risk of being harmed by the disease than the children of women who have had recurrent bouts of the infection, according to a researcher at the Stanford University Medical School.

"The woman who has herpes is in good shape if she knows she has it," said Dr. Anne Yeager, associate professor of pediatrics at Stanford. "The problem comes for the mother who doesn't know she has it."

Yeager described the dangers of herpes simplex and cytomegalovirus to fetuses and infants Tuesday evening, Nov. 16, in the second of a series of public "Progress in Medicine" lectures on the herpes viruses.

Women who carry the virus chronically have antibodies in their blood which they pass on to a developing fetus as a protective cloak of immunity, Yeager said. But if a woman never has contracted herpes, or has contracted it recently, her infant is born without antibodies to the virus and, for the first few weeks of life, is vulnerable to an infection that can severely damage its vital organs such as the brain, liver and adrenal glands.

More than annoyance

The two herpes simplex viruses (labeled HSV-I and HSV-II) that afflict at least 15 million Americans with recurrent cold sores and genital infections are annoying but non-life-threatening infections for most adults. HSV-I is responsible for most oral infections while HSV-II is most often linked to recurring genital blisters, though both viruses have the ability to attack mucous membrane anywhere in the body.

Yeager emphasized that both viruses are equally dangerous to infants in the first weeks of life and the mother is not the only source of infection. Grandparents or friends with open cold sores caused by herpes can occasionally transmit the virus through a kiss to the infant.

"Adults and children who have herpes and are in contact with an infant whose mother has never had herpes, and therefore has not passed on immunity to her infant, can give the baby the infection," Yeager said.

A decade ago obstetricians routinely delivered infants by Caesarean section if mothers had experienced an active episode of genital herpes sores within the last trimester of pregnancy. Once the sack of amniotic fluid that surrounds the developing infant during pregnancy ruptures in the hours before delivery, the child takes fluid into his lungs, along with any viruses present in his mother's birth canal. Via Caesarean section, physicians can remove the baby directly from the uterus before the sack is ruptured.

Day of delivery

More recent studies have shown that men and women with herpes usually only are able to transmit the virus for a few days when open sores are present, so women with herpes now have routine vaginal deliveries unless they have an outbreak of sores the day of the delivery. Recurrent blisters last an average of nine days, and contagious virus cells are shed only during the first four days.

Yeager quoted studies from her own and other laboratories that indicate the group of susceptible infants may be even narrower. She cited a study conducted at Emory University several years ago which showed that three of six infants delivered vaginally who contracted herpes at birth all had mothers whose tissue cultures showed that they were shedding active virus the day of delivery. The three women were experiencing their first outbreak of the disease.

This study is frequently quoted, Yeager said, as evidence that 50 percent of infants exposed to herpes at birth will contract the infection.

"Less quoted is the fact that, in the same study, of the 23 women who had

School staff meet Purpura in first forum of its kind

Stanford University Medical School's future is not "doomed" by external economic trends as some might think, Dean Dominick Purpura last week reassured a roomful of administrative and support staff.

While expense reductions and budget restrictions throughout the School are becoming increasingly necessary as programs like Medi-Cal grow financially tighter, he said, "We're not on a collision course, and things will get better."

A creative approach will be needed during the next few years, he said, for the Medical Center to maintain a competitive edge. Examples of this are the Hospital Modernization Plan and the Boswell Building Renovation Project.

Purpura's talk, "The Medical School Today: Learning to and Loving to Live with Less" was the first Medical School Staff Forum, a new series for administrative and support staff launched by the Human Resources Group (HRG) of the Medical School.

"This is the first time we've done anything like this for this particular group of employees," said HRG manager Rosemary Hornby. "They're the ones who maintain continuity for the Medical School. We wanted them to have more of a chance to see where the School is going and how they fit into the scheme."

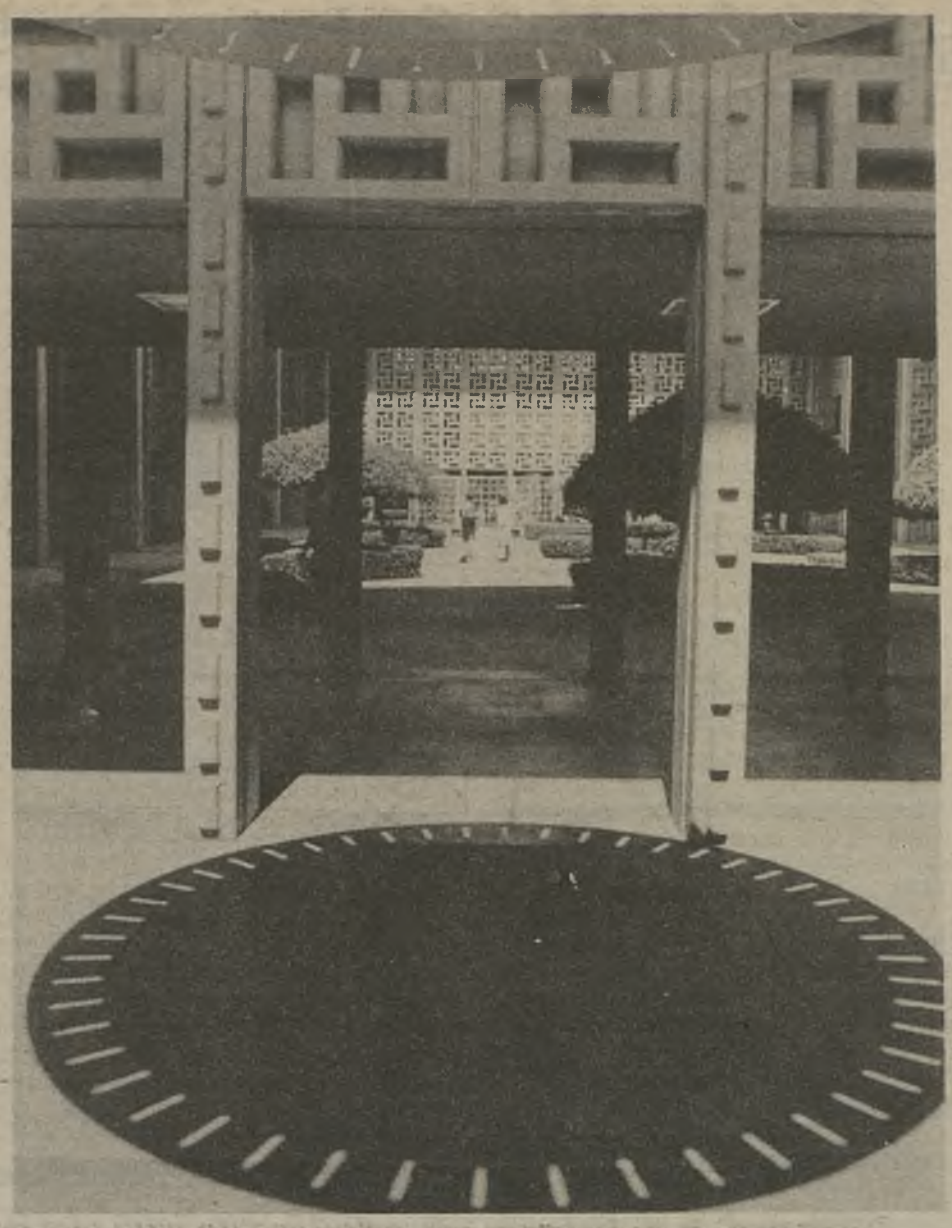
Hornby said she hopes to have administrative and support staff help plan forums in the future, "so they can decide who they want to hear from." She said she hopes anyone with an idea will let her know.

The Staff Forums are just one example of several new activities being planned by HRG, said Hornby, representing a change or additional direction for the group.

"This office has always reviewed and approved personnel transactions in the Medical School and served as a resource for departmental staff," she explained.

"Now we're being asked to develop programs for staff to help them enhance working relationships, develop skills, and bring them into closer contact with the University and the School.

"All this is fun, and long overdue," said Hornby.



Activities being planned include a special quarterly orientation program for new Medical School employees; and Medical School staff recognition/reunion events for employees with long service.

"We want HRG to be more of a resource center for staff," said Hornby. "We post applicable activities, and now we have information on file regarding area child care, amusement and recreation, and other concerns."

Hornby sees much significance in HRG's relocation last February, out of the Dean's office and Hospital basement, into new headquarters in room M118.

"All of the HRG staff members are together now, in our own office. We're physically an entity, so we're recognized as a functional unit. And we've organized ourselves so that we're able to do all these new things on top of the personnel matters we still handle."

A Staff Activity Advisory Group, said Hornby, will be meeting with members of HRG to plan and advise on future programs. "I really want input from the people these programs are designed *for*," Hornby stressed. —Lisa Ames

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MONDAY, NOVEMBER 29

Dept. of Emergency Services: Advanced Cardiac Life Support Provider Recertification Course. For registration information, call 497-7907.

Dept. of Gynecology and Obstetrics REI Conference: "Menstrual Cycle"—Dr. Alan Shapiro. 8 a.m., A336.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Sensorineural Hearing Loss"—Dr. F. Blair Simmons. 7:30 a.m., R117.

TUESDAY, NOVEMBER 30

Dept. of Dermatology Grand Rounds: "Selected Topics in Contact Dermatitis"—Dr. Alexander Fisher. 10 a.m., Dermatology Library, R136.

Depts. of Pathology, Medical Microbiology, Medicine/Immunology, and Genetics Seminar: "Early Development of the T Cell Repertoire: *In Vivo* Treatment of Neonatal Mice with Anti-I-A Antibodies Interferes with Differentiation of I-Region Restricted T Cells But Not K/D Region Restricted T Cells"—Ada M. Kruisbeek, Ph.D. (NIH). 4:15 p.m., 3rd floor conference room, Fairchild Building.

WEDNESDAY, DECEMBER 1

Lane Medical Library Booksale. Proceeds go to new library acquisitions. 8 a.m. till noon—$2; 12:30 till 4 p.m.—$1. Rare books and special items individually priced. Fairchild Auditorium lobby.

Dept. of Neurology Grand Rounds: "Multiple Sclerosis: Current Concepts in Diagnosis and Treatment"—Dr. Larry Steinman. 5 till 6 p.m., C364.

Depts. of Pathology, Medical Microbiology, Medicine/Immunology, and Genetics Seminar: "Development of the Cytotoxic T Cell Lineage Inside and Outside the Thymus"—Dr. Ken Shortment. 3:15 p.m., 3rd floor conference room, Fairchild Bldg.

THURSDAY, DECEMBER 2

Dept. of Medicine Grand Rounds: "Neurosyphilis"—Dr. Robert Cutler. 8:30 a.m., Fairchild Auditorium.

DECEMBER 6 AND 7

Nursing Educational Services: Pediatric Critical Care Course, Level I. Continuing education credit available. Registration deadline is Nov. 29 and fees are required. For further information, call 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Hoffman named one of 1983's Hartford Fellows

Dr. Brian Hoffman, assistant professor of medicine, has been named one of twelve 1983 John A. and George L. Hartford Fellows by the Hartford Foundation in New York City.

Each Fellow will receive $105,000 over a three-year period as support for the early stages of his medical research career, as well as a stipend paid to the sponsoring institution for research expenses. Each Fellow is a young physician beginning on a faculty track in a U.S. medical school who plans to pursue a career in medical research.

Hoffman is interested in the mechanisms by which catecholamines, such as adrenalin, activate cells. He is particularly interested in the inhibition of the enzyme adenylate cyclase. His fellowship support will begin in July, 1983.

The 1983 Hartford Fellows are the fourth class of Fellows to be supported by the Hartford Foundation since the program was established in 1979. The objective of the program is to encourage promising and highly qualified young physicians to pursue medical research careers.

Twelve Fellows are selected annually through a national competition. This year, 94 individuals were nominated by 62 American medical and research institutions. The Fellows were selected by an advisory committee of prominent medical researchers.

In addition to the Fellowship program, The John A. Hartford Foundation makes grants to stimulate health care payment system reform and to promote efficient energy use. In 1981, the Foundation gave more than $10 million to projects in these three areas.

Medical Faculty Openings

Stanford University is an affirmative action employer and welcomes nominations of women and minority group members and applications from them.

The department of genetics at Stanford University is seeking an assistant professor with scientific interests in the areas of human genetics (for example, cytogenetics, human biochemical genetics); or cellular genetics (particularly chromosome structure and function). The position will be full-time, involving teaching and independent research.

Applicants should send curriculum vitae, bibliography and names of three referees to: Dr. Stanley N. Cohen, chairman, Department of Genetics, Stanford University Medical Center, Stanford, California 94305.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Clinics billing revamped. . .

continued from page 10

Hummer's official title is assistant director of the FPP for patient relations, one of five assistant directors. She is part of a general administrative reorganization of the program that accompanied Tower's arrival.

Other assistant directors include Vera Waechter, R.N., who has served for many years as manager of patient services for the outpatient clinics, now under the auspices of the FPP. With her new title as assistant FPP director for the clinics comes broadened responsibilities for supervising the outpatient care arm of the FPP, Tower said.

Mike Worlund is assistant director in charge of patient accounts, directing a billing staff of 59 persons. Jane Duperrault is in charge of finance, while Noel Tebo, formerly of El Camino Hospital in Mountain View, is assistant director for data systems.

Until Tower arrived, the Clinics were administered separately from the FPP, and until January 1981 they were under the jurisdiction of the Hospital. The more than 80 separate outpatient clinics are staffed by 240 full-time medical faculty members.

The FPP was under the direction of an associate dean for administration, who supervised an FPP controller, a position which has been eliminiated.

As before, an executive committee, consisting of the dean of the Medical School, department chairmen and two at-large physician members, oversee the FPP, including distribution of the approximately $36 million in revenues to the academic departments represented by the membership.

"For the first time we have a management team that meets and functions together," said Hummer.

Tower said he was pleased with the restructuring and proud of his new staffers. And he reemphasized the role that Hummer and patient relations must play.

Besides one-to-one problem-solving, both Tower and Hummer see the patient relation function as a chance to make long-range improvements in procedures.

"My job really is to look for trends, not just respond to the loudest complaints," said Hummer. "For example, if someone has a problem, I investigate on the basis that other people may have encountered the same difficulty, and that a change in the system might be needed."

Changes are being made in the way services are written on bills, so that insurance companies will recognize clearly that the service the Clinics provided was one they ordinarily reimburse.

Policies, including due dates for payment of bills, are clearly spelled out, so patients will know what is expected of them.

". . .We are establishing a billing system as good as the quality of our medical services."

"For example, we don't bill outpatient insurance, so it's important that patients know that so that they will bill the company. This will very soon be communicated on the bill," said Hummer.

She added that just about the most important job for her staff is patient and staff education of Clinics policies.

"If the patients just know what to expect when they come here, that usually solves most of the problems," she said. The office is preparing handbooks and handouts explaining Clinics policy. All staff, from nurses to administrators to physicians, are also being informed so they too will be able to answer inquiries their patients may have.

The patient relations office is now located at 525 University Ave., Palo Alto, but will soon be moving closer to the Clinics. Underground, validated parking is available there. The phone number is 328-6138.

—Shirley Kraus and Mike Goodkind

Sheldon King

King to meet staff over lunch

A new program to begin in December is intended to expand communication between Sheldon King, executive vice president and director of the Hospital, and SUH employees.

King will be inviting small groups of long-term employees for informal lunches from noon to 1:30 p.m. in room C200. Luncheons will be held monthly, with a different group of employees each time.

Employees will be chosen by tenure, and will be sent personal invitations. Copies will be sent to department heads with the request that time off be arranged appropriately.

"I see this as an excellent opportunity for me to get to know some of our employees, share information with them on the programs going on at the Hospital, and listen to their creative ideas and suggestions," King stated.

He added that plans are also being formulated for quarterly luncheon meetings with small groups of supervisors, to begin in February.

Eagerly awaiting signals & signs of life in space

Is there intelligent life on other planets?

Dr. John Billingham thinks there is, and as chief of the Extraterrestrial Research Division at NASA Ames Research Center, he is leading the efforts to verify his belief.

Billingham intrigued Medical School alumni with his ideas as keynote speaker at their semi-annual meeting Nov. 19.

Research is being conducted on the premise that like Earth, there are other planets suitable for life, Billingham explained. Once life is introduced, it is likely to go through evolutionary stages similar to Earth's. Darwinism—evolution and survival of the fittest—most likely occurs any time life exists, he said.

The most feasible way to detect life on other planets, Billingham explained, is to pick up a signal. Researchers are developing a "multi-channel system analyzer" with which to do this.

Because they don't know what frequency the signal would be on, they need as many channels as possible. The signal would be picked up by the analyzer, and reflected off a big "dish." A prototype of an analyzer with 75,000 channels is being built at Stanford, and will be tested for the first time in the spring.

The "proper machine," Billingham said, will have from 10-100 million channels. He expects it to be built in about seven years.

The oft-asked question, Billingham said, is why it matters if other life exists. "We know very little about extraterrestrial civilizations. What we do know, however, is that they are much older than our civilization. Thus, in their evolutionary process they've gone through the stage we are going through now.

"If we could just detect a signal, we'd know they've successfully survived, and that we will be able to do so also," he said.

—Shirley Kraus

For infants with herpes or CMV, timeliness of treatment is crucial. . .

continued from page 10

experienced recurrent infections (as opposed to primary infections) and were virus positive on the day of delivery, only one baby became infected."

Yeager has since studied 204 women who had herpes sometime during their pregnancy, and none of the babies have developed the severe symptoms of a herpes infection. Apparently these infants were "protected" by antibodies they received from their mothers, Yeager said.

Though the remote possibility of "silent shedding"—transmitting the virus when no sores are present—exists, even this process could be detected through a tissue culture or blood test on the day of delivery. "We think eventually that it's not going to be so helpful to culture throughout the pregnancy, but perhaps only on the day of delivery to detect the virus," Yeager said. Infants who have definitely been exposed to active virus can then be watched for signs of disease and quickly treated with a battery of newly developed antiviral drugs.

"If the virus is suspected in babies, and the infants are offered antiviral therapy within three days of the first sign of illness, as a general rule they do very well," Yeager said. Studies are currently under way at Stanford and other research centers to determine whether the antiviral drug acyclovir or adenine arabinoside is more effective in treating neonate infections.

"The thing to remember is that only half of these babies have skin lesions. If you wait for the skin lesions to make the diagnosis, you're going to miss half the cases."

If a baby suddenly becomes lethargic or develops an enlarged liver or spleen and shows a sudden drop in platelets for no apparent reason, but doesn't have a bacterial infection, it probably has herpes, Yeager said. Premature infants are especially vulnerable to the disease and timeliness of treatment is crucial for these children.

Cytomegalovirus (called CMV) is a less famous member of the herpes virus family, but "overall may be of more importance to the average parent than herpes simplex," Yeager said. The virus is a threat because 50 percent of American women have never been exposed to the virus, so can't transmit immunity to their infants.

CMV can be transmitted through blood transfusion or through other body fluids. Yeager and her Stanford colleagues developed a screening test for donated blood in 1977 that has eliminated transfusion-acquired infections in vulnerable premature infants. Still, studies indicate that 15 percent of all pregnant women shed CMV virus sometime during their pregnancy, and can infect the developing infant.

"If you wait for the skin lesions to make the diagnosis, you're going to miss half the cases."
—Anne Yeager

"In addition to the one in every hundred infants who are born with the infection, five in a hundred will acquire it within six weeks of age," Yeager said. This figure compares to the one in 10,000 who develop defects from a congenital rubella infection acquired in the first trimester of pregnancy.

While effects of the infection can range from slightly stunted growth to mental retardation, liver damage, and even death in some infants, the most common effect of CMV is deafness.

"It is especially important that these babies be identified early because there's good data that indicates that their hearing actually gets worse between one and two years of age," said the scientist.

If the babies can be diagnosed early, they can often be treated successfully. "One out of every 100 American babies is born with this problem," Yeager said. "It is a major health hazard."

—Deborah Franklin

Franklin, Johnsen call expunging of criminal records ineffective, costly

Expunging criminal records is "ineffective" and entails high moral and legal costs to society, two Stanford Law School scholars declare.

Prof. Marc A. Franklin and Diane M. Johnsen, a 1982 Law School graduate now serving as law clerk with the Ninth Circuit Court of Appeals, detail their views in the current issue of *The Stanford Lawyer* and in the *Hofstra Law Review*.

While providing "little real benefit" to convicts, expungement statutes "foster dishonesty, limit access to judicial records, and threaten First Amendment rights of expression," they declare.

Legislators should consider "less offensive" ways of helping convicts after their release from prison, ranging from wage subsidies, tax incentives and halfway houses to civil rights acts, they suggest.

In those states which permit the expunging of criminal records, this can only be done several years after the convict is released from incarceration. It is therefore "totally ineffective" in eliminating discrimination against presumably rehabilitated convicts, reducing the chances they will return to criminal activity, or aiding rehabilitation for their own sake.

"The records are shielded from the public too late to help the convict find the initial job, credit or housing that will prevent a return to crime," they explain.

Some states, including Kansas, Massachusetts, and New Jersey, require officials to lie about the existence of criminal records that have been properly expunged. Others, including Kansas and Nevada, allow convicts with expunged records to deny the records exist.

Massachusetts and Utah are among the states which prohibit employers from inquiring about any criminal record that has been properly expunged.

The net effect is "tremendous social costs in dishonesty and secrecy," Franklin and Johnsen believe.

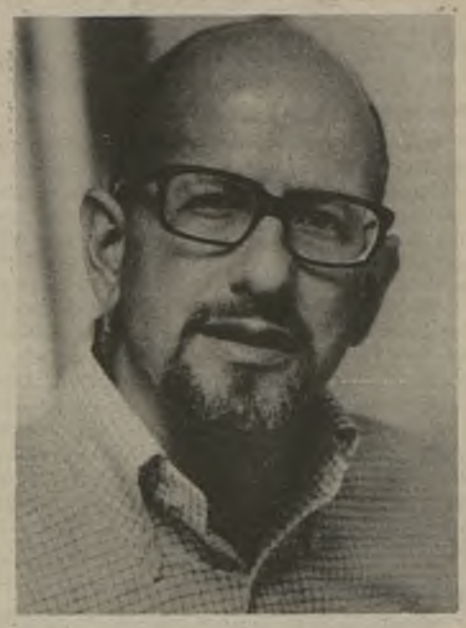
Even when records to be expunged are specified in detail, entries on police blotters are not erased or sealed, nor are entries on appellate court dockets outside the jurisdiction of the expunging court.

Unofficial sources, such as news accounts and the memories of those who witnessed or otherwise knew of the crime, the trial, and the sentencing, also endure.

"Criminal trials constitutionally may not be closed as a matter of course," they note, citing the Sixth Amendment and *Richmond Newspapers Inc. v. Virginia*. "It is inconceivable that the public would stand for the broad speech and press restrictions that would be necessary to seal the other 'unofficial' sources of criminal record information. . . .

"Our tradition of public criminal trials of adults suggests a long-perceived value in the openness of the criminal justice process. . . .

"Expungement's dishonesty. . .handicaps society by preventing it from confronting and clarifying its own attitudes about convicts and their reentry into society.



"When the public is deceived by the concealment of criminal records or by lies about their existence, it is deprived of the opportunity to learn to accept convicts, particularly those who have rehabilitated themselves. Indeed, it is encouraged to think it appropriate to look askance at those whose conviction records are available.

"It is questionable whether the full implications of expungement statutes, whose goal is to rewrite history, were ever made known to voters."

Some states, like New Jersey, infringe First Amendment freedoms by prohibiting "any person" from divulging information contained in expunged records, they note. Several court decisions and the First Amendment bar punishment "for publication of accurate information about once-public official records, whether or not those records are now open to public view," they declare.

Employers, creditors and others barred from criminal information about applicants may simply discriminate against groups that have, or are thought to have, disproportionately high conviction rates.

Expungement statutes make criminal records less available for research, thus depriving the public of knowledge about the criminal justice system and its participants. They may also conflict with expression rights guaranteed by state constitutions.

Marc Franklin

Franklin is the Frederick I. Richman professor of law at Stanford. Before coming to Law School, Johnsen was a reporter for the *Arizona Daily Star* in Tucson. She now is law clerk for Judge Ben C. Duniway in the Ninth Circuit Court of Appeals.

Ph.D. oral exams

Peter Coutts Hill condominiums

Stanford University is accepting applications now for rental of the new Peter Coutts Hill Condominiums.

Rental units will be available in December, 1982. Rental agreements, are month-to-month.

Preference in rentals will be given to members of the Stanford community (faculty, staff, students, etc.) and its affiliates. Families with children are welcome.

Floor plans of the various unit types and rental applications are available from the Peter Coutts Hills rental office, 138 Peter Coutts Circle, Stanford, Calif. 94305; (415) 493-1471.

The unfurnished average rents for the various types are as follows:

A-1	(2br/2ba)	$930
A-2	(2br/2ba/study)	$1,010
A-3	(2br/2ba/study)	$930 (handicapped unit)
B	(2br/2ba/study)	$985
C-1	(3br/3ba)	$1,095
C-2	(3br/3ba/study)	$1,200
D	(3br/3½ba/study)	$1,260

These are average monthly rents. The actual rent on any particular unit may vary slightly according to unit location. Additional rent of $50 per month will be charged for each unrelated adult in excess of one per unit.

GSA: Faculty underestimate time needed in venture firms

Following is the text of a Graduate Student Association Committee report on faculty-industry relations written by chemical engineering graduate student William J. Smith.

Summary

During the last decade increasing numbers of University faculty have assumed equity, consulting or managerial positions in industrial ventures closely related to their research fields. When a faculty member assumes entrepreneurial responsibilities, his or her new role may both support and detract from the University's principal missions of teaching, research and public service.

To aid the University in reviewing and developing regulations promoting the beneficial aspects of these relations between faculty, students and industry, this report presents several policy recommendations based on the experiences, opinions and observations of several students.

Some of the students who contributed information to this report either are entrepreneurs themselves, or have advisers who are entrepreneurs and speak from personal experience. All are convinced that the University should conduct a comprehensive review of equity and managerial participation by faculty in for-profit ventures.

Student Experiences

Undergraduates, graduate students and post-docs have had mixed experiences with faculty members who have combined the roles of entrepreneur, researcher and educator. Students value the additional grant support for campus-based research, the access to industrial personnel and laboratories, the opportunity for consulting while enrolled and the job opportunities on graduation which arise from close faculty-industry relations.

At least 10 undergraduates, graduates, and post-docs, on the other hand, have reported experiences to the University Ombudsman or to the Dean of Graduate Studies within the last year where they believe conflicts between their adviser, the researcher and educator, and their adviser, the entrepreneur, have interfered with their education and training.

Many other reports of problems exist on the student grapevine in biochemistry, chemical engineering, computer science, electrical engineering, mechanical engineering and medical microbiology. In some cases the atmosphere surrounding joint student-faculty research has changed from cooperative investigation to mutual mistrust. This has severely restricted the flow, discussion and development of the ideas necessary for innovative research (see the memorandum from the GSA Academic Affairs Committee to the Committee on Research, *Campus Report*, April 21, 1982, p. 16).

Of the problems in this area reported to the Ombudsman's office in the last year, the most serious involved situations in which the advisers had assumed formal or *de facto* managerial positions in start-up ventures.

In one example, it was apparently very difficult for the faculty members involved to manage the problems of a struggling young company and still have enough time and energy to supervise their graduate students.

In another example, because of the key role one faculty member played in a competitor, an outside sponsor would not support an ongoing University project unless that faculty member ceased his active participation in the research. The University accepted the funding and the faculty member subsequently left the project as requested by the outside sponsor.

Present University Policies

At present University policies governing relations between University personnel and outside profit-oriented ventures are generally few and poorly defined.

The University administration is aware of this as there have been a number of changes in the last year making the policies more specific. The Faculty Senate, on the recommendation of the Committee on Research, has amended the consulting policy to require faculty members to disclose their consulting activities when requested to do so by the "cognizant dean, the provost, or the president."

Basically the University relies on the individuals involved to structure their outside relationships in a manner compatible with the University's teaching, research and public service objectives. As faculty-industry and student-industry relations have become more common in the last decade and some individuals have assumed key roles in outside for-profit ventures, it is becoming evident that there are limits to the commitments an individual may make to an outside organization and still fulfill his or her obligations to the University.

In most cases in which problems have arisen and been brought to the attention of our committee it does not appear that the faculty have intentionally overcommitted themselves. Rather, as inexperienced businessmen, they have underestimated the difficulties of securing operating capital and competent management for their fledgling ventures. Hence, they have been forced to spend more time securing funds for and managing their venture than they had originally intended to.

It was, furthermore, not clear to either faculty or students that services performed for one's own outside venture were governed by the University's consulting policy. The synopsis of the consulting policy found in "Patents, Copyrights and Other Research Property" recently published by the Patent and Copyright Affairs Group contains a much needed clarification of this point. It makes is clear that work done for a company in which one has an equity interest is consulting even if there is no service-related fee. This policy clarification should be widely publicized for both faculty and students.

The recent change in University policy governing the outside employment of students by their advisers recognized not only the substantial advantages to be gained by both parties in such a relationship, but also the inherently high potential for abuse. The new regulation quite properly insists that a third party, the department chairman, be informed of and approve of the details of the relationship to protect the junior party's interests.

But the regulation does not deal with other situations. Suppose that the faculty member and the student both hold equity positions in the company or are both corporate officers, as is the case in at least one company in mechanical engineering and computer science.

It is not clear from the above regulation that these individuals need to consult with the department chairman about their outside working relationship. Yet strong motivation clearly exists for the faculty member involved to provide preferential treatment for his student coworker as compared to students not involved with the company. Indeed, one complaint alleging such preferential treatment has already been received by the Ombudsman's office.

The regulations or modifications described above have been adopted on a case-by-case basis as problems arose or were anticipated. Two serious problems with this approach are apparent. First, it relies primarly on staff, students and junior faculty to bring problems to the attention of the University administration and committees. Yet these parties are extremely reluctant to report on their difficulties because they perceive that such reports can be made only at great personal risk. No one can estimate the number of serious problems which have gone unreported.

Secondly, relations between University personnel and industry are so complex and varied that many potential problem areas are almost impossible to anticipate, and hence govern with a manageable number of regulations. Further, without a comprehensive understanding of the general nature and various types of relations between University personnel and industry, no one can say with assurance that a regulation designed on the basis of a specific case will be broadly applicable. Instead, it may be an overreaction to an isolated occurrence and lead to unnecessary restrictions on the activities of students, staff and faculty alike.

In short, it will be impossible for the University to accrue the maximum benefits from relationships between its personnel and outside organizations, and simultaneously guard against abuses, unless the University administration knows what those relationships are.

Surveying Outside Professional Activities

Many of the problems arising from outside professional activities are eventually brought to the attention of the dean of graduate studies and research and the departmental chairmen. Thus it is desirable to provide these individuals with access to information on the outside activities of faculty not just after a problem has developed (which is the *de facto* current policy), but from the time a faculty member first enters into serious negotiations to provide services for an outside organization.

Prior notification would serve two purposes. First, it would give the University administration, based on their previous experience, a chance to catch problems early, before they became serious. For instance, in the case of a new venture, the administration could point out that the amount of capital was inadequate or that more management talent might be needed. Second, it would ensure that the University administration received representative reports of relationships between University personnel and industry, not just information on the major successes and failures. These reports would then be useful in evaluating the effectiveness of current University policies and, if needed, for forming new policies.

The University should consider adopting the following or a similar process for annually surveying the outside professional activities of faculty, staff, and students:

1) The Committee on Research should prepare and distribute an "Annual Report on Outside Professional Activities," to be filled out by all faculty members and collected, reviewed and filed by the department chairmen.

The report would be accessible to administrators, students, faculty and staff. The report should also be available to those for whom the faculty perform services, such as regulatory agencies and governmental committees.

2) The dean of graduate studies and research should summarize the reports, supplementing them with information gathered informally from students, faculty members and staff, and present his findings to the Committee on Research.

The annual report would document governmental, industrial and professional committees on which a faculty member serves and the organizations, profit or non-profit, for which the faculty member provides services related to his or her academic field.

In particular, the form would request that the faculty member disclose the extent and nature of equity interests in firms with products or research activities closely allied to their own academic fields. The Annual Report of Outside Professional Activities recently proposed by an Ad Hoc Committee of the UC-Davis Academic Senate on Conflicts of Interest illustrates how the report could be structured.

Comparable institutions have recognized the problems inherent in relations between their faculty and outside commercial ventures. Their guidelines on faculty-industry relations are generally more explicit than Stanford's.

MIT requires "faculty members to keep their department heads informed continuously in adequate external committees, and other special assignments, whether within or without the Institute."

Harvard states in its guidelines that arrangements between faculty members and industries in which the faculty members assume responsibility for the day-to-day operations of the firm, either as a line officer or as a consultant, "present an unacceptable conflict of interest or commitment." At least one Harvard faculty member was asked to resign, and did, as a result of this policy.

Substantial support for disclosure of consulting and equity interests to the University community and public already exists. President Kennedy, Prof. Halsted Holman, and graduate students William Smith and Thomas Dietterich all expressed their support for public disclosure during a panel discussion held as part of last spring's symposium on *Universities, Industries and Graduate Education*.

It is apparent from private conversations, however, that substantial opposition to public disclosure also exists among administrators, students and faculty. However, few are willing to openly discuss the reasons for their opposition. These need to be elicited (in confidence if necessary), documented and carefully evaluated.

Additional Policy Recommendations

Based on the situations brought to the attention of our committee, the University ombudsman and the dean of graudate studies and research by undergraduates, graduate students, post-docs and faculty we make the following additional recommendations.

1) Companies in which a faculty member has a major equity (or equivalent) interest should be prohibited from sponsoring the faculty member's University-based research. Presently, nearly all faculty with outside commercial interests are voluntarily abiding by this policy. One case in which this policy was not adhered to resulted in legal and other problems for University administrators, faculty members and students alike.

2) It appears from the cases we have seen, and the policies of other universities cited above, that it is almost impossible for faculty to assume managerial responsibilities in an outside commercial venture and still perform the duties required of a full-time University professor. Consequently, faculty members should be prohibited from assuming managerial functions in commercial ventures while they are full-time members of the University staff.

3) The dual employee-employer advisee-adviser relationship should be monitored closely by the administration. The recent change in regulations requiring faculty and students entering into an employee-employer relationship may prove to be adequate to protect student and University interests.

It is not clear, however, whether this or any other policy will be sufficient to prevent faculty members from providing preferential treatment to their student employees. Must a student work for the company to be assigned to certain projects in the group? If the University administration cannot carefully monitor dual employee-employer advisee-adviser relationships, they should be prohibited.

4) One of the most difficult and important questions for the University community to answer with respect to industrially sponsored research is the following: is the research directed toward answering fundamental scientific questions or solving basic engineering problems?

It is generally agreed that peer review has done an excellent job of answering that question for the National Science Foundation and the National Institutes of Health. An appropriately structured peer review system could provide the answer for industrially sponsored research as well. Peer review should be extended to include all sponsored projects, industrial as well as governmental. A peer review system is the best means available for assuring the University community and the public that University-based,

Kilson talk provokes lively discussion of black studies

Black intellectuals are moving beyond the "cathartic balm" of enthnocentrism in America, Harvard Prof. Martin L. Kilson said Tuesday, Nov. 16, at Stanford.

"Blackness belongs to everyone, impervious to chauvinist boundaries," he told an overflow audience of 70. Several prominent black faculty challenged his views.

As racism in America "gradually weakens" and "Afroization continues to shape important facets of American character," Kilson argued, blacks can "resume the essential burden of being an intellectual, namely fidelity to the interdependence of the human condition."

To get ahead as an intellectual, he told a student, "You gotta be good. It's as simple as that.

"Learn to use the language that's most powerful and persuasive," as a writer. Or become deeply skilled in economics to attack the "parochial, chauvinist. . .capitalist, barbaric features of the American economy."

"Be good" as an intellectual "if you want to critique all that raunchy, crazy stuff about Negroes in psychology or politics" or "hoodlums in genetics" like Stanford Prof. William Shockley, coinventor of the transistor.

Disagreement

Prof. Sylvia Wynter, Spanish and Portuguese, congratulated Kilson for "a wonderful talk. . .with which I totally disagree.

"As you talked, I felt great pain," she added. "If you want to know what inequality is today, it is to be on an American campus and to believe that black studies was, and is, part of an intellectual revolution of enormous direction.

"(Yet) you refer to black studies and the black movement of the 1960s as only ethnocentricity."

Kilson said "I'm a proponent of black studies" primarily because it provided a "powerful option for (black) intellectuals in society."

"Was it anything else?" Wynter asked.

"Very little, in fact," he replied.

It's important to distinguish between what's written—and read—and the "vagabond" grid of what's sent on the "street communication grid," Kilson added.

The scholarly results of black studies have been "disappointing. . .haven't produced a bloody thing," unlike the work of black scholars in mainstream social science departments or other disciplines, he said.

Asked about the future role of black colleges and universities, Kilson said it was "sad but historically necessary" that the most "intellectually talented and gregarious" students would come to places like Harvard and Stanford. "You didn't go to Tougaloo," he observed.

Black colleges

Thirty years ago, nearly nine out of 10 college blacks were enrolled in black colleges, he said. In the 1920s and 1930s they were "important" in providing a haven for black intellectuals. They were "reasonably supportive" of the political left, especially in comparison to "Penn, Harvard and Cornell" and also encouraged ties across ethnic and racial boundaries.

But today these colleges are "in trouble," he said, after acknowledging he had not studied them.

Prof. St. Clair Drake, anthropology, who has participated in a National Endowment for the Humanities study of black colleges for two years, said that the move toward integrated but predominantly black colleges is helping integration work both ways. Blacks integrated in predominantly white colleges could contribute to their "Afroization," he noted.

Prof. Clay Bates, materials science and electrical engineering, said there are many examples of black scholars trained or employed at predominantly white, high prestige universities who have returned as scholars at predominantly black institutions. "I don't agree that black schools are going under," he added.

"That's good news," Kilson replied.

Prof. Donald Harris, economics, suggested that even "cosmopolitan" black intellectuals would be limited because they have to exist in a bourgeois society," where some might make "quite a profit at it."

Kilson replied that, even so, a less ethnocentric approach would be more effective in pushing capitalism "beyond itself" to "whatever it is—socialism, communism, humanism." He described his own preferences as "flabby, eclectic, open-ended humanism," agreeing when Wynter added the adjective "liberal."

Prof. James Gibbs, anthropology, a fellow graduate student of Kilson's at Harvard in the 1950s, said that if black intellectuals "flee into cosmopolitanism" they still face a "real dilemma" if they abandon ethnic concerns.

"How can you clasp to your bosom one aspect without losing the other?" he asked.

Kilson suggested that Richard Wright provided one example of how this had been done. He cited Senior Fellow Thomas Sowell of the Hoover Institution at Stanford as one of the few black intellectuals in the "crypto-fascist, crypto-racist right wing."

A cultural milieu

While it may never have been easy for intellectuals to find the right cultural milieu, Kilson said in his prepared remarks that it is easier for Afro-Americans now than during any previous period.

A key element is "the emergence of a new generation of college-educated whites, shaped by the counter-culture movement of the 1960s and 1970s who are discarding psycho-cultural constraints upon a cosmopolitan cultural identity in which 'blackness' is an accepted element."

Racial parochialism reached its peak between 1965 and 1975, but has begun to subside, he said. "The black aesthetics and black studies movements saw the formatin of numerous agencies that racially proscribed the creative life of most Afro-American intellectuals.

"These agencies included three major national magazines—*The Black World*, *The Black Scholar*, *and Freedomways*; cultural conferences and groupings of infinite descriptions;" and black caucuses in such academic associations as the American Political Science Association and the American Sociological Association."

In general, he predicted, "the typical black intellectual will undergo a transition from parochialism to cosmopolitanism (cultural marginality) by fits and starts, while a few will experience a clean and sharp break with ethnocentrism. . . .

"After all, many intellectuals gained jobs and influence in the ethnically protected academic marketplace of black studies programs, and it is to be expected that disengagement from black ethnocentrism will take time.

"The more creative and talented black intellectuals, however, will seize the new opportunities for cosmopolitanism, aided no doubt by the recent examples of disengagement from ethnocentrism set by LeRoi Jones and Julius Lester."

While some may remain in a "hybrid status" between these extremes, they will gradually disengage themselves from "the black bourgeois power game of monopolizing blackness," he predicted.

"This perplexing inability to monopolize 'blackness' has always been recognized by leaders of the religious-oriented form of black ethnocentrism," including the Garveyites of the 1920s and 1930s and the Black Muslims of the 1950s to 1970s. Both favored migration to Africa, much as Zionists backed migration to Israel.

But the creative potential and enduring appeal of black spirituals, gospel, blues and jazz suggest that "blackness is endemically cosmopolitan," as Orlando Patterson and others have argued, Kilson said. Black intellectuals "should never want for sources of viable, creative inspiration."

His talk was one in a series arranged by the Afro-American studies program at Stanford, headed by Prof. Kennell Jackson, history.

Wynter, Drake, and Gibbs each have headed Afro-American Studies at Stanford in the past decade.

—Bob Beyers

NASA's Beggs looks forward to space station approval

James M. Beggs, administrator of the National Aeronautics and Space Administration, said Thursday, Oct. 18, he thinks he can sell Congress and the Administration on building a space station—with a little help from the Soviet Union.

Beggs, on the Stanford campus as part of a program at the Hoover Institution, said he thought the Reagan Administration was "favorably inclined to the space program.

"The problem the administration faces vis-a-vis a program like that, is that while you're trying to cut the budget in various and sundry ways. . . it's awfully difficult to move out on a brand new initiative. . . .

"But I think given the proper planning of the job on our part, coming up with a proposal that fits reasonably sound budgets for the next six or seven years, we'll do well," Beggs said in an interview.

President Reagan has referred to a U.S. "permanent presence" in space, presumably an orbiting space station, but members of his administration, particularly Budget Director David Stockman, have apparently restrained him from making any firm commitments.

Beggs said that NASA has contracted with eight consortia in industry and academe to analyze the need and usefulness of a space station. Those reports should be ready early in 1983.

NASA will then do further studies on the "architecture," defining the activities that would be performed on such a station. Then NASA will be ready to go to the White House and Congress and ask for funds.

He said a space station would have some commercial uses, but the project will not "rise or fall" on the commercial potential; the real argument is whether a space station is a "desirable next national commitment.

"The gut, basic question is whether this nation is committed to the continued exploration and exploitation of space. If you are, then you need certain things to do that. The shuttle was one of those tools," he said. The station would be another.

"My crystal ball has always been clouded. My view of the world says that I think this country has always considered itself a pioneering country in high-technology kinds of things. This is high technology; it has very large benefits for the country in a very economical and psychic way, which is very important. I don't think either political forces or the American people are going to back away from it."

Beggs said that having two Soviet cosmonauts presently setting space endurance records on a Soviet space station will not hurt his argument any.

"That should be a 'driver' for us to learn the same things that they are learning. There is a general unease in Washington that the Soviets are flying more and more. But I don't know if that's a major 'driver' or not," he said.

"The argument goes as follows:

"We think the space station is a good idea on its own merits; we are prepared to defend it on its own merits for America. We think it's important to continue to learn and extend capability in space if you want to fulfill the commitment to be a true space-faring nation.

James Beggs

"You have to take account for the fact that the Soviets have been flying very, very extensively for a long, long time, and they are learning things we're not privy to. You have to be worried about the fact that you could, indeed, wake up one day and find you're falling behind in this technology. It's one of several arguments.

He said there are military aspects to this competition but he doesn't think it is as important as the technological aspects.

The space station could provide great technological fallout in such things as computer sciences and robotics, just as the Apollo program provided fallout in electronics and operations sciences.

—Joel Shurkin

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

36636-LL (JCC:5588) LIFE SCI RES ASST I: Utilize biochemical & chemical analytical tech in neurochemical & psychiatric research; perform biochem assays for neurotransmitter enzymes, assays for neurotransmitters & their metabolites, receptor assays, & protein purification; help w/ establishing procedures for maintaining primary adrenal medullary cell cultures & adrenal medullary explant cultures for biogenic amine enzyme regulation studies; QUALIFICATIONS: BS or MS in chemistry or biochemistry or equiv edu & exp required; familiar w/ & can perform basic lab skills essential; this incl use of serological & micropipettes, balances, pH meter, liquid scintillation counter, ultraviolet & visible spectrophotometers, high pressure liquid chromatography instrumentation, high speed & ultracentrifuges, polyacrylamide & agarose gel electrophoresis apparatus; able to work closely w/ supvr on various projs.; C05; $1670-2086.

31349-LL (JCC:5588) LIFE SCI RES ASST I: In charge of a cell culture facility & will be respon for maintaining tissue culture cell lines & aiding in prep of primary cultures & culture media; help develop & perform both hormone binding assays & radioimmunoassays; QUALIFICATIONS: BS degree or equiv exp; some familiarity w/ sterility tech; prev exp w/ binding assays or RIA helpful but not required; willing to work w/ 125I, 3H & 14C labelled chemicals.; C05; $1670-2086.

Bargaining Unit

39076-FM (JCC:8452) PLUMBER/STEAMFITTER: TMS Unit; 8-4:30; performs high pressure Steam Maint; inspects, installs & repairs high pressure steam lines; serv & repairs steam valves, pressure regulators condensate pumps, condensate lines, traps & expansion joints; inspects & maint 20.5 miles or 103,240 ft of high pressure steam & condensate return lines, condensate pumps & high pressure regulators; occasionally respon for defining parts, mat'ls, & methods of repairs; also performs plumbing maint; installs & repairs chilled water sys w/in bldgs, etc; QUALIFICATIONS: able to read Steam Maps; uses proper methods of valving steam & condensate; follows safety procedures; reads drawings & schematics, welds, soft & silver solders; able to perform rigging operations; preferably completed steamfitter or pipefitters apprentice program.; A37; $11.8.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Nov. 30, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

SLAC

94427-JM (JCC:6492) LAB MECHANICIAN III: TMS unit; from drawings, sketches & verbal descriptions, perform machine work on diverse types of equipt & produce components or parts; requires full journeyman level skills; operate all machine shop & hand tools; use all types of precision measuring devices; familiar w/ rigging methods & operation of various types of hoists; familiar w/ standard shop practices; knowl of welding, brazing & sheet metal; A41; $2250. APPLY AT SLAC

Nonexempt

28166-BP (JCC:2462) OFFICE ASST III: Strong typing skills for classwork & genl corresp for dept profs; maintain undergrad student files, keeping them up to date; liaison person between undergrad majors & faculty advisor; offc receptionist for dept'l offc; sort mail; operate & maintain offc machines; order supplies; answer phones; act as Petty Cash custodian; aid Dept'l Colloquium faculty organizer w/ details in arranging for visiting speakers once each wk during academic yr; contact: Margie Jaedicke, Stauffer III,Rm 113, 4974906.; B11; $1246-1310.

43076-BP (JCC:2470) OFFICE ASST IV: Prov offc & sec'l support for Facilities Procurement staff of 5 people; handle all details of day-to-day running of the offc; typ contracts, letters, memos, reports & forms using the word processor; answer telephones; screen calls; handle requests for informa & refer calls to approp staff member; open, screen & distribute mail; order offc supplies & equip't; maintain files; input & update computer file; maintain records of expenditures & accts for offc budget; reconcile monthly budget statements; maintain Petty Cash fund; respon for the develop't, maintenance & revision of all offc procedures & sys; QUALIFICATIONS: typ 65; high proficiency w/ word processing equip't essential; some knowl of WYLBUR/SPIRES computer lang desirable; good oral & written commu nec; knowl of procurement policies & procedures desirable; send appl/resume to B. Leans, Old Pavilion Annex.; B14; $1440-1514.

36180-PM (JCC:2596) SECY II-SPEC: 8-4:30; prov sec'l support for res/clinical unit in Div of Gerontology; performs accurate finished form typing on corresp, manuscripts, reports & forms, fr handwritten or typed copy; receives & screens a variety of calls & visitors, some patient contact; require indiv interested in learning APPLE computer; enter & evaluate clinical data; QUALIFICATIONS: typ 65; knowl of med terminology helpful; 2-3 yrs of approp clerical sec'l exp required; ability to work w/ a diverse group of doctors, technicians, nurses & clerical staff; contact: Betty Barnett, 497-5913.; B12; $1310-1373.

21996-BP (JCC:2596) SECY II-SPEC: Full sec'l serv to Prof & Div chairman; take dir dictation; typ corresp, class notes, tech reports; open mail, sort, arrange corresp & prep journal manuscripts for reviewing; keep complete filing sys; review records of expenditures for several contract budgets; opportunity for independent work in sub-editing & processing of journal articles is provided; QUALIFICATIONS: typ 65; knowl of gov't contracts; familiarity w/ policies & procedures of univ desirable; good verbal & written commu skills; good English usage & spelling; contact: T. Hegis, Rm 252, Durand Bldg., 497-2173.; B12; $1310-1373. 33702-PM (JCC:2714) **MED SERV ASST III-SPEC:** 7:45-4:30; Primary respon is to assure a timely processing of follow-up claims & tracers to MediCare, MedICal & Commercial carriers; submit tracers to MediCare MedICal & Commercial carriers; work insurance corresp; process insurance inquiries; coord activities w/ Cash I.D. area, Billing & Patient Relations area; prep of adjmts on accts; review patient insurance updates & generate claim forms; process MediCal denials QUALIFICATIONS: working knowl of Physician Billing Procedures for Gov't & Commercial Programs; must have analytical & problem solving skills; work & commu w/ people both w/in & outside the area of respon; able to work w/ frequent interruptions; work accurately & rapidly; knowl of CRT helpful; prev exp in med setting; contact: Marty Witron, 525 University Ave., Suite 400.; B12; $1310-1373.

28400-PM (JCC:2714) MED SERV ASST III-SPEC: 7:45-4:30; primary respon is to assure a timely processing of in & Outpatient Billing forms for submission to MediCare & MediCal carriers; prep claims for Compliance Review Section; prep of approp adjmts on patient accts; access terminals, patient files, microfilm & MediCal sticker file for insurance informa; send claims to Med Analyst for diagnosis or By-Report procedures; asst w/ the completion of month end MediCare & MediCal summaries; submit claims to Hospital Industrial Carriers for payment, etc; QUALIFICATIONS: working knowl of Gov't regulations of Physician Billing Procedures for MediCare & MediCal accts; able to work w/ frequent interruptions; able to work accurately & rapidly; knowl of CRT helpful; typing skills; prev exp in med setting; med terminology; contact: Marty Witron, 525 University Ave., Suite 400.; B12; $1310-1373.

31723-PM (JCC:2714) MED SERV ASST III-SPEC: 7:45-4:30; Primary respon is to assure a timely processing of follow-up claims & tracers to MediCare, MediCal & Commercial carriers; submit tracers to MediCare MediCal & Commercial carriers; work insurance corresp; process insurance inquiries; coord activities w/ Cash I.D. area, Billing & Patient Relations area; prep of adjmts on accts; review patient insurance updates & generate claim forms; process MediCal denials QUALIFICATIONS: working knowl of Physician Billing Procedures for Gov't & Commercial Programs; must have analytical & problem solving skills; work & commu w/ people both w/in & outside the area of respon; able to work w/ frequent interruptions; work accurately & rapidly; knowl of CRT helpful; prev exp in med setting; contact: Marty Witron, 525 University Ave., Suite 400.; B12; $1310-1373.

32609-LL (JCC:5914) LIC VOC NURSE: Work under direction of Nurse Mgr in various clinics to prov nursing support to physicians; dir patient care duties & asst physicians as well as restocking of supplies & cleaning of supplies; QUALIFICATIONS: current Calif LVN license, 2 yrs exp in an acute care setting desirable; must have excel commu skills; able to use initiative, tact & good judgment; must be of good physical & mental health.; B14; $720-757.

Rental housing

HOUSING AVAILABLE

□ **March to Oct. '83:** Close-in fully furn. campus hse. 3BR/1BA, study, 18'covered Doughboy pool (chem. maintained). Fenced yd, central air. No cats. $1000/mo. incl. grdnr. Refundable $500 sec. dep. + 10% int. Call (415) 322-9208 or 497-2512 (day).

□ **Jan. to June 83:** Furn. Palo Alto hse, 4BR/3BA, LR, DR, FR w/frpl, study. Pool w/solar sovr. Close to campus. $1650/mo. incl. pool serv. Call 493-1179.

□ **Beg. Dec. 15, '82:** Furn. fam. hse, 4BR/2BA, fenced yd. Nr. schls, parks, shops. 3 mi. to campus. Children welcome. Call Marilyn Hull, (415) 326-8683 (wkdays), (415) 493-6164 (eves & wknds).

□ **April 1 to June 15, '83 (flex):** Fully furn. hse, 4BR/2BA, den, AEK, W/D, hot tub. Children ok. So. Palo Alto, 3 mi. to campus. Swim/tennis club mbshp (across st.). On bus rte. $1000/mo. incl. grdnr & club mbshp. Call (415) 494-6492.

□ **NOW:** Fully furn. 3BR/2½BA + study, 2-story deluxe twnhse. Formal DR, frpl, wet-bar, 2 car gar., pool, jacuzzi. 10 min. to campus. $1700/mo., 1st & last mo. rent, + $1500 sec. dep. Call Sonia, 494-2939.

□ **NOW:** Prof. woman has rm to rent w/BA, W/D, ktchn. priv. Female, nonsmoker. Furn. except for bed. 10 min. to campus. $325/mo. incl. util. Call 969-5870, after 7 p.m.

□ **Beg. Jan. 1, '83:** Fully furn. Oak Creek apt. w/sports fail. 5 min. to campus. Avail. for 6 mos. (flex). $675/mo. Call 326-3684, morns. & eve.

□ **Jan. to Sept. '83 (flex):** Fully furn. 4BR/2BA lrge campus hse. Frpl, garden w/auto sprinklers, view of hills. Nonsmokers, no pets. $1400/mo. incl. grdnr. Call 497-3987 (day) or 494-0362 (eve).

□ **NOW:** Alpine Meadows, Tahoe. Nice cabin, 3BR/1½BA, phone, W/D, frpl., sleeps 10. $200/wknd, $70/wknights. Call 493-4139 (eve).

□ **Jan. 15 to July 1, '83:** Fully furn., all appliances, 4BR/1¼BA hse in Los Altos. Lge garden. $975/mo. Call (415) 961-3079 (eve).

□ **Dec. 20 thru Jan. 3, '83:** Fully furn. campus hse., 4BR/2BA, close in. $400 incl. hsecleaning & util. Call 497-9432 (day), 327-8042 (eve).

□**NOW, HAWAII:** Haena, Kauai. 2BR/1BA hse, fully furn. Sleeps 7. Loft, laundry. Walk to beach. $280/wk. Call Nancy Scholl, 321-4407.

□**Dec. 22, '82 for 1 yr. (flex):** Fully furn. contemp. campus hse. 2BR + 2 studies (1 converts to BR), 2BA. Frpl, piano, lush atrium, wooded lot. $1350/mo. incl grdnr, water. Call 857-0479.

□**Regularly avail:** 1 & 2 BR furn. and unfurn apts. & twnhses, also 3BR/2BA hses. In Palo Alto & Menl;o Pk, good nghbrhds, close to campus. Call Shirley, 493-2321 or Jane, 968-4957.

□**April to July '83:** Furn. campus hse, 3BR/2BA, study;. Fenced yd. $900/mo. incl. grdnr, hsecleaning. Call 858-2142 (eve & wknd).

□**Beg. Dec. 15, '82:** Avail. indef. Unfurn. 1BR lux. condo, AEK, Lndry facil. nrby, pool, sauna, gardens. Air-cond. Lincoln Green in Sharon Hgts. $650/mo. Call Ed Haertl, 497-3008 (day) or 854-6028 (day).

□**NOW, to share:** 2BR/2BA hse. Share w/1 person. W/D. Gar., basement. Must like gardening. 2 blcks to campus, El Camino, 4 blcks to Marguerite bus. $400 + util. Lv. message 858-2121.

□**NOW:** TAHOE/DONNER VACATION CONDO. Fuily furn., fully equip., sleeps 8. On ski run. Clubhse w/spa. W/D. Firewood. Call Al 326-3821 (eve).

HOUSING NEEDED

□**Jan. to Mar. '83:** Visit Prof & wife seek 1 or 2BR furn. apt. or hse within 1 mi. of campus. Homeowners, nonsmokers, local refs. Call (212) 260-8221 or write R. Lipsey, 70 E. 10th St., #3, NYC 10003.

□**Mid-Dec. to Summer '83:** Mature fac. cpl visit. Stanf. will care/sit your hse or apt. Will pay rent & provide expert care of furn., yd., pets. Exclnt refs. Call 497-0909 (day), or 324-8166 (eve).

□**Jan. to Oct. '83:** Cornell Prof. & fam. on sabbatical seek Bay Area hsng. Will EXCHANGE Ithaca 3BR hse, xtraordinary, custom design, nestled in forest. Flex. within above time. Call Vera or Dr. John Billinghamat (415) 965-5989.

□**Jan. 1 to April 15, '83:** Visit. Oxford Prof seeks hsng for self, & fam. Will EXCHANGE 4BR hse in Oxford, fully equip., central heat. 2½ mi from city ctr. Wishes similar hsng at Stanf. Call 326-6524.

□**Dec. 1 to Jan. 29, '83:** Visit. Med. Sch. fac. seeks to rent furn. 1 BR apt. or small hse. Call COLLECT (319) 356-2551 or Dr. Angel, 325-2476 (eve).

□**NOW to April 1, '83:** House or apt. sitting. Mother of fac. mbr. seeks long to short periods. Call Lee Yearley, 497-0466 (day) or 493-6430.

□**Beg. Jan. or Feb. '83:** Stanf. alum seeks furn. hse on old campus for yr. or more, or furn twnhse in Sharon Hgts. 3BR pref. (flex). Call 857-0623.

□**JAN to July '83:** Visit Prof, wife, 16 yr. old child seek furn. hse. on or nr. campus. Call Marlene Wine 497-2444(day).

□ **Beg. Dec. 1, '82 (flex):** 32 yr. old Stanford PhD student seeks quiet 1BR or studio apt. or cottage. Responsible, neat, nonsmoker. No pets. Call Susan Hofer, 497-0322 (day).

□ **Jan. 1 thru June 15, '83:** Visit. prof. w/child age 9 seeks furn. hsng. Shared hsng possible. Call Suzanne Caldwell, Dept. German Studies, 497-1068.

□ **Jan. to Mar. '83:** Retired cpl. seeks furn. 1 or 2BR apt., condo, or hse on campus, Palo Alto, Menlo Pk., close to shops, campus. Pkge deal to include car best. Call Dave Marimont, 497-3796 (day), 325-7182 (eve).

□ **Sept. '83 to June '84:** Approx. 50 fully furn. hses needed for Fellows & their families coming to Ctr for Advanced Study in the Behavioral Sciences. Call Frances Duignan, 321-2052 (day).

□ **Winter Qtr:** For 3 or 4 mo. (flex.): Visit. prof. seeks very quiet apt, studio, or comfortable rm. w/ktchn priv. On campus or walk to campus. Call Feferman, 497-2439 or 857-0323.

□ **Feb. to June '83:** Visit. prof. from MIT & wife seek furn. 2BR apt. or hse nr campus. Will give loving care to animals, plants. Stanf. refs. avail. Could EXCHANGE 4BR hse in Concord, Mass. Call 328-8103 till 12/4, or (415) 593-6506. Or call COLLECT (617) 369-4713.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

University should more closely monitor outside activities of faculty...

continued from page 1

"In most cases in which problems have arisen...it does not appear that the faculty have intentionally overcommitted themselves. Rather, as inexperienced businessmen, they have underestimated the difficulty of securing operating capital and competent management for their fledgling ventures....

"Undergraduates, graduate students, and post-docs have had mixed experiences with faculty members who have combined the roles of entrepreneur, researcher, and educator. Students value the additional grant support for campus-based research, the access to industrial personnel and laboratories, the opportunity for consulting while enrolled, and the job opportunities on graduation which arise from close faculty-industry relations.

"At least 10 undergraduates, graduates, and post-docs, on the other hand, have reported experiences to the University Ombudsman or to the Dean of Graduate Studies within the last year where they believe conflicts between their adviser, the researcher and educator, and their adviser, the entrepreneur, have interfered with their education anbd training.

"Many other reports of problems exist on the student grapevine in Biochemistry, Chemical Engineering, Computer Science, Electrical Engineering, Mechanical Engineering, and Medical Microbiology.

"In some cases, the atmosphere surrounding joint student-faculty research has changed from cooperative investigation to mutual mistrust. This has severely restricted the flow, discussion and development of the ideas necessary for innovative research."

The GSA noted that work done for a company in which an individual has an equity interest is consulting, even if there is no service-related fee. While there are substantial advantages to both parties in outside employment for students by their faculty advisers, there is also "inherently high potential for abuse," it added. Hence it is appropriate for the University to insist that department heads be informed of and approve the details of such relationships.

When both the faculty member and the student hold equity positions or both are officers in the outside company "as is the case in at least one company in Mechanical Engineering and Computer Science...strong motivation clearly exists for the faculty member...to provide preferential treatment for his student coworker as compared with students not involved with the company."

The Ombudsman's Office has already received one such complaint.

No one can estimate the number of problems which have gone unreported because staff, students, and junior faculty are "extremely reluctant...because they perceive such reports can be made only at great personal risk."

Routine reporting and prior notification would give the University "a chance to catch problems early, before they become serious." By providing a broader overview, it would encourage a balanced evaluation of university-industry relations, "not just information based on major successes and failures."

The GSA committee recommended that the Dean of Graduate Studies and Research should summarize individual faculty reports, supplementing this with information gathered informally from other sources, and present his findings to the Committee on Research, which makes policy recommendations to the Faculty Senate.

MIT requires "faculty members to keep their department heads informed continuously in adequate detail regarding all outside professional activities, service on external committees, and other special assignments, whether within or without the Institute."

Harvard's guidelines state that when faculty members assume responsibility for the day-to-day operations of a firm, either as a line officer or as a consultant, this "presents an unacceptable conflict of interest or commitment." At least one Harvard faculty member has been asked to resign as a result of this policy, and did so, the GSA committee report states.

At present, nearly all Stanford faculty with outside commercial interests are voluntarily abiding by the proposed prohibition against the outside firm's funding of the faculty member's research. In one case where this was not done, legal and other problems resulted for administrators, faculty and students alike.

"If the University is to ensure that rapidly increasing and much needed ties between faculty, students, and outside organizations will promote teaching, research, and public service, then it must monitor these relationships closely and regulate them when necessary," the GSA committee declares. The Office of the Dean of Graduate Studies and Research is in the best position to identify existing deficiencies.

"We agree with President Donald Kennedy's statement last spring during a panel discussion...that 'good policies will always leave faculty members with enough discretion for a few to abuse,' " the report concludes.

"We believe, however, that the University community has not yet considered the possibility that current abuses may be of sufficient frequency and magnitude to seriously impair the University's...functions."

Lieberman...

continued from page 1

proprietary secrecy that would distort the fundamental purpose of the University, and that the University accordingly should not give up its right to examine the appropriateness of exclusivity for each invention on a case-by-case basis."

This question is currently under review by the Committee on Research and may be discussed in conjunction with its annual report to the Faculty Senate Thursday, Dec. 2.

Lieberman notes that "interactions between academia and industry are not only desirable, they are essential to keep American science and technology strong.

"However, university-industrial relations have grown dramatically in complexity over the past few years. Industrial technology in such areas as electronics and computer software has advanced to a point at which many results of basic university research can now be applied in industrial settings in a matter of months, as compared to the decades required in earlier eras.

"In addition, new fields of university research into basic properties and processes, such as recombinant DNA, which have emerged recently offer unprecedented potential for widespread commercial application.

"Thus industry, which supports more university research for potential profit-making purposes than for philanthropy, is looking for increased and novel research partnerships with academia. At the same time, universities are faced with the need to replace dwindling federal support for research activities.

"The increase in university-industrial relations is therefore both a positive and predictable outcome. The proportion of Stanford's research programs funded by industrial sources has more than doubled—from about two percent a decade ago to almost five percent today—and now totals more than $5 million in annual expenditures.

"It is likely that industrial sponsorship of our research will continue to increase considerably faster than federal funding. But it will probably never represent more than a fraction of our total funding, in view of the fundamental differences between the missions of educational institutions and profit-making companies."

Lieberman's paper will be published in the Dec. 1 issue of *Campus Report*, the University's weekly newspaper for faculty and staff.

GSA text...

continued from page 14

industrially sponsored research will continue to be of the highest quality. This peer review process would be most effective when done in conjunction with other universities.

There are many advocates of peer review of industrially sponsored research within the University community. Biochemistry Professors Paul Berg and Arthur Kornberg, for instance, are trying to establish a peer review system for industrially sponsored research through the Life Sciences Foundation.

Conclusions

If the University is to ensure that the rapidly increasing and much needed ties between faculty, students and outside organizations will promote teaching, research and public service, then it must monitor these relationships closely and regulate them when necessary. The office of the dean of graduate studies and research is in the best position to piece together the reports of department chairmen and to identify significant deficiencies in existing University policies. The above proposals, designed to give the University a sound informational base on which to make policy decisions, have recognized this.

Even from the limited information now available, scattered reports to the ombudsman, to the dean of Graduate Studies and Research and to the GSA Academic Affairs Committee, it is clear that arrangements between faculty members and industries in which the faculty members assume responsibility for the day-to-day operations of the firm present an unacceptable conflict of interest or commitment. Thus the recommendation to prohibit full-time faculty from accepting such responsibilities.

We agree with President Kennedy's statement last spring during a panel discussion on universities, industries and graduate education that "good policies will always leave faculty members with enough discretion for a few to abuse."

We believe, however, that the University community has not yet carefully considered the possibility that current abuses may be of sufficient frequency and magnitude to seriously impair the University's teaching, training and public service functions.

Budget correction

In last week's story about the budgetary presentation to the Faculty Senate, it was incorrectly stated that Stanford is one of only a few institutions levying a "tax" on restricted funds. The sentence should have read, "Stanford is almost alone among comparable institutions in *not* levying such a 'tax.' " A 10 to 15 percent charge on expenditure of restricted funds is currently under consideration at Stanford.

Research...

continued from page 1

circuit drawings, engineering diagrams, and other material developed in the course of research.

The new policy 1) promotes prompt and open exchange of tangible research property and associated research data with other academicians outside the investigator's immediate laboratory; 2) states that control over the development, storage, use and distribution of tangible research property is the responsibility of the principal investigator or laboratory director; and 3) provides tangible research property may not be sold for a profit.

In response to student concerns that faculty members may file disclosures on inventions, without informing students involved in the disclosures, the Sponsored Projects Office has developed a document on "Patents, Copyrights, and Other Research Property" as a working guide for distribution to graduate students in research departments. The Committee on Research also approved an arrangement proposed by the Stanford Synchrotron Radiation Laboratory in which a consortium of three external sponsors—another university, a commercial company, and the federal government—would fund construction and operation of two new beam lines for three-year renewable periods. One-third of the operating time will go to the other university sponsor, one-third to the corporate sponsor, and one-third to general SSRL users.

Besides Keller, 1981-82 committee members were Profs. Jon F. Claerbout, geophysics; Michael Fayer, chemistry; Philip Hanawalt, biological sciences; Sumner Kalman, pharmacology; James Meindl, electrical engineering; Jonathan Roughgarden, biological sciences; Margaret Wright, operations research; Research Assistant Mark Everson, Stanford Center for Youth Development; and students Peter Brett and John Halamka.

Meindl currently heads the committee. Continuing members include Brett, Claerbout, Fayer, Halamka, Hanawalt, and Kalman. New members include Profs Edward Garwin, physical electronics, and John Shoven, economics; Research Associate Marcia Bieber, radiology; and student Rosie S. Redfield.

Lebanese system disintegrating, journalist says

The current Lebanese political system is beginning to fall apart due to internal problems within the government, a Lebanese journalist said Monday, Nov. 15, at Stanford.

Hisham Milhem, a Washington correspondent for a Saudi Arabian newspaper, "Okaz," himself a Labanese-born Christian, said that the Lebanese people are now presented with the historical opportunity to reunite the country by establishing a national coalition that will work to rid Lebanon of foreign invaders.

"Never before has loyalty to the Lebanese nation been so deep as today," said Milhem, who described his fellow Lebanese as being "tough mountain people who are not going to be subjugated by anyone."

With an audience of about 60, Milhem was the first speaker in a series of talks called "Perspectives on the Middle East Conflict," sponsored by the ASSU Speakers Bureau and the Committee for Justice in the Middle East.

"President Gemayel only rules over a very small area in the country, and the Lebanese army is very weak now," Milhem said.

While admitting that Palestinian and Syrian occupation in Lebanon has also been a problem for the Lebanese, Milhem asserted that the Israeli military occupation of southern Lebanon "is the issue that must be dealt with first."

Visibly angered by the invasion of Israel into southern Lebanon, Milhem said: "The Israelis haved destroyed our country in the south. Now they want to sell us the cement to rebuild it."

Milhem called it a "war-torn misery belt" that the Israelis have destroyed and are now trying to incorporate into their own economy by flooding the area with Israeli-made goods and by controlling the municipalities.

If the Israelis insist on making a peace treaty with us only by applying force, there will be trouble, he said. "The Lebanese people are willing to take the lead now and face their invaders."

Milhem suggested what he believes will be the requirements for the formation of a new Lebanese coalition. He said it should:

* Refuse to ever sign a peace treaty with Israel;
* Work politically and militarily to end the Israeli occupation;
* Press for disarmament of the country's many militias and establish a unified national army;
* Maintain its Arab character and political strength in the Arab world;
* Strive for human and political rights of Lebanese people;
* Regulate any political pressure in Lebanon that would endanger Lebanese sovereignty;
* Maintain the democratic character of the country.

Calling for an end to the fighting in Lebanon, Milhem said: "The Israeli is not 10 feet tall. He bleeds as I bleed. And many have bled in Beirut."

—Craig LaGrow

Shaw's *Arms and the Man* starts Dec. 1

The Stanford Drama Department's production of George Bernard Shaw's *Arms and the Man* will open at 8 p.m., Wednesday, Dec. 1, in the Nitery. The production, directed by second-year doctoral student Stephen Weeks, is part of the Graduate Directing Workshop series. Performances continue through Saturday, Dec. 4.

Arms and the Man, first produced in London in 1894, was Shaw's fourth play and his first theatrical success. It was received with great laughter, and Shaw was concerned that he would be appreciated too much for his humor and too little for his ideas.

The play deals with the conflict between realism and romanticism in the human experience and, although the excesses of romanticism are condemned, the play is more concerned with the subtle and shifting balance between realism and idealism. At one point, Shaw subtitled the play a "romantic comedy" and at another time an "antiromantic comedy." It is both.

Set in Bulgaria in the late 1800s, *Arms and the Man* is the story of an idealistic young couple whose highest ideas are tested against down-to-earth practicality and realism when a war breaks out.

Throughout the play we hear echoes of Shaw's statement that "the tragedy and comedy of life lie in the consequences. . . of our persistent attempts to found our institutions on the ideals suggested to our imaginations by our half-satisfied passions, instead of on a genuinely scientific natural history."

The setting for *Arms and the Man* is designed by Laurence Maslon, the lighting by Nan Buck, and the wardrobe supervision is by Douglas A. Russell.

The young couple, Raina and Sergius, is played by Christine Roum and Scott Leland. Others in the cast include Grahm Winton as Bluntschli and Deanna Carlyle as Louka. Admission is free.

Two showings set of Morocco film

"Morocco: Cities, Sun and Sahara," produced and narrated by Clay Francisco, will be presented twice on Monday, Dec. 6, by Stanford University Events and Services as part of the on-going Discovery Film Series.

The film will be shown at 2:30 p.m. in Kresge Auditorium, and at 7:45 p.m. in Memorial Auditorium.

The film depicts the people of Morocco in a variety of settings. Some of the places visited are the royal palace in flower-filled Rabat, the imperial city of Fez, the Kairouine Mosque housing the world's oldest university, the Moslem shrine of Moulay Idriss, Casablanca, and the coastal city of Tangier.

Also included are Agadir, a major resort, Marrakech, still reached by camel caravan across the mountains, and, finally, the date capital Zagora, at the edge of the Sahara. South from there is the stark beauty of gigantic, continually shifting sand dunes.

Tickets are $3 for the matinee and $4 for the evening showing. Tickets are available at the door, or at Tresidder Ticket Office (415) 497-4317.

Panel on Japan's hi tech challenge

Keiske Yawata, president of NEC Electronics U.S.A., Inc., and Prof. Daniel Okimoto of the Stanford Department of Political Science will discuss "The Japanese Challenge to High Technology Industries in the 1980s" at 7:30 p.m. Thursday, Dec. 2, in Kresge Auditorium at Stanford.

Sponsored by the Northeast Asia-U.S. Forum on International Policy, the free public program will be moderated by Stanford Prof. John Linvill, director of the Center for Integrated Systems.

Okimoto is codirector of a major binational research project on U.S. and Japanese high technology industries, based at the NEA-US Forum, and author of a new book, *Japan's Economy: Coping with Change in the International Environment.*

Before becoming chief executive officer of NEC Electronics U.S.A., Yawata was general manager of the International Electron Devices Division of Nippon Electric Co. from 1973 until 1981.

The CIS, directed by Linvill, is a new program bringing together Stanford's top-ranked Departments of Electrical Engineering and Computer Science with scholars from materials science and other disciplines. The Center is funded by three-year gifts of $750,000 from each of 18 U.S. firms and government-sponsored research totaling $8 million. Ground will be broken for its new building early next year.

The lecture program is the first in a series which will cover such topics as arms control, international security, science and technology, economic management, and health.

Sierra Camp open for winter sports

For the first time since it began operation in the 1950s, the Stanford Sierra Camp at Fallen Leaf Lake, near Tahoe, will be open for winter sports.

Camp Director Wim Steenbakkers has announced plans for a four-weekend trial opening in January and February, featuring Nordic skiing.

Twenty-four guests will be housed in the main lodge at the camp the weekends of January 21-23, January 28-30, February 3-6, and February 11-14.

Participants, accompanied by instructors, will arrive at the camp after a three-mile ski over Fallen Leaf Road, while their luggage is transported by snocat. (Steenbakkers notes that any fit adult with the desire to learn will find the trip an ease and a pleasure.)

Activities during the weekend will include personalized cross-country ski instruction, guided nature tours, ski equipment clinics, lessons in Nordic downhill techniques, introduction to winter wilderness skills, and ski races and snow games. In addition to comfortable fireside meals, there will be movies, music, and time just to absorb the winter wonderland.

Alumni, faculty, staff, and students are welcome to participate in the program. The rates are $130 per person (double occupancy) for the first two weekends and $195 per person for weekends three and four.

Further information may be obtained by contacting the Stanford Sierra Camp staff at Bowman Alumni House, 497-2021.

Arthur Barnes

Wind Ensemble salutes Grainger

Stanford's Wind Ensemble, under the direction of Arthur Barnes, presents a centennial salute to Percy Grainger at 8 p.m. Saturday, Dec. 4, in Dinkelspiel Auditorium.

The Music Department concert will also feature Paule Reale's *Concerto for piano trio and wind ensemble*, written and premiered this year.

Grainger was born in Australia in 1882 and died a U.S. citizen in 1961. He premiered Grieg's piano concerto in 1907 and wrote many popular works for band, chorus, and orchestra based on English folk songs and dance tunes.

Grainger played oboe in the U.S. Army Band during World War I and later joined the music department at New York University. He was a frequent guest conductor at Interlochen in the '30s and '40s.

The Wind Ensemble will play Grainger's *Handel in the Strand*, *The Immovable Do*, *Molly on the Shore*, *The Power of Rome and the Christian Heart*, the very famous *Country Gardens*, and *Lads of Wamphray*.

The Mirecourt Trio, in residence at Grinnell College in Iowa, is traveling to Stanford specifically to perform Reale's concerto, and then to record it in Los Angeles. Trio members are Kenneth Goldsmith, violin (Stanford music M.A.'68); Terry King, cello; and John Jensen, piano.

Reale, age 39, is a composer at UCLA. His concerto was commissioned for the Mirecourt Trio and the Green Lake Festival of Music through a grant from the Jerome Foundation of Saint Paul, Minn. It is based on the medieval *Dies Irae* hymn, and "has everything," according to Prof. Barnes—"jazz, tangos, ragtime, tone-clusters. It's very rhythmic."

Tickets for the Dec. 4 concert are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and at the door.

Lane book sale

Lane Medical Library will hold a book sale from 8 a.m. to 4 p.m. Wednesday, Dec. 1, in the Sherman Fairchild auditorium lobby. Proceeds of the sale will be used for new library acquisitions.

The books will be $2 each from 8 a.m. to noon, with the price going down to $1 from 12:30 to 4 p.m. Rare books and special items will be individually priced.

Chorus, Orchestra join to perform *King David* and *Te Deum* Dec. 3, 5

Stanford's Chorus and Orchestra will perform Honegger's *King David* and Bruckner's *Te Deum* twice: at 8 p.m. Friday and Sunday, Dec. 3 and 5, in Memorial Church.

Presented by the Stanford Music Department, Andor Toth will conduct these combined forces and a very impressive line-up of soloists: cantor Hans Cohn, soprano Barbara Reiter, contralto Marcia Hunt, tenor Gregory Wait, baritone John MacAllister, and soprano Lila Stuart in her first appearance since joining Stanford Music Department's faculty this fall.

King David tells the biblical story of David: his youth, crowning as king after the tragic defeat of King Saul, his reign, and finally the crowning of Solomon.

Te Deum is Bruckner's strongest affirmation of his deep Christian religious faith and definitely his most popular choral work.

The role of narrator in *King David* will be spoken in English by Hans Cohn, cantor at Temple Beth Jacob in Redwood City. Cohn has soloed at the Carmel Bach Festival and studied with the great basso, Alexander Kipnis.

Soprano Barbara Reiter will sing the role of Angel. Earlier this year she won first prize in the Metropolitan Opera apprentice auditions.

Contralto Marcia Hunt has soloed frequently with the Oakland Symphony, Pocket Opera, and Lamplighters, She was last heard at Stanford in Beethoven's *Symphony No. 9.*

Completing the soloist roster for *King David* will be popular Stanford tenor Gregory Wait. The spoken role of the Witch of Endor will be taken by Florence Oeschger, who is completing her M.M. at San Jose State while working full-time as Stanford Music Department's secretary.

Soloists for *Te Deum* will be Gregory Wait and Marcia Hunt, plus two exciting new soloists: Stanford's new voice teacher, Lila Stuart, and bass-baritone John MacAllister. Stuart comes from the University of Redlands and was formerly artist-in-residence and leading soprano with the Opera Theater at Indiana University's School of Music.

MacAllister has sung five seasons with the San Francisco Opera and is a frequent soloist with the San Francisco Symphony, Oakland Symphony, and many other groups.

Rob Campbell, D.M.A. candidate in choral conducting, has prepared the Chorus this quarter while Prof. William Ramsey, director of choral activities at Stanford, is on sabbatical.

Tickets for the two performances ($4/$2) are available from Tresidder Ticket Office (497-4317) and the door. Advance purchase of tickets is strongly recommended.

Alea II plans *Requiem for Cornelius*

A Requiem for Cornelius will be presented by Alea II at 8 p.m., Tuesday, Nov. 30, in Dinkelspiel Auditorium.

Alea II is the Stanford Music Department's ensemble for new music, directed by Jonathan Berger.

Composer Cornelius Cardew, a student of Stockhausen and one of the foremost composers of aleatoric ("chance") music, died last year at the age of 45. The requiem will include his *Autumn 1960* for an unspecified number of players, conducted by Jeannine Wagar.

Also on the program will be *Vision No. 15* from Messiaen's *Visions of the Infant Jesus*, with pianist John McGiness; Morton Feldman's *The King of Denmark*, with percussionist William Winant; David Lang's *Blue Nails*, with trombonist Anne Witherell; and the premiere of Paul Nahay's *Torus* for two pianos. D.M.A. candidate Nahay will perform *Torus* with pianist Ellen Brodsky.

The free public concert will begin with a surprise piece whose composer requests the audience set their digital wristwatch alarms to sound at 8:07.

Christmas Faire at TMU Dec. 3-5

Abundant crafts, music, jugglers, magicians, and international foods will provide the holiday fare for the eleventh annual Stanford Christmas Faire at Tresidder Union Friday through Sunday, Dec. 3-5. The free public festivities will be open from 10 a.m. to 5 p.m. daily.

The Faire will be highlighted by 87 craftpeople who will display a wide variety of quality handcrafted items including paintings, sculptures, jewelry, pottery, leatherwork, photography, stained glass, woodwork, toys, stitchery and weaving. New additions include hand-blown glass ornaments, original silks, and perfumes blended on the spot to match individual personality. The craftpeople were chosen from more than 600 applicants.

Holiday food and drink, homemade pastries, and entertainment by wandering minstrels and mimes also will be featured. Twenty percent of all artists sales benefit the campus program activities sponsored by STARTS, Student Arts at Stanford.

Unique, special and handcrafted gifts range from 25 cents to over $500.

Van Siclen talks on Egypt here

Charles Van Siclen III, a fellow of the American Research Center in Egypt, Inc., and director of the Babastis Research Project, will give an illustrated lecture about the origin and development of the Stanford Museum's Egyptian Collection at 7:30 p.m. Wednesday, Dec. 1, in Terman Auditorium on the campus.

A member of the Stanford Class of '67, Van Siclen first became interested in the Museum's extensive Egyptian holdings while he was an undergraduate. He is currently cataloging the collection and in his lecture will trace some of the more interesting objects back to their places of origin.

Van Siclen has done field work in Egypt since 1971 and has served as lecturer for five Stanford Alumni Association Travel/Study Colleges on the Nile.

The program is free and open to the public.

Orford Quartet

Lively Arts presents Orford Quartet playing Mozart, Beethoven, Schafer

The Orford Quartet, one of Canada's national treasures, will be presented by the Lively Arts at Stanford at 8 p.m., Wednesday, Dec. 1, in Dinkelspiel Auditorium.

The program will include Mozart's "String Quartet in G Major K. 387 ('Fugue')"; Beethoven's "String Quartet, Op. 59, No. 3 in C Major"; and Canadian composer R. Murray Schafer's "String Quartet No. I."

Founded in 1965, the Orford comprises violinists Andrew Dawes and Kenneth Perkins, violist Terence Helmer, and cellist Denis Brott. In 1974 the quartet received first prize in the European Broadcast Union's international string quartet competition in Stockholm. It has toured extensively in the U.S., Eastern and Western Europe, the Soviet Union, North Africa, and the Caribbean. The group has also made 20 recordings.

The quartet has a wide repertoire of over 130 works, specializing in contemporary works by Canadian composers. It is the quartet-in-residence at the University of Toronto.

Principal violinist Dawes is from Western Canada. He studied violin with Clayton Hare, Murray Adaskin, Lorand Fenyves, and Oscar Shumsky. He has appeared as soloist with all major orchestras of Canada, and has given recitals in Canada, the U.S., and Europe. In addition, he has been a prize-winner in many national and international violin competitions.

Perkins, violin, has been a member of the Montreal Symphony and the McGill Chamber Orchestra, and taught at McGill University. He has toured Canada with chamber groups, and appeared as soloist in Canada and with leading orchestras in Italy and Switzerland. Also a native of Western Canada, Perkins has studied with Ivan Galamian, and in Geneva with Lorand Fenyves, where he was a classmate of Andrew Dawes.

Helmer, viola, was born in Northern Ontario, and has studied with Geza de Kresz, Kathleen Parlow, Joseph Gingold, and Arthur Grumiaux. A graduate of the University of Indiana, he also has a Diplome Superier from the Brussels Royal Conservatory. Helmer made his debut with the Toronto Symphony at 15, and has since played with the Stratford Orchestra and the Chicago Chamber Orchestra.

Brott, cello, joined the quartet in 1980. He won first prize at the 22nd international cello competition in Munich, Germany. Born in Montreal, he was a protege of Gregor Piatigorsky at the University of Southern California. He has appeared with every major orchestra in Canada, and his solo engagements have taken him throughout the U.S., Mexico, and Europe. Brott has taught at Interlochen Arts Academy, North Carolina School of the Arts, and the UC-Santa Barbara.

For ticket information, call Tresidder Ticket Office at (415) 497-4317.

Nagle to give talk on peace at I-Center

"Peace: Can We get There from Here?" is the topic of the final autumn quarter Tuesday luncheon/lecture at noon, Nov. 30, at the Bechtel International Center.

Michael Nagler, associate professor of classics and comparative literature at UC-Berkeley is the featured speaker. Nagler is founder and codirector of the Berkeley Peace Studies Project and author of *America Without Violence*, a book that challenges the assumption that violence is an inevitable part of human existence.

Nagler's past education and experience include a medical degree from Cornell, postmedical work at NYU and a year of study in Heidelberg, Germany, in addition to his doctoral degree in comparative literature from Berkeley. He has written extensively on Greek mythology and literature and more recently published an article on "Peace as a Paradigm Shift" which appeared in the *Bulletin of Atomic Scientists* in December of 1981.

Tickets for the lunch cost $2.50, available in advance; brown baggers are also welcome at no charge.

The series will resume winter quarter on January 11. Focusing on major world issues and their backgrounds during the current quarter, the series will concentrate on particular countries and case studies next quarter.

For further information, phone the I-Center at 497-1831.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Nov. 24, to cover the week of Mon., Dec. 6, through Sun., Dec. 12.

MONDAY, NOVEMBER 29

Biological Sciences Dept. Seminar: "Current Status of Gene Amplification" with Dr. Robert Schimke, S.U. 4:15 p.m. Room T175, Herrin Hall. Open to the public.

Energy Policy Seminar: "Long-Term Planning Results 1982-2002" with Mason Willrich, vice president, PG&E Co. 4:15 p.m. Skilling Aud.

Numerical Analysis Seminars: "Analysis of a Multigrid Method as an Iterative Technique for Solving Linear Systems" with Ann Greenbaum, Lawrence Livermore Laboratory. 4:15 p.m. Math 380C.

Applied Physics Colloquium: "Theory of the Two-Electron Chemical Bond" with Prof. W. A. Harrison, S.U. 4:15 p.m. Applied Physics 200.

EE350 Radioscience Seminar: "Propagation of ULF/ELF Electromagnetic Fields Along the Sea-Sea Floor Interface" by Aziz Inan, his Ph.D. dissertation examination. 4:15 p.m. McCullough Bldg., Room 134.

Stanford Film Society: "Some Like it Hot." With Marilyn Monroe, Jack Lemmon, Tony Curtis. 7 p.m. Kresge Aud.

ASSU Speakers Bureau/Committee for Justice in the Middle East Lecture: "Middle East Realities and American Politics" by Prof. Seymour Martin Lipset. 7:30 p.m. CERAS Room 112. Public cordially invited.

TUESDAY, NOVEMBER 30

Hillel Tuesday Lunch Program: "Israel Through Women's Eyes" with Ellen Boneparth, Dean of Social Sciences, San Jose State University. Alumni Room, Old Union Clubhouse. Kosher lunch for $1.25, or bring a bag lunch.

I-Center Tuesday Lecture-Lunch Series: "Peace: Can We Get There from Here?" by Assoc. Prof. Michael N. Nagler, UC-Berkeley, and author of *America Without Violence*. Noon. I-Center. Lunch tickets for $2.50 sold one week in advance. Brown baggers welcome.

Fluid Mechanics Seminar: "Recent Developments in Transonic Flow Theory" with David Nixon, Nielson Engineering and Research, Inc. 4:15 p.m. Skilling Aud.

Communications Design Seminar: "Integrated Circuits in Tomorrow's Radios" with Polly Estabrook and J. B. Kuo, S.U. 4:15 p.m. McCullough Bldg., Room 128.

Music Dept. Concert: Alea II, the Stanford Ensemble for New Music. Jonathan Berger, director. An evening of recent and innovative works. Set your digital wristwatches for 8:07. 8 p.m. Dinkelspiel Aud. Free.

WEDNESDAY, DECEMBER 1

Lane Medical Library Booksale: $2 items, 8 a.m.-noon; $1 items, 12:30-4 p.m. Rare and special items individually priced. Sherman Fairchild Aud. Lobby. Proceeds towards new library acquisitions.

Book Sale: Books and periodicals in many fields. Hardbound $1 and up, paperback 25 cents and up, periodicals 10 cents. 11 a.m.-1:30 p.m. Green Library, West Wing, first floor, Room 101.

EE380 Computer Systems Laboratory Seminar: "Application of Distributed Computers to a Real Time System" with Fletcher Buckley, RCA, Moorestown, N.J. 4:15 p.m. Terman Aud.

Electronics in Medicine Seminar: "Electro-phrenic Stimulation in Otherwise Respirator-Dependent Quadriplegics" with Dr. Conal Wilmot, chief of rehabilitation, Santa Clara Valley Medical Center. 4:15 p.m. McCullough 134.

Colloquium of the Dept. of Chemical Engineering: "A Mathematical Model of Oil Recovery by Gas Injection" with Dr. Khalid Aziz, S.U. 4:15 p.m. Chemical Engineering Conference Room.

The Lively Arts at Stanford: Orford Quartet. Mozart: String Quartet in G Major, K. 387, ("Fugue"); Schafer: String Quartet No. 1; Beethoven: Quartet in E-flat Major, Op. 74. 8 p.m. Dinkelspiel Aud. $9.50, $8.50; students $3 off these prices.

Drama Dept. Graduate Directing Workshop: George Bernard Shaw's "Arms and the Man." Directed by Stephen Weeks. 8 p.m. The Nitery. Free. (Through Dec. 4.)

CROW Women at the Top Lecture Series: Pat Schroeder, U.S. Congresswoman, Colorado First District, will speak. 8 p.m. Kresge Aud. Public cordially invited. (Last in series.)

Art Dept. Lecture Series: "Letterforms in Evolution" by Asst. Prof. Charles Bigelow, Depts. of Art and Computer Science. 8:15 p.m. Annenberg Aud. Public cordially invited.

Alumni Associaton Guest Lecture: "Mummies and Mysteries: Investigation in the Egyptian Collection of the Stanford Museum" by Egyptologist Charles Van Siclen, '67, lecturer on Alumni Association Colleges on the Nile. 7:30 p.m. Terman Aud. Public invited.

THURSDAY, DECEMBER 2

Biological Sciences Dept. Special Seminar: "Variable Genome of Flax—Its Response to Environmental Stress" with Dr. Christopher Cullis, Dept. of Applied Genetics, John Innes Institute, Norwich, England. Noon. Room T175 Herrin Hall. Open to the public.

Stanford Geothermal Program Seminar: "Geophysical Monitoring of Vapor-Liquid Interfaces in Reservoirs" with Amos M. Nur, S.U. 1:15-2:30 p.m. Room B67, Mitchell Bldg.

Solid Mechanics Seminar: "Preliminary Design of Composites" with Dr. D. J. Wilkins, General Dynamics, Ft. Worth. 4:15 p.m. Skilling Aud.

Condensed Matter Physics Seminar: "Transition Metal Impurities and Core Excitons in Semiconductors" with A. Zunger, Solar Energy Research Institute, Golden, Colorado. 4:15 p.m. Applied Physics 200.

I-Center Other Cultures Film Series: "Threads of Life" explores facets of life in a rural village of Afghanistan as well as in the capitol; and "Stones of Eden," a year in the life of a wheat farmer in Centrl Afghanistan. 7:30 p.m. I-Center. 75 cent donation at the door.

Drama Dept. Graduate Directing Workshop: Shaw's "Arms and the Man." See detials for Wed., Dec. 1.

FRIDAY, DECEMBER 3

STARTS Christmas Faire: Opening fanfare from Tresidder Balcony, Fri., Dec. 3 at 10 a.m. Handcrafted articles by 85 artisans, juggler, musicians, dancers. 10 a.m.-5 p.m. today through Sunday. Free admission.

Applied Mathematics Lecture: "On the Symmetric Eigenvalue Problem" by Prof. Tara Nanda, UC-Berkeley. 3:15 p.m. Room 380C (Mathematics Corner Basement).

Materials Science and Engineering Dept. Colloquium: "Austenitic Stainless Steel BWR Piping Materials" with Dr. A. Gianuzzi, EPRI. 3:30 p.m. Peterson Laboratory, Room 550A.

Stanford Women in Science and Engineering Lecture Series: "Risks and Benefits in Engineering Decisions" by M. Elisabeth Pate-Cornell, asst. prof. of industrial engineering, S.U. 4:15 p.m. Skilling Aud. Stanford community welcome. Inquiries at 497-2496.

STARTS Great Directors Film Series: "Destroy, She Said" directed by Marguerite Duras, a primary exponent of the French New Novel and a leading figure in modern experimental film. 8 p.m. Geology Corner, Room 320. $3.75 general, $2.75 students.

Music Dept. Concert: Stanford Chorus and Chamber Orchestra. Andor Toth, conductor. Honegger's "King David"; Bruckner's "Te Deum." 8 p.m. Memorial Church. $4/$2. (Repeated Dec. 3, same details.)

Drama Dept. Graduate Directing Workshop: Shaw's "Arms and the Man." See details for Wed., Dec. 1.

STARTS Live Entertainment: Tom Smith and Jon Creger. Folk and light rock. 9 p.m. Coffee House. Free.

SATURDAY, DECEMBER 4

STARTS Christmas Faire: 10 a.m.-5 p.m. Tresidder Union. See details for Fri., Dec. 3.

Music Dept. Concert: Stanford Wind Ensemble. Arthur Barnes, conductor. Paule Reale—Concerto for Piano Trio & Wind Ensemble featuring the Mirecourt Trio (Kenneth Goldsmith, violin; Terry King, cello; John Jensen, piano). Percy Grainger Centennial Music: The Immovable Do, Shepherd's Hey, Country Gardens, The Gum-suckers March, Molly on the Shore, Handel in the Strand. 8 p.m. Dinkelspiel Aud. $4/$2.

Drama Dept. Graduate Directing Workshop: Final performance of Shaw's "Arms and the Man." See details for Wed., Dec. 1.

SUNDAY, DECEMBER 5

University Public Worship: Student Worship Service, 8:30 p.m.; Glen Stassen, Southern Baptist Theological Seminary, sermon and eucharist, 11 a.m.; Catholic Mass, 4:30 p.m.

STARTS Christmas Faire: Final day. 10 a.m.-5 p.m. Tresidder Union. See details for Fri., Dec. 3.

ASSU Sunday Flicks: "Personal Best." 7 & 9:30 p.m. Memorial Aud. $1.50.

Music Dept. Concert: Stanford Chorus & Chamber Orchestra. Same details as Fri., Dec. 3.

EXHIBITS

Paul Harris—Still Life. Stanford Museum. Through January 2.

Venice in the 18th Century. Paintings, drawings, prints and decorative arts. Stanford Art Gallery. Through December 19.

Before Darwin and After. Books and other materials dealing with Charles Darwin, his theory and its impact. Second floor, West Wing, Green Library. Through November.

Wood Construction and Process Sculpture by E. David Camardo. For library environment. The Jonsson Library of Government Documents, Green Library. Through December.

The Orchid Observed. Five centuries of botanical illustration and exhibit of books from the collections of William K. Glikbarg and the university libraries. Lurie Rotunda, Dept. of Special Collections, second floor, West Wing, Green Library. November 15-January 11.

Acrylic on Canvas Paintings by Win Belton. Bechtel International Center. Through November.

Views Through a Natural Lens and California Vignettes. Color photographs by Damien Kuffler. Tresidder second floor gallery and the Coffee House. Month of November.

Performance Art as a High School Teaching Methodology. Documentation in film and text by Charles Garoian. Stanford Faculty Club lower entry area. Through late November.

Melange of Paintings. By several artists who have had exhibits in 1982. Faculty Club Gold Lounge.

Fiberwork by Priscilla Hextor. Faculty Club upper entry. Through late November.

Japanese Brush Painting by Ami Wada. Reception, Fri., Dec. 3, 5-7 p.m. Bechtel International Center. Dec. 3-30.

Brown bag concert

Stanford's Chamber Orchestra, under the direction of Andor Toth, invites the Stanford community to a free brown-bag Christmas concert at 12:30 p.m. Thursday, Dec. 2, in Dinkelspiel Auditorium. The concert will conclude at 1:30 p.m.

The orchestra will perform sections of Corelli's *Christmas Concerto* and music by Mozart, Bach, and others.

Student soloists will include John DeVincenzo, trumpet; Allan Rubin and Daniel Cher, violins; Cindi Campbell, cello; and Kathryn Barnard, flute.

Soloists from the community will be Janet Da Foe and Laurel Machado, violins, and Curtis Smith, cellist.

Literary criticism

Prof. Sara Castro-Klaren of Dartmouth College will speak on "Feminist Literary Criticism and Women Writers in Latin America" at 4:15 p.m. Thursday, Dec. 2, in room 276, Building 260, at Stanford University.

Her free public lecture is sponsored by the Department of Spanish and Portuguese.

Engineering talk

Assistant Prof. M. Elisabeth Pate-Cornell, industrial engineering, will speak on "Risks and Benefits in Engineering Decisions" at 4:15 p.m. Friday, Dec. 3, in Skilling Auditorium on the Stanford campus.

The lecture, sponsored by the Office of the Dean of Graduate Studies and Research and Women in Science and Engineering (WISE), is one of a series of monthly talks presented by women faculty and graduate students.

CAMPUS REPORT

Volume XV, Number 11 | A publication for Stanford University faculty & staff | December 1, 1982

Crews clear storm debris from campus

"Controlled chaos" is the way Jim Horgan, manager of operations and maintenance described the aftermath of Tuesday morning's storm at Stanford.

More than 30 trees were uprooted by the heavy winds and rain including a 100-year-old eucalyptus that fell across Campus Drive West near the Golf Course Driving Range, blocking the road and snarling morning traffic. Crews cut away enough of the tree to reopen the road at 10:30 a.m.

A catalpa tree blocked Mayfield Ave. near Campus Drive East, but a path for vehicles was cut through by 7 a.m.

Operations and Maintenance employees were summoned beginning at 1 a.m. to cope with storm-related problems.

Tree limbs falling on overhead electrical lines caused numerous blackouts in the faculty-staff housing area and on the central campus, according to Utilities Manager Jerry Ostrander. Power to Operations and Maintenance, Stores, Commissary, and Children's Center was disrupted until 11 a.m. Emergency generators were utilized at Operations and Maintenance.

Pine Hall and the Research Libraries Group trailers were without power for about 30 minutes early Tuesday afternoon when a power breaker opened unexpectedly. Crews closed the breaker, restoring electrical power. Ostrander said no evidence could be found as to why the breaker opened.

By mid-afternoon when power had been restored to campus, Ostrander turned his efforts to helping PG&E locate blackouts in the faculty-staff housing area. Stanford crews are not allowed to handle PG&E lines, Ostrander said, but his men helped secure downed lines that posed hazards.

Ostrander said residents could report power problems to the University at 7-2281. He then will coordinate with PG&E to restore service.

According to grounds manager Herb Fong, two houses on Salvatierra sustained serious roof damage when three elms fell during the night. Two more elms fell at the entrance to the Buck Estate and two trees were down at Hoover House, the University-owned residence of the president.

Hundreds of branches littered the campus, Fong said. He attributed the extent of the damage to the fact that many trees have been planted too close together, resulting in weak structures and inadequate root systems. Thinning out groves of mature trees leaves behind weak trees susceptible to damage.

A fallen eucalyptus blocked the exit at University Stores on Bonair Siding, where

continued on page 13

This tree on Inner Quad near Memorial Church is one of the casualties of Monday night's storm.

Jaedicke to take charge at the GSB corral

Robert K. Jaedicke, 53, professor of accounting at the Stanford Graduate School of Business since 1961, has been appointed dean of the School, effective Jan. 1, President Donald Kennedy announced Tuesday, Nov. 30.

Jaedicke served as acting dean in 1979-80 and as associate dean for academic affairs from 1969 to 1981. He will succeed Rene C. McPherson, 58, who announced his intention to resign in June, citing health and personal reasons.

Jaedicke holds the endowed William R. Kimball professorship of accounting. He will be the sixth dean of the School, which was founded in 1925, and the first selected from its faculty in many years. the last three deans—Ernest C. Arbuckle, Arjay Miller, and McPherson—were prominent corporate executives.

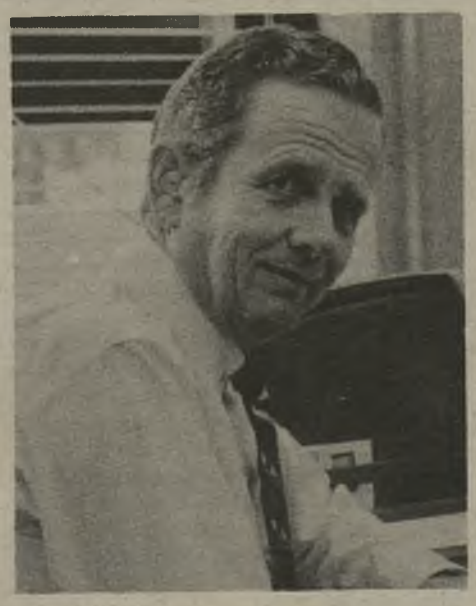
Miller once said Jaedicke "could be dean of any business school in the country. He's got all the good qualities that you look for in an executive.

"He cares about the institution. He's smart, hard working, and always plays his cards face up. There's no hidden agenda with Bob, no politicking, no indirection. He's straightforward and honest."

While Jaedicke was associate dean for academic affairs, Stanford was rated the top business school in the nation by faculty peers and by other business school deans.

Jaedicke played a key role in revamping the curriculum, trimming course requirements to give students more latitude in tailoring the MBA program to their major interests, and broadening the curriculum on grounds that managers need to more fully understand the workings of both the public and private sector of the economy.

Stanford now is the most selective of the nation's major business schools, with 5,000 applicants for 320 positions in each MBA class. Three out of four students offered admission chose to enroll, a "yield" not exceeded by any other school.



Jaedicke currently teaches a first-year MBA course in accounting and directs the Stanford Executive Program, an eight-week, intensive summer program to help top executives improve their managerial skills.

Jaedicke is well-known for his love of the West and life on the range. His third-floor office in the Business School is decorated with Charles Russell prints of the Old West, models of cowboys, samples of barbed wire, and photos of his family on the ranges of Big Sky Country.

Born and reared in farm and ranch country, Jaedicke was riding horses before he was in his teens. For years, he has spent summers and other holiday periods working on ranches in Montana, usually with his family. He and his wife, Marilyn, have four children.

Jaedicke's appointment culminates a four-month search by a 12-member committee headed by Stanford Business Prof. Harold J. Leavitt. Leavitt said Jaedicke "turned out to be the standard by which we judged all candidates. His strong support in the business community was a major factor in his selection."

Students check out first car more carefully than college

In all too many cases, "the first purchase of an automobile is more thoroughly researched than the purchase of a college education," Stanford Admissions Dean Fred Hargadon suspects.

"Learning about colleges is an arduous task, one to which many students simply do not allocate sufficient time and thought," he adds.

Chairman of the College Board nationally, Hargadon suggests students should start this process by assessing their own educational interests. Then they should talk with their parents, "a much underutilized resource," about what they might do differently if they had the chance to be starting college.

After that, students should look up the basic facts about colleges in a current issue of such publications as the College Board's *College Handbook*, Peterson's *Annual Guide to Undergraduate Study*, and Cass and Birnbaum's *Comparative Guide to Colleges*.

After using basic data from these sources to narrow down their choices, students should request bulletins and application information from perhaps a dozen different colleges.

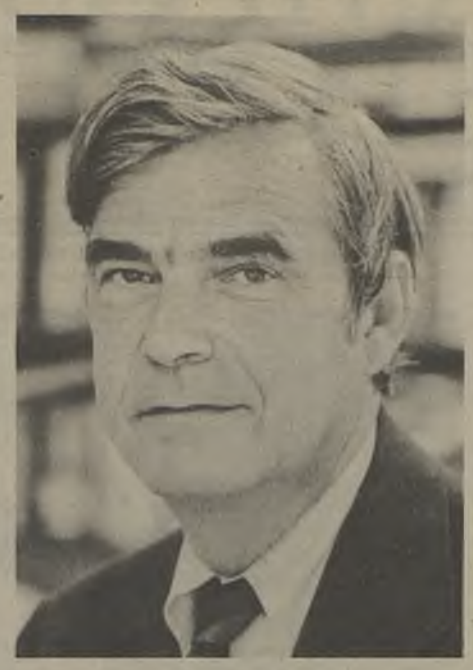
Assessing this "second-level information" isn't easy, Hargadon cautions. "The quality of an academic program obviously depends on the quality of the faculty and the student body, neither of which is as easily measured—and certainly not as easily rank ordered—as some would have us believe."

Is faculty quality determined simply by the number of Ph.D.'s, for example, or do the institutions where they were obtained make a difference?

When it comes to teaching, are all assistants necessarily better than all teaching assistants, or all full professors—many of whom once were TA's—better than those who have not yet achieved this rank?

Contrary to the quick, summary impressions conveyed by "insider" and popular guidebooks, colleges and universities often may have more than one academic and one social milieu. The fraction of faculty and students identified with any one milieu shifts from year to year, and from fall to spring in the same year, he suggests.

"While colleges are frequently portrayed as rather traditional institutions, it is in fact their dynamic rather than their static qualities which have most impressed me," he adds."Colleges change academically, socially, and extracurricularly not least of all by by virtue of the particular application and enrollment decisions made by succeeding generations of students."



Eight years ago, for example, Stanford had very little extracurricular drama; now almost 20 amateur productions are put on in various dormitories annually.

Introducing complexity

If college admissions counselors want to help students think about college, "it is a matter of integrity that we avoid simplicity and introduce them to complexity—that we let them know that a commercial guidebook's two- or three-page interpretive description of a college is an inadequate substitute for a 50, 100, or 135-page college bulletin, however vulnerable to overstatement or idealism some of the latter may be....

"Guidebooks have the effect of treating prospective applicants and colleges alike as fixed objects, as if the matter of selecting a college to attend were a mere matter of finding a nut to fit a bolt.

"Decisions about where to attend college are expensive ones and not to be taken lightly. When my own staff travels, they spend less time trying to 'sell' Stanford than they do attempting to help students begin to ask the right questions about college in general.

Fred Hargadon

"Our experience suggests that too many students want to know the wrong things. Too often, they are interested in what a college will do for them, rather than what opportunities a given college's resources will offer them to make something of.

"Too often, they want to know the requirements for getting through, rather than the challenges which will be presented along the way. They want to know what their 'chances' for admission to medical school will be, rather than the ways in which they might grow and change while in college. They want to figure out 'how to get admitted' rather than what it is they plan to do with college once they get there."

No easy choices

Even for those who do their homework, college choices remain difficult, he adds. Should a student attend college where similar students are in the majority or in the minority? Should a student attend college where it's reasonably certain he or she will graduate at the top of the class or enroll where the odds are they may wind up in the bottom 90 percent?

"The best education is the one which is actively pursued rather than passively received," he suggests.

The same goes for choosing colleges. "The degree to which you can effectively evaluate and compare the programs and resources of various colleges will depend greatly upon just how much thought you have given to what it is you seek from college," Hargadon advises students.

This does not mean students have to know precisely what occupations they plan to enter or even what their majors in college will be. But if students don't develop a pretty clear notion of what they expect to get out of college—other than a degree—it is difficult to know what resources to look for and how to weigh their comparative usefulness in terms of the student's goals.

Besides taking time to list their likes and dislikes, strengths and weaknesses, students should "make a list of the things they think they ought to know about, but don't, or of the academic and extracurricular activities they should have attempted, but did not," he adds.

"Students considering college should always act to maximize their options. One's goals, ambitions, and career plans may change...the likelihood of change should be built into one's planning.

"This is no less true for the ninth or tenth grader selecting courses to take in high school than it is for the high school senior selecting a college to attend." Where the ninth or tenth grader might be concerned if college were still available as an option if a planned ballet career did not develop, the senior should consider whether a college chosen for the strength of a particular department has alternatives in case the student's interest in one subject wanes.

Anticipating growth

Students should take into account their own anticipated growth, the changes which take place in colleges themselves, and the variety of paths to be followed in any single college, he suggests.

"Colleges are dynamic and are affected by the students who enroll and the talents, skills, and inclinations they bring with them," Hargadon observes.

"There is no evidence to suggest that either the intelligence level or the integrity of those who write college publications are lower than that of those who publish the interpretive college guidebooks which purport to tell you what colleges won't (reveal).

"A given college catalog, well done, tells prospective students—if they will only take the time to read it—far more about that college than any guidebook possibly can."

Hargadon's views were developed in a panel discussion at the National Association of College Admissions Counselors last September and will be published in *The Stanford Observer*, the University's monthly newspaper for alumni, parents, and friends. Single copies are available on request from Stanford News and Publications Service.

Search firm helps look for new v.p.

Stanford has retained an executive search firm to help gather information about candidates for its vice-presidency for development, President Donald Kennedy told the Development Office staff in a recent letter about the status of the nationwide search.

Julia Hirsch of Boyden Associates—a Stanford alumna, former staffer, and active volunteer—will screen a select group of nominees from among the more than 200 names that have been put forward, Kennedy said.

The search committee hopes to develop a short list of finalists within a few weeks, then "ask these finalists to go through Stanford's usual thorough round of interviews," he added.

"If all proceeds according to plan, we will announce the appointment early in winter quarter."

Kennedy himself is heading up the committee. Serving as vice-chairman is Ray Bacchetti, vice-provost for management. His assistant, John Hughes, staffs the search committee.

Rhyne shows work

Programmer/analyst Theresa Marie Rhyne of CIT currently is showing her paper and fabric collages at Old Town Art Center in Los Gatos.

Rhyne has a Stanford bachelor's degree in civil engineering and has done graduate work in structural and geotechnical engineering, seismic design, and infrastructure planning and management.

She has developed a unique technique of blending cut-out pictures into unified and harmonious themes. Her subject matter encompasses the full spectrum of common events, objects, and places.

Rhyne has had several exhibitions in the local area, including Stanford.

Sponsored Projects holiday closings

All principal investigators planning to submit proposals for January 1 deadlines are reminded that the Sponsored Projects Office will be closed Thursday and Friday, Dec. 23-24, and Friday, Dec. 31.

Due to the holiday schedule, the U.S. postal system is generally overloaded: therefore, it is recommended that proposals reach SPO no later than Monday, Dec. 13, to insure timely processing, to allow for the mail backlog in meeting the deadline, and to give SPO time to process unavoidably late proposals.

Additionally, the principal investigator should identify an individual who will be available during the processing period to answer any questions and to be responsible for correcting any errors. Please indicate on the Proposal Routing Sheet the name of the contact person, together with home, office or vacation telephone numbers, as Sponsored Projects expects to be reviewing proposals outside of normal office hours.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medicals news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Stockdale will show students how to avoid manipulation

Second of two parts

BY DONALD STOKES

When the administration in Washington hinted to James Bond Stockdale that he might like to take a federal position he shot down the idea with the skill learned as a 200-mission wing commander.

"I can do more for the country outside Washington than directing traffic in some bureaucratic job," he snorted with salty scorn.

Vice Admiral Stockdale is America's ranking naval hero. Holder of the Congressional Medal of Honor and 24 other decorations, he is nationally famous for having resisted the tortures and coercion of his Vietnamese captors for eight terrible years.

In spite of broken bones, a body scarred by tortures, savage interrogations and isolation in cramped cells, his diamond-hard will was victorious.

Today Stockdale plans to do more for his country. He is polishing the teaching skills which he gained as president of the Naval War College. Starting this winter, Stockdale, who is a senior fellow at Hoover Institution, will teach "Combating Coercion and Manipulation," a seminar course for sophomores.

Stockdale will show his students how most of us are liable to manipulation and coercion in our everyday lives; how it occurs in every large organization, every educational institution, even in religious circles.

Stockdale will teach how to recognize the warning signs, how to defend oneself with dignity, maintain one's feelings of self-worth; how to deal with fear and not be consumed by guilt.

The hero is coming home. Stockdale was squadron commander of a supersonic F-8 Crusader outfit when he was selected by the Navy as a "comer" and in 1962 was sent to Stanford for two years to study politics, history and economics.

Stockdale noticed that in many courses his interest would peak about the time the professor would say something to the effect of "But we're getting into philosophy—let's get back to the subject."

"I decided to take some philosophy courses," Stockdale said. "It was my good fortune one morning to wander through the halls of the Philosophy Department, in civilian clothes, and come to an open office whose occupant asked if he could help me.

"When I told him I was a graduate student technically in the humanities but with no formal philosophy background, he could scarcely believe it. When I told him I was a naval officer, he asked me to have a seat. He had been in the Navy in World War II. His name was Philip Rhinelander (now emeritus professor of philosophy).

"He was in the midst of his two-term course 'The Problems of Good and Evil.' This he built on the lessons of the Book of Job ('Life is not Fair'). He offered to let me enter the course, and, to overcome my shortcomings of background, to give me an hour of private tutoring each week.

"I loved Phil's class, and particularly our hour together each week. I remember how patient he was in trying to get me to realize the full implications of Hume's 'Dialogues on Natural Religion.'

As we parted after our last session, he reached up to his bookshelf and said, 'You are a military man—take this booklet as a momento of our hours together. It provides moral philosophy applicable to your profession.' It was Epictetus' *Enchiridion*."

Three years later, incarcerated in Fiery Furnace prison, Hanoi, passages from that 2,000-year-old work were a mainstay for Stockdale during his long drawn-out captivity. Time and again, in Stockdale's moments of agony, Epictetus spoke to him across 20 centuries. Stockdale, in turn, inspired the other American prisoners to maintain their spirits, and to resist.

After an eight-year-long duel with his captors Stockdale remained unbroken, while his chief opponent and interrogator was in disgrace for having failed to break the American.

This bust of Admiral Stockdale was unveiled in the Lou Henry Hoover Building at Stanford on Oct. 22. Flanking it are Mrs. Sybil Stockdale and Admiral Stockdale.

Stockdale plans to show his students at Stanford how the lessons he learned in suffering in Vietnam can be applied to everyday life.

"My course is really a study of how man manipulates man by means of the imposition of coercion and guilt. Though sometimes done in an easily recognized, explicit and illegal way, the process is usually more subtle, more insidious and within the law.

"People who are part of hierarchies—be they academic, business, governmental, military or other—are frequently in positions where others are trying to manipulate them, to get moral leverage on them by methods which are not easily recognized by the victims.

"What I experienced at the hands of the North Vietnamese was an acceleration and intensification of this process through physical coercion and solitary confinement. It formed a pressurized microcosm which was ideal for the study of the elements of this phenomenon.

"The manipulative squeeze plays of a harsh political prison provide harsh extortive forces that can drive to the surface issues of integrity and destructive guilt. In civilian life these take much longer to fester and to erupt into public view. In the prison cauldron people make or destroy their own lifetime reputations in weeks.

"Coercion and manipulation has been going on for thousands of years. Those who practice it use whatever means works, whatever will make people do things against their will or their normal inclinations."

And sometimes the carrot is used instead of the stick?

"Of course. But understand that I am not making this an 'anti' course. All I am trying to do is to sharpen people's sensitivity to what is happening to them a great deal of the time. If you are going down the primrose path, at least know that you are being led and by what tools you are being led.

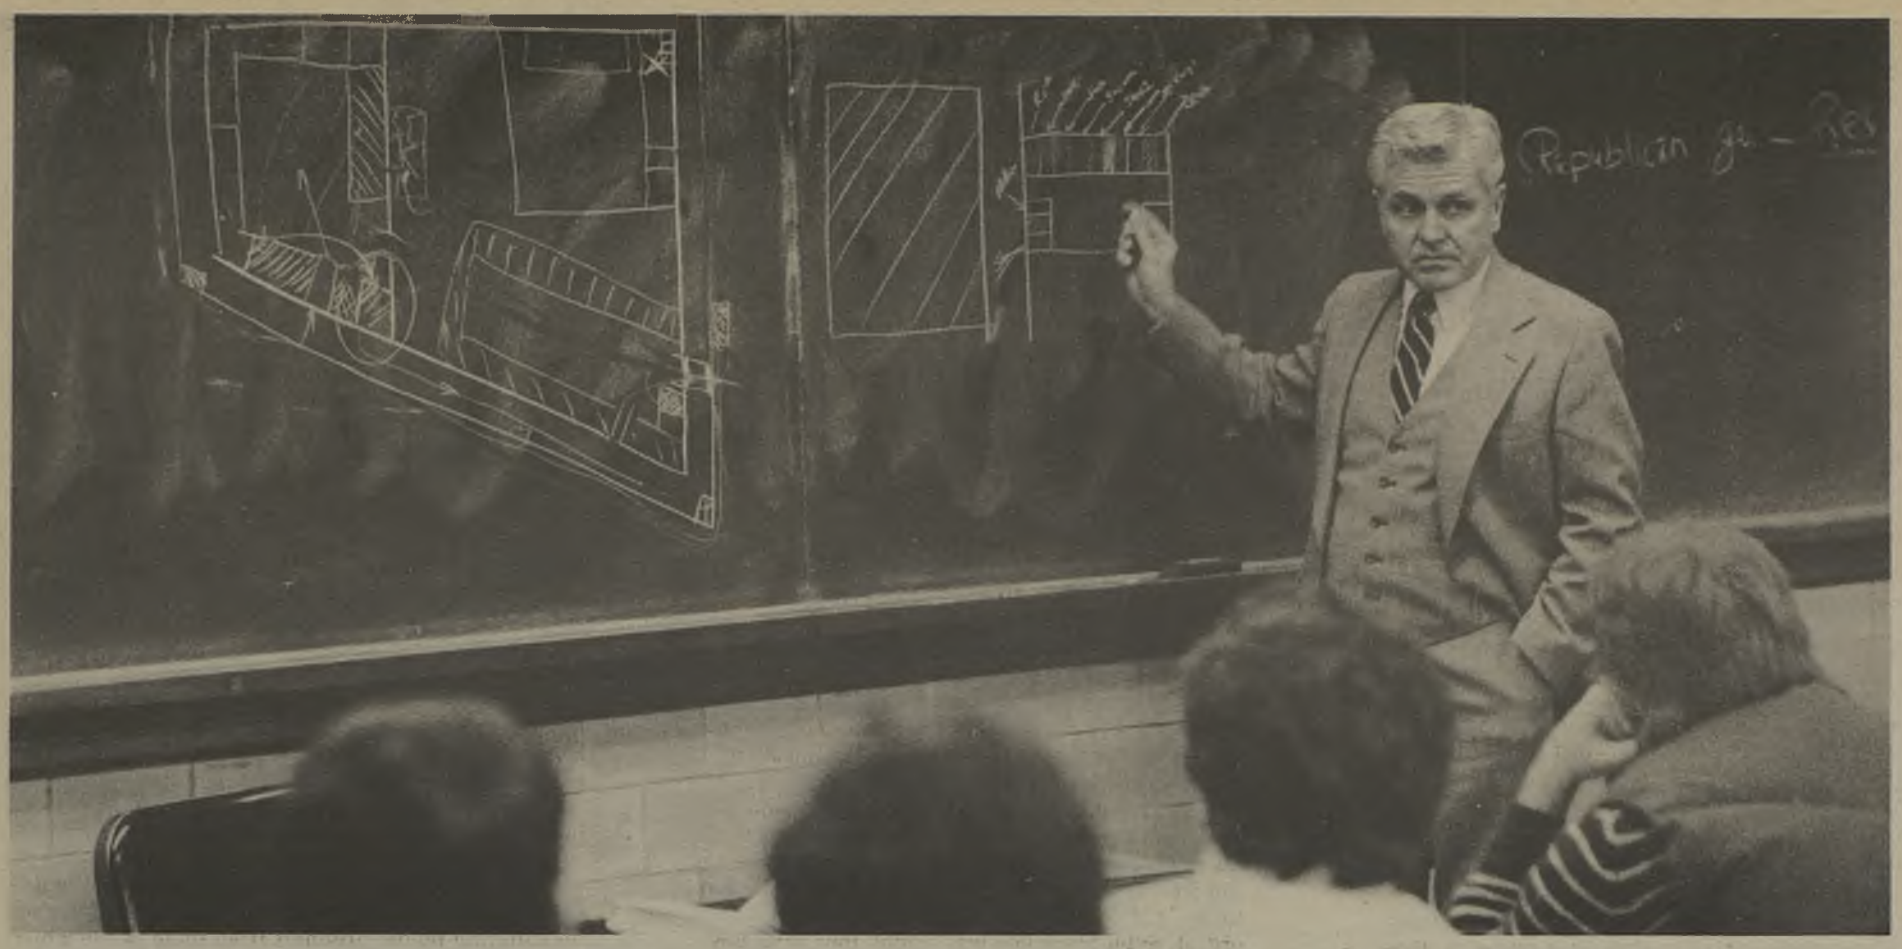
"Perhaps I am more sensitive to the process than most because I was exposed to the extortionary process in such a concentrated form. It gave me a vivid awareness of the process and how it is conducted.

"I know when I am being 'had.' You cannot survive such a prison experience as I had without developing long tentacles of awareness about what is being done.

"The manipulation doesn't happen very often to writers or artists or other free agents. It happens mostly to people in hierarchies, such as in business, government, faculties. It even happens in the world of religion."

Does the growth of hierarchies and mass organizations mean that manipulation is now more than ever a fact of life?

"Yes, most people have to knuckle under to the organization, to Big Daddy—as somebody put it, 'cooperate to graduate.' This process can become a quagmire if you let it become one. You can become compromised by so many little steps that seem insignificant, and before you know it, you have passed the point of no return. The extortionist knows, when you reach that point, that he has you."



So the person who prides himself on being a 'good organization man' is on the slippery slope?

"Exactly. Many people have no compunction against taking those little steps which seem to have no harm, but which lead inevitably to surrender of oneself.

"However, don't get the idea that I am trying to create rebels. All I am trying to do is to warn people how they must take stock of themselves, how to avoid taking those steps which can lead them to becoming ashamed of themselves."

One of the first lessons, he says, is to disabuse oneself of the inborn belief of most people that a natural economy prevails by which evil is punished and virtue is rewarded.

Admiral Stockdale tells Hampden-Sydney College students about his experiences as a prisoner of the North Vietnamese.

Stockdale...

continued from page 3

"When it dawns on trusting souls that no such moral economy is operative in this life some of them come unglued. Aristotle had a name for what happens to good men who suffer unjustified bad ends—tragedy. The control of tragedy in this sense is the task of education.

"The only way I know to handle failure is to gain historical perspective, to think about men and women who have successfully lived with failure in our religious and classical past.

"One can develop or learn that special kind of courage that can prepare us for failure and diminish its worst effects. Failure is not the end of everything—a man can always pick himself up off the floor and fight one more round."

Stockdale remembers warmly many of the Stanford faculty who helped him to form his ideas. There were Peter Duignan and John Bunzel (today senior fellows at Hoover Institution), Emeritus Prof. Thomas Bailey and Prof. Robert North.

People often ask Stockdale what other influences prepared him for what he had to face during his long years in the hands of the North Vietnamese.

"Many things and many people," he tells them. "Partly my training as a football player, my military training, my academic studies.

"But the training that may surprise you as being useful was in dramatics. My mother was a dramatic coach, and when young I played in every single production she put on. That may seem trivial, but I think an ability to act is often important in crucial situations. Certainly it is important in being a good teacher."

People who are part of hierarchies—be they academic, business, governmental, military or other—are frequently in positions where others are trying to manipulate them, to get moral leverage on them by methods which are not easily recognized by the victims.

—Admiral Stockdale

How can his wartime experiences be a guide to everyday living in hierarchies?

"In these worrying times of economic hardship, people can so easily fall into despair. One of the realizations that came to us in prison is that we are all capable of achieving more than we think, that the human spirit has a vast amount of resilience and if we summon it up it will rise to the occasion in the grandest sense.

"It is uplifting to realize the untapped resources of our own minds. You would think that prisoners in isolation, in really tough situations, would lose their spontaneity and their spirit, but that is not so. If you summon your will, whether in war or within the organization, you can achieve far more than you think. Your resources will emerge, sometimes ones you never realized you had."

Reminded that he had once referred to "the mutation of ethics in our litigious society," Stockdale nodded his head vigorously. "Yes, moral goodness becomes defined as conformity to specified rules of conduct; personal virtue is considered synonymous with a mechanical disposition to submit consistently to those rules.

"The flagrant, excessive use of courts and regulations and the growing penchant for directing society's course by a myriad of rules has largely and sadly depreciated the burden of moral responsibility. No longer are individuals expected to make determinations of right or wrong.

"Society has largely adopted the judicial process as its moral yardstick and forfeited common sense and personal responsibility. 'Legal' is not necessarily synonymous with 'good.'

"This situation exists to a great extent in business or government bureaucracies, in which too many functionaries are armed only with technical knowledge and a legalistic, by-the-numbers approach. This type of person proceeds through his career tripping over minutiae and substituting checkoff lists for common sense.

"Our bureaucrats have been weaned on slogans and fads of the sort preached in the better business schools of the country. Rational managerial concepts are expected to cure all evils."

Stockdale turned his beliefs into action when he resigned from an important position, a civilian one, he had been given after his release from captivity. He felt that to stay on in that high position would compromise his principles, for reasons he would rather not discuss nowadays. To his great surprise it was the young people who supported him enthusiastically, while older people shook their heads.

This makes Stockdale optimistic about today's younger generation. "This is not the first time I have come across this new attitude, this spirit, in our educated men and women in their 20s and 30s. I think it is born of a new, responsible, awakening of moral responsibility. I like it.

I get a big kick out of today's young people, and realizing their spirit. They feel less dependent and don't worry about keeping the lid on and going along with the system. They are more idealistic and ethical, and they are capable of being tough about it.

"They know what is worth standing up for, and they are not afraid to do it.

"My generation was brought up on such ideas as 'Don't be impulsive' and 'Wisdom will come to you later,' and 'You will come to see that the name of the game is to get along and accommodate.' I think a lot of that was bred into us by a fear of failure."

The older people have lost that spirit?

"I wonder whether my generation has become hooked on collegial solutions, on keeping the lid on, on seeking a consensus, on making a deal to preserve unanimity.

"Corporate life, board life, hierarchical life breed a slide to accommodation which we are told is necessary to get something accomplished. That is an invitation to moral weakness. If you don't think any weakness is incurred by becoming used to compromise, try living in a communist jail. I still

Stockdale...

continued from page 4

remember that favorite phrase of my interrogator in prison: 'Why not meet us halfway?'

"I do not advocate a POW name, rank and serial number stance at every board of directors meeting here at home. But neither do I advocate suppressing moral sensibility in the interest of cooperation—or tenure.

"I believe today's young people will do better than we did.

"Let me tell you how I would like to spend the next few years. I'd like to continue with my writing and get several books published. At the same time I want to get more and more involved with helping undergraduates. I look forward to the day when my writing is done and I can be a teacher.

"My mother was a teacher, and two of my sons are teachers. I think every good leader is a teacher. Every great leader I have known has been a great teacher, able to give those around him a sense of perspective and to set the moral, social and motivational climate among his followers.

"Glib, cerebral and detached people can get by in positions of authority until the pressure comes on. When that happens people cling to those they know they can trust—those who are not detached but involved.

I don't have any simple formulae for my students, but I can advise some good readings, and pass on some thoughts I think will be useful. The subject I deal with is so basic. I see so many affirmative nods when I tell some of my beliefs to experienced men who have had success in business and other fields. .

"Typically, one will say, 'That is a belief I have carried right through my career, I have always resisted the attempts of my colleagues and counterparts to manipulate me.' "

Stockdale tries to impress his young friends with the fact that it is highly relevant to their studies and future careers to study Epictetus and the other philosophers of old.

"They will learn how to deal with the corporate structure, with collegial activity, with the group, political party, or force. It all comes under the heading of the collective.

"I understand that, I am not against it. I simply want people to be aware of the consequences of blindly following edicts that are the conventional wisdom of the day, of following the formula.

"Within each group there is a whirlpool of temptation. If a person does not maintain his autonomy, his dignity, his sense of right and wrong, then he will lose his independence by allowing himself to be led into compromises, which later can be held over his head.

"I want to strike a blow for individualism, for pride and dignity."

Stockdale is writing a book about his experiences in prison. There is a possibility this may be made into a movie. Stockdale resembles in some ways an elderly Paul Newman, and the white-haired hero agreed jocularly that it would suit him nicely if Newman played the lead.

He plans a second book about his views on leadership. But it is a third book which is most on his mind today. It is tentatively called "The Eye of the Storm," and it centers largely on the part that his wife of 35 years played during his wartime ordeal. Sybil Stockdale was raising four little boys when Stockdale was in the prison the Vietnamese called Fiery Furnace.

"Sybil and I each invested a considerable part of our lives in the Vietnam period," he said. "Round her kitchen table in Coronado, Calif., was founded the League of Families of American Prisoners and Missing in South East Asia.

"She did this against government opposition. In those days, 1967 and 1968, they would not give any information to service wives about other wives, however worrying the individual situation. The authorities did not want any input from families.

"The official attitude was 'Keep quiet, and don't try to enter into matters of national significance.' Sybil would not listen to that sort of talk. She became involved in a big way.

She read every book she could lay her hands on concerning communist treatment of prisoners. She made up her mind that it was vitally necessary for the media here to publicize the fact that our people were getting killed or tortured as prisoners in Vietnam. The government would not listen to her arguments.

"She kept at it, and after a long hard fight, during which she suffered two nervous breakdowns, she finally got through to some sympathetic people. Slowly the official attitude changed. Publicity was given to the barbaric methods of the North Vietnamese.

"As soon as media references began to be made to the harsh conditions in the Vietnamese jails, our conditions in prison slowly began to change. Why? Because the Vietnamese did not want to spoil the relatively favorable perspective that many Americans had at that time about Communists who had us in their power."

Thus it was that Sybil Stockdale, half way round the world, was able to help relieve her husband and his suffering fellow-prisoners from some of the worst burdens of their captivity. Their teamwork—hers in persistence of principle, his of heroism under ultimate stress—was a partnership in nobility.

Stockdale still reads Epictetus and gains strength from him. The tough old slave-philosopher would be proud of his distant pupil and of all those who act on his bleak but stirring counsel.

Japan should dramatically increase nonmilitary foreign aid, Okimoto says

Japan should "dramatically increase" its nonmilitary foreign aid, a Stanford scholar believes.

Japan also should work to strengthen free trade and become more influential as a "rule maker" in the international community, says Assistant Prof. Daniel Okimoto of the Stanford Department of Political Science.

His views are detailed in a new book he edited, *Japan's Economy: Coping with Change in the International Environment*, published by Westview Press (304 pp., $13.50 paper, $30 cloth).

In his book, Okimoto notes that "by systematically eschewing military power and focusing instead on economic enhancement, Japan has managed to construct an industrial and technological (base) that now makes it awkward for the country to continue assuming a posture of politico-military innocence."

Japan spends less than one percent of its gross national product on defense, while the U.S. now plans to increase the share of its GNP devoted to defense from five percent to eight percent by 1985.

While critics contend that Japan gets a "free ride" on U.S. Defense, Okimoto notes that Japan's defense expenditures, like its GNP, have risen at an average rate of seven percent annually in the past 15 years. Japan's total defense expenditures—$10 billion this year—rank eighth in the world.

The primary constraint on increased defense expenditures in Japan is political, not economic, Okimoto says. Economic simulation studies show "Japan's economy is clearly capable today of sustaining substantially larger defense outlays without suffering serious setbacks in either the rate of growth or the size of the economy."

While Japan is "highly sophisticated" in commercial microelectronics, its defense-related technology is "conspicuously backward," with only about one percent of the very limited defense budget allocated to research and development.

If Japan's technological assets were harnessed in a bilateral program of research and development, the capacity of the U.S. and Japan to lengthen their technological lead over the Soviet Union would be "given a powerful thrust forward," Okimoto observes.

If defense expenditures are combined with economic assistance and research and development expenditures, Japan spends about four percent of its GNP on these kinds of international cooperation. This compares to about eight percent for the U.S. at present, according to Tokyo University economist Uchida Tadao.

He and others have suggested an international division of labor for these security responsibilities, with each country specializing in areas where it enjoys a comparative advantage. Japan thus would be in a logical position to strengthen economic security through expanded aid programs.

"Obviously, this kind of nonmilitary aid must come from taxes and voluntary contributions by all the Japanese people," Okimoto says. "In this sense, foreign economic policy is indeed domestic economic policy, but idealistic humanitarianism in international politics is quite consistent with Japan's nationalistic interests."

In encouraging free trade, he continues, "Japan must take practical policy measures to avoid disrupting the domestic markets of other countries. . . .

"Given the tremendous impact of Japan's actions and policy on the world economy, Japan's failure to assume a responsible role appropriate to its position reveals a lack of serious concern about maintaining the stability of a precarious international system. . . .

"If the achievements of the Japanese people are to have a significant place in world history, it will be because (their) creativity and the nonmilitary stance. . .can make a substantial contribution to the prosperity and stability of the world economy. . . .

Stanford ranks high in engineering

Stanford ranks second nationally in the perceived quality of its faculty in mechanical engineering and tied for second in electrical engineering, according to a major new national survey.

Stanford was fifth in chemical engineering and sixth in civil engineering.

MIT ranked first in both mechanical and electrical engineering, second in civil engineering, and seventh in chemical engineering.

Berkeley ranked first in civil engineering, tied with Stanford for second in electrical engineering, ranked third in mechanical engineering, and fourth in chemical engineering.

The new survey was based on a survey of 822 engineering faculty across the country. It was sponsored by the Conference Board of Associated Research Councils, including the American Council of Learned Societies, the American Council on Education, the National Research Council, and the Social Science Research Council. It is part of a series funded by $500,000 from the Mellon, Ford, and Sloan Foundations, the National Institutes of Health, the National Science Foundation, and the National Academy of Sciences.

The report gave two figures for the perceived quality of faculty. The first was a raw score, ranging from 0 to 5 on a scale where 4 was "strong" and 5 "distinguished." The second figure converted this raw score into a scale of 1 to 99, with 50 representing the average and about two-thirds clustered between 40 and 60.

On those measures, the results were:

Chemical Engineering: (79 universities rated) Minnesota, 4.9, 73; Wisconsin, 4.8, 72; Caltech, 4.7, 71; Berkeley, 4.6, 71; Stanford, 4.5, 70; Delaware, 4.5, 69; MIT 4.3, 67; Houston, 4.1, 64; Princeton 4, 64; and Illinois, 4, 64.

Civil Engineering: (74 institutions) Berkeley,4.8, 75; MIT, 4.7, 74; Illinois, 4.5, 72; Cal Tech, 4.5, 71; Texas, 4.2, 67; Stanford, 4.1, 67; Cornell 4, 66.

Electrical Engineering: (91 institutions) MIT, 4.9, 76; Berkeley, 4.8, 75; Stanford, 4.8, 75; Illinois, 4.6, 73; USC, 4.1, 67; UCLA, 4.1, 67; and Cornell, 4, 66.

Mechanical Engineering: (82 institutions) MIT, 4.8, 76; Stanford, 4.6, 74; Berkeley, 4.6, 73; Caltech, 4.3, 69; Minnesota, 4.1, 68; Princeton 4, 66; and Michigan 4, 65.

Lieberman reviews issues in academic-industrial ties

Following is a "White Paper" on Stanford-industrial relations prepared by Vice-Provost Gerald J. Lieberman, dean of graduate studies and research, distributed to the Board of Trustees in June, and discussed with the Committee on Research in November:

University-industry relationships have been the subject of considerable scrutiny over the past year or two, at Stanford and elsewhere.

It is beyond doubt that university interactions with industry offer significant benefits:

They provide funding for specific university research activities as well as gifts to support broader educational missions;

They provide a matrix for outside consulting activities, giving faculty opportunities for continuing education and experience that can lead to improved scholarship and teaching;

They provide a means of speeding the transfer of science and technology from the university laboratory into the stream of commerce for the public benefit; they can enrich students' educational experiences through interactions with visiting scholars from industry and industrial participants in such programs as university research consortia and affiliate programs; and

They can lead to improved quality in applied science.

Indeed, interactions between academia and industry are not only desirable, they are essential to keep American science and technology strong.

However, university-industrial relations have grown dramatically in complexity over the past few years. Industrial technology in such areas as electronics and computer software has advanced to a point at which many results of basic university research can now be applied in industrial settings in a matter of months, as compared to the decades required in earlier eras. In addition, new fields of university research into basic properties and processes (e.g., recombinant DNA) which have emerged recently offer unprecedented potential for wide-spread commercial application.

Thus, industry—which supports more university research for potential profit-making purposes than for philanthropy—is looking for increased and novel research partnerships with academia. At the same time, universities are faced with the need to replace dwindling federal support for research activities.

The increase in university-industrial relations is therefore both a positive and predictable outcome. The proportion of Stanford's research programs funded by industrial sources has more than doubled—from about two percent a decade ago to almost five percent today—and now totals more than $5 million in annual expenditures.

It is likely that industrial sponsorship of our research will continue to increase considerably faster than federal funding; but it will probably never represent more than a fraction of our total funding, in view of the fundamental differences between the missions of educational institutions and profit-making companies.

Despite the positive benefits of university-industrial relationships, there is reason for concern that the unprecedented potential for financial gain that has resulted from the new commercial opportunities might divert universities and/or their individual faculty members from their primary obligations of teaching and research.

This issue has been the subject of considerable review at Stanford, involving faculty, students, and University officers.

Are industrially-sponsored projects as academically worthwhile as are projects funded by sponsors who don't have potential financial profits as a motive for their support?

Are some individual faculty members likely to be diverted from their primary duties to the University by outside consulting activities that are becoming increasingly attractive financially?

Are graduate students assigned research tasks solely on the basis of their scientific merit, regardless of potential commercial applications of their work?

Are research activities and their results shared openly with other scientific colleagues, beyond their own laboratories, without delays motivated by proprietary commercial interests?

Are universities so attracted by industrial support that they have the potential for ceasing to become independent, credible, and impartial resources?

Is the transfer of technology from universities via patents, copyrights, and licensing arrangements conducted in ways that best serve the public interest?

These and related questions have been addressed at Stanford and many other universities over the past two years. During this period, Stanford has developed several new or revised policies and guidelines to help faculty and administrators avoid conflicts of interest while preserving the flexibility and freedoms necessary to foster a creative research and teaching environment. These changes include:

* A University-wide requirement for faculty to disclose, upon the specific request of the President, Provost, or cognizant dean, the general nature of their outside consulting activities when questions of potential or apparent conflicts of interest arise;

* A proposed policy prohibiting faculty from hiring or directly supervising graduate students in outside consulting activities while simultaneously acting as those students' Stanford advisor or as a participant on their dissertation committees (subject to Faculty Senate approval this fall);

* A set of principles and guidelines governing industrial affiliates and related programs at Stanford arising from corporate gifts;

* A recommended change in the Secrecy in Research Guidelines to permit delays in publication of research results for patent application purposes to be modified from the current one-year limit to a 90-day maximum (subject to Faculty Senate approval this fall);

* Publication of a policy pertaining to tangible research property, i.e., research results in such tangible forms as biological cell lines, computer software, electronic chips, etc. The policy requires that such tangible research results must be made available to others for scientific purposes in an open and timely fashion, i.e., they may not be withheld for commercial purposes;

* A policy requiring prior review and approval by the Provost for any University investments in companies owned totally or in significant part by our faculty which aim to commercialize faculty members' research results.

In addition to the changes above, which have already been implemented or formally recommended, several other issues either are under current consideration or will be in the near future:

* A faculty committee in the Medical School has recommended a School policy requiring nonclinical faculty in the School to disclose the nature of their outside consulting activities on a continuing and formal basis to the Department Chair, not only because outside consulting activities have the potential for distorting academic objectives, but also because the Medical School faculty has a unique role in the development and application of new diagnostic tools and therapies ultimately tested and used on patients.

* That same Medical School Committee has also recommended disclosure to Human Subjects Committees of the personal involvement of principal investigators in companies sponsoring their drug studies.

* The same report proposed that distribution of income from "clinical consulting" be reviewed for comparison with the way nonclinical consulting income is handled (all fees generated by faculty in clinical departments through the practice of medicine go into the Faculty Practice Plan). The above three recommendations are being considered now by the Executive Committee of the Medical School.

* Stanford's Consulting Policy is concerned primarily with the time faculty spend in such activities, and does not limit the duties that the faculty member may undertake for the company. Faculty may hold officerships or other positions, and some concerns have been expressed about the appropriateness of such activities because of their potential for distorting the academic objectives of the University.

* The issue of routine reporting of the general nature and time spent on outside consulting activities of the faculty will be reconsidered.

* Matters relating to the disposition of intellectual property (e.g., copyrights and patents) resulting from research activities are also under review.

In order to provide an opportunity to study these issues on a case-by-case basis, interim guidelines for internal use have been developed which require approval of the Vice-Provost and Dean of Graduate Studies and Research of any proposed arrangement with industry that would give industrial sponsors of Stanford research 1) title to intellectual property resulting from the research; 2) royalty-free exclusive licenses; or 3) options to exclusive licenses to research results which are patentable or copyrightable before the results are achieved.

This last point raises the question whether Stanford should accept corporate reseach agreements that require giving exclusive licenses to the sponsor prior to the development of any discovery.

The granting of an exclusive license may be necessary if development is to take place after a discovery has been made: few firms will expend large sums for development that is likely to benefit others disproportionately. However, difficulties may arise from corporate research agreements in which the sponsor requests the right to exclusive licenses on all discoveries made as a result of the research funded by the company.

Some believe that such a blanket agreement provides incentives for proprietary secrecy that would distort the fundamental purpose of the University, and that the University accordingly should not give up its right to examine the appropriateness of exclusivity for each invention on a case-by-case basis.

The question of conflict of interest ultimately comes down to matters of individual ethics and personal integrity. No set of policies can substitute for integrity, nor legislate individuals' motivations.

However, it is important that Stanford continue to examine our industrial relations as they evolve, in order to provide the meaningful guidance to faculty and administrators and to maintain the public's trust that Stanford indeed is an independent and impartial resource committed to its mission of discovery and dissemination of new knowledge.

Thus, University officers, the Committee on Research, and other *ad hoc* committees which may be established for this purpose, will continue to study these issues with great care during the coming year and may formulate additional policies to guide Stanford's—and individual faculty members'—relationships with industries in ways which will best support our primary educational missions.

Sally Cole to handle Honor Code cases

Dean of student affairs James W. Lyons has announced the appointment of Sally Cole as Assistant Dean for Judicial Affairs. Cole's new responsibilities are in addition to her position as Director of Research for Student Affairs.

The assistant dean for judicial affairs is a campus-wide resource for questions or concerns about Stanford's Honor Code and Fundamental Standard. In addition, Cole will investigate alleged violations of the Honor Code and Fundamental Standard and, when appropriate, initiate formal charges on behalf of the University. These activities were previously lodged in the Office of Legal Counsel at the delegation of the President. The decision to move this responsibility to Student Affairs resulted primarily from a desire to decrease the perception of adversary proceedings and to emphasize more visibly the educational goals underlying the student judicial process.

Cole will be reporting periodically to the Stanford community on cases heard by the Stanford Judicial Council—or, at students' request, by the dean of student affairs. (Individual student identities will not be disclosed.) She is also responsible for overseeing the judicial process as a whole and ensuring that cases are dealt with as expeditiously as possible.

Sally Cole

Lyons observed that Cole is a long-time student of Stanford's Honor Code; in 1976, and again in 1980, Cole conducted surveys of students' beliefs, perceptions, and behaviors with respect to their own academic honesty and that of their fellow students.

Anyone with questions, concerns, or problems about the Honor Code or the Fundamental Standard can reach Cole at 7-2733 or 7-4162. Her office is in 323 Old Union.

Weinstein studies industrial marketing around the world

BY MARCIA TANNER

Industrial marketing represents the most important segment of the economy, but it has received much less attention than consumer marketing in the academic world, says David Weinstein, visiting professor of marketing at the Stanford Business School for the 1982-83 academic year.

Lacking the theoretical basis which academic research could provide, industrial marketing executives often rely on rules of thumb and intuition when making important strategic decisions.

Working to redress this imbalance, Weinstein brings to the GSB an international perspective, solid hands-on expertise, and impressive academic credentials in the field of industrial marketing strategy for multinational corporations.

On leave from INSEAD in France, one of Europe's leading international schools of management, Weinstein consults with a broad range of multinational firms on industrial marketing stategy issues, and his teaching and research reflect his involvement in that complex arena.

"The challenges involved in industrial marketing are quite different from those in consumer marketing," Weinstein explains. "When you're dealing with organizations, the purchase decisions are oriented more to the long term, and riskier.

"And since the customers are groups of individuals, many different people are involved in a single decision-making process. Not only do you have to understand them as individuals, you also need insight into their interactions as a group, the politics of the organization, and so on."

Because industrial buying, in most cases, requires a long-term relationship, organizations tend to be as conservative in purchase decisions as do individual consumers when a heavy commitment is entailed, Weinstein says. "This does not necessarily mean that they make the best economic decisions. But it does create a barrier to taking market share away from competitors."

Marketing complex

The marketing system itself is much more varied and complex in industrial marketing; the simple exchange process between a buyer and a seller can become very convoluted, Weinstein points out.

"Consider, for example, the interrelationship between the manufacturers of chemical or electronic products that compete for customers in some product areas, supply each other with other products, share a joint venture in a third area, and manufacture under mutual licensing agreements in a fourth," he says.

"Then, some of the tools you rely on in industrial marketing—such as the promise of faster delivery or the building up of inventory—represent a heavy investment for the firm and may be partly out of the marketing person's control. The same is true of communication to your customers.

"Consumer marketing is very direct, whereas in industrial marketing you have many intermediaries between you and your customer (your salesforce, distributors, etc.), and the message has a greater chance of being distorted along the way."

All these factors make for greater complexity in the design and implementation of industrial marketing strategy, Weinstein says. Add the international dimension—when strategy is planned from the viewpoint of the corporate headquarters of a multinational company with subsidiaries all over the world—and the situation becomes even more complex.

David Weinstein

"Here you're also dealing with sensitive organizational issues, where the challenge is to maintain a good working relationship between corporate HQ and its outposts in other countries."

Despite the importance of industrial marketing in the world economy, Weinstein observes, the academic world has tended to focus on consumer marketing. "This is partly because it's more difficult to obtain data from the industrial marketing community."

Weinstein is working to correct this omission at the academic level in ways that he believes will have practical consequences for business. One current project is a collaborative effort with Jean-Claude Larreche, Weinstein's colleague at INSEAD and creator of the successful marketing strategy game called MARKSTRAT.

"Weinstein and Larreche are developing a similar computer-based game for industrial marketing strategy, tentatively named INDSTRAT. "It should be useful for marketing executives in any industrial firm, anywhere in the world," Weinstein says.

INDSTRAT simulates the process of designing and implementing strategy in the industrial marketing environment. "Players in the game have to anticipate the needs of the marketplace, coordinate their 'firm's' research and development so that new products are ready for the market when they're needed, make strategic choices about which markets or market segments to go after, and decide how to position the product in the market.

"Players must also consider how to introduce a product into the client organization given the fact that several decision-makers are involved, each with different degrees of influence on different stages of the buying process—which in turn requires decisions on the organization and allocation of the sales force."

INDSTRAT has features which should make it especially interesting to play, Weinstein says. "It involves the cross-licensing of products and technology between competing companies, for one thing," Weinstein says.

"And it's designed with varying degrees of difficulty, so that people with different levels of experience can play. It also will use current telecommunications technology to link players in different parts of the world, so that executives in San Francisco, New York, Tokyo, and Paris may play against each other at the same time."

Customer perceptions

With the cooperation of some of his industrial clients, Weinstein is also collecting data on customer perception, buyer behavior, and so on, from firms in Europe, the Far East, South America, and the United States. "This is the type of information we have a lot of from consumer marketing firms, but it barely exists for industrial marketing.

"Since so much of what we know about marketing is based on experience, there's every reason to also be interested in how managers actually make industrial marketing decisions and there, lots of empirical work is needed."

As part of this exploration, Weinstein and Gary L. Lilien of Pennsylvania State University have recently completed a study comparing the determinants of industrial marketing expenditures of firms in the U.S. and Europe.

"We compared the results of data collected from 55 European companies on 80 products with a sample of 131 products from 29 companies in the United States," Weinstein says. "We found surprisingly few differences across the board in the way decisions are made. This led us to conclude that there are probably only a small number of strategic factors that influence budgeting behavior in Europe and the U.S. What differences there are probably stem largely from different circumstances, such as different styles of advertising use. We need to identify and measure the impact of those strategic factors to develop a general, quantitative understanding of industrial marketing decision-making that would be helpful to managers."

While at Stanford, Weinstein hopes to interest his marketing colleagues in further exploration of his data.

Weinstein's most recent article, "Optimal Strategic Business Portfolio Analysis," appears in the October 1982 issue of *Management Science*. In it, he and his coauthor Marcel Corstjens, develop a new model to assist managers with one important aspect of strategic planning in marketing: the "product portfolio mix."

By incorporating two models, one based purely on financial considerations (return on investment) and another solely on strategic ones, the authors have come up with a more comprehensive framework intended to help managers satisfy a number of criteria when determining and analysing a company's product-market policy.

Weinstein is also the author of "Sales Forecasting for Industrial Products," a chapter in the recently published *Handbook of Forecasting* (Spyros Makridakis and Steven C. Wheelwright, Eds., John Wiley & Sons, 1982).

A native of Israel, Weinstein received his BA from the Hebrew University of Jerusalem and his MBA and Ph.D. from Columbia University. He did post-doctoral research at the Consumer Research Institute in Washington, D.C., and has been a visiting scholar at Harvard Business School.

At Stanford, Weinstein will be teaching three sections of the introductory marketing course required of all MBAs in their first year. "I'm looking forward to interacting with such an exceptionally bright group of young people as these," he says.

Marjorie Dodds, 79, dies at Hospital

Marjorie K. Dodds, 79, wife of Stanford emeritus professor of English John W. Dodds, died at Stanford Hospital Friday afternoon.

She was taken ill at home and rushed to the hospital. She had been suffering from heart problems.

In addition to her husband, who is the brother of the late Harold Dodds, former president of Princeton University, Mrs. Dodds is survived by two sons, John A. Dodds of Atherton and Christopher Dodds of Evanston, III. She had five grandchildren.

Mrs. Dodds was born in Denver, Ohio, and attended Mt. Holyoke for two years before transferring to Smith College, where she graduated in 1926. She met her husband while both were doing graduate work in English at Yale.

The Dodds came to Stanford in 1937 from University of Pittsburgh. John Dodds held an endowed chair, the Jackson Eli Reynolds professorship in humanities, when he retired in 1967. The family home is on the Stanford campus.

No memorial services are planned.

The family prefers gifts to the Stanford Children's Health Council.

Medical Center MEMO

Recombinant DNA offers hope for future herpes vaccine

A vaccine that prevents herpes simplex infections without exposing the recipient to the virus may be a decade away, said Dr. Thomas Merigan, Becker professor of medicine and head of infectious diseases at Stanford University Medical School.

In the meantime, a new generation of antiviral drugs recently approved for herpes treatment can curtail both the severity and duration of blisters though they can't keep the outbreaks from recurring.

"It looks like recurrence is still a problem, even with the most potent agents available today," said Merigan in a public lecture held at Stanford Tuesday, Nov. 23, describing current and future treatments for herpes viruses.

Many of the 40 million Americans who suffer from recurring herpes blisters on their mouths or genitals wonder why effective treatments and vaccines have taken so long to be developed. The answer, Merigan said, lies in the large and complex structure of the virus which, until the advent of recombinant DNA technology, has been inscrutable to researchers.

"These viruses are also particularly challenging because they persist and can cause recurrent infections in the presence of immunity," Merigan said. "Once we are infected, we are infected for life, though the symptoms appear only periodically and, in most people, eventually disappear completely."

In comparison to polio, which has a much smaller and simpler structure, herpes viruses are made up of a number of proteins in a complex structure.

When the active herpes virus, a naked package of genetic material, invades a cell in a patient, it takes complete control of the host cell's functions, diverting nearly all the cell's energy to the replication of viruses. In this way, thousands of copies of the virus are produced that can spread to other cells.

The problem with most antiviral drugs is their toxicity. In order to thwart the virus, an effective agent must somehow influence the growth of the virus in infected cells. But, in many respects, herpes-infected cells look a lot like normal cells. The challenge to researchers has been to develop drugs that can zero in on infected cells without harming healthy ones.

Two currently used

Adenine arabinoside (called ara-A) and acyclovir are two effective drugs now available to the public which have the necessary specificity, Merigan said.

First used in 1972 to treat herpes simplex infections in the eye, adenine arabinoside has a very similar structure to a component of the herpes simplex DNA. But the drug has an important structural difference: once incorporated into the genetic code of the virus, it turns off the action of an enzyme that the virus needs to reproduce itself. Once the virus stops replicating, the infection is arrested and can't be spread to other cells.

Acyclovir, an even more powerful drug, according to Merigan, works on the same target as ara-A, but has an additional degree of specificity. The drug, first used in clinical trials in 1979, only

"It looks like recurrence is still a problem, even with the most potent agents available today. . ."

—Thomas Merigan

becomes active once it is inside a virus-infested cell. This specificity gives healthy cells, such as those in the bone marrow that can be especially vulnerable to DNA-altering drugs, an added measure of protection, the scientist said.

The two antivirals have been especially useful in treating herpes infections in "immunosuppressed patients," such as those with organ transplants or some types of cancer, whose normal immunities to infections have been drastically reduced by the drug therapies they need to stay alive.

Infections in such patients caused by herpes simplex or cytomegalovirus (CMV), another variant of herpes, can spread to vital organs such as the heart and kidneys and be fatal. Although the antivirals can't prevent infections, they can greatly reduce the serious complications associated with the infections, Merigan said.

Prompt administration a must

Though a tremendous boon to immunosuppressed patients with prolonged herpes simplex infections, antivirals have been less useful for herpes sufferers with short-lived infections because the time which they are most effective is in the first few days of infection.

"These are exciting drugs, but they have to be given early," Merigan said, "probably within the first few days (after symptoms begin to develop)." Patients are often slow to bring the infection to the attention of their physician, and most hospitals are not equipped with viral diagnostic laboratories that can make a quick, positive diagnosis of herpes, he said.

Chronic, low-level doses of the drugs might be a solution for some patients,

Ultrasound screening proves useful in neonatal ICU

Stanford University scientists have demonstrated a new use for ultrasound diagnostics—to detect blood clots in the vessels of critically ill infants who are being monitored by umbilical artery catheters.

The use of noninvasive ultrasound, they hope, will spare newborn babies from the potentially negative effects of radiation, while providing doctors with a quick and safe screening method for a variety of catheter-associated complications.

Catheterized babies in the past have been subjected to the use of angiography, a method which provides doctors with X-ray visualization of blood vessels following the introduction of contrast material.

But now with his faculty colleagues, a Stanford resident, Dr. David Oppenheimer, has found that sonography—previously used effectively to *locate* umbilical artery catheters—is equally suited for detecting thrombosis, or clot formation, in the aorta and nearby arteries.

Addressing the 68th Scientific Assembly of the Radiological Society of North America Monday, Nov. 29 in Chigago, Oppenheimer explained, "Sonograms can be performed at cribside without removing infants from the intensive care environment. Diagnostic information is obtained without associated ionizing radiation and iodinated contrast material."

In a clinical study at Stanford, 71 neonates with umbilical artery catheters received a series of ultrasound exams. All echoes *not* representing the catheters themselves were considered indicative of an abnormality. (Normal arterial vessels, Oppenheimer said, are free of these types of echoes.)

In one instance the catheter itself, by completely filling an inner blood vessel, appeared to obstruct normal blood flow. This caused ischemia, or blood deficiency in the area, and normally present pulsation was absent. Vascular pulsations returned when the catheter was withdrawn.

(Oppenheimer explained that umbilical artery catheters are never used unless absolutely necessary in patient treatment, but that without them "many more babies would die." The umbilical artery provides the easiest route for monitoring patient hemodynamics, the movements and forces involved in blood circulation.)

Twelve infants had clinical signs of complications, including bluish or blanched extremities or toes, malfunction of a catheter, decreased peripheral pulses, leg swelling, and hypertension. Catheters had been in place between two and 35 days before symptoms developed. Ultrasound demonstrated abnormal echo collections of various sorts in ten of these infants.

Other causes were hypothesized in two symptomatic children with normal ultrasound exams. In one of these, the catheter had recently been removed, possibly causing an associated clot to fragment and then lodge in a more peripheral blood vessel. Oppenheimer said that most neonatal clots tend to resolve without the need for surgical intervention.

In his study he found that ultrasonically detected abnormalities persisted from two to more than 70 days. Many of these lasted long after the clinical symptoms had resolved.

In one baby, Oppenheimer said, the abnormality was mobile rather than fixed to the vascular wall. This moving "flap," he said, may have been causing the patient's hypertension. He hypothesized that the flap represented either a "floating" clot or a layer of vessel wall which had torn off during catheter insertion.

"Sonograms can be performed at cribside without removing infants from the intensive care environment."

—David Oppenheimer

He added, "This type of abnormality has not previously been demonstrated in a catheterized infant. Our ultrasound exams led us to detect it."

Moreover, in a variety of cases ultrasound was able to identify clots and other obstructions causing ischemic symptoms in the babies. Further work, Oppenheimer said, is required to determine the long-term prognostic significance of ultrasonically detected vascular abnormalities and the impact of their detection on patient care.

What he has demonstrated, however, is that ultrasound is useful as a diagnostic tool in catheterized infants. "It is likely that future diagnostic techniques will provide even more accurate analysis of flow limiting lesions," he concluded.

Oppenheimer's research was supported in part by a grant from the General Clinical Research Centers Program of the Division of Research Resources, National Institutes of Health.

His report was co-authored by Drs. Barbara Carroll and Karen Garth of the Division of Diagnostic Radiology, and will appear in the December, 1982 issue of *Radiology*.

—Lisa Ames

Humor helps in dealing with commotion of the Sleep Disorders Center

One of Lynn Hassler's greatest fears is having a boring job. As administrator of the Sleep Disorders Center, however, boredom is the last thing she has time to worry about.

"This is not your usual place to work," she said, chuckling. "When I interview people for positions here I tell them if they want a calm, relaxed atmosphere, this isn't the place for them."

With about 50 employees, including physicians, researchers, and support staff working on about ten research programs sponsored by about 15 grants, the Center gets, she admits, a bit crazy at times.

"Dr. Dement (Center director) is so overcommitted that the amount of activity on the local and national level is overwhelming. Because of the volume of work, a lot of what we do is at the last minute," she said.

Hassler's job then, is to keep the "craziness" organized. With a staff of three, she is in charge of the Center's budget, including the research programs, and personnel. She also helps determine space allocation, and interacts with the University. Her favorite responsibility, she said, is organizing meetings of sleep researchers from all over the country, many of whom visit Stanford to keep up with the latest research.

Despite the overload, Hassler enjoys working at the Center. "Dement is a stimulating and challenging person to work for," she explained. "He's always pushing you to do things you didn't think you could do. He promotes you to work independently, and I think I can do that pretty well."

Dement also encourages Hassler to "figure out new ways of doing things." Since she's been in the position of administrator, she said, she's revamped "just about every office process." She's most proud of the budget, she explained. It was a "mess" when she began working on it—the grants, funding sources, and programs were all mixed up. "Its finally understandable," she concluded.

"This is not your usual place to work."

—Lynn Hassler

Hassler wasn't always enthusiastic about the Center. She began working there as a receptionist in 1972. Not even a year later, she quit and worked for another office instead. Six months later she formed her own typing service, which she ran until 1976. The Center called her in one day to help with some typing, and she's been there ever since.

The key to her longevity is the ability to maintain a sense of humor—an ability that's taken her four years to develop, Hassler concedes. Exemplifying her newly cultivated trait is a scrapbook, full of documents with typographical errors, ungrammatical errors, and other "absurd" things people at the Center give her.

"I used to take everything so seriously," she said. "I worked ten hours a day until I realized it was killing me."

Even so, Hassler admits she periodically does "burn out." At such times, she takes off in quest of her favorite hobby—seemingly contrary to her vivacious personality—birdwatching.

"I just forget about everything, and trip out watching them," she said of the birds.

Hassler has seen nearly 800 spiecies throughout California, as well as Mexico, Trinidad, and Tobago. She's also been in three bird-a-thons, sponsored by Pt. Reyes Bird Observatory, to raise money to save Mono Lake. This past year, she raised about $1,100 for sighting about 120 species in one day.

Hassler is also a gardening enthusiast, and has recently taken up weight lifting. And during the Medical Center's softball season, Hassler was out in right field. Even when she is sitting in her home, Hassler said, she feels she has to do something. As a result, she said, her house is overrun with needlepoint pillows. "I'm hyper, I like to do something all the time," she admitted.

And at the Center, there is more than enough for her to do. —**Shirley Kraus**

Self-help for arthritis sufferers

Among a variety of community education programs originating at Stanford are arthritis self-help courses, conducted throughout the Bay Area over the past three years.

Directed by Drs. Kate Lorig and Halsted Holman through the Stanford Arthritis Center, the project uses specially trained lay leaders, most of whom have arthritis themselves or in their families, or feel a strong personal desire to help those with the often crippling disease. Class members practice exercise and relaxation techniques, discuss nutrition, medications, and generally work on problem-solving for the physical and emotional aspects of arthritis.

The research is funded by the National Institutes of Health (NIH) and the National Arthritis Foundation (NAF). Results since it began are encouraging, says Lorig. In fact, the initial success has been such that, in cooperation with the NAF, the project has expanded across the country, with similar classes debuting in about 30 cities nationwide.

This local class was held at Menlo Park's Little House.

Between an assortment of lectures on holistic health topics, there was time for nurses and others attending last week's 1982 CRONA Convention to glance through literature supplied by the Center for Health Awareness in San Jose. The Center was instrumental in presenting this year's program, entitled "The Nurse as Healer: Self and Others." The second day consisted of a CRONA business meeting, including a talk by the union's president, Hedy Dumpel.

...News Notes...

The Department of Nursing Services sponsored its first national nursing research symposium Nov. 18-20 at the St. Francis Hotel in San Francisco. The symposium, which focused on clinical research, was attended by nearly 300 people.

Sixty nursing research projects were presented by participants from all over the U.S. and Canada, according to Dr. Lois Welches, R.N., associate director of Nursing. Seven of these, she said, were Stanford projects.

* * * *

John Medeiros, Ph.D., a Stanford faculty member, is serving as acting director of the Division of Physical Therapy, effective Nov. 24.

Medeiros replaces Terry Sanford, who served as acting director since January, 1981, and who has left Stanford for a position at Springfield College in Massachusetts.

Aaron Smith

Aaron Smith, pediatric clinical social worker at Stanford University Hospital, spoke at the Nov. 23 meeting of "Parents for Heart," a group sponsored by the Santa Clara County Chapter of the American Heart Association.

A film entitled "Of Hearts and Lives" was shown, followed by an informal discussion with Smith to allow for the sharing of ideas and concerns. Smith is one of three medical advisors to the parents' group. The other two are nurses Eleanor Hedenkamp and Ann Weinberger.

Herpes. . .

continued from page 8

except that the virus could subtly change its structure and become resistant to such therapies. In addition, Merigan said, the possible side effects of long-term exposure to the drugs could outweigh the benefits.

Ultimately, the best way to stop a "herpes epidemic" is to prevent infection, and several research teams around the world are working on different types of vaccines that could do just that, Merigan said.

An "attenuated virus" vaccine, injections of a live virus that has been altered slightly to give recipients a very mild virus infection without the accompanying disease, is useful against diseases such as polio or measles which can only be contracted once in a lifetime. Once exposed to the vaccine, the body makes antibodies and other factors to thwart a future infection.

But, because herpes can lie dormant in a patient without producing symptoms, recipients of an attenuated virus vaccine might run the risk of developing herpes years after the inoculation. Such an infection might be dangerous for patients who were healthy when they were vaccinated, but later became immune suppressed.

Recombinant DNA technology will permit a different kind of vaccine, Merigan said. As scientists break up the DNA of the virus into specific components, they are also able to isolate fragments that code for proteins on the virus surface. Such fragments have been used to make a vaccine in bacteria that can stimulate herpes directed antibodies in animals.

Thus, it might eventually be possible to initiate the recipient's natural immune response without exposing him to infectious components of the virus. In addition, further studies of immunity and resistance to infection will be required, Merigan said, to know how best to deliver this vaccine to produce enduring protection.

"I'm enthusiastic about the vaccines, but I think it's going to take at least another decade of research to perfect them," Merigan said. "But at least with recombinant DNA techniques, we have hope that they are possible."

—Deborah Franklin

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Med Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, DECEMBER 1

Lane Medical Library Booksale. 8 a.m. till 4 p.m., Fairchild Auditorium lobby.

Dept. of Neurology Grand Rounds: "Multiple Sclerosis: Current Concepts in Diagnosis and Treatment"—Dr. Larry Steinman. 5 p.m., C364.

Depts. of Pathology, Medical Microbiology, Medicine/Immunology, and Genetics Seminar: "Development of the Cytotoxic T Cell Lineage Inside and Outside the Thymus"—Dr. Ken Shortman (of Melbourne Hospital). 3:15 p.m., 3rd flr. conference room, Fairchild Bldg.

Basic Science Research Colloquium: "Serotonin Receptors and Adenylate Cyclase in Parasites"—Dr. Tag Mansour. 5 p.m., Fairchild Auditorium.

THURSDAY, DECEMBER 2

Dept. of Medicine Grand Rounds: "Neurosyphilis"—Dr. Robert Cutler. 8:30 a.m., Fairchild Auditorium.

Dept. of Pharmacology: "The Actions of Avermectin on GABA Nerve"— Dr. C.C. Wang (of UCSF). 4:15 p.m., R358.

Div. of Otolaryngology/Head and Neck Surgery Grand Rounds: "Snoring"—Drs. Robert Riley, Brian Humphreys, F. Blair Simmons. 6 p.m., Wang Library, R117.

Dept. of Genetics Seminar: "Reversible Transformation of Lymphocytes with an Intracellular Parasite, Theileria"—Samuel J. Black, Ph.D. (of the International Laboratory for Research on Animal Diseases, Nairobi, Kenya). 12:15 p.m., S336.

FRIDAY, DECEMBER 3

Dept. of Pediatrics: "Wiskott-Aldrich Syndrome"—Dr. John Miller. 8 a.m., M106.

Dept. of Pathology Surgical Pathology Conference: "Regional Morphology and Pathology of Prostate"—Dr. John McNeal. 8 a.m., L201.

MONDAY, DECEMBER 6

Dept. of Structural Biology: "Studies on the Photo Receptor Cyclic CMP Phosphodiesterase and its Homology with Adenylate Cyclase"—Dr. Mark Bilensky (of Los Alamos National Laboratory). Noon, Fairchild Bldg., D102.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Masking Techniques"—Holly Hosford-Dunn, Ph.D. 7:30 a.m., R117.

DECEMBER 6 AND 7

Nursing Educational Services: "Pediatric Critical Care Course, Level I." Continuing education credit available. Fees required. For further information, call 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Graduate students develop new Robot Drill technique

A recent Stanford graduate is getting ready to market a drill developed at Stanford which can drill oil wells sideways or even uphill.

The Robot Drill (TM) uses hydraulics to grip the side of its own hole. This enables the bit to go off in almost any direction. The inventor, Robert Horstmeyer, has formed a Palo Alto Company, Advanced Drilling, to market the device.

Horstmeyer conceived of the drill while a physics major at the U.S. Naval Academy. He says he was impressed by the ways the navy used hydraulics in nuclear submarines. He and another graduate student, Larry Weick, produced a working model of the drill while at Stanford and tested it in a concrete-filled cylinder.

The drill would replace the conventional form of digging oil wells, according to Advanced Drilling chairman Harold C. Nissley.

"The idea was that there's got to be a better way to drill holes in the ground rather than use an 80-year-old technology which is essentially brute force," Nissley says. "You take rotating pipe and just have a lot of weight added to it."

Old technology

This technology has been improved upon through the years, but remains basically the same. Usually oil drillers put a three-coned bit at the end of a 93-foot pipe and, by adding weight to the pipe, force the bit downward.

Once the bit comes to the end of its reach, another 93-foot pipe is added, and so on, Nissley says. To change the bit, the whole drill stem has to be pulled up, section by section; the process is reversed to reimplant the bit.

Horstmeyer's system holds onto the side of the hole, offsetting the torsional and forward thrust of the drill.

"You're gripping the sides of the hole down deep as you go. You can think of it like a kind of inflated tire that you inflate against the sides of the hole; then you deinflate, let the air out. . .you lower the anchor, expand it and drill some more," Nissley says.

The drill stem is 10 to 20 feet long.

Attached to the stem are hoses which carry "mud," a heavy liquid used to clean away the rubble produced by the bit, and the return hydraulics. Another tube carries electronic wiring for the sensors.

New technology

Nissley says the system has two advantages over the usual drilling method.

"The first is that we can go down into a hole and come back out approximately 10 times faster than the conventional system." Each round "trip" includes the time it takes the driller to pull out the bit, replace it, and reinsert it to the bottom of the hole.

Instead of having to deal with each long section of pipe, the Robot Drill can be reeled in like a fishing line.

Another advantage is that the drill can go around corners, sideways, or in a curve.

It is possible to bend a conventional drill stem and go off at an angle. But this is so slow and expensive that it is done very rarely. It is also possible to drill at an angle using conventional technology. This is also slow and the angle is limited to around 60 degrees, Horstmeyer says.

"In places like the North Sea, drilling is done from expensive platforms," Nissley emphasizes. "Drilling in the Beaufort Sea near the Arctic Circle, for example, involves building artificial islands costing up to $1 billion each."

"Obviously, it is extremely important economically to drill as many wells as possible from one platform. With Horstmeyer's Robot Drill, permitting highly deviated and horizontal drilling, more wells could be drilled from one platform. Of course, this amortizes the cost of the platform over the larger number of wells."

In addition to oil wells, the drill can be used in coal and mineral mining, tunnelling, geothermal wells, pipelines, and for utility conduits in urban areas and under roadbeds.

Advanced Drilling Corporation was formed in April, 1982, to produce and market the Robot Drill. Many of the initial investors are people in the oil industry from Calgary, Cleveland, Europe, and Texas.

The company plans to drill test wells in Taft and Half Moon Bay to produce additional data for further engineering development and investment information.

Stanford was given stock in the company because University facilities were used. —**Joel Shurkin**

Inventor Robert Horstmeyer stands in front of his Robot Drill. Hal Nissley, chairman of the company, is to the rear.

Letters to the editor

Here's how to help ASSU recycling

Dear patron of ASSU Recycling:

Recently we've been barraged by questions from confused patrons of the recycling program about the kinds of paper we accept and the reason why each type must be segregated.

The ASSU recycling staff must *hand sort* paper into the following categories: newspaper, computer paper, computer tab cards, corrugated card board, and white paper. White paper includes letter heads, bond machine copies, stationery and typing paper, white tablet sheets without backing, unused envelopes, and white card stock. Metal staples, paper clips, and fasteners need not be removed.

The following material is NOT recyclable: plastics of any kind, glue bond paper, glossy magazine paper, ditto masters, mimeo stencils, carbon paper, NCR paper, photographic or blueprint paper, any item with attached cellophane tape or self-adhesive labels, and copier paper wrappings (they're usually contaminated with non-water soluable glues).

Markets to which we sell our paper will either refuse to accept our product or will lower our prices significantly if they find contaminants or mixtures of newspaper, white paper, and computer paper. When we empty a barrel from the Stanford campus you can imagine the tedious and costly sorting required if the paper is unsorted or contaminated.

Please help us by policing your own barrel; post this letter nearby to use as a reference.

Some confusion was created this fall by our new policy for student residences, where we now collect newspapers rather than mix recyclable paper.

Fred Beddall
Comanager
ASSU Recycling, 7-0915

Jaedicke...

continued from page 1

President Kennedy called Jaedicke "deeply and deservedly respected by the faculty and a proven performer."

Well known among both academic and practicing accountants, Jaedicke is author or coauthor of six textbooks and numerous articles on accounting. Among his books are *Managerial Accounting*, now in its sixth edition, *Management Controls, Quantitative Analysis for Business Decisions* and *Accounting Flows: Income, Funds, and Cash*.

He has won several awards for outstanding research articles, including two in a row from the National Association of Accountants in 1961 and 1962 on use of quantitative methods in planning and control within an organization. The American Institute of Certified Public Accountants cited him for distinguished contribution to literature for an article defining the principles of objectivity and reliability in financial reporting.

Jaedicke holds bachelors and masters degrees in business administration from the University of Washington, where he graduated cum laude and Phi Beta Kappa. He received his Ph.D. from the University of Minnesota in 1957.

He began his academic career in 1953 at Minnesota, as an instructor and assistant professor. He became a Ford Foundation postdoctoral fellow and assistant professor of business administration at Harvard before coming to Stanford in 1961. He directed the GSB's doctoral program from 1965 to 1968, then served as associate dean for academic affairs from 1969 to 1979, when he was named acting dean.

When McPherson became dean in September, 1980, he asked Jaedicke to serve another year as associate dean for academic affairs. Jaedicke spent 1981-82 in academic research.

The last dean promoted from within the business faculty at Stanford was J. Hugh Jackson, who served from 1931 to 1958. The permanent faculty now totals 72, and is widely known for its research. Ten new faculty were appointed this year. Besides more than 600 MBAs, the School has 73 Ph.D. students in residence, and 42 executives in the Stanford-Sloan program. More than 500 executives participate in executive education programs, which will be extended to Singapore and Geneva in the near future.

The School receives $4 million in gift support from 4,000 donors annually.

—**Rich Kurovsky**

THE TIME IS 1 p.m. Saturday and Sunday at Tresidder Union, when Milton, the quick-witted cur, matches wits with the Christmas Faire audience in his own TV talk show. Puppeteer Gary Schnell and his furry friend will be outdoors if the weather is fine and inside if it's not. Schnell has entertained street-corner and college audiences across the country in the show entitled "Dog Day Afternoon."

Rental housing

HOUSING NEEDED

□ **June '83 to Aug. '84 (flex):** Visit Prof in Elec. Engr seeks hsng for self, spouse & 12 yr. old daughter. Nonsmokers. Call COLLECT (505) 294-7758, after 5 p.m., or write: Prof. Etter, EECE Dept., Univ. New Mexico, Albuquerque, NM, 87131.

□ **Jan. 1 thru June 15, '83:** Visit. prof. w/child age 9 seeks furn. hsng. Shared hsng possible. Call Suzanne Caldwell, Dept. German Studies, 497-1068.

□ **Jan. to Mar. '83:** Retired cpl. seeks furn. 1 or 2BR apt., condo, or hse on campus, Palo Alto, Menlo Pk., close to shops, campus. Pkge deal to include car best. Call Dave Marimont, 497-3796 (day), 325-7182 (eve).

□ **Sept. '83 to June '84:** Approx. 50 fully furn. hses needed for Fellows & their families coming to Ctr for Advanced Study in the Behavioral Sciences. Call Frances Duignan, 321-2052 (day).

□ **Winter Qtr:** For 3 or 4 mo. (flex.): Visit. prof. seeks very quiet apt, studio, or comfortable rm. w/ktchn priv. On campus or walk to campus. Call Feferman, 497-2439 or 857-0323.

□ **Feb. to June '83:** Visit. prof. from MIT & wife seek furn. 2BR apt. or hse nr campus. Will give loving care to animals, plants. Stanf. refs. avail. Could EXCHANGE 4BR hse in Concord, Mass. Call 328-8103 till 12/4, or (415) 593-6506. Or call COLLECT (617) 369-4713.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

HOUSING AVAILABLE

□ **Regularly Available:** 1 & 2 BR furn. & unfurn. apts. & twnhses, and 3BR/2BA hses in Palo Alto & Menlo Pk. In good neighborhoods and close to campus. $525 to $800/mo. Call Shirley (415) 493-2321 or Jane (415) 968-4957.

□ **Now:** SKI CABIN, So. Lake Tahoe. 2BR, frpl, color TV, phone, Adj. Nat'l Forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk (5 days). Call Janine (415) 497-2501 (day), (408) 739-3141 (eve).

□ **Dec. 22 for 1 yr (flex):** Fully furn contemp. campus hse. 2BR + 2 studies (1 can convert to BR), 2BA, FR, piano, lush atrium, wooded lot. $1350/mo. incl. grdnr, water. Call (415) 857-0479.

□ **March to Oct. '83:** Close-in fully furn. campus hse. 3BR/1BA, study, 18'covered Doughboy pool (chem. maintained). Fenced yd, central air. No cats. $1000/mo. incl. grdnr. Refundable $500 sec. dep. + 10% int. Call (415) 322-9208 or 497-2512 (day).

□ **Jan. to June 83:** Furn. Palo Alto hse, 4BR/3BA, LR, DR, FR w/frpl, study. Pool w/solar sovr. Close to campus. $1650/mo. incl. pool serv. Call 493-1179.

□ **Beg. Dec. 15, '82:** Furn. fam. hse, 4BR/2BA, fenced yd. Nr. schls, parks, shops. 3 mi. to campus. Children welcome. Call Marilyn Hull, (415) 326-8683 (wkdays), (415) 493-6164 (eves & wknds).

□ **April 1 to June 15, '83 (flex):** Fully furn. hse, 4BR/2BA, den, AEK, W/D, hot tub. Children ok. So. Palo Alto, 3 mi. to campus. Swim/tennis club mbshp (across st.). On bus rte. $1000/mo. incl. grdnr & club mbshp. Call (415) 494-6492.

□ **NOW:** Fully furn. 3BR/2½BA + study, 2-story deluxe twnhse. Formal DR, frpl, wet-bar, 2 car gar., pool, jacuzzi. 10 min. to campus. $1700/mo., 1st & last mo. rent, + $1500 sec. dep. Call Sonia, 494-2939.

□ **NOW:** Prof. woman has rm to rent w/BA, W/D, ktchn. priv. Female, nonsmoker. Furn. except for bed. 10 min. to campus. $325/mo. incl. util. Call 969-5870, after 7 p.m.

□ **Beg. Jan. 1, '83:** Fully furn. Oak Creek apt. w/sports fail. 5 min. to campus. Avail. for 6 mos. (flex). $675/mo. Call 326-3684, morns. & eve.

□ **Jan. to Sept. '83 (flex):** Fully furn. 4BR/2BA lrge campus hse. Frpl, garden w/auto sprinklers, view of hills. Nonsmokers, no pets. $1400/mo. incl. grdnr. Call 497-3987 (day) or 494-0362 (eve).

□ **NOW:** Alpine Meadows, Tahoe. Nice cabin, 3BR/1½BA, phone, W/D, frpl., sleeps 10. $200/wknd, $70/wknights. Call 493-4139 (eve).

□ **Jan. 15 to July 1, '83:** Fully furn., all appliances, 4BR/1¼BA hse in Los Aitos. Lge garden. $975/mo. Call (415) 961-3079 (eve).

□ **Dec. 20 thru Jan. 3, '83:** Fully furn. campus hse., 4BR/2BA, close in. $400 incl. hsecleaning & util. Call 497-9432 (day), 327-8042 (eve).

Ph.D. oral exams

FRIDAY, DECEMBER 3

Douglas H. Hamilton, geology, "The Tectonic Boundary of Coastal Central California," 2:15 p.m., Room 326, Bldg. 320.

MONDAY, DECEMBER 6

Daphna Baratz, education, "How Justified is the 'Obvious' Reaction," 2:15 p.m., e114, Education Bldg. (Cubberley). **Jonathan P. Raider,** graduate special—social theory, "The Origins of Sociology in France: The Historical Discontinuity of the Counterrevolution," 2:15 p.m., Conference Room, Florence Moore Hall.

TUESDAY, DECEMBER 7

Anirudh Dhebar, engineering-economic systems and economics, "Theory of Optimal Dynamic Pricing and Market Equilibria for Goods with Positive Demand Externalities," 2:15 p.m., Terman 217.

WEDNESDAY, DECEMBER 8

Ralph Alan Bergh, applied physics, "All Fiber Gyroscope and the Rotation Rate Error Due to the Optical Kerr Effect," 2:15 p.m., Applied Physics 200. **Marilynn J. Price,** education, "Directed Imagination and Drawing: Justification and Implementation," 2:15 p.m., e114 Education Bldg. (Cubberley).

THURSDAY, DECEMBER 9

Victor Chin-Keung Chan, art "Pierre-Paul Prud'hon and Neo-Classicism," 2:15 p.m., ar101A, Cummings Art Bldg. **Sheldon Gorell,** chemical engineering, "Optimal Stability of Variable Viscosity Displacements in Porous Media," 4 p.m., Chemical Engineering Gazebo. **Susan L. Griffiths,** education and psychology, "Conditions of Organizational Decline: Responses of Experienced Ex-Teachers and Current Teachers," 2:15 p.m., e114 Education Bldg. (Cubberley). **Peter Claver Matthews,** statistics, 2:15 p.m., s120. **Stephen G. Powell,** engineering-economic systems, "The Transition to Nondepletable Energy," 2:15 p.m., Terman 329.

FRIDAY, DECEMBER 10

Jeffrey L. Coles, economics "Efficiency and Inefficiency in General Equilibrium Models," 2:15 p.m., Room 414, Encina Hall. **Laura Seitel,** modern thought & literature, 2:15 p.m., 52T (Bldg. 50). **Alexander Wessitsh,** education and psychology, "Explanation: Comprehension, Concept Formation, and Discourse," 2:15 p.m. e208 Education Bldg. (Cubberley).

Staff employment

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827. or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

30740-TC (JCC:8880) MISC PROFESSIONAL: Develop & implement marketing strategies for Stanford athletics — 14 men's & 10 women's intercollegiate sports, spec events, tournaments & championships & other athletic activities; secure sponsors to underwrite spec events, advertising promotions, etc; supv production of 'Cardinal Sports Line' incl writing & placing wkly advers; promote football regular & group ticket sales & also youth group ticket sales; arrange speaking engagements; handle corresp; supv Asst. student staff & sec; freq evening & wkend work; some local travel; QUALIFICATIONS: able to write & speak clearly & persuasively; exp in Univ admin, marketing, ticket & game promotion indicating strong familiarity w/ intercollegiate sports; proven organization ability in sports related events; demonstrated ability to interact effectively w/ wide variety of athletic professionals & community reps; demonstrated exp in supvn, task mgmt, long range planning; C06; $1854-2312.

30738-TC (JCC:3280) INFORMATION EDITOR II: Help in all aspects of sports informa, publications, media servs; write & edit news releases & feature stories on Stanford varsity teams; write & edit press brochures; res & assemble records, statistics, rosters, other mat'l for press brochures & programs; answer requests; serv as liaison between Stanford coaches & athletes & the news media; edit periodic newsletter for supporters of Stanford athletic program & other tasks as assigned by Director; seasons; some travel; QUALIFICATIONS: typ 65; demonstrated writing & editing exp in sports inform or sports writing; BA degree in commu or equiv combination of edu & work exp; excel keyboard skills for word processing on computer terminal; extensive overtime during peak seasons; some travel; ability to work w/ a wide variety of professionals; C05; $1670-2086.

Bargaining Unit

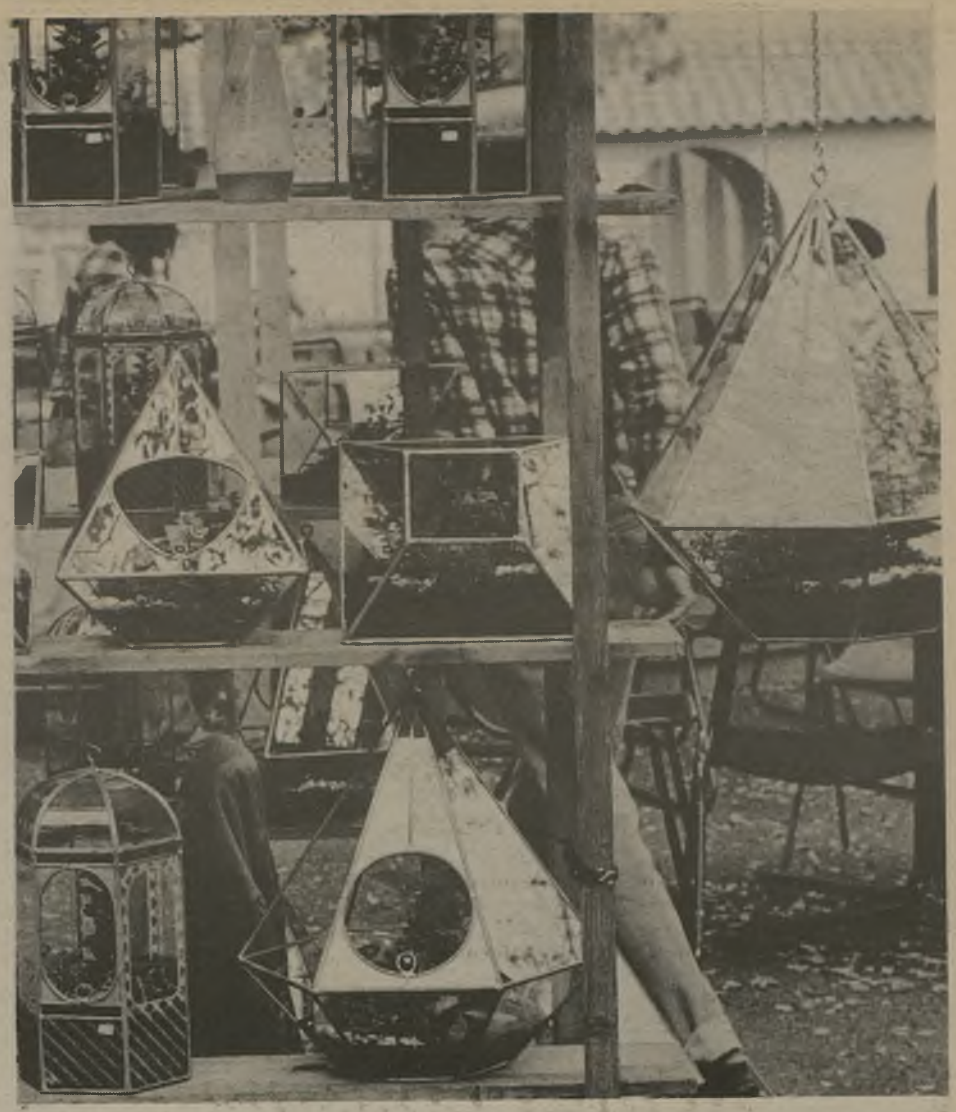
31079-VW (JCC:1728) PORTAL MONITOR: TMS Unit; 50%; Sun-Thurs, 7-11:15pm; performs duties in Central Circulation Dept; checks patrons' identification for access to lib; enforces lib regulations w/ regard to pets, smoking, food & beverages; prevents access by potentially disruptive persons; refers security problems to supvr; exam book bags, briefcases & other belongings for lib mat'ls at the exit portal; prov informa & directions on request by patrons; maintains statistics; shelving & sorting discharge cards, etc; QUALIFICATIONS: require prev public serv exp; ability to commu clearly in spoken English; dependability & punctuality; ability to learn & apply lib regulations tactfully & courteously; A09; $6.08/hr.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Dec. 7, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

The root of the eucalyptus tree that blocked Campus Drive West dwarfs one of the workers who toiled to open the road.



Storm/ continued from page 1

a fence also was knocked down. Falling limbs also damaged two Operations and Maintenance trucks.

In other storm-related incidents, the HP-3000 computer at Operations and Maintenance was down, delaying response to queries about service. High winds toppled a 20- by 8-foot wall at the Braun Music Center construction site. The wall had been scheduled for grouting Tuesday.

Skylights on two dormitories were blown open during the night and the pool bubble cover at the Pearce Mitchell housing complex collapsed.

Horgan estimated repair, overtime, and outside contractors' costs would reach $10,000 to $20,000. He said he hoped the campus would be cleaned up by the end of the week.—**Karen Bartholomew**

Unusual entertainment, fascinating food, and 85 of the best craftsmen around will gather at Tresidder Friday through Sunday, Dec. 3-5, for the STARTS Christmas Faire. Open from 10 a.m. to 5 p.m. all three days, the Faire is a sort of combination fantasy break and good, practical place to do your Christmas shopping.

Senate to consider bar on faculty hiring of Ph.D. advisees in outside firms

Following is the Annual Report of the 1981-82 Committee on Research, headed by Prof. Joseph B. Keller, mathematics and mechanical engineering. Its policy recommendations will be considered by the Faculty Senate Dec. 2.

During the past academic year the Committee on Research (C-Res) met five times to consider University Research-related policies and practices. As usual, one of the meetings was open to all members of the Stanford community to give them an opportunity to raise questions and issues of concern.

Significant committee efforts were devoted to matters related to openness of research and to potential conflicts of interest arising from outside consulting activities of the faculty. The committee also considered the University's indirect cost rates and their structures.

Actions Requiring Senate Approval

The C-Res recommends two policy changes which require Senate approval:

I) **Modification of the Faculty Consulting Policy** to include the following paragraph:

Faculty members must be especially sensitive to potential conflicts of interest between their teaching responsibility vis-a-vis graduate students working under their supervision and their outside consulting interests. To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's adviser or as a participant on that student's dissertation committee. Exceptions to this provision must be approved prospectively by the department chairman.

Background: Student members of the C-Res and a representative from the Graduate Students Association expressed concern about situations in which graduate students work for their faculty advisers in outside employment in fields related to the students' training.

Specifically, questions were raised about the ability of faculty members in such situations to separate their University teaching obligations to their students from the priorities and obligations of their outside consulting activities. After considerable discussion, the Committee voted unanimously to propose the above addition to the Faculty Consulting Policy.

II) **Modification of the Secrecy in Research Guidelines:** Current University policy, as adopted by the Senate in 1969, permits delay in publication of research up to a maximum of one year to protect the patentability of an invention in cases 1) where the sponsor intends to apply for a patent on an invention arising from the research, and 2) where publication would destroy the patentability of the invention. However, experience over the past decade has taught us that decisions to file patent applications, and the filing process itself, can reasonably be accomplished within a three-month period after a disclosure has been filed.

Thus, to promote openness in research and to permit timely publication of research results, the C-Res voted unanimously to propose for Senate approval a modification of the Secrecy in Research Guidelines to change the maximum period of publication delay for patent protection purposes from one year to 90 days.

Such a policy, as revised, is similar to relevant policies at most other universities.

Other actions of the Committee on Research

1. The C-Res reviewed and approved a policy statement (which essentially incorporated other current University policies) regarding the control and distribution of tangible research property (TRP). TRP is tangible property, such as biological cell lines, computer software, circuit drawings, engineering diagrams, etc., which is developed in the course of research.

Three primary points of the policy statement are 1) University policy is to promote the prompt and open exchange of TRP and associated research data with other academic colleagues outside an investigator's immediate laboratory; and 2) control over the development, storage, use, and distribution of TRP is the responsibility of the principal investigator or lab director; and 3) TRP may not be sold for profit. The policy statement was issued by Gerald J. Lieberman, vice provost and dean of graduate studies and research, on March 16, 1982.

2. The C-Res approved an arrangement proposed by the Stanford Synchrotron Radiation Laboratory (SSRL) director in which a consortium of three external sponsors (another university, a commercial company, and the federal government) would fund construction and operations of two new beam lines for three-year renewable periods as follows: one-third of the operating time for the other university sponsor, one-third to corporate sponsor, and one-third to general SSRL users.

3. Students expressed concern about faculty members filing disclosures on inventions which arise from University research activities involving students, without informing the students of such disclosures. In the course of these discussions, it became clear that students may not be sufficiently aware of the laws and University policies and procedures related to the disposition of intellectual property arising from research.

Thus, it was recommended that a working guide on patents and copyrights and other forms of intellectual property be prepared and made available to graduate students in research departments. As a result, the Sponsored Projects Office did develop such a document, entitled "Patents, Copyrights and Other Research Property." It is being distributed this fall to relevant departments.

Reports to the Committee

1. The 1981-82 C-Res heard at its open meeting reports from Dean Lieberman and Frank Riddle, associate controller, on the 1982-83 indirect cost rates for sponsored research and the ways in which indirect costs are calculated. Dean Lieberman reported that a rebate plan would be implemented, beginning in 1982-83, to ease the transition to the new rates for principal investigators.

2. Dean Lieberman also reported to the committee the recommendations of the Ad Hoc Task Force on Industrial Affiliates. It had been established by the Provost to look into the nature of the relationship between the University and industrial members of the 21 or so affiliate programs on campus. (See *Campus Report* edition of April 28, 1982, for the text of those recommendations.)

1981-82 C-Res Members: P. Brett, J. Claerbout, M. Everson, M. Fayer, J. Halamka, P. Hanawalt, S. Kalman, J. Meindl, J. Roughgarden, M. Wright.

1982-83 C-Res Members: J. Meindl (chairman), M. Beiber, P. Brett, J. Claerbout, M. Fayer, E. Garwin, J. Halamka, P. Hanawalt, S. Kalman, R. Redfield, J. Shoven.

Naomi Sparrow (left) and Thomas Stauffer

Stauffer, Sparrow to give concert at 8 p.m. Tuesday in Kresge Auditorium

Cellist Thomas Stauffer and pianist Naomi Sparrow will perform at 8 p.m. Tuesday, Dec. 7, in Kresge Auditorium on the Stanford campus.

Their concert will cover a wide range of styles from the decade 1910-1919—one of the most revolutionary decades in the history of music. "It was a terrible time for humanity, but a wonderful, exciting time for music," says Stauffer. "There was a great deal of experimentation going on."

On their program are *Pohadka* by Janacek, sonatas by Koechlin, Debussy, and Hindemith, and *Three Short Pieces* by Webern.

Stauffer is lecturer in cello at Stanford, principal cellist with the Santa Rosa Symphony, and a member of the Bloch String Quartet in residence at UC-Davis. He studied with Margaret Rowell and Gabor Rejto, and was a Fulbright Fellow at the Music Academy of Zagreb in Yugoslavia. Stauffer also has an M.A. in composition from UC-Davis and was *student extraordinar* in composition at the Academy for Music and Dramatic Arts in Vienna.

Sparrow is senior lecturer and head of the piano program at Stanford. Previously she taught at Mills College and was a founding member of the Mills Performing Group. Sparrow is a well-known specialist in contemporary music, and has recorded for Fantasy Records and CRI.

Tickets are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

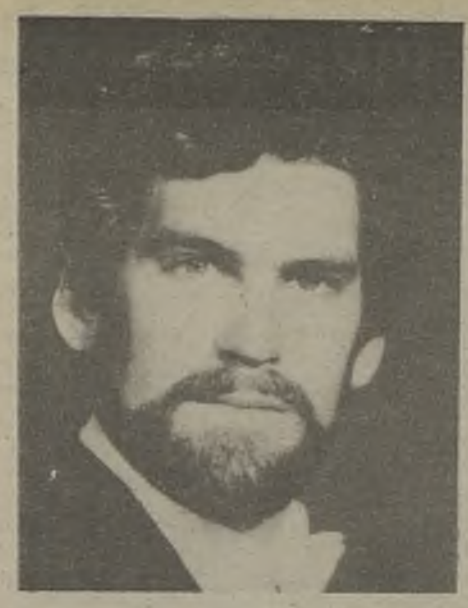
ASSU sponsors holiday sharing drive

The Associated Students of Stanford University (ASSU) will sponsor a holiday sharing drive from Dec. 2-15, collecting packaged food, clothing, household items, toys, books, and money to benefit the Ecumenical Hunger Program.

Drop boxes will be placed in all campus residences, as well as the ASSU office, Tresidder Union, CPPC, and various campus offices, lounges, and libraries. Money donations should be made in check form (payable to the Ecumenical Hunger Program) and sent to the ASSU office.

The Ecumenical Hunger Program is a community organization which has operated since 1975 to bring food, clothing, and household items to needy Palo Alto, East Palo Alto, and Menlo Park residents. They operate a food closet which services (emergency) needs; they also supervise a gardening project and a food-purchasing cooperative to ease long-term needs.

For further information, call ASSU at 497-4331, and watch for announcements in "Once Around the Quad."



Help Center hours

The Stanford Help Center's new hours, effective Dec. 1, are as follows:

9 a.m. to 5 p.m. Monday, and Wednesday through Friday, including lunch hours; 9 a.m. to 7 p.m. Tuesday, including the lunch hour.

The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Stanford Medical Center, and SLAC employees and their families. All workshops and counseling sessions are free.

Make appointments by phoning 497-4577 9 a.m. to 5 p.m. Monday through Friday. Parking is available at Angell Field.

Cantor Hans Cohn (right) of Temple Beth Jacob in Redwood City will be narrator for the Honegger *King David*, which will have performances by the Stanford Chorus and Orchestra at 8 p.m. Friday and Sunday, Dec. 3 and 5, in Memorial Church. Also on the program is the Bruckner *Te Deum*, for which John MacAllister (left) will be a soloist. MacAllister has sung five seasons with the San Francisco Opera.

Prof. Herbert Nanney will give his 36th annual concert of Christmas and Advent music at 2:30 p.m. Sunday, Dec. 12 in Memorial Church.

Rousing weekend of Christmas music slated Dec. 10-12 at Memorial Church

Stanford's Music Department, in conjunction with Memorial Church, finishes off the Fall Quarter with a rousing weekend of Christmas music at Memorial Church Dec. 10, 11, and 12. All concerts are free and open to the public.

The ever-popular *Service of Lessons and Carols* will be presented twice: at 8 p.m. Friday and Saturday, Dec. 10 and 11. Both the Chorale and the Church Choir will sing—the Chorale in the organ loft, conducted by Sharon Paul; the Choir on the altar steps, conducted by Gregory Wait. University organist Herbert Nanney will accompany.

Among the works to be sung at the Service are *A Boy was Born* by Britten, *A Spotless Rose* by Howells, *O Magnum Mysterium* by Poulenc, *Nunc Dimitis* by Grechaninov, and *Quodlibet* by Paul Nahay, Stanford graduate student in composition.

Organ buffs will especially enjoy Herbert Nanney's 36th annual organ recital of Advent and Christmas music at 2:30 p.m. Sunday, Dec. 12. Nanney will perform works by Bach, Lau, Karg-Elert, Franck, Charpentier, Daquin, and others.

The Messiah Sing tops off the festive weekend at 7 p.m. Sunday, Dec. 12, conducted by Gregory Wait. Soloists include soprano Nancy Wait and baritone Leroy Kromm. The public is invited to sing *or* play Handel's beloved oratorio. Participants should arrive early—this is a very popular event. Choral scores will be sold at the door ($4.50); orchestra parts will be provided.

Pauling to speak

Prof. Linus Pauling will speak on "Reversing the Present Arms Race" at 8:15 p.m. Wednesday, Dec. 8, at Fairchild Auditorium, Stanford University Medical Center.

Pauling, an emeritus professor of chemistry at Stanford, is the winner of two Nobel Prizes—for chemistry in 1954 and the peace prize in 1962. His talk is sponsored by the Stanford and Mid-Peninsula chapter of Physicians for Social Responsibility. It is free and open to the public.

The Mirecourt Trio performs with the Stanford Wind Ensemble Saturday, December 4, in Paul Reale's Concerto *Dies Irae* for piano trio and wind ensemble. The concert starts at 8 pm in Dinkelspiel Auditorium.

Christmas Faire starts Friday morning

Abundant crafts, music, jugglers, magicians, and international foods will provide the holiday fare for the eleventh annual Stanford Christmas Faire, open 10 a.m. to 5 p.m. Friday through Sunday, Dec. 3-5, at Tresidder Union, Stanford University.

The Faire will be highlighted by more than 80 craftpeople displaying a wide variety of paintings, sculptures, jewelry, pottery, leatherwork, photography, stained glass, woodwork, toys, stitchery and weaving.

New additions include hand-blown glass ornaments, original silks, and perfumes blended on the spot to match individual personality. Selected from over 600 applicants, these craftpeople offer some of the finest work presently being done in northern California.

In addition to the craftpeople, there will be holiday food and drink, homemade pastries, and entertainment by wandering minstrels and mimes also will be featured. Twenty percent of the artists' sales benefit the campus program activities sponsored by STARTS, Student Arts at Stanford.

This is an ideal opportunity to find those unique, special and handcrafted gifts that range from 25 cents to more than $500. And in addition to providing Christmas shopping opportunities, the Faire is sure to be a delightful and festive holiday experience.

I-Center shows Wada's ink paintings

Sumi-e ink paintings by award-winning Japanese artist Ami Wada will be on view at Stanford's International Center from Dec. 2-31.

The exhibition will include the painting titled "Sho-shun," depicting two rabbits in a floral setting, which won Best of Class award in a competition with more than 5,000 other entries at the Japanese Nangan-In Art Society last year.

A reception for the artist will be held at the International Center from 5-7 p.m. Friday, Dec. 3.

Born in Yokohama, Japan, the artist was educated at Yamate Women's School in Yokohama and the Azuma Art School in Kyoto where she studied the Senmenga style of Art. She subsequently studied privately with Shutei Ota in Tokyo.

Ami Wada's watercolor paintings are executed in oriental brush painting styles. Her techniques include those of traditional Japanese brush painting and the "wash" technique using *washi*, the handmade rice paper of Japan.

The artist's work has been exhibited here in the U.S. as well as in Japan. She currently lives in Sunnyvale and has taught a class in Japanese brush painting at Foothill College as well as giving private lessons.

Summer institute on world education set at Stanford

The Bay Area Global Education Program's (BAGEP) 1983 Summer Institute will be held at Stanford from June 22 to July 8. Its theme will be "Focus on Latin America."

Funded in part by the National Endowment for the Humanities, this program for elementary and secondary educators will be presented in cooperation with the Stanford-Berkeley Joint Center for Latin American Studies, and the Stanford Program on International and Cross-Cultural Education (SPICE).

Similar to previous Institutes on Asia and Africa, during this immersion in Latin American culture participants will experience a wide variety of presentations, including lectures by distinguished faculty, films, curriculum sessions, performances, and field trips.

Educators will have the opportunity to review current curriculum materials, including units on Latin America currently being developed by SPICE's Latin American Project (formerly Project REAL), under a grant from the U.S. Department of Education.

The program is open to any elementary or secondary educator on a fee basis. Applications and information may be obtained by writing: Kathie Toland, SPICE/Latin America Coordinator, Lou Henry Hoover Building, Room 226, Stanford University, Stanford, Calif. 94305. Deadline for applications is April 1, 1983.

Drama auditions for *The Wager*

Auditions for the Drama Department's production of *The Wager*, by Mark Medoff, will be held Dec. 5-7 in Stanford's Little Theater.

Medoff, who received an MA in English from Stanford, has also written the Tony Award winning play, *Children of a Lesser God*.

The Wager will be directed by Christine Roum, a graduating senior in Drama and Communications, as a senior honors project.

Auditions will be held Sunday and Monday, Dec. 5-6, from 7 p.m. to 10:30 p.m. with call-backs Tuesday, Dec. 7, from 7:00 to 10:30 p.m. All auditions will be in the Little Theater.

Please sign up for an audition time in the Drama Department office located in the back hall of Memorial Auditorium, Room 144. Scripts will be available on a loan-out basis when you sign up. All are encouraged to audition.

Performance dates for *The Wager* are Feb. 9-12, 1983, in the Nitery.

Kennedys to host Stanford Staffers

The Stanford Staffers will have their annual Christmas party at the home of President and Mrs. Donald Kennedy on Wednesday, Dec. 8.

Members and their guests will enjoy refreshments and conversation with the Kennedys.

For more information, call Kay Mahon, ext. 7-2968.

Carol Cheek

Alma Trio, guests to perform Dec. 9

The Alma Trio & Guests will perform at 8 p.m. Thursday, Dec. 9, in Dinkelspiel Auditorium. Stanford Music Department's ensemble-in-residence is celebrating its 40th anniversary this year. Members are Andor Toth, violin; Gabor Rejto, cello; and Adolph Baller, piano.

Mozart's *Trio in B-flat Major, K. 502* will open the program. It is a piece with all the Mozart trademarks: skill, elegance, humor, thematic beauty, and harmonic variety.

Bartok's *Sonata No. 1 for violin and piano* will follow—a brilliant showpiece filled with Hungarian folk rhythms and melodies set in contemporary idioms.

Concluding the program, by popular request, will be Schubert's famous "Trout" piano quintet. Joining the Alma Trio will be bass Larry Epstein and violist Carol Cheek. Epstein is a member of the San Francisco Symphony; Cheek is a teacher and soloist from Los Angeles.

Tickets for the Dec. 9 concert are $4 general, $2 students and senior citizens.

Mehnert to tell what Soviets read

Klaus Mehnert will discuss "The Russians Today: What They Read—What They Are," at 7:30 p.m. Thursday, Dec. 2, in History Corner, Room 2 (Serra Street near Palm Drive).

The talk will be based on his forthcoming Hoover Institution press book by the same name. A question and answer period will follow.

A regular commentator on German television and radio since 1950, Mehnert has also been the editor of both *Osteuropa* in Berlin and the political weekly *Christ und Weldt* in Stuttgart.

Born to German parents in Moscow, Mehnert moved to Stuttgart, Germany at the outbreak of World War I. He graduated from the classical Gymnasium and studied at the Universities of Tubingen, California (Berkeley), Munich, and Berlin, where he received his Ph.D. in history.

The speech will be cosponsored by the Hoover Institution and the Stanford Committee on Political Education.

Police urge patience on recovery of stolen goods—it will take weeks

Swamped by calls from 650 citizens seeking recovery of an estimated $2 million in stolen property, Stanford Police Capt. Raoul Niemeyer Wednesday, Nov. 24, urged public patience in a process that may take six weeks or more to complete.

The property was recovered earlier this month from the residence of Robert and Maureen O'Connor in La Honda, a friend's house in Montara, and rented storage rooms in Foster City.

The O'Connors will have a preliminary hearing at 8:30 a.m. Monday, Nov. 29, in San Jose Municipal Court Department 6.

"We're getting swamped with a lot of irate people" who want to identify and recover their property, Niemeyer said. So far, the police have concentrated their effort on victims involved in six burglary counts filed in the case.

Starting Monday, other victims from Stanford and Los Altos will be called by their local police for appointments to view the recovered goods, which fill two 50-foot trailer modules.

Niemeyer emphasizes that 1) victims must have a copy of the police report filed at the time of their property loss, and 2) detectives from each jurisdiction involved will notify the victims and schedule the viewing. Only two persons per hour can be scheduled, under police supervision.

Only one jurisdiction per week can be handled, Niemeyer said. "We have had more than 100 calls from Palo Alto alone."

Calls have been received from victims as far away as Contra Costa, Niemeyer said. So far, however, it still appears that the burglaries were mainly in Los Altos, Stanford, Palo Alto, Menlo Park, Redwood City, and nearby parts of San Mateo County. "I don't think he did more than 300 cases," Niemeyer said. "That's incredible," but far below the number of citizens who have called.

While the trailers now house an impressive display of furs and an exquisite collection of derringers and other antique guns, some of the most valuable items—museum quality rugs, gold, silver, and fine jewelry—reported lost have not been recovered. The jewelry may have been broken up, and the gold and silver melted down, Niemeyer suggested.

Those who have viewed the property "appear to be pretty truthful," Niemeyer said. "They're not trying to rip off someone else's keepsake." The spontaneous reactions are quite marked. "People will go through two or three boxes, then suddenly discover something they never thought they'd see again."

Even after the lengthy process of arranging for victims to view the recovered goods is complete, the property may not be released without permission of the court. Those victims whose losses were reimbursed by insurance face further complications.

Stanford Daily gives us the last laugh on Big Game

Continuing the Big Game rivalry in a humorous vein, *Stanford Daily* editors Wednesday distributed 7,000 copies of a bogus four-page issue of *The Daily Californian* with the banner headline "NCAA awards Big Game to Stanford."

The lead article said "an unprecedented and sure-to-be-controversial decision" was made by "a special NCAA panel, invoking a rarely used amendment to its bylaws."

An editorial commented "if this game is going to be decided in the courtrooms, so be it. We're prepared to fight this decision by the NCAA as long as it takes."

Richard Klingler, *Stanford Daily* editor, credited staffers Tony Kelly and Adam Berns with the idea for the bogus edition.

Copies were distributed in Berkeley between 8 and 9 a.m., before the regular issue of the *Daily Californian* hit the streets.

"It was gone almost as soon as it was delivered," Klingler said. "We intended it to be slightly implausible. Our intent was to be humorous rather than malicious."

How was it received? "They weren't laughing," Klingler said. Some early readers argued whether the issue was authentic.

Stanford students worked all night to produce the issue. Ten did the writing, and another 10 the distribution. "Bears shocked, appalled," was the headline on a front-page sidebar story.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next calendar deadline is Wed., Dec. 1, to cover the week of Mon., Dec. 13, through Sun., Dec. 19.

LATE ANNOUNCEMENTS

Wed., Dec. 1. Basic Science Research Colloquium: "Serotonin receptors and adenylate cyclase in parasites" by Dr. Tag E. Mansour, Pharmacology Dept. 5 p.m. Fairchild Aud.

CROW Women at the Top Lecture: Eleni Fourtouni, editor and translator of *Great Women Poets*, reads Greek women poets (in translation). 8 p.m. History Bldg., Room 203. Public cordially invited.

Squash: Vs. Peninsula SC. 6 p.m. deGuerre.

Thurs., Dec. 2. Wrestling: Vs. Oregon. 6 p.m. Maples Pavilion.

Fri.-Sun., Dec. 3-5. Men's and Women's Swimming & Diving: Stanford Invitational. All day. deGuerre pools.

Fri.-Sat., Dec. 3-4. Men's Basketball: Stanford Invitational. 7 & 9 p.m. Maples Pavilion. Ticket information at 497-1021.

Sat., Dec. 4. Men's and Women's Rugby: Stanford Ten-a-Sides. 8 a.m. Maloney Field.

Fencing: Vs. San Jose State. 1 p.m. Roble Gym.

MONDAY, DECEMBER 6

Structural Biology Dept. Lecture: "Studies on the Photoreceptor Cyclic GMP Phosphodiesterase and its Homology with Adenylate Cyclase" by Dr. Mark Bitensky, Los Alamos National Laboratory, NM. Noon. Fairchild Bldg., D102.

Numerical Analysis Seminars: "The Splitting Extrapolation Method for Multidimensional Problems" with Lin Quin, Academia Sinica. 4:15 p.m. Math 380C.

Condensed Matter Physics Special Seminar: "Surface and Thin Film Analysis of Mercury Cadmium Telluride by Combined SIMS, AES, XPS and TDMS" with Otto Ganschow, Westfalische Wilhelms Universitat Munster, West Germany. 4:15 p.m. McCullough Bldg., Room 240.

Stanford Film Society: "Left Handed Gun." 7 p.m. Kresge Aud. $1.50.

TUESDAY, DECEMBER 7

Fluid Mechanics Seminar: "Rapid Estimation of Unsteady Aerodynamic Forces by the Transonic Indicial Method" with Sam McIntosh, Nielsen Engineering and Research, Inc. 4:15 p.m. Skilling Aud.

Music Dept. Concert: Thomas Stauffer, cello, with Naomi Sparrow, piano. Music by Debussy, Koechlin, Janacek, Hindemith. 8 p.m. Kresge Aud. $4/$2.

Alumni Association World Premiere Film: "The Verdict" starring Paul Newman. 7 p.m. Memorial Aud. Tickets $5 at Tresidder Ticket Office or major outlets. No tickets sold at door. A benefit for the Student Film and Television Production Center.

WEDNESDAY, DECEMBER 8

Electronics in Medicine Seminar: "Laser Applications in Cardiology" with Dr. Robert Ginsberg, Dept. of Cardiology. 4:15 p.m. McCullough 134.

Colloquium of the Dept. of Chemical Engineering: Title TBA. The speaker is Prof. Roy Jackson, Princeton Univ. 4:15 p.m. Chemical Engineering Conference Room.

Squash: Vs. California No. 2. 6 p.m. deGuerre.

Basic Science Research Colloquium: "Immunochemistry of actin clathrin and HLA" with Dr. Peter Parham, S.U. 5 p.m. Fairchild Aud.

Dance: Student and Class Projects. 7 p.m. Roble Gym.

Women's Basketball: Vs. San Jose State. 7:30 p.m. Maples Pavilion. $2 adult, $1 child.

Physicians for Social Responsibility: "Reversing the Present Arms Race" by Linus Pauling, twice Nobel Laureate. 8:15 p.m. Fairchild Aud. Public cordially invited.

THURSDAY, DECEMBER 9

Men's Basketball: Vs. St. Mary's College. 8 p.m. Maples Pavilion. Ticket information at 497-1021.

Music Dept. Concert: Alma Trio and Guests. Andor Toth, violin; Gabor Rejto, cello; Adolph Baller, piano. Mozart—Trio in B flat Major, K. 502; Bartok—Sonata No. 1 for violin and piano; Schubert—Quintet in A Major, op. 114, "Trout." 8 p.m. Dinkelspiel Aud. $4/$2.

Law School Lecture: "Rhetoric and Legal Reasoning" by Prof. Chaim Perelman, Universite Libre de Bruxelles. 4:15 p.m. Law School, Room 280. Public cordially invited.

FRIDAY, DECEMBER 10

Applied Mathematics Lecture: "A dynamic theory of sedimentation" by Prof. Russel Caflisch, Math Dept. 3:15 p.m. Room 380C (Mathematics Corner Basement).

Materials Science & Engineering Dept Colloquium: "Cyclic Crack Growth in Pressure Vessel Steels" with Dr. R. Jones, EPRI. 3:30 p.m. Peterson Laboratory, Room 550A.

Music Dept./Memorial Church: Service of Lessons and Carols. Gregory Wait, conductor; Herbert Nanney, organist. Music of Brahms, Britten, Poulenc. 8 p.m. Memorial Church. Free. (Repeated tomorrow, same details.)

STARTS Great Directors Film Series: "India Song" (1972), dir. by Marguerite Duras. Varied characters comment on a story of marital infidelity and suicide at an embassy reception in Calcutta in the mid-1930s. 8 p.m. Geology Corner, Room 320. $3.75 general, $2.75 students.

Archaeological Institute of America Lecture: The speaker is David Stronach, UC-Berkeley. Title TBA. 8:15 p.m. Room 370 (opposite Physics Tank). Public cordially invited.

SATURDAY, DECEMBER 11

Men's Basketball: Vs. Chico State. 3 p.m. Maples Pavilion. Ticket information, 497-1021.

Music Dept./Memorial Church. Service of Lessons and Carols. See details for yesterday.

SUNDAY, DECEMBER 12

University Public Worship: Student Worship Service, 8:30 a.m.; Robert G. Hamerton-Kelly, dean of the chapel, 11 a.m.; Evening Communion in Memorial Church Round Room, 6 p.m.

Music Dept. Concert: Organ Recital by Herbert Nanney. Advent and Christmas Music to inaugurate the new console of the Murray Harris organ. 2:30 p.m. Memorial Church. Free.

ASSU Sunday Flicks: "My Fair Lady." 6:30 & 9:45 p.m. Memorial Aud. $1.50.

Annual Messiah Song: Gregory Wait, conductor; Herbert Nanney, organist. Come and sing or play the Handel oratorio. Orchestra parts provided. Bring choral scores or they may be purchased there. 7 p.m. Memorial Church. Public invited to participate or listen.

EXHIBITS

Paul Harris—Still Life. Stanford Museum. Through January 2.

Venice in the 18th Century. Paintings, drawings, prints and decorative arts. Stanford Art Gallery. Through December 19.

Wood Construction and Process Sculpture by E. David Camardo. For library environment. The Jonsson Library of Government Documents, Green Library. Through December.

The Orchid Observed. Five centuries of botanical illustration and exhibit of books from the collections of William K. Glikbarg and the university libraries. Lurie Rotunda, Dept. of Special Collections, second floor, West Wing, Green Library. Through January 11.

Japanese Brush Painting by Ami Wada. Reception, Fri., Dec. 3, 5-7 p.m. Bechtel International Center. Dec. 3-30.

Melange of Paintings. By several artists who have had exhibits in 1982. Faculty Club Gold Lounge.

Contemporary Chinese Paintings by Anna Wu Weakland. Tresidder 2nd floor gallery. Month of December.

Photographs by Matthew Schwartz. Coffee House Gallery. Month of December.

CAMPUS REPORT

Volume XV, Number 12 | A publication for Stanford University faculty & staff | December 8, 1982

Students study in the sun

Campus growth, complexity may divide faculty, staff

Administrative costs at Stanford today remain about the same as a decade ago, at 27 percent of the University's operating budget.

But sheer growth of the institution and professionalization of its managers have increased tension in faculty-staff relations, according to an extensive self-study of university organization and management.

"Within universities, the coexistence of two subcultures—the faculty and staff, each with substantially different workstyles and objectives—can produce stress. . .as when, for example, the person held accountable for cutting a certain amount of grass each day by a computerized schedule runs a noisy mower next to a lecture," the study noted.

While this may seem a trivial example, "a good deal of pent-up frustration within the institution is due to the failure of one culture to understand the needs of the other."

Originally headed by Vice-President Joel P. Smith, development, the study included President Donald Kennedy, Provost Albert Hastorf, Vice-Provost Raymond F. Bacchetti, director of university budgets; Vice-Provost Gerald J. Lieberman, dean of graduate studies and research; Vice-President William F.

Indirect costs for research spark Faculty Senate concern

Slow or no growth in total research volume makes it increasingly difficult for Stanford to recover the full costs of producing new knowledge, Vice-Provost Gerald J. Lieberman, dean of graduate studies and research, told the Faculty Senate Thursday, Dec. 2.

Last month, Provost Albert Hastorf cited lower than anticipated growth in research as a prime cause of a new three-year $10 million belt-tightening program for the University.

"In Washington's current political climate, we are not likely to see any significant overall increases in federal research funding, which accounted for some 90 percent of Stanford's total research support of $136 million in 1981-82," Lieberman said.

Last year, for the first time in recent history, Stanford's direct research expenditures did not increase as rapidly as inflation. Research salaries, travel, computer time and other direct costs rose about three percent, inflation about nine.

continued on page 23

Senate adopts new safeguard for grad student-employees

Stanford faculty may not serve as academic supervisors of graduate students whom they employ outside the University without advance approval from their department head or dean, the Faculty Senate decided Thursday, Dec. 2.

In a divided voice vote, the Senate said: "Faculty members must be especially sensitive to potential conflicts of interest between their teaching responsibilities vis-a-vis graduate students working under their supervision and their outside consulting interests.

"To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's adviser or as a participant on that student's dissertation committee without the prior approval of the department chair—or dean, if the involved faculty member is also department chair."

The action, suggested publicly in April by Vice-Provost Gerald Lieberman, dean of graduate studies and research, was unanimously recommended by faculty and student members of the Committee on Research.

In a Nov. 16 letter to the committee, the Graduate Student Association noted there were "substantial advantages" to both faculty and students in such off-campus employment but also "inherently high potential for abuse."

"The majority of students involved in off-campus employment with their (faculty) advisers appear to be quite satisfied with the current situation, and would oppose any policy which would necessitate termination of their employment," the GSA said in a statement circulated to the Senate Thursday. The GSA favored third-party approval of such employment as a curb on potential abuse.

While students have been "very

DNA patent file is closed to public

Stanford University Monday, Dec. 6, asked the U.S. Patent Office to close the files on the patent application for recombinant DNA from public scrutiny until action on the application is complete.

Noting that the initial decision to hold the files open to public view was "unprecedented," Robert M. Rosenzweig, Stanford vice-president for public affairs, said Monday's action was "taken with some regret."

The initial decision to keep the file open to the public was "an experiment with some risks attached," he noted. "We were prepared to take the risk because of the wide interest in the subject of the application and because we believed we would emerge at the end with a stronger patent.

"The latter may still be true, but in our judgment, the experiment has failed. It is better to recognize that fact before more damage is done.

"Unfortunately, there has been no effective way to correct the erroneous public impressions resulting from the way in which the Patent Office acquires additional information. It does that by formally rejecting the application. The reason given for the rejection then tells the applicant what new information needs to be supplied.

"In practice, however, when an application is contested, the result of this process is to separate the allegations from the answers to them. As is so often the case when this happens, the charge is newsworthy but the answer to it is not. The two should appear together.

"When the application process is completed, the file will be open for public inspection. Until then, it is better that it not emerge in piecemeal fashion."

Jaedicke foresees increases in space, faculty, and expenses

Maintaining and building upon the quality of the Stanford Graduate School of Business will be the major concern of Robert K. Jaedicke, a Stanford professor of accounting who has been appointed dean of the school, effective Jan. 1.

In his first interview since the appointment was announced Nov. 30, Jaedicke, 53, said the School has no "glaring weakness" and he expects no major changes in direction.

"This is already a quality School and a quality University, with a high-quality faculty and student body and a very supportive alumni group," Jaedicke said.

"There's no evidence that it needs some dean to come in to shake it up or move it in a particular direction. I don't think we're in a position where there is some glaring weakness that dominates everything else."

Quality improvements

Jaedicke, who has been a professor of accounting at the School since 1961, said his central concern as dean will be to continue to improve the quality of the School, which is widely regarded as one of the top schools of management education and research in the world. "The only way that I know an academic institution can increase its productivity is through quality improvements."

Jaedicke also listed several needs facing the Business School over the next five years, including the hiring of additional faculty members and a continuing emphasis on faculty recruitment, the need for additional space, continued improvements in computer facilities, and greater focus on international dimensions of business management.

Robert Jaedicke

"There are many needs created when you go about improving the quality of what you are doing," he said.

He added, however, that those needs are built upon "a very important core of activities that are the basic strengths of this School and are ones you don't want to overlook. When you talk about what needs to be done, you can easily ignore the 80 percent of things that are already in place and of high quality. These are the kinds of things we want to keep strong, as well."

Jaedicke served as acting dean of the School in 1979-1980 and as associate dean for academic affairs from 1969-81. He will succeed Rene C. McPherson, 58, who announced his intention to resign in June for health and personal reasons.

One problem Jaedicke foresees in continuing to improve quality of the Stanford Business School is that it will become increasingly expensive to operate and more difficult to finance, he said. Unlike profit-making businesses, academic institutions aren't able to raise prices in order to fully recover their costs for improvements. "The better we get, the more money it costs," Jaedicke said. "It makes our bottom line worse in the sense that we have to raise more resources."

Faculty direction

Jaedicke also said he firmly believes that the academic direction and policies of the School must continue to be set by the faculty. "It would be foolish for this School to hire the best faculty people around and then dictate what they should be doing. You just don't play the game that way. You hire those individuals because you want their expertise; then you do everything you can to get that expertise to operate."

He said the responsibility of the dean is "to make sure that the School has the financial and other kinds of resources that are needed in order to see that the direction—as set by the faculty—can in fact be carried out by the faculty." He described the role of the dean as a catalyst to ensure that the process of faculty involvement is continually active.

He added: "The dean should also exercise some leadership in this whole process. One of the big contributions of the three deans I have served under was giving the School a sense of quality. I never heard any of them, as the first question out of the bag, ask 'What does this cost?' I heard them continually say 'Is this of high quality?' "

Jaedicke, who will become the sixth dean of the GSB since it was founded in 1925 and the first selected from its faculty in many years, said he doesn't believe his status as an "insider" will handicap him in dealing with the business community and other external groups. The previous three deans—Ernest C. Arbuckle, Arjay Miller, and McPherson—were all prominent corporate executives.

Public relations

He noted that over the past two decades, the School has developed good working relationships with external constituencies—including business and government leaders and alumni—and has also greatly intensified its ties within the Stanford University community. "If deans from the nonacademic world could strengthen internal relationships, then somebody from the academic world ought to be able to strengthen external relationships," he said.

He added that his extensive knowledge of the School and his year as acting dean will help him in dealing with external constituencies—a duty he said he enjoys. "The things that you want to talk about with people from the outside have to do with the School—what we're doing, where we're going. I think that's a comparative advantage for me. If I know anything, I ought to know about that."

He added that that knowledge will help him in his role as fund-raiser for the GSB.

On the subject of the future of management education, Jaedicke said one of the major challenges facing American business schools in the 1980s is how to react to the rapid expansion of the boundaries of management.

He said management has experienced tremendous change and growth in the last decade, becoming more international in scope, increasingly concerned with the development of new technologies, more involved with political systems, and intertwined with the world economy.

New environment

American business schools will probably all respond differently in teaching students in master of business administration degree programs to grapple with the new environment of management, Jaedicke said. He added that in the future the major business schools may specialize more since no one school will be able to teach all the extra business skills required for a modern-day manager.

"With all these things happening, they've got to be reflected in an MBA education. But the big challenge is that business schools still have a two year MBA program; there are no prospects of more than two years," he said. "In a sense, we are going to do a smaller part of the education of managers in the future."

Jaedicke said executive education programs may grow in number and scope as managers on the job return to business schools to update their skills.

McCarty heads hazardous waste group

Prof. Perry McCarty, civil engineering, will head a new faculty task force on hazardous waste management, Vice Provost Gerald J. Lieberman, dean of graduate studies and research, has announced.

Perry McCarty

Other members are Profs. Carl Djerassi, chemistry; Stanley Falkow, medical microbiology; Errol Friedberg, pathology; and Henry S. Kaplan, radiology.

Prof. Keith Hodgson, chemistry, will serve as "back up" for Djerassi. Associate Dean Pat Devaney will serve as Lieberman's representative. Alain DeCleve, director of health and safety, and Roland Finston, director of health physics, will provide staff support for the task force.

The task force will provide informed faculty views as the administration proceeds to develop a University-wide waste management system, Lieberman said.

DeCleve and Finston have proposed construction of a permanent on-campus facility to store, package, treat and incinerate all hazardous wastes generated by the University and the Hospital. Those few wastes which cannot be burned or treated would continue to be trucked off campus for disposal.

The task force will review the need for such a centralized facility, comment on proposed operations and traffic patterns involved, advise on the criteria for choosing its location, and comment on alternative sites.

The University currently has a small facility where chemical wastes are stored before they are trucked off campus for disposal. But this facility has only a temporary permit and does not provide adequate resources for packaging, treating or incinerating wastes.

While some wastes, primarily infectious agents, are now incinerated on campus, the equipment involved needs to be replaced in the near future.

The Health Physics Office now packages radiological wastes generated at Stanford which are trucked to a dump site in the state of Washington. This site will not be available to Stanford after 1986.

DeCleve, as director of health and safety, is now in the process of developing a "cradle to grave" approach for the acquisition, use, storage and disposal of hazardous agents used in research and teaching laboratories and the physical plant.

(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medicals news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Stanford's unique program

Environment finds new sort of friend– the engineer

BY DONALD STOKES

Stanford is training a new breed of professional who blends engineering expertise with skills in meeting the needs of environmental conservation.

"I am not aware of any other university that tries to achieve this in the way we do," says Leonard Ortolano, professor of civil engineering, who is director of the Graduate Program in Infrastructure Planning and Management.

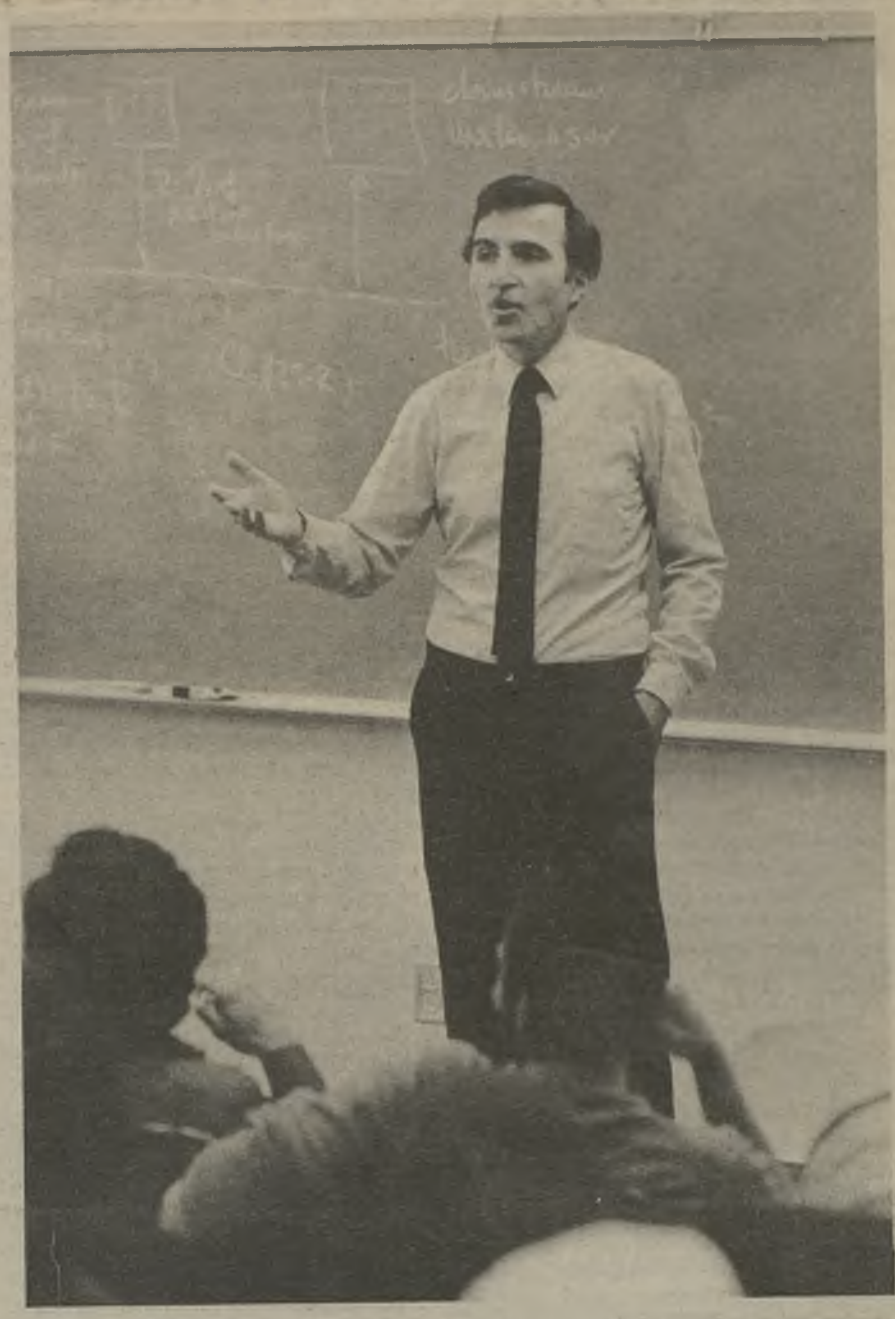
"It is long overdue. For too long all the emphasis on environmental conservation has come from volunteer groups such as the Sierra Club. Now the thrust for preserving environmental values will come from trained professionals as well, the very people who have the responsibility of changing our world physically."

In a typical year, between 15 to 20 students are accepted into the program. About 60 percent of them are American, the rest come from countries all over the world. Roughly one third are women.

"Other universities train people in separate programs, each aimed at mastering a particular expertise such as public transportation, energy facilities or water resources development," said Ortolano. "Their faculties are in separate groups.

"We believe that every person engaged in planning public works should share a common body of knowledge. Our band of faculty works together as a group in each of the main areas.

"Our Infrastructure Program consists of faculty who specialized in particular areas. They include such people as Gil Masters and Lyna Wiggins in energy facility planning; and Greig Harvey who is a transportation specialist. I work on the water development side. We are searching for a specialist in land use problems.



"What we are doing is innovative. It has taken quite a while to learn how to do it, and we have had some setbacks, but now we are well on our way.

"The program is becoming better known, and we are getting an increasing stream of applicants, but we take only as many as we can handle effectively.

"This is one of those developments where one is surprised that it didn't come much earlier on, for the need is quite clear. It is remarkable that although the face of the land has been changed drastically, little attention has been paid till recently to the environmental and social values entailed.

"What concern there was came from members of the public who banded together to make their voices heard. What Stanford is doing is to internalize those outside forces in the training of public works experts.

"Our training is not confined to what might be called the environmental and social aspects, we also teach the economic and financial planning consequences of public works. In other words we train people not only to create projects but to do this in a way that will affect the public in the most beneficent ways."

We believe that every person engaged in planning public works should share a common body of knowledge. Our band of faculty works together in each of the main areas.

—Leonard Ortolano

The graduate program comes out of a long tradition at Stanford which began three decades ago with the work of Clarkson Ogelsby, Ray Linsley, and Eugene Grant, all three of whom are now emeriti professors. They designed a program for engineering economic planning.

"The premise they worked on—one that still dominates our thinking—was that civil engineers have a great responsibility for the way the world is changed, in a development sense. The three professors said that it was not sufficient to train engineers technically, that they also had to be concerned with the broader needs of the community.

"Our predecessors developed programs that exposed engineers to economics and political science. By the late 1960s it became clear that what was needed was a balanced approach to the social and environmental issues involved in public works projects. This important element was added to the teaching.

"After that it became a logical step to put together the program in infrastructure planning and management. The men and women emerging from this program are a new breed. They plan with all the needs of the public in mind, not just the provision of technical services.

"Civil engineers affect the lives of the public at every turn, from highways to dams, from buildings to sewage systems, from canals to railroads and bridges."

Ortolano points out that engineers and other city planners often do not live in the locality of projected works and are unaware of neighborhood interests or feelings. "By involving individual citizens in your project planning you are able to ensure that local sensibilities are reflected in whatever public works are constructed.

"Remember the days when very little attention was paid to neighborhood feelings? This led to people laying down in the path of bulldozers, or chaining themselves to threatened trees, to try to stop projects that were alien to what the locality wanted.

"It is not enough merely to rely on random polls or to announce that the views of local people are invited. A vital part of all public works should be interaction with the public throughout the various stages of planning, with a full range of information being exchanged.

"This is a side of public works which has cried out for more attention. We have the know-how to do the work technically, but a big gap has been the lack of effective ways of involving the public in the planning process."

It was the work of people such as Ortolano that helped stop the confrontational period between the public and the authorities dealing with public works. Ortolano developed new approaches to planning which were responsive to the need (and the legal necessity) to secure public participation in water planning.

His research work became well-known and widely respected by academicians, planners, and engineers.

His work was by no means confined to water problems. Professional journals published his suggestions on ways to include environmental considerations in highway planning.

"Today environmental considerations are frequently taken into account right from the start in planning public works," said Ortolano." At Stanford we are able to take the process a step farther.

"We are now researching how to organize scientific and technical information in ways that are useful to planners. For example, I am trying to forecast more accurately changes in land use associated with large public projects. This is a very difficult forecasting problem.

"We try to look ahead and make assessments of what will happen to the areas concerned. We have to make informed guesses about the probable impact of particular developments."

The new breed of socially-conscious engineers will often have to make presentations, either orally

Medicare cost curbs won't work

Federal proposals to contain Medicare costs through prospective reimbursement of hospital costs at negotiated, pre-set prices "will not contain the rise in health care costs," says economist Rita Ricardo-Campbell, a senior fellow at Stanford's Hoover Institution.

The proposals, made by Health and Human Services Secretary Richard S. Schweiker, "will increase regulation and the size and costs of the bureaucracy that administers Medicare" if adopted by Congress, she predicts.

Better cost containment could be obtained by moving up existing copayments by patients under Medicare from the 61st day to the sixth or eighth day of hospital stay, Ricardo-Campbell says. "This would create a needed incentive for patients to minimize the length of their hospital stay. Medicare pays for less expensive home care and home health services."

The Schweiker plan would use nearly 500 diagnostic-related groups (DRGs) with a set schedule of fees, a pattern "very similar to rate setting as practiced by public utility commissions," she observes. Each price would be modified by the patient's age, treatment procedure, discharge status, geographic area, and the size and type of hospital.

"If this legislation is enacted, then we are talking about negotiating and setting thousands of prices," she adds. At best it would result in only a one year lag in the level of costs being reimbursed."

The Hoover Institution economist also criticized California's "czar" bill for Medicaid patients and companion legislation covering private patients.

The MediCal-Medicaid bill requires hospitals to submit closed bids on a per capita patient basis in order to be reimbursed for MediCal patients. Ricardo-Campbell says this will result in increased competition among hospitals, speed up hospital specialization, and accelerate formation of hospital systems or chains.

"It should also reveal the already large subsidies being paid by private patients to support Medicare and MediCal patients," she says. "It raises the question of who should be paying for in-hospital teaching and research."

California legislation covering private patients will result in a range of prices for different levels of care, ranging from Volkswagen to Buick to Jaguar. "It assumes that Rolls Royce quality of care is being paid for out-of-pocket by the patient," she adds.

"The bills have no quality guidelines. Competition will increase among hospitals, insurers, and pre-paid groups or health maintenance organizations who act as financial middlemen," Ricardo-Campbell says.

Industry may take advantage of the different levels of quality and prices offered, but should help employees become "prudent purchasers" of health care to contain costs.

"Employers can encourage the advertising of medical care prices even if medical, professional colleagues disapprove," she declares. "Business pays $100 billion in health care coverage annually, but business is not performing all the customary facets of a purchasing agent's job for its employees—and it should be. . . .

"As competition among prepaid arrangements increases, some will fail. Business should assess the financial status of any health insurer or provider before signing a contract."

While health maintenance organizations and others may help contain costs by referring patients to relatively low-cost specialists, there is no assurance that these savings will be passed on to consumers, she notes. While HMO's have about a 20 percent market penetration in both San Francisco and Los Angeles, the number of physicians per thousand population are among the highest in the country "and so are prices and costs of medical care," she adds. "The HMO's in California compete by product differentiation, noy necessarily by price."

Ricardo-Campbell's views were developed in an Oct. 27 talk with the Santa Clara County chapter of the Financial Executives Institute, meeting at the University Club in Palo Alto.

Writing recommendations? Read on.

Following is a Dec. 6 memo to all faculty members and administrators from Christopher J. Shinkman, director of the Career Planning and Placement Center concerning letters of recommendation:

Since my office is frequently asked to handle letters of recommendation, I would like to share with you some thoughts on the subject. Most applications for admission to graduate and/or professional schools, and some applications for employment, require one, two, or three letters of recommendation. By definition, your "recommendation" or "reference" may be positive, neutral, or negative.

It seems to me that in order to be most useful to the person who will be receiving the letter and to the person about whom the letter is being written, the letter should be thoughtful, honest, and informative. If you do not know a student, it may be better either to get to know the student before agreeing to write (perhaps ask for a transcript and/or resume) or to suggest that the student seek another letter writer. Cursory or perfunctory letters of recommendation may have a negative impact on the student's application.

Some graduate admissions officers and employers have suggested to me that the most helpful letters of recommendation are ones which not only use descriptive adjectives (bright, pleasant, hard-working, etc.), but which also cite examples to demonstrate those traits or characteristics. For example, "He has exceilent leadership ability, as evidenced by his work as captain of the varsity soccer team."

It is generally wise to ask the student for what purpose the letter will be used and to emphasize academic skills in graduate school letters and personality factors in employment letters. In either case, you may want to refer to such qualities as: 1) ability to apply general information, to extend information, and to handle abstract ideas; 2) clarity of expression, both written and spoken; and 3) perseverance, maturity and personal adjustments, self-discipline, integrity, self-confidence, resourcefulness and creativity, sensitivity and tolerance for others. It may also be a good idea to describe the context in which you have known the student.

Some practical considerations may be worth mentioning. Whenever possible, letters should be on Stanford letterhead and typed or written in black ink (in order to yield a clear copy). Needless to say, letters must be signed and dated.

The Career Planning and Placement Center serves as a repository for letters of recommendation for current students and alumni and will reproduce and mail these letters at the request of the person about whom the letter is written. Only full-time staff members in the Career Planning and Placement Center have access to these letters, except in cases legislated by the Buckley Amendment. Either the letter writer or the subject of the letter can ask that the letter be removed from the Career Planning and Placement Center files and destroyed.

The Buckley Amendment to the Family Educational Rights and Privacy Act gives students access to letters of recommendation in the files of the Career Planning and Placement Center unless they have signed a statement waiving this right.

Before agreeing to write a letter of recommendation, the letter writer is entitled to know whether the person being written about has waived or retained the right of access. If you do not wish to write a recommendation in letter format, the Career Planning and Placement Center can make available to you a supply of standard Stanford recommendation forms, on which the subject of the letter expresses his/her intention to waive or retain the right of access.

Some students at Stanford get close to their date of graduation and then have trouble obtaining recommendations. In order to help solve this problem, the Career Planning and Placement Center will announce to all entering students that we are prepared to receive recommendations written about them at any period in their stay at Stanford. We will keep those recommendations on file until such time as the student is ready to use them.

Some graduate and professional schools provide their own recommendation form as part of the application packet. Letter writers need not use that form but should staple a copy of the letter of recommendation to it and return both in the same envelope. On the other hand, some faculty members may wish to individualize their recommendations to the particular school to which admission is being sought.

Any questions regarding this memo, or reactions to it, would be welcomed.

Ortolano...

continued from page 3

or verbally, so that the public can be fully involved in the planning process for public projects. It is important therefore that graduates should be able to write and speak clearly, so as to explain their ideas at public fora.

For this reason Ortolano is keen on making sure that his students can write and speak effectively. He refutes the common belief that often engineers are unable to do so. "That may be true at other places," he says, "but not at Stanford.

"When ever it is necessary for a particular student, we see to it that he or she takes appropriate courses to improve writing or speaking skills.

"The typical engineering student is not required to use speaking and writing skills so often as, say, the typical humanities student. It is useful, therefore, for the young engineer to be given the opportunity to practice self-expression."

Ortolano played a leading part in putting together the Program in Infrastructure Planning and Management. He serves as the leader of the group, but he also has other responsibilities.

"I play two roles at Stanford" explains Ortolano. "On the one hand I teach and do research in water resources and environmental planning. On the other I am director of the Undergraduate Program on Urban Studies.

The program does not have a separate faculty, but includes professors from history, anthropology, economics, and several other departments. This undergraduate program enables those students who wish to put together interdisciplinary majors that cover particular aspects of life in cities. Up to a dozen students do so each year. They include future architects and city planners.

Ortolano was reared in the Italian area of Brooklyn, New York. He recalls fondly the crowded street markets, the rich scents of ethnic cooking, the liveliness of the community. He graduated *magna cum laude* from the Polytechnic Institute of Brooklyn and went on to Harvard, where he gained his doctorate in engineering in 1969.

By then he had accumulated considerable experience in summer work as a research scientist with the U.S. Public Health Service, later he worked for the U.S. Army Corps of Engineers, and many private firms engaged in environmental and water resources planning.

He joined Stanford in 1970. His work soon led to professional honors from several engineering societies and a fellowship from Resources for the Future. He became known as a water resources engineer-planner with special expertise in the integration of environmental factors into water resources planning and decision-making.

Ortolano made major contributions with his studies of the implementation of the National Environmental Policy Act by federal water resource agencies.

When that Act became law in 1970 all the various water agencies ran into great difficulties in deciding what was expected of them. "Many of them had a tendency to suppose that nothing much would be expected" observed Ortolano.

"We at Stanford investigated the situation to gauge the response of the agencies. Our studies showed that often their work on environmental aspects was not being used to influence decisions. In many cases the effect was to observe the letter of the new law rather than its spirit.

"It may sound amazing, but in the early 1970s environmental reports were often made *after* the vital decisions had been made. The reports were often made simply to conform to the law.

"Our team did quite a lot of work in figuring out ways to restructure planning processes, so that environmental issues would receive serious consideration in public works planning. A central feature that I advocate was the need for public participation in the planning process, started at an early stage.

Today graduates from the special program at Stanford are to be found in key posts all over the world. Their influence will help to create an environment that is more pleasing and useful to all.

Ortolano is married to Patti Walters, who is an architect in Palo Alto. There are two sons from a previous marriage: Christopher is a freshman at UC-Berkeley, and Alexander is at Palo Alto high school.

Soviet policy now more than muted echo of Byzantine, Tatar past

—BY MILLICENT DILLON

In making predictions about the future of the Soviet Union, the limits as well as the uses of history must be taken into consideration, says Stanford Soviet expert, Prof. Alexander Dallin.

"My point is of course not to discourage people from looking at Soviet history. It's obviously a terribly important part of Soviet studies. But a good historian has to know the limits of history.

"There is too much of a tendency in some quarters to see Soviet policy now as a muted echo of the Byzantine past and the Tatar yoke, and of all sorts of exotic and confused happenings of the past, which in turn are supposed to determine what Russia is going to be like in the future," said Dallin, professor of history and chairman of the international relations program, in a recent campus interview.

"If we would have applied that standard in 1945, we would have said that Germany could never be democratic and that Japan would always be as it had been.

"I don't expect any changes in Russia as fundamental as in those two countries, but it is necessary to keep in mind that the future is not just an extension of the past."

Dallin sees a clear divergence in the field of Soviet studies between those who take the determinist view and those who believe some change is possible. He suggests that it would be helpful to think of the Soviet experience as a slow and painful learning process, in which the Russians keep checking the real world to find out whether their prior assumptions have or have not been borne out by what happens.

"So, for example, it's a little hard to see how they can keep the faith in the idea of world revolution after 65 years in which their expectations have not been fulfilled.

"Or to take another example, the original Soviet expectation was that in their state crime would wither. It was regarded as a byproduct of capitalism and was to disappear with the advent of socialism.

"But they have noticed that far from withering, crime is flourishing. There is as much corruption in the Soviet Union today as in any country and they no longer try to deny it.

"So that reluctantly and piecemeal there is a learning process taking place. With each new generation there is some change in values. The changes may not always be things we're particularly fond of, but that's something else altogether. Nevertheless, people's values do normally undergo changes.

"For example, there's much more consumerism in Soviet Russia today than there was a generation ago or than Lenin had ever expected."

Commenting on the reason many historians and politicians choose to look at Russia in determinist terms, Dallin says, "I think one of the reasons is ideological. It is very convenient to have a single adversary on whom you can blame everything that goes wrong.

"Psychologically, in the American experience, the notion of a single devil has been found to be very comforting. It's much easier to deal with that than with a world consisting of many rival forces, each of which has to be recognized as authentic and indigenous."

One of America's leading experts on Soviet history, and past chairman of the National Council for Soviet and East European Research, Dallin is the author of a number of scholarly works, including *German Rule in Russia 1941-45*, *The Soviet Union at the UN*, *The Soviet Union and Disarmament*, and *Political Terror in Communist Systems*.

He has just completed an extended study on domestic sources of Soviet foreign policy.

In all of these studies he does not, of course, disavow the importance of history.

"Certainly it's true that some Soviet attitudes toward the state and toward authority come out of their past experience. You're not going to be picking up Jeffersonian tendencies there, for example.

"The Russian society never had intermediate groups, secondary associations such as Rotary Clubs or the National Association of Manufacturers, to mediate between the state and the individual. So it's long been taken for granted in Russian society that the state does a lot that Americans would be suspicious of.

"We have to be aware of that paternalistic view of authority, but we still have to guard against an absolute extrapolation from it."

Some of the most unpredictable factors that may make for future changes, according to Dallin, are linked to developments in the Soviet economy, specifically to the effects of recent slowdowns and shortfalls.

"History is no use to us here," says Dallin, "because there is no historical precedent for these happenings."

Dallin came to Soviet studies partly because of his parents, both of whom came from Russia. "Because of them I had a little language very early and also a feeling for the culture."

Born in Germany, Dallin lived in France with his family and emigrated to the U.S. in 1940. After finishing high school, he served in the Army from '43 to '46. There he was called on to act as a translator for German prisoners of war.

"By chance I also had to deal with a large group of Russians who had been captured by the Germans, put into German uniforms and forced to serve on the front. They surrendered to us and were brought over here, thousands of them. No one understood them and in fact it took a while for people to know what language they did speak.

"These Russians couldn't figure out what had happened to them. They'd traveled thousands of miles, having been brought by ship to this country. At the end of the war it was very painful. Some of them committed suicide rather than be returned to the Soviet Union, although most of them did go back.

"Through my contact with them I became more interested in the whole subject of Soviet studies."

Following his war service, Dallin went to Columbia, where he enrolled in the Russian Institute, one of the first two programs in this country.

"Those were good years, those first postwar classes at Columbia. A lot of students were older, had been in the war, had been in Europe, had met Russians, and some of them knew the language. They were people who wanted to get a systematic training in the field."

Out of that original group emerged some of the leading Soviet experts in the country today, including Walter Stoessel, a Stanford graduate, ex-ambassador to the Soviet Union, and, until his recent retirement, number two in the State Department under Secretary Haig. Also in that class was the present director of the Columbia Harriman Institute, Marshall Shulman, who went on to become Secretary Vance's major adviser on Soviet affairs.

Before this time, Dallin notes, there were no Russian studies programs in the U.S. In fact, before World War II, there were only five people in the country teaching university courses about Russia.

After the War, primarily as a result of financial support from the Rockefeller, Ford, and Carnegie Foundations, a number of programs were set up nationwide. Russian Studies flourished at American colleges and universities until the late '60s, at which time a serious decline in funding and enrollment took place.

It's a little hard to see how (Russians) can keep the faith in the idea of world revolution after 65 years in which their expectations have not been fulfilled.

—Alexander Dallin

From his vantage point as former director of the Russian Institute at Columbia ('62-67), and his current tenure as professor at Stanford (since '71), Dallin evaluated the future of scholarly needs of Soviet studies.

"Some fields have been totally neglected in this country, such as Soviet society. There are virtually no sociologists in the U.S. dealing with that subject.

"Occasionally some literary scholars will use literature as a mirror of society. But beyond that, there are perhaps three people in the whole country who spend even part of their time on this study.

"Well, it's largely the same situation in economics. Neither in sociology nor in economics are departments interested in area specialists. In economics, for example, the interest is in econometrics or in functional problems, but not in particular geographical areas. Yet there's a real need for study in these fields.

"There is nobody in Soviet economics at Stanford. Nationally, the prediction is that over one-half of those studying or teaching Soviet economics will retire in the next 10 years. And we have almost no one to replace them.

"This is partly a question of incentives. For any good economist there are many more jobs available with much more money and fewer headaches, say working for a brokerage house or for a corporation, than working on Soviet economics. Further they don't have to deal with false statistics and with the language barrier."

Another subject in the field that has been neglected, according to Dallin, is the study of nationalities in Russia.

"We've been so preoccupied with high politics, with the question of who is doing what to whom in the Kremlin, that we've neglected the other 250 million people in the country.

"Three or four people in the country are

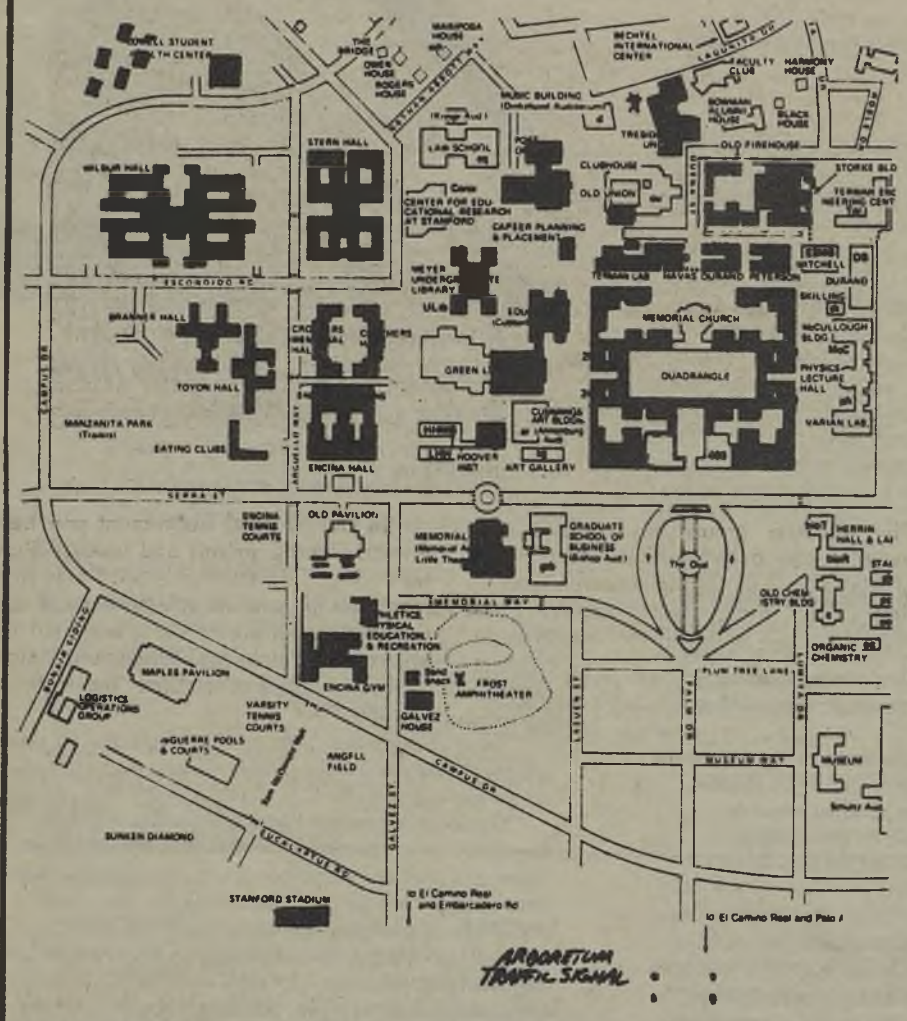
Brian Reid wins ACM's Hopper Award



Prof. Brian K. Reid, electrical engineering, is the recipient of the 1982 ACM Grace Murray Hopper Award of the Association for Computing Machinery.

The ACM Awards Committee cited Reid for "his contributions in the area of computerized text-production and typesetting systems, specifically Scribe. . . (which). . . represents a major advance in this area. It embodies several innovations based on computer science research in programming language design, knowledge-based systems, computer document processing, and typography. The impact of Scribe has been substantial due to the excellent documentation and Reid's efforts to spread the system." Scribe is now marketed by Unilogic, Ltd., Pittsburgh.

Reid received a B.S. degree with honors in physics from the University of Maryland in 1970 and designed and implemented the Scribe system as a graduate student/research programmer at Carnegie-Mellon University. He received his Ph.D. in 1980, and joined Stanford's Computer Systems Laboratory the same year.

The ACM Grace Murray Hopper Award has been presented annually since 1971 to recognize achievements in computing made by persons before their 30th birthday. The award includes a check for $1,000 donated by the Sperry Univac Corporation in honor of Dr. Hopper, a computer pioneer who is currently serving as a captain in the U.S. Navy.

Central campus blackout

Power will be off to the main quad and other areas shown in black on the above map, including the arboretum traffic signal on

Sunday, December 19
from 8 a.m. to 5 p.m.

Power to Tresidder Union only will be off from 8 a.m. to 12 noon.

This shutdown is required for substation construction and equipment maintenance. For additional information, call the Utilities Department at 7-3765.

Thomas Henrikson

Henrikson named to Hoover post

Hoover Institution Director W. Glenn Campbell has announced the appointment of Thomas H. Henriksen as senior research fellow.

Henriksen began his Hoover Institution career as the peace fellow in the 1979-80 National, Peace, and Public Affairs Fellows Program. He was appointed a research fellow in 1980, and continued his studies at the Institution while he held the position of senior auditor in the Internal Audit Department of Stanford University.

On march 1, 1980 he returned to the Hoover Institution on a full-time basis, assuming certain administrative duties in addition to his academic research.

He is the editor of *Communist Powers and Sub-Saharan Africa* (Hoover Institution Press, 1981) and the coauthor, with Senior Fellow Lewis H. Gann, of *The Struggle for Zimbabwe* (Praeger 1981), among other works.

Before coming to the Hoover Institution, Henriksen was professor of history at the State University of New York at Plattsburgh. He served in the U.S. Army as an airborne infantry officer, 1963-65. Henriksen received his B.A. degree from the Virginia Military Institute in Lexington and his Ph.D. degree from Michigan State University.

Library closure

The Green and Meyer Libraries will be closed on Thursday, December 30th, while the buildings are being fumigated. This is in addition to the already scheduled New Year's holiday closure December 31st through January 2nd. Other libraries will maintain their regular intersession hours on the 30th.

Dallin reviews Soviet studies...

continued from page 5

beginning to specialize in the study of Central Asia. Partly, of course, it's a language problem. What graduate student in this country can be expected to spend years studying Uzbek in addition to Russian?"

In connection with future funding Dallin emphasized the importance of cooperation between universities, as is currently taking place between Stanford and UC-Berkeley.

"Together with the people in Soviet Studies at Berkeley we have the critical mass we need. Neither place alone can do all the things that need doing.

"This kind of cooperative venture is, I suspect, something that the foundations will encourage us to do. It makes for better use of scarce resources, even in graduate student training.

"We already have an arrangement whereby students can take courses at either campus and get credit at their home campus. We're likely to start several joint research projects soon.

"We do have a faculty seminar joining the two programs and joint conferences. The two libraries have coordinated acquisitions in this field so there will not be duplicate purchasing. So we're moving more and more toward coordination. I think it makes sense.

"Realistically, at this point, we're not going to have the money or the green light from the Administration to hire half a dozen more people in fields where we don't have them.

"The group at Berkeley is a large one and a good one. They have excellent people in a variety of disciplines.

"But they don't have anything like our arms control program, or anyone like the people here at Stanford Linear Accelerator Center. Our collection at Hoover is also unique. Each side has something to contribute that the other doesn't have, so it makes good sense to work together."

Theodore Anderson gives Wald lectures

Theodore W. Anderson, professor of statistics and economics, gave the Abraham Wald memorial lectures at the 1982 annual meeting of the Institute of Mathematic Statistics together with the American Statistical Association at Cincinatti this fall.

Anderson was president of the Institute of Mathematic Statistics in 1963 and vice president of the American Statistical Association in 1971-73.

Personnel update

Enroll in health plans by December 10

Health Open Enrollment ends December 10. Faculty and staff who want to change base health plan participation (Bay Pacific, Blue Cross, Kaiser or TakeCare) or who want to add dependents need to do so by December 10.

Faculty and staff may call the Office of Benefits and Records at ext. 7-1776 between the hours of 9 a.m. and 4:30 p.m. to obtain necessary forms and information. Employees located at SLAC should call ext. 2357.

New coverages and monthly premium rates become effective January 1, 1983. Faculty and staff who did not receive the information packet mailed in early November should contact the Office of Benefits and Records in the Old Pavilion.

Fiber optics research at Ginzton Labs suggests new kind of gyroscope

Researchers here, probing the new technology of fiber optics, have developed new devices for sensing and signal processing, including an accurate optical gyroscope with potential advantages over mechanical gyros.

Still in its experimental stages, the new gyro may soon be competitive with conventional gyros or even the new laser gyros constructed for navigation on the new Boeing 757 and 767 and Airbus A-300 jets.

The new gyroscope will fit into a container the size of a box of chocolates, according to Adjunct Prof. John Shaw, associate director of Stanford's Ginzton Laboratory. Shaw says the new technology overcomes various disadvantages of the mechanical gyros: their large mass makes them sensitive to acceleration, and they require a long start up time.

Uses of technology

The fiber optic technology is being used here to construct optical memories for high-speed data storage and interferometers for accurate sensing of temperature, pressure, magnetic fields, inertial rotation and the like.

The Ginzton Lab devices make use of the ability of light to be guided along paths of arbitrary shape when contained in a flexible glass fiber. The light hits the walls of the fiber and can be guided in any direction the fiber is aimed. The fiber is quartz glass, about one millimeter (.04 inches) thick, slightly larger than a human hair.

Shaw and his associates send beams of polarized light clockwise and counterclockwise through hundreds of yards of fiber wrapped around a cylinder.

In the case of the gyro, the technique works this way:

When the cylinder is made to rotate, the light beam going in the direction of the rotation has to travel slightly further than the length of the fiber to reach the starting point. Similarly, the beam traveling counter to the rotation does not have to travel as far. The rotation rate of the gyro can be measured by determining the difference in travel time for the two beams, Shaw says.

Shaw and his colleagues felt that a gyro made on this principle had real promise and decided to take the technology as far as it would go. The gyro is "the system we started earliest and have carried the furthest," Shaw said. "We have a state-of-the-art system that is competitive."

"When we started, the thing could not even measure the earth's rotation. Now it can measure rotation a thousand times smaller," Shaw says.

"Through the efforts of Ralph Bergh and Herve Lefevre, the device can now measure rotation at a rate of about one revolution in four years."

New devices

Many new types of prototype devices applicable to the sensing, signal processing and communications fields are emerging from the Ginzton Lab group on glass fiber device research, which in addition to Shaw involves participation of some half dozen faculty people principally Prof. Marvin Chodorow and Chapin Cutler, and 15 graduate students. . . .

"We are always talking about devices that have not been explored," Shaw says, and added that the direction of the research can "change almost overnight. . . .

"We never commit ourselves to doing anything, but at the same time we always look at what's needed out there."

Interesting physics

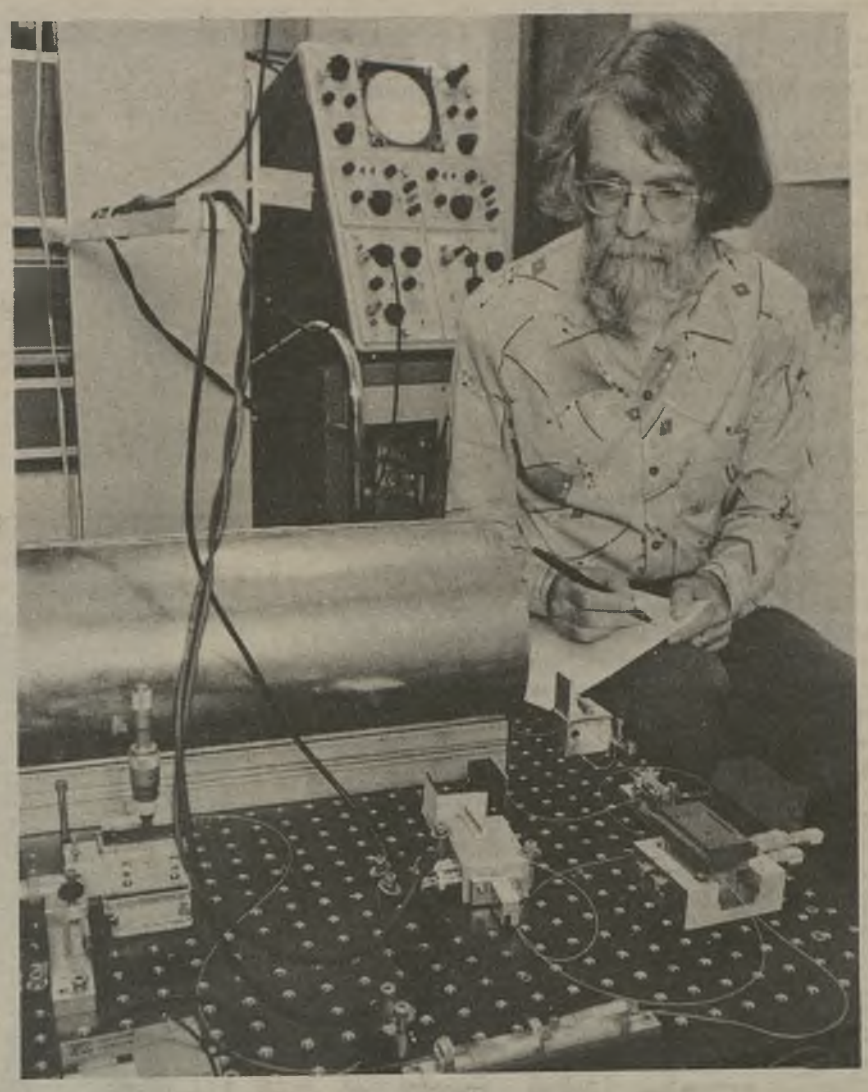
Although the physical phenomena studied are not new, they do involve some interesting physics because they have new characteristics, Shaw says.

"In terms of physics, it is very delicate and very precise work. Distance changes are measured in thousandths of angstroms (and angstrom is 100,000,000th of a centimeter).

But the lab's main purpose is "to find out how far we can go, how far this technology can go. . . . The lab has always worked in one kind of wave propagation or another, microwave propagation, acoustic propagation in crystals."

What made Shaw and his colleagues interested in fiber optics was the vast improvement in the technology in recent years. Ten years ago a fiber would lose most of the light put in because of impuritiers. "The ratio of what you put in to what you got out was many millions," Shaw says. "Nothing came out. All of it was lost in the glass."

"What has happened is that there has been a tremendous break-through in glass technology," Shaw continued, "if you can imagine a glass window a kilometer thick that you can see through just as well as an ordinary glass pane," he adds with a smile.



It is this improvement in technology that has made the gyro possible.

Current exploration

Another property of fibers is currently being explored at Ginzton labs: "light travelling in an optical fiber, it turns out to the dismay of some, is sensitive to the environment."

Even small variations in pressure, vibration and temperature affect optical propagation in the fiber. This sensitivity is due to the physical properties of the material itself, Shaw says.

The sensitivity is important for fiber sensors, such as thermometers or magnetometers, but one must be selective.

John Shaw

The Ginzton group has evolved new techniques to make the fibers insensitive to gyrations in fluctuating environments so that they are stable, rugged and responsive only to the desired inputs.

Another area of research is the development of fiber signal processors. For example, the interferometers that measure the minute phase shifts in the light in fiber sensors, can themselves be made from fibers.

"In the classical instrument you have mirrors, lenses, prisms and lasers," Shaw says. "We make analogs in solid state fiber form, the circuits are relatively small and the light never leaves the fiber from the source to the detector. These components behave much better than the classical counterparts."

The fiber optics work is being funded Lytton Industries and the Department of Defense.

—Jiri Weis

The Stanford Sierra Camp at Fallen Leaf Lake will be open for winter sports, primarily Nordic skiing, for four weekends in January and February. This trial winter operation is open to members of the faculty and staff. Further information may be obtained by contacting the camp staff at Bowman Alumni House, 497-2021.

Longterm measures proposed to cure our economic woes

Michael Boskin and his colleagues suggest new ideas for the national budget, Social Security, and research and development

BY DONALD STOKES

There can be no quick fixes for the economic woes of the nation. The remedies may take several decades.

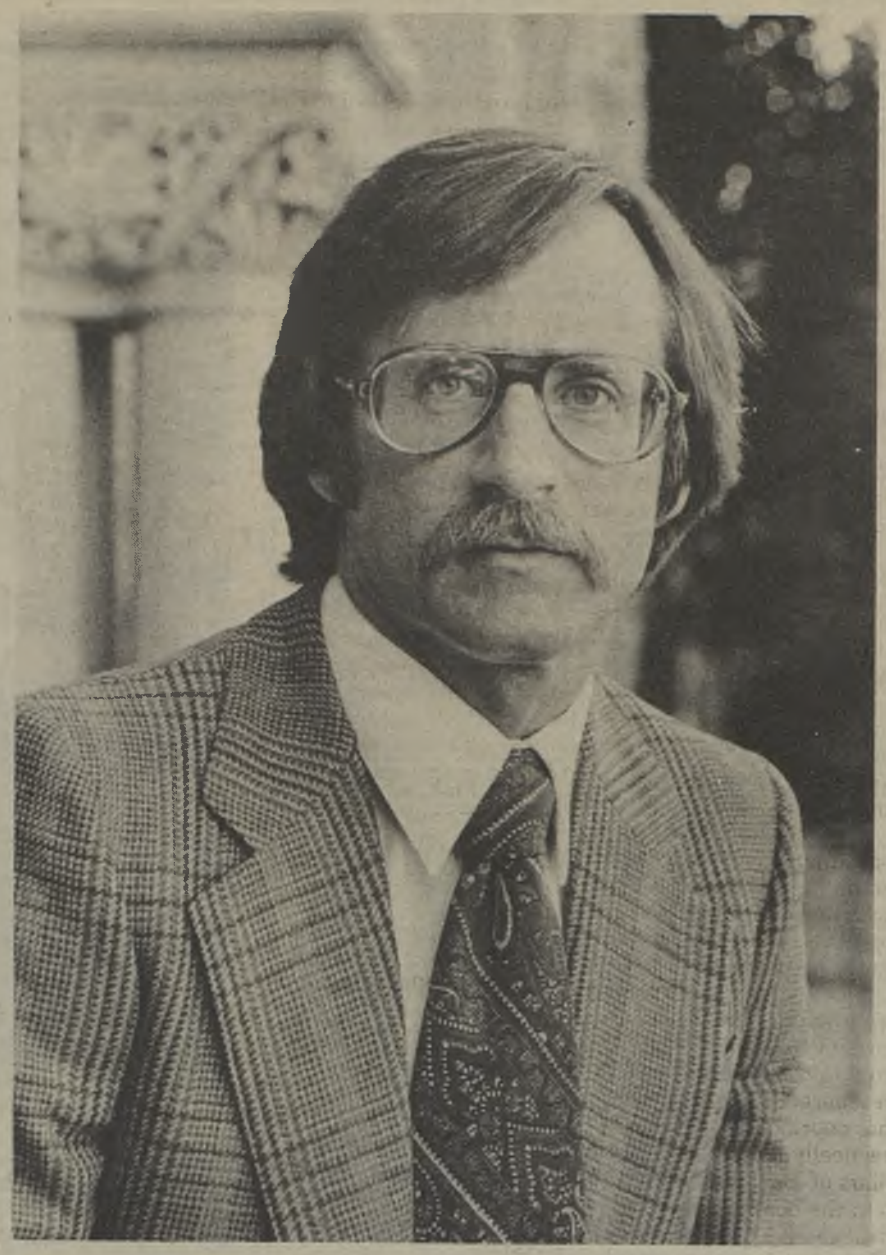
Our problems go well beyond the current recession, which overlays enormous upheavals that have occurred in the economy.

America's position in the world, and on the home front, have changed profoundly in recent years. To adjust, we must develop new longterm methods of government spending, taxation and ways of generating new technology.

One of the leading younger economists of the nation, Prof. Michael J. Boskin of Stanford, proposes a corrective set of principles, in which he is joined by several colleagues, both at Stanford (some in its newly created Center for Economic Policy Research), and elsewhere, including the National Bureau of Economic Research.

They have developed research which can produce a business-like national budget for the first time in this century; ideas on how to make the Social Security system more equitable and financially solvent; policies to attract more funds into the research and development which is vital to the progress of America.

One of the first essentials, say these younger economists (Boskin is 37), is to modernize the often archaic methods now used to show the national balance sheet.



Boskin is writing a book which will attempt, on both practical and conceptual levels, to explain the nature of government spending, quasi-spending, revenues and fiscal policies. In effect he is recasting the postwar fiscal history of the U.S. and drawing a true statement of the financial condition of the nation.

"The documents we now rely on to report those things are seriously misleading for a number of reasons," Boskin told a campus interviewer.

Boskin believes that the government should develop better information about its finances and investment. He is working on a project, funded largely by Stanford's Center for Economic Policy Research—to develop a more realistic method of showing the national balance sheet and income statements.

"I would like to see a separate capital account which values assets and liabilities at their market rather than book values, and deals with contingent liabilities such as loan guarantees and deposit insurance.

"We should try to make sense out of off-budget borrowing and adjust assets and liabilities for inflation. There is a whole slew of such measures, some of which the government requires of private business, but does not carry out itself."

We shall hopscotch our way toward more sensible policies. We shall be sidetracked on occasion, but we shall get there.

—Michael Boskin

Boskin was asked whether younger economists such as he feel that traditional methods of tinkering with tax laws, deficit spending, and wage and price guidelines, have outlived their usefulness.

"Most serious economists feel that tinkering doesn't make much sense, and that only when the economy is way off its normal performance should the government actively intervene in macro-economic affairs."

And are we in that position now?

"Probably. Nobody forecast that this recession would be so deep or so long. I think it would be a mistake to go back to the era of rapidly-changing fiscal and monetary policies every time the economy changes course.

"Many high-quality younger economists are now concentrating their attention on policy issues.

"There are no quick fixes available for our condition. The remedies will span several decades. Our problem is much more than the current recession, which overlays an enormous series of structural changes in the economy.

"Among these are our changing comparative position in world trade, what we can produce efficiently, and a very severe long-term growth slowdown. Some of these have to do with insufficient rates of capital formation and with the generation of new technology.

"We must take adequate steps to adapt to these new conditions.

"Even if we were not in this recession our economy would still have these underlying problems. It will take a long time to deal with them. To do that there will have to be gradual changes in our tax laws, and changes with regard to government spending in general."

Surely this will require a bipartisan approach in Congress?

"No doubt about that. I think we shall be moving back and forth over the next 20 years over where the pendulum will light, but it is my opinion that we shall hopscotch our way toward more sensible policies. We shall be sidetracked on occasion, but we shall get there. I think we are moving, albeit slowly, toward more sensible tax laws and more sensible budgetary controls.

"I think many people will get hurt during the transition, and we shall have to absorb more people in the labor force who are no longer eligible for certain benefit payments. That is easier to do in a robust economy than a sluggish one. But I think it would be a mistake to view our economic problems as exclusively the current recession. The recession is made worse by other problems."

Which economic problem most urgently requires solution?

"Our long-term growth slowdown. If that is not solved we shall end up a generation from now like the U.K. in relation to the wealthier members of the Common Market. The most immediate problem is the recession. A more stable and predictable monetary policy would have helped to lessen its severity.

A principal reason for the recession was not only the tightness of the monetary policy but also its lack of predictability. In late 1980 the Fed had a very severe monetary expansion which had to be matched eventually with a much tighter clamping. I think that is partly why interest rates were driven up.

"We did not do a good enough job in controlling the growth of government spending, as was anticipated when the Reagan administration came into office. The tax cuts were larger, the spending cuts were less, hence the deficits boomed substantially.

"The combination of a tight monetary policy and the very loose fiscal policy drove up real interest rates. As a result we had a nastier recession than anticipated.

"The first steps that need to be taken are a more stable monetary policy and a fiscal policy that focuses on slowing the growth of government spending from its current levels."

At the moment, Boskin emphasizes, the government cannot even tell exactly what its expenditures and income are.

Boskin...

continued from page 8

"Today the U.S. is one of the few industrialized nations that lacks a capital account. It lumps together all capital and operating expenses, although it does separate budget items by categories such as defense, energy, and income security programs.

"The federal budget treats the construction of a new bridge in the same way it does the purchase of a head of lettuce for the White House kitchen. No corporation in the nation could make rational investment decisions if it were run that way."

Boskin would solve this problem by adopting an income statement that would include a current operating account, listing revenues separately from outlays. The income statement would also have a capital account, showing net new investment in infrastructure after subtracting depreciation.

Boskin says that many economists believe a properly constructed balance sheet might have alerted officials earlier to the seriousness of the crisis facing the Social Security system. He wants to see a balance sheet addendum showing long-term economic and demographic forecasts for federal pension program. He would then keep track of the potential liabilities accrued in these funds, by adding a below-the-line reserve to the annual budget deficit.

Boskin gives other examples of outdated accounting methods used in preparing U.S. budgets. "We don't adjust any of our figures for inflation," he said. "In highly inflationary times such as the late 1970s, the inflation-adjusted value of the national debt fell considerably.

"In the 1970s we had a very substantial real decline in government investment and R. and D. spending and this was not reflected in the official accounts because of the lack of a separate capital account. Also, the government has enormous contingent liabilities which it practically ignores.

"It has over half a trillion dollars of loan guarantees which don't show up in the books. We don't even have a sensible bad debt reserve.

"The central point is that making decisions about fiscal policy, based on misleading and inaccurate information is at best foolish, and at worst dangerous.

"Forget about making forecasts—we can't even evaluate accurately what we did in the past, say in 1975 or 1978. At the most fundamental level we have to improve the flow of information."

Political maneuvering will be a serious obstacle to secure reforms, particularly in Social Security?

"An immense amount of emotional political capital has been made out of Social Security. It has been quite distressing. I have lost much respect for a variety of public officials who have made statements about Social Security that have no factual basis.

"There are immense problems of solvency ahead for the Social Security program, and also major short-term problems. I find it startling that some people will ignore these problems in a blatant political way in order to, in effect, buy votes from certain groups of voters.

A window of opportunity is opening up for changes in the Social Security system, based on economic, demographic and political considerations. Over the next seven years we shall have major short-term problems. Starting in 1990, for the following 15 to 20 years, the system will be in relatively favorable short-term shape.

"After that the enormous problem of the postwar baby boom will hit us, and unless we do something in the near future to anticipate that there will be very little pressure, say in the 1990s, to do anything about it, and our options will be severely limited.

"We shall find ourselves, on the eve of the baby boom generation's retirement, having to impose drastic, probably disruptive tax increases—either that or drastic benefit cuts.

"We have about eight years, the balance of this decade, to begin to phase in sensible reforms for the long-term problems. We have until July 1st of next year to cope with the short-term problem. For on that day the Old Age and Survivors Insurance Fund will no longer be able to meet its obligations. There will have to be a tax increase, or benefit cuts, or some other measure such as borrowing."

Boskin and his Stanford colleague. Prof. John B. Shoven, together with prof. Laurence J. Kotlikoff of Yale, have put forward a proposed method for rationalizing the Social Security system. Their proposal initially leaves unaltered Social Security treatment of households currently headed by those over 55, while for young people the proposals tightly link the future benefits they will receive to their credited lifetime Social Security contributions. This will allow the system to pay the highest uniform return to all participants.

Boskin explained it this way: "We propose that Personal Security Accounts (PSA's) be created to keep track of specific Social Security coverage for every member of the system on an annual basis. PSA dollar credits would be the basis for the particular benefits to be received later.

"Every dollar of PSA credits would provide actuarially determined, inflation-indexed benefits for old age, spouse-survivor, disability, child-survivor, and health insurance.

"We think our proposal offers a fundamental, sensible approach to reform that would remedy the system's defects. Many of the other ideas for solving the problems are piecemeal proposals that would leave the country burdened with an inequitable, inefficient system well into the next century."

Should our first priority be to curb the growth of government spending on big-ticket items, such as Social Security, which takes up a quarter of all government spending?

"You have to evaluate the respective benefits and costs of the various programs," replied Boskin. "As the public sector gets larger and larger, and we have to raise tax rates higher to finance those programs, the costs to society for each dollar we devote to the public sector becomes progressively greater because it creates increasingly large distortions in the economy.

"The extra costs, beyond those of raising the dollar, are proportional to the tax rates. The higher the tax rates the worse the distortions. Further, we have recently reduced the growth of the modest-ticket items substantially, so there is not much room left to deal with overall spending growth unless we deal with health, social security and defense.

"People can reasonably differ on the respective costs and benefits of those programs, but I think that, especially in health care and social security, they have been sacred cows for a long time. Defense has the appearance of being a sacred cow at the moment, though basically it was neglected for a decade.

"In health care and social security, we have hundreds of billions of dollars of spending, much of which is not very cost-conscious nor target-effective. Sometimes it goes to people who don't need it or don't pay for it. It does not give much to people who are most needy, and it is transferring our assets around in 'leaky buckets.' "

What led Boskin to study economics, particularly his research into the effects of alternative tax and government spending policies on capital formation, inflation and U.S. economic growth?

"The opportunity to be somewhat rigorous, scientific and empirical about issues that are of importance to society," he replied.

Boskin received his B.A. *summa cum laude* at UC-Berkeley, where he received the Chancellor's Award as the most outstanding undergraduate of 1967. He also received his M.A. and Ph.D. in economics at Berkeley. His doctoral dissertation was awarded the first annual Outstanding Doctoral Dissertation Award of the National Tax Foundation.

He has published more than 40 books and journal articles in the fields of public finance, labor economics and econometrics. Some of these articles have been reprinted by the U.S. Treasury Department and also by the U.S. Congress. He has frequently been a witness before House and Senate Committees.

He is a consultant to the U.S. Treasury on tax policy, to the Department of Health and Human Services on Social Security, and to the Joint Economic Committee.

He was a principal figure in the formation of Stanford's Center for Policy on Economic Policy Research.

Boskin was asked to overcome his stated reluctance to making forecasts, and to give some idea of how America would fare economically in the next few years.

"We have to deal with the structural problems I've mentioned, we have the changing mix of industrial output and our changing position in the world. We have to move from an economy where we heavily finance consumption by borrowing to one where we generate saving so as to create investment and research and development, to increase capital formation.

"All that will take a long while. Partly because of this recession we shall be in a position to take advantage of unutilized investment opportunities by the middle and end of this decade.

"Therefore I see us doing well in the long term, but I think we are going to have a long and rough interim period.

"Anybody who thinks that making such policy changes as dramatically changing the growth rate or the composition of government spending, or changing the tax laws, are going to change things around instantly, is wildly optimistic.

"I think the important thing is to evaluate the sensibility of these policies on a long-range basis and not hold them up as the answer to our current short-term problems."

Stanford scientist honored for cancer research gains

A Stanford cancer researcher became the first beneficiary last week of an annual prize established by the Armand Hammer Foundation to reward "the person or persons deemed to have made the greatest contribution to the cure for cancer."

Dr. Ronald Levy, a Stanford associate professor of medicine (oncology) will share the first $100,000 prize with an Australian researcher, George Telford Stevenson, for their research using polyclonal and monoclonal antibodies in the treatment of cancers of the blood and lymph glands.

First developed in England in 1975, monoclonal antibodies are proteins made by "hybridomas," biological factories created when scientists fuse an antibody-producing cell of the human immune system with a cell from a mouse tumor. Inheriting characteristics from both parent cells, the new hybridomas are able to produce virtually unlimited quantities of a desired antibody.

Once released in the blood stream, such antibodies travel throughout the body, seeking cells that carry matching protein "antigens" on their membrane coats. The antibody locks on to the antigen, labeling the cell for destruction by other cells of the immune system.

Levy and Stevenson adapted monoclonals for use as weapons in fighting leukemia and lymphoma of B-cells—blood cells in the human immune system that normally produce infection-fighting antibodies.

Stevenson found that leukemia cells of the B-cell type have proteins on their surface, called "idiotypes," which are not found on normal cells. In effect, these idiotypes serve as a fingerprint for the leukemic cell—a B-cell turned cancerous will produce millions of descendants all with the same fingerprint, and therefore all distinguishable from the normal B-cells and every other cell in the body.

Levy and his colleagues produced monoclonal antibodies against such idiotypes and are using the compounds in treatment. One patient with B-cell lymphoma was given multiple doses of such antibodies in 1981 when conventional therapy failed to halt his cancer. Eighteen months later, the patient is still in complete remission.

Though monoclonal antibodies seem promising in treating B-cell lymphoma, Levy cautioned earlier this year when the case was reported in the *New England Journal of Medicine* against making generalizations about the experimental therapy.

"The improvement of this patient's lymphoma with monoclonal antibody administration is a single observation that must be confirmed in other patients before we can draw any conclusions about the effectiveness of this technique," he said, adding that the characteristics of B-cell malignancies make them especially responsive to treatment with the custom-made antibodies in ways that other types of cancer might not be.

Levy, 41, graduated from Harvard University and received his M.D. degree from Stanford University in 1968. From 1973-75 he served as a fellow of the Helen Hay Whitney Foundation in the department of chemical immunology at the Weizmann Institute of Science in Rehovot, Israel.

A member of the Stanford faculty since 1975, Levy has served on the editorial boards of the medical journals *Hybridoma* and *Blood*.

Sweet, quiet dreams. . .

Loud snoring, sleep apnea curbed by simple operation

Snoring affects nearly half of all adults and can often threaten the snorer's health. But doctors at a recent conference of Ear, Nose and Throat specialists in New Orleans, La. were told that snoring can be cured.

Severe cases of snoring can now be cured by a simple operation, long used in Japan and called palatopharyngoplasty, said Dr. F. Blair Simmons, professor of surgery at the Stanford University School of Medicine.

The procedure, said Simmons, was recently "discovered" in this country and it always works. In many cases, it stops snoring completely. In others, it significantly reduces the sounds of snores, "to levels that allow these patients' bed partners to sleep in the same room."

The jawbreaker word for snore-stopping surgery eliminates the problem by removing the offender's noise-maker—unneeded tissue in the upper throat.

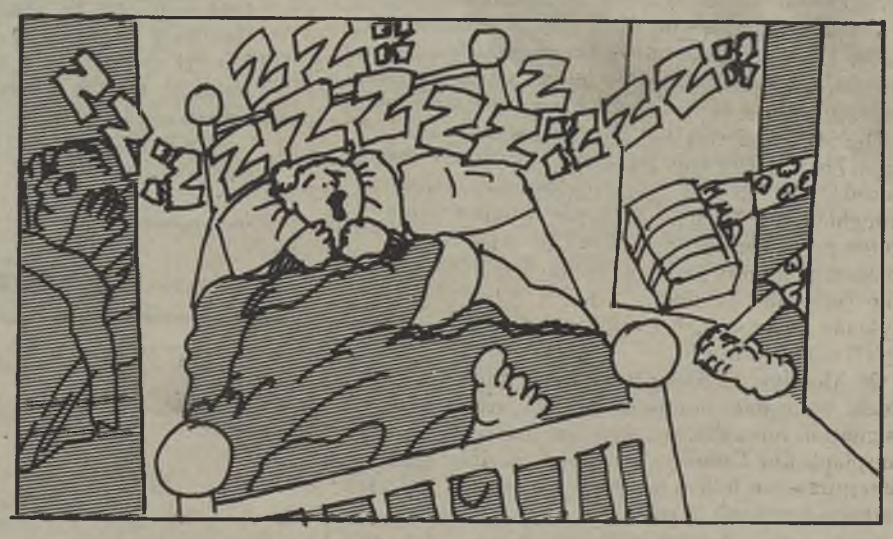
As the sleeper breathes, the tissue vibrates and produces the nocturnal snorts and snuffles in much the same way blowing against the reed in a horn produces more melodious sounds. Snoring is an involuntary process and snorers cannot be conditioned to stop. The so-called "heroic" snorers are typically male and have their onset of snoring in their midthirties.

According to Simmons, who has operated successfully on more than 80 patients, when one has an excessive amount of upper throat tissue, "excessive snoring always accompanies the condition."

"Anyone who snores in every position, is loud enough to be heard at least one or two rooms away and whose bed partner has moved elsewhere to sleep is a candidate for the treatment," Simmons added.

The operation was originally applied by specialists at Henry Ford Hospital in Detroit to treat sleep apnea. This is a life-threatening condition marked by cessation of breathing during sleep.

Earthquake-scale snorers actually may stop breathing for 15 seconds or more, several hundred times a night, then wake up with a loud snort as their blood's oxygen level drops. Sleep apnea causes daytime sleepiness and seriously taxes the heart and lungs.



At Stanford, Simmons said, half of the patients suffering from sleep apnea have benefitted from the operation. But the results also showed clearly that the social snoring problem of most other patients could be corrected with the new procedure.

"Snoring is socially a very big problem," Simmons noted. "It has been neglected by medicine because nobody knew how to treat it and it was considered funny to even try it."

Palatopharyngoplasty is as simple as removal of the tonsils. It is performed in a hospital under general anesthesia. It involves removal of about the back half of the soft palate, tonsils if they are present, and any extra tissue on the sides and back wall of the throat. After the unneeded tissue is removed, what remains is stretched and sutured together again. Postsurgical discomfort may involve a sore throat which requires a four- to five-day hospitalization.

"It's actually nothing more than a kind of facelift of the oral pharynx," Simmons explained.

—Spyros Andreopoulos

"Anyone who snores in every position, is loud enough to be heard at least one or two rooms away, and whose bed partner has moved elsewhere to sleep is a candidate for the treatment. . ."

—F. Blair Simmons

Goldstein reviews actions of Senate under his lead

Stepping up Stanford University School of Medicine's minority recruitment program, revamping the admissions procedures, and officially documenting the School's primary commitment of providing a research-oriented medical education to produce as many researchers and academicians as possible were just some of the Faculty Senate's achievements during the last three years under the leadership of Dr. Avram Goldstein, professor of pharmacology.

Goldstein, who relinquished the chairmanship earlier this year to Dr. Roland Ciaranello, associate professor of psychiatry, summarized the accomplishments of the Senate—the governing body of the Medical School Faculty—in an open letter to alumni, faculty, and students in the latest issue of *Stanford MD*, the School's alumni magazine.

"The changes accomplished in these past three years clearly represent the majority of the faculty's wishes," wrote Goldstein.

The Senate "has made a major commitment to the intensive recruitment of research-oriented academically qualified minority students," the letter stated. Specific recommendations included establishing a research scholarship program to meet the needs of minority and disadvantaged students, and appointing an assistant dean for minority affairs. Currently, 21 percent of Stanford's medical students are from minority backgrounds (other than Asian).

The admissions procedures have been extensively revised, Goldstein wrote. The admissions committee has been reduced to nine full-time or emeritus members of the Academic Council and one upper-class student; a computer system has been introduced to help initially screen the nearly 6,000 applications the School receives each year; and a preferential policy for children of medical alumni, faculty, and staff, "all other considerations being equal," has been established.

Other actions included:

- adopting new Articles of Organization giving the Senate full authority over admissions, curriculum, and evaluation of student performance; and giving alumni and voluntary clinical faculty non-voting representation;
- approving in principle a core curriculum in basic medical science, clinical medicine, and investigative medicine to ensure students' competence in these areas;
- recommending a single global tuition so students can spend more time completing their education without prohibitive costs;
- expanding the Medical Scholars Program;
- reinstituting a core of required clinical clerkships and establishing a requirement for all students to be competent in Basic cardiopulmonary resuscitation (CPR) and Advanced Life Support;
- taking full responsibility for incoming students' orientation program.

"The changes accomplished in these past three years clearly represent the majority of the faculty's wishes. . ."
—Avram Goldstein

"The past few years have witnessed a period of unprecedented productivity on the part of the Medical Faculty Senate in matters of academic policy and school governance," said Dean Dominick P. Purpura.

—Shirley Kraus

National study spurs coming symposium

A day-long symposium to discuss aspects of the general professional education of the physician will be held Jan. 22 at the Stanford University School of Medicine.

The purpose of the meeting is to generate ideas that might be useful to a national study of medical education in the United States now conducted by the Association of American Medical Colleges (AAMC), according to Dr. John Steward, associate dean.

The symposium, chaired by Dean Dominick Purpura of the Medical School, will be held at Fairchild Auditorium. It will consist of three panels, each dealing with a specific aspect of medical education.

A panel led by Dr. Robert Cutler, associate dean for medical education, will address these issues: promoting broad baccalaureate education, essential biomedical science knowledge, and teaching of essential concepts in medicine.

A second panel, chaired by Dr. Roy Maffly, chairman of the Medical School's admissions committee, will review the development of clinical skills during medical school and the acquisition of computer technology skills by medical students.

Dr. Steward's panel will examine personal qualities, values and attitudes of medical students, as well as the problems of students in dealing with emotional stress.

The AAMC-sponsored national study will be conducted by an 18-member panel of administrators and medical educators. Dr. Steven Muller, president of Johns Hopkins University, chairs the panel. The three-year project, the first such comprehensive review of medical education since 1932, is jointly funded by the Henry J. Kaiser Family Foundation of Menlo Park, and the AAMC, which represents 127 medical schools in this country and 16 in Canada.

The review is necessary, the panel recently stated in an overview paper, because since 1932, the purpose of the educational program leading to a medical degree has changed.

"Specialization and the rapid rate of advancement of knowledge and technology," the panel said, "may tend to pre-empt the attention of both teachers and students from the central purpose of medicine, which is to heal the sick and relieve suffering."

The 60-page overview paper, along with a questionnaire, has been distributed to medical educators and students in the United States and Canada.

The AAMC panel plans to hold regional hearings for the purpose of allowing medical school administrators, faculty, students and others to present views. Results of the Stanford symposium will comprise part of Stanford's contributions to the regional proceedings.

The first regional meeting has been scheduled Jan. 27-28 at the University of California in San Francisco.

Other hearings will be held in various parts of the country through May, 1983.

The final project report will be presented at the annual meeting of the AAMC in November, 1984.

—Spyros Andreopoulos

Stanford's 10th heart-lung transplant

Because of the increasing frequency of heart-lung transplants, the News Bureau will no longer routinely report each one that occurs. Naturally, we will provide stories when conditions make a particular transplant newsworthy for scientific or human interest reasons.

A San Rafael, Calif. man Monday, Dec. 6, became Stanford's 10th heart-lung transplant patient, the third recipient of such surgery here in just over a month.

The patient, Frank LaForge, was born with a heart defect which had relentlessly caused his health to deteriorate throughout his 27 years, said Dr. Stuart Jamieson, assistant professor of cardiovascular surgery and head of the heart-lung program. Jamieson led the five-physician team which performed Monday's five-hour surgery.

On Monday, LaForge was reported in critical but stable condition, the standard designation immediately after the double transplant. On Tuesday, he was taken off the respirator at 6:30 a.m., and still listed in critical but stable condition.

Two other heart-lung transplants, Philip McGrath, 22, East Islip, N.Y., and Ronald Grunden, 40, Ventura, Calif., were reported in stable condition Tuesday. McGrath, who received his replacement organs Nov. 9, and Grunden, whose operation occurred four days earlier, were both progressing and are able to walk around as they gain strength, the doctor said.

All three of the most recent recipients suffered from ventricular septal defects (VSD), characterized by holes between the left and right chambers of the heart. This allows blood to flow between the chambers, resulting in too much blood entering the blood vessels in the lungs. Eventually, the overcirculation causes pressure to increase in the pulmonary arteries, and the right ventricle of the heart is unable to overcome the pressure.

In recent years, surgeons often have been able to correct the condition in infants. If left uncorrected, however, both the heart and the lungs become irreversibly damaged.

"We and the families of our recipients are indeed grateful to families who make this program possible. . ."
—Stuart Jamieson

LaForge is married and had worked as an accountant until his condition deteriorated and he was forced to restrict his activities severely. Jamieson said his life expectancy was estimated at only a few months without the operation.

"Our research and clinical experience indicate that the heart-lung procedure is a viable therapeutic treatment for these patients," Jamieson added.

"We are limited in our efforts to perform these procedures by the number of families who are unaware of the urgent need for donors. We and the families of our recipients are indeed grateful to families who make this program possible."

Despite the encouraging prognosis for the latest patients, Jamieson cautioned that all three men face lifelong regimen of monitoring and medication intended to prevent the body's tendency to reject the new organs.

LaForge is the 10th heart-lung transplant patient since Stanford began its program March 9, 1981. Seven of the patients, including the first recipient, are doing well. Three of the patients died, all within a month of their operations.

Heart-lung transplants were first performed 12 years ago, but all three patients—transplanted in South Africa, Texas and New York—soon died.

The procedure was revived here last year with the discovery of Cyclosporine (formerly called Cyclosporin A), which allows the windpipe to heal while working to prevent rejection.

Cyclosporine has also been used at Stanford since December 1980 on heart-only transplants, and Jamieson and his colleagues credit its use in helping to increase the one-year survival rate to approximately 80 percent. Stanford has performed 248 heart transplants since Dr. Norman Shumway pioneered the procedure in this country in January, 1968.

—Mike Goodkind

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Hepatitis B vaccine available

The Medical Board has approved hepatitis B vaccines for two categories of Hospital employees.

The board decided this month to accept a recommendation of the Hospital infection control committee and offer the vaccine without charge to lab employees who have contact with human sera, as well as persons working in the hemodialysis unit.

The board also recommended a study of the desirability of vaccinating surgical housestaff, a group considered especially vulnerable to the infection.

Carol Oakes, assistant director of Care Review/Risk Management, added that other employees who want the vaccine must contact their personal physician and be responsible for related expenses.

Death meetings for case review

The Department of Pathology has started monthly conferences on death, Dr. Charles Carrington, director of the autopsy service, has announced.

Carrington, associate professor of pathology, said that two cases will be chosen each month for discussion by community and full-time faculty attending staff, housestaff, and medical students. The cases, he added, will come from a variety of services in the Hospital.

"We hope that members of the clinical staff will participate in these discussions so as to make them more meaningful," Carrington said.

The conferences, which began in October, are being held the second Monday of each month at 5:30 p.m. in room M104.

Each session is expected to last one hour, but Carrington said informal discussions may continue afterward.

Medical Faculty Openings

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

Applications or nominations are invited for a faculty position in Stanford's department of biochemistry at the level of assistant, associate or full professor, depending upon qualifications and experience.

Applicants should have demonstrated ability to perform important original research and show promise of excellence in teaching. Candidates should submit a curriculum vitae including a list of publications and a description of research interests to: I.R. Lehman, Department of Biochemistry, Stanford University School of Medicine, Stanford, CA 94305. They should also provide the names of three individuals who can serve as references.

Care for homebound cancer patients

Isabel Walker, a social worker at Stanford's Oncology Day Care Center, looked pleased as Joan McVicker took the temperature of her daughter Lori, a cancer patient. Stanford and the American Red Cross joined forces in 1979 to provide training for friends and relatives of cancer patients, like Lori's mother, who now cares for her daughter at home.

The short course, initiated at Stanford and offered by the Palo Alto Chapter of the American Red Cross, is an attempt to "extend services to the home using existing community resources," says Walker.

Many cancer patients can leave the Hospital but still require some nursing care at home. Lori's mother was trained to give Lori her medications, take her temperature and blood pressure, give her bed baths, monitor her nutrition and do all the things a home nurse would do.

More than 100 families have taken part since the home care course, now also offered to hospice volunteers, began. Sharon Hedden, an East 1A nurse, and Barbara Reville, a Stanford oncology nurse, both became volunteer instructors for the course.

Walker adds a section on the psychosocial aspects of cancer.

The next six-hour class is scheduled for Jan. 15, and they will then occur on various Saturdays throughout the year. Anyone interested is encouraged to call 322-2143 for further information.

Lori, says Walker, has been free of disease for over a year, and is living an active life. But Mrs. McVicker still thinks about the course and how it helped them both through a very difficult time. "When I took the course I felt I was the only person facing a loved one with cancer. I discovered a lot of other people were there for the same reason and that we had a special bond," she says.

News Notes

Peter O'Connell has been appointed director of Dietetics effective Nov. 15, announced Donald Utt, associate director of SUH. O'Connell, who has been director of Food Service Operations since arriving at Stanford in September, 1981, is replacing John Varnado in his new position.

Varnado, director of Dietetics since June, 1980, has been promoted by SAGA Corporation to a position of district manager. In his new role Varnado will continue to work at Stanford two days a week, while the remainder of his time is spent at his other responsibilities.

O'Connell's office is located in C108. Paul Harvey, assuming the Food Service Operations position, is located in C105.

* * * *

Dr. Willard Fee, Jr., chairman of Stanford's division of otolaryngology/head and neck surgery, was voted chairman-elect of the American Academy of Otolaryngology-Head and Neck Surgery's newly created Board of Governors, at its first meeting this fall in New Orleans.

The function of this group is to provide communication between the Academy's Board of Directors and the membership through the approximately 120 local, state, regional, national and international otolaryngological societies.

Also, Dr. Richard Goode, professor of surgery at Stanford and chief of the division of otolaryngology at the Veterans Administration Medical Center in Palo Alto, was reelected at the Academy's annual business meeting as its Coordinator for Program, for a three-year term to begin in January.

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

WEDNESDAY, DECEMBER 8

Div. of Hematology Conference: "ASH meeting review"—Dr. Tom Kipps. Noon, S102d.

Basic Science Research Colloquium: "Immunochemistry of Actin, Clathrin and HLA"—Dr. Peter Parham. 5 p.m., Fairchild Auditorium.

Physicians for Social Responsibility Meeting and Lecture: "Social Responsibilities of Scientists"—Linus Pauling, Ph.D. 7-10:30 p.m., Fairchild Auditorium. Includes an 8:15 p.m. talk by Pauling on "Reversing the Present Arms Race."

THURSDAY, DECEMBER 9

Dept. of Medicine Grand Rounds: "Tuberculosis, or 'The White Plague'"—Dr. Jack Leventhal. 8:30 a.m., Fairchild Auditorium.

Div. of Otolaryngology/Head and Neck Surgery Lecture: "Surgical Treatment of Chronic Aspiration"—Dr. Charles Cummings (of Univ. of Washington). 6 p.m., Wang Library, R117.

FRIDAY, DECEMBER 10

Dept. of Dermatology Lecture: "Modern Aspects of Skin Pharmacology and Pharmacokinetics"—Dr. Hans Shaefer. 8 a.m., Dermatology Library, R136.

Div. of Otolaryngology/Head and Neck Surgery Lecture: "Surgery of the Paralyzed Larynx"—Dr. Charles Cummings (of Univ. of Washington). 5 p.m., Wang Library, R117.

Dept. of Obstetrics and Gynecology Grand Rounds: "Toxic Shock Syndrome"—Dr. R. David Miller (of UC Irvine). 8 a.m., A336.

Dept. of Pediatrics: "Pelvic Inflammatory Disease"—Dr. Paula Duke. 8 a.m., M106.

WEDNESDAY, DECEMBER 15

Div. of Orthopedic Surgery Basic Science Grand Rounds: "Orthopedics in Singapore"—Dr. N. Balachandran (of Nat'l Univ. of Singapore). 8:30 a.m., M114.

Dept. of Neurology Grand Rounds: "Local Cerebral Glucose Metabolism in Epilepsy Using Positron Computed Tomography"—Jerome Engel, M.D., Ph.D. (of UCLA). 5 p.m., Palo Alto Veterans Administration Medical Center, Bldg. 7, B108.

Dept. of Pharmacology: "Regulation of Plasma Protein Gene Expression in Acute Inflammation"—Dr. John Taylor (of Gladstone Foundation, San Francisco). 4:15 p.m., Pharmacology Library, R358.

Basic Science Research Colloquium: "Regulation of the Immune Response by the Major Histocompatibility Complex"—Dr. Hugh McDevitt. 5 p.m., Fairchild Auditorium.

WEDNESDAY, JANUARY 11

Nursing Educational Services Critical Care Course Level II: "Abnormalities of Coagulation." Course will include background information, theory, and case study exercises. Fee required. Registration deadline is January 2, 1983. For further information, call Carole Kidder at 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Michael Ray unlocks creativity in Business School class

BY MARCIA TANNER

Twenty-seven second-year MBA students sit in a darkened classroom at the Stanford Graduate School of Business. Eyes closed, they listen to tape-recorded sounds of ocean surf and sea gulls, overlaid by the quiet voice of the instructor, a woman's, urging them to "let go."

They are asked to breathe deeply, thinking "let" as they inhale, "go" as they exhale. "Let go of judgments, obstructing thoughts, bodily tensions, past perceptions, whatever is keeping you from tapping that reservoir of magnificence within you," she intones. "Reach the place that simply is, the point of equilibrium."

These future managers haven't wandered accidentally into a misplaced class on transcendental meditation. They are enrolled in Creativity in Business, an elective which, since its inception two years ago, has become one of the more popular courses at the Stanford Business School.

Brainchild of Michael L. Ray, professor of marketing and communications at the School, the creativity course may at first glance seem an unorthodox blip in the MBA curriculum. Stanford business students normally expect courses that emphasize the quantitative and analytical aspects of management functions. And they themselves are perceived as goal-oriented, competitive, and analytical individuals.

It's precisely for those reasons, Ray believes, that such a course is necessary. Finding imaginative solutions to old and new problems; discovering one's own intuition, flexibility, and entrepeneurial instinct; and stimulating the daring required to take a creative leap and the courage to propose the unorthodox are not abilities ordinarily nurtured within a business school environment, Ray believes—though they are all acquiring a premium in the turbulent and unpredictable economic climate of the 1980's.

In response, he and his colleague Rochelle Myers, director of the Myers Institute for Creative Studies in San Francisco and co-instructor for the course, have developed a syllabus whose eclectic approach is designed to awaken those creative capacities slumbering inside each student. Its basic premise, Ray says, is that "creativity is within everyone, and is essential to happiness, health, and success in a business career."

"This seminar goes deep into the thought processes which relate to creativity," according to the course description. "Topics include the creative process, conceptual blockbusting and lateral thinking, the inner world of problem solving, the creative organization, the negatives of creativity, creativity versus rationality, the great creative ideas."

Even that somewhat startling entry in the current Business School catalog—sandwiched between descriptions of electives on Regulatory Policy and Politics and Consumer Analysis—gives little indication of the flavor of the course. "Other people are trying to teach creativity, but I don't think anyone is doing it exactly like this," Ray says.

Ray's approach to the course is a rich and heady mixture of lectures by invited guests, weekly papers documenting students' reactions to their "live-with" assignments and to the "creative tools, techniques, and activities" to which they are introduced; reports on assigned reading; and, finally, students' individual answers to the question "How can I bring personal creativity into the business world?"

"In the speakers' series," Ray says, we invite people who've either been extraordinarily creative in business, or who have special insight into the creative process, and ask them to be publically introspective." Guest lecturers have included Paul Cook, founder and president of Raychem Corporation; Steven Jobs, founder and president of Apple Computer; Nolan Bushnell, founder of Atari Inc. and Pizza Time Theater; Joe McPherson, director of Innovation Programs at SRI International; a professional psychic; and a woman whose book on dream interpretation was used as a class text.

"The idea of this course is to get to the.core of the person's creativity," Ray explains, "so we give the students 'live-with' assignments. For a week at a time they have to observe themselves as they live with injunctions that may be radically difficult for their personalities to accept: "Destroy Judgement, Don't Improve, Be Ordinary, Ask Dumb Questions, Do Only What Is Easy, Effortless, and Enjoyable." Ray thinks of these as "creativity heuristics," rules which serve "to guide, discover, or reveal," (Webster's *Seventh New Collegiate Dictionary*).

"We give them techniques for doing this, all of which are meant to remove the blocks that get in the way of their creativity." Ray explains. Among the techniques and tools Ray and Myers teach are meditation, chanting, art work, dream interpretation, body movement, and Oriental systems such as Hara and the I Ching.

Students are also expected to read extensively; the reading list is possibly the longest and most recondite of any MBA course offered at Stanford. Minds accustomed to texts on financial accounting and microeconomics find themselves confronting *Mandala* by Miriam and Jose Arguellos; Swami Muktananda's *I Am That*; Gayle Delaney's *Living Your Dreams*; Francis Vaughan's *Awakening Intuition*; and books on Zen, Yoga, and the Tao Te Ching, as well as more standard approaches to creativity and problem solving like James Adams' *Conceptual Blockbusting*, de Bono's *Lateral Thinking*, and Gary Steiner's *The Creative Organization*.

How do MBA students react to this full-scale, frontal assault on their personalities and modes of consciousness?

"We get really hostile, aggressive attacks at first," Ray admits. "They feel threatened; they want to approach this intellectually, talk philosophy or something, but it's not intellectual. Or they want to say it's against their religion. One student handed in a paper in which he said that his wife wanted him to drop the course; she liked him the way he was, she didn't want him to change, she felt he was happy. He stayed in the course and in his marriage, by the way.

I think they're all frightened like that to some extent. It's a frightening thing, to face that aspect of yourself. They know they have these capacities, and they may have a feeling that they're not being themselves completely. But they're making money, moving ahead; they've been able to get along without that part getting in their way. They've got it controlled.]

"Most of them stay in the course, though. After a while they calm down and start to understand what it's all about. After getting a hostile weekly report from a student, we thought she would drop the course. But she didn't; she stayed, and since then her papers have been really positive."

In fact, students' evaluations proclaim the course a tremendous success. Since its inception, 75 percent of the participants have awarded it the highest marks on the seven-point scale used for all GSB courses, while the rest have given it a "6." Even more telling are the glowing individual responses of students.

"I wish I'd had this course before, or perhaps during my first year here," said one. "It would have helped a lot. The 'live-with' assignments are ideal. One real problem at the Biz School is that you can't remember more than five percent of what they throw at you. Here, there's a real emphasis on working on it every day, taking it home with you. These are things that should not be foreign to you, you shouldn't be fighting them. They should become a part of you. And the class atmosphere encourages that.

"The creativity aspect of a business education will be particularly useful in the kinds of things I'll be

Michael Ray

doing," said another student. "I intend to get into one of the fast-growth areas—alternative energy or communications—where it certainly pays to be innovative. There's also a very good chance that I'll continue in politics—government is another area that's crying out for new approaches to traditional problems.

"Another reason I really like the course," he adds, "is that you deal an awful lot with getting to know yourself and your own feelings, learning how you can operate at perhaps your highest potential."

Others are even more lyrical in their praises. "I didn't consider myself much of an artist," one student wrote, "but through the art assignments I was surprised that I was able to create images that were substantive and worthwhile, and found that I could relate that experience to my business experience. This taught me that one could not survive in business unless one added value—if possible, unique value—by being creative. Not for competitive reasons, but because that is the essence of life."

The most commonly heard comment from students, according to Ray, is that "This course changed my life."

Ray continued: "I don't see it (the course) as subversive. It's like the conflict going on in that student's marriage, or within the heads of our students: The dominant culture sees that it needs this (creativity)—the School and our economy would atrophy without this other side."

Ray is also quick to point out that the GSB has a strong tradition of attending to both the analytical and nonanalytical sides of management, which is evident in course offerings on interpersonal dynamics, organizational cultures, and decision sciences approached as "decision arts and sciences," acknowledging the intuitive aspects of decision-making.

"We've done a lot of continuing education for faculty on the nonanalytic side of management," he says, "and faculty members like Harold Leavitt, James March, David Kreps, Jerry Porras, and David Bradford are all involved in maintaining the balance in the School."

Ray, whose major research explores strategies for improving the effectiveness of advertising, first got the idea for his course while teaching basic advertising at Northwestern University. He developed a technique to encourage his class to think

Growth fosters separate faculty, staff cultures

High-level self-study suggests ways to reduce conflict between traditional academic culture and increasingly professional staff. The 'academic imprint' should permeate our activities.

Introduction

In January, 1981, President Kennedy announced that he and a small group of colleagues would undertake a study of Stanford's organization and management. (The membership, in addition to Donald Kennedy, consisted of Albert H. Hastorf, Raymond F. Bacchetti, Gerald J. Lieberman, William F. Massy, Kent Peterson, and Joel P. Smith who served as the group's initial chairman. Michael Oman was the staff director).

The intention was to form a group that could regularly put some distance between itself and immediate problems, so as to gain perspective on the requirements of administering a modern research university and on whether our present organization and style of interaction succeeds or fails in meeting those requirements.

In addition, the study made an effort to analyze the relationships between parts of the University's political economy, in an attempt to understand and locate sources of internal inefficiency—economic "hotspots"—where resources were being consumed at a rate out of proportion to the importance of the activity.

The study concentrated more on defining and understanding issues than it did on sketching solutions to particular problems. As a result, in what follows there will be more emphasis on the definition of issues than on particular recommendations for change.

However, the report does cite a number of specific actions already taken and recommendations for future steps. We indicate these in italics.

In a number of additional areas, the study asked existing groups to undertake particular efforts of their own. The study's major accomplishment may, in the end, consist of just that set of derived efforts, out of which may evolve significantly improved understanding and conduct of the University's business. These are also set out in italics.

As central issues, the study group considered a number of general features of the organization and management of Stanford and similar institutions, in an effort to separate those that seemed especially important and accordingly might deserve more detailed attention.

Some of these turned out to be trivial or intractable, others simply unproductive. But the group returned repeatedly to several topics, from which it began to distill themes and to construct a sense of interconnectedness, if not of perfect order.

Among the recurring themes was the coexistence of two cultures at Stanford—a traditional academic culture, and an increasingly professional managerial culture—between which there is both a record of cooperation and collaboration *and* an incidence, perhaps increasing, of conflict and misunderstanding.

A second theme centered on the forcing function provided by rapidly-changing external events, including an insistent regulatory climate, and the new abrasions these forces produce.

But arching over both of these, and related to them in multiple important ways, was a third issue which came up repeatedly in the biweekly discussions and which, more than any other single matter, captures the Study's central focus. It is the single fact of size: Stanford's administrative agenda has become so large that the University can no longer be run, as it once was, by a few part-time or former faculty people in the central administration.

Administrative growth and complexity are unavoidable by-products, as much of Stanford's own academic goals as of significant driving forces in the world outside. As a consequence, managerial responsibility must be distributed more widely through the organization in order to guarantee the competence, breadth, and responsiveness needed to run the university.

No single event in the last decade or so of its history catapulted Stanford into a new class of organization requiring a larger and more broadly distributed administration. Over the years there has been a gradual accretion of complexity brought on by the combined forces of internal growth, new enterprises, inflated costs, external regulations, and our own heightened standards and expectations.

In light of the cumulative force of these requirements there is no reasonable alternative to a large, competent, highly trained, authoritative, and increasingly specialized administrative staff. Without it the University's affairs would not be cared for properly, nor would the University stand a good chance of achieving its goals.

In reflecting on this relatively new fact of institutional life, the study group was aware that the conspicuous presence of administration—not simply the apparent growth and cost of administration, but the academic community's awareness of the significant role of administrative staff in many major University decisions—is a serious concern to some, particularly to those faculty who believe that some staff members relatively distant from the University's academic enterprise tend to be insensitive to its purposes.

The potential divisiveness that can grow out of real or imagined failure to keep academic values foremost is a concern about which we heard a good deal during the study. The arrangements by which universities blend the capabilities of nonacademic staff with the work and objectives of the faculty to support basic teaching research have not been lightly nor easily evolved.

There are always situations where administrative and professional work can develop a life of its own and veer in directions that detract from academic goals. For example, as the University's staff has grown more professional, managers have been held to account more rigidly by an internal hierarchy. And some of Stanford's professional managers may—like the "invisible colleges" of faculty peer groups—look to external standards and values that may relate only distantly to the institution's "academic" values.

These tendencies are, we believe, neither greater nor less here than in our sister institutions. That observation is not intended to give comfort; rather it is an acknowledgement that one of the built-in characteristics of our associated life at Stanford is the need always to integrate the intrinsic value of the faculty's role in teaching and research and the instrumental role of the staff in sustaining the environment within which the academic purposes prosper.

The study group believes, therefore, that two critically linked challenges confront the management of a major research university. The first is to achieve maximum effectiveness from a strong staff that actively supports the primary place of academic values in University decisions and enjoys good relationships with faculty; the second is to create better understanding and acceptance of administration by the faculty.

These ideas introduce the central focus of the study. En route to even such a modest advance in its understanding of the current status of administration at Stanford, the study group looked at a number of difficult and elusive themes. The remainder of this paper will summarize the most important of them, one by one.

Accepted Conditions

Before turning to these themes, however, we noted that there are several aspects of Stanford's governance and management that we take quite for granted, even though different patterns are in place and apparently functioning effectively in other institutions of quality. What, we may ask at the outset, are the "givens" about Stanford's organization and management that we accepted and left unchallenged?

* *Governance*—Stanford is governed by a traditional arrangement of a single Board of Trustees and a presidential chief executive officer. This structure has served Stanford well, as it has served most other American universities; but it is not the only available model. Harvard and Brown, for example, both have "bicameral" governing boards. At Harvard, the smaller and the more active Board—the Corporation—amounts to a managing directorate, with the president *primus inter pares*. At the University of Rochester and at Duke, the top leadership is shared by an officer accountable for operations and a chief executive who has relatively less hands-on responsibility.

* *Vice Presidential Organization*—At Stanford much policy development is undertaken by the vice-presidents as a collegial group or "cabinet." Among the vice presidents the Provost is the senior officer, an arrangement that has effectively guarded the primacy of academic priorities. The Study Group believes that this mechanism has worked effectively.

Now we want to turn to a thematic summary of the work of the Study.

MAJOR THEMES

1. The Primacy of Academic Goals and Values—In the course of our discussions we adopted the phrase "the academic imprint" as a shorthand reference for an extremely important concept: the process by which the values and goals of the academic sector of the University are impressed upon the plans and operations of the professional and service sectors, so that the latter support the former instead of taking on lives of their own.

This process should be an unquestioned premise of decision-making in academic institutions. However, the Study Group was especially concerned about changes in the University that have made academic imprinting more difficult, thus permitting more and more distance to develop between the administrative and academic sectors.

The forces which seem to be driving Stanford toward greater divergence are:

* *Multiple goals and objectives*—Stanford has become many things besides an educational institution; thus the daily life of the place necessarily reflects diverse points of view, operating procedures, and objectives.

* *Scarce resources*—Fragmentation is further encouraged by scarce resources, which can lead to factional competition and constituency politics. Moreover, pressures to find additional resources drive us toward activities (e.g. aggressive investment and development programs), which, however much they may contribute, are nevertheless perceived by some as inconsistent with academic principles and values.

* *Professionalism and accountability*—Growth of staff professionalism has led to an emphasis on accountability, more rigid in some administrative areas than others, which narrows perspectives and can make the pursuit of higher goals and the consideration of longer-range issues more difficult. The force of accountability is focused rather than distributed: some vice presidents necessarily feel more accountability to the Board of Trustees and its committees than others. The experience of Board members on specific matters (e.g. real estate, investments, etc.) sometimes gets translated into standards of accountability that do not emphasize academic sensibility; indeed, they may be viewed by some trustees as especially valuable precisely because they reflect the "real world" rather than the academic culture.

The Study Group believes that the sensitivity of the senior administrative officers of the University to academic values is high; but it does recognize the existence of pressures within the University that require continual vigilence if the academic imprint is to be maintained and protected as an imperative.

In response to concerns about academic imprinting, the President resolved to increase the representation of the academic sector in the Vice President's Group. This small group had been the final point of review and approval for a wide range of administrative proposals and issues on their way to formal action by the Board of Trustees. The President added two vice provosts and renamed the Vice President's group, calling it the Administrative Council.

Other changes aimed at clarifying the objectives and effectiveness of the Council are under consideration. Guidelines indicating which matters do and which do not require review by the Administrative Council will be developed, along with suggestions to staff for preparing background material.

The Council's meeting schedule and agenda will be coordinated with other groups and meetings (e.g. the Capital Budget Group and the Pre-Agenda meeting prior to the Board of Trustees) to streamline the pathway of decision and to reduce potential redundancy. (The group that prepares the facilities funding forecast and gives preliminary approval to capital projects.)

In order to engage the school deans directly in a wider range of issues—especially those concerned with planning and policies of broad institutional consequence—the Administrative Council will meet periodically in joint session with the Dean's Council.

2. *Cultural Challenges to Faculty/Staff Relationships* Organizations (universities, banks, manufacturing companies) and professions (lawyers, teachers, accountants) have standards, traditions, values, heros and folklore—in short, cultures—that determine how things get done and provide valuable clues to those who succeed in them.

Within universities the coexistence of two subcultures—the faculty and staff, each with substantially different workstyles and objectives—can produce stress. Universities are characterized by a predisposition toward consultation and consensus building, open debate, participative decisionmaking, and an uncommonly non-hierarchial, nonauthoritarian outlook.

When confronted with these aspects of University life the astute administrator recognizes that they differ from the working conditions found in profit-making enterprises and modifies his or her behavior accordingly in the pursuit of strategies and goals, especially those that impinge directly on the faculty. But many feel that responsiveness to faculty values, emphasizing increased participation and consultation, carries a cost represented both by frustration over how long it takes to accomplish things, and over the dollars lost occasionally through less efficient approaches to solving problems.

On the other hand, faculty members confront sophisticated University support services and auxiliary enterprises that require professionals and specialists to run them—managers who have been trained to value productivity, efficiency, and accountability.

These objectives are comfortably endorsed by all, but they can become a source of stress when in real situations they run counter to the style of the place—as when, for example, the person held accountable for cutting certain amount of grass each day by a computerized schedule runs a noisy mower next to a lecture. Such examples risk trivializing a very real problem; a good deal of pent-up frustration within the institution is due to the failure of one culture to understand the needs of the other.

In order to sharpen its perceptions of administrative services and faculty-staff relationships, the Study Group decided to commission a series of case studies. We were eager to understand how people on campus feel about the administrative services they receive and deliver.

Interviews were conducted with staff in several central administrative offices, and with administrators and faculty at school and departmental levels. The interviews were conducted

continued on next page

Management/ continued from page 14

Case studies reported localized but fairly widespread concern about a variety of personnel matters—staff turnover, burnout, understaffing, workload, etc.—that together suggest Stanford may have serious human resource problems.

in May and June of 1981 by 20 members of the University's Management Development Program.

At the end of the interviewing the MDP teams were asked to write up case studies which were subsequently read and discussed by the Study Group. We learned much from the case studies; here we share a few of the central ideas and impressions reported in them with a wider audience.

The following case study themes have broad institutional significance. Although they are stated separately, it will be obvious that they are closely interwoven.

A. Those interviewed did perceive separate faculty and staff subcultures; some mentioned the strengthening of central administration and the efficiency measures undertaken during BAP and BEP as a major contributing cause of a "we/they" attitude at Stanford. Complexity, size, different goals, and economic constraints were cited also as underlying causes of this phenomenon.

Some staff felt that the faculty fails to recognize as clearly as it should that the University, and the environment in which the University operates, have changed so as to require a different style of management. Some staff expressed frustration about inconsistant faculty attitudes concerning administration.

Faculty members sometimes accuse administrators (especially when the two are at odds) of shallow thinking; but at other times faculty members seem unwilling to spend the effort necessary to understand complex administrative issues (i.e. cost accounting). While some felt this paradox could be minimized by greater communication, others felt that the fundamental cultural gap dooms such efforts to failure.

B. A number of faculty (and faculty administrators) charged that the administration lacks a positive orientation toward its clients, and that the situation is getting worse. Some felt that the clients most actively served by the University were not faculty and students but were external agencies, or even internal line management.

Several staff recognized this issue also, and argued that it is compounded by the central administration's obligation to enforce University-wide rules, sometimes at the cost of not understanding or responding to the needs of departments.

C. Some of the faculty interviewed were critical of various administrative and service departments. These departments are sometimes seen as unduly costly, unresponsive, and insensitive to academic values.

D. Among both faculty and staff, there are various definitions of administration. Depending on one's perspective, the term "central administration" can refer to the Department Chairman, the Dean, the Provost, the Vice President for Business and Finance, or to the President.

Nor is it the case that all criticism of administration comes from the faculty. In fact, the cases suggest that some members of central administration are occasionally dissatisfied with the capability and responsiveness of department administration; and conversely, that department administrators sometimes feel more closely in tune with department faculty than with administrative colleagues at the central level.

As the University continues to struggle with the ebb and flow of decentralized authority, it will be important to resolve these identity issues and to make sure that appropriate human and financial resources exist throughout the institution to accomplish expected levels of service.

E. The case studies report localized but fairly widespread concern about a variety of personnel matters (e.g. staff turnover, burnout, understaffing, workload and pace, recruitment, and career development) that together suggest that Stanford may have serious human resource problems.

The administrators now being hired are perhaps more systematic about their own career advancement than they were 20 years ago, and it appears that Stanford's prestige and ambience are no longer as significant in attracting and retaining people, and keeping them happy, as they once were.

F. The case studies raise questions as to whether stress between the academic and administrative subcultures may be exacerbated by a failure on the part of University leaders to clarify expectations, establish guiding principles, and set goals which provide a supportive context for administration.

Some staff perceived a lack of guidance, and felt that the signals they were receiving from top administration were more mixed, perhaps suggesting a lowered concern for administrative processes themselves.

Some felt that major changes in leadership in the offices of the President, the Provost, and in several schools have created uncertainty regarding the strength of institutional commitment in such vital areas as salary equity, affirmative action, and compliance with various federal and state regulations.

3. *Resource Allocation*—The formal decision processes we employ to allocate scarce financial resources in the interest of pursuing various competing objectives provide a means of reviewing the balance between the academic and the administrative sectors of the University.

The comments of faculty interviewed for the case studies illustrate the sensitivity of this issue. One noted, "the University has an external, showy notion of what needs to be done—consistently building fountains, but not improving teaching space."

Another said he had a "feeling that the Business area has it pretty good; there aren't dollars available for an undergraduate advising secretary but the University can afford green posts around campus."

Although we take such comments seriously, we believe, nonetheless, that they represent misunderstandings—which we suspect may be shared by many.

In the first instance, restricted gifts are sometimes received for projects that would not ordinarily receive funding through normal University budget channels. These gifts would not otherwise be made; they consequently represent no loss to established fundraising objectives. Nor do they indicate a tilt in the budget process toward nonessential functions. They *do* represent our willingness to capitalize on opportunities to enhance the quality of campus life.

The second comment, which deals more directly with the budget allocation process, reflects the disagreement that reasonable people may have about specific allocation decisions. But it is a mistaken perception that allocations for administrative service divisions are for their benefit only. These are reached after careful considerations of the needs of the *academic* enterprise they support.

The study group wanted to assure itself that the merits, rather than the characteristics, of competing claims for resources determine the outcome of budget decisions. For example, requests from administrative areas are often backed up by specific data (e.g. figures on transaction volume) establishing not only the validity of the claim but often the consequences of a decision not to fund.

In contrast, requests from the academic sector are generally unsupported by extensive data and tend to be based on assertions regarding program requirements and benefits. The study group wanted to assure itself also that the various allocation processes (e.g. capital budget, operating budget, general plant improvements) are comparably competitive—i.e., is the degree of difficulty encountered by the last item funded in one process equal to that in another?

After looking at this issue, the Group concluded that there is no significant weighting of budget decisions in favor of the administrative and service sector, and that the combined, but separately determined, set of choices produce generally satisfactory results. In other words, style doesn't dominate outcome, and at the margin the different allocation processes are roughly equally competitive.

Moreover, it would seem inappropriate to link academic departmental requests to such numerical indexes as enrollments or numbers of majors, the rigid application of which would undercut the University's commitment to certain disciplines that may be less popular but are of intrinsic value.

One exception to the foregoing was the group's concern about the rules governing the allocation process for pro rata general plant improvement (GPI) funds. Heretofore, these funds, which are generated in connection with specific building projects and which are used for the construction or improvement of commons spaces, have been limited to outdoor spaces and utility applications (e.g. road improvement, parking, lighting, etc.).

A proposal was developed in the study to include other kinds of commons spaces: namely, classrooms and auditoria. This proposed change was analyzed and endorsed by the capital budget staff and forwarded to the Administrative Council for approval. That group subsequently adopted the recommendation, so that now general plant improvement funds will be available for a wider range of uses—including academic purposes.

Since budget requests for improvement and consolidation funds for academic programs and administrative services are developed through separate processes, there is little opportunity to compare competing claims (either collectively or separately) until the final stage of the annual budget.

As the number and complexity of these requests has grown, the budget officers have found it increasingly difficult to make item-by-item decisions in order to produce a merged list. These decisions involve trade- offs between needs that are often quite disparate in nature and that require specific technical knowledge to evaluate.

The study Group asked two of its members to work with the Budget Group on strategies that would alleviate these difficulties. While no decision on changes in the budget setting process has been reached, several alternatives are under consideration.

The objective is to develop program themes under which specific items could be combined in broader categories and reviewed at an early stage in the cycle as well as at the point of final allocation decisions. It is hoped that early emphasis on a higher level of aggregation will allow judgments to be made with greater confidence on specific program components within each vice presidential group. We expect that the 1983-84 budget process will be altered to fit this general objective.

Resources are allocated through fundraising as well. For many years the University has maximized gift revenues by letting donors restrict gifts to specific purposes (e.g. schools, departments, programs).

As the result of uneven fundraising capacities in schools and other University units, and the near impossibility of securing gifts for administrative activities, the benefits of fundraising are not equally distributed.

In addition, unrestricted gift income has fallen as a proportion of total gifts, further reducing internal flexibility. The budget process has been used to sort the internal equity issues, and to provide resources whenever necessary to support those units lacking fundraising capacity.

However, we find that internal fungibility of the kind needed has become more difficult to guarantee and that the operating budget no longer works as a smoothing mechanism with the effectiveness it once had. But to reverse this condition completely would require an undesirable loss of fundraising incentives which have resulted in higher gift totals.

The study group identified this loss of flexibility as a serious problem and launched a study of one strategy for ameliorating the imbalance between restricted and unrestricted funds.

Many sister institutions are more advanced than Stanford with respect to applying administrative use charges against restricted funds. Current practices in this area at Cornell, Harvard, MIT, Pennsylvania, Princeton, USC, and Yale were studied.

Based on the information gained from these inquiries, we are likely to modify Stanford's policies and to be more aggressive about charging appropriate administrative costs to restricted funds. Specific recommendations will be forthcoming in 1982-83.

Our examination of the use of restricted funds led to consideration of the life cycle of centers, institutes, and other non-departmental programs that rely principally on restricted gift support.

By their nature many organizations of this type carry out their activities without close decanal supervision or the scrutiny that results from competition for operating budget allocations within a school. They are often established to answer emerging needs whose longevity is impossible to predict. Some might be recognized at the outset to have a fixed life, while others might be expected, if they prove successful, to receive long-term budgetary commitments.

Under these circumstances we were concerned that there is no University policy that mandates review of these organizations or that establishes guidelines and criteria for determining whether they should be closed down, assimilated in a regular department, or given a permanent identity of their own.

A policy statement on the review and reauthorization of centers, programs, and other non-departmental academic organization has now been sent to the deans from the Provost which clarifies these issues.

4. *Administrative Growth and Costs*—The Study gathered data about administrative costs in order to understand the basis of apparently widespread concern about growth of administration at Stanford. As the authors of one case study put it; "there is an inevitable feeling that there are a lot of administrators, whether that's objectively true or not."

The data in the table below indicate that administrative costs remained an approximately constant fraction of the operating budget during the '70s. The combined cost of general administration and Business and Finance remained at 26.9% (see categories 4 and 5).

Such a large fraction as that might seem to argue that the cost of administration at Stanford is too high, even if it has not grown disproportionately. Much of this total, however, is comprised of expenditures for materials and services, not administrative personnel.

Even the portion that is, strictly speaking, administration is magnified by a pecularity of Stanford's presentation of the relationship between the operating and consolidated budgets.

The consolidated budget (which includes the hospital, SLAC, sponsored research and auxiliary activities such as student housing) has grown at a considerably faster rate than the operating budget, and in so doing has required a higher level of administrative support services, most of which are carried in the operating budget.

For example, auxiliary accounting is done in the Controller's Office and paid for out of the operating budget—even though its services are delivered outside that budget. And whereas the number of invoices processed by the Accounts Payable Section for sponsored research has grown, the cost of salaries for paying these bills is included in the operating budget.

Growth in the Consolidated Budget, 1980-81 over 1971-72: 246

* *Figures exclude School of Medicine, Financial Aid, and Utilities.*

** *Excludes School of Medicine*

*** *Includes central administration, Public Affairs, Development, and University Counsel.*

The Study compared in greater detail the rates of growth (measured by increases in salary expenditures) of some two dozen administrative units from 1974-75 through 1979-80 in order to identify any points of overheating among them.

We found that growth rates vary widely, with some exceeding the baseline increase in inflation, and with others showing quite constrained rates of growth. In the former category, the Office of the University Counsel stood out; but on further analysis it was found that although the University has indeed added staff to handle an increased workload, that expansion has been cost effective and has reduced expenditures for external legal services. In some areas of the Controller's Office such as payroll and Processing, Billing, and Reporting, improved methods and automation along with continued hard work, have helped to keep growth and costs at a low level.

After looking at these data and considering the factors requiring real growth in the cost of administration at Stanford, we concluded that these patterns and rates of growth cannot be considered unusual or unjustified. They nevertheless present a challenge to contain future growth within reasonable boundaries and to increase productivity and efficiency.

5. *Planning*—Much of the study group's thinking on this topic was presented to the Board of Trustees in September 1981 in a paper by Donald Kennedy and Joel Smith entitled, "Planning at Stanford."

That paper emphasized how significantly planning is influenced by the academic culture, with the result that "the style and method of much of the planning here is different from that done in more hierarchial organizations where authority is centralized and the management style is top-down."

In his fall speech to the Academic Council that year, the President added, "Given the special considerations that apply to an academic institution like this one, we should probably not engage in a massive effort to evolve a comprehensive plan for Stanford."

He was referring to an antipathy toward centralized, comprehensive planning common among faculty "who work, not according to conventional notions of productivity and accountability, but instead with career-long licenses and maximum professional freedom. Discipline is provided not by instructions from above, but rather by peer review."

Still, planning is imperative for the purposeful accomplishment of goals and the question is not whether we plan, but how. Conventional planning is required and can be undertaken in administrative support units with less consideration of the academic culture. But even in those circumstances effective planning will account for academic values as important determinants of eventual success.

In the absence of a comprehensive plan, the study group is confident that the University can be directed effectively through the definition of broad objectives, and—at a lower level—the pursuit of detailed plans in support of activities instrumental to the accomplishment of those objectives. For example, attracting first-class faculty will require careful planning about housing.

In consultation with others the Study Group drafted a statement of the University's mission. This paper sets forth purposes, principles, and objectives for Stanford.

6. *Client Relations and Administrative Responsiveness*—Service organizations face a dilemma when it comes to balancing client satisfaction against cost effectiveness. Given enough resources (i.e. budget, personnel) they can be responsive and provide a degree of local and personal service that results in a high level of satisfaction. Conversely, client relations in service organizations where budgets and other resources are in short supply can be a difficult proposition—especially if the clients approach their day-to-day activities from a different cultural perspective, or if they nourish and hold unrealistic expectations.

Based on its own perceptions, inputs from other faculty and staff, and the case studies, the Study Group believes that relationships between many of the supporting administration services and their clients could be improved.

While our discussions and actions concentrated mainly on nine divisions of Business and Finance, administrative responsiveness is clearly an important concern throughout the University.

We believe that there have been changes over the last decade in the way administrative services are managed, and that some of the negative impressions reported to us regarding a lack of responsiveness and poor client relations are valid.

These complaints may have been an inevitable consequence of pushing for greater cost consciousness, accountability, and efficiency as the University moved away from an era of comparatively abundant financial resources into one in which budgets had to be closely controlled.

It was necessary to develop centralized administrative services that were more highly organized and efficient; but they also became recognizably more impersonal and bureaucratic.

Also during this period, service level expectations and requirements increased due to such factors as the greatly expanded scope and complexity of the physical plant and compliance regulations imposed by various state and national agencies. Difficult decisions had to be made about the allocation of funds that were insufficient to meet all the expectations of the community.

Under these circumstances it has proven to be an extremely vexing managerial task to meet longterm, but less visible service requirements (e.g. maintenance of heating, ventilation, and air conditioning systems) while responding adequately to the highly visible and more personal needs (e.g. cleaning classrooms).

Some alienation may also have been caused by perceptions of an immovable bureaucracy, run by assertive and specialized staff who have been granted a considerable degree of freedom—even though the purpose of that freedom was to obtain more effective decisionmaking, efficient administration, and the assumption of responsibility and accountability.

On balance we believe that the University must continue to search for ways of increasing efficiency while also listening more carefully to the client's point of view.

To signal our commitment in this area, we asked the Vice President for Business and Finance to prepare a strategy for improving client relations in the facilities and services divisions. This project is underway, and we hope it may provide a model for similar efforts in other parts of the administration.

With the assistance of a consultant a responsiveness measurement system is being developed and tested which will monitor and encourage client feedback, something that has been completely lacking heretofore.

Client relations will be introduced into the performance evaluations of managers.

Finally, the University Committee on Land and Building Development will be requested periodically to discuss the general appearance of the University's grounds, signs, and buildings and to comment on the performance of the custodial services.

The study group is also concerned about the related need to lower expectations of clients wherever a mismatch arises between those expectations and a lowered level of service that the institution has chosen to provide.

For example, if budget dollars are scarce, an institutional decision may be made to reduce the cleaning of faculty offices from several times a week to once a week; the service department should not be blamed for what is in fact an allocation choice.

Accordingly, the information provided about budget decisions should highlight reductions in service levels, so clients will know what changes to expect and not place blame unfairly on the service departments.

7. *Organization Structure and Size*—We concentrated our organizational analysis in two broad areas. The first involved discussing the organization of specific units or the relationships among several units with similar goals.

For example, we considered undergraduate education and student services by focusing on the relationships among the Undergraduate Dean, the Graduate Dean, the Dean of Humanities and Sciences, and the Dean of Student Affairs. At issue was rationalizing these relationships, clarifying reporting lines, and eliminating administrative redundancy. We looked in a general way at the organization of various student and undergraduate service functions such as admissions, housing, placement, overseas studies, health services, the registrar's office, financial aid, and advising.

Two key issues emerged: the relationship between the Undergraduate Dean and the Dean of Humanities and Sciences, and the division of responsibilities now lodged in the office of the Dean of Students into those related to the curriculum and those having to do with administration.

Subsequently, a Provost's Committee made recommendations, which have now been implemented, for a major reorganization of the duties of the Undergraduate Dean, passing many of these responsibilities to the School of Humanities and Sciences.

No action was taken—nor is any contemplated—regarding the responsibilities of the Dean of Students, although this may be an area that the Undergraduate Cabinet will consider.

Finally, without reaching any conclusions or deciding on future steps, we discussed the organization of the Center for Information Technology and the policy and governance structure through which CIT sets its goals and receives direction.

The second area of organizational analysis dealt with the size of the University enterprise as a whole. We considered the argument advanced by one of the group that most of our present difficulty in controlling costs and in generating efficiencies is related to size—that is, size as measured by number of positions. In effect, this means the number of staff positions, since the student body and the faculty have grown only by small amounts in recent years and are not expected to change.

This argument holds that every member of an organization produces some work that is useful and some that is not. When a new staff member is added, the proportion of non-useful work increases, because the non-productive activities are proportional to the size of the organization as a whole.

Larger organizations, it is argued, generate more mistakes because they are more confusing and because there is more to be wrong about and more chances for misunderstanding. They also generate more self-justifying activity such as protective memoranda, the pursuit of personalized arguments and the like. The result is a more costly and less efficient organization.

This argument stimulated discussion of the merits of a formalized staff billet control system based either on regulation or an incentive mechanism. Although we reached no consensus on the need for rigid staff billet control or on a feasible method for achieving it, there was general agreement that diseconomies of scale do exist and that there is an external cost associated with each incremental position.

We concluded that the cost of size should be emphasized by requiring more rigorous justification in the budget process of requests for new positions and that, whenever economies and improved productivity would result, incentives should be provided for substituting capital for labor.

8. *Administrative Decentralization*—We found it productive to examine management and organization issues within a conceptual framework based on the locus of responsibility and authority within the organization for making key decisions. Over the years, and especially during the last 15 years of strict budget control, Stanford has developed a comparatively centralized approach to administration. But with a larger and far more complex organization, we must consider whether the present degree of centralization is functional.

Stanford is changing and undertaking new initiatives at a rapid rate. The senior officers are required to make decisions across an increasingly broad and technical spectrum, and about issues that range far up and down the scale of importance.

A greater degree of decentralization could help us avoid overload and improve the quality and legitimacy of the many decisions and actions that will have to be taken during the next few years.

Decentralization would put a greater degree of responsibility in the hands of those with the expertise, access to data, and time to deal with issues effectively. It could further the sense of participation in an enterprise with worthy goals and fair processes.

On the other hand, there are compelling reasons for maintaining a substantial degree of centralized authority. Limited resources, central planning, interrelatedness of decisions, and the necessity of asserting control in order to achieve certain institutional goals are factors that should be recognized in reaching an appropriate balance.

Some degree of centralization is needed to sort out the interplay of market and equity considerations in the determination of policies governing differentiated school tuition rates and faculty salaries, for example, and in the resolution of questions involving the academic calendar, faculty titles, and access to prospective donors.

As we come to an understanding on what should be decided centrally, what should be guided centrally but decided locally with post-performance evaluation, and what should be left to local initiative, it is important to recognize that these movements can take place side by side.

For instance, more decentralization in budgeting does not necessarily imply a decentralized staff compensation policy. And we could have relatively centralized strategy formulation and policy-making in certain areas while sharply decentralizing implementation. continued on next page

Management...

continued from page 16

We recognize that specific steps toward greater decentralization in certain areas (e.g. personnel) would require clarification of the role of deans as administrative line officers and would probably necessiate strengthening the capacity of decanal staffs to handle increased delegation of certain administrative tasks.

Redefinition of the dean's role along these lines would probably result in a different type of faculty member choosing to fill the dean's chair. Whether this would be in Stanford's best interests in the long run is an important question.

Summary and Conclusions

As the result of the study several improvements have been made in the way the University is administered. Among these accomplishments we include the reorganization of the Administrative Council; broadened use of GPI funds for academic commons spaces; a policy calling for systematic review of nondepartmental centers and institutes; a statement of University mission and objectives; and procedures for improving relations with the clients of service divisions within Business and Finance.

A number of other initiatives have been set in motion which will result eventually in other changes. These include establishing a new policy governing an administrative charge on the use of restricted gift funds; and changes in the procedure employed in the operating budget process to determine consolidation and improvement funds allocations.

The study has not demonstrated any equivalent arguments to make sweeping changes in the way the University is organized or is governed. We believe the University is in good shape administratively and that it will be able to cope with the challenges and opportunities of the next decade without undergoing a major reorganization.

We do see a number of issues, however, that we suspect will form the core of an agenda that will continue to concern the administrative for some time—control over growth in size; truly cost effective methods for increasing productivity and efficiency; and the proper degree of decentralization for an organization of Stanford's type.

These matters will not be dropped at the conclusion of the Study of Organization and Management. The value of a discussion group that can help the President evaluate policy options and define issues and problems at an early stage of their development has been well established. In all likelihood some comparable group will serve this purpose, though perhaps on a less formal basis. A second mechanism for continuing to give these and other comparable issues the attention they deserve is the fall retreat of the vice-presidents and deans, which was inaugurated last year and which is planned now as an annual event.

Finally, we hope that everyone in the community will continue to be concerned about these topics and will share their ideas with us and with other colleagues.

Complexity, size, economic constraints contribute to 'we-they' attitudes

continued from page 1

Massy and Associate Vice-President Kent Peterson, both business and finance; and Associate Vice-Provost Michael Oman, staff director for the study.

Interviews conducted by 20 members of the University's management development program in 1981 indicated that complexity, size, and economic constraints contributed to a "we-they" attitude between faculty and administrators.

Some staff felt faculty failed to recognize that the University's environment now requires a different style of management. "Faculty members sometimes accuse administrators of shallow thinking; but at other times, faculty members seem unwilling to spend the effort necessary to understand complex administrative issues, such as cost accounting," the report noted.

Administrators criticized

On the other hand, several faculty charged that the administration lacks a "positive orientation towards its clients and that the situation is getting worse." Some felt those most actively served by the University were not faculty and students but external agencies or even internal line management.

The interviews showed "localized but fairly widespread concern" about staff turnover, burnout, workload and career development that "together suggest that Stanford may have serious human resource problems," the report said.

"The administrators now being hired are perhaps more systematic about their own career advancement than they were 20 years ago. It appears that Stanford's prestige and ambience are no longer as significant in attracting and retaining people, and keeping them happy, as they once were."

Between 1971-72 and 1980-81, the combined share of the University operating budget devoted to General Administrative Support and Business and Finance remained stable at 26.9 percent. General administrative support rose from 7.8 to 10 percent, while Business and Finance declined from 19.1 to 16.9 percent.

Excluding the School of Medicine, financial aid expenditures, and utility costs, the proportion of the operating budget devoted to School and other academic programs dropped from 54.2 to 52.6 percent. The fraction devoted to student services declined from 7.8 to 7.6 percent.

Library expenditures rose from 11.1 to 12.9 percent of the operating budget during this decade.

While the total share devoted to general administration, business and finance may appear high, the study noted that "the consolidated budget—which includes the Hospital, Stanford Linear Accelerator Center, sponsored research, and auxliary activities such as student housing—has grown at a considerably faster rate than the operating budget and, in so doing, has required a higher level of administrative support services, most of which are carried in the operating budget."

Improvements made

As a result of the study, several improvements already have been made in the way the University is administered, the report noted:

1) To increase the "academic imprint" on decisions considered by the University's vice-presidents, two academically-oriented vice-provosts were added to the group, which has been renamed the Administrative Council. The enlarged group will meet periodically with Stanford's deans.

2) Funding for general plant improvements will be expanded from roads, parking, lighting, and other outdoor utilities to include classrooms and auditoria.

3) Following the established practice of many other universities, Stanford may apply appropriate administrative use charges against restricted funds. This change would reduce the differences in treatment of restricted and unrestricted funds, permitting a little more flexibility in budgeting. Current practices at Cornell, Harvard, MIT, Pennsylvania, Princeton, Yale and USC have been studied.

4) "Sunset" rules for reviewing centers, institutes and other non-departmental programs that rely mainly on restricted fund support have been established by the Provost. After review, these programs may be closed down, assimilated in a regular department, or given a permanent identity of their own.

5) Client relations will be introduced into the performance evaluations of managers in the facilities and services divisions of Business and Finance. With help from a consultant, a responsive measurement system is being developed to monitor and encourage feedback from clients.

6) When budget decisions result in reduced service levels, information about the change will be provided to clients, so they will not unfairly blame those responsible for providing the services.

While the University appears "in good shape administratively. . .able to cope with the challenges and opportunities of the next decade without undergoing a major reorganization," the study says three issues form the core of an agenda for the future:

1) Control over growth in size;

2) Truly cost-effective methods for increasing productivity and efficiency; and

3) The proper degree of decentralization for an organization of Stanford's type.

The combined forces of internal growth, new enterprises, inflated costs, external regulations and "our own heightened standards and expectations" have left "no reasonable alternative to a large, competent, highly trained, authoritative and increasingly specialized administrative staff," the report says. "Without it, the University's affairs would not be cared for properly, nor would the University stand a good chance of achieving its goals."

Where the University was once run "by a few part-time or former faculty people in the central administration," now "managerial responsibility must be distributed more widely through the organization in order to guarantee the competence, breadth, and responsiveness needed to run the university."

As the University's staff has grown more professional, some managers may—like the "invisible colleges" of faculty peer groups—"look to external standards and values that may relate only distantly to the institution's 'academic' values," the report says.

"These tendencies are, we believe, neither greater nor less here than in our sister institutions."

But the values and goals of the academic sector of the University should permeate the plans and operations of the University's professional and service staff, the report adds. This "academic imprint" should be "an unquestioned premise of decision-making in academic institutions."

End tax on unrelated business income for nonprofit groups, scholar suggests

Taxes on unrelated business income of nonprofit organizations should be repealed, Columbia University Prof. Susan Rose-Ackerman suggests in a recent issue of *Stanford Law Review*.

"Tax-exempt firms must now concentrate their profitable endeavors in those few lines of business judged to be 'related,' " she notes.

"The growth of gift shops and vacation tours operated or sponsored by nonprofit organizations may be, in part, a response to the conditions of the tax law. Such concentration in a few areas makes it much more likely that the business activities of nonprofits will impose losses on competitive for-profit firms. . . .

"By permitting nonprofits to enter any profit-making industry, repeal will reduce the pressure on for-profit firms in areas that are related to the primary activities of nonprofits.

"While this new freedom may increase the overall level of nonprofit entrepreneurial activity, the diffusion of this activity throughout the economy reduces the chance that investors in a particular industry will suffer substantial, unanticipated losses from nonprofit entry."

A graduate of Wellesley and Yale, Rose-Ackerman is a professor of law and political economy at Columbia. Her research was supported by Yale's program on nonprofit organizations.

Her article on "Unfair Competition and Corporate Income Taxation" appears in the *Stanford Law Review* for May, 1982, just published (Vol. 34, No. 5 pages 1017-1039.

Future executives learn creativity...

continued from page 15

creatively by asking them to trace the genesis of any good idea they'd ever had.

"People would describe their ideas; you could see what an idea was, how it differed from imagination or production, what steps were required for getting there. So when I came to Stanford in the '70s, and taught Marketing Communications, I used the same approach." Students wanted more, and Creativity in Business evolved.

Currently working on a book based on the talks given in the creativity course, Ray recently published a textbook on *Advertising and Communications Management* (Prentice-Hall, Inc., 1982). The new book, tentatively titled *Awakening Business Creativity*, "might be better called *How to be Yourself in Business*," says Ray.

"That's what it, and the course, is really about. If you can be yourself, then you can be creative, and there's no barrier, no distance between you and your creative self."—**Marcia Tanner**

Indirect costs top $60 million annually, Lieberman says

Following are comments by Vice-Provost Gerald Lieberman, dean of graduate studies and research, on indirect costs at the Faculty Senate Dec. 2:

Purpose

The purpose of this discussion is to give the Senate a better understanding of what indirect costs are, how the indirect cost rates are determined, and the importance of indirect cost, or "overhead," recovery to Stanford.

As you are aware, the primary reason for our projected Operating Budget deficits is because Stanford is collecting less overhead on sponsored research projects than had been predicted.

What are Indirect Costs?

As described in the accompanying paper, indirect costs are those costs that are not themselves a direct expense of doing research or teaching, but are the costs of providing services or contexts, without which the research or instruction could not be done.

Examples of direct costs are faculty and student salaries, travel expenses, etc. Costs which we refer to as "indirects" include school and department administration; student services; the library; depreciation on buildings, some equipment, and some land improvements; the operations and maintenance of the University's physical plant, sponsored projects administration, and general and administrative offices.

If we look at the appropriate table *(see page 19)*, we can see the actual breakdown of indirect costs which conform to the federal government's definition of "allowable" indirect costs—i.e., those overhead items the government is willing to fund in the form of indirect costs on projects they sponsor.

Every activity that the University performs (government or nongovernment supported) draws its share of the total overhead. The numbers in the left hand column show the total indirects as defined above which were estimated to be incurred this year in support of Stanford's primary activities of teaching and departmental research, organized research, and other such activities as conferences, SLAC, RLIN, and auxiliary activities such as housing and food service. These primary activities of the University are referred to in the paper as "direct cost objectives."

The numbers in the middle column represent those indirect costs which support "organized," or sponsored, research; that is, research which is funded by outside grants or contracts. The numbers in the right hand column show the breakdown of indirects allocated to on-campus sponsored research as expressed in terms of the overhead rate. This rate calculation assumed a total (modified) direct research volume of $89 million for this year.

As you can see from these figures, almost half of all indirect costs associated with sponsored research are space related; that is, operations and maintenance of buildings and grounds and depreciation account for about $28 million of indirect costs in support of research activities.

Administration of general University activities related to research and administration of departments, sponsored projects, and student services related to research account for another $26 million. And about $6 million in costs of the library are associated with sponsored research.

Thus, for the current year we expect $60.6 million in costs to be incurred which indirectly support sponsored research activities, counting only those costs which the government has agreed are allowable under our government indirect cost rate structure.

How Are Indirect Cost Rates Determined?

In order to derive an indirect cost rate which will recover the above costs, we have to estimate the volume of direct cost expenditures for the year.

This we do on the basis of the volume of prior year research expenditures, proposals and awards of sponsored projects, taking into account to a limited extent the level of funding anticipated that will be appropriated by Congress for the federal R&D funding agencies.

In theory then, the indirect cost rate is achieved by dividing the estimated volume of indirect costs by the estimated volume of direct costs for any given year. I say, "in theory," because the actual process is extremely complicated, involving a bewildering "stepdown" schedule and a cast of cost accountants. This rate is then charged to each direct cost as the direct funds are expended for every sponsored project.

At the end of each year we see what the actual indirect costs were. If we collected less than the actual amounts incurred to which we were entitled, we add the amount of underrecovery in that year to the next year's overhead rate as a "carryforward." If we overcollect in any given year, we reduce the next year's rate by the amount of the prior year's overrecovery.

This process assumes that each sponsored research project incurs indirect costs in proportion to the direct costs of the project. While we realize that in fact some projects take up proportionately more or less space, use more or less library resources, etc., than others, this averaged method of collecting the overhead recovery is what is mandated by the federal government.

The Problem

The problem we are now experiencing is that recovery of indirect costs from sponsored research projects is less than the actual costs incurred.

To just increase the indirect cost rate in order to collect what we refer to as "full recovery," is not a simple solution: as you know only too well, both researchers and their sponsoring agencies are concerned about universities' rapidly-rising indirect costs, arguing that every dollar going into overhead is simply one less dollar going into the direct support of research.

In Washington's current political climate, we are not likely to see any significant overall increases in federal research funding, which accounts for some 90 percent of Stanford's total research support of $136 million (in 1981-82). However, to deliberately not try to collect full recovery from our research sponsors would be disastrous, since virtually our only other sources to cover such costs would be through increased gift support or higher tuition.

Thus, we are in a dilemma which is compounded in three ways: first, when the volume of direct research expenditures drop, the indirect cost rate must go up if we are to recover all the overhead costs.

Second, indirect costs are rising faster than inflation, a phenomenon which has been true for many years. This is because such costs as utilities have skyrocketed, salaries go up faster than inflation, more and more space is required for modern research, and because of government requirements for more and more accountability re the use of their funds, all of which drive the indirect costs up.

As long as the direct research expenditures also rise faster than inflation, the indirect cost rate can remain stable. Last year, however, for the first time in recent history, Stanford's direct research expenditures did not rise as much as inflation; they rose only about three percent when inflation was around nine percent.

Furthermore, we don't see any signs for increases in direct research expenditures this year. Thus, we are faced with a double whammy. We see a dropping (in real terms) of direct research volume without a corresponding drop in indirect costs.

This is then compounded by the issue of carryforward: that is, the process of adding to future year indirect cost rates that amount of money to fund those indirect costs incurred in prior years but not collected. All these factors push the indirect cost rate up.

I would very much appreciate the Senate's thoughts on this problem and possible solutions to it. But I must warn you that the apparent "obvious" solution of merely cutting indirect costs is not as obvious as it might seem.

First of all, many of the indirect costs are fixed, such as those related to space; we incur them regardless of the research volume.

Second, to cut those overhead items which might be possible to cut may require a significant change in our lifestyle, our physical environment, and in the Stanford we have come to know and love. . . .

Frank Riddle, associate controller, (will) explain in some more detail (not to mention accuracy) the process I briefly described above of arriving at our indirect cost rates.

Frank has been one of the most influential people from all universities working with the federal government to keep as low as possible both the overhead rates and the administrative burdens on the faculty associated with government-sponsored projects.

Indirect cost calculation quite complex: here's a brief guide to the accounting

Following is a background paper on indirect costs circulated to the Senate:

I. Introduction

One of the fundamental assumptions made in government as well as in most industries is that each activity in an organization is allocated its total cost. This includes the costs directly attributable to that activity and its proportionate share of the general costs of running the organization (indirect costs).

These general or indirect costs at Stanford include such items as Building Depreciation, Operations & Maintenance, General University Administration, School and Department Administration, Libraries, etc. These costs are allocated proportionately to all of the direct cost objectives of the University; i.e., instruction, research and other direct activities, on the bases explained in this paper.

In the case of grants or contracts to universities, the federal government and most non-government entities assume that they will pay the *direct costs*, which include research salaries, travel, expendable materials and supplies, computer time, etc., as well as an allocable share of the allowable general costs of running the University (*indirect costs*).

The federal government does not recognize (nor do many businesses) an incremental type of costing policy whereby one would allocate to a new activity only its direct costs and the "added" or "incremental" general costs due to that new activity.

In the case of the federal government, quite specific regulations exist as to which of indirect costs may be assigned to government grants and contracts.

In fact, substantial indirect costs are not allowable for allocation to the government. These are real costs of running the University which cannot be included in the calculation of the indirect cost rates for federal grants and contracts. A higher rate for non-government grants and contracts has been calculated without excluding these government unallowable costs.

The non-government rate does not, however, include any of the costs considered allocable but unallowable to federal grants and contracts. That is, the unallowable portion of costs allocable to federally-sponsored projects is totally subsidized by the University from general funds; these unreimbursed costs are *not* added back to the non-government projects in calculation of that rate. Likewise the allocation of indirect costs to Instruction and Department Research is paid for with University unrestricted funds.

In order to show how the indirect cost rates are calculated, the following three sections will discuss the individual components of the indirect rate; the direct cost objectives, the indirect cost pools, and the indirect cost allocation bases (how the costs in each cost pool are distributed to each cost objective). The discussion of indirect costs will continue by addressing how the allocated costs are converted into indirect cost rates.

II. Direct (Final) Cost Objectives

The direct or final cost objectives of the University, to which the indirect costs are allocated, are as follows:

1) **Instruction & Department Research**—all instruction and research funded by general funds and gifts to the University.

2) **Organized Research**—all research funded by grants and contracts which are so classified because they generally bind the University to a specific line of inquiry; make specific personnel commitments, items of output, or specific performance targets; contain detail budgets for expenditure and require return of unspent funds; and/or contain reporting or disposition of property requirements.

3) **Sponsored Instruction, including Educational Service Agreements (ESA)**—all instruction or educational service projects funded by grants and contracts so classified because they have the characteristics enumerated above under Organized Research.

4) **Other Sponsored Activities (OSA)**—all projects funded by grants and contracts not included in Organized Research or Sponsored Instruction. Included are travel grants, conferences, public service projects and the like.

5) **Stanford Linear Accelerator Center (SLAC)**—all SLAC activities associated with the Department of Energy contract.

6) **Research Library Information Network (RLIN)**—all activities of RLIN managed by Stanford under agreement with Research Libraries Group, Inc. (RLG).

7) **Auxiliary Activities and Other Institutional Activities**—Auxiliary Activities are self-supporting Stanford activities existing to furnish goods or services to students, faculty, staff or others who are charged a fee. Included are the Housing and Food Service, Faculty Practice Plan, Tresidder Union, part of the Athletics Department, etc. Other Institutional Activities do not necessarily relate to the University, but receive some services therefrom. Included are the Faculty Club, Bookstore, Alumni Association, ASSU, Stanford Hospital (in its new status), Children's Hospital, Non-Stanford Library Users, etc.

III. Indirect Cost Pools

There are seven indirect cost pools that collect indirect costs for subsequent allocation to cost objectives. Listed below are these indirect cost pools with a brief explanation

continued on next page

Indirect costs...

continued from page 18

of what each contains:

1) **Depreciation**—For indirect costing purposes, depreciation of capital assets is recognized as a cost; depreciation is not recorded as a cost in the University's external financial statements. Stanford has three main categories of depreciable assets:

* buildings
* capital equipment (non-government funded purchases)
* land improvements (such as roads, pathways, street lights, etc.)

2) **Operations & Maintenance (O&M)**—The O&M cost pool contains costs incurred for the administration, supervision, operation, maintenance, preservation and protection of the institution's physical plant. At Stanford it includes:

* the normal costs of utilities
* building and grounds maintenance
* janitorial and custodial contracts
* fire and police protection
* plant insurance
* parking and transportation
* major repairs and alterations to buildings

3) **General & Administrative (G&A)**—G&A expenses represent those costs incurred for the general executive and administrative offices and other expenses of a general character. At Stanford these are represented by the following offices:

* Board of Trustees
* President's Office
* Provost's Office
* Office of the Academic Deans
* Legal Counsel
* Part of the Office of the Vice-President for Business & Finance
* Personnel Office
* Office of the Vice-President for Public Affairs
* Office of the Vice-President for Development
* Controller's Office
* Procurement Office
* Insurance & Risk Management Office
* Part of Facilities Office (not charged to facilities projects)
* General and Administrative Costs from Academic Schools and Departments.

4) **Sponsored Projects Administration (SPA)**—Sponsored Projects Administration expenses represent those costs incurred by separate organizations established primarily to administer sponsored projects. This cost pool currently consists of:

* Sponsored Projects Office
* Part of the Office of the Vice-Provost & Dean of Graduate Studies and Research

5) **Department Administration**—Departmental Administration expenses are incurred at the school or department level for administrative and support services that benefit common or joint departmental activities or objectives. The following activities are considered Departmental Administration:

* Planning and administration of department curriculum, research and facilities
* Guidance of students
* Selection of new graduate students
* Department personnel functions
* Maintenance of department records
* Review of library needs of the department
* Accounting and purchasing for the department
* Preparation of proposals for sponsored instruction or sponsored research
* Planning and administrative duties for the department, school and University
* Work on all department committees
* Paid leaves, such as sabbaticals

6) **Student Administration and Services**—This cost pool contains those expenses incurred for administration of student affairs and services to students. Student Services expenses include expenditures for the following:

* Dean of Students Office
* Placement Office
* Admissions Office
* Registrar's Office
* Student Financial Aid and the Financial Aids Office
* Student Health
* Student Activities

7) **Library**

Expenses included in the library cost pool are those incurred for the operation of the Stanford University Library System, which includes Meyer Undergraduate Library, the Cecil H. Green Library, ten branch libraries (Art and Architecture, Cubberley Education, Music, Falconer Biology, Swain Chemistry, Branner Earth Science, Engineering, Mathematical and Computer Sciences, Physics and Hopkins Marine Station), and the six Coordinate Libraries (Food Research Institute, Hoover Institution, Jackson Library of Business, Lane Medical, Law, and Stanford Linear Accelerator Center).

IV. The Allocation Process

Each of the indirect cost pools has one or more bases on which the expenses in the pool are allocated. The development of these allocation bases comes from the requirements of Federal Office of Management & Budget Circular A-21, which outlines costing principles for educational institutions.

A-21 provides as its preference for indirect cost allocation the use of special cost allocation studies produced in accord with a set of requirements. If special studies are not conducted, the cost pools must be allocated on bases prescribed by A-21. Stanford has chosen to use the special study approach to produce more equitable allocations to our cost objectives.

The descriptions of the allocation bases presented below are simplified summaries of the actual complex methodologies developed in compliance with A-21 requirements.

1) **Depreciation allocation**

* Buildings—depreciation of each building is allocated based upon net assignable square footage of space occupied by each academic cost objective or indirect cost pool within the building.
* Equipment—depreciation of equipment in a department is allocated based upon net assignable square footage of space occupied by each cost objective or indirect cost pool within the department.
* Land improvements—depreciation of non-auxiliary land improvements is allocated in the aggregate based upon net assignable square footage of space occupied by each cost objective and indirect cost pool throughout the academic and administrative buildings.

2) **Operations & Maintenance**

A special study was conducted for the O&M cost pool to associate the costs incurred more closely with the cost objectives. O&M costs are allocated using several bases; each allocation method used is one considered to be most accurate in matching O&M costs with the benefits received by the user.

The allocations are based primarily on net assignable square footage by cost objective or indirect cost pool. For utility costs, square footage of each applicable cost objective or indirect cost pool is weighted by the amount of utility usage derived from a special engineering study. Police and Fire Protection costs are allocated on the basis of replacement value of buildings by cost objective or indirect cost pool.

3) **General & Administrative**

For allocation, this cost pool is divided into a number of cost groupings which are determined by analysis and discussions with representatives of various General & Administrative offices and of the University cost objectives served. Most of these cost groups are allocated to benefitting cost objectives based upon their respective Modified Total Direct Cost (MTDC) bases. For a few of the cost groupings, however, other allocation bases are used. For example, non-faculty salaries are used to allocate the Personnel Office cost grouping. No allocation is made if little or no benefit is attributable to a cost objective relative to its base.

4) **Sponsored Projects Administration**

This cost pool is also broken down into cost groupings which are then allocated to benefitting functions of the University where Sponsored Projects are conducted. These cost groupings are allocated on the basis of the Modified Total Direct Cost (MTDC) of sponsored activities.

5) **Department Administration**

The allocation of the Department Administration cost pool is on the MTDC bases of the following: Sponsored Instruction, Organized Research, Other Sponsored Activities and Instruction & Department Research on a department-by-department basis.

6) **Student Services**

This pool is allocated on the basis of the ratio by cost objective of graduate and undergraduate student hours—both course credit hours and employment hours.

7) **Library Allocation**

The allocation basis for the cost pool is developed through a special study under A-21. Library costs are first separated into library functions: (a) **Collection Development/Processing and Maintenance** (CD/PM), defined as costs of obtaining and maintaining the Library collections; and (b) **Public Service** (PS), defined as costs associated with serving the users of the Library materials once the materials are available for public use. Second, cost of CD/PM and PS are allocated to user groups (undergraduates, graduates, faculty/staff and non-Stanford). CD/PM is allocated primarily on the basis of the target population for each library. PS is allocated based on the results of library user circulation surveys.

The resulting graduate and undergraduate user costs are allocated to the University academic cost objectives based on student hours, both employment and course credit hours. Faculty/Staff user costs are allocated to the University academic cost objectives based on faculty/staff salaries. Costs allocated to non-Stanford users are absorbed by the University.

V. Calculation of Rates

Indirect costs allocated to Organized Research on the bases described briefly above are divided by the Modified Total Direct Cost of Organized Research to develop the Indirect Cost Rate. The rate is the mechanism by which costs allocated to Organized Research are distributed to individual projects.

The table below shows indirect cost projections used in the January, 1982 negotiation of the FY83 rate. The first column contains the total costs of each indirect cost pool prior to allocation among the cost objectives, but after removal of the government-defined unallowable costs. The second column shows the dollar amount from the first column which has been allocated to Organized Research. The third column is the on-campus Organized Research Rate by original indirect cost pool component. The rate calculation assumed on Organized Research MTDC volume for FY83 of $89 million for both on- and off-campus work.

The components of the on-campus rate below are calculated by determining the portion of the indirect costs allocated to Organized Research in column 2 that are applicable to on-campus projects and dividing it by the appropriate MTDC base. Although simple in concept, the process involves numerous calculations which are handled by a computer program.

Note that the projected rate for Fy83 was 71.5 percent, whereas the negotiated rate is 69 percent. The University and the government negotiated a slightly lower rate than projected in exchange for expediting the timing of negotiations. The rates are fixed with carryforward. The carryforward is the difference between the negotiated rate based upon estimates and the precisely calculated and audited rate determined after the close of the year when actual costs and bases are known, applied to the actual MTDC base. The carryforward may be an overrecovery or an underrecovery of costs and becomes an adjustment to future years' rates.

VI. Treatment of Indirect Costs in the Operating Budget

Reimbursed indirect costs are treated as unrestricted

Siegman suggests every budget should bear overhead costs

Following is a proposal drafted by Prof. Anthony Siegman, electrical engineering, on overhead and indirect costs at Stanford.

The primary objective of this document — in addition to giving a brief tutorial for the uninitiated on what the term "overhead" means —is to present a proposal for a new approach to the overhead system at Stanford.

This new approach will by no means solve all the University's financial problems. It will, however, the author is convinced, change the environment and the approach to budgeting and to cost containment within the university in the only way that can make the overhead rate a constructive rather than a contentious and divisive subject within the university.

The problem of overhead, or more precisely of indirect costs, is by no means of concern only to sponsored researchers at Stanford. It touches directly on the interests of all of us at Stanford in being able to accomplish the maximum amount toward the University's (and our own) goals, within the resources available to us; and we should all be concerned about it.

Why Discuss Overhead Now?

This seems a particularly appropriate time to discuss the overhead problem at Stanford. The university has once again raised its indirect cost rate or "overhead rate" on government-sponsored research contracts, from 58% to 69%, and has also for the first time imposed a still higher overhead rate of 73%, going to 79%, on industrially sponsored research.

The rate for government-sponsored projects threatens to go as high as 85% within the next few years. Yet despite these increases university officials have warned of impending budget problems, which they attribute in large part to reduced indirect cost recovery on sponsored research contracts, caused by lower than expected volume of sponsored research on campus.

President Donald Kennedy has meanwhile called for uniform treatment of university overhead rates by all government agencies, after the National Institute of Health nearly succeeded in adopting a policy under which NIH would have simply refused to pay 10% of the University's negotiated overhead rate. And, Representative Bedell of Iowa has given wide publicity to some essentially trivial but embarrassing audit findings, which seem to show that Stanford accidentally included charges for the *Stanford Magazine* and a golf course irrigation system in its government overhead rate proposal.

The most recent rate increase has produced the angry complaints from Stanford researchers heard each time the overhead rate is raised (this rate was only 42% as recently as 1968). There is, however also a growing conviction among faculty members active in sponsored research that the University simply cannot follow the present course of apparently never-ending overhead increases forever. Overhead consumes such an increasing fraction of contract funds, especially when coupled with the effects of inflation, that at some point Stanford will no longer be competitive for research funding with other universities or with industry.

More serious than that, for some of us the rewards of obtaining and managing sponsored research funds may become just no longer worth the headaches involved. The present system is just not stable in the long term. It is likely to come apart in a very serious fashion at some time in the future — a time which may come sooner rather than later.

What Is Overhead?

Perhaps it will be helpful if, before proposing solutions, we first walk through a quick elementary explanation of what the term overhead" really means at Stanford.

Income in the form of dollars which can be spent for university purposes comes into Stanford from many sources — tuition, endowment income, gifts, government and industry sponsored research contracts and grants, and educational contracts and grants. Some of this income is unrestricted, while other parts of it are sharply restricted in how they can be used. Although overhead is a very complex topic, we will get all the essential features if we think of the Stanford faculty and administration as spending all of this university income for either *direct* or *indirect expenditures*.

Direct expenditures occur when the Stanford administration, or one of its departments or schools or laboratories, spends money to accomplish any of the direct missions, such as teaching or research or scholarship, of the university. *Indirect expenditures* occur when the Stanford administration, through one of its support branches, spends money to carry out any of the support and administrative tasks that are necessary to maintain or support or manage these direct expenditures.

Faculty salaries, student salaries or fellowships, supplies and equipment, travel and computer costs — all of these when carried out in direct pursuit of research or educational objectives are (or should be) direct costs.

In addition, under Stanford's accounting system salaries for employees and staff members who work directly on these objectives —secretaries, technicians, machinists — are also direct costs or expenditures. Direct expenditures are made, for the most part, by individual faculty members, or by schools or departments or laboratories, as when a researcher buys research supplies or hires a staff member, or a department appoints a faculty member.

On the other hand, the costs of running Stanford's central accounting and payroll system, and its Health and Safety offices; the central university administration generally; the Office of Development; the costs of heating, lighting and maintaining buildings; the costs of roads, landscaping, and grounds maintenance; certain departmental and School administrative costs; and many of the costs associated with the library system — all of these are considered to be indirect costs.

Indirect costs for the most part are for facilities or services which support the primary missions of the university; which benefit all or a large number of the direct-cost activities on campus; and which would be difficult to assign or charge out to individual direct activities on campus. Appendix A lists all the categories of indirect costs, which together constitute the overhead.

How Is the Overhead Rate Calculated?

During each year the university pays all of these indirect costs out of university funds. At the end of each year, however, the university adds up all these indirect-cost expenditures, and assembles them into various "indirect-cost pools". For each pool it then estimates, using various formulas, what fraction of that pool of indirect costs should be fairly assigned to unsponsored direct-cost activities, like teaching and unsponsored faculty research (which are in essence paid for by university tuition, gift and endowment funds); what fraction should be assigned to *sponsored* research and teaching activities (which are paid for through grant and contract funds the university has received from outside sponsors); and what fraction should be assigned to other institutional activities (such as residences and food service, to Hospital, and the Athletics Department). Federal-government-sponsored research is of course by far the biggest contributor to this latter category.

Indirect expenditures made on road maintenance, for example, may be divided between sponsored and unsponsored categories in proportion to assigned square footage of space. Costs of heating and building maintenance are allocated on the basis of a complex inventory of building usage and the square feet of floor space allocated to each kind of activity. Certain library costs may be allocated on the basis of student head count. All these allocation procedures, whatever they are, must be negotiated with government officials and auditors, who must agree that the allocation of indirect costs to government-sponsored activities is reasonable.

The university determines from these formulas the total dollar amount of the indirect costs that should be allocated to sponsored projects (sponsored research or teaching), and then divides these indirect costs for sponsored projects by the total expenditures for *direct costs* on the same sponsored projects during the same period, to get a *percentage overhead rate* for sponsored projects on campus. This overhead rate is currently 69% on government-sponsored research projects on campus, and 79% on industrially sponsored projects, as mentioned above.

plicated than this, because of "cross-correlation" effects. For example, staff workers in the Controller's Office (an indirect cost area) use the roads (another indirect cost area); while the road maintenance workers have their paychecks prepared by the university payroll system.

Each indirect cost activity or indirect cost pool must thus be cross-assessed for part of the indirect expenditures in the other pools, in a complicated "step-down" calculation, to determine the final overhead rate. The final results of this process for 1982-83 (based on cost data from 1980-81) are tabulated in Appendix A.

Who Pays Overhead?

Once the overhead rate has been determined, any direct expenditures made by anyone spending *externally sponsored* research and teaching dollars on campus are then assessed an indirect cost rate or "overhead rate" — in essence, a spending tax—on almost every direct expenditure as it is made.

Every dollar a researcher spends out of a sponsored research contract, for example to pay for summer salary or for academic year salary offset, or to pay a student research assistantship, or to buy supplies, or whatever, thus incurs 69 cents in overhead.

(Note that many faculty members in Engineering and other departments pay up to 50% of their academic year salaries from contract funds; this is referred to as ååsalary offset". Salaries of adjunct research faculty are of course paid entirely from contract funds. All these salaries carry overhead.)

This 69 cents of overhead is immediately taken out of the sponsored contract and transferred into university general (unrestricted) funds. When a sponsored researcher, for example, travels on contract funds to Washington to report to the sponsoring agency, the airline tickets, hotel bill, and taxi rides all bear this 69% overhead. The only expenditures not taxed are purchases of equipment items above a certain minimum dollar value (typically $500 to $1,000) and outside subcontracts.

Direct expenditures for research, teaching, supplies or travel by faculty members or others using university funds derived from tuition or endowment (or gifts, or foundation grants) do not, however, pay such an overhead — at least not directly or visibly. There is no visible "overhead rate" assessed on such nonexternally-sponsored activities, (even though it is calculated in the overhead determination process).

The effects of overhead on a typical research budget for an experimental project in science or engineering are illustrated in Appendix B attached to this report.

What Is the Problem?

The final result of all this is quite clear. Those faculty members who attempt to achieve fundamental university goals by raising and using outside sponsored funds pay an immediately visible 69% (or79%) tax as they spend each dollar they have obtained.

Other faculty members who work toward the same goals using funds derived from university sources (tuition, endowment or gifts) do not directly pay, and in many cases are not aware of, this indirect cost burden. The indirect costs associated with their activities are still paid, of course, by university funds, but without their being directly aware of it or seeing it happen.

This system is perceived as very unfair and very inequitable by many of the principal investigators on sponsored research projects. Some will assert (incorrectly, I believe) that the overhead on their contracts is a "ripoff," used to support the rest of the university. Many others believe the university manipulates the overhead rate to at least some extent, in order to achieve the same objectives.

Whatever the truth in these complaints — and I am only reporting, not supporting them here — it is true that principal investigators have no opportunity to control or to reject any of the services contained in the indirect cost rate, or to shop for alternative ways of obtaining these services at lower cost.

The overhead process is essentially open-ended: the university administration carries out the indirect functions; sees what they cost; and then assesses the sponsored projects for those costs, whatever they come to. The principal investigators must then attempt to do the research they proposed, as best they can, with whatever funds are left.

Given the university's financial problems, moreover, there certainly would be at least a temptation to manipulate indirect cost allocation formulas, within the limits set by government

continued on next page

Indirect costs/

continued from page 19

income in the budget process. Indirect cost recovery is second only in magnitude to tuition and fees as a source of unrestricted funds and, therefore, is very important to funding the University's operating budget. It is important however, to remember that indirect cost recovery is a reimbursement of identifiable costs rather than an income item in the usual sense.

* The Indirect Cost Rate is sensitive both to changes in the dollar level of each indirect cost pool and to changes in the direct cost objective dollar levels. An increase in the volume of direct research base greater than the increase in indirect cost pools will cause the rate to stabilize or even decrease. This was evident in the 1977-80 period when just such events occurred and the indirect rate was almost unchanged from year to year. FY83 indirect rates assume a direct cost base increasing at a rate lower than the last four years, leading to a multiplier effect on the FY83 rate, i.e., continued increasing indirect costs and a slowing in the growth rate of the Organized Research direct cost base produce increased indirect cost rates.
* The goal of indirect cost recovery and indirect rates is, simply stated, full and equitable cost allocation and recovery of legitimate University costs.

VII. Conclusion

There are several concluding points which will consolidate information and provide insights into the necessity for, and the future of, indirect costs.

* Indirect costs are carefully allocated "real" costs; they are not a tax or profit for the institution. Through the Operating Budget, indirect cost recovery is used to fund the costs incurred in each of the indirect cost pools to maintain acceptable levels of service and provide a physical environment to contribute to Stanford's continuing preeminence as an instructional and research institution.
* Stanford is not alone in experiencing rapid increases in indirect cost pools. Everyone, not just universities, can attest to skyrocketing utility costs. Additionally, all educational institutions are subject to A-21 cost accounting requirements and the ramifications of this change on indirect rates. Educational institutions that don't pursue a full cost recovery policy may place greater pressure for increase on tuition and fees, endowment income, gifts, and other sources to fund the budget. Years of study and development of the financial equilibrium concept have shown that failure to pursue full cost recovery jeopardizes the financial future of the institution.

Indirect costs/Siegman...

continued from page 20

oversight, to load as much cost as possible onto outside sponsored funds. Suspicions of this are not helped by the administration's tendency in some instances to describe indirect cost recovery as a kind of "income."

The most serious problem, however, is not with the principal investigators who pay overhead, or with the devisiveness and hostility that this engenders. It lies instead with all those individuals in any area of the university *who do not pay overhead, and thus are not as aware as they should be of the indirect cost burden.* Some of these individuals are aware of the reality and the magnitude of indirect costs, and of the indirect cost burden carried by all university activities — but in my experience such awareness is still limited.

In any case these individuals do not share, I suggest, the same real understanding of the necessity of paying indirect costs, nor the same real commitment to *reducing* the indirect costs associated with the functioning of the university. This is a political question. *You have to pay overhead to be really concerned about overhead.*

What Should Be Done?

As a much younger faculty member I spent many years berating university administrators and provosts about the inequity of the overhead rate. With age I came to accept that the university's overhead process for sponsored research was more or less honest.

That does not, however, make it fair or equitable, or effective in its objective — which should be to support the indirect needs of the university's operations with the minimum financial burden on university funds and on the fundamentally important direct-cost functions of the university.

The overhead situation will not begin to improve, I am totally convinced, until the university moves to an accounting procedure in which *all* direct allocations of university funds are made only to direct-cost expenditures, and the indirect costs in the university are covered entirely by an overhead rate *which is imposed, uniformly and without exception, on every direct-cost expenditure in the university* (including the Stanford Museum, Memorial Church, and even if possible the Sunday Flicks and the *Stanford Daily*!).

This would be accomplished in essence by taking all the university funds now used to support nonsponsored indirect costs; reallocating those funds to the nonsponsored direct activities; and then collecting them back as overhead on the nonsponsored activities. In other words, we must have a policy of "overhead for all," in which *every expenditure of funds within the university would either be overhead or bear overhead.*

It must be emphasized at once that this is (a) *not* merely an accounting gimmick, and (b) *not* a proposal aimed in any way at redirecting the flow of resources among different direct objectives or areas within the university.

What a policy like this would mean in practice, for example, would be that next year's budget allocation for, say, the English Department would be immediately increased by 69%; but then each month, every time the English Department paid a professor or bought a ream of paper, every such expenditure would be taxed with exactly the same overhead as comparable expenditures on a sponsored research project.

Adoption of this system thus would not — at least initially —necessarily lead to any changes in the net flow of resources in the university. No department or activity would become either richer or poorer (and no more dollars in total would flow either into or out of the university). But many more people would become directly aware — as they now are not — that if the indirect costs in the university could be reduced, or at least kept from growing, they would be able to retain more of their money" to spend on things they would like to spend their money on.

Possible Disadvantages?

Before arguing in more detail the real advantages that this new approach would bring, let us first dispose of some of the objections that are likely to be raised:

1) Imposing overhead on everyone will require much more accounting. This is simply not true. In order to compute the overhead rate for sponsored projects under the present system, the university must already keep detailed records of all the indirect costs in the university, and then go through the complex process of allocating them between sponsored and nonsponsored activities. An overall uniform overhead rate will be both conceptually simpler and simpler to operate. Actually collecting the overhead, as a computerized bookkeeping transaction, is no more difficult than the present necessity to keep track of whether every expenditure does or does not bear overhead.

2) Certain funding sources, for example foundations and many gift donors, simply won't pay overhead. This is true, but it is in fact an argument for rather than against a uniform overhead rate. If there is any point that university officials have consistently (and validly) made in overhead discussions with sponsored researchers over the years, it is that *indirect costs are real costs.* Somebody has to pay those costs. If a donor or a foundation sponsors an activity at Stanford without paying overhead, the additional indirect costs must still be paid somehow, behind the scenes, from university funds. The deception is that many of the people involved (including the donor), who should recognize this fact, do not do so.

> ***...we must have a policy of "overhead for all," in which every expenditure of funds within the university would either be overhead or bear overhead.***
>
> ***—Anthony Siegman***

3) A uniform overhead rate would actually be higher than the present sponsored research overhead, since there are real indirect costs (fund-raising and interest costs, for example) which the government refuses to pay. The answer to this is the same as for the previous objection. If this is true, let's get it out on the table. If sponsored researchers are in fact getting hidden subsidies from university funds, let these be instead explicit direct allocations of university funds.

What Will Be the Advantages?

These can be very briefly stated, but are not therefore to be minimized:

1. A uniform and universal overhead rate will bring perceived fairness and equity to the overhead collection process throughout the university. This is not the case now. There is suspicion at best, and hostility at worst, among the overhead-paying principal investigators.

2. Everyone in the university will become equally aware of the reality and the importance of indirect costs in the university. It seems worth making this point once more: you have to pay overhead to be really concerned about overhead. When you become concerned about overhead, you begin really looking for ways to reduce it — especially if you know that this will benefit you directly.

3. All university budgeting and financial planning can be carried out in real, comparable dollars. When an allocation of $10,000 of unrestricted university funds is made to some project at present, this really means that in excess of $17,000 of university funds is going toward that project, counting the hidden indirect cost subsidization. In the future everyone will realize that this subsidy is present — and also that so long as the overhead rate stays at 69% a $10,000 total budget has only about $5,900 worth of buying power toward the real objectives of the project.

4. Our position vis-a-vis external agencies will be strengthened. The validity of the overhead rate we charge to external and especially governmental agencies will be much less assailable if we charge exactly the same rate on the spending of all of our own funds internally.

5. Most important of all, it will give everyone on campus an equally heartfelt motivation to reduce unnecessary indirect costs. This is of course the real objective, or should be, for all of us. If we want to continue to do the things we think important within our available resources, we've got to turn off the lights when they're not needed; consider the hidden indirect cost implications of the policies we adopt; and increase our concern for indirect cost control.

What About Loopholes?

When and if such an "overhead for all" system is finally adopted, it will be very important (a) that the indirect cost rate be essentially uniform across all activities in the university, and (b) that every activity be assessed overhead.

As with every tax system, there will be enormous pressures for special exemptions from the tax, for "poor" departments, or for student activities, or for what are perceived as particularly meritorious programs, whether these be affirmative action appointments, or scholarships, or whatever. These must be resisted if the system is to achieve its objectives of perceived fairness, genuine fairness, and uniform treatment across the university community.

Special support for especially meritorious programs should come through direct allocation of additional university funds in the regular budget process, visible and understood by all. The overhead system should be an accounting mechanism for paying the unavoidable indirect costs in the university, and nothing more — in particular, it should not become an indirect way to differentially allocate university resources.

Visibly perceived equality of rates and of treatment is also much more important than accounting sophistications. If a History graduate student receives a fellowship support check through the university accounting system, that check should bear the same overhead rate as the paycheck received by an Electrical Engineering graduate research assistant, even though the funding source for one may be a Ford Foundation gift and for the other an AFOSR research contract.

If a student activity requires university facilities and administrative time and effort, the funds involved should pay for those indirect costs through the same overhead rate as everyone else. Recipients of gifts from donors who "will not pay overhead" should have to seek the necessary allocation of university operating funds to pay that overhead — not receive it as a hidden subsidy.

Some categories of direct expenditures in the university may seem to justify an additional indirect cost burden, because they consume special resources or require special administrative services. Solving these problems through differential overhead rates should be avoided if at all possible. If a differential overhead rate seems the only solution, then the people in these higher-overhead categories should have exceptional opportunities to question and control those differential indirect expenditures, and even to reject them in favor of purchasing the same services independently.

What Are the Alternatives?

If the university professes to be unwilling or unable to move to a visibly uniform, fair and equitable overhead structure of the type proposed here, what then are the alternatives? I can see only a few, none of them very acceptable.

I believe the university should in any case attempt to close at least part of our present financial gap not just with another "Budget Adjustment Program" or BAP, but with a specific "Indirect Cost Adjustment Program" or ICAP. This ICAP should focus specifically, and with a goal, on the reduction of indirect costs rather than the reduction of the university budget in general.

Beyond this, the university could conceivably set a target, in the form of a permanent cap, on the maximum overhead rate it would regard as tolerable; and then determine what would have to be done to live within the income that overhead rate would generate. This would not mean giving up the principle of full recovery of indirect costs; it would mean however forcing those costs to stay within the available income, come what may (as indeed most principal investigators must do now with the direct cost portions of their research budgets).

But suppose none of these are done; the overhead rate on sponsored projects climbs in a few years time to 85% and beyond; the situation deteriorates in the fashion that this would cause; and my colleagues in engineering and science then ask me what I think we should do.

My answer at present would be that the principal investigators on campus must then realize that determination of the overhead rate under the present system is essentially an adversary process, in which the sponsored researchers have no lawyer in the courtroom.

This is not to attack in any way the motives or the performance of any of the dedicated university administrators who struggle with the university's difficult financial problems. It is to recognize, however, that existing university officers, such as the Vice Provost for Research in particular, must both represent principal investigators to the university central administration and represent the university central administration to the principal investigators. They must thus consider and attempt to reconcile the interests of both.

What one must have in an adversary proceedings, however, is an advocate who is strictly concerned with one's own interests, and nothing else. My advice, therefore, would be that the principal investigators in the university must then join together to hire a skilled and knowledgeable representative, a full-time advocate, who would represent and be responsible to them alone. The principal investigators must then insist to the university administration that they be given the opportunity, through this advocate, to examine, question, quarrel with, and if necessary to reject every single point of indirect cost in the overhead. There must be the opportunity to say, "we don't accept that allocation formula as equitable", or "we don't want that particular service, we can't afford it, we'll do without it, or take care of it ourselves — please count us out on that particular indirect cost".

These last few paragraphs do not, I would strongly emphasize, represent the kind of considered response to the overhead problem that I would want to urge now, or even later. My strongly held conviction is that the "overhead for all" approach is the only approach that will serve the interests of all of us. Lacking this, however, or at least some close facsimile to this, the situation may indeed deteriorate in this direction in the future.

Anthony E. Siegman, Director
Edward L. Ginzton Laboratory
26 November 1982

Indirect costs/Siegman...

continued from page 21

Appendix A: What Makes Up the Overhead?

To set the overhead rate, the university's actual expenditures for various indirect costs are collected into indirect cost categories or "pools", which are then added together to make up the total overhead rate. The second and third columns of the following table show the projected contributions each of these categories will make to the total overhead rates for government-sponsored projects and industrially sponsored projects during the academic year 1982—83, based on 1981—82 expenditures. The fourth column shows the approximate fraction of the total overhead rate contributed by each of these indirect cost categories. The overhead rates actually being used in 1982—83 are 69% and 79% respectively.

The expenses included in each of these pools can be briefly summarized as follows:

Depreciation includes depreciation and use allowances for capital assets, including buildings (2.3%), university-owned capital equipment (4.1%), and roads, pathways and other improvements.

Operations and Maintenance (O&M) includes utility costs, building and grounds maintenance, janitorial, fire and police, insurance, major repairs and alterations.

General and Administrative (G&A) includes the central administration from the Board of Trustees down through the Dean's Offices, plus Personnel, Controller's Office, Procurement, and Risk Management; plus some costs at the school and department level.

Departmental Administration includes activities at the school and department level such as planning, advising, graduate admissions, department record keeping and accounting, proposal preparation, all departmental committee work, and sabbatical leaves.

Student Services includes Dean of Students, Office of Admissions, Registrar, Financial Aid, Health, Student Activities, and Placement.

Library Expense covers operation of the Stanford University Library System.

Carry Forward represents costs from earlier years not recovered because of inadequate earlier overhead rates.

TABLE A

	Gov't Rate	Indus. Rate	
Depreciation	6.8	6.8	10%
Operations and Maintenance	16.6	17.3	24%
General & Administrative	12.9	13.7	19%
Departmental Administration	20.0	22.8	29%
Student Services	3.2	9.5	5%
Library Expense	10.3	10.7	16%
Carry Forward	2.1	2.1	3%
Total Overhead Rates	73.7%	84.7%	100%

Appendix B: A Typical Research Budget

It may be of some interest to look at a typical sponsored research contract budget, such as might apply to an experimentally oriented research program sponsored by NSF or by a DOD agency, which supports two Ph.D. students in a Stanford science or engineering department. A copy of such a budget follows.

As a representative example we have assumed a research contract with total annual budget of $120,000. The research is carried out by a faculty member with an academic year salary of $40,000 plus two Ph.D. students who have 50% research assistantships during the full year (for which they are generally expected to work 100% time, if not more!).

The faculty member, as is common in such departments, pays from contract funds 20% of academic year salary and 50% of summer salary on this contract (plus probably equal amounts of salary from a second contract of comparable magnitude). The contract also supports 1/6 of a laboratory technician or machinist, 1/6 of a departmental or laboratory administrator, and 1/6 of a secretary.

Representative Contract Budget for Calendar Year 1983

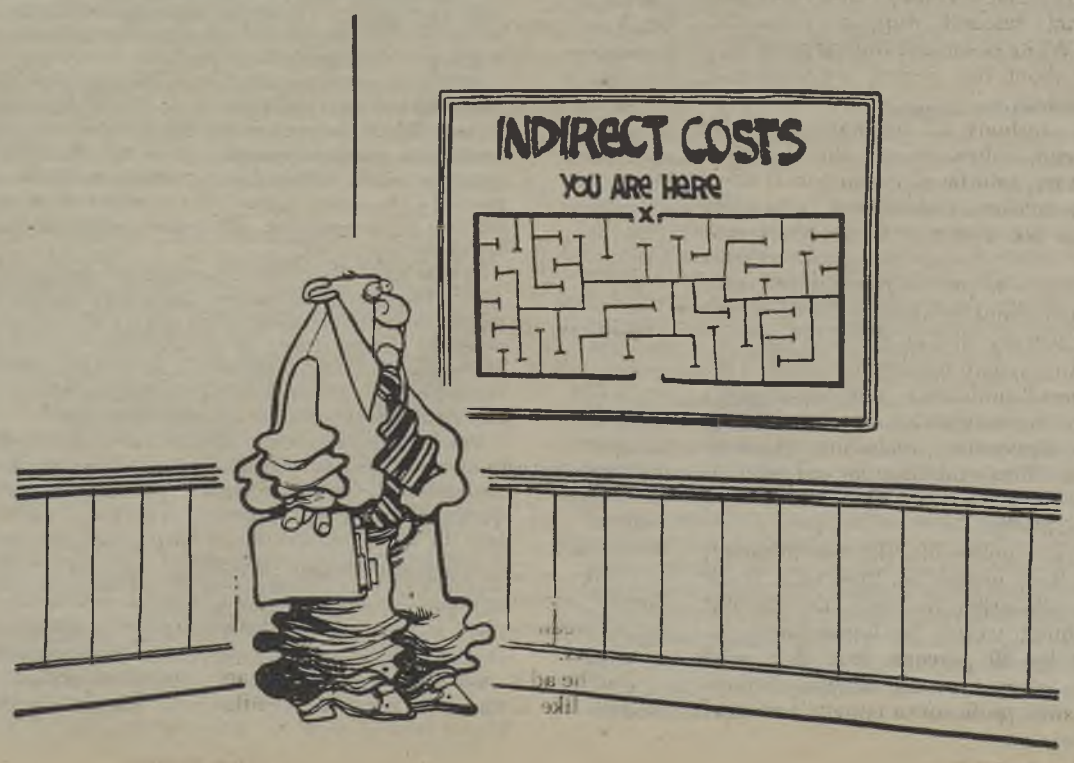
TABLE B

Representative Contract Budget for Calendar Year 1983

A. Salaries and Wages:	
Faculty salary (3.5 months at $40,000/9 months)	15,600
Two Graduate Research Assistants (50% time)	16,100
Two Technician months at $2,900 per month	5,800
Two Direct Administrative months at $2,050 per month	4,100
Two Secretary months at 1,950 per month	3,900
Total Direct Salaries	$45,500
B. Staff Benefits	
21% of salaries (and rising); also carries over head.	9,600
C. Expendable Materials and Supplies	
Chemicals, gases, metals, glassware, electronic parts	6,000
D. Travel	
To professional meetings or the sponsoring agency	1,000
E. Reports and Publications	
Preparation and mailing of reports and publications	800
F. Communications	
Telephone, shipping, mailing delivery costs	1,000
G. Computer Cost	
Computer charges, supplies, maintenance contracts	1,200
Modified Total Direct Cost, or MTDC (sum of all above)	$65,100
H. Indirect Cost	
Overhead at 69% of MTDC	44,900
I. Capital Equipment	
Apparatus costing over $1,000 (does not incur overhead)	10,000
Total Contract Cost	$120,000

Comments:

Several significant aspects of this budget may be worth noting for those not familiar with such research contract budgets:



1) This is a relatively modest budget. The amount of supplies, technical support, and capital equipment are modest, if not really inadequate, for an experimental program supporting two Ph.D. dissertations. The impact on such a budget of raising the faculty salary rate to a more senior level — or of supporting an adjunct faculty member or research associate, whose entire salary must be paid — can readily be judged.

2) A number of items in this budget — such as secretarial costs, direct administrative costs, reports costs, and telephone service — would in many other organizations be considered indirect costs, to be covered by the overhead. In the university, however, these are all direct charges paid by the contract funds — and indeed overhead is paid to the university on these direct charges.

3) The central administrative and accounting services provided by the university within the indirect cost pools are generally not adequate to meet the full administrative needs of even a modest project such as this. Nearly every faculty member, department or laboratory doing sponsored research must purchase as a direct expense (and pay overhead on) additional direct administrative assistance, to interface with the university administration.

4) Perhaps it needs to be said that all those laboratories and technicians and computers and machine shops that one sees in the research-active parts of the university are *not* in general provided by university funds. They are bought, or paid for, or maintained directly by contract funds, on which overhead is paid.

5) Finally, what every principal investigator finds continually distressing is the appallingly small amount of research that a budget of this size — supported in most cases by taxpayers' funds — will accomplish. If one sets aside the other salaries, overhead, and miscellaneous costs, then the items that are really directly useful in doing an experimental research project — the supplies and expendables, computer costs, capital equipment, technician support and the graduate students —add up to less than $38,000 out of a $120,000 total budget. These amounts, moreover, as most researchers will recognize, are really not adequate for a state-of-the-art research program. The rule of thumb for a minimal experimental research program is something like $75,000 to $80,000 of research support per Ph.D. project per year — and that only with the assumption of 4 to 6 such Ph.D. projects per faculty member.

Full cost recovery on research increasingly difficult, Lieberman

Continued from page 1

For the current year, these direct expenses are expected to total about $89 million.

For many years, Lieberman noted, indirect costs associated with research have risen faster than inflation. These include skyrocketing utility costs, expansion of physical space for research, and greater accountability to the government.

Space-related expenses account for almost half of all indirect costs. Building operation, maintenance, and depreciation were projected last year to total about $28 million in 1982-83.

General administration, departmental administration, sponsored projects, and student services related to research were projected at $26 million. About $6 million was estimated for library costs associated with sponsored research.

Total indirect costs allocated to research are projected to exceed $60 million this year, amounting to about 69 percent of the direct expenditures. This rate, negotiated with the federal government, excludes those costs not allowed by federal rules.

This "arbitrary underrecovery" is similar to such federally funded programs as Medicare, President Donald Kennedy told the Senate.

Earlier this year, Kennedy and several other university presidents successfully argued against an arbitrary 10 percent cut in payments on the federally negotiated rate proposed by the National Institutes of Health.

"To just increase the indirect cost rate in order to collect what we refer to as "full recovery' is not a simple solution," Lieberman told the Senate. "As you know only too well, both researchers and their sponsoring agencies are concerned about universities' rapidly rising indirect costs, arguing that every dollar going into overhead is simply one less dollar going into the direct support of research."

Industry rate higher

Prof. Robert White, chairman of electrical engineering, asked why the indirect rate charged on industrially sponsored research at Stanford now is 79 percent. Associate Controller Franklin Riddle replied that this includes costs related to research which are not allowed under federal rules.

The difference in indirect rates raises questions when Stanford researchers seek additional research support from industry, White observed. Industry last year funded about five percent of Stanford's total research.

Prof. Anthony E. Siegman, electrical engineering, director of the Ginzton Laboratory, said faculty members funded through tuition, endowment, and gifts often are not aware of this indirect cost burden.

"You have to pay overhead to be really concerned about overhead," he declared. The University should move toward an accounting system where an overhead rate "is imposed uniformly, and without exception, on every direct cost expenditure in the University, including Stanford Museum, Memorial Church and even, if possible, the Sunday flicks and *The Stanford Daily*.

"What a policy like this would mean, in practice, would be that next year's budget allocation for, say, the English Department would be immediately increased by 69 percent. But then each month., every time the English Department paid a professor or bought a ream of paper, every such expenditure would be taxed with exactly the same overhead as comparable expenditures on a sponsored research project."

Initially, at least, this would not necessarily lead to any change in the flow of resources within the university. But it would greatly increase awareness that "indirect costs are real costs."

"Somebody has to pay those costs," Siegman noted. "If a donor or a foundation sponsors an activity at Stanford without paying overhead, the additional indirect costs must still be paid somehow, behind the scenes, from university funds. . . .

"A uniform overhead rate would actually be higher than the present sponsored research overhead, since there are real indirect costs—fund-raising and interest costs, for example—which the government refuses to pay. . . . If sponsored researchers are in fact getting hidden subsidies from university funds, let these be instead direct allocations of university funds."

A uniform, universal rate would increase the perceived fairness and equity in collecting overhead, he added. "This is not the case now. There is suspicion at best, and hostility at worst, among overhead-paying principal investigators."

Such a change would strengthen the University's position in dealing with external agencies, he noted. "Most important of all, it will give everyone on campus an equally heartfelt motivation to reduce unnecessary indirect costs."

Lieberman said MIT had considered a similar change, but dropped the idea as "too complex." He announced appointment of an advisory group on indirect costs including Engineering School Profs. Robert Street, James Meindl, and William Reynolds; Humanities and Sciences Profs. Robert Simoni, Richard Zare, Jeffrey Ullman, and Theodore Geballe; and Medical School Profs. David Korn, Donald Harrison, and Dale Kaiser.

Prof. Nathaniel Gage, education and psychology, suggested the group needed an "accountant counsel," since "one side has all the expertise" at present.

Kennedy praised the comments made by Siegman, White and Gage. Provost Albert Hastorf said to Siegman "I'm not at all sure your idea is workable, but I support the notion back of it."

"What we don't want is more divisiveness," Siegman said in reply.

—Bob Beyers

Harding book examines Chinese communist bureaucracy

Future performance of the Chinese Communist Party bureaucracy depends largely on its own self-control, Stanford Prof. Harry Harding indicates in a new Stanford University Press book, *Organizing China: The Problem of Bureaucracy 1949-76* (418 pp. cloth $29.50).

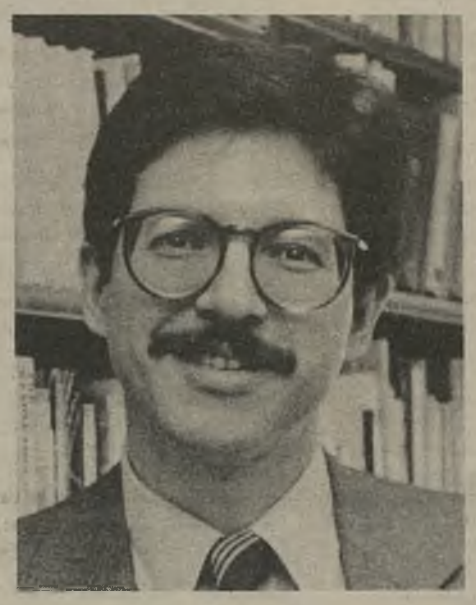
"Under Communist Party rule, China has been transformed from what Sun Yat-sen described as a 'sheet of loose sand' into one of the most highly organized societies in the world," Harding notes.

Besides moving rapidly to create a "closely meshed system of mass organizations" after coming to power, Chinese Communist leaders created "an administrative apparatus, centering on the state and party bureaucracies, that has exercised broader and tighter control over Chinese society than any previous government in the country's history. . . .

"China today is a society without powerful legislative bodies, an independent press, autonomous mass organizations, or a visionary charismatic leader.

"Unless Mao's successors are willing to undertake fundamental institutional reforms, the prospects for subjecting the Party and state to effective external controls are bleak indeed."

Without such reforms "performance of the communist bureaucracy will depend largely on its own self-control, just as the behavior of China's imperial government depended largely on the self-discipline of its officials.



"In the past, bureaucratic self-control produced both periods of benevolence and periods of despotism. The question for the future is whether an ethos of public service will ensure humane government, or be too weak to prevent China from evolving into an unresponsive and inflexible authoritarianism."

Social welfare

Harding believes that "the organizational network established by the Chinese Communists has been able to promote a reasonably high rate of economic development and has created an even more impressive degree of social welfare and economic equality for a developing society. . . .

"Chinese leaders have usually been harsher critics of the performance of their own bureaucracies than have most outside observers."

But he adds that "a poor and backward society like China will inevitably suffer

Harry Harding

from shortages of trained and skilled officials as long as its educational system remains relatively small and primitive. . . .

"The Party's suspicion of 'bourgeois intellectuals' has often prevented it from using available human resources in the most effective manner."

The party's reliance on indoctrination, rectification, and mass campaigns to ensure flexibility, commitment, and efficiency in the bureaucracy has had "serious unintended consequences," he adds.

"Indoctrination and rectification have often produced stifling conformity among officials, a reluctance to take risks or independent initiatives, and disillusionment and cynicism at frequent shifts in the official line.

"The campaign style, in turn, has often led cadres to ignore routine work, provide their superiors with exaggerated and distorted information, apply directives blindly and unquestioningly, and employ coercion to force the people to accept rapid change. . . .

"The personal costs associated with such mechanisms are also high. An organization that demands commitment to a single set of absolute political and social values. . .and is prepared to subject its officials to intense psychological and social pressures to achieve that commitment can only trouble those who value intellectual freedom and individual human dignity.

"Chinese leaders are engaged in their most sweeping reassessment of organizational policy since the early 1950s. In so doing, they have compiled a long list of organizational shortcomings. An unacceptably small number of officials, they now reveal, have received middle-school or university educations. Few understand even the rudiments of administrative science or of substantive policy issues.

"Cadres are selected on the basis of class background rather than managerial ability, are promoted on the basis of seniority rather than achievement, and enjoy lifetime tenure regardless of performance. Many officials are now too old and feeble to put in a full day's work.

Organizational reform

"The Chinese are now considering a number of significant organizational reforms, including electing top officials at all levels of government to fixed terms of office, retiring cadres who are too old to work efficiently, removing or reassigning officials who do not perform effectively, promoting younger cadres to positions of greater responsibility, and retraining promising men and women in administrative practice, science, and technology.

"It is still far too early to know the effect of the reforms that Chinese leaders are now considering.

"It may be that, with the death of Mao Tse-tung, China's organizational policy has passed a crucial turning point, and that ideological indoctrination and mass campaigns will be set aside in favor of rationalization, formalization, and specialization.

"Or it may be that we are simply witnessing one more short-lived organizational experiment, after which the (bureaucracy) will once again return to its own center of balance, regardless of the suitability of that balance for a more modern and complex society."

The book is based on Harding's Ph.D. dissertation at Stanford. An initial draft was written in 1975-76 under a program of research leaves for junior faculty made possible by the Andrew W. Mellon Foundation.

Harding wrote a second draft while on leave as a national fellow at the Hoover Institution during 1977-78, receiving additional support from the Stanford Center for Research in International Studies and the Arms Control and Disarmament Program.

Senate report

Senate adopts policy on faculty hiring grad students outside Stanford

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 6

Summary of Actions Taken 12/2/82

At its meeting on December 2, 1982, the Senate took the following actions:

1. The Senate approved, by divided voice vote, a modification in the University Faculty Consulting Policy, subject to Professor E. Traugott's amendment that the last sentence in the modification be worded as appears below:

> Faculty members must be especially sensitive to potential conflicts of interest between their teaching responsibilities vis-a-vis graduate students working under their supervision and their outside consulting interests. To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's adviser or as a participant on that student's dissertation committee without the prior approval of the department chair (or dean, if the involved faculty member is also department chair).

2. The Senate approved, by unanimous voice vote the modification of the Secrecy in Research Guidelines as presented in Appendix B of the Annual Report of C-Res for 1981-82.

3. The Senate approved, by unanimous voice vote, the Annual Report of C-Res for 1981-82.

Minutes of the Fifteenth Senate
of the Academic Council
December 2, 1982
(Subject to approval 1/6/83)

A meeting of the Fifteenth Senate of the Academic Council was held on 12/2/82, beginning at 3:17 p.m. in Room 180 of the School of Law with Chairman A.L. Fetter presiding. Present were 32 Representatives, 8 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 11/11/82 were subject to one correction and one comment for the record. The correction pertained to page 2, Preliminary Long Range Financial Forecast, paragraph 2, line 2, where the end of that sentence should read ". . .and to expect to do so again for 1982-83." (not 1983-84, as the draft minutes stated). The comment for the record was made by the Associate Dean of Humanities and Sciences for Undergraduate Programs, Professor C. Lougee, who pointed out that though the minutes correctly recorded what had been reported to the Senate, it should be noted for the record and for the Senate's information that there are two errors of fact about the C-US agenda for 1982-83:

> 1. SWOPSI and SCIRE are not under review this year; Undergraduate Special Programs and the Learning Assistance Center are, and
> 2. The second matter of report for the Subcommittee on Residential Education and Advising is not Ethnic Studies but Ethnic Theme Houses.
> The minutes were accepted as amended.

Report of the Steering Committee

Chairman Fetter called attention to the fact that the Annual Report of the Committee on Computing and Information Technology (C-CIT) will be on the agenda for the first Senate meeting of Winter Quarter, January 6, 1983.

Report of the Committee on Committees

Chairman A. Mellor reported that *Rosters* has now been printed and distributed. There are a few committees for which membership lists do not appear in *Rosters*, but appointments to even those committees are now virtually completed.

Report of the President and the Provost

The President indicated his willingness to respond to questions, but said that he had no formal report to make to the Senate at this meeting. There were no questions.

The provost commented on three items:

1. He announced his pleasure that Professor Robert Jaedicke has been appointed Dean of the Graduate School of Business.
2. He stated that the report of the *Ad hoc* Committee on Overseas Studies chaired by professor A. Inkeles has now been received, and has been distributed to C-US, to the committee chaired by professor D. Rosenhan which is advisory to the Overseas Studies Program, and to the Director of the Overseas Program, Professor M. Mancall. It is expected that comments and recommendations based on the Ad Hoc Committee's report will reach the Senate, via C-US, sometime late Winter Quarter.
3. Finally, he remarked on the continuing publication of ratings of academic departments, reporting that ratings of Humanities and Sciences departments and of Engineering departments had now been published, with ratings of Biological Sciences departments and Behavioral and Social Science departments yet to come. He noted the superb ratings given Stanford Engineering departments (three of the four departments rated were rated in the top five), and also noted that six of the nine H & S departments rated were rated in the top ten. He congratulated colleagues in those departments and schools.

Annual Report of the
Committee on Research (C-Res)

The Annual Report of the Committee on Research (C-Res) for 1981-82, which appeared in *Campus Report* on December 1, 1982, was presented by the committee's chair, J. Keller. Concerning the recommendations for Senate action, Professor Keller noted with regret that the last portion of the final sentence was omitted in the revised paragraph on Faculty Consulting Policy in *Campus Report* and on the first page of the Annual Report. He pointed out that it does appear correctly in its proposed context on page 5 of Appendix A of the Annual Report. The final sentence of that recommended paragraph should have read: "Exceptions to this provision must be approved prospectively by the department chair (*or dean, if the involved faculty member is also department chair*)." (The portion earlier omitted appears here in italics.)

He noted that both recommendations for Senate approval are for modifications in official University policies (one pertaining to Faculty Consulting Policy and the other pertaining to the Secrecy in Research Policy) and briefly detailed the background which led to each recommendation for policy revision. He then called attention to a formal statement prepared and distributed to the Senate representatives at this meeting by the Graduate Student Association. The statement supports C-Res in addressing the problems of potential conflict of interest arising from outside consulting activities, but questions an absolute ban on the student's off campus employment in such circumstances. Invoking a third party (the department chair or the dean) is seen as one way of protecting the junior party's interests, not as a way of preventing his or her employment off campus.

Chairman Fetter assumed Senate consent to deal with the action items separately before proceeding to the acceptance of the Annual Report. He first called on William Smith, a graduate student guest of the Senate who was representing the Graduate Student Association, to comment on the GSA statement which was before the Senate representatives. He commented that graduate students in general favor the spirit of this recommendation, though some who would be directly affected feel that it may be premature and not entirely beneficial to their interests. The larger issue, the GSA feels, is unregulated and unobserved faculty consulting, and this particular problem may be only one of a number which derive from the larger issue. This is why the GSA report in the November 24, 1982 *Campus Report* makes a series of recommendations related to faculty consulting policies.

Following these reports, Professor Keller was asked how strong the evidence was that a problem exists. He responded that, unfortunately, the evidence was largely second-hand, mostly because affected students are hesitant to call attention to themselves by protesting their circumstances. Their concerns are apparently expressed through their peers on C-Res and through the Ombudsman. Dean Lieberman reinforced the point that students feel very vulnerable in such situations; they are reluctant to make their circumstances public knowledge and it is virtually impossible for them to decline to work for an advisor off-campus.

The question was asked if department chairs were likely to prove effective watchdogs on this kind of potential student exploitation, and also why the recommendation was couched in prohibitive terms if most cases were expected to be exceptions to the rule. Professor Keller responded that C-Res expected the rule to sensitize the faculty member to assume responsibility for requesting a third-party review when conflict-of-interest potential became apparent.

There was some discussion of the similarities and differences between potential conflict of interest problems on and off campus. Both clearly exist, but the off-campus potential for conflict of interest, President Kennedy pointed out, is clearly intensified by a professor's equity relationship or lucrative consultantship with industry. This opens up additional opportunities for conflict of interest. He further commented that in paying particular attention to such problems over the last couple of years, he had become convinced that there were real problems; that students do feel considerable pressure when they are asked to serve a faculty member in an outside context for pay. The fairness of such a situation is a matter for concern.

It was pointed out that the evidence presented by student members of C-Res and by GSA representatives at earlier meetings on this problem seems to contradict the written statement presented by the GSA to the Senate at this meeting. Prior testimony has indicated a serious conflict-of-interest problem and the need for University consideration of measures to alleviate it.

To avoid the apparent prohibition of all such outside professional employment, Professor E. Traugott offered a friendly amendment, rewording the last portion of the paragraph to read:

> "To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's advisor or as a participant on that student's dissertation committee without the prior approval of the department chair (or dean, if the involved faculty member is also department chair.)"

This would make it a regular procedure, not an exception, that a chair or dean always has to approve of such outside appointments.

While Professor Keller personally found the amendment acceptable, neither he nor Professor J. Meindl, Chair of the 1982-83 C-Res, felt free to accept the amendment without consulting the committee again.

There was further discussion of the wording of the C-Res recommendation and that of the amendment. There was support for the C-Res wording as fostering equity and serving as a safeguard against the exploitation of students, and also as promoting faculty awareness of the potential dangers of conflict of interest better than a standard review procedure would. There was also a suggestion that disclosure practices would solve the problem more appropriately than regulatory practices. It was pointed out by Professor B. Roth, however, that disclosure is often not sufficient control. The problem appears to be a larger one: we have problems with ambiguous policy and with unenforcible policy regarding conflict of interest. The GSA report (*Campus Report*, November 24, 1982) addresses the larger problem, but this C-Res recommendation appears to be a step in the right direction.

The question was asked why resistance to this recommendation is reported by the GSA when the policy change appears to be motivated solely to protect students from exploitation by faculty members. The response was that the recommendation is so worded that most people affected by it will be exceptions to the law, and the strength of the wording will cause some students to believe they can't get a job under these circumstances.

Dean Lieberman reminded the Senate that the students under discussion are engaged full time at Stanford (50 percent as students and 50 percent as TA or RA) with an opportunity to work up to eight hours per week outside without jeopardizing their Stanford status. He expressed his view that chairs or deans would be expected to act on these cases not in a routine fashion but rather by considering whether or not the outside work experience would be beneficial to the student.

Related questions were asked regarding other aspects of potential conflict of interest (involving summer employment, e.g., with the same faculty-student relationship pertaining). While some of the same potential problems exist, the University has no jurisdiction over a non-registered student and has no option but to consider him/her a free agent. W. Smith, speaking for graduate students, commented that a major concern for students is preferential treatment for students who do consent to work for advisers off-campus. That serves as a powerful motivation to accept such an offer, even when they prefer not to do so. He also pointed out that he had reported both sides in earlier testimony, both that there were serious problems perceived as motivated by conflict of interest, and that there were many students who want to work with their advisers off campus, and see no problem in so doing. Graduate students do want a third party informed about these situations, but at this

Senate/ continued from page 24

point they don't want such outside work prohibited.

It was pointed out in further discussion that the policy change contains no guidance for chairs or deans in making a decision in such cases, or in determining in what ways a work experience is to be judged as beneficial to the student. The recommendation was criticized as setting up a prohibition to which the majority of cases would be exceptions, and defended as raising faculty consciousness, offering a mechanism for control and, in the absence of a better alternative, better than doing nothing about a recognized problem.

It was pointed out again that there are conflict-of-interest problems which go beyond this specific issue, that the possible exploitation of students and the question of equity in the treatment of students (regarding, for example, access to equipment and proprietary information) are separate though related issues, and that when a relationship is both commercial and academic there is a greater potential for the relationship to go sour. When that happens, the commercial issues can cloud the academic association, and the student could feel victimized.

At the close of the discussion, Chairman Fetter presented the C-Res recommendation for modifying the Faculty Consulting Policy to the Senate for a vote. At this point, Professor H.C. Heller seconded the Traugott amendment to the C-Res paragraph. The voice vote on the amendment was divided. The Chair ruled that the amendment failed, and a show of hands on the vote was requested. The amendment passed on a divided vote.

The amended modification then read as follows:

> Faculty members must be especially sensitive to potential conflicts of interest between their teaching responsibilities vis-a-vis graduate students working under their supervision and their outside consulting interests. To avoid such conflicts, a Stanford faculty member may not hire or directly supervise a Stanford student in employment activities outside the University while simultaneously serving as either the student's adviser or as a participant on that student's dissertation committee without the prior approval of the department chair (or dean, if the involved faculty member is also department chair).

The amended version passed on a dvided voice vote.

Chairman Fetter then called for a vote on the C-Res recommendation for a Modification of the Secrecy in Research Guidelines as presented in Appendix B of the Annual Report. It passed unanimously on a voice vote.

Chairman Fetter then inquired about the present status of the GSA report which appeared in *Campus Report* on November 24, 1982. It is currently before the C-Res for discussion, and includes consideration of the larger issue of conflict of interest in general.

There being no further discussion of the Annual Report, Chairman Fetter put the question of its acceptance to a vote. The Annual Report of C-Res for 1981-82 was accepted by unanimous voice vote.

Report on Determination of Indirect Costs

Chairman Fetter then called upon Vice-Provost G. Lieberman to present his report on the Determination of Indirect Costs. The full text of that report appears in the December 8, 1982 issue of *Campus Report*. The report focused on an explanation of the relationship between direct and indirect costs, the process of how indirect costs rates are determined, and the importance of indirect cost (overhead) recovery to Stanford.

He defined indirect costs as expenditures which are not a direct expense of doing research or teaching but are the costs of providing services or contexts without which that research or teaching could not be done. As examples of indirect costs, he cited School and department administration, student services, the library, building depreciation, some equipment and land improvements, the operations and maintenance of the University's physical plant, sponsored projects administration, and general and administrative offices.

His handout (SenD#2452) gave the breakdown of the total of the University's indirect costs which conform to the Federal Government's definition of "allowable," i.e., recoverable indirect costs on federally-sponsored projects, as estimated about a year ago for Fiscal Year 1983. It then gave the portion of the total in each category which was allocated to organized research, together with the on-campus organized research rate for each category. The sum of this latter column (71.54 percent) served as the base for the University's negotiator (F. Riddle) with the Federal Government in the establishment of the negotiated cost return rate for Fiscal Year 1983 (69 percent). This overall rate calculation was based on the assumption of a direct research volume of $89 million for this year. (The ratio of indirect costs divided by the estimate of research volume gives a rough estimate of the cost return rate.) Thus, for 1983, Stanford expects $60.6 million in costs which indirectly support sponsored research activities (counting only those costs which the Federal Government allows to be recoverable). Almost half of that $60.6 million in costs represents expenses which are space-related.

If, in a given year, Stanford collects less (or more) than the total indirect costs incurred, that amount is added (or subtracted), from the next year's overhead rate as "carryforward."

Even though it is recognized that research projects vary in the actual indirect costs they incur, the calculation of one overall cost recovery rate for all projects is mandated by the Federal Government.

The problem at the present time is that the recovery of indirect costs has fallen below the amount of the actual costs incurred, because the volume of research dollars has diminished. Raising the indirect cost rate in an attempt to establish full indirect cost recovery is not a simple solution. Both researchers and sponsors are concerned about high, and rapidly-rising, indirect costs. Nor is the current federal climate likely to foster significant increases in federal research funding to stimulate greater research volumes.

Multiple factors push the indirect cost rate up: the volume of direct research expenditures drops; certain indirect costs (utilities, salaries, etc.) rise faster than inflation; more and more space is required, as is greater accountability for the use of government funds. All this is complicated by the issue of carryforward (adding to future years' indirect cost rates the costs incurred but not collected in prior years).

Simply cutting indirect costs is not as obvious as it may seem. Space-related costs, for example, are fixed; cutting other costs may have significant consequences.

At this point, Vice-Provost Lieberman introduced Associate Controller Frank Riddle as one of the most influential people from all universities working with the Federal Government to keep the overhead rates as well as the administrative burdens on faculty researchers both as low as possible.

Mr. Riddle defined direct costs in federal (A-21) terms as those costs which can be associated with a cost objective with a high degree of accuracy and relative ease, e.g., salaries, supplies, etc. used for a given project. Indirect costs are joint-benefiting costs, i.e., costs associated with more than one cost objective, e.g., library, student services, building maintenance). The term "cost objective" specifies the functions of a university (e.g., instruction and department research, organized research), and, at another level, the diverse functions of a given faculty member (e.g., specific contracts or grants or departmentally-budgeted instruction).

The allocation process to determine cost return rates starts with the accounting record of the institution because indirect costs, like direct costs, are real. The institutional budget, structured for University purposes along organizational lines (departments, Schools, etc.) is reanalyzed in cost-accounting terms along the government-preferred functional lines. From this restructured budget form (considering cost objectives and cost pools), the Controller's Office staff derives both a cost study and a cost-rate proposal for future rates. Federal auditors spend from 90 days to over a year auditing the cost study. (Stanford still has no audit report, for example, on the 1980 cost study given the government auditors a year and a half ago.) Concurrently, Stanford projects a proposal for the future indirect cost rate, so that principle investigators will have appropriate figures for budgets on grant applications for the future.

The federal auditors propose changes, either in the cost pools or the base, which are advisory to the federal negotiators and are given to Stanford for comment. This is preliminary to the negotiation on the federal audit position and the University position for reaching a compromise agreement. Any adjustments agreed upon for the cost study are also made in the proposal rate. This results in a rate which is "fixed with carryforward," i.e., fixed for a given fiscal year. After that year, another cost study is done and the difference between the cost study done prospectively (the estimated costs) and the cost study done retrospectively (the actual costs) for a given year results in a carryforward amount, either positive or negative, which is normally carried forward through a three-year period into the future, e.g., fiscal 1981 would be carried over into 1984 or beyond. Since we are in an under-recovery mode currently, that can have a significant effect on the rate. Our goal is to have very little carryforward because its effects can be disruptive.

Once those rates have been negotiated, the information is disseminated to faculty through the Sponsored Projects Office and incorporated into grant proposals for future funding.

He briefly outlined the rate components, using SenD#2452, p. 3, pointing out that the two major items in Operations and Maintenance are the first and last items listed (normal costs of utilities, 53 percent of that pool, and major repairs and alterations to buildings, 18 percent of that pool). He also pointed out that demonstrating relatively stable Department Administration expenses had allowed the Stanford negotiator to win the consent of the government to the elimination of Faculty Effort Reporting, thus easing a burden for the faculty and administration and eliminating one whole section in the Controller's Office which had been needed to implement that federal regulation.

In a comment on why indirect cost rates increase, he pointed out that even with no greater expenses incurred, given an inflation rate of nine percent and a flat research volume, the indirect cost rate will increase, i.e., the rate is an expression of the cost pools divided by the bases. If one base increases more rapidly than another, it will cause a subtle shift in indirect costs from one cost objective to another and the overall rate will increase because of varying rates of growth. Carryforward impact from prior under-recovery of indirect costs will also increase the rate.

Professor R. White commented that freedom from the indirect cost burden for certain sectors of the University is a matter of great concern to those who must pay for indirect costs. He also asked why, if the actual rate calculation for FY 1983 is 71.54 percent, the overhead on industrial contracts is set at a rate of 79 percent. The response was that the calculated rate of 71.54 percent did not include those indirect costs which the government refuses to allow. A calculation of normal indirect costs comes out at the higher figure, and is a truer reflection of real indirect costs.

President Kennedy pointed out that these government disallowances of true full recovery are not unlike those practiced by Medical and Medicaid in refusing to allow the full costs of patient care. He also recognized that inequity in indirect costs assessment is a problem, but stated his belief that the calculation of separate indirect costs rates for different sectors of the University would lead to unacceptable administrative increases. He pointed out, as one example of that inequity, that RA-ships contribute to the indirect cost rate through the tuition remission and staff benefits pool, a fact which works to the advantage of Schools which have a lot of RAs (like Engineering) and to the disadvantage of Schools which have relatively few (like Medicine). Another indirect cost pool might shift that particular balance of advantage, but the cost-accounting expense of disaggregating and analyzing differential expenses across the University would, in his opinion, make the situation even worse and drive the cost return rate even higher.

Mr. Riddle pointed out that the appearance of a "free ride" in relation to overhead may not reflect the real situation. Indirect costs are actually charged to auxiliary activities in the University. Normal instructional functioning in the University is not charged overhead, even though the rate is calculated. Overhead charges here are met through tuition and fees.

At this time, chairman Fetter called on Professor A. Siegman to outline his perspective on overhead and its impact on the University. (A position paper detailing Professor Siegman's views appears in the December 8, 1982 issue of *Campus Report*.) He expressed concern about the divisive effect of inequities in indirect cost assessments, and also about the direct threat of rapidly-rising recovery rates to the future of organized research. One of his major concerns is that so many in the University remain oblivious to the problem; in his words, "you have to pay overhead to be concerned about overhead." His proposed solution is that the University should adopt an accounting procedure which allocates all funds "in loaded dollars," i.e., which budgets full costs (direct and indirect) to each activity, and subsequently charges the appropriate overhead on every direct expenditure. Every expenditure would thus either be overhead or would bear overhead.

The advantages of such a practice are many: 1) It would bring perceived equity to the process of assessing indirect costs; 2) Everyone would become aware of the reality and importance of indirect costs; 3) All University budgeting and financial planning could be carried out in real, comparable dollars; 4) The validity of our true indirect costs rates would be apparent to the government and to other sponsors; 5) It would give all of us a strong motivation to reduce indirect costs wherever possible.

The accounting this requires is already being done.

Vice-Provost Lieberman reported that he had appointed a faculty consultative group to advise him on these matters and that he is presenting the Siegman proposal to them for their comments. (This group includes Professors R. Street, J. Meindl, W. Reynolds from Engineering, R. Simoni, R. Zare, J. Ullman from Humanities and Sciences, and D. Korn, D. Harrison, D. Kaiser from the Medical School.)

He also commented that MIT is reported to have considered and dropped this idea as too complex.

Professor Roth agreed that there is a widespread feeling of unfairness about indirect costs, and expressed his concern that there appears to be no advocate for the research faculty in these allocation processes. Someone closer to the actual research might be better able to assess the validity of the indirect costs assigned to that objective.

Professor R. Street expressed his commendation of the Siegman position. It is important to recognize that all of the costs are real both the indirect costs and the direct costs. The issue is not so much how the costs are allocated as it is whether or not we are getting what we pay for and what we

continued on next page

Conflict of interest rule sparks broad debate among faculty representatives

continued from page 1

reluctant to step forward publicly, (they) really are very vulnerable" if they refuse an adviser's request, Lieberman said. "It's virtually impossible to say 'no.' "

President Donald Kennedy said there is "substantial, convincing evidence that this is not an empty problem" nationally. Graduate students "feel under considerable pressure" when asked to serve the faculty outside the University for pay.

Lieberman noted that graduate students employed as teaching assistants or research assistants on campus could work outside up to eight hours per week. There should be "good reason" for approving outside employment by faculty as "beneficial for students," he said. "I'd be unhappy if the department chair routinely approves" such arrangements.

Senate discussion indicated the great majority of outside employment of students by faculty would be approved.

William Smith, graduate student in chemical engineering and GSA spokesman, said some students are concerned "that those working for their advisers (outside) get preferential treatment" from the faculty.

Prof. Jonathan Roughgarden, biological sciences, a former member of the Committee on Research, said unequal access to outside employment could lead to "severe distortion" in student access to equipment and proprietary information. There have been "very reliable" reports that some laboratories are divided into "haves" and "have nots," he added.

Engineering Dean William Kays expressed concern about "promulgating new rules without strong evidence of a problem." He would "have a hard time imagining any department head (in his school) turning down outside employment of students by their faculty advisers. As a professor, "I'm much more concerned about others using my students," he observed.

Prof. Robert White, head of electrical engineering, noted that typically students in engineering or the physical sciences could earn much more from consulting, which is "lucrative" in comparison to minimum wage jobs. This leaves more time to study and often enhances education.

Prof. Joseph Keller, mathematics and mechanical engineering, 1981-82 head of the Committee on Research, said there was "no strong evidence" of abuse, but emphasized that students could be reluctant to make these known for "fear of the potential consequences." For example, he noted, a student might be asked by a faculty adviser to work on a problem "not of intrinsic scientific interest" that might be related to the professor's consulting.

Prof. Merrill Carlsmith, psychology, noted that when he writes a textbook he often has a student write an accompanying guide for instructors. Presumably, this would fall under the new rule if he simultaneously advised the student academically and supervised the same person writing the guide.

Prof. Elizabeth Cohen, education and sociology, noted that even on campus professors were in a position to "bully" graduate students to work on their pet problems, regardless of their academic merit—a source of past grievances.

Prof. Craig Heller, biology, asked what's different between hiring off campus and hiring teaching or research assistants on campus. While both have potential for abuse, Kennedy replied, professors hiring students for their own firms have "an entirely new set of motivations."

Education Dean J. Myron Atkin suggested that there was a greater potential for commercial relationships to "go sour" than academic ones.

Prof. Anthony Siegman, electrical engineering, said he generally favored disclosure, rather than regulation, especially when the consequences of a new rule were not thought out.

Prof. Bernard Roth, mechanical engineering, said the rule "could be a help," even though it was both "ambiguous" and "unenforceable."

Prof. Carl Degler, history, favored the new rule as "a step in the right direction," helping to create greater awareness of potential conflicts of interest.

Prof. Leonard Ortolano, civil engineering, noted that no guidance was provided for department heads, who probably would have few questions if both the faculty member and the student concerned favored the arrangement.

The Senate narrowly approved a change in the language proposed by the Committee on Research before endorsing the overall motion by a substantial margin in a voice vote.

It then quickly and unanimously approved a change in research policy, reducing the delay in publication of research to protect the patentability of an invention from the previous limit of one year to 90 days.

In a unanimous report to the Senate, the Committee on Research noted that since the previous policy was adopted in 1969 "experience. . .has taught us that decisions to file patent applications, and the filing process itself, can reasonably be accomplished within a three-month period.

A series of recommendations from the GSA for further changes in consulting policy remain before the Committee on Research, which is now headed by Prof. James Meindl, electrical engineering.

In brief, the GSA believes:

1) Faculty should make annual reports on their outside professional activities to their department heads;

2) Faculty should be prohibited from assuming managerial functions in commercial ventures while serving the University full-time;

3) Companies in which faculty have a major equity position should be prohibited from sponsoring the same faculty member's university-based research; and

4) Peer review should be extended to include all sponsored research, industrial as well as governmental. —**Bob Beyers**

Self-sufficiency in rice production should be regional goal in West Africa

West Africa should work toward regional rather than national self-sufficiency in rice, a major study by the Food Research Institute at Stanford indicates.

The findings of a three-year $702,000 research project funded by the U.S. Agency for International Development are reported in a new Stanford University Press book, *Rice in West Africa: Policy and Economics* (482 pp., cloth $38.50) by Scott R. Pearson of FRI, J. Dirck Stryker of Tufts, Charles P. Humphreys of the World Bank, and others.

Between 1960 and 1980, sub-Saharan Africa was the only region in the world to experience a decline in food production and consumption per capita.

While rice is commonly viewed as an Asian staple, its production, consumption and trade have a significant impact on West Africa's ability to feed itself.

Working in collaboration with the West Africa Rice Development Association, an intergovernmental organization of 15 countries, the Food Research Institute found that Sierra Leone and especially Mali are the best potential exporters of rice within the region.

Given its wealth of land and shortage of labor, West Africa should place greater emphasis on use of animal traction and improved manual techniques in raising rice production, the study indicates.

Increased control of water supplies is necessary in drier regions to improve the security of production and to take advantage of other technical innovations, the study suggests.

But water control should be limited to relatively low cost systems. Where more expensive, total control structures are necessary, their potential benefit should be weighed against the corresponding costs for their construction.

Many of the conditions that make irrigated rice production in the more arid regions unprofitable now—high construction costs, lack of river regulation, and low population density, for example—will change as the major river basins are developed, the study notes.

Better food security can be obtained in many places by small irrigation projects, the study indicates.

The Ivory Coast and Liberia have a strong comparative advantage in crops other than rice. Hence, rice should be promoted only as a local crop in these countries.

Peanuts and cotton are Senegal's most competitive crops. Here, too, the only potential for profitable rice development is where it is grown as a local food crop.

In general, cultivation for on-farm or local consumption is profitable nearly everywhere. This generally improves equality of income distribution and the security of food production.

The study is based on a novel approach to agricultural policy which has wide applicability throughout Africa and in other low income, predominantly agricultural countries.

Initially, microeconomic analyses determined the economic efficiency of alternative techniques and locations of production in integrated systems of farming, processing, and distribution.

Next, the incentives incorporated in government trade, price, tax subsidy, and investment policies were analyzed by measuring transfers of income to or from farmers, millers, and traders.

Finally, comparative analyses were made of the efficiency of various techniques and locations and of the effectiveness of these policies—first, within individual countries, then among several countries within the region.

The authors observe that the Green Revolution, which took place mainly in Asia during the 1960s and 1970s, was well suited to a region where land is scarce and labor relatively cheap.

Mechanized techniques have been developed in the U.S. and other countries with relatively abundant capital and the ability to maintain machinery efficiently.

West Africa, however, with abundant land and labor shortages, requires an intermediate technology which has yet to be designed.

Critical areas for research include chemical and mechanical techniques to substitute for labor, more efficient use of irrigation water, additional investment in infrastructure, and cost-reducing changes in food processing and distribution.

In Asia, the authors note, research and price policy studies were critical preconditions for the success of rice production programs. In some instances, 20 to 30 years were required for developing effective varieties of rice and irrigation facilities.

"Most Asian technologies for rice production are not transferable without substantial sacrifices in economic efficiency," the authors note. "Hence the successful development of rice production in West Africa will likely prove to be a highly indigenous process.

Such revolutions in farming "did not occur overnight," they conclude.

Senate/

continued from page 25

need to operate as a first-rate institution. That may mean hard looks at expenditures for teaching, for research, at how much administration and services we need, and how to get those costs down. The only way the rate will come down is if the costs come down.

Professor Gage suggested that one member of the Vice-Provost's advisory group might play the role of advocate for principal investigators, and that person should have sufficient accounting expertise to ask the right questions.

President Kennedy commended the focus on examining spending incentives. That is what produces our problems and there must lie the solution, he felt.

Professor Madix pointed out that a certain amount of teaching is embedded in research activities, and that in fact the early years in a research assistanship are the joint product of education and research, i.e., the RA, while doing research, learns how to do research better. A more equitable system of allotting indirect costs might take those combined functions into account.

As the discussion drew to a close, Provost Hastorf commented that even if the Siegman notion does not prove workable on closer study, the idea behind it is terribly important. It is absolutely crucial that everybody understand that there are costs to doing all of our business, that since World War II indirect cost structure has been an integral part of our research organization, and that if that structure changes radically, the character of our institutions (including our own) is going to change. Everybody ought to be aware of that.

There being no further business, the meeting adjourned at 5:25 p.m.

Influence of tests in admissions exaggerated—Hargadon

"In no major system of higher education in the world is access to higher education less dependent on the results of a single examination or set of exams than in the U.S.," says Stanford Admissions Dean Fred Hargadon.

Head of the trustees of the College Board nationally, he discusses "Tests and College Admissions" in a recent issue of *American Psychologist* magazine.

While many colleges require applicants to take Scholastic Aptitude Tests or the American College Testing Program, he notes, the U.S. has no single national exam that even closely approximates the Baccalaureat in France, the Abitur in Germany, the "A" level exams in England, or China's three-day national exams.

While tests and their uses "rank with religion, politics and sex" as topics for debate, "test scores, taken by themselves, hardly constitute the barrier to higher education that is sometimes alleged," he observes.

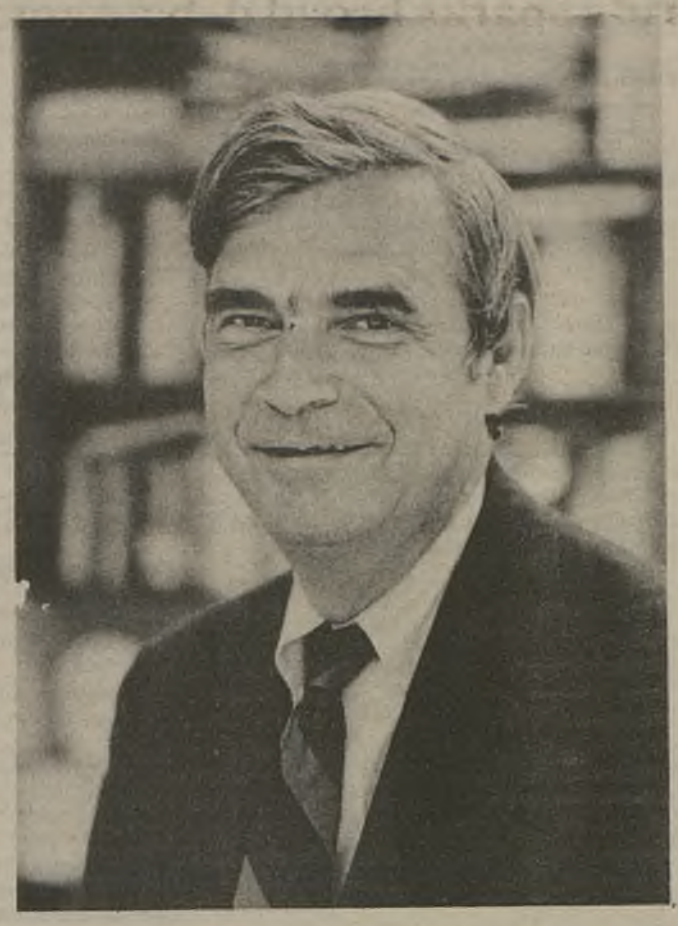
Research by others suggests that there are probably fewer than 10 colleges in this country that find themselves in the position of being able to admit only a relatively small fraction of applicants from an applicant pool that is both large and at the same time very highly qualified academically."

A 1979 survey by the College Board and the American Association of Collegiate Registrars and Admissions Officers showed that colleges "are far more concerned with the strength of a student's academic program in high school and the level of achievement in that program than with the student's test scores," Hargadon says.

Critics' error

"Critics of college admissions tests have committed a fundamental error by assuming that the significance colleges attach to test results can be inferred simply by looking at the large number of students who take the tests.

In some instances, these tests may free some students from the "personalism" of school authorities and parents. Students can gain a sense of how they compare with the fellow students, those from other schools, and those in other parts of the country.



Tests also may help students allocate their intellectual resources more effectively. Low math and science scores may make students think twice about pursuing physics in college, for example, a path which might look more attractive based on an inflated grade in a less rigorous high school course.

Students similarly may find their test scores helpful in finding a college that "fits"—one that is neither lacking in challenge nor clearly unmanageable.

"High school transcripts are not always adequate reflections of the intellectual skills and abilities of students," Hargadon says. "There are more than 20,000 secondary schools in this country. Course content varies considerably from school to school as does the quality of teaching.

"There is a lack of comparability of grades not only between schools, but between departments in the same school and between teachers in the same department.

"If one starts with the proposition, as I do, that it is unconscionable to admit a student who does not have a reasonable chance of successfully pursuing the curriculum of a given college, and if one accepts the additional proposition that a student with considerable intellectual ability should not be overlooked simply because circumstances not under his or her control dictated attendance at a secondary school less richly endowed than most, it is hard to escape the conclusion that some form of standardized tests, available on a national basis and administered impartially, are a necessary, if insufficient, component for assuring an element of fairness in admissions."

It is evidently not very difficult for even the minimally motivated student to gain admission to some college in the U.S.

—Fred Hargadon

Survey results

In the College Board-AACRAO survey, 31 percent of the colleges said the single most important factor in admissions was academic performance in high school, as seen in grade averages or rank in class. An additional 34 percent said this was a very important factor.

Test scores were considered the single most important factor by two percent of the colleges, and very important by an additional 43 percent.

Four-year private colleges were more likely to give considerable importance to high school academic performance than four-year public institutions, which gave somewhat greater weight to test scores.

Among the colleges surveyed, 34 percent were "open door" colleges, admitting all who wished to enroll without review of conventional academic qualifications or admitting any high school graduate or equivalent.

An additional 56 percent of the colleges, termed "selective," admitted the majority of applicants who met some specified level of academic achievement or other qualification above and beyond high school graduation. These requirements may be nothing more than completion of certain high school courses or subjects, or attainment of a particular grade average or rank in class, or some combination of factors, including test scores.

Only eight percent of the colleges surveyed were "competitive." They normally have more applicants who meet their specified requirements than they can accommodate. Thirteen percent of the four-year private institutions fell in this category, as did 10 percent of the four-year public institutions.

Many options open

"It is evidently not very difficult for even the minimally academically motivated student to gain admission to some college in the U.S.," Hargadon observes. "This is so even at the selective and competitive levels. About half of the competitive institutions and about three-fourths of the selective institutions surveyed require a minimum grade point average of 2.0 or less out of a possible 4.0."

The average of the lowest combined SAT scores (summing verbal and math) reported by four out of 10 competitive institutions was 838 out of a possible 1600 total. The average minimum SAT test reported by 44 percent of the selective institutions was combined score of 733.

"Even the most idealistic among us would be hard put to underestimate the accessibility to some institution of higher education for the great majority of students," he observes.

A 1980 survey published by the American Association for Higher Education found that only 17 of 200 randomly chosen, four-year institutions accepted fewer than 50 percent of their applicants. Four out of five accepted at least 70 percent of their applicants and one third accepted 90 percent of those applying.

With a very small number of exceptions, the degree to which U.S. college admissions can be characterized as "highly selective" is "greatly exaggerated," Hargadon says.

And even the highly selective institutions do not stack their student bodies with those scoring highest on the tests, as only they could afford to do, Hargadon notes. "It is precisely in such colleges that large numbers of students with high test scores fail to gain admission, while at the same time large numbers with lower test scores are admitted."

State influence on private colleges studied by Fullmer

While New York has long asserted the value of independent colleges and universities, in fact, it has eroded their autonomy more than most states, a new Stanford analysis indicates.

In a doctoral dissertation for the School of Education, Kenneth Fulmer said "independent institutions are not fighting hard enough to protect their autonomy," especially in New York. "State governments are good friends of higher education," he observed, but "even good friends can misbehave."

"All colleges have had their autonomy in some way affected by state government," he added. "Decision-making of independent institutions is most affected by the promise of state rewards for a certain type of behavior."

Admissions is the policy area most affected by the state, with "increased parochialism" one result. Curriculum and student policy also have been "considerably impacted," he said.

In all, 28 states offer only scholarship aid to the independent sector. A detailed study of two states in this group—California and Wisconsin—indicated that private colleges were slightly more influenced by all types of state activity than was the case in Minnesota and Maryland, two of nine states which provide both scholarships and institutional aid to the private sector.

Findings in these states suggest governments are respecting the freedom of the colleges they assist. "Institutional aid, as well as scholarship aid, can be offered responsibly," Fulmer explained. "Neither aid type more clearly protects autonomy than the other."

However, it appears institutional aid does intensify political relationships by expanding the scope of accountability. In institutional aid states, the amount of reporting required is clearly higher. Additionally, dependence on state funds is greater.

But the autonomy of independent institutions was "much more adversely affected" in New York than the other four states, Fulmer said.

Among the five states studied, "Maryland's government has least affected the autonomy of independent colleges," he said. "Wisconsin is a close second."

Stanford Staff Development Courses *January through March 1983*

WORKPLACE SKILLS DEVELOPMENT

Challenges of the workplace will be explored in the following courses, each of which is structured to develop skills helpful to effective work performance in many different kinds of jobs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore, please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy, ext. 7-0657.

Telephone Techniques—This workshop focuses on using the telephone and having an effective telephone personality. Topics include an overview of the skills required, tactful phraseology, and examination of issues and problems.

- Friday, 2/4, 1:00-3:00

Office Interaction: Getting and Giving Cooperation—Does your job include answering questions, giving information, assisting people who call or come to your office? This workshop focuses on how to make these interactions both efficient and productive. Participants will explore the ways that they and the people they work with experience the communication/problem solving process.

- Schedule to be arranged

Office Interaction: Working With Pressure—How to function at your best in spite of the pressure of continuous office interactions. Participants will examine ways to increase concentration and patience for effective workplace relations.

- Schedule to be arranged

Assertiveness Training—Assertiveness Training introduces verbal and nonverbal skills for handling uncomfortable situations. As a result of active involvement in this course, participants will be able to ask for what they want in clear statements, assertively deal with conflict on the job, maintain a feeling of self-worth while effectively dealing with manipulative demands, and make assertive decisions.

- Friday, 2/11, 8:30-4:30
- Friday, 2/18, 1:00-5:00
  (Attend both sessions.)

Career Exploration Workshop assists staff members in making more effective career decisions. It consists of seven sequential one-hour workshops which provide methods for self-assessment (interests, skills, values, career motivations, interpersonal skills), information about Stanford career possibilities, and practice in decision making and development of action plans. Checking ideas against job market reality is emphasized.

Some of the tools used in the self-assessment process include the Strong-Campbell Interest Inventory Test, the Quick Job-Hunting Map, Firo-B and problem-solving and values clarification exercises. Discussion includes reality testing of the kinds of skills the University looks for, the kinds of jobs on campus, and the personal qualities necessary to get ahead. Exercises on strategizing and decision making are used along with the development of short and long term career goals. Instruction and information on resume writing and interviewing are included, with information on the use of the Stanford Employment Department and its organization.

- To register, call Marilyn Gilla, ext. 7-0659.

On-The-Job Goal Setting—How can you focus your energies and skills more effectively to increase the satisfaction you get from your work, as well as the contributions you make? Susan Strong will provide practical steps for setting and reaching well-stated workable goals.

- Schedule to be arranged.

Skills Development Center—The clerical skills program upgrades skills of employees on their present jobs, helps them prepare for additional responsibilities, and provides clerical training specifically related to Stanford's policies and procedures.

For information about the clerical skills program,
call Marilyn Gilla, clerical skills program coordinator,
ext. 7-0659.

Is lack of typing skills getting in the way of effective use of your computer terminal? Marilyn Gilla teaches both beginning and intermediate keyboard skills for staff members starting to use a terminal. For information, call ext. 7-0659.

SUPERVISORY DEVELOPMENT PROGRAM

The supervisory development program includes a two-session orientation to the personnel administration aspects of supervision, two intensive supervisory skills courses, and shorter workshops on specific aspects of supervision. All courses and workshops combine theory and practice and apply directly to participants' on-the-job experience.

Supervisory courses and workshops are given regularly through Staff Development. They may also be adapted to specific departmental needs and presented in departments. New workshops are developed to meet general and departmental needs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy, ext. 7-0657.

Supervisory Orientation explains general personnel processes (employment, classification and compensation, staff development, employee relations, benefits) and outlines supervisory responsibilities in personnel administration. This program is especially useful for supervisors recently promoted or new to Stanford.

- Schedule to be arranged.

Fundamentals of Supervision is a course in how to develop employee performance, establish effective supervisor-employee communication, and establish and maintain the supervisory role. Participants learn through discussion and practice of skills, incorporating new skills into their own supervisory style. An orientation meeting prior to the sessions introduces the basic principles on which the course is based.

Participation in the course requires at least three months of experience as a supervisor. Attendance at all sessions is also required.

Session topics are:

Session 1, Setting Job Standards
Session 2, Teaching a New Job
Session 3, Communicating about Performance
Session 4, Improving Performance
Session 5, Handling Performance Problems, Giving Recognition
Session 6, Managing Change

Fundamentals of Supervision (A)
- Wednesday, 2/2-3/16, 2:00-5:00

Fundamentals of Supervision (B)
- Thursday, 2/17-3/31, 9:00-12:00

Supervisory Problem Solving is designed to help supervisors increase their ability to make sound judgment in personnel matters and increase their confidence in handling the predictable and not-so-predictable problems involved in supervising others. Topics covered include complaints, conflicts, problem performance and behavior, discipline, and establishing methods for solving problems.

Completion of Fundamentals of Supervision is prerequisite for participation.

- Tuesday, 3/1-3/29, 1:30-4:30

Effective Interviewing introduces methods for making productive hiring decisions by getting sufficient appropriate information in interviews. The workshop is centered around practice exercises that are progressively more complex; participants will learn to plan and conduct interviews related to the specific responsibilities and duties of open positions.

- Thursday, 2/10, 8:30-4:30

Giving Directives is a practical three-step procedure for giving directives of all kinds. Participants will also learn the specific effects of language on directives.

- Friday, 1/28, 8:30-4:30

Managing Conflicts which can and do occur in any work setting, and when well handled can renew motivation and be a catalyst for innovation. When ignored or mismanaged, however, conflicts can cause serious damage to morale, productivity and well-being. Effective conflict management involves guiding the disputants to solve their own problems. In this workshop participants will learn how to find out the nature and scope of the conflict, how to elicit suggestions, and how to get agreement to an action plan while controlling bickering and outbursts without taking either disputant's side.

- Friday, 2/25, 8:30-4:30

SPECIAL INTEREST COURSES

Courses from the Learning Assistance Center

The following courses have been developed by the LAC to respond to specific staff training requests. Each course combines classroom instruction and individual tutorials with the instructor. Class size is limited to provide for maximum participant involvement, and enrollments are accepted in the order received.

Effective Reading—Designed to help individuals with their reading rate and comprehension. Emphasis is on reading ideas, not words. Designed to help you save time, as well as reduce confusion and anxiety.

- Monday & Wednesday, 1/10-3/2, 12:00-1:00
- To register, call Staff Development, ext. 7-0657.

Effective Writing: Letters, Memos, Minutes (A)—Is writing an increasingly important part of your work? In Effective Writing, participants review fundamentals of skillful writing, analyze and develop their writing style, and practice purposeful writing of letters, memos, and minutes. The class meets for one hour a week for eight weeks, and the instructor meets with each participant for five individual half-hour sessions.

- Friday, 1/14-3/4, 12:00-1:00
- To register, call Staff Development, ext. 7-0657.

Time Management—Is a day simply not long enough? This workshop helps participants discover where their time goes, set up a schedule and establish priorities, and become more effective at accomplishing what they decide to do. The class meets four times (one hour each time), and the instructor meets with each participant for three individual half-hour sessions.

- Tuesday, 1/11-2/1, 12:00-1:00

Effective Writing: Letters, Memos, Minutes (B)—Is writing an increasingly important part of your work? In Effective Writing, participants review fundamentals of skillful writing, analyze and develop their writing style, and practice purposeful writing of letters, memos, and minutes. The class meets for one hour a week for eight weeks, and the instructor meets with each participant for five individual half-hour sessions.

- Friday, 1/14-3/4, 12:00-1:00
- To register, call Staff Development, ext. 7-0657.

ESL I—Speaking and Understanding Conversational English—One hour a week of class, five

continued on next page

Staff Development Courses

continued from page 28

30-minute conferences, plus language lab. Practice in pronunciation and listening skills. Some work with English spelling as related to pronunciation of written words. Limited to 15. Those interested in ESL II should meet with the instructor before the class begins in order to take a screening exam to insure placement in the class best suited for their needs. Please contact the Learning Assistance Center (497-2207).

- Friday, 1/14-3/4, 12:00-1:00

Courses from the Association for Continuing Education

The Association for Continuing Education delivers courses accredited by local colleges and universities. For more information call ext. 7-0657.

Golden Gate University MBA Program:

Planning & Control
Policy Formation & Administration
Law & The Free Enterprise System
International Marketing

College of Notre Dame:

Managerial Accounting
Introduction to Probability & Statistics
Introduction to Computer Technology

Foothill College:

Principles of Accounting II
Business English II
Human Relations in Business II

Also from ACE:

CPL 102—Introduction to BASIC—A good beginning course in BASIC, the most popular and easily understood computer language available today. Students will learn the computer operations they seek for a given application through a process of self-checking exercises and flow-charting. It will not be necessary for students to have access to a computer to learn from this course. (Certificate only.)
(Tuition $90; textbook additional.)

CPL 105—Introduction to PASCAL—An introductory course in PASCAL for people who want to acquaint themselves with modern programming tools and concepts. It will give students with no previous programming experience a good grasp of the fundamentals and provide a foundation for learning correct and disciplined programming skills. (Certificate only.)
(Tuition $90; textbook additional.)

For additional information or to register for ACE courses call Staff Development, ext. 7-0657. The Staff Training Assistance Program provides reimbursement to $75 per quarter for cost of courses related to employee's job performance.

Resources for disabled on computer list

A public, computerized file of resources for disabled people should be operational by the end of this week, according to William H. Seidman, specialist on programs for the disabled at Stanford.

Modeled after the community information program developed by San Mateo County's Peninsula Library System which is already accessible through Stanford's CIT system, the file will include a list of on- and off-campus people, organizations and services which serve disabled people in the Stanford community.

Seidman explains that the extensive list will eventually range from sign-language interpreters, to the Sensory Aids Foundation services, to information on getting around in the area, such as which transportation services provide wheelchair access.

Expenses for the project, estimated now at about $500 to start up with an annual cost of between $150-200, are being shared by the Dean of Student Affairs Office, the Personnel Office and the Affirmative Action Office.

Those using the service—including students, staff and members of the community—will have to pay the same amount as those using other CIT public access files, approximately $4-12 per search. Those with personal or departmental CIT accounts can access the file using the "Disabled" subfile of the SPIRES system.

For more information, contact Seidman at 497-3483.

Geothermal workshop

The eighth Workshop on Geothermal Reservoir Engineering will be held Tuesday through Thursday, Dec. 14-16, in the CERAS building (LGI Room), with about 40 technical papers accepted for presentation or publication.

Besides the paper, the schedule includes several lunches plus a reception, a wine tasting, and a banquet.

Each day will feature a keynote speaker: M. L. Sorey of the U.S. Geological Survey in Menlo Park on "Hydrothermal Convection Systems"; Franco d'Amore of the International Institute of Geothermal Research in Pisa, Italy, on "Reservoir Chemistry"; and A. S. Batchelor of the Camborne School of Mines, England, on "The Stimulation of Hot-Dry Rock Geothermal Reservoir in the Cornubian Granite, England."

The banquet speaker will be R. P. Wischow of the PG&E Geysers Project.

Participants must register for the workshop; information is available at 497-1218 or 497-4744.

Silicon Valley executives speak at GSB on computer developments

A Stanford Business School computer course this year includes some of the best known executives in Silicon Valley as teachers, thanks to the energetic efforts of a group of students.

Gregory Young, who is scheduled to receive an MBA degree from Stanford in June, a year ago took Decision Support Models and Optimization, an introductory course in managerial use of computers. Young lamented the fact that the course had little to do with the use of computer technology in managing organizations and was focused instead on building, using, and interpreting computer models.

When the course was over, he had an idea. Why not invite some of the top executives of high technology firms in the Silicon Valley to give lectures which could run in tandem with the course material.

"Here we are in the middle of the second coming of the Industrial Revolution, located next door to some of the best managed companies in the world," he said. "I saw this as a chance for the students to get a better idea of what is going on in the field, and to stimulate more interaction between industry and the Business School."

Faculty members teaching the course were enthusiastic and asked Young to help work out the details. "The executives liked the idea of talking to students and, obviously, their coming to the School is good visibility for them and their companies," said Young. "And the School gains by getting some state-of-the-art knowledge."

The result is a series of eight lectures on the theme, "Management, Computers and Information Technology in the 1980s," which runs through fall and winter academic quarters.

The students taking the computer course are required to attend each lecture. Questions based on the lectures were included on the recent midterm examinations, said Jeffrey H. Moore, the Business School's assistant dean for computing.

"Basically, the series amplifies topics taken up in the course," said Moore. "The speakers generally deal in more detail than we take up in the course. For instance, we discuss the various generations of computers, and they have filled that out with the development of semiconductors. They will give makret forecasts and other situational-specific material that we don't have access to."

Sometimes it has worked in reverse, with the School presenting the details and the executives offering a broader view, said Moore. "Where we talk about various types of software for decision-making, one of the speakers discussed the nature of software," Moore said.

So far, the series has included talks by Dr. Gordon Moore, chairman and chief executive officer of Intel Corp., on the development and growth of the semiconductor; by Dr. David Crockett, senior vice-president of Dataquest, Inc., on trends in computation; and by Dr. Daniel Fylstra, chairman and chief executive officer of VisiCorp, on the microcomputer software revolution; and John D. Couch, vice-president and general manager of the P.O.S. Division of Apple Computer.

Future speakers will include Steven P. Jobs, chairman of Apple Computer, Inc., on technology and society, January 25; Dr. Kenneth Oshman, president and chief executive officer of Rolm Corp., on communications technologies, February 1; Edward McCracken, general manager of the business computer group of Hewlett-Packard, on "Putting it All Together," February 22; and John A. Young, president and chief executive officer of Hewlett-Packard, on technology and the world competitive environment, March 8.

Want help on micros? CIT may assist

Responding to the growing use of microcomputers by Stanford faculty, staff, and students, the Center for Information Technology has established a new microcomputer program, CIT Director Edward E. Shaw has announced.

Headed by Michael Carter, CIT's director of instruction and research information systems, the new program will include a newly organized Stanford Microcomputer Instructional Laboratory Experiment (SMILE) to support special projects in training and use of micros in instruction and research.

Located in Jordan Quadrangle, SMILE will be used initially as a training site for the Tiro Project, a program to introduce the use of microcomputers in the humanities. Starting in winter quarter, SMILE will house a variety of experiments, including the teaching of writing using microcomputers.

During winter quarter, a microlab will be opened in Forsyth Hall for the evaluation, demonstration, and development of microcomputer systems and software.

"The uses of these devices range from text editing and file storage, through analyses of data, to use as a means of accessing larger computer systems and services," according to the new program's charter. "There is reason to expect that microcomputers will become an essential component of most, if not all, University programs and activities."

The Department Information Systems unit of CIT's Administrative System's Division will provide support for administrative staff use of microcomputers.

The new program also will develop the most appropriate ways of supporting microcomputers on SUNet, the Stanford University Network. "We expect SUNet to become operational, in phases, over the next 24 months," Shaw said.

Financial support for CIT's new microcomputer program comes from reallocation of staff from more traditional computing activities, one-time funds, and support from external sources, including the participation of some microcomputer vendors.

A steering committee for the new program will be appointed in the near future. It will include representatives from the School of Humanities and Sciences, Engineering, Education, Computer Sciences, LOTS (Low Overhead Time Sharing System), Interactive Educational Technology Program, Academic Council Committee on Computing and Information Technology, Administrative Systems Policy and Planning Group, and four faculty with specific interest and expertise in microcomputers.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

36549-AW (JCC:4084) PROGR/ANALYST GEN III: Evaluate needs for micro-computer applications, terminal installations & use of other user tools by personnel in Controller's Offc, such as use of EASYMARK, MARK IV, SCRIPT, WYLBUR & SAS; recommend approp solutions to meet needs of Controller's Offc in areas of local automated offc tools; identify vendor support for maintenance & application program support needed for micro-computer users; prov on-site support to these functions; asst in developing & monitoring documentation of micro-computer application; QUALIFICATIONS: 3-5 yrs exp as programmer/analyst working w/ user software tools; exp in an acctg sys environ preferred, using automated offc tools & one that meets audit requirements; familiarity w/ programming langs (BASIC, PASCAL, COBAL, APL); exp in use of micro-computers & familiarity w/ micro-software offerings helpful; significant commu & teaching skills to work w/ a broad range of users.; C07; $2113-2724.

33234-LL (JCC:5596) LIFE SCI RES ASST II: 50%; exp in biochemical tech incl HPLC, GLC, Radioisotope applications, electrophoresis, immunochemical applications & & enzyme technology; flexible scheduling & respon for independent work; QUALIFICATIONS: require BA/BS in Biochemistry or similar degree plus min of 3 yrs exp in a Biochemical Research Lab or equiv combination of educ & exp; expected to be sufficiently exp'd; prov theoretical input relating to the duties to be performed; capable of exercising independent initiative & judgment in performing work of a non-routine nature, relating to various ongoing res projs.; C06; $927-1156.

33235-LL (JCC:5596) LIFE SCI RES ASST II: LSRA for Premature Res Ctr to work specifically in infant clinical physiological res studies; main areas of res incl eval of intensive care monitoring, pulmonary function, sleep, respiratory control, & temperature control in preterm & term infant; polygraphic & minicomputer tech used for data collection; use of pressure transducers for measuring various pressures as well as endosophageal pH; maint lab equip't; independence in setting work prior; interaction w/ clinical fellows, clinical personnel; data compilation & interpretation; implementation of new res strategies/tech; QUALIFICATIONS: BS in Engr or Biosci desirable or equiv exp; working knowl of varied testing & recording instruments; some knowl abt microprocessor acquisition sys & interfacing w/ electronic recording equip't nec; good organizational skills; able to make judgments; good interpersonal skills.; C06; $1854-2312.

Bargaining unit

35058-FM (JCC:7936) Groundskeeper/Laborer: TMS Unit; 7-3:30; pulls, hoes, or cuts w/ a rotary mower -common weeds; waters lawn & shrub areas; occasionally mows small lawns & edges all lawns in area regularly; operates mobile & non-mobile power equip't; some tree work, equip't operation, irrigation repairs, spraying, etc; moving furniture in bldgs & new locations; install & maintain street & traffic signs, jump post, parking bumpers on campus & post in cement; set up for commencement & registration, set up chairs, trash cans, & signs for programs for each quarter; QUALIFICATIONS: able to follow job-related instructions; able to perform work in all types of weather conditions; extensive standing, stooping, squatting, pushing & pulling.; A16; $7.16.

17845-LL (JCC:5638) LIFE SCI TECH I: TMS Unit; Generation & maintenance of murine T cell clones reactive w/ soluble antigens & analysis of these cells using T cell proliferation assays; production & maintenance of hybridomas which are somatic cell fusions between drug marked myeloma cells & antibody producing spleen cells; extensive mouse work involving antibody production, immunizations, collection of serum & minor surgery involving removal of lymph nodes & other organs; analysis of cell surface antigens of T cell clones by fluorescence activated cell sorting using reagents prep in lab as well as commercially available; QUALIFICATIONS: prior lab exp using biochemical or molecular biology tech important; exp w/ cell culture tech helpful.; A18; $7.5.

42879-TC (JCC:5644) LIFE SCI TECH II: TMS Unit; construct cDNA libs for insect & bloodstream forms of Trypanosoma brucei; identify, map & seq stage-specific recombinants; growth of T. brucei in rodents & culture; purification of T. brucei; prep of mRNA & DNA fr T. Brucei; cDNA synthesis; molecular cloning; restriction mapping; DNA seq; in vitro expression of recombinants; QUALIFICATIONS: molecular biologist w/ exp of all DNA seq & gene cloning tech plus some exp of chromatography, analytical biochemistry, cell culturing, animal handling & microbiological tech.; A24; $8.65.

42878-PB (JCC:5835) ANIMAL CARE ASST I: TMS Unit; 50%; T 8-5, Th 8-5, F 12-4; maintain clean environ for lab mice & rats; change dirty cages, feed & water; wash all cages & bottles; do basic daily chores; sweep & hose floor; take trash out; QUALIFICATIONS: no allergies to animals & be able to lift 50 lbs; requires manual dexterity; able to follow detailed oral & written instructions in English; able to learn tech & procedures in caring for & handling the animals; able to operate related equip't.; A12; $6.54.

33565-JB (JCC:6596) S&E TECH - ELECTRO MECH: TMS Unit; 50%; pick up chemicals fr labs; segregate chemicals by reactive groups; able to recognize hazards & chemical compatibilities; interact w/ lab personnel & edu them in proper packaging & storage of chemical waste; recognize chemicals that could be recycled & encourage recycling in the labs; perform inspections & report problems; order & maintain supplies for waste disposal; collect environ'l samples; analyze & test samples under direction of Health & Safety professionals; QUALIFICATIONS: must be exp'd in handling chemicals; college chemistry nec; accuracy, neatness, atten to detail, self-direction desirable; 18 yrs of age or older; licensed driver; physical strength needed to handle containers of up to 55 gallon drums, manual dexterity required.; A28; $9.5.

SLAC

94755-JM (JCC:6604) SR. S&E TECH/TRAINEE - ELECTRO MECH: TMS Unit; rotating shifts; operate & repair liquid helium refrigerators & sys; operate & maint cryogenic, hydraulic & pneumatic equip't; leak check high vacuum equip't; use machine tools; bend tubing; do silver solder & braze; read blue prints; fill & transport liquid hydrogen trailers; keep records; related industrial courses desirable; college or military tech sch'l helpful; exp w/ hydrogen & helium refrigerators, high pressure gas, photography, optics, hydraulics & cryogenics desirable; skills in leak detection & lab vacuum practices.; A34; $1901. APPLY AT SLAC

91781-JM (JCC:8586) HEAT VENT A/C MECH MAINT: TMS Unit; troubleshoot, serv & repair a variety of HVAC equip't & sys, i.e. compressors, heat pump units, electrical & gas heating apparatus, etc; operate & overhaul fans, blowers, etc; perform preventative maintenance; QUALIFICATIONS: high school or equiv; several yrs related exp; able to qualify for gov't driver's license.; A35; $1945. APPLY AT SLAC

95029-JM (JCC:7082) STOREKEEPER II: TMS Unit; independently perform supply tasks incl stocking items, inspections, inventories incoming shipments, wait on customers, etc; several yrs exp in storekeeping; mechanical aptitude & ability to organize records & mat'ls; able to qualify for gov't driver's license.; A22; $1430. APPLY AT SLAC

94328-JM (JCC:7166) DELIVERER II: TMS Unit; collect scrap & salvageable mat'l or equip't, disassemble as required & store; maintain salvage facility & scrap yard in neat & efficient order; maintain records; be alert for & report conditions of property & recommend corrective action if nec; ability to comprehend & commu both orally & in writing; ability to perform arithmetic calculations; exp in or ability to learn rapidly; the safe & efficient use of forklift equip't; ability to move heavy objs or mat' when use of forklift is not efficient or possible; prior exp in plant protection or property responsibility desirable; able to qualify for gov't driver's license; A17; $1271. APPLY AT SLAC

93255-JM (JCC:7736) MAINT PERSON II: TMS Unit; change filters in heating, ventilation & air conditioning sys; make minor repairs; inspect blowers, lubricate bearings, change belts, change bearing where nec; clean & flush water chiller condensers; asst HVAC mechanics; perform variety of preventive maintenance tasks; a couple yrs related exp or training sch'l or mechanical apprentice sch'l may substitute for part of job exp; ability & knowl to perform duties; good reading & writing ability; able to climb ladders & work outside on roof tops during inclement weather; able to qualify for gov't driver's license.; A26; $1577. APPLY AT SLAC

93256-JM (JCC:8594) HEAT VENT A/C MECH SPEC: TMS Unit; troubleshoot, serv & repair a variety of HVAC equip't & sys, i.e., water cooling sys, heating, electronic & pneumatic control sys, etc; install, operate & overhaul HVAC sys & components; high sch'l or equiv; journeyman level HVAC training; several yrs exp; able to qualify for gov't driver's license.; A36; $1997. APPLY AT SLAC

95077-JM (JCC:2136) ACCOUNTANT III: Maintain acctg records, controls & reconciliations of Stores Inventories & all related transactions in a fully automated inventory control sys; supv acctg work order sys; maintain input controls for all journal vouchers; prep original input & changes for computer prepared billings & oversee the distribution of invoices & related records; QUALIFICATIONS: BS in Acctg or equiv; several yrs exp in multi-phase computer oriented acctg operations & in specific areas of cost, inventory control & fixed asset acctg; understanding of computer programming & analysis; supvry exp desirable.; C07; $2113-2800. APPLY AT SLAC

Rental housing

HOUSING AVAILABLE

□ **Regularly Available:** 1 & 2 BR furn. & unfurn. apts. & twnhses, and 3BR/2BA hses in Palo Alto & Menlo Pk. In good neighborhoods and close to campus. $525 to $800/mo. Call Shirley (415) 493-2321 or Jane (415) 968-4957.

□ **Now:** SKI CABIN, So. Lake Tahoe. 2BR, frpl, color TV, phone, Adj. Nat'l Forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk (5 days). Call Janine (415) 497-2501 (day), (408) 739-3141 (eve).

□ **Dec. 22 for 1 yr (flex):** Fully furn contemp. campus hse. 2BR + 2 studies (1 can convert to BR), 2BA, FR, piano, lush atrium, wooded lot. $1350/mo. incl. grdnr, water. Call (415) 857-0479.

□ **Feb. to Mar. '83:** Furn. lux. apt. 1BR/2BA, study, Palo Alto, 3 mi. to campus. $1,000/mo. Call Knoles (415) 493-4964.

□ **Winter Qtr.:** Coastal hse, so. of Carmel, 1BR. $1,000/mo. Call Knoles (415) 493-4964 or (408) 624-7290.

□ **NOW:** Guest cottage, cntry setting, 7 mi. to Stanf. Furn. incl. dishes, pans, toaster, blender, linens. LR, ktchn, BA, 1½BR, gar. Pool. Nonsmokers, adults, no pets. $475/mo. incl util. Call 941-3501.

□ **NOW:** SKI NORTHSTAR AT TAHOE. 2BR/2BA condo, sleeps 8. W/D. Dwnhill, Xcntry. Free shuttle to slopes. Ideal family resort. Day care. Avail. holidays. Call (415) 564-5324.

□ **Jan. to June, '83 (flex):** Furn. campus hse. 4BR/3BA LR, DR, FR w/frpl, shop, carport. Auto sprinklers. Nonsmokers. $1400/mo + elec., gas, gardening; 1st & last mo. + dep. Call 857-9185 or 497-1663 (day).

□ **Mid-Jan. to mid-June '83:** Contemp. hillside hse w/view in Portola Valley. 4BR/3BA fully furn; conversation pit w/frpl. 2 lge decks , spa. 5 mi. to campus. $1500/mo. Call 327-8615 (eve) or 858-4035 (day).

□ **NOW:** Prof. woman has rm. to rent w/priv BR/BA, W/D, ktchn. priv. Female, nonsmoker. Furn. except for bed. 10 min. to campus. $325/mo. incl. util. Call 969-5870 (after 7 p.m.).

□ **Beg. Jan. 1, '83:** 4BR/2BA partly furn (or unfurn) hse. Spanish style, in Redwood City. All appl., frpl, alarm system, encl. yd., B-B-Q. Mt. Carmel area, 15 min. to campus. Xclnt for sharing. $1100/mo. Call Carol 327-5670 (eve).

□ **NOW:** Share hse rental, for grad. stud. Mt. View/P.A. border. 10 min. to campus. Priv. BR, ktchn. priv., W/D, good jogging area. $337.50/mo. + ½ util. Call 857-5445 (day), 949-2609 (eve).

□ **Beg. Jan. 1, '83:** Fully furn. apt. w/sports facil, at Oak Creek. 5 min. to campus. Avail 6 mos. (flex). $675/mo. Call 326-3684 (a.m. & eve).

□ **Jan. to June '83:** Palo Alto, furn hse. 4 BR/3BA, LR, DR, FR w/frpl, study. Pool w/solar cover. Close to campus. $1650/mo., incl. pool ser. Call 493-1179

□ **Jan. to Sept. '83 (flex):** Fully furn. 4BR/2BA lge campus hse. Frpl, gardn w/auto sprinklers, view of hills. Nonsmokers, no pets. $1400/mo incl. grdnr. Call 497-3987 (day), or 494-0362 (eve).

HOUSING NEEDED

□ **Now:** Prof. Stanford MBA seeks 1 or 2BR w/BA unfurn. condo, apt., twnhse in dwntwn Palo Alto for 12 mo. Local refs. Call Steve, 321-2303.

□ **Jan. to Mar. '83:** Retired cpl seeks furn 1 or 2BR apt. condo or hse. on or nr. campus, Palo Alto, Menlo Pk. Nr shops. Pkge deal to include car best. Call Dave Marimont, 497-3796 (day), 325-7182 (eve).

□ **Apr. 1 to June 15, '83 (flex):** Visit. Prof. seeks apt. or cottage on or nr. campus. Call John Felstiner, 497-4722 (day), 322-7727, or msge. at 497-2635.

□ **Jan. 1, '83 thru Mar. '83:** Winter Qtr. Visit Prof., wife, 15 yr. son seek furn. 2BR hse or condo on or nr. campus. Nonsmokers. Call COLLECT to Paul or Suzanne (303) 444-1979.

□ **Jan. & Feb. '83:** Prof. man seeks small apt. or hse-sit during sabbatical educ assignment. Call (415) 361-1406.

□ **Dec. 19 thru 26, (or longer), '82:** Staff mbr, Stanford seeks hse. for parents and adult siblings. Will pet/plant sit. Call Susan 327-4667 or 497-1743 (day).

□ **Beg Apr./May '83:** Finnish-French family, 2 daughters (6 & 4 yrs.) seek 2 to 4 BR hse/apt. in Bay area. Will care for pets & garden. Chldrn used to strict limits at home. Local refs. EXCHANGE 3BR/BA apt. + 2 cars in beautiful area 5 mi. from ctr. Paris. Wkly cleaning incl. Write: Fourmeaux, 12, rue S. Vigneras, 92380 Garches, France.

Okimoto, Yawata discuss Japanese technological challenge

"My English is made in the USA—his was made in Japan. We all know the difference that makes."

With this quip, Stanford Prof. Daniel Okimoto, political science, opened a discussion of Japan's high technology challenge with Keiske Yawata, president of NEC Electronics U.S.A., Inc. before an audience of about 200 at Stanford Thursday, Dec. 2.

Discussing semiconductors, Yawata later replied that U.S. product quality has greatly improved, though the bad image of a few years ago lingers.

The quality problem has been "mostly, if not totally cured," creating a "very healthy" competition, he added.

Yawata said "most Japanese companies are aware of the importance (of semiconductors and related technology) to U.S. security...

"The flow of information from the U.S. to Japan actually ends there. We do not export integrated circuits to communist countries."

While Japanese firms have had "several inquiries" they do not transfer technology or information to communist countries, he added. There should be "no fear" that "information is leaked by the Japanese to the other side of the fence."

Integration an advantage?

Responding to concerns that large, integrated Japanese firms have an exceptional advantage over smaller but more innovative American companies, Yawata said that "in the next decade or two, custom-designed requirements (at which smaller companies excel) will be much greater because the scale of (chip) integration will increase."

Small companies may find it advantageous to remain small with high quality, customized chips and good service.

Okimoto, author of a new book on *Japan's Economy—Coping with Change in the International Environment*, said Japan's practice of targeting specific industries for government support has drawn increasing criticism from the U.S. and other Western countries because

1) It encourages world-wide overinvestment in the selected industries;

2) It distorts trade and encourages overproduction; and

3) It results in "export downpours" from Japan when several companies simultaneously release a "torrent of goods" that "flood foreign markets."

Yawate replied that consumers should welcome the competition. At present, there still is not enough capacity world wide for building 64K chips and other high density memories.

The best way to reduce economic distortion is for Japanese firms to build plants in the U.S., and vice versa. NEC is currently building in Roseville, Calif., he noted, while Fairchild is building in Japan.

Okimoto suggested that Japanese firms still benefit from "a legacy of unfair practices," particularly close government regulation of the financial markets there. Interest rates may be kept artificially low and key industries insulated from foreign competition, at least until they have adequately matured.

Japan also benefits from the strategic protection provided by the U.S., which spends six percent of its gross national product on defense, compared to less than one percent by Japan.

Yawata replied that the Japanese government is "trying to find logical ways to liberate the financial industry."

He personally is "completely against military spending. We don't need another military power in Asia. I'm sure we have another (better) way of spending taxpayers' money."

Free ride on research

Responding to concerns expressed by Okimoto that Japan gets a "free ride" on basic research done in the U.S., Yawata said funds allocated to this purpose in Japan have been "too small" but are now "increasing rapidly as the technology gap narrows."

NEC spends more than 10 percent of its total sales income on research and development, and 13 percent of semiconductor sales. About one-fifth of these funds go to basic research in the company. In the early 1960s, Japanese firms paid about 12 percent of sales on licensing arrangements with such American firms as Bell Telephone, Texas Instruments, and Fairchild, he noted.

Targeting undesirable

Following the formalized debate, Okimoto suggested that targeting of industries might prove increasingly undesirable politically. While there clearly would be short and intermediate-term problems in providing foreign firms easier access to the Japanese financial market, providing this could be "an important step in limiting frictions" especially with the U.S.

Prof. William F. Miller of the Stanford Graduate School of Business, president of SRI International in Menlo Park, said that the U.S. could respond to "targeted" competition in one of three ways:

1) By doing nothing, "in which case we'd lose;"

2) By persuading Japan to do less "targeting;" or

3) By adopting the same practice, which would lead to "government-to-government competition."

The best course would be to encourage more free market competition in Japan, he said. In a subsequent conversation, Miller expressed concern that a full scale trade war could erupt.

Lowering the capital cost differentials for U.S. firms in Japan would be "a significant modification," Okimoto said. The more foreign investment occurs in Japan, the less homogeneous and less susceptible to "targeting" its industry will become.

Yawata suggested that U.S. managers should educate private investors to look more for long-term gains than short-term profits.

Okimoto noted that U.S. firms cannot borrow heavily from banks on a long-term basis and that banks are forbidden from directly owning equity in companies.

The debate was sponsored by the Northeast Asia-U.S. Forum on International Policy and moderated by Prof. John Linville, head of the Stanford Center for Integrated Systems. —**Bob Beyers**

Crane, Div of Ophthalmology A227, SU Med Ctr.; B14; $1440-1514.

Elizabeth Cheney receives first Mendelowitz scholarship

Senior painting and printmaking student Elizabeth Cheney is the first recipient of the Daniel M. Mendelowitz memorial scholarship, made possible by gifts from family members and friends of the late Professor Mendelowitz, well-known portrait painter and watercolorist of mostly Bay Area subjects, who was a member of the Stanford Art Department faculty from 1934 to 1969.

The scholarship award was "a complete surprise, and wonderful" to Cheney, an independent 26-year-old from Berkeley, who is working her way through Stanford in the Art Department photo lab and as a lifeguard at deGuerre pools.

A nonrepresentational painter who "works quite large in oils and also in monoprints," she is getting married to a Stanford graduate student at the end of this year, plans to go on to graduate school, and wants a career as a studio artist "insofar as possible." She previously studied photography and design here.

Dan Mendelowitz

Dan Mendelowitz was born in Linton, North Dakota in 1905 and died in February 1980. He was educated at Stanford (AB '26, AM '27), won a New York Art Students League scholarship in 1931, and taught at San Jose State before joining the Stanford faculty.

The author of *Children are Artists*, *A History of American Art*, and the popular college text *Drawing*, Mendelowitz once wrote, "Nowhere is the spirit of adventure more certain than in the arts. People derive great satisfaction from exercising their manipulative skills in this age of mechanization."

He was a very effective teacher, revered for his natural, forthright manner. As a painter, although he also treated other areas of California, and of Mexico and Europe as well, his long-time friend Stanford physics professor Robert Hofstadter said, "He knew the Bay intimately. He loved the mist in the air and he had the sense of California."

With the first award of the Mendelowitz scholarship, Professor of Studio Art Matt Kahn thanked Mrs. Mildred Mendelowitz, her son, Palo Alto sculptor and painter Louis Mendelowitz, and other relatives and friends whose gifts "made it possible for the department to honor Professor Mendelowitz in the most appropriate way imaginable: by helping an outstanding young artist carry on with her work in the studio."

Elizabeth Cheney in the studio

"Additional gifts to the Mendelowitz Fund are most welcome," he added, "and will eventually enable us to award the scholarship more frequently."

Help Center hosts holiday workshop

"Exploring the Realities of the Holiday Season," a one-session workshop with John Preston Jr. and Larry Starkey, will be given from noon to 1:30 p.m. Wednesday, Dec. 15, at the Stanford Help Center.

The workshop will cover issues which commonly arise during this season, such as: frantic activity (too much to do in too little time); childhood holiday memories vs. present day realities; holiday loneliness and depression; holiday crutches, such as alcohol and drugs; and ways to create a more personally satisfying holiday season.

Call the Help Center, 497-4577, to reserve a place in the workshop. Coffee and tea will be served.

The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Stanford Medical Center, and SLAC employees and their immediate families. All workshops, seminars and counseling sessions are free of charge.

The Help Center entrance is at the rear of Galvez House, near Frost Amphitheater. Parking is available at Angell Field.

Perelman to speak

Prof. Chaim Perelman of the Université Libre de Bruxelles will speak on "Rhetoric and Legal Reasoning" at 4:15 p.m. Thursday, Dec. 9, in room 280 of the Law School.

The talk is sponsored by the Stanford Law School.

Recreation facilities

Finals Week, December 13-17

Encina lockers and showers—7:30 a.m.-9 p.m.
Roble complex (lockers, showers, gym floor, dance studio, studio 42, and room 33)—8 a.m. to midnight.
Encina weight room—Noon to 2 p.m., 3:30-8:30 p.m.
Maples Pavilion—Noon to 1 p.m.
deGuerre pools—Noon to 2 p.m.
deGuerre courts—11 a.m.-7:15 p.m.
Golf course—T-F, first available starting time.
Tresidder recreation center—M-Th 8 a.m. to midnight, Fri. 8 a.m. to 1 a.m.
Open: Olympic Gamefield, Perrier Parcourse, Angell Field, and tennis courts
Closed: Roble Pool

Calendar

Calendar items should be delivered to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next deadline, the last of fall quarter, is Wed., Dec. 8, to cover the **three weeks** *of Mon., Dec. 20, through Sun., Jan. 9.*

Events must now be submitted on forms supplied by Events and Services. Forms will be sent to major presenters. Others wanting copies should call Events and Services, ext. 7-2551. When the Calendar is finally on-line, *Campus Report* **will provide directions on calling it up.**

LATE ANNOUNCEMENTS

Wed., Dec. 8. EE 380 Computer Systems Laboratory Seminar: "NMOS II and the HP 9000 Development" with Dr. Fred Clegg, section manager, Technical Computer Group Engineering, Hewlett-Packard, Cupertino. 4:15 p.m. Terman Aud.

MONDAY, DECEMBER 13

Biological Sciences Dept. Seminar: "Plant Studies on Jasper Ridge" with Dr. Hal Mooney, S.U. 4:15 p.m. Room T175, Herrin Hall. Open to the public.

TUESDAY, DECEMBER 14

WEDNESDAY, DECEMBER 15

Basic Science Research Colloquium: "Regulation of the immune responses by the major histocompatibility complex" with Dr. Hugh O. McDevitt, Dept. of Medical Microbiology. 5 p.m. Fairchild Aud.

THURSDAY, DECEMBER 16

FRIDAY, DECEMBER 17

Women's Basketball: Vs. USF. 7:30 p.m. Maples Pavilion.

SATURDAY, DECEMBER 18

Men's Basketball: Vs. CSU Dominguez Hills. Maples Pavilion. 3 p.m. Ticket information at 497-1021.
Women's Basketball: Vs. Pepperdine. 7:30 p.m. Maples Pavilion.

SUNDAY, DECEMBER 19

University Public Worship: Ernle D. Young, 11 a.m.; Catholic Mass, 4:30 p.m.

EXHIBITS

Paul Harris—Still Life. Stanford Museum. Through January 2.
Venice in the 18th Century. Paintings, drawings, prints and decorative arts. Stanford Art Gallery. Through December 19.

Trustees approve selective stance on stock proxy votes

The Stanford University Board of Trustees has adopted a more selective policy on stock proxy issues.

The board's action Tuesday, Dec. 14, followed the unanimous recommendation of the Commission on Investment Responsibility, an advisory group of faculty, staff, students and alumni, made after a year-long study.

Modifying its 1977 statement on investment responsibility, the board said "trustees shall normally not vote on any shareholder resolution involving social issues unless they conclude a company's activities cause substantial social injury."

Any member of the Stanford community may request action under this policy in a written statement to the CIR. By majority vote, the commission may then decide to investigate and analyze the allegation "in whatever manner it deems appropriate." (Unless a majority votes to investigate the allegation, no further action will be taken unless persuasive additional evidence or arguments is given the CIR.)

By two-thirds vote—or eight of its 12 members—the CIR may subsequently recommend that the trustees 1) vote Stanford's shares, 2) make representation to management, 3) divest the University's shares, or 4) take any other action the commission deems appropriate.

The board then makes the final decision.

Otis Pease, head of the Trustees Subcommittee on Investment Responsibility (SCIR), said "not voting on shareholder proxy issues would be the norm" for the trustees.

The change gives the commission "a vote of confidence" with broad freedom to "pick and choose" those issues of greatest significance, he added.

"The trustees will see fewer recommendations, but what they see will have greater clout.

"The likelihood is that the trustees will find themselves more in agreement with the CIR's recommendations.

"In the past, when the CIR recommendations were close to unanimous, the trustees usually agreed. Otherwise, they did not."

In the past, both the commission and the trustees "felt pressured to vote" on a wide variety of issues "even though they were not ready to do so," Pease said.

In its 1980-81 report recommending a year-long study of the proxy process, the CIR said the past practice was "too hurried and too limited to do justice to the issues involved." A majority felt "as a

New phone, electronics net planned for $15-18 million

Stanford trustees have approved the concept of a new electronics communications project with an estimated cost of $15 to $18 million. The proposal faces further review by the board in February.

The project includes installation of a new telephone system, estimated at $13 to $15 million; SUNet, a broadband network for video and computers, estimated at $1 to $1.5 million; and an energy management and control system, estimated at $1 to $1.4 million. Costs for improving the underground conduits shared by all three of these systems are included in these estimates.

The existing telephone system is "obsolete. . .not cost effective. . .and must be replaced within two years," according to a report submitted to the trustees.

While voice traffic cannot yet coexist economically on the same cable with digital and video, the report adds, all three may be integrated by the end of this decade. This projection has been incorporated in planning the new telephone and SUNet systems.

So far as the phone system goes, the

Cable service interest high, new survey shows

Two-thirds of Stanford's resident faculty and staff are interested in subscribing to cable communications systems, not only as a source of new TV programs but also as a working link between home and office, a new survey shows.

Conducted by graduate students Hugh Daley and Donald Case of the Institute for Communication Research, the survey covered all faculty and staff living on campus and half those living in Palo Alto.

Among those residing on campus, 40 percent said they were "extremely likely" to subscribe to a basic cable service at $10 to $15 per month. An additional 28 percent said they were "somewhat likely" to do so. *(See text, page 14.)*

The University's Cable TV Steering Group, headed by Associate Provost Michael Oman, currently is working with Palo Alto officials on plans for a cable system which might include campus subscribers. The University also is exploring commercial interest in using Stanford as a test-bed for new, interactive cable services.

Overall, three-fourths of the survey respondents were interested in interactive cable services. Home security (77 percent) and electronic banking (70 percent) were the most desired services.

About 60 percent of the respondents now use a computer terminal or word processor at work. Twenty-five percent use a terminal at home.

Twenty percent of the campus residents and 12 percent of Stanford faculty and staff in Palo Alto own personal

Williams named first holder of Paradise professorship in resources law

A new professorship in natural resources law has been established at Stanford University by the Board of Trustees, it was announced Tuesday, Dec. 14.

The professorship is the result of a gift from Robert E. Paradise, an attorney, and his wife Ione, of Arcadia, Calif.

Howard R. Williams, a noted Stanford Law School professor, was appointed first holder of the endowed chair, which is titled the Robert E. Paradise professorship of natural resources law.

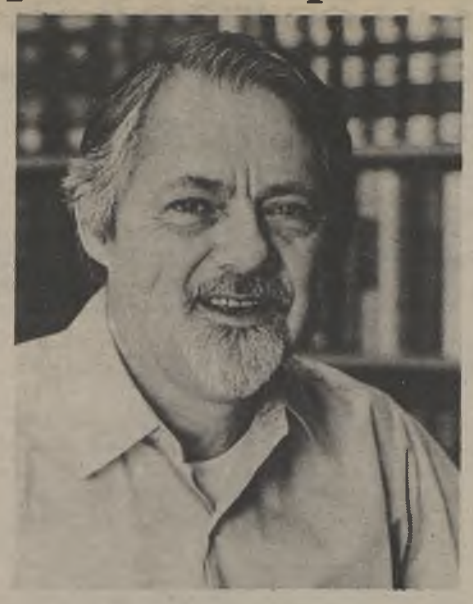
"This new chair will help ensure Stanford's continued leadership in a legal field that vitally affects the future of the West and the nation," John Hart Ely, dean of the Law School, said.

Natural resources law includes oil and gas law, water law, hardrock mining, other possible energy sources, and management of the public domain.

Paradise earned both his undergraduate and law degrees at Stanford, where he was elected to Phi Beta Kappa and the Order of the Coif.

He is currently a co-owner of Anacapa Oil Corporation, which is active in drilling for gas in the Sacramento Valley.

Paradise retired in 1974 after eight years as general counsel of the Ralph M. Parsons Company, an international engineering and construction firm.



A specialist in oil and gas law, he also served, from 1937 to 1944, as assistant general counsel with Richfield Oil Company, predecessor to ARCO.

Paradise was previously (1929-37) with the law firm of Gibson, Dunn & Crutcher in Los Angeles. He returned to private practice in 1944 as a partner in Krystal and Paradise.

Paradise has been an active supporter of Stanford for many years, and a member of the Law School Board of Visitors from 1972 to 1975.

Mrs. Paradise, who graduated from UCLA, is a former president of the California division of the American Association of University Women.

The Paradises have two daughters, Lisa (Mrs. Gus Van Der Stad) and Carol (Mrs. Leo C. Black).

Howard Williams

Professor Williams is a nationally known expert in oil and gas law who frequently serves as a consultant to governmental agencies and law firms.

He was a member of the California Law Revision Commission from 1971 to 1979, including four years as vice-chairman and the final year as chairman.

He has also been a trustee of the Rocky Mountain Mineral Law Foundation for the past 15 years.

A Stanford Law faculty member since 1963, Williams was named in 1968 the first holder of another endowed Stanford chair, the Stella W. and Ira S. Lillick professorship in law, and remains Lillick professor emeritus.

He became an emeritus professor upon his official retirement earlier this year, but was promptly recalled to teach his specialty of oil and gas law.

Williams was born in Indiana and educated in Missouri, earning his bachelor's degree at Washington University in St. Louis.

He studied law at Columbia University in New York, where he was a member of the law review.

During World War II, he saw active duty as a member of the Army field artillery.

Williams joined the law faculty of the University of Texas in 1946, serving for a time as acting dean of the School.

He was appointed to the Columbia Law School faculty in 1951 and held its Dwight Professorship from 1959 until his departure for Stanford in 1963.

Williams has written several books, including the definitive *Oil and Gas Law* (with Charles J. Meyers), an eight-volume work with annual supplements and an abridged edition. Among his other works are a *Manual of Oil and Gas Terms* (also with Meyers), which has had five editions.

In his memorandum to the faculty announcing Williams' appointment to the Paradise professorship, Dean Ely stated that "The chair will always be more distinguished for having had as its first holder the nation's most distinguished natural resources law professor."

Williams has also published in the areas of property, trusts, wills and estates.

He and his wife, the former Virginia Merle Thompson, were married in 1942 and have a son, Frederick.

People

Keith Copeland has been named assistant manager of employment in the University Personnel Office effective Dec. 1.

Formerly coordinator of systems for the Employment section, Copeland will directly supervise the staffs of the Employment section and the Stanford Employment Experience Program. In addition, he assumes responsibility for all operational aspects of the Employment function and for its staff planning, budgeting, and policy formulation under the direction of Employment Manager Linda Haines.

Prior to joining Personnel in 1979, Copeland held personnel-related positions with the Fremont Union High School District and the City of Sunnyvale.

He earned an A.B. in political science—international relations from Stanford in 1977.

Janet McNeil, director of public information and publications at the University of Redlands, has been named director of Stanford University Publications Service, effective Jan. 3.

She succeeds Robert McCann, who asked to be relieved of his administrative responsibilities but will continue with the Publications Service staff.

Grand award winner in the 1982 publications competition of the Council for the Advancement and Support of Education (CASE), McNeill created publications which sharply increased both the number and caliber of applicants to Redlands.

She previously served as director of public relations for the Eastman School of Music in Rochester, N.Y., and for the St. Paul, Minnesota, Chamber Orchestra.

She has been an adviser on programs at a wide variety of colleges and universities, including Rochester, Columbia, Barnard, Oberlin, Minnesota, Wisconsin, and South Dakota, among others.

A 1967 graduate of Oberlin, where she majored in philosophy, McNeill did graduate work in student personnel administration at Columbia in 1968-69. She has held scholarships from the National Science Foundation, National Merit Corporation, and American Field Service.

Richard Reis to recruit EE grads, help CIS with career development

Richard Reis, director of career planning and placement for engineering and science for the past five years, has been appointed chairman of the Graduate Recruitment Committee in the Electrical Engineering Department and director of career development at the Center for Integrated Systems.

His fundamental objectives in both jobs are to make sure that the brightest and most promising graduate students come to Stanford, that they have a satisfactory and rewarding experience while here, and that some contact is maintained with them when they leave.

The Electrical Engineering Department, second largest on campus with nearly one-tenth the graduate student population, has for years attracted and admitted an outstanding applicant pool. However, a number of the top candidates, once admitted, choose to go to other institutions for a complex of reasons—including the availability of financial support, their perception of the department's research programs, and subjective factors which lead them to an overall judgement on the attractiveness of Stanford as a place to study.

Reis will contact outstanding applicants, develop fellowship, RA-ship or TA-ship packages, and make appropriate faculty aware of outstanding applicants interested in their research areas.

Large-scale integration

The Center for Integrated Systems (CIS) under the codirectorship of Prof. John Linvill and James Meindl, was established to expand research in the area of Very Large Scale Integration (VLSI). The major goal of VLSI research is to place more than a million integrated circuit elements on a one-square-centimeter silicon chip and to make systems that can use those chips.

Possible future application areas of VLSI include entire books stored on a single chip and available for less than a quarter, superfast computers that can be used to improve weather forecasting, recognize objects in a televised scene and conduct research into controlled nuclear fusion, "friendlier" computers that can recognize and understand human speech, and a variety of "smart" consumer products, communication services, and medical instruments.

CIS will serve as an umbrella organization to stimulate the flow of ideas among various disciplines. CIS does not have faculty or students of its own and does not grant degrees. Reis will help develop ties between graduate students, affiliated faculty and the industrial sponsors of CIS. He can be contacted at ext. 7-0409.

Overseas applications

The deadline for applications from Stanford faculty to teach overseas during academic year 1984-85 has been extended to December 27, 1982.

Forms may be obtained in the Office of Overseas Studies in the Old Union. For further information, please contact Daryl Sawyer, ext. 7-3555.

Research associate in opthalmology

Research Associate for studies on transduction mechanism in the corneal nerve terminals. Experienced in electrophysiological techniques; a background in neuropharmacology or psychophysics would be an advantage. Send CV to D. Maurice, Div. Opthalmology, Stanford Med. Ctr., Stanford, CA 94305. Telephone (415) 497-5844. Stanford is an equal opportunity/affirmative action employer, eager to identify qualified women and minority candidates.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medicals news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Indian professor shows a better way for Americans to market their goods

BY DONALD STOKES

An Indian who spent the first 17 years of his life in a small town in southern India is today an honored expert in discerning the needs of the American people.

Venkataraman ('Seenu') Srinivasan, aged 38, has introduced remarkable new ideas into one of the pursuits in which America feels it leads the world—how to market.

Advertising is not the best way, he says. Nor is "salesmanship."

What is more important is to find out exactly what consumers really want. If the product policy is based on consumer preferences then sales will follow with comparative ease.

Establishing consumers' real needs is a complicated process that requires all the latest techniques of in-depth market surveys and computer-aided analysis.

Srinivasan explains that a key factor is not to ask those surveyed to pick between competing brands, but to probe deeper and more tangentially, so as to uncover broad patterns of individual thinking that in effect reveal the consumer's preferences more accurately than he can articulate himself.

Srinivasan, who is professor of marketing and management science at Stanford's Graduate School of Business, is in charge of the doctoral program at the School.

This means that he has responsibility for overseeing the quality of the highest ranking students produced by the nation's top-rated graduate school of business.

This post is in addition to his teaching and research, which has produced some notable awards both for himself and his students.

In research he specializes in quantitative techniques in marketing; multiple attribute decision-making models; measurement of consumer preference structures, plus (as the advertisers he looks on coldly would say) much much more.

The threads of destiny which led a foreigner halfway round the world to the top of an American profession began in a social paradox of modern India.

Born a Brahmin, an Indian of the highest caste which for centuries had been the administrative elite until the birth of the Indian republic, Srinivasan found himself the victim of "backlash" caste prejudice.

The mass of the Indian people resented the fact that five percent of the population, the Brahmins, had been their leaders before independence.

This prejudice was so marked that although Srinivasan was a top student at high school he was denied entrance to any of the engineering colleges in his native state of Madras.

"Fortunately, there was a national competition for entry into the Indian Institute of Technology, so I studied for this and passed," he said.

He spent five years at the Institute in Madras and gained his B.Tech. in mechanical engineering. He received a gold medal as the top student of all those graduating in his year.

He was offered admission by several American colleges, but none of them had a graduate program dealing with his particular interest at that time—mechanical vibrations and turbo-machinery. He decided to join a Bombay firm of large-scale engineers and to specialize in machine design.

However, when he started work in the firm's training program he was put into the section dealing with production planning and management. He complained, but was asked to continue there for a few weeks until suitable arrangements could be made for him to transfer to the section he wanted.

He found that he liked production planning so much that he never again raised the matter of a transfer. This was his first taste of business administration. "I found it fascinating because I could find analogs in business administration of what I was doing in engineering."

After two years of this experience he came to the U.S. in 1968, and studied industrial administration at Carnegie-Mellon where he gained his doctorate in 1971, the university having granted him his M.S. in 1970.

In 1971 he joined the University of Rochester's Graduate School of Management as assistant professor of marketing, operations research and operations management; he was soon promoted to associate professor. Two years running he won the Best Teacher award from graduating students.

He came to Stanford Graduate School of Business in July 1974 and two years later was named professor of marketing and management science.

His interest in marketing had been sparked at Carnegie-Mellon where his roommate, Allan Shocker, was absorbed by the subject. The two men used to spend hours discussing ideas. As a result of those discussions they focused on what was to become the central theme of their research; this was to try to understand the consumer's preference structure.

"This boils down to finding out why the purchaser chooses one brand or model over another" he explained."Autos, for example, can be viewed as a bundle of attributes, such as seating capacity, price, gas mileage, acceleration and so on. In our research we tried to understand how people trade off these attributes against each other.

"Basically, what Allan and I worked on was whether it was possible to construct and parametrize a model of a consumer's behavior, so that we could establish those trade-offs for each member of a sample of consumers.

"If we had this model, and also the knowledge of the sort of offerings already on the market, we should be in a position to forecast what would happen if we introduced the new product. Ours would not be perfect predictions, for we dealt with human nature, but we could capture a good deal of what was likely to happen.

"Not only that, but we could also find out what particular niche in the market was not covered by a suitable offering."

How could such a structure be built up?

"We give the potential consumer a list of hypothetical options. We might for example give him 25 options in the purchase of a car, by handing him cards on which all the various attributes were listed for each option. Then we would ask the person to rank-order the options in order of overall preference.

"Having collected the data we then apply a procedure developed by us to infer the consumer's trade-offs. The procedure uses the mathematical technique known as linear programming.

"It is more useful to do market research this way than to ask people outright to name one product as prefered over the others. One reason why the latter method is unreliable is that those asked to name a favorite often try to give socially acceptable answers.

"Our methods catch people with their guards down, so to speak, and we tend to get more truthful answers."

Srinivasan has used his model not only to find how particular products would find acceptance, but also to seek areas where no suitable products would gain an advantage over competitors, and why.

"The key point is that if the product policy is based on a proper understanding of consumer preferences, there is a minimum need for 'selling.'

A product policy based on a proper understanding of consumer preferences minimizes the need for 'selling.'

—'Seenu' Srinivasan

You will have fought your battle so well that there is sufficient attraction to a sizeable segment of consumers to make your product the preferred one."

Srinivasan has been involved in several marketing projects, usually in an advisory role. The surveys were comprehensive, and involved in-depth questioning of many hundreds of people.

He believes that real marketing, in the sense of finding out what consumers really want, is far more useful than advertising.

"Often advertising is done with financial excessiveness. Some of the money would be far better spent on finding out what products were needed, or how existing ones could better meet the requirements of consumers."

Asked how he could be expected, as a foreigner, to have the ability to predict the reactions of Americans, Srinivasan said that much of his work came under the heading of psychometry, that is, the measurement of psychological phenomena.

Srinivasan feels it has often been an advantage to him to be a foreigner who has had to study the American scene from a completely detached view, taking nothing for granted. "I have no inbuilt feelings that would lead me to regard any particular aspect of the market as unnecessary to examine.

"I am also able to ask questions of potential consumers which probe their basic reactions, without assuming attitudes that a native-born questioner might reflect as a result of his own life experience and inculcation."

In any case, people's behaviors change under the impact of events, says Srinivasan, and here again, behavior changes can be predicted. As an example, he mentioned his research into public attitudes toward using autos in preference to public transport, in the face of rising fuel costs. He carried out research into this just before the Iran crisis.

The accepted wisdom at that time was that most people would continue to use their cars, out of habit, in spite of rising fuel prices. Srinivasan constructed a model based on in-depth surveys and found that people did in fact worry about rising

continued on next page

Srinivasan...

continued from page 3

costs, and that a significant number would switch to public transport if costs rose beyond certain points.

"We estimated that mass transit ridership would nearly double if a 60-cent surcharge were put on gasoline. After we had finished the study the Iranian crisis broke out, the price of gas did go up and the increase in demand for public transport was just about what we had predicted.

"The point is that if you had simply asked people beforehand what they would do if the price rose you may or may not have received an accurate answer. A more in-depth study did reveal what would happen.

"One typical result of not listening to the public, or not trying to find out what it really wanted, was seen in the reluctance of Detroit to build compact cars. They did this finally only after foreign rivals had successfully demonstrated the wishes of the U.S. public."

Srinivasan found that his method could be used in areas which have almost nothing to do with marketing. "For example, at one time the federal government was giving money to rural areas to improve primary health care, with the stipulation that the money was to be spent in a way that yielded maximum benefit.

"The question arose: 'How to figure out the benefit to people if certain actions are taken?'

"Clearly there were millions of options, and the danger was that things would become politicized. What my student Barnett Parker and I tried to do was to apply the same sort of methodology that I had done in more traditional areas of marketing.

"We asked all the questions that would build up an effective model of what people felt they needed. We included questions to get at the trade-offs on the type of health care facility, hours of operation, appointment and visiting times and so on.

"Our research did not simply ask people to choose between existing types of service. We tried to establish what the real needs were, whether some new sort of service, such as a central health care center which costs a lot, or a registered nurse's office, which costs less, might meet the needs beter on a cost-benefit basis.

"Economists often talk about cost-benefit analysis, but I think that in our approach to marketing we have a method of quantifying the benefit which is in consumers' terms. We were able to maximize the potential benefits to the future patients, and to do it within the budget stipulations."

The Stanford authorities realized that Srinivasan's methods of research would help them to establish long-range strategy and priorities. This has in fact occurred.

Part of the success of Stanford in maintaining financial equilibrium has been the way it carefully considers probable future trends, says Srinivasan. He pays warm tribute to the work of William F. Massy, vice-president for business and finance at Stanford, who has been one of those principally responsible for gathering all the possible facts about likely changes in conditions.

"One of the factors in forward planning is that each of the planners has a particular perspective, according to his or her field of responsibility," said Srinivasan. "It is important to feed into the model as much as possible of those perspectives, together with assessments of how much support and demands will come from outside.

"Each player in the campus game has particular priorities which may conflict with those of others. The history professor will probably have very different wishes and expectations from, say, his colleague in the Medical School.

"Bill Massy was very keen on putting together the same sort of methodology that would provide as many as possible of the necessary facts. A considerable number of appropriate staff and faculty were interviewed."

Srinivasan made it clear that he had not himself carried out that particular research, but had simply made some suggestions as to how it could be done.

With the growth of conglomerate corporations, Srinivasan has become involved in considering marketing strategies of those firms with their widespread interests and operations. In particular, he has become very interested in the intersection of business policy with market strategy.

The question that the boards of management have to consider, says Srinivasan, is 'which are the business areas where we should thrust most vigorously in the next few years?' "

To answer the questions, Srinivasan has given much attention to decision support systems. "In areas where you cannot get hard objective data you could ask managers to supply subjective data. For example, if a firm has a 10 percent share of a particular market, what would have to be done to increase that share to 15 percent?

...I think that in our approach to marketing we have a method of quantifying the benefit which is in consumers' terms.

"You might find that it would be necessary to spend 10 million dollars to achieve that, whereas if a minimal amount was spent the share was unlikely to fall below eight percent.

"What the decision support system does is to pull all the relevant data together so that a model can be created. One can then think much more clearly about taking decisions on whether and how to enter new markets, whether to close out marginal operations. The group of planners are enabled to see more clearly the respective effects on longterm profits and short-term cash flow."

In the fall of 1982 Srinivasan took over as director of the doctoral program of the School. There are 72 students in residence who are part of the program, and some 10 others who are not in residence, and who are completing their theses. About 20 doctoral candidates enroll each year although, as with all doctoral programs, there is a high attrition rate.

Srinivasan has some changes in mind for the doctoral program. He would like to see the candidates do more research and to focus less on structured work. "They tend to take a lot of courses, so that by the time they do get to their theses they have not much research to build on."

Since he began supervising doctoral candidates about ten years ago Srinivasan has been responsible for six candidates. Of these, three won top awards for their dissertations.

"I believe in the apprenticeship method, which gets the candidate involved in work with his adviser. One of my present doctoral students has worked with me so closely that he might almost be called a research colleague."

Srinivasan is regarded as one of the better teachers in the School. He finds teaching a great stimulus to his own thinking. "Interaction with the students is vital to me, if only because of the indepth questions I get from them. They make me think, and often have caused me to think in new ways and to develop ideas."

The Stanford Graduate School of Business has developed a systematic evaluation system for applicants to its M.B.A. program; Srinivasan was one of the principal architects of this.

"We have about 5,000 applications each year for some 300 places in the School" said Srinivasan. "Our criterion is that the person we enroll has high potential for management, and is also academically sound.

"That rules out some people who may very well rise to high positions but who are not academically viable."

He has developed an actuarial model that attempts to predict the academic performance of applicants to the M.B.A. program. It builds in several indicators such as undergraduate grade-point average, test scores, business experience and undergraduate major. The factors are weighted, instead of being used as raw statistics.

The model was used for the 1981 applicants as a part of the total admissions process and will be an ongoing operation.

During the academic year 1978-79 Srinivasan was visiting professor at the European Institute for Advanced Studies in Management in Brussels, and also at the Catholic University of leuven, Belgium.

Srinivasan has few hobbies, but loves to travel, and is very interested in Indian classical music. He talks fondly of such Indian instruments as the veena, which has been in use in southern India for over 3,000 years.

Srinivasan is married to Sita, whom he met in India. They have a six-year-old son Ramesh. His older brother, Balachandran, is a professor of accounting at the business school of Northwestern University.

...and now Srinivasan is named first holder of new endowed chair

Stanford Business School Professor Venkataraman Srinivasan has been named the first holder of the new Ernest C. Arbuckle Professorship, which has been established to honor the dean of the Stanford Graduate School of Business from 1958 to 1968.

The appointment and creation of the chair were approved by the University Board of Trustees at their meeting on Tuesday, Dec. 14.

The professorship was funded by eight major donors: William R. Hewlett, Belton Kleberg Johnson, Edmund W. Littlefield, David Packard, the Grace Foundation Inc., Hewlett-Packard Co. Foundation, International Business Machines Corp., and Wells Fargo Foundation.

The professorship honors Arbuckle, 70, who as dean directed the School's greatest period of expansion. He is generally credited with being the key figure in the School's surge to international prominence.

During the decade of Arbuckle's leadership, the size of the faculty doubled, the number and quality of applicants for the MBA and Ph.D. programs rose sharply as the School greatly enlarged its base of teaching and research, the operating and capital budgets increased sevenfold, and the School constructed its present building at a cost of $5.5 million.

Arbuckle also worked to increase the School's relationships with the community through the establishment of the Stanford Business School Advisory Council, a group of top executives and government leaders, and creation of the Affiliate Program, which strengthened ties to businesses and dramatically increased corporate financial support of the School.

Arbuckle came to the deanship directly from W. R. Grace and Co., where he had been an executive vice-president. After leaving the Business School, he became chairman of the board of Wells Fargo Bank and Wells Fargo & Co., a position he held until 1977.

In 1978, he became chairman of the board of Saga Corp., a position he left last year. He is currently chairman of the executive committee of Saga. He also holds the title of GSB dean and professor of business management emeritus.

Say hello to new Tresidder group—SCAR

Tresidder Outdoor Programs have changed their name to Stanford Outdoor Adventures and Recreation (SCAR). In January they will teach beginning clinics for both downhill and cross-country skiiers. They also will visit the elephant seals at Ano Nuevo, as well as view California grey whales close-up in kayaks.

For more information, call 497-4316 between 10 a.m. and 2 p.m. any Monday, Tuesday or Friday.

Palo Alto mayor stresses communication, cooperation in talk with trustees

Communication and cooperation are vital to Palo Alto and Stanford as they face several major issues in the coming months, Mayor Fred Eyerly reported to the Stanford Board of Trustees Monday, Dec. 13.

Eyerly, in the first meeting in history of a Palo Alto mayor with the Board, called for new steps to increase understanding between the two communities.

He suggested including a City Council member on the Stanford Hospital Board, having a Council member attend the liaison meetings between University and city staffs, developing a Council relationship with the Trustee's subcommittee on real estate, and providing close contact between the Council and the Stanford Office of Business and Finance.

"Stanford has done an admirable job with its recent handling of Stanford West," Eyerly said. "The open planning process has helped raise the confidence level of the community. Further confidence would be gained with involvement of the public where possible in longer range planning."

The Stanford Board received Eyerly and City Manager William Zaner warmly, applauding them at the conclusion of their presentations.

Trustee Parmer Fuller, retiring from the Board after 24 years of service, congratulated University President Donald Kennedy and his staff for arranging the meeting.

"There is a definite need for cooperation in view of the areas of mutual benefit," Eyerly said. "Current examples are your proposed modernization of the Stanford Hospital. . .Stanford West, the connection of Willow Road to El Camino Real, and the addition of a Neiman-Marcus store to the Shopping Center."

The provision of cable television and gas and electric utilities by the city are other areas of potential cooperation.

In the past, Palo Alto has tended to ignore the economic and cultural benefits flowing from the University because of the change in the "quality of life" that Stanford land development helped bring about, Eyerly told the Trustees.

Relations improved

Since the mid-1970s, however, relations have improved with the start of the staff liaison meetings, the consolidation of the Stanford-Palo Alto fire departments, and the signing of waste water and garbage disposal contracts, Eyerly said.

Zaner reported to the Trustees on recent demographic and economic shifts in Palo Alto. He cited the various services supplied to the campus under contract with the city.

"The Stanford West housing project you have proposed can be a welcome addition to our housing efforts," Zaner said. "It is an example of Stanford's willingness to accept a share of the responsibility in the housing area. You rightfully deserve recognition for accepting that responsibility and for taking steps to deal with it.

"However, it is important to note that a project of this magnitude—it is the largest residential project in Palo Alto history—carries some drawbacks with it. An endeavor of this size must have side effects, some of which will in themselves be significant and possibly undesirable. . . . I suspect that we may come to the point where we disagree about those side effects and the means to mitigate them."

Responding later to questions from the Board, Zaner said he saw "no fatal flaw" in the project, however.

The proposed Hospital Modernization Project and Willow Road extension are other major efforts looming ahead, Zaner said.

"We see clearly the potential benefits of (the HMP) to the community at large," Zaner said. But, "while the University and the Hospital focus on the medical and teaching aspects of the project, the City is concerned about the availability of service to our citizens, the physical impact of the structure itself, and the traffic that will be associated with it."

As for the extension of Willow Road from Arboretum Dr. to El Camino Real by the University, "I look forward to the day when we will have that exquisitely complex tangle of interests resolved and put to rest."

The city staff favors the extension, Zaner said, given the facts presently in its possession.

Zaner said that the Trustees would find the city "anxious to listen and to work with you to find mutually acceptable solutions" to the Stanford West and other problems. But, "you will find us equally resolute in our insistence that solutions to problems" be found before the projects move ahead.

"We are unashamedly proud of Palo Alto," Zaner concluded. "It's an outstanding city in every way, and it is made all the richer by having Stanford as its closest neighbor. We don't promise you a neighborhood without some occasional discord. What we do promise is that we'll always be anxious to listen thoughtfully to what our neighbor has to say and to consider his interests as well as our own."

Over the past several years, President Kennedy and several Stanford vice presidents have made "State of the University" reports to the Palo Alto City Council. Eyerly and Zaner offered to reciprocate this year by appearing before the Trustees to discuss issues of mutual interest.

—Andy Doty

Technology licensing income tops $2.5 million, leads U.S.

Stanford's gross income from technology licensing topped $2.5 million during 1981-82, ranking first among 20 major U.S. research universities.

Initial licensing of the basic patent on gene splicing and cloning accounted for nearly $1.5 million of the total. So far, 73 firms have paid an initial $10,000 fee and an additional $10,000 annually.

The University of California received $471,843 as its share of the DNA licensing program. An additional $200,000 was established as an interest-bearing "litigation reserve" to protect the patent.

After deducting direct licensing expenses and administrative costs, $1,358,401 was distributed to Stanford inventors ($141,595), their departments ($605,150), and their schools ($611,656).

Ordinarily, inventors, their departments and their schools each receive one-third of net income. But Drs. Stanley Cohen of Stanford and Eugene Boyer of UC-San Francisco gave their share of the recombinant DNA patent income to their respective institutions.

In his annual report, Director Niels Reimers of the Office of Technology Licensing notes that "we are in the third year of a very high rate of discoveries—two or three per week—which shows no sign of abating in the near term.

"Molecular biology and information sciences are the areas of greatest activity.

"In these areas, the technology often involves tangible research property (TRP), such as a piece of biological material or a computer software program."

The University recently announced a TRP policy designed to make TRP promptly available to scientific colleagues while protecting its commercial value.

The Office of Technology Licensing recently established a Software Distribution Center to help meet these objectives. More than 25 software packages are now being distributed.

Biological products of greatest research and commercial interest are hybridomas, DNA probes, and plasmids. So far, researchers have made more than 100 disclosures of biological materials to the Office of Technology Licensing.

Diverse sources

During 1981-82, Stanford received income from 56 separate technologies. Earned royalty income on sales came from such products as a biological cell sorter instrument, text editing software, chemical reagent, infant hearing detection system, insect attractant, hybridomas, and an infant transporter.

Advance payments were received on FM sound synthesis for musical instruments, human hybridomas, acoustic microscopes, computerized axial tomography (CAT) technology, blood flow detection systems, cryptology systems, and computer-aided design software.

"The gestation period of a university discovery until significant income from sales is received is generally long," Reimers observes. "In 1981-82, more than 88 percent of the income came from cases first disclosed to the Office of Technology Licensing in 1974 or earlier. For 1980-81 income, it was nearly 60 percent."

Since 1969, the Office of Technology Licensing has received gross income totalling $6.4 million. Net income topped $5 million, of which $2 million was realized in 1981-82 prior to payments to UC and creation of the DNA litigation reserve.

Investments...

continued from page 1

method of influencing corporate behavior, the proxy process seems very weak indeed."

Pease called the 1982 report and recommendations from the commission, headed by Prof. Alexander Dallin, "highly admirable," both in reaching unanimity on a new process and in candidly discussing very different rationales for socially responsible investment by the University.

In an interview, Pease noted that "there is nothing (in the new policy) to give preference to certain issues over others." This is left entirely to the commission to determine.

Pease said the CIR's record shows students, faculty, alumni, and staff tend to vote across "bloc" lines. His impression is that student votes tended to be the "most clustered" as a group, with faculty the least clustered.

There is "no evidence" that the requirement for a two-thirds majority on future recommendations was designed to permit any group to stymie action by simply not voting or acting as a bloc.

"What clearly has driven both the commission and the board is the overwhelming load of work" in considering the growing avalanche of stock proxy issues, Pease said. "On balance, the changes suggest the board is willing to place greater credence in the commission." Focusing greater attention on fewer issues may improve the University's effectiveness as an ethical investor.

The Board of Trustees adopted an initial statement on investment responsibility in 1971 and a revised document in 1977. That same year, 294 students were arrested in a peaceful protest against U.S. investments in South Africa, the first major demonstration on that issue nationally.

During the 1981-82 moratorium on stock proxy votes by the University, the CIR held 16 meetings, including one with six former heads of the commission. It reviewed extensive literature on investment responsibility, including books on this subject and policy documents produced on other campuses in the 1970s.

Despite repeated advertisements in three Stanford campus publications soliciting opinions, expressions of concern, or questions from the community, it received no responses at all. Bob Beyers

Trustees expand COIN $9 million

The Stanford Board of Trustees has approved a $9.3 million expansion of the University's coinvestment mortgage program for faculty and senior staff.

This will bring total investment in the COIN program since 1980 to its authorized ceiling of $21 million.

Robin Hamill, director of housing programs, will head a task force to recommend a successor program to COIN.

The present program will be closed at the end of the current recruiting season June 30, 1983, except for commitments made prior to that date.

To stretch the remaining funds to benefit as many participants as possible, the average amount lent to each individual will be reduced.

The reduction will affect only those homes purchased for more than $200,000. The maximum COIN loan on houses priced at $400,000 or higher would be $80,000, instead of the present $100,000.

Since faculty salaries have increased at a faster rate than local housing prices in the past year and since interest rates have declined, the purchasing power of COIN borrowers under these guidelines will be equivalent to that of a year ago. Prices of lower cost homes have remained stronger than those of higher cost homes in the past year.

To improve the loan-to-value ratio of COIN loans, 15 percent down payments will be required on homes priced at $350,000 or more under the program. At present, 10 percent down payments are required, regardless of price.

One fourth of faculty, staff have home computers; many more plan to buy

continued from page 1

computers, using them an average of 2.5 hours a day.

Within five years, the survey indicated, 60 percent of the faculty and staff expect to own a microcomputer or home terminal device. Respondents predicted doing about 20 percent of their work at home with a cable link to their office.

Potential users of cable-based computer services showed the greatest interest in text-editing (81 percent), transmitting to a remote high quality printer (81 percent), access to Stanford and other library catalogs (72 percent), data storage and management (70 percent), office communications (64 percent), and Stanford data bases (64 percent).

According to Paul Kaufman, staff to the University's cable steering group, the interest shown in an interactive system was unusually high by national standards. However, he cautioned that the overall high interest in cable indicated by the survey might reflect the tendency of very interested people to return the questionnaire. The survey was completed by 48 percent of those living on campus and 35 percent of those in Palo Alto.

Kaufman, Oman, William Yundt, director of network development for the Center for Information Technology and Prof. Henry Breitrose, chairman of the Communication Department, were responsible for the intitial survey design, while Daley and Case conducted the study and analyzed the data.

The survey coincides with initial planning for a prototype broadband network providing video, and computer links between several buildings on campus.

"The survey was designed to find out what people wanted, what services were appropriate," Kaufman said. The resulting information will be used in planning and negotiations with Palo Alto officials and commercial vendors.

The University currently is working with city officials on a request for proposals for a cable TV system which would include faculty and staff residences on campus. Whether such a system would be owned by the city, a private firm or some form of joint venture will not be known until fall, Kaufman said. Meanwhile, the University also is exploring the interest of outside vendors on its own.

The cost of cabling residences would be borne by the city or an outside vendor.

The University's own institutional cable—called SUnet—presumably would be designed to link up with the residential system.

Survey respondents showed a strong interest in cable TV programs originating on campus. The Lively Arts programs led, with 83 percent, followed by lectures of campus visitors (82 percent), campus music and drama performances (77 percent), and Stanford lecturers (74 percent).

Four-fifths of the faculty and staff living in Palo Alto were interested in a "video community bulletin board" of local events, housing, want ads, and emergency "hot line" information.

Among all respondents, 97 percent had TV sets. Use averaged 2.7 hours per day, compared with the national average of six hours daily. Most respondents were dissatisfied with present TV programs.

About 65 percent of the faculty and staff might access a cable system for computer-based services within five years, the survey indicated. About a third of all respondents currently have access to a University terminal which they could take home to use.

Among those who have a terminal at home (one-fourth of those responding), nearly 50 percent said they used their terminal about one hour per day, 20 percent use it about two hours per day, and four percent use it five hours or more per day.

One-third of those with a terminal at home had a separate phone line for computer use.

Twenty percent of the Stanford campus group and 12 percent of those faculty and staff living in Palo Alto own a home computer, used by an average of two or three people.

The most prominent uses, in order, were: 1) work-related word processing; 2) entertainment and games; 3) programming; 4) scientific calculation; and 5) personal word processing. Average reported usage for each of these purposes was greater than two hours per week. Total usage of microcomputers for all purposes averaged 17.6 hours per week per household.

Half the respondents expect to purchase a home computer in the foreseeable future. Of these, more than 60 percent—or more than a quarter of all respondents—expect to buy within the next two years. Most expect to pay between $1,000 and $3,000, but 20 percent plan to spend more than $4,000.

An alternative means of linking to a cable network is through a keyboard terminal used in conjunction with a TV set. Forty-five percent of the faculty and staff in Palo Alto expressed an interest in such a device, as did one quarter of the Stanford residents. Most of those interested were willing to pay $200 to $500 for a keyboard.

A total of 55 percent either own a computer now or will within five years. Adding those interested in a keyboard-TV unit brings this total up to 60 percent.

"Video technologies and computers, along with cable, may increasingly be viewed as part of an integrated home information and entertainment utility," the report said.

Super Bowl coming Jan. 20, 1985; Geiger praises community support

Stanford will host Super Bowl XIX Sunday, Jan. 20, 1985.

Athletics Director Andy Geiger said he was "delighted" with the decision made Tuesday, Dec. 14, by the National Football League.

Geiger said: "The achievement of this bid has come through the significant community efforts led by the Super Bowl Task Force, headed by San Francisco Supervisor Quentin Kopp. The additional enthusiastic support of Mayor Diane Feinstein was essential.

"We believe that the visibility engendered by hosting the Super Bowl will be extremely beneficial to Stanford and its athletic program. We are looking forward to the devotion of energy and community cooperation that will make Super Bowl XIX the best ever."

The NFL requires dressing rooms on the site, so new locker rooms will be built within the stadium. Concessions and the restroom facilities will be improved. The upper level of the press box will be renovated and a fourth deck may be added to the press box.

The NFL will provide lighting on a temporary basis to both the stadium and surrounding areas.

Geiger said traffic density may be somewhat less than that surrounding Big Game or USC, since many more busses may be involved.

He indicated the facility improvements would be a joint venture, with the Stanford portion raised through the efforts of the University and the Bay Area Super Bowl Task Force.

The 84,892-seat stadium is the largest privately owned college stadium in the U.S. Construction of the original 60,000-seat stadium began in 1919, with mule power used for excavation. It was dedicated to Big Game Nov. 19, 1921, won by Cal 42-7. The stadium was expanded to its present capacity in 1927-29. Herbert Hoover accepted the GOP Presidential nomination in 1928.

The largest crowd was 94,000 at the 1935 Big Game. The stadium was used for the 1960 U.S. Olympic trials, the 1962 U.S.-U.S.S.R. track meet, and the East-West Shrine Football Classics in 1969, 1975-78, and 1980-82, and is scheduled for 1983.

Personnel update

Official University holidays for 1983

The Administrative Council has approved the following dates for the observance of the designated University holidays in 1983.

New Years 1983—Friday, Dec. 31, 1982;
Washington's Birthday—Monday, Feb. 21;
Memorial Day—Monday, May 30;
Independence Day—Monday, July 4;
Labor Day—Monday, Sept. 5;
Thanksgiving—Thurs. and Fri., Nov. 24-25;
Christmas—Fri. and Mon., Dec. 23 and 26;
New Years 1984—Monday, Jan. 2, 1984;
Birthday Holiday.

The birthday holiday may be taken on the employee's birthday or any other work day mutually agreed upon by the supervisor and the staff member.

Frequently staff members ask to have time off to observe days of religious or other special significance, other than those days designated as University Holidays. Because of the flexibility in scheduling the birthday holiday, staff members should be reminded that the birthday holiday can be scheduled to provide paid time off on a day which has special significance to them.

Supervisors are also encouraged to accommodate staff requests for vacation or personal time off to observe days of religious or other special significance.

Payroll deadlines for 1983

World looks to U.S. to spark economic recovery—Hoadley

BY DONALD STOKES

Many U.S. firms seem to be shying away from taking more international risks.

Simultaneously, a new wave of comfortable provincialism is settling over much of the American public, with growing support for protectionism.

Carried to extreme, this trend would mean an increasing vacuum in global economic and political affairs.

So says Walter E. Hoadley, globally known economist and financial executive, who was executive vice-president and chief economist at the Bank of America from 1968 until 1981, when he became a senior research fellow at Stanford's Hoover Institution.

Among his many high offices are adviser to the U.S. Congressional Budget Office and vice-chairman of the Commission on International Monetary Relations of the International Chamber of Commerce. He is widely regarded as the "dean" of business economists.

"Selling U.S. recession surpluses abroad is not likely to be as easy this time as in previous downturns," Hoadley said. "World markets are depressed, particularly in Western Europe and Latin America. The overvalued U.S. dollar hurts trade. Foreign companies and governments are prepared to counterattack.

"Consequently, we had better sharpen both our strategic and tactical thinking to meet long standing charges from these companies and governments that most American firms are unreliable suppliers to the world's markets.

"Over the years, the approach to overseas markets by American companies has been markedly different from that of their foreign competitors. The foreign executive starts with a global or major country perspective and evaluates his own country's prospects last. The typical U.S. executive—for understandable but still provincial reasons—does the reverse.

"Rising world uncertainty makes more U.S. shareholders, directors, regulators and employees prefer to concentrate on the domestic market. Fewer Americans seem willing to live abroad long enough to become fluent in foreign languages and knowledgeable in non-U.S. cultural and political affairs.

"Foreign rules and regulations make it costly for Americans to compete. Personal security overseas is becoming a more threatening and expensive problem. So the easy answer for U.S. companies is to lose interest in foreign business.

The time has come to: 1) document what our international presence or absence abroad means corporate-wise and personally; 2) update American understanding of international risks and rewards; and 3) challenge a new breed of Americans, especially in business, to pursue the opportunities now going by default outside the U.S.

"No one can deny that risks are rising on many global fronts for Americans to do business, negotiate agreements or even travel. But the answer is not to start building a wall around ourselves.

"In my international travels I find little or no evidence that economic developments outside the U.S. will help lift our economy. On the contrary, almost everywhere there are expressions of major dependence upon economic recovery in the U.S. to help bring about recovery within most industrial nations.

"My analysis provides some encouragement for global recovery but not a vigorous upturn in 1983. The year 1984 now looks more promising.

"Unfortunately, slow irregular recovery in the U.S. and elsewhere is certain to aggravate some credit and liquidity problems already evident in many depressed industries and financially weak developing countries. The global recession and past heavy borrowing have raised the debt service ratio from 16 percent in 1980 to about 25 percent at present.

Walter Hoadley

"Similarly, the ratio of interest payments on foreign debt to total exports has advanced from eight percent in 1980 to roughly 14 percent currently. These are danger signals of more liquidity problems ahead.

"In my view, the prevailing sharp reduction in private lending to many developing countries will very likely necessitate some type of summit meeting of world leaders to resolve the emerging liquidity problems. A more rapid and general global economic recovery than now expected and lower interest rates could ease or prevent this occurrence.

"Possible solutions would include: 1) added member funding or borrowing from the global money markets by the official world financial organizations; 2) grants of special drawing rights by the International Monetary Fund; 3) a new system of credit insurance for private loans; and 4) some redefinition of quality standards for new or old credits, or some combination of these.

"Naturally, any liquidity crisis of major proportions would impact global financial markets, thus tending to strengthen the already overvalued U.S. dollar.

"In periods of economic and political uncertainty, funds move from weaker to stronger currencies—in the current situation mainly to the U.S. dollar. Once the overall problem is resolved and more confidence restored, a reverse correction—against the U.S. dollar—should occur."

Asked what effect the recent world economic conference would have on U.S. trade policies, Hoadley said, "The question of how U.S. companies can hope to operate successfully on market principles in a world of ever increasing government ownership and subsidy is moving from general to pointed discussion. Similarly, the proper role of foreign investment in the U.S. and American investment overseas is attracting interest.

"How foreign nations control the value of their currencies, especially as regards the U.S. dollar, and what if anything should be done about it is now being debated at a high level.

"The use of more U.S. government credit in competing for foreign trade has been generally rejected, but continuing loss of major contracts to overseas firms may prompt some reconsideration.

"U.S. policy makers will be under more pressure to limit foreign imports and to give more government assistance to U.S. firms to meet what is termed unfair competition from abroad.

In many foreign policy issues, Americans tend to take rather provincial or defensive positions. This is often because of their belief that the U.S. has few real friends abroad, that a substantial portion of U.S. funds sent for overseas relief is wasted, and that most foreign political leaders speak out against our country rather than in support of U.S. leadership.

"Accordingly, there is dangerously little political support within the U.S. for our country to continue to exert the leadership which so many other nations implicitly or explicitly want or take for granted.

"At the same time as world support for U.S. leadership is weak, too many Americans are currently waiting for things to get better or for the wolrd to 'settle down.'

"The conditions we face now are unhappily far more likely to be the new normal than an aberration before a return to the comfortable conditions of the past.

"Many major governments now find their countries in recession because of revenue and expenditure limitations. Accordingly, the hopes for new global growth and lowered inflation depend increasingly on what private initiative can add, reinforcing the trend toward more supply side governmental policies.

"In this challenging atmosphere, the U.S. now has a striking opportunity to strengthen its relative position in the world as well as its home economy, and thus its global bargaining position.

"Unhappily far too many Americans fail to recognize their heavy personal stake in the successful revitalization of the U.S. economy and the improvement of its global image in the ever increasingly competitive and more hostile world.

"The time has come, therefore, for all of us to try harder to ensure our future growth by putting back more into our economy rather than take it for granted and continue to milk it.

"No surge in the world economy is in the offing to lift the U.S. economy and solve our problems. Indeed, the opposite is true, because the world at large is waiting for a new surge of economic expansion in the U.S., and a moderation of our high interest rate—strong dollar dampening impact on other economies.

Americans must come to understand that worldwide perception of greater U.S. revitalization in itself will serve significantly to deter further economic and armed attacks against our interest in world affairs as well as at home. Further evidence of weakness, incompetency and poor productivity can only cause misery for us.

"U.S. citizens are already paying a high price for our persistent provincialism in many policies and attitudes. As negative perceptions overseas have mounted concerning the future strength and power of the U.S., critics and avowed enemies have felt less and less constrained to respect our leaders and ordinary citizens alike, to attack our friends, to recognize our investments, technology and related interests, to fulfill agreements and to accept U.S. views and recommendations on almost any issue.

"A new surge of American homegrown confidence—based upon a more realistic appraisal of our capability and resources relative to all others—could touch off a wave of new expansion of enormous value to our people. Almost certainly it would be followed by a similar wave in many other parts of the world, helping to ease many political and economic tensions.

"Each American should be asked to state the conditions which must prevail to cause him or her to

Law School professorship gift of Calder Mackay, attorney, Stanford parent

A Stanford Law School professorship and scholarship fund in memory of A. Calder Mackay was established by the University Board of Trustees Tuesday, Dec. 14.

Mackay, who died in 1981 at the age of 90, provided the endowment for the fund in his will.

"We are delighted and grateful to be the beneficiaries of Mr. Mackay's generous bequest," said Dean John Hart Ely of the Law School.

"The new A. Calder Mackay professorship endowed through his gift will help us attract and hold outstanding faculty members.

"And the endowment income designated for Mackay scholarships will help make a Stanford legal education available to talented students of limited means," Ely said.

Mackay, a prominent Los Angeles tax attorney, developed close ties to Stanford first as a parent of Stanford students and then as a volunteer and major donor.

Both his sons, John Calder Mackay and Richard N. Mackay, earned their bachelors and law degrees at Stanford, and his daughter Leah married Stanford law graduate F. Lee Coulter.

Mackay was born in 1891 on a farm in Granger, Utah.

He received his bachelor of arts degree from the University of Utah in 1915 and his law degree from George Washington University in 1917.

Following a tour of duty with the Army in World War I, Mackay served as secretary of the Italian War Damages Board of the American Peace Commission.

In 1919 he returned to Utah and began the general practice of law.

Three years later, he was named special attorney to the Bureau of Internal Revenue in Washington, D.C., where he successfully litigated many issues raised by the commissioner.

He was selected to represent the I.R.S. commissioner in the first case tried before the Board of Tax Appeals, now known as the United States Tax Court.

He entered private practice in 1926, specializing in the field of taxation, and was a founding member of the Los Angeles law firm of McGregor, Bennion & Higson.

Mackay contributed to the growth of many business organizations, not only as a lawyer but also as a director.

He played an important role in the development of Don Baxter, Inc., the company that pioneered the commercial preparation of intravenous solutions, and in Pharmaseal, a leader in the disposable health care products field.

After these two companies merged with the American Hospital Supply Corporation, Mackay served on the American board of directors, until becoming, at the age of 76, an honorary director for life.

Before retirement he also served on the board of Pendleton Tool Industries, Inc., and Pacific Employers Insurance Company.

Mackay was president and director of the Donald A. Baxter Foundation for 15 years, during which the Foundation endowed the Donald A. Baxter professorship in pharmacology at Stanford Medical School.

Mackay was also a donor to the Hoover Institution at Stanford.

He was named a Stanford Associate in 1951 in recognition of his continuing service and generosity to the University.

Mackay's large bequest to Stanford was motivated by "appreciation of Stanford's commitment to excellence in education and of the education Stanford provided his sons and grandchildren," according to his son Richard N. Mackay.

Richard, who graduated from Stanford Law School in 1949, is a partner in Mackay, McGregor, Bennion & Higson, the Los Angeles law firm which his father helped found.

His brother John Calder Mackay, a 1948 Stanford Law graduate, is a noted real estate developer and founder of Mackay Homes.

Their sister Leah Mackay Coulter was widowed in 1957 and lives in Los Angeles.

Two of A. Calder Mackay's nine grandchildren—Sally Ann Coulter and Calder Mead Mackay—attended Stanford.

Faculty consulting activities, companies student use audited

Stanford currently is conducting an internal audit of outside consulting activities among a randomly chosen sample of 60 faculty members, according to Vice Provost Gerald J. Lieberman, dean of graduate studies and research.

The audit, first of its kind since 1977, covers the 1981-82 academic year.

"New questions of apparent or potential conflicts of interest are arising as a result of unusual potential for financial gain stemming from University research results," Lieberman notes.

"Thus it is important that we be able to assure ourselves, our external sponsors of research—most notably the federal government, and the public of compliance to our policies (concerning) outside consulting."

University policy limits those on full-time appointment to one day per week consulting, or 13 days per academic quarter.

The audit questionnaire asks faculty to name the companies for which they consulted last year, if any; the number of days spent consulting per quarter; the general nature of their role; and their title while consulting.

It also asks faculty to describe any formal agreements between Stanford and the companies for which they consulted involving them in their role as faculty members. Examples might include serving as principal investigator on a research project sponsored by the company; serving as faculty representative to the company as part of a University-sponsored industrial affiliates program; or being responsible for directing or managing gift funds to Stanford provided by the companies.

It also asks whether faculty created or invented any intellectual property licensed to the company by Stanford while the faculty member was a consultant to the firm. If so, the identity of the agency sponsoring the research, the general nature of the intellectual property, the faculty member's role in developing the intellectual property, and the terms of the licensing agreement should be described.

Finally, the questionnaire asks if faculty hired or supervised any Stanford students in their outside consulting activities while simultaneously acting as their academic adviser or serving on their doctoral dissertation committee.

Lieberman himself is among those expected to reply to the questionnaire by Dec. 23. His name was among those randomly chosen for the audit.

Carpools

Hoadley...

continued from page 7

make some new plans and expenditures. Then let's compare these minimum conditions for more positive decisions with those prevailing or in prospect. Where they are deficient, we should either temper our desires or seek to alter the conditions which retard our decision-making.

"Where else is the initiative for a better tomorrow to come from than the U.S.?

"Europe seems overwhelmed by its past traditions and lacks cohesiveness and determination to take many needed bold new steps for change and progress.

"The Muslims in the Middle East are beset with enormous internal problems and exhibit little desire to take responsibility for broader leadership. Africa is plagued by strife and slow economic growth.

"The Communist-Socialist nations are generally in economic disarray and can hardly be expected to provide positive global leadership with their anti-capitalist doctrine.

"Japan has achieved great economic power and wealth, but still is reluctant to accept major leadership roles in global affairs. Unfortunately, too often Japanese policies and actions also tend to cause misunderstanding and thus continue to engender ill rather than warm feelings. Nowhere else in Asia, including China and the new industrial countries, are there near-term prospects for strong regional or global catalytic leadership.

"Latin America has considerable long-term promise, but inflation, political problems and innumerable financial adjustments leave little room for global leadership.

"Only in the U.S. do most observers find the potential for setting new directions and demonstrating by example new economic courses and leadership for tomorrow's world.

"Will that potential be realized? What concerns me is that some foreigners now have more confidence in the future of the U.S. than most Americans. Admittedly, we face tough basic or structural adjustments and our national life is not ideal—but we still have much more opportunity to meet and resolve our problems than any other nation."

Asked whether a great deal of world trade was now being carried on under some form of nontariff restraint, Hoadley replied, "All those aged over 50 must remember that this has been going on for a long time, and up till the time GATT (the General Agreement on Tariffs and Trade) started was a major influence on world trade."

"Much of the present trouble is due to the fact that the dollar is overvalued, possibly by as much as 10 percent. The reason is that in spite of our troubles the U.S. is still one of the most stable currencies, and much of the rest of the world values it because of its stability.

"There have been allegations that the Japanese have manipulated the yen so that it has grown weaker on the world markets in recent months, and thereby helped Japanese exports. There is little evidence for this. What is more to the point is that a major key to world recovery would be for the dollar and the yen to be valued more closely to their real worth.

"The key to world recovery is for the U.S. to resume its productivity and its competitiveness. There was a time when the U.S. represented half of the total gross product of the world. Today it is about one-fourth.

"In the past America was able to use its trade strength to make arrangements with other countries, particularly less developed countries, in a way that meant we were extending significant support to those countries.

"Partly as a result of that many countries were unable to build up their industries at the cost of our own. We have now reached a stage where some of these countries have developed to a point where it is no longer desirable to continue the favorable arrangements we formerly extended to them. Naturally, they do not like this at all, and this has led to a good deal of dispute."

Asked to sum up what lay ahead, Hoadley said:

"Economic recovery in the U.S. is assured by strong underlying economic forces. The recovery will be slow and irregular. This slow recovery will contribute only modestly to near-term global recovery, and poses some important financial problems both for international lenders and borrowers, especially involving Third World countries.

"But difficult problems are seldom resolved in any atmosphere other than crises. So the time is at hand for some major constructive policy and institutional decisions.

"During 1983 the U.S. almost certainly will evaluate and modify its foreign economic policies, so it would be useful for the leaders to international trade to meet together to discuss the effects of changing U.S. policies on the world situation.

Board approves concept of $42 million cogeneration facility

The Stanford Board of Trustees has approved the concept of building a new cogeneration plant to produce electricity for the main campus and steam for both the main campus and Medical Center.

No final decision on the project will be made until May or June.

Preliminary estimates indicate a total project cost of $42 million. The cogeneration plant would be located next to the existing Central Energy Facility near Jordan Way and Campus Drive.

The University currently purchases electricity at an annual cost of $7.8 million and natural gas to fuel boilers for $4.8 million annually. By 1986, these energy costs are expected to exceed $22 million.

Cogeneration—the production of both electricity and steam from a single fuel—could reduce the current $12.6 million energy cost to $4.8 million, an annual savings of nearly $8 million, according to Jack Barkle, project manager in the Facilities Project Management Office.

A report submitted to the trustees indicates that a cogeneration plant sized to meet the University's steam requirements offers the maximum gain in efficiency, together with an opportunity to realize revenues through the sale of electricity.

Public utilities face mounting problems in expanding electrical generating capacity, the report notes. These include problems in obtaining site approvals, rising fuel costs, uncertain fuel availability, rate regulation, and capital shortages.

"The prospect of starting construction of a new large generating unit, whether nuclear or another type, on the Pacific Gas and Electric system within the next 10 years is remote indeed," the report states.

"As demands for energy continue to increase and as the economy recovers from the recession, this area—as well as most areas of the nation—may find the capacity is insufficient to meet the demand with the reliability and service continuity provided in past years. . . .

"Regulators, legislative bodies, and environmental agencies are creating a favorable climate and encouraging cogeneration plants.

The cogeneration plant would use natural gas to fuel an electric power generator. High temperature exhaust gases, which otherwise would be wasted, would be used to create steam. This results in much more efficient use of fuel.

"Gas turbine plants, using natural gas as the primary fuel, are environmentally acceptable, are clean in a housekeeping sense, and are simple to operate and maintain," the report to the trustees notes.

The ultimate economic benefit to the University depends a great deal on long-term trends in fuel costs and in the sale price for surplus capacity and energy sold to others. Negotiations are continuing with both Pacific Gas and Electric and the City of Palo Alto.

Anticipated net reductions in utility costs to the University are substantial, ranging from a net present value of $35 to 75 million for the first 15-year operating interval.

Besides the economic benefit, the University will gain an independent source of electricity. It will not be subject to curtailed service because of supply or capacity shortages. As a cogenerator, the University also would move one step higher in priority to receive natural gas supplies. The plant would be designed to use oil in the event natural gas were not available.

The University currently is seeking permits to build the cogeneration plant from the Environmental Protection Agency, the Bay Area Air Quality Management District, and Santa Clara County. "We consider the probability is very good that all permits will be obtained," the report states.

"Project Cogen will result in an overall area reduction in emissions of some of the regulated pollutants and only small increases in others."

A request for proposals on financing plans has been sent to individuals, banks, financial institutions, insurance companies and credit corporations. University ownership, third-party ownership, and joint ownership all are being considered.

The trustees authorized an additional $370,000 to continue design, permitting, financing and contracting activities, bringing the total authorized to date for this purpose to $1,120,000. Lease purchase agreements and tax-exempt debt financing are among the alternatives for permanent funding of the project.

The present $42 million cost estimate is based on starting construction by the third quarter of 1983, with completion by the first quarter of 1985.

During the ensuing 20-year period, steam requirements are expected to peak at 250,000 pounds per hour, with an annual consumption of 1.3 billion pounds. Electrical demand will approach 30 megawatts with annual consumption above 170 million kilowatt hours.

Trustees approve $3 million Shopping Center parking deck

The Stanford Board of Trustees has authorized $3 million for construction of a parking facility in the Stanford Shopping Center.

At their meeting Tuesday, Dec. 14, the trustees also approved the concept of extending Willow Road from Arboretum to El Camino at an estimated cost of $1.8 to $2.2 million.

Both projects would be paid by revenues from Shopping Center tenants and other beneficiaries.

Subject to signing a lease with Neiman-Marcus, the University now plans to start construction of a parking deck in the Shopping Center in January, with completion in June. Major areas of the Shopping Center parking lot are being restriped as part of a continuing resurfacing project. Additional parking at grade level will be built in late 1983, at the earliest.

The new, 402-car, single story deck would be located above the present lot at the intersection of Arboretum and Quarry Rds.

The board approved a sale-leaseback of the parking structure if this results in net savings to the University. The Shopping Center, which already has benefitted from a $17 million renovation program, is one of the largest revenue producers for the University and the City of Palo Alto, which benefits directly from sales tax revenues.

For 27 years, the Shopping Center's parking lot has served as a surrogate road for traffic from Willow Road and Quarry Road bound toward El Camino, a report to the trustees notes.

Future developments, including the hospital modernization program and Stanford West, a major housing development on Willow Road, may add to this traffic. With the contemplated addition of Neiman-Marcus to the Shopping Center, use of the parking lot and internal traffic lanes as a surrogate road will become "untenable," the report suggests.

Noting that extension of Willow Road to El Camino has been discussed for more than 50 years, the report says special emphasis has been placed on design of an intersection which would require traffic to turn north or south on El Camino, rather than proceeding east to Alma Street. The proposed alignment of the Willow Road extension is designed to preserve as many trees as possible in the area.

The proposed design was submitted to the Palo Alto Architectural Review Board last month. City staff has indicated an environmental impact report will be required. Its preparation and approval is expected to take six or seven months. The University hopes contruction will start in July.

Tennis court expansion approved

The trustees also approved the concept of a tennis improvement project, including construction of a 12th court and a new office, lounge and team room facility at the tennis stadium, located at the corner of Sam McDonald Road and Campus Drive.

The new court would permit equal space for men's and women's practice and allow simultaneous dual matches (of six singles matches each). It would be built on the southeast corner of the present courts.

The new office would replace the wooden structure built around 1926 now used for this purpose.

Costs of $200,000 to $300,000 would be met through gifts anticipated for this purpose. Design is expected to be complete by May with occupancy in the fall of 1983.

Purchase of IBM 3081 approved

The trustees also approved purchase of an IBM 3081 computer for an amount not to exceed $1,960,000 by the Center for Information Technology.

IBM has recently lowered its purchase price on 3081s while raising lease prices. The company also has offered universities a one-time increase in its educational allowance for installed 3081s.

Purchase is expected to result in budget savings of $600,000 annually over the next three years. The purchase will be financed through external borrowings for general and research equipment authorized by the board in October. It may prove eligible for tax-exempt financing at lower rates. Debt service will be funded through the rate structure of CIT.

California Energy Commission Loan

The trustees also authorized a $74,800 loan agreement with the California Energy Commission. This will provide about one-third the funds needed for converting 760 lighting fixtures on major access roads, Campus Drive, and parking lots to high pressure sodium devices. These will increase the lighting level by more than 15 percent while reducing energy use by one half.

The total project cost is $221,000, with an internal rate of return of more than 30 percent.

Campus power out 8 to 5 Sunday

Power will be off in the main Quad and other areas from 8 a.m. to 5 p.m. Sunday, Dec. 19, for substation construction and equipment maintenance.

Other areas include Memorial Hall, the 500 buildings, Wilbur, Stern, Crothers, Branner, Toyon, and Encina Halls, the Undergraduate and Green Libraries (except for the new wing), and others. Please refer to the map in the Dec. 8 issue of *Campus Report* for details.

For additional information call the Utilities Department, ext. 7-3765.

Buck estate hosts academic functions

Stanford University has applied to San Mateo for a permit to use the Buck estate mansion between Alpine and Sand Hill Roads as a center for academic functions.

Vice-President and Provost Albert Hastorf said that the main use of the 60-year-old home on the estate will be the daytime seminars, conferences, receptions, and other activities related to the University's academic programs.

The meetings normally will accommodate 20 to 50 people, he said, with the likelihood of receptions for up to 150 people three or four times a year. There will be no overnight guests.

The San Mateo County Planning Commission will take up the use permit application at its meeting of Dec. 17, as well as an application for a 50-car parking lot in an open area west of the home.

The lot is needed to replace parking lost on Alpine Road through the widening of that route at the Alpine-Junipero Serra intersection by the city of Menlo Park. An entrance to the lot from Sand Hill road will be required because the former driveway into the estate from Alpine Road also has been restriction by the intersection improvements.

The 13-acre estate includes a 3,600-square-foot home, a single family cottage, a garage, storage buildings, and a barn. It was given to Stanford under the wills of E. Olga Meyer, who died in 1970, and Alice Meyer Buck, who died nine years later.

The property is known for its beautiful grounds, which will be maintained by the University. Two full-time gardeners are employed at the estate.

Medical Center MEMO

Boswell Clinics renovation work to begin this month

A construction firm in Foster City has signed a contract with Stanford to undertake a major program to extensively upgrade the physical facilities of the Stanford University Clinics.

The project involves renovation of the first two floors of the Boswell Building, the facility adjacent to Stanford University Hospital where a majority of the 82 outpatient medical clinics will be located.

The $6.5 million construction, equipment and remodeling program was approved last June by the University's Board of Trustees. Improvements will include completely redesigned and larger patient treatment rooms, achieved in part by construction which expands clinic space into a few feet of what is now the building's courtyard.

Other improvements will be: decongested corridor traffic; a larger outpatient pharmacy; expanded office and storage space; four treatment rooms and five recovery spaces in a special procedures suite, to accommodate minor surgical procedures not requiring overnight hospitalization; and a better overall atmosphere. The renovation plan includes increasing the size and number of clinics to be accommodated in the Boswell Building by moving certain academic and research functions elsewhere.

The firm S.J. Amoroso signed as general contractor for the project Tuesday, Dec. 7, following signatures a week earlier by Dr. Lawrence G. Crowley, vice president for medical affairs at Stanford, and William Massy, vice president for business and finance. The total construction contract is for $3,852,600, according to Betty Rose, assistant director of Facilities Projects at SUMC.

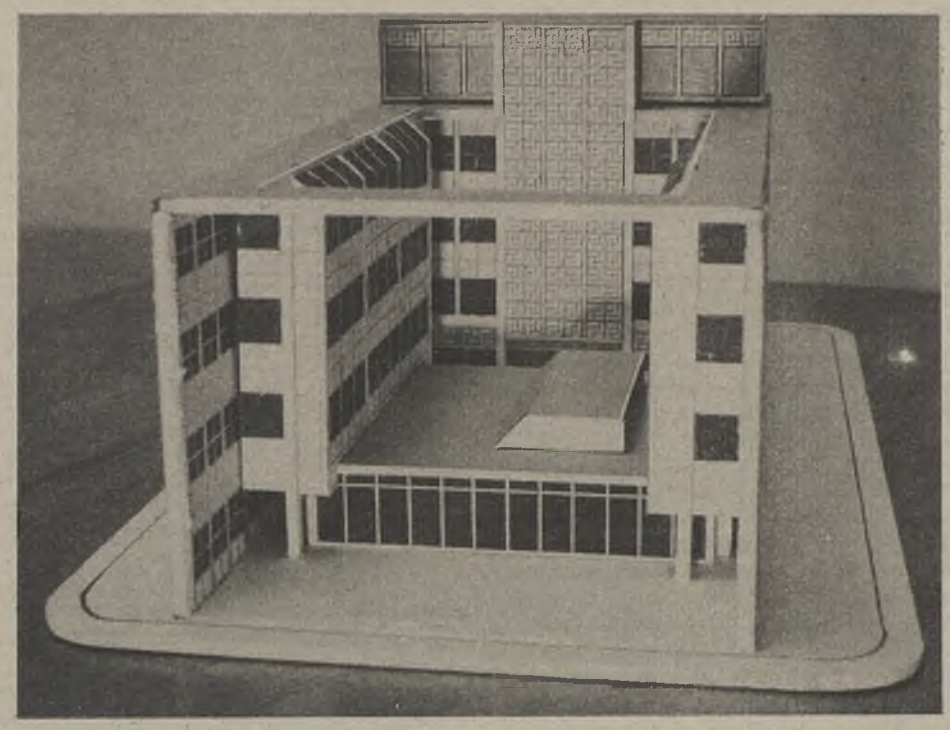
"The modernization of the Boswell Building is a first step in our efforts to expand the dimensions of faculty medical practice in order to serve the community more effectively, and with the maximum comfort for our patients," said Donald Tower, director of the Stanford University Clinics and Faculty Practice Program.

"The Faculty Practice Program is being reorganized," he added, "to provide comprehensive medical care, consultation, diagnosis and treatment, sharing responsibility for the sustained good health of families choosing faculty physicians as their doctors.

"These physicians will work as a team to bring their specialized areas of knowledge and experience to the patient's medical problem."

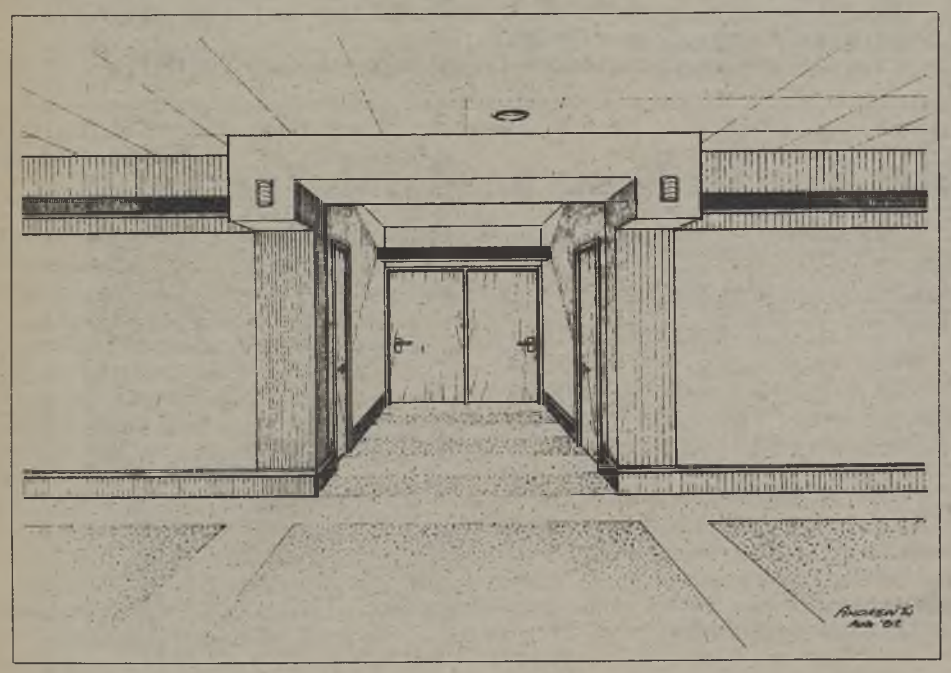
Presently, the specialty and subspecialty clinics, staffed by faculty physicians, receive about 135,000 visits per year, with patients referred from all over northern California, the west, other states and even other countries, Tower noted.

Patient care unimpaired



Work will begin under the 880-day contract Dec. 22, although the beginning stages of construction are not expected to impact the normal activities of patients and staff. In fact, said Langston Trigg, Jr., assistant director of Facilities and project manager, there will be little disruption of patient care throughout construction, because of the staged approach to the project.

Periodic updates on the status of construction will soon be available to patients and others at an information booth located near the front entrance of the Boswell Building.



The Boswell Building was built in 1959, and has had only minor, occasional renovation since. The present renovation is intended to make the Clinics a more comfortable and efficient place for patients to seek medical care.

The Boswell Renovation and related projects will result in relocation of many of the clinics. The clinics to move are: Cardiovascular Surgery; Dermatology; Medicine (allergy, cardiology, chest, endocrine, gastroenterology, hematology, immunology, internal medicine, nephrology, preventive medicine, and Stanford Medical Group); Neurology; Pain Clinic (already moved); and Surgery (eye, general surgery, hand, orthopedics, plastic and reconstructive, thoracic, and urology).

The clinics to remain where they are include: Gynecology/Obstetrics; Medicine (oncology); Pediatrics; Psychiatry (including Sleep Disorders); and Surgery (audiology, ENT, neurosurgery, and pediatric surgery).

Architect's model shows planned exterior of the Boswell Building. Enclosed balconies are intended to expand usable space inside.

Architect's sketch shows view of improved corridor space, planned as part of the renovation.

Background

The Clinics are a separate outpatient care facility from Stanford University Hospital since September, 1981. They have a close relationship, however, with both the Hospital and the Stanford University School of Medicine, the three interdependent components together comprising the Stanford University Medical Center.

"For the past two and a half years we have been analyzing the Clinics' needs," said Trigg, who will be assisted by Erik Lund of Facilities. (Lund will handle the project once construction begins.)

"For example," said Trigg, "among changes will be a shorter journey for orthopedic patients from their clinic to X-ray. The ophthalmology clinic, which obviously serves the largest percentage of visually impaired patients, is specifically being placed in an easy-to-find location," he added.

"A lot of changes which superficially might be seen as technical or procedural will in fact make visits to the Clinics more comfortable for patients."

For example, Vera Waechter, R.N., assistant FPP director for the Clinics, said that patient registration is being decentralized to the individual clinic areas.

"This will reduce the amount of time patients will have to wait before seeing their doctor, since they will no longer have to check in with a central desk and then with a receptionist at their individual clinic," Waechter said.

She added, "We're proud of the quality patient care provided at our clinics by Stanford medical faculty, and we'd like the physical setting to reflect that high quality." In that respect Waechter hopes to see positive results for the Clinics over the next few years.

Designers of the Boswell Clinics Renovation Project are Almeter and Finley, Architects of Palo Alto.

Funding will come from private sources, including a major gift from the James G. Boswell Foundation, the original contributors to the existing facility. Additional gifts to Stanford University Medical School for the Boswell Clinics Renovation Project are still being sought and gratefully accepted. Part of the costs will be covered by the Faculty Practice Program and the Medical School's capital budget.

Inspector for the project will be Morrie Grove of the SUMC Facilities Projects Office, under the direction of Howard Mark, manager of construction.

Outcome benefits

The improvements are intended to prepare the Clinics for technological advances in medicine in the coming years. They are also designed for greater flexibility than is now provided. Additional conference rooms will be added for teaching purposes in the Clinics area, said Trigg.

During construction, things may sometimes seem hectic in the Boswell Building, he added. There will be some noise, and perhaps some dust near construction areas. The final benefits, however, are hoped to outweigh the temporary inconveniences which may occur.

"Since greater convenience for all is the ultimate goal, everyone's cooperation and patience should prove more than worthwhile," added Tower.

—Lisa Ames

Clue to risks of whooping cough vaccine

When a few healthy British infants developed brain damage and epilepsy a few days after routine whooping cough immunization, some parents panicked and refused to have their children vaccinated.

The result: more than 100,000 children contracted whooping cough, and at least 30 died.

Controversy over the vaccine continues, although most physicians agree that the dangers of the disease outweigh the risks of immunization. Now, by studying the effects of the vaccine in mice, a Stanford neurologist has found a way to predict which animals, and perhaps which children, are most likely to be harmed by the vaccine.

The clues are in the genes, said Dr. Lawrence Steinman, assistant professor of neurology, and the answers may help doctors decide who should be vaccinated and who shouldn't.

"The whooping cough vaccine is one of the crudest vaccines currently given to kids," Steinman said. "It's the whole organism, killed and ground up for injection. But for now, the vaccine has to be used because the risk of reintroducing the natural disease in the community is higher than the rare complications from the vaccine."

While whooping cough is not itself fatal, it can leave a child vulnerable to viral pneumonia and other infections that can kill.

In a study published in a recent issue of the British journal *Nature*, Steinman reported injecting several inbred strains of mice with the vaccine.

Genetic control

While a fraction escaped unscathed from the experiment, all the animals possessing specific factors in their genetic code suffered convulsions and died within two hours of immunization. Autopsies of the mice showed physical and chemical changes in their brains that were "nearly identical," Steinman said, to the damage found in the brains of children who died after receiving the vaccine.

The genetic factors that the stricken mice had in common were located on the "immune response chromosome," the cluster of genes in every cell that seem to control how an animal responds to infection.

Humans have an analagous gene cluster called the "histocompatibility complex." In the last decade, scientists studying the complex have recognized that some genes appear more frequently in persons with certain diseases.

Multiple sclerosis, juvenile diabetes, and "poker spine" all are associated with specific genes which physicians can sometimes use as easily detected signposts

Lawrence Steinman

for disease susceptibility. But Steinman's work is the first hint that adverse responses to routine immunizations might also be under genetic control.

Research teams in England have just begun studies of children who develop complications from the vaccine, in hopes of finding a similar genetic marker. "We hope to identify a subpopulation of children who are at greater risk and exclude them from immunization," he said.

Currently one in 1,000 children who receive the vaccine will develop mild fever or irritability, and one in 50,000 will suffer severe brain damage.

"One out of 50,000 is not very many except that when every kid gets the vaccine, it takes its toll," Steinman said. "But five times that number will be damaged if we don't immunize. It's a risk that I think is worth taking, but it's a situation that should be improved."

The vaccine research was funded by a grant from the National Institutes of Health. —Deborah Franklin

Final planning stage for underground animal facility

Stanford University School of Medicine Monday, Dec. 13, received approval by the University Board of Trustees to proceed with final planning for a new, modern animal research facility.

The project, estimated to cost between $10 and $12 million, envisions a single-level underground facility located south of the Sherman Fairchild Auditorium. The facility of approximately 32,000 gross square feet will be connected to the main Center by an underground tunnel, and will replace approximately half of the existing animal research facilities of the School of Medicine, which do not meet present codes.

The facility would be equipped with ventilation stacks about 40 feet above ground and located in the greenbelt near Campus Drive. Parking space adjacent to the Fairchild Auditorium would be restored after construction of the facility is completed.

The trustees approved the building site based on drawings prepared by the architectural firm of Stone, Marraccini and Patterson of San Francisco, the project's consultants. Completion of design is expected by early summer of 1983, with construction scheduled to begin shortly thereafter. The building is expected to be completed in late 1984.

The project will be funded by about $3 million of University and Medical School reserves, and the balance will be a candidate for financing by tax-exempt bonds through the California Educational Facilities Authority (CEFA), according to David Mendelow, associate dean for administration.

"Laboratory animals are an essential component of biomedical research," said Dean Dominick Purpura of the School of Medicine. "Virtually every new surgical procedure is first tested for feasibility and safety in animals. No new medication is ever released for application in patients without extensive animal testing for efficacy and toxicity.

"In the basic sciences, advances in such fields as immunology, physiology, and microbiology are owed to studies in animals.

"A prerequisite to the use of animals in research is that they be maintained in excellent health and as free from stress as possible. While there is active research to find alternatives to animal experimentation when possible, it is fair to say that for the foreseeable future, laboratory animals would continue to play an important part in basic and clinical research."

Three quarters of the Medical School's principal investigators make use of laboratory animals in their studies. On the average, close to 30 different species or types of animals totalling 8,000 are accommodated within the facilities of the Medical School's division of laboratory animal medicine. An additional 45,000 animals, principally rodents, are held in departmentally administered facilities within the Medical School, according to Mendelow.

"Existing facilities do not properly support the extensive animal-related research programs of the School," Mendelow said. "They are not in compliance with applicable codes and guidelines, and are difficult to maintain and poorly designed for effective use.

"External agency reviews in the past two years have substantiated the urgency of instituting corrective measures," he added. "While temporary measures at a cost of $1.3 million have been taken to alleviate deficiencies, these are not sufficient."

The proposed facility, Mendelow said, would permit improved quality animal care and centralized operations, with greater efficiency.

—Spyros Andreopoulos

Everyone wins at gift shop!

One busy spot in the Hospital this time of year is the Auxiliary-run gift shop, where lovely holiday gift selections (including some Christmas lingerie) abound. This year the shop will sponsor a drawing, Dec. 20, for a big stuffed teddy bear. One free chance for the bear is given out with every single item purchase of $5 or more, said Auxiliary member Janet Whittaker.

Medical Center MEMO

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

WEDNESDAY, DECEMBER 15

Div. of Orthopedic Surgery Basic Science Grand Rounds: "Orthopedics in Singapore"—Dr. N. Balachandran (of Nat'l Univ. of Singapore). 8:30 a.m., M114.

Dept. of Neurology Grand Rounds: "Local Cerebral Glucose Metabolism in Epilepsy Using Positron Computed Tomography"—Jerome Engel, M.D., Ph.D. (of UCLA). 5 p.m., Palo Alto Veterans Administration Medical Center, Bldg. 7, B108.

Dept. of Pharmacology: "Regulation of Plasma Protein Gene Expression in Acute Inflammation"—Dr. John Taylor (of Gladstone Foundation, San Francisco). 4:15 p.m., Pharmacology Library, R358.

Basic Science Research Colloquium: "Regulation of the Immune Response by the Major Histocompatibility Complex"—Dr. Hugh McDevitt. 5 p.m., Fairchild Auditorium.

Div. of Clinical Pharmacology Seminar: "Effect of Salicylic Acid Analogs on the Renal PAH Transport Systems"—Solomon S. Tse, Ph.D. 4 p.m., M110.

DECEMBER 15, 16, 17, 20, 21, 22

Christmas Caroling in the Medical Center: All interested employees are invited to meet at 11:30 a.m. outside the "Brown Bag" room in the Hospital for an hour of caroling. For further information, call Bill Gilmore at 497-6251.

THURSDAY, DECEMBER 16

Dept. of Medicine Grand Rounds: "Hepatitis B Vaccine"—Dr. William Robinson. 8:30 a.m., Fairchild Auditorium.

FRIDAY, DECEMBER 17

Dept. of Gynecology and Obstetrics: "The Use of Monoclonal Antibodies in Developing Assays for the Clinical Laboratory"—Marcia Federici, Ph.D. (director, Monoclonal Antibodies Inc., Mountain View). 8 a.m., A336.

Holiday Door Decorating Contest Judging: Doors will be judged Friday morning and winners announced that afternoon for "Most Traditional," "Most Humorous," and "Most Modern" categories. For further information, call Susan Cabral in Employee Relations at 497-6251.

Dept. of Pediatrics Grand Rounds: "Cystic Fibrosis"—Dr. Richard Moss. 8 a.m., M106.

Div. of Orthopedic Surgery Grand Rounds: "Treatment of Acute Spinal Cord Injury"—Dr. Norman Kane. 7:30 a.m., M114; and "Ligaments"—Dr. James Gamble. 8:30 a.m., M114.

TUESDAY, DECEMBER 28

Stanford University Blood Drive: 11 a.m. to 4 p.m., second floor of Hospital, above cafeteria. For an appointment, call 497-7831. Drop-ins are welcome. (See *News Notes* for new Blood Center hours.)

TUESDAY, JANUARY 11

Nursing Educational Services Critical Care Course Level II: "Abnormalities of Coagulation." Course will include background information, theory, and case study exercises. Fee required. Registration deadline is January 2. For further information, call Carole Kidder at 497-6366.

THURSDAY, JANUARY 20

Dept. of Pharmacology Windsor C. Cutting Memorial Lecture: Featured speaker will be Dr. Stanley Cohen, of the dept. of biochemistry, Vanderbilt University. Reception will follow. 3:30 to 7 p.m., Fairchild Auditorium.

SATURDAY, JANUARY 22

Association of American Medical Colleges: A day-long symposium on medical education, chaired by Dean Dominick Purpura, with panels led by Drs. Robert Cutler, Roy Maffly, and John Steward. Topics will include promoting broad baccalaureate education, acquisition of computer skills, and problems of dealing with stress. Fairchild Auditorium.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Medical faculty opening

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members or applications from them.

The department of pediatrics at Stanford University School of Medicine seeks candidates for appointment to the full-time faculy at the assistant professor level in the division of general and ambulatory pediatrics.

This division, which is based primarily at the Children's Hospital at Stanford, is responsible for the Primary Care Clinic and for supervision of patients hospitalized from this clinic, the program in Adolescent Medicine, and teaching activities in the Well Baby Nursery.

The appointee will share in the management of the Primary Care Clinic, supervision of the 37 pediatric houseofficers in their weekly continuity clinics (within the Primary Care Clinic), teaching of medical students, and participation in the Robert Wood Johnson funded fellowship program for Academic Development in General Pediatrics.

Candidates should be certified or eligible for certification in Pediatrics and should have completed a fellowship in General or Ambulatory Pediatrics. Stanford's division has a strong research orientation, and is seeking a person with research training and demonstrated ability to conduct independent research in an area of general or ambulatory pediatrics.

Interested candidates should send curriculum vitae and names of references to: Ruth T. Gross, M.D., professor of pediatrics, Children's Hospital at Stanford, 520 Willow Road, Palo Alto, CA 94304.

A warning about holiday crime

"Christmas is coming, and so are the thieves. . .It's a time for giving, and a time for taking!"

So reads a flyer from Hilary Ryniewicz, director of Safety/Security Services, warning employees that this busy holiday time of year is "even busier for thieves."

His pointers for security follow:

- Not all delivery people are who they claim to be, especially this time of year. Charitable appeals may not be legitimate.
- Be alert for strangers in your building, especially during vulnerable hours: 30 minutes before work, lunch hour, and 30 minutes after closing.
- Don't leave your wallet or purse out. Lock them in your desk. Don't leave wallets in jackets or coats. Lock up personal or office cash; watch your checkbooks, credit cards and I.D.
- Don't leave gifts out or in cloakrooms. Lock them in your desk or keep your eye on them *at all times* until you take them home.
- Don't leave your office unattended. Lock your door even if you're momentarily absent.
- When you place purchases in your automobile, lock them in your trunk. In station wagons conceal gifts by covering with car robe or blanket.
- Keep your ignition key on a separate keyring. Then parking attendants or others can't open your trunk. If you're at home and office keys are left with strangers during the day, they could be copied—and you could be burglarized.

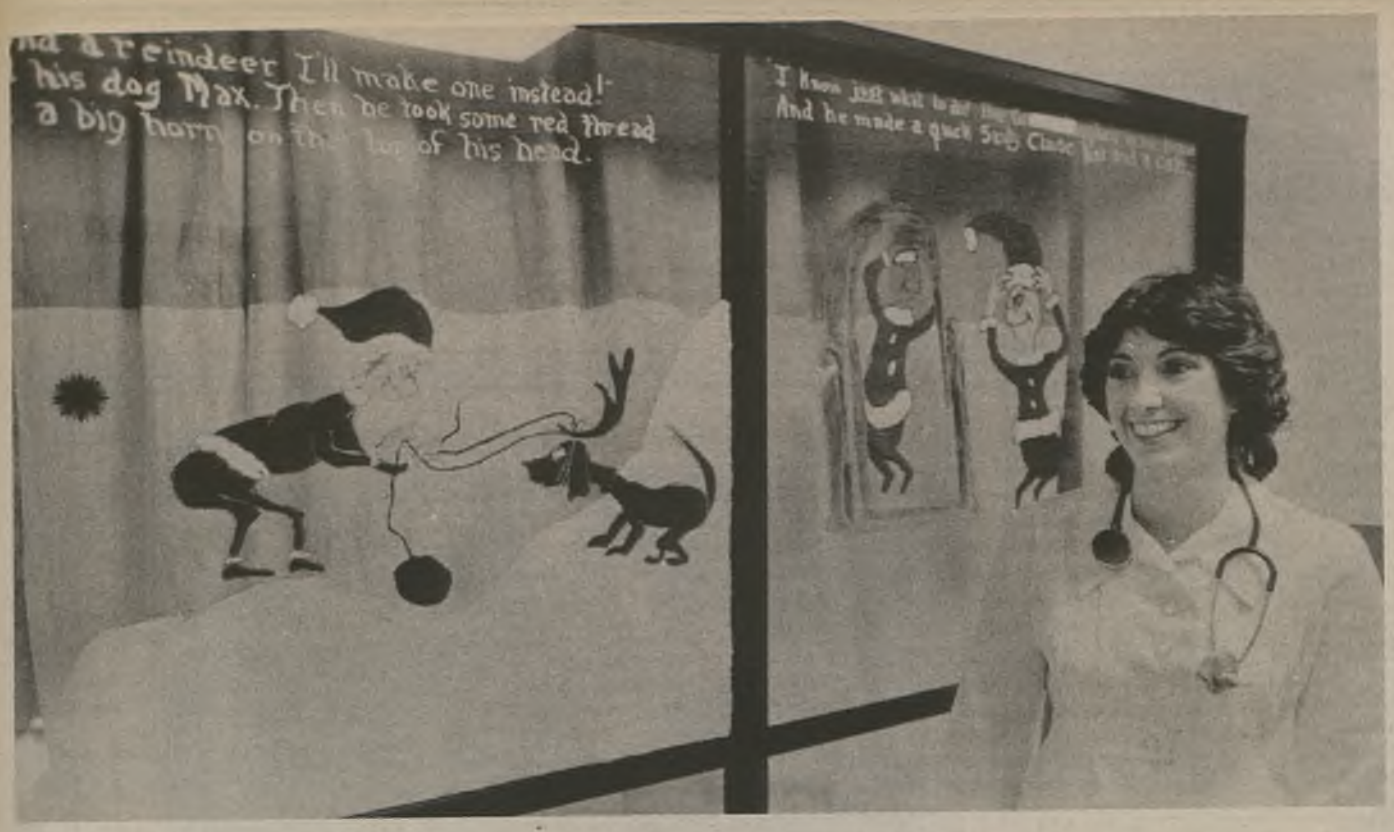
"You're filled with the spirit of goodwill," Ryniewicz noted, "but don't let your guard down, when you should be *especially* alert!"

Holiday fun and goodwill spread by various Hospital activities

Poinsettias for patients, decorated office doors and windows, egg nog and Christmas trees are among the many efforts under way to spread some holiday cheer in Stanford University Hospital.

The Hospital auxiliary members are decorating 35 Christmas trees throughout the Hospital, and as in past years the volunteers will bring individual poinsettia plants to each patient Dec. 23.

Instead of having their own gift exchange, nurses, physicians, residents and others in the SUH Delivery Room purchased gifts for several elderly and needy Peninsula residents. Nurses Gwen Anderson and Bea Covara coordinated the collection and shopping for individuals recommended by the Homemaker Service of Santa Clara County.



They purchased and wrapped gifts chosen to meet each recipient's own special needs, such as an electric blanket for a bedridden woman, a room heater for another, and clothing and food baskets for several. The Delivery Room staff have helped in this way for the past ten years.

One of the biggest parties in the Hospital may be in the Pediatric Playroom Dec. 21, when former patients are invited to join in with visits from magicians, Palo Alto High School carolers, and many others. A special addition this year will be dozens of stuffed Christmas toys donated by the George Collier family of Fremont and the Dakin company. Many community groups and businesses in the area contribute to the holiday cheer for pediatrics patients, according to Colette Case, recreation therapist.

Employees throughout the Medical Center are invited to take part in caroling Dec. 15, 16, 17, 20, 21, and 22. Caroling books will be provided to those who meet at 11:30 a.m. outside the Hospital's "brown bag" lunchroom.

Judging of the annual holiday door decorating contest is set for Friday morning, Dec. 17, with winners to be named in three categories: most traditional, most humorous, and most modern. Susan Cabral of Employee Relations, who can be reached at 497-6251, coordinates the event.

For those who will be at work in the Hospital Dec. 23 and 24, holiday punch and egg nog will be available free in the main center and Hoover cafeterias.

Nurse Cheri Slee said she never knew she could draw, but you'd never guess it looking at the windows in the North Intensive Care Unit. Slee, with the help of the other nurses on the unit, has painted the story of *The Grinch Who Stole Christmas* on the windows, for their entry in SUH's decorating contest. This is the third year the unit is featuring Slee's artistic talent, which she said she discovered one night at work "when I was really bored." (In a similar effort, the clerical support staff of the General Internal Medicine Clinic have painted their window area with colorful holiday scenes.)

Construction Corner

Item: The remodel of the Hoover Nurses Cottage for the Division of Plastic and Reconstructive Surgery is nearing completion. The area under construction will provide office and laboratory space for personnel being relocated from the Edwards Building. John J. Daly Construction is the general contractor, and Gordon MacLachlan is the construction coordinator from the SUMC Facilities Office.

Item: The clinics of the Division of Plastic and Reconstructive Surgery will be relocated to the third floor of Hoover Pavilion in the middle part of January. Erik Lund, senior project manager of SUMC Facilities, has been responsible for coordinating this effort. The area on N3C in Hoover is presently under construction by R.L. Cerruti Builders.

Item: Construction in the southwest corner of the Phase I Building will soon provide an expansion of cafeteria space for the Department of Dietetics. R.L. Cerruti Builders, under the direction of Richard Booth, Facilities Office, is completing the first floor area, which will allow additional seating for approximately 150 people.

...News Notes...News Notes...News Notes...

Effective Jan. 1, 1983, by California law, it will be illegal for an unrestrained child (through four years old) to ride in a car without being buckled into a child's safety seat, according to ICN discharge planner Kathy Petersen.

Car seats, she said, may be purchased for about $40 through Central Supplies in the Hospital. While parents are already informed of the importance of safety matters upon leaving the Hospital, she said, and most do make the necessary arrangements, the new law will actually enforce the use of child car seats.

* * * *

Pest and rodent control programs are conducted regularly at SUMC in order to protect patient care and research activities. However, recent weather conditions and ongoing construction projects around the Medical Center have led to an increase in the wild rodent and pest population throughout the Center, according to associate dean for administration David Mendelow and director of Health and Safety Alain Decleve.

Increased trapping efforts, they said, as well as the application of approved pesticides and intensive preventive measures, are now under way, in order to contain both wild and research animals.

All employees should report the presence of any pest problems in their working areas to the Housekeeping Department, at 497-6896. Employees are also requested to return food trays to Dietary in a timely fashion and to store personal food items in appropriate containers and dispose of them in designated refuse containers.

Employees should not keep pet animals at work, and they are asked not to interfere or tamper with the trapping equipment and methods set up. Short-term and long-term strategies for pest and rodent control are being implemented.

For further questions or information, call Ruben Perez at 497-7225, Donald Utt at 497-5661, or Al Perez at 497-0448.

* * * *

"Radiation Effects: Separating the Facts from the Myths" is the focus of a two-unit winter quarter course being offered to medical and graduate students at Stanford Tuesdays and Thursdays from 4:15-5:05 p.m., in room M114 of the Medical School.

According to the course description, the radiation used in radiotherapy cures or helps to cure about 100,000 cancer patients each year in the U.S. But radiation also causes cancer, and this argument is used against the use of nuclear power. At present, more radiation is received by the public from diagnostic X-rays than from all other man-made sources. What are the risks and benefits, for example, of mammography screening of women?

Such questions and topics will be examined in depth, with a particular focus on the mechanisms involved in cell killing, mutagenic and carcinogenic effects of radiation. The course, entitled "Biological Effects of Radiation" (Radiology 201; Biological Sciences 201), is offered by the division of radiobiology research in the Department of Radiology. The first class will meet Jan. 4.

* * * *

In order to minimize excessive noise pollution throughout the Medical Center, paging via overhead loudspeakers will be reduced to use only when other methods are not available, announced SUH associate director Mary Catherine Krawec.

Radio-pagers (beepers), telephones, electronic mail, and memos are encouraged to be more fully utilized prior to activation of an audible page. One of the following numbers should be called if locating by overhead page is needed: Emergency (86), Cardiac Arrest (66), or Non-Emergency (88).

Effective Dec. 20, overhead paging will be provided only for the following groups of personnel: physicians, senior administrative staff, medical students (third year and over), emergency/disaster team members, interns and residents, and security staff.

Announcement paging will be allowed only for patient care related activities.

Overhead paging will no longer be provided for the following persons: therapists, dietitians, housekeepers, social workers, unit managers, nurses, Central Service staff, employees, outside vendors, medical students (first and second year), visitors, patient families, and patients.

This policy has been approved by the senior staff of the Medical Center. Questions should be referred to the Telecommunications supervisor at 497-5931.

* * * *

The Stanford Blood Center has announced new hours for accepting donations. They are: noon to 6 p.m. Mondays; 8:30 a.m. to 7:30 p.m. Tuesdays and Thursdays; 8:30 a.m. to 6 p.m. Wednesdays; and 8:30 a.m. to 3 p.m. Fridays.

Donors are invited to call 497-7831 for further information or to make an appointment. Drop-ins are also welcome. **See Dec. 28 calendar item for special Hospital blood drive.**

Mr. Ronald Kepner has been appointed director of Materials Management effective Dec. 1, announced SUH associate director Donald Utt.

Kepner comes to Stanford from U.C. Davis Medical Center, where he served in several functions since 1977. He received his B.S. in Business Administration at California State University, Sacramento, and his M.B.A. from Golden Gate University, San Francisco.

Kepner is located in Trailer A, and may be reached at 497-5412.

Ophthalmology receives grant

Stanford University Medical School's ophthalmology department has received a $14,000 unrestricted grant from Research to Prevent Blindness (RPB), announced department chairman Dr. A. Ralph Rosenthal.

RPB has given the department a total of $86,000 since 1970, he said, for use by researchers exploring new concepts in the prevention and treatment of eye diseases.

"The application of research funding to the clinical needs of patients has been more rapid in ophthalmology than in any other area of medicine," Rosenthal said, speaking of recent advances in the treatment of cataract, glaucoma, retinal diseases and other ocular disorders.

Stanford is one of more than 50 medical institutions that receive support from RPB each year. The group has channeled more than $40 million into the study of all blinding diseases.

Cable communications survey report

Two-thirds of campus residents likely to subscribe to cable

Following is a report on the Cable Communications Survey:

EXECUTIVE SUMMARY

Survey questionnaires were mailed to all faculty and staff living on campus. One-half of the faculty and staff living in Palo Alto were also surveyed. Surveys were completed by 48 percent of the Stanford residents and 35 percent of the Palo Alto group. The majority of on-campus respondents (67 percent) were faculty members, while most off-campus respondents (79 percent) were staff members.

Interest in Cable Programs

Sixty-eight percent of the faculty and staff respondents, resident at Stanford, indicated they would be either "extremely likely (40 percent) or "somewhat likely" (28 percent) to subscribe to a basic cable service at a cost of between $10 and $15 per month.

Respondents rated their interest in Stanford originated cable programs. Lively Arts programs (83 percent interested), lectures by visitors to the campus (82 percent), campus music and drama performances (77 percent), and Stanford lecturers (74 percent) were the most desired programs. Faculty and staff residing in Palo Alto showed a significant interest (81 percent) in a "video community bulletin board" of local events, housing, want ads, and emergency "hot line" information.

Overall, 75 percent of the respondents were interested in having interactive cable services. Home security (77 percent) and electronic banking (70 percent) were the services most desired.

Among the special programs offered in the basic cable package, the most popular were 24-hour news (72 percent), old feature films (72 percent) and FM radio (71 percent).

The preferred optional (requiring payments in addition to the fee charged for basic service) programming were: an arts-cultural channel (47 percent) and first-run movies and specials (41 percent).

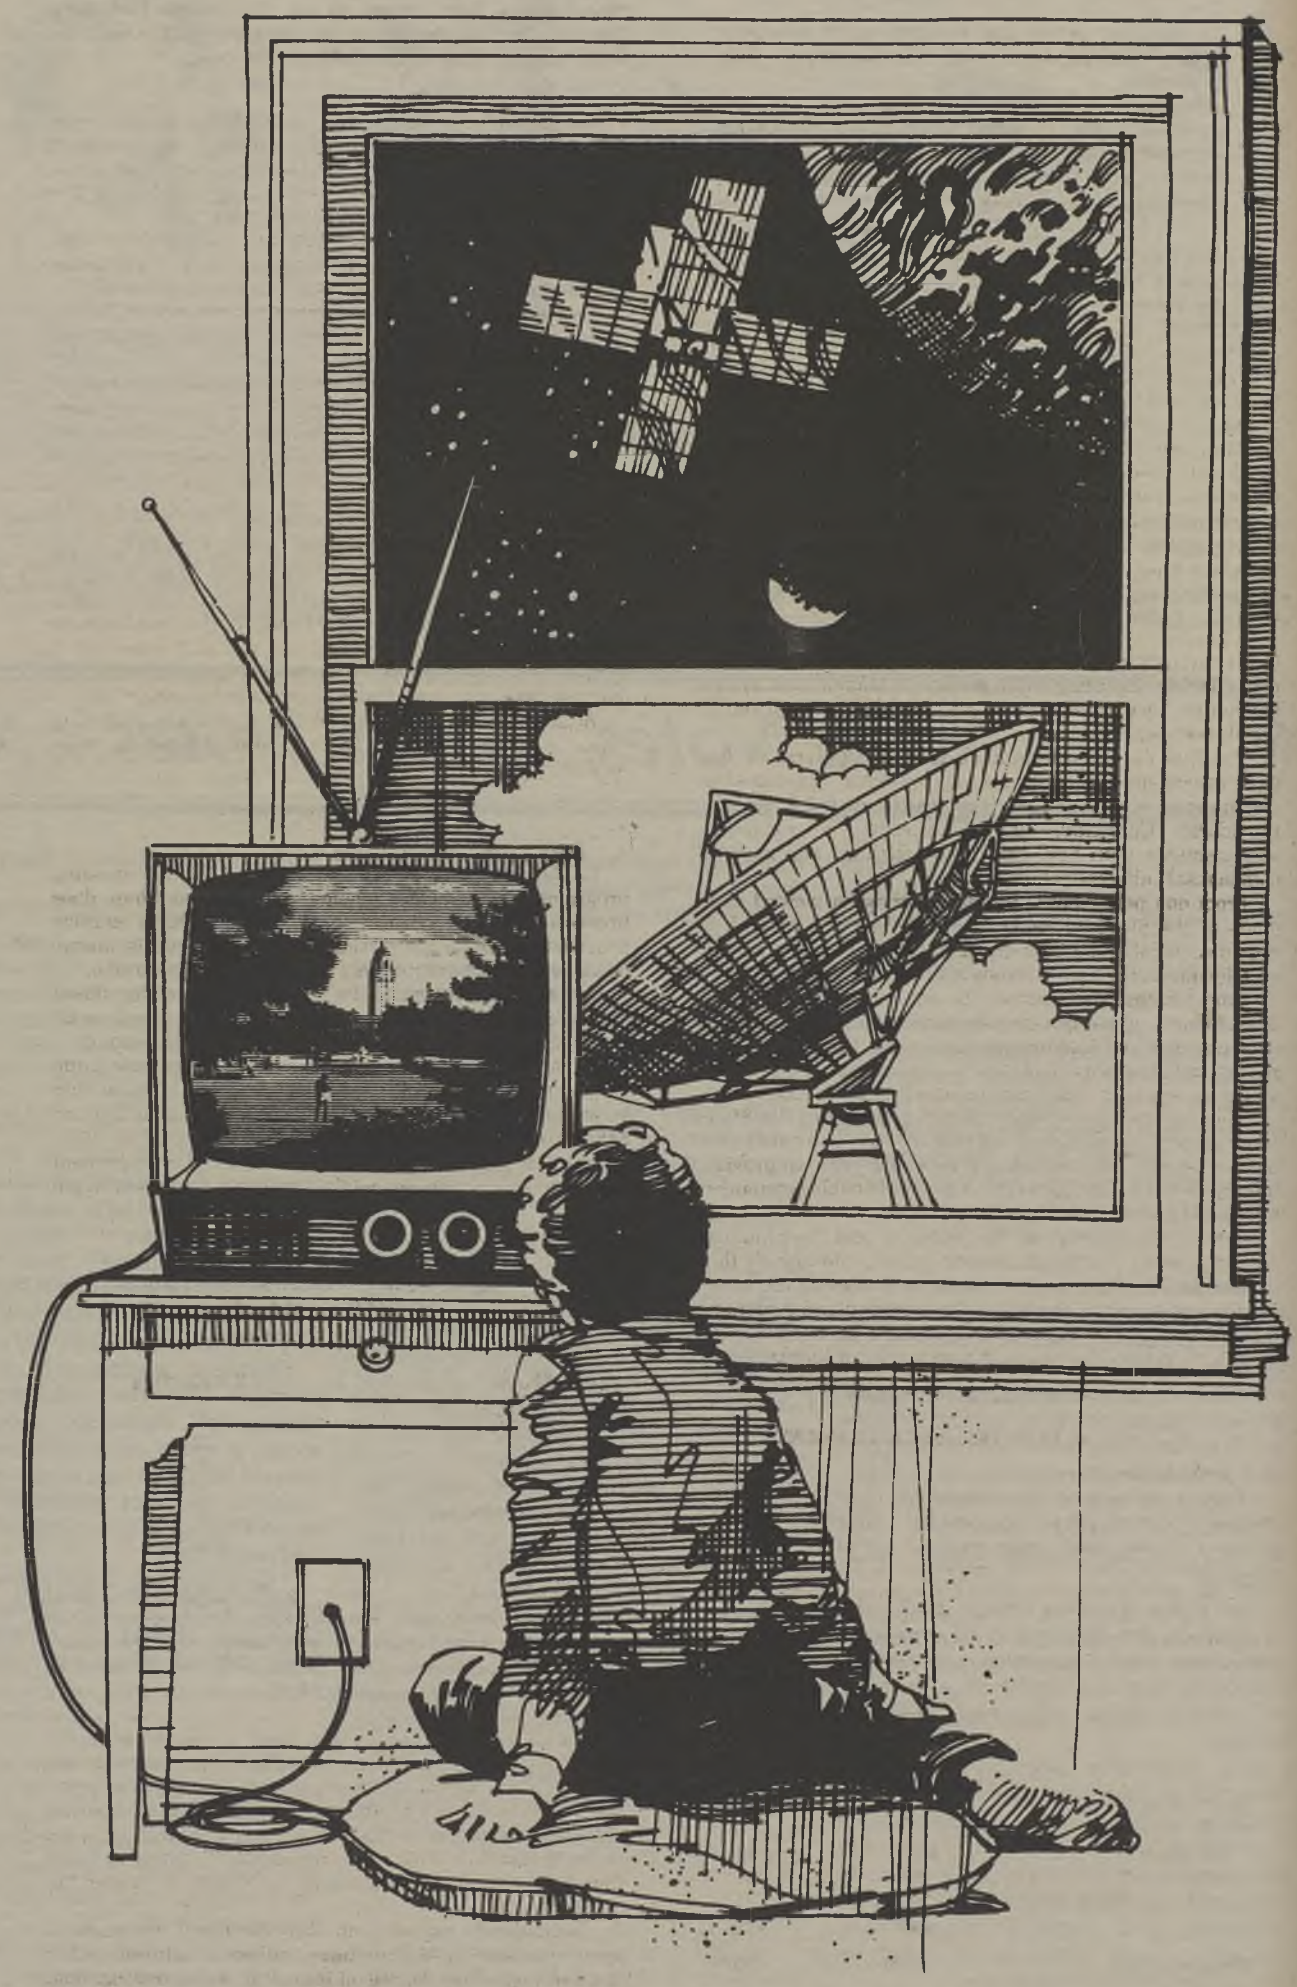
Cable and Computer Services

Cable can provide communication between home and work. About 60 percent of the respondents now use a terminal or word processor at work. Twenty-five percent use a terminal at home. Twenty percent of the Stanford residents and 12 percent of the Palo Alto respondents own personal computers. Owners reported an average of 2.5 hours per day of personal computer use in the home.

An estimated 60 percent of the faculty and staff residents on campus and in Palo Alto can be expected to own a microcomputer or home terminal device within the next five years. Respondents could predict doing about 20 percent of their work at home using a cable system that could provide a link between home and office.

Potential users of cable based computer services showed greatest interest in: text-editing (81 percent) transmitting to a remote high quality printer (81 percent), access to Stanford and other library catalogs (72 percent), data storage and management (70 percent), office communications (64 percent) and Stanford data bases (64 percent).

I. INTRODUCTION



In May 1982 the Stanford University Task Force on Cable Television recommended:

> Stanford should work toward development and early installation of a two-day interactive residential broadband cable communications system for resident students, faculty and staff; and should investigate opportunities for interconnection with systems which serve those who reside in surrounding communities, primarily Palo Alto.

Broadband communication was recognized as a versatile and economic means of providing the Stanford community with data and video channels of potential use in four areas:

> **Entertainment and Personal** needs including television programming, access to data bases, electronic mail, banking and business transactions, home security and fire alert systems.
> **University Events and Services** such as sports, drama, music, public lectures, community bulletin boards, class scheduling information, and employment opportunities.
> **Administrative and Utility** uses including energy

continued on next page

Cable TV survey

continued from page 14

management, safety and security, voice telephone circuit multiplexing, and administrative data processing.

Instruction and Research uses such as the distribution of Stanford educational materials, teleconferencing, access to student computing facilities, and expanded opportunities for research and preprofessional study in communications.

Following publication of the Task Force Report, the University initiated technical surveys and economic analyses aimed at developing a financially viable system design which would meet Stanford's requirements for video and two-way data transmission.

In June 1982, the University sent survey questionnaires to faculty and staff residents of Palo Alto and Stanford. The objectives were 1) to ascertain the level and nature of interest in cable communications on the part of the Stanford residential community, 2) to obtain accurate data on current uses of home terminals and personal computers, 3) to determine interests in Stanford originated data services and programs on the part of faculty and staff living on campus and in Palo Alto, and 4) to deepen the University's understanding of future patterns and trends in media and home computer use—information essential to the planning of a flexible system which would serve the community's needs through the next decade. (At the time of the survey, policy issues regarding cable service to student residences had not yet been addressed. Therefore only the faculty staff population was surveyed.)

The Task Force had recommended that Stanford develop clear overall objectives for its cable system and prepare for negotiations with potential franchisees or cable service providers. Currently, the University is exploring arrangements with both local municipalities and several commercial cable operators.

From one perspective, the survey may be viewed as a study of the Stanford cable television market. As such it provides useful data about the likely number of subscribers and the interest in various types of programming.

From another perspective, the survey is a guide to the development of cable services drawing upon Stanford's own cultural and intellectual resources. The Task Force recognized Stanford originated programs as an asset to any larger system with which the University might interconnect.

This document is a report to the members of the Stanford community, many of whom took the time and care to fill out the lengthy questionnaire. It may also serve to provide information to public agencies and private cable companies interested in collaborating with the University.

Forty-eight percent of the surveys sent to Stanford residents were completed. Among cable professionals this is considered a very good response rate. Among the staff, faculty and graduate students who prepared and evaluated these surveys, the high rate of return is a source of gratification for which we wish to express our thanks.

II. METHODOLOGY (omitted)

III. CHARACTERISTICS OF RESPONDENTS

A. Demographics

Four hundred and sixty households on the Stanford campus returned the survey questionnaire. The Palo Alto version of the questionnaires was returned by 372 households. Of the 832 total respondents, 47 percent were staff, 44 percent were faculty and 4 percent were retired from University work. The majority of on-campus respondents (67 percent) were faculty members, while most off-campus respondents (79 percent) were staff members.

TABLE 1. RESPONSE TO THE SURVEY

	Stanford	Palo Alto
No. Surveys Sent:	955	1062
No. Surveys Returned:		
Faculty	309	57
Staff	93	294
Other e.g., Retired	58	21
	460	372
Response Rate	48%	35%

Almost two-thirds (62 percent) of those who completed the questionnaire were males, but this varied between the two groups: 24 percent of the campus respondents were female, compared to 53 percent of those off-campus.

Average age of the total sample was 48, with a modal response of 42 years. Age also differed between the two samples, with the on-campus group reporting an average age of 51 and off-campus respondents an average of 43.

Overall, 40 percent of the respondents lived in two-person households. Fourteen percent lived alone, 16 percent with two other persons and 18 percent in a four-person household. Eleven percent lived in a household of more than four persons, with on-campus households more likely to fall into this category. Sixty-four percent of the respondents had no children, 16 percent had one child and 15 percent had two children. Five percent of the respondents had more than two children. Again, on-campus households were more likely to have children than those off-campus.

B. Media and Computer Use

Ninety-seven percent of the respondents had television sets, and reported that their sets were used an average of 2.7 hours per day. (The national average is about six hours per day.) Most respondents were dissatisfied with the programs available on broadcast television.

About 60 percent of the respondents indicated that they used a terminal or word processor at work. Twenty-five percent used a terminal at home. Nearly 50 percent said they used their terminal about one hour per day and about 20 percent use it about two hours per day; four percent use it five or more hours per day.

Twenty percent of the Stanford group and 12 percent of the Palo Alto respondents reported owning a home computer. A large majority of respondents who do not presently own a home computer or terminal expressed an interest in acquiring a home computer or keyboard device which, in conjunction with a television set, could access a cable network.

About 60 percent of the Stanford faculty and staff can be expected to own a microcomputer or home terminal within the next five years. Taking into account respondents who reported using terminals at home (but did not indicate plans to purchase a home computer or cable terminal), a total of about 65 percent of the faculty and staff surveyed might access a cable system for computer based services.

Additional data on computer and media use, including video recorders, magazines, and professional journals appear in Section V.

IV. SURVEY FINDINGS

A. Basic Cable Programming

Cable television offers better reception of existing programs and a wider choice of programs than does broadcasting. A subscription to a **basic** cable service provides the familiar television channels plus sports, music, news, and films available only through the cable service.

Since cable offerings in Palo Alto might be independent of any Stanford University system, questions about basic cable programming were restricted to Stanford residents.

After a typical basic service had been described, the respondents were asked how likely they would be to subscribe to a basic cable service at a cost of between $10 and $15 per month. Sixty-eight percent said they would be either "somewhat" or "extremely likely" to subscribe, 16 percent were unlikely to do so, while another 16 percent were uncertain.

TABLE 2. LIKELIHOOD OF SUBSCRIBING TO BASIC CABLE SERVICE (Stanford residents)

Likelihood	% Responding
Extremely likely	40
Somewhat likely	28
Uncertain	16
Somewhat unlikely	6
Extremely unlikely	10
	100%

Stanford respondents were asked to indicate their level of interest in standard components of a basic service (other than regular broadcast channels). These included: news, films, sports, children's, community, educational, science, music, and religious programming, as well as FM radio reception via cable.

Responses were collected along a five-point scale reflecting level of interest. The two lowest points on the scale (indicating no interest or minimal interest) were grouped to represent a "not interested" response, while the three highest points (indicating at least moderate interest) were pooled to form an "interested" category. The following results are discussed in terms of those two categories.

Seventy-two percent of the Stanford respondents showed interest in **24-hour news and news features,** half of them stating a high degree of interest in such programming. For **sports programming** the percentage of interested respondents was 59, with about two-thirds of these reflecting a high degree of interest.

Of the three questions dealing with regular entertainment offerings, older **feature films** were the most popular with 72 percent indicating interest. **FM radio reception,** which can be substantially improved through cable hookup, attracted a similar 71 percent. Twenty-five percent were interested in **music television channels** (such as taped rock performances broadcast in stereo).

Another three items inquired about educational programming. For general **educational programming from local schools and college,** 58 percent said they were interested. **Children's educational or entertainment programs** drew a positive response from 33 percent of the Stanford group, representing almost all of that group who have children. A more specialized form of educational programming focusing on **health, science, and nutrition** appealed to 57 percent of this audience.

Community affairs (such as City Council and School Board meetings) appealed to 30 percent of the respondents, while **religious programming** was of interest to 6 percent of the Stanford residents.

TABLE 3. INTEREST IN TYPICAL CABLE SERVICES (Stanford residents)

Programming	% Interest
24-hour news features	72
Old feature films	72
FM radio	71
Sports	59
Educational	58
Health, Science, etc.	57
Children's	33
Community affairs	30
Music TV channels	25
Religious	6

B. Optional Programming

Stanford respondents were also asked about five kinds of **optional** cable programming. These included channels devoted to un-cut first run films, opera and theater, and adult entertainment. For each, a typical price was given and respondents were asked how likely they would be to subscribe.

The most popular of the five offerings described was "Bravo," the **arts/cultural channel,** with 47 percent likely to subscribe and 22 percent unsure about subscription. Following closely behind was a **movie and original entertainment** channel, such as Home Box Office. This channel drew a positive response from 41 percent of the respondents, while 26 percent were uncertain.

The other three suggested services were not as popular. A **family entertainment channel** (such as Theater Network Plus, including "G" and "PG" rated movies) was attractive to 20 percent, while another 24 percent were uncertain. A **pay-per-view** channel, in which subscribers pay for special programs on a "per-event" basis, attracted 29 percent of the respondents. Twenty-two percent were uncertain whether they would subscribe to such a service, which would also involve a monthly fee. Finally, the **adult entertainment channel,** which would include "R" and "X" rated films, drew a "likely to subscribe" response from 13 percent of those surveyed, while 12 percent were undecided on this offering.

TABLE 4. LIKELIHOOD OF SUBSCRIBING TO OPTIONAL SERVICES (Stanford residents)

Programming	% Likely
Arts/Cultural	47
Movies/Specials	41
Pay-Per-View	29
Family	20
Adult	13

C. Stanford Programs and Services

It would be possible to televise some of the many performances and events that take place on the Stanford campus. We asked residents of both Palo Alto and Stanford to indicate their level of interest in eight types of university events and services.

Campus music and drama performances were of interest to 77 percent of the combined sample of respondents. The Palo Alto group showed more interest than those on the Stanford campus, with 86 percent expressing interest compared to 70 percent of the Stanford group. This was true to an event greater degree with **Lively Arts performances:** 91 percent of the Palo Alto residents and 76 percent of the Stanford ones indicated interest in those performances. Overall, 83 percent of the sample found Lively Arts Performances attractive.

continued on next page

Cable TV survey

continued from page 15

Athletic contests showed a similar trend: 66 percent of Palo Altans were interested as compared with 56 percent of Stanford respondents, an average of 60 percent of the total sample.

Visiting artists (such as the Pilobolus Dance Company) often offer **master classes and demonstrations.** A total of 68 percent of the respondents were interested in receiving telecasts of these demonstrations, with the Palo Alto residents more so (77 percent) than the Stanford respondents (61 percent).

The questionnaire also inquired about interest in televised **lectures,** both by Stanford faculty and by visitors. **Visiting lecturers** were slightly more popular, with 82 percent interested versus 74 percent for **Stanford lecturers.** In both cases the off-campus sample indicated more interest, especially for seeing Stanford professors: 82 percent compared to 68 percent on-campus.

A **video community bulletin board** (listing Stanford and Palo Alto events, governmental and emergency numbers, and advertisements) was attractive to 81 percent of the off-campus sample and 55 percent of the on-campus group. **A Stanford originated news program** interested 65 percent of the Palo Altans and 41 percent of the Stanford residents.

D. Interactive Cable Services

Respondents were given a short explanation of interactive cable, which can provide information retrieval and transactional services to the home. They were asked if they were interested in having this service which could include such specialized services as financial information services, electronic newspapers and banking, teleshopping, video games and home security.

Overall, 75 percent of the respondents indicated an interest in having interactive services as a part of the cable system. This differed by place of residence, with 83 percent of the Palo Alto residents interested versus 70 percent of the Stanford group.

Financial services (e.g., stock and commodity prices) were of interest to 52 percent of Palo Altans and 39 percent of Stanford residents. Sixty-nine percent of the Palo Alto group found an **electronic newspaper** (such as the *New York Times* or the *San Francisco Chronicle*) appealing as did 57 percent of Stanford residents.

Electronic banking, which would allow bill paying and other account transactions from the home, interested 79 percent of the Palo Altans and 63 percent of the Stanford residents. **Teleshopping,** ordering products via cable, was less popular: 63 percent interested in Palo Alto and 48 percent in Stanford.

Forty-two percent of the Palo Alto sample and 28 percent of the Stanford group were interested in **video games** on cable. **Home security** was the most popular of this group of services: 77 percent of the combined sample was interested (this varied only slightly by place of residence).

E. Computer Services

A cable communications system can provide services to home users of computers, terminals, and "television terminals." Respondents were presented with a list of currently available services. Of the Stanford residents, 58 percent indicated interest in **accessing on-campus data bases** while 72 percent of the Palo Alto residents were also interested in this service. Interest in **accessing national data bases** was slightly lower: 55 percent of the Stanford respondents and 67 percent of the Palo Alto respondents were interested in this capability.

A third, and more popular, type of computer service would be **access to Stanford and other library catalogs.** Sixty-eight percent of the Stanford residents and 78 percent of the Palo Alto residents stated that they would be interested in using this service. Seventy-seven percent of the Palo Alto group and 64 percent of the Stanford respondents were interested in **data management and storage** through the cable system.

Collaborating "on line" with colleagues or students interested 55 percent of the Palo Altans and 49 percent of the Stanford residents. A more popular service was the capability to **communicate with an office computer system.** Fifty-nine percent of the Stanford residents found this option appealing, while 70 percent of the Palo Alto respondents were interested.

Interest in text editing and word processing capabilities was high in both groups. Eighty-one percent of all respondents found this option appealing. Between the two groups, 85 percent of those interested in text editing were Palo Altans, and 78 percent were Stanford residents.

Transmitting to a remote high quality printer, a service that enables the user to produce publication-quality manuscripts, was appealing to 70 percent of the Stanford respondents and 78 percent of the Palo Altans. Finally, **financial management services** were attractive to 53 percent of the Stanford residents and 68 percent of the Palo Altans.

TABLE 5. INTEREST IN STANFORD EVENTS AND COMMUNITY PROGRAMS
Percent Interested in Programs

Programming	Stanford	Palo Alto	Combined
Lively Arts	76	91	83
Visiting lecturers	78	88	82
Campus music/drama	70	86	77

On-line collaboration	49	55	52

V. RESPONDENT USE OF COMPUTERS, VIDEO TECHNOLOGIES AND PRINT MEDIA

In addition to ascertaining cable communications needs and interests, the surveys were used to develop profiles of present and future media and computer uses. Some of these data were presented earlier.

A. Use of Computers and Data Communications

Stanford's planned cable system will include an institutional communications network. Ideally, the University network will link terminals in every campus building, including residences. Any point on the Stanford campus, **institutional** or **residential**, would be able to both send and receive text and data signals.

Interest and Access

Respondents were asked: "If you had a home computer or terminal that could be linked to your office computer system, approximately what proportion of your work would you be likely to do at home?" On average, respondents could predict doing about 20 percent of their work at home. Most estimates fell between five percent and 30 percent. However, fully one-quarter of our respondents, both on campus and in Palo Alto, did not anticipate doing any work at home. Probably the work activities of these respondents are not affected by access to computer services.

About a third of all respondents currently have access to a University terminal which they could take home to use.

Computer Use and Experience

A series of questions was directed to those who use a computer or terminal at home or in the office.

About 60 percent of the respondents indicated that they use a terminal or word processor at work, and about 25 percent said they use a terminal at home.

The most common use in the workplace is for text editing (50 percent). Each of the following was mentioned as a primary use by roughly 10 percent of the sample: access to a database, programming, data analysis/research, and electronic mail or "bulletin boards." Scientific computation

continued on next page

Cable TV survey

continued from page 16

was mentioned by about six percent of respondents. Less than three percent reported terminal or computer use at work for finance, education, business management, consulting and professional work, or data storage.

Respondents were asked whether anyone else in their family used a computer terminal or word processor at work. In the Palo Alto group, about 30 percent of those who use a computer at work also had a family member using a computer in the workplace. Among the Stanford respondents, less than one-fifth reported an additional family member using a computer at work.

Those who do use a terminal at home were asked to indicate how many hours per day it was in use. Nearly 50 percent said they used their terminal about one hour per day, approximately 20 percent used it about two hours per day, and four percent used it five or more hours per day.

One-third of those having a terminal in the home had a separate phone line for computer use. Half of the modems are 300 baud while the other half operate at 1200 baud. (A modem is a device that allows a terminal to communicate with a computer over conventional phone lines. "Baud rate" refers to the number of characters per second that can be transmitted by the modem.) Half of the respondents with terminals in the home were dissatisfied with their transmission speed, while one-third were dissatisfied with the reliability of their data transmission.

Few of those who had a modem used the capability to access commercial data services such as Dow Jones, the Source, or Dialog: 10 percent in the Palo Alto group, and one percent among Stanford respondents.

Home Computer Ownership and Use

Twenty percent of the Stanford group and 12 percent of the Palo Alto respondents report owning a home computer. More than two-thirds of the home computer owners reported one or more other users of the home computer in their households. On average, each home computer is used by two or three individuals.

We asked home computer owners to estimate the number of hours a week their home computer is in use for each of a number of functions such as word processing and programming: The most prominent uses, in order, are: 1) work-related word processing, 2) entertainment/games, 3) programming, 4) scientific calculation, and 5) personal word processing.

Average reported usage across all respondents for each of the above was greater than two hours per week. For each of those uses, respondents who reported at least some usage typically estimated between one to five hours per week.

There were some differences in the pattern of usage between our two respondent groups. Stanford home computer owners reported significantly more usage for work-related word processing—6.4 hours versus five hours per week. Among Palo Alto respondents, reported usage for business management averaged 1.7 hours per week, with .4 hours by the Stanford group. The total number of hours of home computer use in each household averaged around 18 hours per week.

Respondents who did not own a home computer were asked about their likelihood of purchasing one. They were also asked about their anticipated uses of the computer. Further, they were questioned about their willingness to invest in a keyboard terminal which would allow them to access computer services on a cable network.

Fifty percent said they expected to purchase a home computer in the foreseeable future. Of these, more than 60 percent—one quarter of all respondents—expected to buy one within the next two years. Most expect to pay between $1,000 and $3,000 for their home computer, but as many as 20 percent plan to spend over $4,000.

Table 9 shows that these respondents expect to use their home computer primarily for word-processing, home finances, and research.

An alternative to the home computer may be a keyboard terminal unit used in conjunction with the TV set as a link to computers on the cable network. Forty-five percent of Palo Alto respondents showed interest in such a device. One-quarter of the Stanford group was interested. Most of those interested indicated willingness to pay between $200 and $500 for the terminal.

Considering these responses together, a majority of the respondents will own some kind of computer terminal within the next few years. A total of 55 percent of all respondents either own a computer now or will within the next five years. Adding those interested in a TV-keyboard unit brings this figure to about 60 percent.

TABLE 8. USE OF THE HOME COMPUTER IN 143 HOUSEHOLDS

Types of Use	Percent of Owners Who Report at Least Some Use	Mean Hours of Use for All Owners	Range in Hours Of use Per Week
Entertainment/Games	47	2.7	0-25

**324 respondents gave these projections regarding the primary uses they would have for a home computer.*

B. Use of Video Technologies and Print Media.

Video technologies and computers, along with cable, may be increasingly viewed as part of an integrated home information and entertainment utility. The cable communications survey has gathered data which through subsequent analysis can illustrate correlations between uses of diverse technologies. In addition, patterns of print media use can be helpful in predicting future demands upon the information services supplied by a cable communication system.

Video Technologies

We asked those participating in the survey about ownership of three home video products: **video recorders**, **video game players** and **videodisc players**.

In each we asked respondents to indicate the year in which they would purchase (or had purchased) the equipment. Fifteen percent already own a **video recorder**, while another 13 percent expect to buy one within the next ten years. The modal response for year of purchase was "1983." Seven percent of the sample expect to purchase a video recorder in the next year; 32 percent indicated they would never buy one and 40 percent didn't know.

Video game players drew a less positive response: 57 percent felt certain that they would not buy a video game player, while 25 percent couldn't say. Video game players are owned by 15 percent of the respondents. Three percent expect to purchase one sometime in the future.

The **videodisc** received the least enthusiastic response. Fifty-four percent of the respondents thought that they would "never" own one, while 42 percent didn't know. Less than one percent of the total sample own a **videodisc player**, and three percent expect to purchase one in the next eight years.

Print Media

We asked respondents about their rates of subscription to five categories of print media: newspapers, news magazines, other mass-circulation magazines, technical/professional journals and consumer information magazines.

Thirty-nine percent of those queried subscribed to one **newspaper**, 36 percent to two, and 15 percent to three or more. On-campus respondents tended to receive more newspapers than those off-campus. About a third of our sample did not subscribe to any **news magazine** (such as **Time** or **Newsweek**). Forty-two percent subscribed to one news magazine, and 24 percent to two or more. Again, on-campus respondents subscribed more heavily than Palo Altans.

For other **mass-circulation magazines** the responses varied more widely: 13 percent did not subscribe to any general magazines, while 32 percent subscribed to four or more. Fifty-five percent of the sample subscribed to between one and three such publications. Less than a third (31 percent) of our sample subscribed to any **consumer information magazines**, and nearly all of these to only one consumer publication.

Technical and professional journals is an area in which the place of residence made a large difference. While the modal response was "zero" for both groups, a few of the on-campus respondents subscribed to a large number of journals—some as many as 20. On the average, on-campus residents subscribed to twice as many (about four) journals as the Palo Alto residents. Overall, 38 percent of the sample subscribed to between one and three journals, while 39 percent subscribed to four or more.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

30534-DS (JCC:2036/2044) Admin Serv Mgr II/III Manage Business & Admin affairs of Dept of Chemistry in support of the res & teaching activities of its 20 faculty, 140 grad students, 75 undergrad majors & numerous postdoctoral fellows & visiting scholars; advise on budget develop't & budget analysis; asst Chairman in long-range planning; oversee dept accts, grants & contracts, serv ctrs; assure accurate forecasts & the prevention of cost-overruns; organize & implement dept & Univ personnel policies for non-teaching staff of 50; directly supv 5 cost ctrs, etc; QUALIFICATIONS: edu & substantial exp in financial & business admin activities in an academic setting; knowl of Univ finance & genl acctg procedures; ability to define problems, propose effective solutions, & implement new or modified procedures; exp in facilities mgmt and/or knowl of chemistry & physical sci lab facilities desirable; knowl of sound supvry practices & effective application of Univ Affirmative Action; C07/C08; $2113-2724/2464-3139

36356-JB (JCC:2160) ACCOUNTANT II Respon for acctg serv to Operations & Maintenance offices & shops & the Utilities group; prep monthly journals; analyze accts; work w/ mgrs to res & reconcile balances; monitor & clear clearing accts; reject lists & suspense accts; respon for acctg customer serv for serv ctrs; access information on HP3000 database; Job Cost Acctg sys reports; facilitate timely processing of 1 procurement, acctg, & payroll documents to insure highest possible level of accuracy in financial statements; supv staff of 3, etc; QUALIFICATIONS: BA/BS in Acctg or Business Admin or equiv practical exp; familiarity w/ complex acctg sys, computer applications in acctg fields & principles of cost acctg/fund acctg; able to meet deadline; have strong interpersonal & commu skills for dealing w/ a wide variety of customer inquiries.; C06; $1854-2312.

23594-AW (JCC:5042/5050) Sys Programmer II/III Maintain Xerox ALTOs, hardware & software; maintain & enhance an ETHERNET commu network among the following machines: PDP-11, DEC System-20, DECSystem-10, VAX 11/780, Xerox ALTO, Mortorola M6800 microprocessor; some UNIX sys programming; QUALIFICATIONS: familiarity w/ microprocessors, hardware/software sys design, & networks; should have programming exp w/ one or more of the following: UNIX, TOPS-20, TOPS-10, XEROX ALTO; some exp w/ graphic sys also desirable.; C06/C07; $1854-2733/2113-3344.

21062-AW (JCC:5042/5050) Sys Programmer II/III Respon involve any tasks needed to maintain the functionality of the computer sys; primary emphasis is on software but consulting for users & hardware repair also important; update, maintain & modify portions of TOPS-20 operating sys, RSX20F, compilers, & other sys programs; write utility programs as 1 needed; asst in facility operations; QUALIFICATIONS: 2 to more yrs of TOPS-20 assembly lang programming exp essential; exp in PDP-11 assembly lang & a variety of high-level lang desirable; hardware knowl desirable; requires commitment to substantially more than 40 hrs/wk; working conditions are peculiar; prep to avoid smoking during working hrs.; C06/C07; $1854-2733/2113-3344.

24765-LL (JCC:5588) LIFE SCI RES ASST I Assay drugs in biological samples, using gas chromatography; develop new chromatography methods as needed; prep cell fractions by differential centrifugation & gradient tech; administer drugs to mice & observe behavioral & physiological effects; analyze data statistically; use inhalation & diet tech for drug admin; develop new methods for study of drug concentration in membranes using radiolabeled drugs; assay proteins & lipids in cell membranes; supv part-time animal caretaker; genl lab & equip't maintenance; ordering supplies, inventory; scheduling; QUALIFICATIONS: undergrad degree in chemistry or biology or equiv exp in lab res; exp w/ gas chromatography, thin layer chromatography, differential centrifugation & scintillation counting would be helpful.; C05; $1670-2086.

33195-TC (JCC:5588) LIFE SCI RES ASST I 75%; 8-3; asst in prep & carrying out of cellular electrophysiological experiments; surgical prep & animal care; construction of microelectrodes; maintenance of a cellular physiology lab & data analysis; required to help in the design of new approaches to experimental problems independently; analyze data & perform in a highly independent manner; QUALIFICATIONS: BA/BS degree in life sci field or equiv combination of edu & exp; must have exp in electrophysiological tech & animal surgery, w/ a bkground in chemistry or physics; some exp w/ histological tech desirable.; C05; $1253-1565.

43504-TC (JCC:5588) LIFE SCI RES ASST I Respon for maintaining tissue culture cell lines & aiding in prep of primary cell cultures; perform receptor & enzyme assays which will require familiarity w/ ultracentrifugation & thin layer chromatography; screening & maintenance of monoclonal antibodies; design or modify experiments; analyze results & contribute to publication of the results; supv student employees; QUALIFICATIONS: BS degree or equiv exp & have a familiarity w/ basic lab skills; willing to work w/ 125I, 3H, & 14C labelled chemicals.; C05; $1670-2086.

27178-LL (JCC:6314) R & D ENGR III Prov high level engrg support of a 'state of the art' clinical echocardiography lab & work w/ cardiology faculty & staff to plan, design & develop advanced electronic instrumentation for acquisition & analysis of cardiovascular data; principal technological collaborator on several projs fr conception to final stages of clinical testing & prep of manuscripts & tech reports; QUALIFICATIONS: BS & MS in Electrical Engrg, Biomedical Engrg or related discipline w/ several yrs of exp in software design & computer programming in biomedical areas; demonstrate a high level of analytic capability; familiarity w/ cardiovascular anatomy/physiology & w/ M-mode & sector echocardiography desirable.; C99; EN.

Next deadline Dec. 28

This is the last issue of *Campus Report* for fall quarter. Jobs to be listed in the Jan. 5 issue must be received at the University or SLAC Personnel Office by noon Tuesday, Dec. 28.

Next orientation Jan. 4

There will be no more new employee orientation sessions for the rest of 1982. The next orientation will be held at 9 a.m. Tuesday, Jan. 4, in room 282, Tresidder Union.

Nonexempt

31082-PM (JCC:1747) LIBRARY SPEC I Fixed term, 1/10/83-6/9/83; perform duties in Technical Operations Div of Meyer Lib; process orders for Meyer Lib librarians; type orders & searches Books in Print for reserves; sort, route & process new lib mat'ls; file & maintain catalog cards in Supplementary Card Files; search RLIN & shelves for catalog maintenance tasks; build & modify reserve records on SPIRES; searches on-line & manually for mat'l needed for reserves; supv student assistants, etc; QUALIFICATIONS: typ 45; demonstrated clerical & organizational skills; atten to detail; ability to learn & use RLIN & SPIRES; prev public serv exp; prev exp w/ RLIN & SPIRES; knowl of and/or exp w/ libs, catalogs, bibliographic citations & lib resources; send appl/resume to Bob Johnson, Green Lib, Room 223 (497-3152).; B10; $1189-1246.

33240-PM (JCC:2058) ADMIN ASST I (N) Admin Asst for Div of Genl & Ambulatory Pediatrics; respon for supvn, training, monitoring & review of Sec IIS & Sec III who prov clerical support for faculty & fellows; prep & monitoring 1 of $200,000/yr. Robt. Wood Johnson Foundation General Pediatrics Academic Development Fellowship Program budget; analyzing & recommending efficient use of offc space, personnel & equip't for faculty & fellows; serving on Ambulatory Care Committee; serv as resource person; arranging mtgs; coordinating travel plans, etc; QUALIFICATIONS: typ 55; demonstrated ability to analyze, organize & direct varied admin functions; understanding of acctg & distribution of funds w/ ability to assume fiscal respon; supvry exp, professionalism & discretion; knowl of Univ admin procedures, policies & guidelines desirable; send appl/resume to Cay Hassler, Children's Hospital, 327-4800 x541.; B16; $1593-1671.

24211-BP (JCC:2058) ADMIN ASST I (N) 75%; 9-4pm; require evening & wkend work during peak seasons; respon for identifying & organizing volunteer support for Cardinal Club events; represent Dept of Athl, w/ ability to articulate its policies & procedures at all mtgs; plan, organize & execute, in conjunction w/ a volunteer committee, a series of fundraising events; interface directly w/ the nec Stanford offices & external agencies; prep all mailings & printer mat'l for each event; help develop new ideas for increased income fr events; make recommendations to Cardinal Club Dir based on reviews, etc; QUALIFICATIONS: typ 70; demonstrated exp in 1 setting objectives, organizing, coordinating & directing spec events; exp in fundraising organization indicating work w/ volunteer groups preferred; knowlof Stanford athletics & familiarity w/ local community helpful; send appl/resume to Y.S. Klemm, Athl Adm Bldg.; B16; $1195-1253.

44477-BP (JCC:2462/2512) Offc Asst III/III-S Prov offc assistance to CIT & RLG Human Resources Offc; works w/ coord Staff Develop't program; monitors Staff develop't budget; responds to questions concerning personnel & payroll policies & procedures; reviews timesheets for accuracy & completeness; resolves payroll problems; assts in maintaining personnel data base for CIT & RLG; at OA III-S understands tech for inputing informa, correcting errors by using SPIRES & WYLBUR commands; produces complex reports fr SMAS; QUALIFICATIONS: work effectively w/ a variety of people on all levels; familiarity w/ personnel procedures desired; knowl of WYLBUR & SPIRES required for OA III-S level & willingness to learn for OA III; excel attendance record; knowl of SU policies & procedures desired; good oral & written commu skills; willing to work overtime as needed; exp working as a sec or offc asst; access to transportation in order to make deliveries as required; send appl/resume to Tahitia Kremer, Pine Hall 175.; B11/B12; 1246-1310/1310-1373.

23191-BP (JCC:2554) SECRETARY II Receptionist/-sec for Dept of Linguistics & various programs; asst Dir of English for Foreign Students program & coordinator of Spec Language Program; answer phone;

Rental housing

HOUSING NEEDED

□ **NOW:** or a.s.a.p.: Stanf. artist seeks non-live-in space for painting/writing. Quiet, reasonably nr. campus. Call Nora, 858-0174.

□ **Dec. 20 to Jan. 30, '83:** Visit. prof., MIT seeks furn. 2BR (min.) rental. January only. Will EXCHANGE, or rent Boston 1BR furn. apt., waterfront Bayview, xclnt bldg. $1000 incl. util. Call (617) 367-3192 COLLECT.

□ **CHRISTMAS VACATION HSESIT:** Out of the area Univ. faculty person available to hsesit this vacation. Local contact and refs at 851-1361.

□ **Jan. thru Mar. '83:** NYC Prof. & wife, no children or pets, seek fully furn. & equipped sublet; apt. or hse. Call Claire, 326-7160 (day), 854-3762 (eve & wknd).

□ **Now:** Prof. Stanford MBA seeks 1 or 2BR w/BA unfurn. condo, apt., twnhse in dwntwn Palo Alto for 12 mo. Local refs. Call Steve, 321-2303.

□ **Jan. to Mar. '83:** Retired cpl seeks furn 1 or 2BR apt. condo or hse. on or nr. campus, Palo Alto, Menlo Pk. Nr shops. Pkge deal to include car best. Call Dave Marimont, 497-3796 (day), 325-7182 (eve).

□ **Apr. 1 to June 15, '83 (flex):** Visit. Prof. seeks apt. or cottage on or nr. campus. Call John Felstiner, 497-4722 (day), 322-7727, or msge. at 497-2635.

□ **Jan. 1, '83 thru Mar. '83:** Winter Qtr. Visit Prof., wife, 15 yr. son seek furn. 2BR hse or condo on or nr. campus. Nonsmokers. Call COLLECT to Paul or Suzanne (303) 444-1979.

□ **Jan. & Feb. '83:** Prof. man seeks small apt. or hse-sit during sabbatical educ assignment. Call (415) 361-1406.

□ **Dec. 19 thru 26, (or longer), '82:** Staff mbr, Stanford seeks hse. for parents and adult siblings. Will pet/plant sit. Call Susan 327-4667 or 497-1743 (day).

□ **Beg Apr./May '83:** Finnish-French family, 2 daughters (6 & 4 yrs.) seek 2 to 4 BR hse/apt. in Bay area. Will care for pets & garden. Chldrn used to strict limits at home. Local refs. EXCHANGE 3BR/BA apt. + 2 cars in beautiful area 5 mi. from ctr. Paris. Wkly cleaning incl. Write: Fourmeaux, 12, rue S. Vigneras, 92380 Garches, France.

□ **NOW:** Cultivated female, business person, age 26, w/elegant furn. seeks to share Peter Coutts unit w/faculty mbr. A.S.A.P. Call Janel, (415) 441-7337 or 321-2469.

□ **Sept. '83 to June '84:** Approx 50 fully furn hses needed for Fellows & their families coming to Ctr for Advanced Study in Behavioral Sciences. Call Frances Duignan, 321-2052 (day).

□ **Xmas Vacation:** Out of the area univ. fac. person seeks HOUSESIT for this Christmas vacation. Local refs & contact at 851-1361.

HOUSING AVAILABLE

□ **Feb. to Mar. '83:** Furn. lux. apt. 1BR/2BA, study, Palo Alto, 3 mi. to campus. $1,000/mo. Call Knoles (415) 493-4964.

□ **Winter Qtr.:** Coastal hse, so. of Carmel, 1BR. $1,000/mo. Call Knoles (415) 493-4964 or (408) 624-7290.

□ **NOW:** Guest cottage, cntry setting, 7 mi. to Stanf. Furn. incl. dishes, pans, toaster, blender, linens. LR, ktchn, BA, 1½BR, gar. Pool. Nonsmokers, adults, no pets. $475/mo. incl util. Call 941-3501.

□ **NOW:** SKI NORTHSTAR AT TAHOE. 2BR/2BA condo, sleeps 8. W/D. Dwnhill, Xcntry. Free shuttle to slopes. Ideal family resort. Day care. Avail. holidays. Call (415) 564-5324.

□ **Jan. to June, '83 (flex):** Furn. campus hse. 4BR/3BA LR, DR, FR w/frpl, shop, carport. Auto sprinklers. Nonsmokers. $1400/mo + elec., gas, gardening; 1st & last mo. + dep. Call 857-9185 or 497-1663 (day).

□ **Mid-Jan. to mid-June '83:** Contemp. hillside hse w/view in Portola Valley. 4BR/3BA fully furn; conversation pit w/frpl. 2 lge decks , spa. 5 mi. to campus. $1500/mo. Call 327-8615 (eve) or 858-4035 (day).

□ **NOW:** Prof. woman has rm. to rent w/priv BR/BA, W/D, ktchn. priv. Female, nonsmoker. Furn. except for bed. 10 min. to campus. $325/mo. incl. util. Call 969-5870 (after 7 p.m.).

□ **Beg. Jan. 1, '83:** 4BR/2BA partly furn (or unfurn) hse. Spanish style, in Redwood City. All appl., frpl, alarm system, encl. yd., B-B-Q. Mt. Carmel area, 15 min. to campus. Xclnt for sharing. $1100/mo. Call Carol 327-5670 (eve).

□ **NOW:** Share hse rental, for grad. stud. Mt. View/P.A. border. 10 min. to campus. Priv. BR, ktchn. priv., W/D, good jogging area. $337.50/mo. + ½ util. Call 857-5445 (day), 949-2609 (eve).

□ **Beg. Jan. 1, '83:** Fully furn. apt. w/sports facil, at Oak Creek. 5 min. to campus. Avail 6 mos. (flex). $675/mo. Call 326-3684 (a.m. & eve).

□ **Jan. to June '83:** Palo Alto, furn hse. 4 BR/3BA, LR, DR, FR w/frpl, study. Pool w/solar cover. Close to campus. $1650/mo., incl. pool ser. Call 493-1179

□ **Beg. Jan. 7 , '83:** Furn. hse. in Pine Hill area of campus. 3BR, or 2BR + study, 2BA. Glassed Liv. & Din. area open to lrge. so. facing patio. Parklike grnds w/orchard, 1/3 acre. Passive solar heat. Nonsmoker, adults pref. $1400/mo. incl. grdnr & firewood. No pets. Call 857-0295.

□ **Jan. 10 to June 20, '83:** Lux. condo, fully furn. 2BR/2½BA, study, LR, all appl. Pool, sauna, 24 hr. security. Adult cpl. Call 324-0457.

□ **Regularly avail.:** 1 & 2BR furn. and unfurn. apts. & twnhses, & 3BR/2BA hses. in Palo Alto & Menlo Pk in good nghbrhds. Close to campus. $525 to $800/mo. Call Shirley, (415) 493-2321 or Jane, (415) 968-4957.

□ **NOW:** So. Lake Tahoe, ski cabin. 2BR, frpl, color TV, phone. Adj. to Nat'l forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk. (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3142).

□ **Jan. to Sept. '83 (flex):** Fully furn. 4BR/2BA lge campus hse. Frpl, gardn w/auto sprinklers, view of hills. Nonsmokers, no pets. $1400/mo incl. grdnr. Call 497-3987 (day), or 494-0362 (eve).

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

New phone system, SUNet, energy management seen as communications package

continued from page 1

present Centrex 701 equipment has been discontinued by Western Electric, which means availability of spare parts for normal maintenance is not assured.

The existing system can handle only 600 more lines, which is marginal for the expected increase in demand over the next two years. A new system would reduce the cost and ease of installations, moves, and changes in equipment as well as providing enhanced call-handling services.

At present, most data communication is handled on telephone twisted pair wire. This cannot support expansion of inter-computer signals, cable TV, closed circuit TV, and energy management systems. SUNet will provide a single data and video "highway" with a small number of coaxial cables linking well over 100 academic and administrative buildings.

A more modern energy management and control system will increase present savings of $400,000 annually in energy costs. It will monitor critical alarms in academic and research areas and be capable of providing additional services, like fire and intrusion alarm systems and more accurate control of building heating and cooling systems.

The new telephone system would be funded through external borrowing or a combination of borrowing and a lease. Costs will be recovered through telecommunications system charges to users.

The broadband communications network portion of SUNet will be funded by debt as a general plant improvement project. A business plan to recover capital costs is being studied.

The energy management and control system will be funded by an energy conservation loan, to be repaid through savings in electrical, steam, and chilled water budgets.

All three projects are planned for completion by November, 1984.

In January, 1981, the Task Force on the Future of Computing recommended development of a campus-wide, high-speed digital data communications network, noting that "the effectiveness with which we manage computer-based information technology will, in large measure, determine the future strength of our instructional, research, and administrative programs."

Since then, the report to the trustees notes, "the technologies have advanced sufficiently to add video-based resources and services" to SUNet.

At present, there are 17 large computers on campus, 340 medium or minicomputers, well over 200 small or microcomputers, and more than 145 computer-based word processors or office information systems.

"The advent of personal computers suggests there will be hundreds, if not thousands of computers in use by our faculty, staff and students," the report notes. SUNet would be designed to provide campus-wide access to the network, links to external networks and computers, and ties to a residential cable TV system and the phone system.

In a recent survey on cable communications, campus residents expressed a strong interest in using a residential system to access departmental and university-wide information sources, such as an online library catalog. SUNet will provbide such a capability.

Besides a broadband "backbone" network between buildings, SUNet will use baseband cable to connect computers and network servers where high speed data transmission is important. Baseband also will be used for some networks within buildings, as will twisted-pair cable

Total capital costs for SUNet are estimated at $3.5 to $5.5 million. Only the broadband component of $1 to $1.5 million is included in the electronic communications media project.

The broad range of cost estimates reflects a series of decisions to be made on the number of intra-building networks needed. SUNet has an estimated internal rate of return of 26 percent on this investment, compared with providing digital connections on the telephone system.

By using a common distribution system of conduits, there will be significant economies for the new phone system, SUNet, and the energy management and control system.

Jobs...

continued from page 18

sort & route mail; maintain files; typ corresp & class mat'ls; keeps dept rosters & mailing list; maintain supply areas, bulleting boards, copy equip't,etc; QUALIFICATIONS: typ 50; good receptionist skills; able to interfac well w/ public; good typing skills (accuracy more important than speed); word processing exp desirable; send appl/resume to Gina Wein, Dept of Linguistics, Bldg. 100.; B11; $1246-1310.

44326-PM (JCC:2596) SECY II-SPEC Prov genl sec'l duties; answer & screen calls; schedule & greet visitors & resident applicants; at time arrange housing; keep appt book; open & sort mail; make travel arrangement; typ letters, manuscripts, grant applications; organize & maintain files; record keeping; prep expense reports, check requests, purchase requisitions, etc; QUALIFICATIONS: typ 65; med terminology essential; use of word processor desired; exp as med typist preferred; accurate typing skills; mature judgment; ability to set prior & work independently; sec'l exp; send contact: Leslie Culligan, 497-7211.; B12; $1310-1373.

Bargaining unit

33237-LL (JCC:5644) LIFE SCI TECH II TMS Unit; prep cultured amniotic fluid cells for chromosome exam, analyze under microscope chromosomes of cultured amniotic fluid cells & prep karyotypes fr the cultured amniotic fluid cells; prep peripheral blood lymphocyte & bone marrow cultures, etc; chromosome banding, photographing cells under microscope, developing & printing photographs; karyotypic analysis; autoradiography & sex chromatin analysis; required to prep reagents, solutions & media used in tissue culture & for various tech; QUALIFICATIONS: knowl of & exp w/ analysis of human chromosomes essential; courses in college level chemistry & biology & exp w/ standard lab techniques are requlred; some knowl of tissue culture procedures desirable.; A24; $8.65.

22915-PB (JCC:5786) LAB ASST I TMS Unit; 75%; 8-3; sterile media prep for tissue culture work; absorption of fetal calf serum; prep of pooled human serum; buffer prep for lymphocyte separation; maintenance of liquid nitrogen tanks; large volume glassware washing; autoclaving of lab glassware; QUALIFICATIONS: dependable individual to assume tissue culture lab support function; exp w/ sterile procedures desirable.; A13; $6.68.

33689-PB (JCC:5835) ANIMAL CARE ASST I TMS Unit; 7:30-4; basic husbandry & care of lab dogs & other species; cleaning cages; watering; feeding; conducting observations for signs of illness or disease; work w/ a variety of animal species; respon for maintaining assigned animals & areas in an extremely clean & sanitary condition; conduct assigned duties on wkends under a reduced level of supvn; able to lift 50 lbs or more; able to follow written & oral instructions in proper animal care tech; QUALIFICATIONS: prior animal handling exp; possess some mech. ability; requires personal habits of cleanliness, neatness & atten to details; able & willing to read, write, understand & commu in English, & follow written & oral instructions; free of allergic reactions to animals; capable of undergoing physical exam & immunizations; able to work some holidays on a rotating schedule.; A12; $6.54.

25918-AW (JCC:7794) MAINT PERSON II PREM TMS Unit; fixed term to 8/31/83; 60% Recreation Ctr Maintenance; solve & prevent bowling machine maintenance problems incl training pin chasers on basic function of the machines needed to make minor repairs & to reset the machines to zero position; perform preventative maintenance on all machines; 40% Bldg Maintenance replace air handling filters; tighten fan belts; check heating valves; replace thermostats; check & change motor oil; fix furniture; patch & paint 1 walls; unclog drains; treat plumbing sys; QUALIFICATIONS: 1 yr exp w/ 82-30 pinspotters desirable; some electrical & mechanical skills needed; ability to identify & solve work related problems; able to follow written & verbal instructions; valid Calif Driver License desirable.; A29; $9.73.

Breast cancer workshop slated

"New Options for Women with Breast Cancer," a Help Center workshop, will be presented from noon to 1:30 p.m. Thursday, Jan. 6, at the Center on Galvez Street.

The film "One in Ten," made by Kate Sphor with the Film and Television Production Center of the Department of Communication, will be shown as a vehicle for promoting discussion of breast cancer and the multiple options for treatment.

To register, call the Help Center at ext. 7-4577 by Tuesday, Jan. 4, 1983.

The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Medical Center, and SLAC employees and their immediate families without charge. Parking is available near Angell Field.

Ph.D.orals

MONDAY, DECEMBER 20

Daeje Chin, electrical engineering, "Two-dimensional Oxidation," 1:30 p.m., AEL Lounge.

Dance! Both now and in New Year

... holiday workshop

A Holiday Dance Workshop sponsored by STARTS, Students Arts at Stanford, features classes in ballet, modern, jazz, and floor barre alignment taught by Elizabeth Larkam, Lisa Burnett, and Elizabeth Gustafson.

The classes meet Monday through Thursday evenings after work, Dec. 13-29, in the Old Union Clubhouse on White Plaza.

For additional information and registration contact Lisa Burnett, 854-4163, or Elizabeth Larkam, 321-3883.

... noon dance

Dance Quorum will sponsor two noon-hour dance classes during winter quarter in Studio 42 of Roble Gym.

Beginning Jazz Dance, with instructor Kim Morris, will meet Tuesday and Thursday, beginning Jan. 4.

Intermediate Modern Dance, with Joy Weston, will meet Wednesday and Friday, beginning Jan. 5.

The class fee is $40 for the 10-week quarter.

Both classes offer a thorough workout within the framework of dance technique. Participants should wear leotards and footless or stirrup tights.

To register, send a check for full tuition (payable to Dance Quorum) to the instructor at Roble Gym. For further information, call 497-4254.

...children's courses

Children's Dance at Stanford offers classes in creative movement, modern dance, and ballet for girls and boys ages 3 to 13. During the nine-week winter session beginning classes will meet once a week on Wednesday and Friday afternoons and Saturday mornings.

Classes are designed to suit different age groups: Rhythms and Movement for 3- to 5-year-olds, Movement and Music 6- to 8-year-olds, and Modern Dance and Ballet for 9- to 13-year-olds.

A Dance and Sculpture Workshop for boys and girls ages 6 to 13 features improvisation in galleries and at outdoor sculpture sites. Dance for Boys features a curriculum in rhythmical, creative dance for 6- to 8-year-olds.

All classes utilize recorded and live music and children's instruments. Tuition is $31.50 for the winter session beginning Jan. 5. For information and registration call Children's Dance at Stanford, 497-4254.

Bechtel International Center lists 'Holiday House' programs

It's time again for "Holiday House," when the International Center becomes a beehive of activity during the winter break.

In its fourth consecutive year, Holiday House (December 18 to January 2) features a variety of activities for Stanford students, staff scholars, faculty and their families.

In addition to planned programs, Holiday House provides a place where the Stanford community can just drop by to relax and enjoy a warm fire, cookies and coffee and the company of those who remain at Stanford during the holidays.

Holiday House is cosponsored and supported by the International Center and put together by many volunteers from Stanford and neighboring communities. Committed to providing a retreat for the Stanford community while the rest of the university closes down for the holidays, these volunteers organize an array of activities, such as trips to nearby places of interest, international cuisine, and Christmas caroling.

Chitra Subramaniam, a graduate of the Department of Communication, is coordinator of Holiday House. She is responsible for the implementation of the programs that have been planned for the two weeks and will be at hand at Holiday House during that time.

The schedule follows:

Saturday, Dec. 18
Family Festival Day, 2-5 p.m. Tree trimming, crafts, refreshments, and more!

Sunday, Dec. 19
Chamber music and tea, 5:00 p.m. Relax with tea as chamber musicians entertain.
***Sunday supper, 6:30 p.m.** Buy tickets on Wednesday prior, $3.25.

Monday, Dec. 20
***Tour of Sunset Publishing, 9:45 a.m.**
International Folkdancing, 7:30 p.m. Learn folkdances from around the world; children are welcome.

Tuesday, Dec. 21
***Tour of Stanford Museum, 10:30 a.m.** See Rodin sculpture and 20th century paintings.
Walk Down Palo Alto's Christmas Tree Lane, 7:30 p.m. Warm refreshments afterwards!

Wednesday, Dec. 22
International Bazaar, 10 a.m.-2 p.m. Crafts, wares, and food for sale.

Thursday, Dec. 23
Christmas Caroling at Escondido Village, 7:30 p.m. (Meet at Pepper Tree House).

Friday, Dec. 24
***Christmas Eve Potluck Supper, 6:30 p.m.** Bring your best holiday dish for this special occasion.

Saturday, Dec. 25
Christmas Day. Holiday House will be open from noon-6 p.m. Find friends and relaxation on Christmas afternoon.

Sunday, Dec. 26
***Sunday Supper, 6:30 p.m.** Buy tickets on Wednesday prior, $3.25.
Silent Movies, 7:30 p.m. Buster Keaton in "The General" and Laurel and Hardy in "Angora Love," with oldtime piano accompaniment and popcorn, $1.

Monday, Dec. 27
***Walking Tour of San Francisco, 8:30 a.m.**
International Folkdancing, 7:30 p.m.

Tuesday, Dec. 28
Game Night, 7:30 p.m. Play backgammon, chess, Monopoly, and other games.

Wednesday, Dec. 29
***Day trip to Half Moon Bay**

Friday, Dec. 31
***New Year's Eve Party, 9 p.m.** Food and drinks served. Purchase tickets in advance, $4.

Saturday, Jan. 1
New Year's Day. Holiday House will be open from 11 a.m.-11 p.m. Drop by and watch the football games on the I-Center TV.

Saturday, Jan. 1-Monday, Jan. 3
***Trip to Monterey-Carmel.** Accommodations at Asilomar for this weekend excursion in this beautiful coastal area. Hike, visit historical spots, shop, and relax.

Sunday, Jan. 2
***Sunday Supper, 6:30 p.m.** Buy tickets on Wednesday prior, $3.25.

*Events marked *require prior sign-up at Holiday House (I-Center). Unless indicated otherwise, all events and excursions begin at I-Center.*

Call Holiday House, 497-1831 for more details.

Holiday House Hours: Holiday House will be open daily from Dec. 18 through Jan. 2. Check schedule at I-Center for specific hours.

Meal Service Available on Campus

Tresidder Main Course

Closed Dec. 18-25; 26, 10-6:30; 27-30, 9-6:30; 31, 9-5; Jan. 1-2, 10-6:30.

Coffee House

Dec. 18-19, 10-6:30; 20-23, 9-6:30; 24, 9-4:30; Dec. 25-Jan. 1, closed; Jan. 2, 5-midnight.

Marcel's

Closed Dec. 18-19, 23-Jan. 2; Dec. 20-22, 7-4.

Encina Station

Closed Dec. 18-19, 23-26, 31-Jan. 2; Dec. 20-22, 27-30, 8-2.

Tresidder Store

Closed Dec. 25; Dec. 18-24, 26-Jan. 1, 8-6; Jan. 2, 8-11.

Recreation facilities

Encina lockers and showers: M-F 7 a.m.-9 p.m.; SS 9 a.m.-6 p.m.; closed Dec. 24, 25, 31, and Jan. 1. (Reg. day 7:30 a.m.-9 p.m.)
Roble complex: lockers only, M-F 11:30 a.m.-1:30 p.m.; closed SS and Dec. 24, 25, 31, and Jan. 1-2. (Reg. day, lockers 8 a.m.-5 p.m.)
Encina Weight Room: M-F noon to 5 p.m.; SS noon to 3 p.m.; closed Dec. 24-26, 31, and Jan. 1. (Reg. day noon to 2 p.m.; 3:30-8:30 p.m.)
Olympic Gamefield, Perrier Parcourse, Angell Field, and tennis courts: all open.
IM Fields and Taylor Field: reserved; call 497-0505.
Roble Pool and Maples Pavilion: closed.
deGuerre Pools: M-F noon to 2 p.m.; closed SS and Dec. 24-25, Jan. 1-2. (Reg. day noon to 2 p.m.)
deGuerre Courts: M-F 11 a.m.-7:15 p.m.; closed SS, Dec. 25-26, Jan. 1-2. (Reg. day 11 a.m.-7:15 p.m.)
Golf course: T-F first available starting time after 11 a.m. (Closed Reg. day.)
Tresidder Recreation Center: Call 497-4316 for schedule information. (Reg. day 8 a.m. to midnight.)

Calendar

Calendar items should be delivered to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the events occur. The next deadline is Wed., Dec. 29, to cover the week of Mon., Jan. 10, through Sun., Jan. 16.

Events must now be submitted on forms. Those wanting copies should call Events and Services, 497-2551.

FRIDAY, DECEMBER 24

University Public Worship: Family Service and Pageant, 7 p.m. Christmas Eve Service, 11:30 p.m.

SUNDAY, DECEMBER 26

University Public Worship: The Rev. D. Caughey, retired Presbyterian minister, 11 a.m.

MONDAY, DECEMBER 27

Women's Basketball: Vs. Las Vegas. 7:30 p.m. Maples Pavilion.

TUESDAY, DECEMBER 28

Men's Basketball: Vs. Brown Univ. 8 p.m. Maples Pavilion. Ticket information at 497-1021.

SUNDAY, JANUARY 2

University Public Worship: Wendy Smith, assistant dean of the chapel, sermon and eucharist, 11 a.m.

MONDAY, JANUARY 3

Discovery Film Series: "The Danube—Vienna to the Black Sea" with Gene Wiancko. 2:30 p.m., Kresge Aud., $3; and at 7:45 p.m., Memorial Aud., $4.

TUESDAY, JANUARY 4

Applied Physics Colloquium: "Fractals, Fractons: Thermodynamic and Transport Properties" with Prof. Raymond Orbach, UCLA. 4:15 p.m. Applied Physics 200.
January Chinese Film Festival: 'New Year Sacrifice" (1956). Lu Hsun story of a young maidservant gradually destroyed through the cruelty of fate and the callousness of society. In Chinese; no subtitles. 7:30 p.m. Memorial Aud. $1.50 donation.

WEDNESDAY, JANUARY 5

CROW **Women in the Performing Arts Lecture Series:** "Women's Role in the Performing Arts" by Vicky Holt, director, University Events and Services. Noon. Terman Aud. Open to all.

THURSDAY, JANUARY 6

January Chinese Film Festival: "Two Stage Sisters" (1964). During the turbulent years of 1935-50, two sisters take separate paths in pursuit of stage careers. 7:30 p.m. Memorial Aud. $1.50 donation. (English subtitles.)

FRIDAY, JANUARY 7

The Lively Arts at Stanford: Oscar Shumsky, violin. Assisted by David Gross, piano. J. S. Bach: Partita No. 1 in B minor for violin solo; Beethoven: Sonate for Violin and Piano, Op. 96, in G Major; Smetana: "From the Homeland"; Franck: Sonate in A Major, for Violin and Piano. 8 p.m. Memorial Aud. $11.50, $10.50, $9.50, $8.50; students $3 off these prices.

SUNDAY, JANUARY 9

University Public Worship: Robert G. Hamerton-Kelly, dean of the chapel, 11 a.m.
ASSU Sunday Flicks: "Star Trek II: Wrath of Khan." 7 & 9:30 p.m. Memorial Aud. $1.50.

EXHIBITS

Paul Harris—Still Life. Stanford Museum. Through January 2.
Venice in the 18th Century. Paintings, drawings, prints and decorative arts. Stanford Art Gallery. Through December 19.
Wood Construction and Process Sculpture by E. David Camardo. For library environment. The Jonsson Library of Government Documents, Green Library. Through December.
The Orchid Observed. Five centuries of botanical illustration and exhibit of books from the collections of William K. Glikbarg and the university libraries. Lurie Rotunda, Dept. of Special Collections, second floor, West Wing, Green Library. Through January 11.
Japanese Brush Painting by Ami Wada. Reception, Fri., Dec. 3, 5-7 p.m. Bechtel International Center. Dec. 3-30.
Melange of Paintings. By several artists who have had exhibits in 1982. Faculty Club Gold Lounge.
Contemporary Chinese Paintings by Anna Wu Weakland. Tresidder 2nd floor gallery. Month of December.
Photographs by Matthew Schwartz. Coffee House Gallery. Month of December.
The Big Squeeze and Other Works by Dolly Du Prau. Acrylic on canvas. Reception, Fri., Jan. 7, 5-7 p.m. Bechtel International Center. Jan. 5-30, 1983.

CAMPUS REPORT

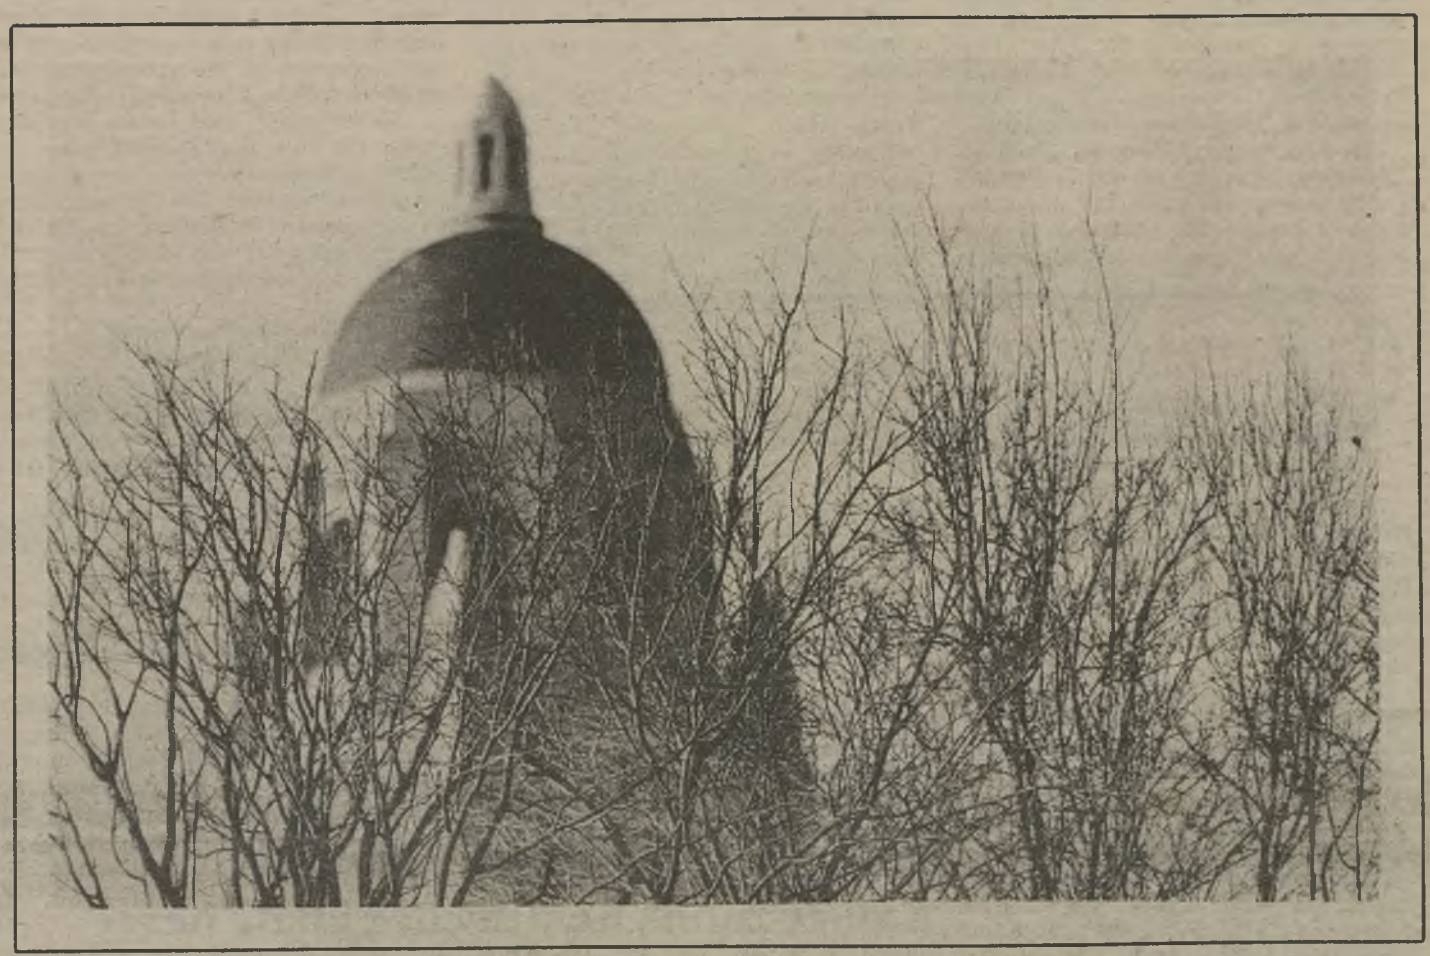
Volume XV, Number 14 | A publication for Stanford University faculty & staff | January 5, 1983

Stanford wins four 'Rhodes' in two years

For the second year in a row, two Stanford students have received Rhodes scholarships.

They are Richard Klingler, senior history major from Cincinnati, Ohio, and William Amos Halter, political science and economics major from North Little Rock, Ark.

They are the 46th and 47th recipients nominated by Stanford.



Klingler, editor of *The Stanford Daily*, was described as "supremely intelligent and unusually mature" by Prof. David Kennedy, history, his academic adviser for the past four years.

Halter, co-director of the advising associates program, was praised for his "absolutely genuine altruism and an intensity of commitment that's hard to believe" by Prof. Hugh Marshall, political science.

Halter is the third successive Stanford Rhodes scholar to have taken Marshall's seminar in Administrative Responsibility. Marshall uses case studies of decision makers in the Executive Branch to examine conflicting personal loyalties—to bureaucratic superiors, Congressional representatives, special interest groups, professional standards, and personal concepts of the public interest.

Halter worked last summer for the

Seven in 10 students get financial aid

More than 70 percent of Stanford's undergraduates received financial aid last year, an all-time high, according to Financial Aids Director Robert Huff, editor of *The Journal of Student Financial Aid*.

Stanford is one of a handful of universities nationally which remains committed to meeting the computed financial need of undergraduates. Admissions decisions are made without regard to need.

The recession has created "a real problem" for many students, Huff says. Where the University had expected about 50 more undergraduates would require University funded help this year, the actual total may reach 200.

"It's clearly the state of the economy," Huff says. "In some cases, a family member loses a job. Other expected income may not materialize. Property may not be sold."

Many more students than normal were not able to find summer jobs, were employed at lower wage rates, or were otherwise unable to obtain the summer savings expected to help meet their educational costs. Through mid-October, 119 students, including both graduates and undergraduates, reported this problem.

The number of individual cases is "far more than I can remember in any previous year," he adds. Huff became financial aids director 25 years ago in January.

He's requested an additional $200,000 in University general funds to meet recession-related needs. "We look at each case individually, and make mid-year course corrections as necessary," he comments.

Undergraduates are expected to meet 25 percent of their educational costs through self-help. That amounts to $3,225 at present. In the standard case, this is met through $1,825 in long-term loans and

Emeritus Provost Frederick Terman dies in sleep at 82

Frederick E. Terman, emeritus provost of Stanford University and academic architect of Silicon Valley, died of cardiac arrest while sleeping at his campus home about 8 a.m. Sunday, Dec. 19. He was 82.

He had no history of heart disease but had been in declining health for several years. His three sons—Frederick, of Carmel; Terence, of Mt. View; and Lewis, of South Salem, N.Y.—and their families had joined him for the holidays.

Besides the three sons, survivors include five grandchildren. Terman's wife, Sibyl, died in 1975. Memorial services will be held at Stanford Memorial Church in early January, at a time and date to be announced. The family prefers contributions to the Terman Deanship Fund in the Stanford School of Engineering.

Born June 7, 1900 in English, Ind., Frederick Emmons Terman was the son of Lewis M. Terman, the psychologist who developed the Stanford-Binet intelligence quotient after moving here in 1910.

Because of his father's belief in Rousseau's notion of natural education, young Fred was not sent to school until age nine and a half, when he had learned to read and was qualified for third grade.

He entered high school at age 13, and graduated from Stanford at age 20 with a bachelor's degree in chemical engineering. Terman earned his engineer's degree in electrical engineering two years later under Prof. Harris J. Ryan, America's first professor of electrical engineering.

He earned his doctorate in 1924 at MIT under the tutelage of Prof. Vannevar Bush. He accepted a teaching position there, but was stricken with tuberculosis on a visit to his Stanford campus home. He spent the next year with sandbags on his chest, getting up only two hours a day to teach after Ryan offered him a half-time job at Stanford.

By 1926, he was able to teach full-time. The following year, he was appointed assistant professor. He married Sibyl Walcutt, a graduate student in psychology, at Memorial Church in 1928.

Landau gives $1 million to Center for Economic Policy

Ralph Landau, award-winning chemist, entrepreneur, philanthropist, and academic, has given $1 million to Stanford's Center for Economic Policy Research to study the sources of technological innovations and their impact on American life.

The gift will provide $250,000 annually for four years, starting Jan. 1, 1983, toward a new Technological Innovation Program (TIP) at the Center. Additional support will be sought from private foundations, industry, and government according to Prof. Paul David, chairman of the Economics Department and the William Coe professor of American economic history.

He and Nathan Rosenberg, Fairleigh Dickinson professor of economics and public policy, will guide TIP under the Center's auspices. The equivalent of three full-time faculty and four or five graduate students will be involved annually, drawn on a part-time basis from departments throughout the University and from outside Stanford.

Landau, a self-made millionaire, has gained worldwide recognition for his laboratory and entrepreneurial achievements in high technology chemistry. He is the first individual in 35 years to receive both the Perkin medal of the Society of Chemical Industry, American section, and the Founder's Award of the American Institute of Chemical Engineers. He holds six major patents, among many others.

He cofounded the Halcon SD Group, a firm which pioneered advanced technology in petrochemicals, and has been a leader in developing about one-fourth of the important processes in the petrochemical industry in the past 25 years.

A consulting professor both in chemical engineering and economics at Stanford, he currently is vice-president of the National Academy of Engineering. He recently coedited a 288-page issue of *Technology in Society* magazine on taxation, technology, and the U.S. economy.

Technologic innovations

His decision to underwrite a major independent academic research program reflects Landau's belief that the most important public policy questions arise at the intersection of "the technological and economic spheres," according to David.

"He has many good friends here and shares the view that Stanford offers an almost uniquely favorable setting for a program of this kind. The University has a strong faculty in the natural sciences and in engineering, as well as in economics, finance, decision sciences and operations research.

"The University's leadership has given continuing encouragement to public policy studies, as reflected in creation of the Center for Economic Policy Research, under the directorship of Prof. James Rosse and Prof. Michael Boskin, who chairs its steering committee."

"Stanford's situation in Silicon Valley and its connections with the innovative and entrepreneurial activity in high technology areas makes this a natural site for a project devoted to studying how economic policies can effect technological innovations.

"We still know remarkably little about the sources of invention, about the conditions governing entrepreneurial success and failure in the management of technological innovation, or about the appropriate goals of national technology policies.

"This need is sharpened by the growing importance of the multinational corporations in international scientific and technological affairs.

"We have to find out the connection between investment in new products and processes and what these bring in terms of industrial opportunities for new growth, profits and higher productivity. The connections between such opportunities and public and private 'investment' in education and worker training, also need to be re-examined.

"We can study three ways in which new technology affects the economy. One involves the allocation of economic resources to the search for improved technologies. We can investigate how expensive that is, how resources are consumed and the return in terms of new products and processes.

"The second one concerns the way in which new products or processes come into action in the economy. It is not sufficient simply to invent something; one has to find a niche in which its use could dominate alternatives. And, even then, it may take a longer or shorter span of time before innovations displace old methods or products. We want to know what factors determine the speed of displacement.

"Third, we plan to examine the actual impact made by new products on people's earning capacity, their working environment and on them as consumers.

"Our research will attempt to form a basis for making better predictions about the outlook for technological innovation."

David emphasized that he and his colleagues would "not seek quick—and probably misleading—generalizations" about technological innovation as a uniform phenomenon. "Rather, we shall consciously be trying to identify similarities and differences among industries (and even among various technological fields within the same industry) in the effects of given sets of policy measures."

—Donald Stokes

People

Stanford Business School Professor **Robert T. Davis**, 62, has been named director of the Stanford Executive Program (SEP), the Business School's eight-week general management course for senior level executives, effective immediately.

He replaces Robert K. Jaedicke, who had been scheduled to direct the SEP until his appointment as dean of the Business School late last month.

Davis has been highly active in executive education throughout his academic career, having taught executives at Stanford since the late 1950s, and having previously directed the Stanford Executive Program from 1962 to 1964 and again from 1967 to 1968. He was also director of the Stanford Sloan Program, the School's nine-month degree program for mid-career executives, from 1971 to 1975.

One of the School's most popular professors, Davis has been a recipient of the Salgo-Noren award for distinguished teaching. In class, he has been described by a colleague as a "rare merging of scholar and super salesman."

Davis, who started his teaching career in 1946, has also blended his academic career with work as a corporate executive, taking a two-year leave of absence form 1964 to 1966 to become a vice-president for marketing of the Varian Corp. in Palo Alto. In addition, he is currently a member of the board of directors of Saga Corp., Omark Industries, Kaiser Cement Corp., International Game Technology, and Plantronics, Incorporated.

Davis holds the Sebastian S. Kresge Professorship in Marketing at the Business School.

CIT's **Jon Sandelin** has been appointed associate director of the Center, CIT Director Ed Shaw has announced.

Sandelin will assume a number of duties in his new position. He will act as principal liaison with external associations in the computing arena, especially EDUCOM and EDUNET. He will also lead the development of the proposed SPIRES consortium, and will be responsible for the services CIT extends to external, non-University, account-holders.

Shaw stated that Sandelin will "continue his activities as a program planner and program catalyst in text handling, electronic printing and publishing, and related areas. These types of programs become operational within one division but often involve planning and coordination across division boundaries and throughout the University. Jon's responsibilities include bringing these various communities together into an effective planning effort."

Kaiser funds health care chair here; Hastorf to pick first endowed holder

With a $1 million grant from the Henry J. Kaiser Family Foundation of Menlo Park, the Board of Trustees of Stanford University has established an endowed professorship to be awarded to a faculty member whose research pertains to health care policy, administration or management.

The foundation made a similar grant to Harvard University simultaneously.

Founded in 1948 by the well-known industrialist Henry J. Kaiser, the Foundation's primary interest is in promoting pre-paid medical care. Its grants for the current year total some $15 million.

Foundation president Dr. Robert J. Glaser said: "Preparation of leaders in health care administration and management necessarily involves the acquisition of knowledge and skills in various disciplines.

"We are pleased that the chair funded by this award will be occupied by a distinguished faculty member with interests and expertise in the subject of health care administration and management, without restriction as to the particular school or department of the University in which he or she holds appointment."

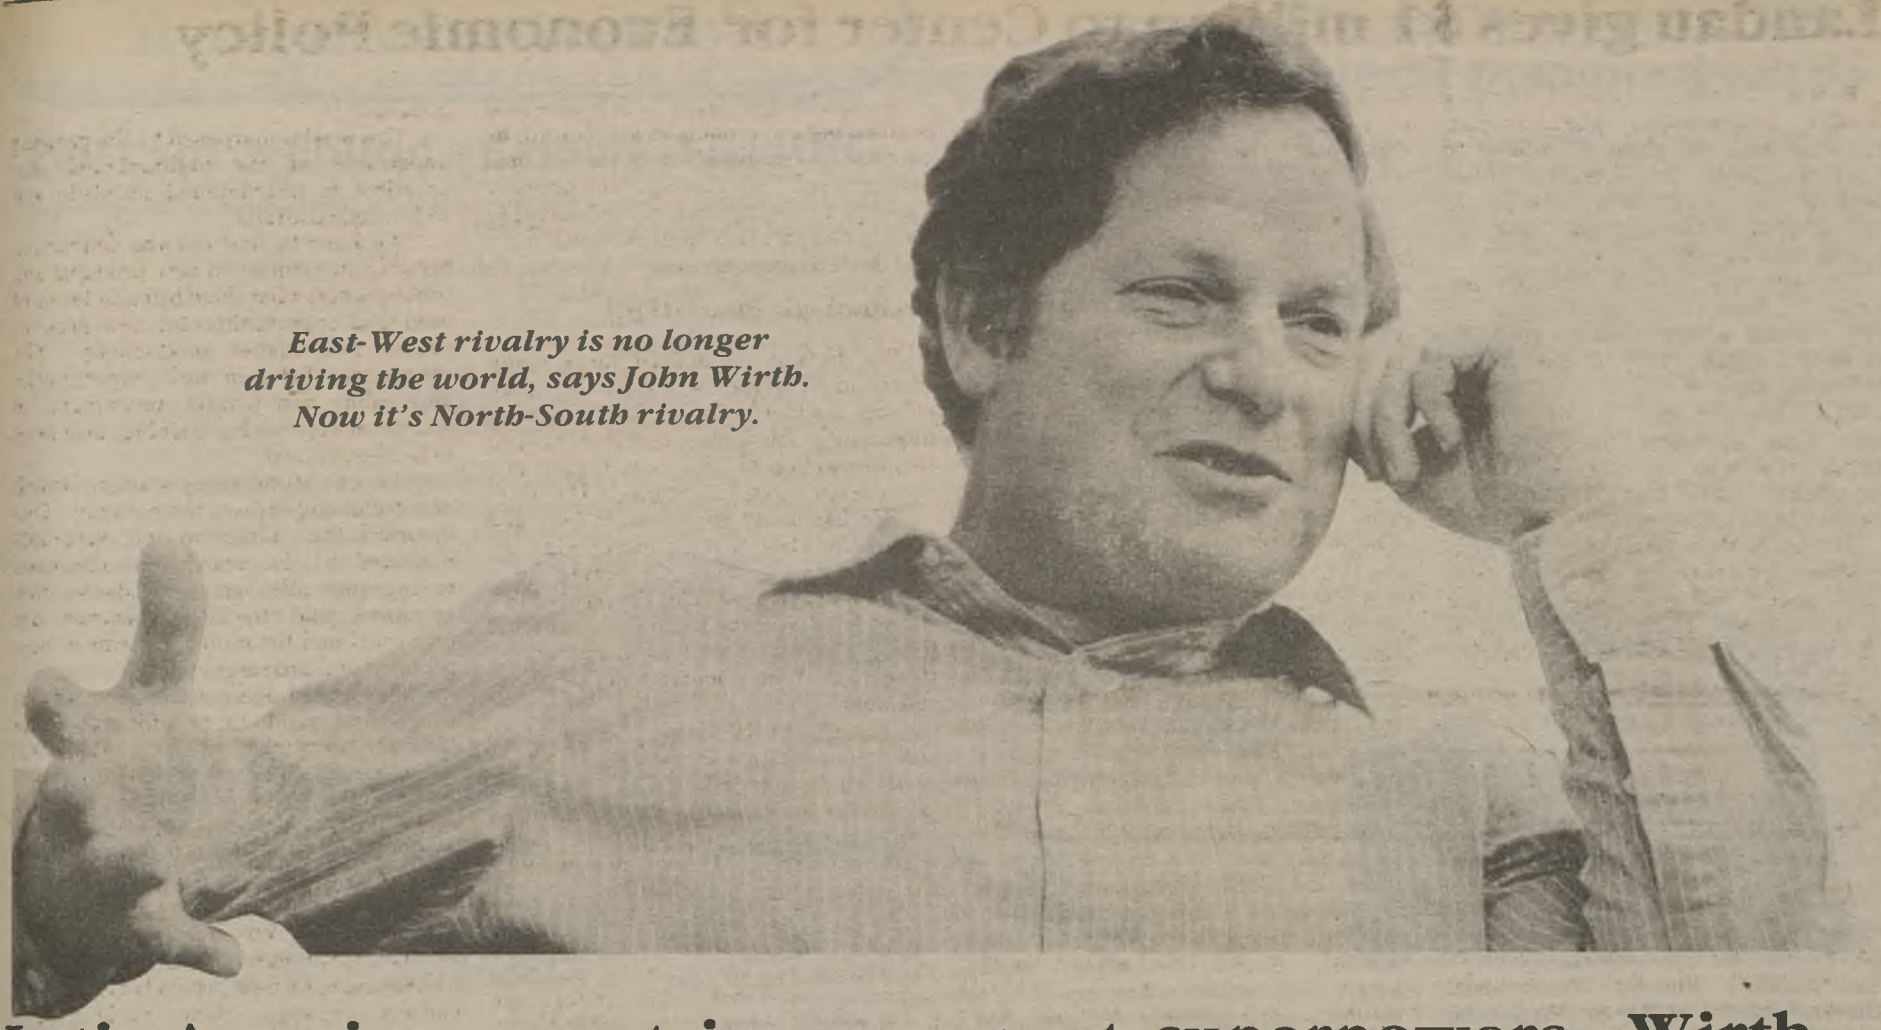
The new Stanford professorship is named for the late chairman of the board of Kaiser Industries, Edgard F. Kaiser, Sr. (1908-1981), eldest son of Henry J. and Bess Kaiser, who organized one of the first pre-paid medical plans—the forerunner of Kaiser-Permanente—for Grand Coulee Dam workers and their families in the 1930s.

The first holder of the chair will be selected by Provost Albert Hastorf with a view to achieving the greatest impact in strengthening the University's teaching and research in the area of health care policy. This currently involves faculty in the Medical School, the Graduate School of Business, and the Departments of Communication, Economics, Psychology, and Sociology.

Nine separate research programs on issues of national health, including disease prevention, health care organization and delivery, health economics, legislative reform, physician and patient behavior, and technology assessment, were recently brought together into the Stanford Consortium for Health Research and Policy, to facilitate interaction among the groups and strengthen Stanford's position as a resource for scholars and leaders in this field.

"The Edgar F. Kaiser, Sr. professorship will be an invaluable instrument in these efforts," Stanford President Donald Kennedy said.

Two of Stanford's interdisciplinary undergraduate majors—Human Biology and Public Policy, masters degree specializations offered by the Graduate School of Business, and several Medical School teaching programs deal with health policy, administration or management.



CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service. Patricia J. Black, editor; Karen Marman, design assistant. Charles Painter and Ed Souza, photographers; Medicals news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

East-West rivalry is no longer driving the world, says John Wirth. Now it's North-South rivalry.

Latin American countries may upset superpowers—Wirth

BY MILLICENT DILLON

New actors are appearing on the world scene. We now have intermediate sized states capable of forcing profound changes in the economic policies of the superpowers, says Stanford history Prof. John Wirth, director of the Center for Latin American Studies.

"In the past few months Brazil and Mexico have pushed the U.S. to redefine its entire policy toward foreign lending and finance in the world economy.

"Faced with the possibility of economic failure in these countries, Reagan and his people have done things they would never have conceived of earlier, doubling the capital for the International Monetary Fund, issuing U.S. government loans on an emergency basis, and putting pressure on private bankers to keep the flow of funds going to these countries.

"It's fascinating to think of this very self-confident group of people who were sure that the world was defined by East-West rivalry. Now it turns out they are jumping to a different tune, that of North-South.

"For the East-West rivalry is no longer driving the world. Just as crucial are these new economic issues arising out of developing countries as they expand."

Recently returned from Brazil, where open democratic elections were held for the first time in years, Wirth spoke in a campus interview of new developments and expansions in that country. As a new intermediate power, Brazil has neither the responsibility of an old colonial power nor the weight of a new super power, he says. In its dealings with African and Latin American nations, it portrays itself as a new kind of entity.

"The are reaching markets that Europe and the U.S. have had a hard time serving. The Africans are suspicious of the Europeans, in any case, and American prices are often too high for them.

"The Brazilians have gone into Africa and Latin America with financing through the Bank of Brazil. They have also set up information agencies and sent in cultural missions.

"They are the only country in the Western hemisphere, excepting Canada and the U.S. and, I suppose, Cuba, that has a global policy."

With the latest economic developments, the whole new policy of development and global planning is at stake.

"The situation came up so fast and unexpectedly," says Wirth. "In Mexico the difficulty was in part caused by the unexpected leveling off in the price of oil but it also had a good deal to do with internal mismanagement.

"But the Brazilians have actually been good managers. Still they are now suddenly unable to sell enough."

The possibility of economic failure threatens the newly emerging democratic policies of the country. "Now for the near term, at least, the external financial situation is driving internal politics."

As far as international repercussions are concerned, "the possibility of failure draws into question the entire future of the world trading system. How will countries on the rise be able to find a place in the world order?"

Emphasizing the emerging role of intermediate states, Wirth notes, "In the 70s, it was expected that multinational corporations would dominate the nation states, but that has turned out not to be so.

"In countries like Brazil the state has turned out to be very powerful, powerful enough to set the conditions for the multinationals.

"What the multinationals want is the internal market of a country like Brazil's, which is rapidly growing. But the Brazilians are making the price of entry very high for the multinationals, saying, 'If you want to come in here, you have to agree to do a certain amount of exporting.'

"None of this was supposed to happen 10 years ago. Then everyone was sure the nation states were too weak to impose their own rules.

"Now in Latin America, people no longer talk so much about the multinational corporations and their potential threat. The crucial question in Brazil now is the question of the pace of technological innovation. The big issue there is data processing and computers.

"The military too is very interested in this field as a direct result of the Falkland conflict.

"One of the military lessons of the Falkland war, as Brazil sees it, was that the Argentinians failed because for the most part their air arm did not have modern computing equipment. They say that even if you have brave pilots, you'll still lose the war if your electronics are not good enough."

To insure that they have a modern data processing and communication network, the Brazilian National Security Council is taking a key role in the new Secretariat for Informatics.

"If they pull it off," says Wirth, "they will be the first Western government to have such a comprehensive information policy, and one different from the American system of free flow of information and technology.

"The Brazilians have in mind very strong state control for military reasons and also to protect the domestic market. Not only would the government get a share of the revenue on all flow of information but it would control what is coming in and going out.

"Essentially they are trying to set up a gateway system in which all the data processing would come in through a central source controlled by the government.

"It's such a new field, I just have a hazy outline of what's going on. But I do know the U.S. government is watching this very closely. It affects our export markets and is a challenge to our own model of trade. It was an issue at the recent GATT meeting."

Wirth notes, however, that there is considerable controversy in Brazil about the government plan. "What happens to a society which has a relatively large and growing modern sector up to U.S. and European standards of consumption, training, and aspiration but that also has a large archaic sector living back in the late Middle Ages in terms of its social rhythms, when you impose a system like this one upon it? Will it allow a small elite to get even further ahead, to get so far ahead in fact that they will be out of touch with the social basis of the society, so eventually that elite won't be able to run the society any more?

"The Brazilians are thinking about this, but they don't have any good answers.

"But then we don't even know what our own technology in this field is doing to our own society."

CPPC's Career Week will present 28 professions at Tresidder Union

In order to provide students with information about a variety of career opportunities the Career Planning and Placement Center will sponsor a Career Week Monday through Thursday, Jan. 10-13, in Tresidder Memorial Union.

"Students need to thoroughly assess their skills, values, needs, goals, and interests. The next step is to obtain information about careers which may satisfy those areas," says Renee Filice, director for liberal arts majors and coordinator of Career Week.

"The purpose of this four-day program is to reach as many students as possible with information about a great variety of careers. They don't have to read about what a technical writer does; they can hear three professionals describe their responsibilities and give advice on how to enter the field."

Twenty-eight career fields will be covered. Professionals from the Bay Area (many are Stanford graduates) will talk about their careers. They will not be promoting or recruiting for their organization but providing valuable inside information.

Panels will be offered at 3-4 p.m. and 4:30-5:30 p.m. Students will be able to select two workshops from approximately seven offered each day.

The Career Planning and Placement Center staff has found that the programs benefit students in two ways. One is obvious—students can learn about new career fields to pursue after graduation and make some good contacts with representatives.

The second is more subtle. After meeting and talking with students, many panelists follow up their visits by contacting the CPPC when they have job openings or want to establish internships.

"Until we contact these professionals for Career Week, many are unaware that we exist. They find we can become a pipeline to provide outstanding future employees," Filice maintains.

In addition to organizing Career Week in January and the Career Faire in October, the CPPC offers many other services designed to ease the transition from Stanford student to employee or graduate student. Career counseling, mailing letters of recommendation, providing job listings, and scheduling recruiters are a few of many services offered. The CPPC is located in White Plaza, between Cubberley and the Bookstore. Hours are 8 a.m.-4:30 p.m.

Nonacademic paths for degree holders

The Career Planning and Placement Center will sponsor a three-person panel on "Professional Opportunities for Ph.D.s and Master's Students: Nonacademic Careers" from 4 to 6 p.m. Wednesday, Jan. 12, in Tresidder Room 270.

The panel will discuss career alternatives for those with advanced degrees who do not go into academic areas.

Games tournaments begin Jan. 15

If billiards, foosball, table tennis, chess, or backgammon are your pleasure, the all-campus games tournaments sponsored by Tresidder Union's Recreation Center may offer some lively competition.

Beginning Saturday, January 15, tournaments for these games will be held for all members of the Stanford community. The winners, if they are currently registered Stanford students, will be eligible to compete on the regional level, playing students from other colleges throughout California, Hawaii, and Nevada. The regional competition will be held at Cal State-Fullerton on the weekend of February 19-20.

The tournaments begin with a four-round Swiss Chess Tournament starting at 11 a.m. Saturday, January 15. Rounds will be played weekly at the players' convenience.

Other tournaments include backgammon on Monday, January 17; billiards on Monday, January 24; table tennis on Thursday, January 27; and foosball on Monday, January 31. All begin at 7 p.m. in the Tresidder Recreation Center or its conference rooms.

A $2.50 entry fee per participant will be charged. Entry forms, rules and additional information may be obtained at the Tresidder Union Recreation Center, or by calling 497-4316.

The tournaments are sponsored by Tresidder Union's Recreation Center in conjunction with the Association of College Unions International.

Masayo Duus wins Japanese prize

Masayo Umezawa Duus, author of *Tokyo Rose: Orphan of the Pacific*, has been named winner of the 44th Bungei Shunju Readers Prize. The prize is awarded annually to the best article appearing in *Bungei Shunju*, the leading monthly magazine in Japan, with a circulation of over 1,000,000.

The winner of the prize is selected from a panel nominated by the magazine's readers, who vote for the article they think the best. The winner is selected from the nominees by a committee of top Japanese writers and critics. The first prize was awarded in 1949.

Duus' prize-winning article was a series on the Japanese-American combat units during World War II. It was based on three years of research, during which she interviewed nearly 300 veterans of the 442nd Regimental Combat Unit and the 100th Battalion. She also visited the sites where the units fought in France.

The series was unusual because no Japanese woman non-fiction writer had written about war and combat before.

The author's previous books include *Tokyo Rose*, which won the first annual Kodansha Non-Fiction Prize in 1977. She has also written *Haisha no okurimono* (*Gift from the Defeated*) on prostitution during the American Occupation of Japan. A collection of her essays on life in the U.S. was published in 1980, with a sequel in 1982.

Mrs. Duus lives in Stanford, Calif. with her husband, Prof. Peter Duus of the History Department, and their son.

Personnel-Payroll

Official University holidays for 1983

The Administrative Council has approved the following dates for the observance of the designated University holidays in 1983.

Washington's Birthday—Monday, Feb. 21;
Memorial Day—Monday, May 30;
Independence Day—Monday, July 4;
Labor Day—Monday, Sept. 5;
Thanksgiving—Thurs. and Fri., Nov. 24-25;
Christmas—Fri. and Mon., Dec. 23 and 26;
New Years 1984—Monday, Jan. 2, 1984;
Birthday Holiday.

The birthday holiday may be taken on the employee's birthday or any other work day mutually agreed upon by the supervisor and the staff member.

Frequently staff members ask to have time off to observe days of religious or other special significance, other than those days designated as University Holidays. Because of the flexibility in scheduling the birthday holiday, staff members should be reminded that the birthday holiday can be scheduled to provide paid time off on a day which has special significance to them.

Supervisors are also encouraged to accommodate staff requests for vacation or personal time off to observe days of religious or other special significance.

Payroll deadlines for 1983

Specific Deadlines for 1983 — Forms must be *received* in the various offices as follows:

Action forms for changes from 1st to 9th or 16th to 24th of month to Personnel by 10 a.m.	Action forms for changes from 10th to 15th or 25th to last day of month to Personnel by 10 a.m.	Hourly forms to PBR by 1 p.m.	Paycheck Delivery

Academic groups decide to flex their muscles nationwide

'New conditions call for advocacy functions'

BY MILLICENT DILLON

Scholarly organizations nationwide are assuming a more active role as advocates with respect to the government and the public, says Dorothy Atkinson, executive director of the American Association for the Advancement of Slavic Studies, currently based at Stanford.

"For a long time professional scholarly organizations have taken it for granted that advocacy of any kind was not their appropriate function. In part this conviction grew out of an ivory tower mentality.

"When education was riding easier, we could afford to take that view, but we no longer can.

"What happens in the educational establishment is directly affected by decisions at the governmental level. So it is certainly a legitimate function for us to express our opinions on legislation relating to education, to seek representation for our views, and to keep our members informed of what is happening," says Atkinson.

Referring to a recent announcement by the American Historical Association of "its rapid and productive plunge into the role of advocate for the historical profession," Atkinson said, "This is a tendency we will see more of in the scholarly field.

"When the federal government proposes, as the current administration has done, drastic cuts in international exchange programs, in the National Endowment for the Humanities and in other agencies that support scholarly work in the field, scholars have to let their representatives know the implications of these cuts."

Nationwide several organizations have sprung up recently to represent scholarly interests in all disciplines. One of these, based in Washington, is the National Humanities Alliance, an umbrella organization. Among the other associations supporting it are the American Council of Learned Societies, the Association for Asian Studies, the Modern Language Association, and many others.

"We are all nonprofit organizations dedicated to the advancement of scholarship, and we are careful to observe the line between political and scholarly interests very clearly."

The present increasing advocacy in scholarly circles follows a decade of particular constraint, even inertia, that succeeded the extreme divisions in the academic community at the time of the Vietnam War.

"During that troubled period," says Atkinson, "there were a number of activists in the American Historical Association and in other organizations who insisted that these groups take stands on various political issues.

"This appalled many of their colleagues who were equally insistent about the need to keep scholarly organizations completely out of the political arena. The debates so polarized the academic community that little middle ground was left open for legitimate advocacy on the part of the organizations. A more balanced perspective has been gaining ground lately."

The AAASS was spared some of the earlier controversy. "The Soviet field has always been one of high political sensitivity and our awareness of that has made us extremely cautious about dealing with matters that might be viewed as political, even when that meant not pursuing our own interests as scholars."

Atkinson points out that a recent major innovation in the field of Slavic studies has been the setting up in Washington of the National Council for Soviet and East European Research, a group of academics who disburse certain government funds to the field.

"Its executive director, Vladimir Toumanoff, has had considerable experience in government services as well as having taught at Harvard," she notes.

The AAASS itself became directly involved last year in a problem that arose for some scholars out of a political situation. When visiting Polish scholars were unexpectedly stranded here due to developments in their own country, the Association sought assistance for them.

"We asked our members to look for temporary research or teaching appointments that could be made available to these scholars so they could continue their work here.

"Several foundations, including the Rockefeller and Ford Foundations, made support money directly available to the Polish scholars here and in Canada. They were funded through IREX (the International Research and Exchanges Board) which is based in New York and is the principal organization for scholarly exchanges between Soviet and East European countries and the U.S.," notes Atkinson.

The Bibliography and Documentation Committee of the AAASS also worked to promote the collection of documentary materials on the Solidarity movement in Poland.

"Through all of this our objective has been to help scholars and facilitate scholarship."

Atkinson, a former professor of history at Stanford, is the author of *The End of the Russian Land Commune*, to be published by Stanford University Press next month. She was also the editor (with Alexander Dallin and Gail Lapidus) of *Women in Russia*.

Shortly after she took office in the AAASS in 1981, Atkinson became aware that "there was a lack of communication among institutions in the field."

At her instigation a meeting was held at Stanford in July, under the sponsorship of the AAASS, with representatives from many Soviet studies programs nationwide. Discussion was focused primarily on problems facing the field and on current legislative proposals to remedy the situation, as well as on the critical need for increased fellowship aid.

Atkinson's own major involvement at the moment is with the question of the steep decline in Russian language enrollments in this country over the past decade. She is currently organizing a National Committee on Russian Language Study with representatives from government and secondary schools as well as higher education.

"I've been digging out the data and by bringing together concerned people I hope to help them construct an effective program of action. A well-designed proposal is likely to find support among public and private agencies at this point, I think, because the situation and its implications have become increasingly evident."

The AAASS also acts as the organizational representative for American scholars in the International Committee for Soviet and East European Studies, made up of scholarly organizations worldwide. The Committee includes representatives from Europe, Canada, Japan, and Australia, among others, but none from the Soviet Union.

The (Vietnam) debates so polarized the academic community that little middle ground was left open for legitimate advocacy on the part of organizations. A more balanced perspective has been gaining ground lately. ***—Dorothy Atkinson***

ICSEES holds international congresses every five years; the next is scheduled for 1985 in Washington, D.C. and will be hosted by the AAASS. Scholars from all countries, including the USSR, are invited to participate.

Recently the Stanford office of the AAASS was visited by Xu Kui, deputy director of the Institute of Soviet and East European Studies of the Chinese Academy of Social Sciences in Beijing. "China is just beginning to develop programs in Soviet studies and he was eager to learn about the Association and Soviet studies in the United States.

"Chinese scholars are interested in setting up an organization similar to ours and in increased cooperation with American scholars. Xu Kui took a complete set of our *American Bibliography on Slavic and East European Studies* and our *Slavic Review* with him back to China."

Frederick Terman's formula to make Stanford great

continued from page 1

Terman worked seven days a week and felt no need for vacations. "Why bother," he once remarked, "when your work is more fun?"

He liked to cannibalize radio parts and build his own sets at home. He worked hard at developing courses and writing textbooks. Rising through the ranks to full professor, he was named head of the Department of Electrical Engineering in 1937. Four years later he was elected president of the Institute of Radio Engineers, the first person so chosen who lived further away from New York City than Rochester.

Tired of the brain drain of students from Stanford to the East, he began to take a direct hand in encouraging local industry. "Small business always interested me," Terman said, "so I helped five or six of my students establish companies of their own. I assisted with encouragement, advice and ideas."

The prewar electronic laboratory at Stanford was an attic under the eaves. The roof leaked, and there was no money for repairs. Students built big wooden trays and lined them with tar paper and tar to catch the water. One winter Bill Hewlett stocked the trays with goldfish.

Following a suggestion by Terman, Hewlett designed and built an audio oscillator, a device that generates signals of varying frequencies. Then they enticed David Packard, a 1934 graduate, to return from General Electric, spending $500 for materials and $500 for Packard's salary—at $55 a month. Hewlett and Packard then started business in Packard's garage, creating what is now a multi-billion dollar, world-wide corporation.

When Edward Ginzton needed a research assistantship, Terman teamed him up with Physics Prof. William Hansen. Russ Varian worked with Hansen to invent the klystron tube during the 1930s. This was used in radar during World War II, provided the technology for the Stanford Linear Accelerator, and now is also used for cancer treatment in clinic machines (or clinical linear accelerators).

Varian moved East at the start of the war, but later returned to establish Varian Associates on the Peninsula. Ginzton subsequently became the firm's president and a Stanford trustee.

When war broke out, Vannevar Bush asked Terman to organize a radio research laboratory in Cambridge, on Harvard turf. During his first winter there, Terman completed one of his best known books, *The Radio Engineer's Handbook*, often called the "Bible of its field."

Terman recruited more than 800 people, including 225 with degrees in engineering or science. His staff included 41 Stanford faculty or former students.

The lab devised jammers for enemy radar and made tunable receivers for detecting and analyzing enemy radar signals. Narrow strips of aluminum, called "window" or chaff, were devised to reflect radar. A six-ounce bundle scattered from an airplane looked like three heavy bombers. The demand was so great there was no tinsel for wartime Christmas trees or foil wrapping for chewing gum.

"The war made it obvious to me," Terman said, "that science and technology are more important to national defense than masses of men. The war also showed how essential the electron was to our type of civilization. Our method of fighting the war was to an amazing degree built around, and determined by, electronic devices. . . .

"The idea of peacetime support of university research by the government was new. The U.S. had never before World War II provided any substantial support for basic research in universities except in the field of agriculture." Food production is one field in which the U.S. maintains "unequivocal superiority to Russia on every count," he added. The earliest government contracts negotiated at Stanford set the tone for times to follow. Sponsored

Frederick Terman surveys Terman Building construction in 1976

projects would be part of education, performed by students and faculty with a minimum of full-time professional staff. Research would be built around the competence and interests of individual faculty members. No extra salary would be given for doing sponsored research. Graduate students could work part-time and use the results in dissertations as appropriate.

When Terman returned to Stanford as dean of engineering in 1946, the university was "an underprivileged institution," he recalled. "But we had a chance to achieve a stronger national position. . . .

"We started off with three projects. The one in chemistry fizzled. The physics project led to the Nobel Prize for Felix Bloch, who discovered nuclear magnetic resonance. The project in electrical engineering was the seed that blossomed into today's nationally recognized research program in engineering. . . .

"The universities came into the picture only because it has been found that they are the most effective places that we have to carry on fundamental research. Private philanthropy would have been inadequate. Industrial concerns' needs must be profit oriented. States could not assume this national responsibility.

"A natural result of this situation is that government money tends to flow to universities and to those parts of universities that possess strength. They want first class faculty members to carry on their research."

Terman practiced and preached a principle he called "steeples of excellence." Its cardinal rule is go for the best. Academic prestige depends on high but narrow steeples of academic excellence. It is not possible to cover all the bases.

By paying the best people well, the experts themselves will attract grant money, graduate students, and promising junior faculty. If a university in those days had $90,000 to spend on five salaries, Terman advised hiring one for $30,000 and four others for $15,000, rather than simply paying all five $18,000 each.

It's better to have one seven-foot jumper on your team, he explained, than any number of six-foot jumpers.

As early in 1947, he started making speeches that "the West has long dreamed of indigenous industry of sufficient magnitude to balance its agricultural resources. The war advanced these hopes and brought to the West the beginnings of a great new era of industrialization.

"If western industry and western industrialists are to serve their own enlightened and long-range interests effectively, they must cooperate with western universities and, wherever possible, strengthen them by financial and other assistance."

The West was wide open but "we won't make the most of this opportunity if we operate a pauperized electronics industry in which workers are expected to take a disproportionate part of their salaries in a climate which God and not the electronics industry gave us."

New companies found it more important to locate near a center for brains than raw materials, transportation, factory labor, or even markets.

The Stanford Industrial Park, which Terman and others established in 1951 now has 90 firms employing 25,000 adjoining faculty housing on campus lands.

"Universities are more than a place for learning," Terman said in the 1950s. "They are major economic influences in the nation's industrial life, affecting the location of industry, population growth, and the character of communities. Universities are a natural resource."

Terman encouraged faculty to get acquainted with their counterparts in industry, to cooperate with industry without jeopardizing the integrity of the University.

Terman was instrumental in opening up Stanford's classrooms to academically qualified industry engineers. He started the honors cooperative program in 1953-54, enabling engineers to sit in class directly or via a television network in their companies. Industrial affiliates programs started. Corporate gift support rose steadily.

In 1955, Terman was named Stanford's provost, the University's second ranking academic officer. President Wallace Sterling called this a turning point in Stanford's history.

Ernest Hilgard, emeritus professor of psychology, said Terman's contributions to selecting faculty were "tremendous. He brought historians Gordon Graig

continued on next page

Terman/ continued from page 6

from Princeton and David Potter from Yale. We didn't have distinction in the early 1950s. Although some joked that Stanford was becoming Terman Tech, he was concerned with all aspects of the University."

Soon after the transistor was invented at Bell Labs in 1955, coinventor William Shockley returned to Palo Alto as a Stanford faculty member and set up Shockley Transistor. More than 55 Silicon Valley firms trace their origin to that move.

In chemistry, Terman brought in Carl Djerassi and William Johnson, who attracted further strength. The Stanford Industrial Park, formed in the 1950s, began to reflect this pool of talent. Syntex, whose research Djerassi headed, moved here. New companies such as Zoecon, Alza, Syva and Dynapol were established.

By 1974, *Fortune* magazine observed, Santa Clara County enjoyed "the densest concentration of innovative industry that exists anywhere in the world." The concentration of 800 pioneering technology firms "has created an innovative ferment without precedent in industrial history." The buildup was "almost wholly the handiwork of Frederick Terman, an enthusiastic and inspiring teacher at Stanford," writer Gene Bylinsky declared.

Terman saw this "community of technical scholars" as the modern counterpart of medieval scholars whose work culminated in such academic centers as Oxford, Cambridge, Heidelberg, Bologna, Gottingen, and Paris.

"In these modern communities of technical scholars there is a continuous ferment which makes them intellectually stimulating for people having the qualities that are the basis for growth industries.

"In such a community, the innovative sources existing in industry are contagious. . . . To a creative mind, a new idea coming from outside is likely to impact in ways that leads to additional ideas, which stimulates more ideas and mounts new challenges. . . .

"As long as we maintain the practices that have made us what we are today, there is no limit to the longevity of this situation."

Terman believed that knowledge is the new focal point for national growth. Where railroads and autos once generated growth, now the focus is on information.

Terman was fascinated by the Russians. He admonished this country not to underestimate them. The Russians, he said, have a long tradition of quality engineering. Under the Czars, engineers had higher status than doctors or lawyers.

As early as 1962, he noted that if the Soviets sustained their efforts in physical science and engineering, they could surpass the U.S. within two decades, at least in military technologies.

"Events of the next several decades will probably determine what kind of world is going to exist for the next 100, or 500, or even 1,000 years, just as did the struggle between Rome and Carthage."

The U.S. has greater depth and diversity in science and technology, but the challenge posed by the Soviets should be taken deadly seriously.

A founding member of the National Academy of Engineering, he and his father formed one of the few father-son combinations in the National Academy of Sciences. In 1976, President Ford awarded Terman the National Medal of Science. The following year, Stanford dedicated its new $9.2 million Terman Engineering Center.

When Terman retired as provost of the University in 1965, he said: "If I could relive my life, I believe I couldn't do better than play the same record over again."

—Bob Beyers

Earthquake expert Harry Williams died on Xmas Day

Emeritus Prof. Harry Andrew Williams of the Stanford Department of Civil Engineering, an early expert on the effects of earthquakes on buildings, died Christmas night, Dec. 25, at his campus home of a brain tumor. He was 80.

A native of Nevada, Williams came to California with his parents in 1916 and settled in Santa Clara Valley. He spent most of his adult life at Stanford.

He received a bachelor's degree in engineering in 1925, then worked five years with Standard Oil Company of California.

He returned to Stanford as a graduate student and part-time instructor in 1930, received the degree of Engineer in 1933, and remained as an engineering faculty member until his retirement in 1966. He kept in touch with some of his first students all his life.

Williams' early research was in soil mechanics and vibrations-the effects of earthquakes on various structures and resistance to fatigue of various building materials. His later work was in stress analysis of structures and in port and coastal engineering. He published numerous articles in technical journals in these fields.

He was a consultant to Douglas Aircraft, Corps of Engineers, U.S. Army, U.S. Air Force, Tracerlab, Westinghouse, U.S. Bureau of Reclamation, and the California Division of Architecture. He spent 15 months as a visiting professor at MIT and two years at the University of Hawaii, where he helped organize a new Department of Ocean Engineering.

He was a member of Sigma Xi and Tau Beta Pi honor societies, the American Society of Civil Engineers, the Stanford Faculty Club, SIRS, Palo Alto Senior Men's Golf Club, and the Commonwealth Club. After retirement, he pursued his interests in golf, travel, book-binding, and Spanish literature.

He is survived by his wife, Gertrude Smoyer Williams; a son, Brian Kirk Williams, and a daughter, Susan Williams Lyon, both of San Francisco; two sisters, Mrs. Gladys Gerritsen, of Petaluma, and Mrs. Ida Fritschy, of Tucson; and five grandchildren, Sylvia and Kirk Williams, and Jesse, Jacob, and Amanda Lyon.

Harry Williams

A memorial service will be held at 3:30 p.m. Thursday, Jan. 6, in Stanford Memorial Church, with the Rev. Robert Minto officiating. Speakers will be emeritus engineering Profs. Clarkson Oglesby and Louis London, and Dr. Paul Holmer of Marin County. The family prefers memorial donations to the Stanford School of Engineering Library or the Sempervirens Fund.

Terman eulogized at memorial

The Stanford community paid its combined tributes Tuesday to Frederick Terman, one of the greatest men in the history of the University.

Memorial Church was filled with mourners who heard eulogies to the man who changed the face of Stanford and was largely responsible for the creation of Silicon Valley.

Terman was provost 1955-65 and professor 1926-65.

Terman died in his sleep at his campus home on Dec. 19, at the age of 82. The private interment has already taken place.

The first eulogy at the Memorial Church service was given by Donald Kennedy, president of the University; the second by William M. Kays, dean of the School of Engineering; and the third by David Packard, chairman of the Board of Hewlett-Packard.

Kennedy said that Terman gave Stanford much of its shape. "He had the power to see the qualities of people, sometimes qualities they were not aware of themselves. He built a team which was able to accept his vision of the future."

David Packard said: "He was responsible more than any other single person for the position of excellence Stanford now enjoys."

The three sons were present, together with their families. The service was conducted by the chaplain of Memorial Church, Robert Hamerton-Kelly. The organist was Herbert Nanney and the soloist Caterina Micieli.

There are five grandchildren, of whom four are now visiting at the Terman home on campus.

Rhodes scholars...

continued from page 1

chief administrative assistant to Supreme Court Chief Justice Warren Berger. He served earlier as a Congressional intern and plans to attend law school after two years at Oxford University. As a sophomore, he won a Truman scholarship, covering his junior and senior years at Stanford and two years of graduate work.

Klingler worked in Washington last summer with the House Wednesday Group, self-described as liberal to moderate Republican representatives. The previous summer he worked with Common Cause in Washington.

Klingler was one of several *Stanford Daily* staffers who recently produced a bogus issue of *The Daily Californian*, giving Stanford the last laugh in the 1982 Big Game. Its banner headline falsely proclaimed "NCAA Awards Big Game to Stanford." Copies now sell for $5 at Cal, $1 at Stanford.

Klingler plans to study English history at Oxford. He has no specific career plans, but expects to pursue public policy concerns through journalism, law or government itself. Besides *The Daily*, his interests have included working for Amnesty International, playing intramural soccer and squash, and backpacking.

Halter plans to enroll in Oxford's philosophy, politics and economics program. He's considering law, teaching, and public service as possible careers. A resident assistant in Roble Hall, he formed the Stanford Partners Project with Jeff Maltzman in their sophomore year. This group works with juveniles age eight to 18.

Halter was attracted to Stanford by its engineering program. He chose the University over CalTech because of its broader options.

His predecessors in Marshall's course included Peter Stamos, who was named a Rhodes scholar in 1980 and Mark Kramer, who received the same recognition last year. Werner Disse, a 1981 economics graduate who worked as an assistant to the University ombudsman, also received a Rhodes last year. He was nominated by his high school in South Africa.

More than 30 Stanford students expressed interest in the Rhode competition this year, twice last year's total. About half were invited to regional interviews. Assistant Prof. Stephen Ferruolo, history, heads the Rhodes-Marshall panel at Stanford.

The scholarships were funded by the will of Cecil Rhodes, who made a fortune in diamonds in South Africa. He hoped the scholarships would contribute to world understanding and peace.

Sharp rise in aid to students, while federal help drops

continued from page 1

$1,400 through employment at the equivalent of 10 hours per week during the school term.

This year, undergraduate financial aid from all sources totals about $27.7 million. It has been received by 4,683 students, or 71.1 percent of those enrolled.

The total includes $19.2 million in scholarship and grants-in-aid to 3,200 students (46 percent of those enrolled) and $8.5 million in loans for 3,878 undergraduates. Many received both kinds of help.

"Need is at the heart of the undergraduate awards," Huff emphasizes.

The basic student budget of $12,738 includes tuition, $8,220; room and board, $3,423; books, $350; and personal expenses, $745. To this is added transportation, generally two round-trip coach fares for those living far from campus, an average of about $450.

The expected family contribution toward these costs is "quite steep" under the uniform methods used by the federal government, the state and the University, Huff says. As costs have risen, he's begun to see "a new clientele" of families with incomes of $50,000 to $70,000.

At these levels, Huff believes, strict needs analysis may not be equitable. Students should be able to work or borrow to help meet their educational costs, even when they are not eligible for scholarship support.

"Loans are really deferred earnings," Huff says. "Some students want to help shoulder more of the family burden in financing their education. This should be possible, so long as loans are used for educaticnal purposes."

Abuses in liberalized loan programs created during the Carter Administration led Congress to curtail the guaranteed and federally insured student loan programs this year. Where 4,774 Stanford graduate and undergraduate students borrowed $14.2 million in 1981-82, this year's total is estimated at $11.3 million for 3,825 students.

$1 million more in loans

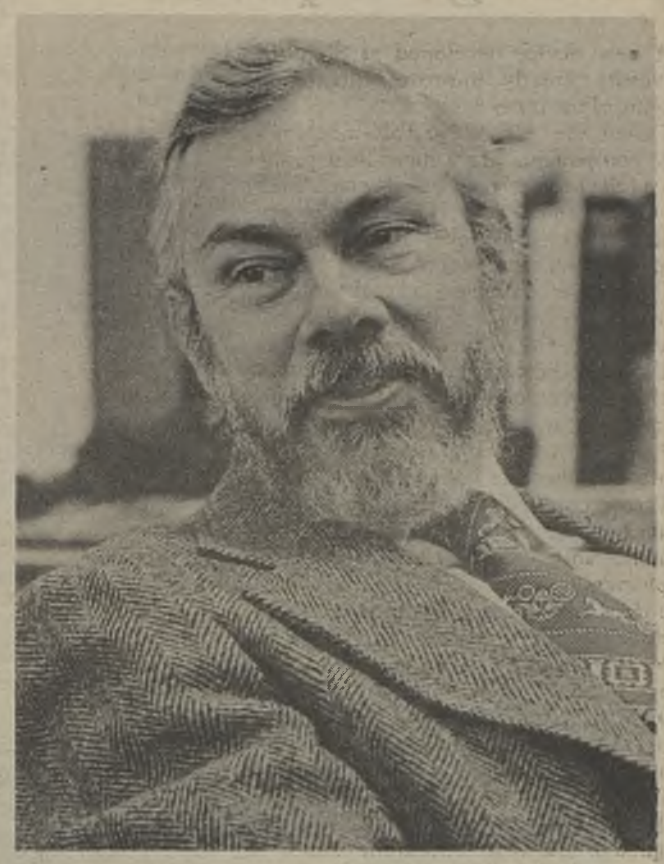
Federal funding of national direct student loans at Stanford is expected to increase by more than $1 million this year, reflecting the University's excellent record on repayments. Less than four percent of Stanford's loans default, compared to a national average of 10 to 12 percent.

Total direct student loan funds, including repayments and University matching funds, are expected to increase from $2.1 to $3.2 million. Total student recipients is expected to increase from 975 to 1,400.

On the other hand, total funds available for college work-study programs at Stanford will drop from more than $1 million to $683,900—less than half the level of 1980-81.

Overall, the University estimates term-time jobs at the University provide about $2 million in aid. Cornell recently announced a $7 million, five-year program to reduce student debts through subsidized summer jobs in the public and private sectors.

During the past four years, the share of undergraduate scholarships and grants-in-aid paid by Stanford itself has risen from less than 60 percent to more than 70 percent. Federal grants have declined while California state scholarships and other outside awards have risen moderately. *(See table below.)*



The outlook for state scholarship is "bleak," since California faces a $2.5 billion deficit, Huff observes. Previous limits on the amount of individual Cal grants are believed to have contributed to a shift toward enrollment in public institutions among talented students with financial need. While this trend is not apparent at Stanford, University officials have repeatedly expressed concern at its long-term impact on maintaining a strong, diverse system of higher education in California.

The outlook for federal student aid funding remains uncertain, but the government is moving toward verification of all information provided by grant applicants.

Huff doesn't quarrel with this in principle, but notes that it requires considerably more administrative effort, since any differences between information reported on tax forms and finacial aid applications must be reconciled.

The fact that federal student aid programs are funded through continuing resolutions tends to protect the status quo, he notes. But if total aid funding remains flat, the result will be greater pressure on University resources as tuition and other student costs increase. Most institutions simply pass the higher costs through to students.

While cuts in federal funding for the current year were not as severe as expected, the initial uncertainty had a "very adverse effect" on student access and choice, particularly in private institutions, Huff notes.

Funding outlook 'bleak,' 'uncertain'...

—Robert Huff

No aid for draft dodgers

Starting next July, federal aid may be denied students not registered for the draft, a linkage sharply criticized by Stanford officials prior to its enactment by Congress this year.

No federal regulations have been issued on how this will be verified and enforced. Huff hopes the question of verifying whether or not a student is in fact registered for the draft will not be left to the universities. The House of Representatives made quite a point of this, urging the Secretary of Education and director of selective service to handle verification, before the law passed.

According to *The Chronicle of Higher Education*, the Education Department is considering a plan where draft-age men would have to provide campus financial aid officers a copy of a letter from Selective Service indicating they were registered for the draft before receiving any federal aid.

But some aid officers have expressed concern that many students may not be able to offer such proof, since they have not been required to save the letters proving they are registered. Others have voiced skepticism that Selective Service's plan to provide copies of such letters within two weeks, on request, actually would work.

Unfair burden of proof

According to *The Chronicle*, some college officials and student leaders charge the proposed procedures would unfairly place the burden of proof on students, rather than requiring federal officials to demonstrate aid applicants had not registered for the draft.

A public interest law firm in Minnesota has filed suit charging that the new law discriminates against low income men who need financial aid.

Earlham College in Indiana is considering a court challenge of the law and has told current students they will not be penalized for acting on the basis of their conscience.

Yale has indicated that those not registered for the draft could meet financial needs through non-federal funding sources, adding an estimated $3,000 to $4,000 to their educational cost over four years because of higher interest costs.

Haverford College in Pennsylvania, Whittier College in California, George Washington University and Princeton are among the institutions considering aid for students not registered for the draft, according to *Higher Education Daily*.

The proposed regulations may be issued by the end of December, according to James Moore, director of student aid programs for the Department of Education.

Higher Education Daily reports that the Department currently leans toward having aid applicants sign forms saying they have complied with registration and intend to use the federal aid for educational purposes. How these statements would be checked remains unclear.

—Bob Beyers

Two grants for Lively Arts

Vicky Holt, director of the Lively Arts at Stanford, has announced the awarding of two grants for 1983-84 from the National Endowment for the Arts. A multidisciplinary cultural program, the Lively Arts presents 35-40 music, dance, and theater events a year at Stanford. In addition, through its Community Outreach Program, it presents 75-100 events in the community at senior centers, schools, hospitals, dormitories, and private homes.

The first grant award is for $6,000 and is for the development of a generic program for computers based on the Lively Arts model. This model has been used by the Lively Arts for nine years to forecast season attendance and income.

The other grant, also for $6,000, is for the expansion of the Community Outreach program into local corporations and the business community.

For further information about either of these grants, contact Sally Mentzer, 497-2551.

Looking deep into the eyes, Stanford builds new probe

A new device developed at Stanford University greatly improves ultrasound imaging of the inner eye.

Called the A/B Scan, this machine's basic components are a hand-held probe and a television screen, but its electronics are so complex they will enable opthalmologists to make more precise diagnoses than ever before.

Doctors can now view a "real-time" or television-like picture of events in the eye, thanks to the work of electrical engineering Prof. James Meindl, Alan Susal, a physician specialist in opthalmology, and Terry Walker, a senior engineering research associate at the Stanford Electronics Laboratory.

The group began work on the B scanner in the spring of 1977, after the National Institute of Health issued a supplemental grant to Meindl and the Electrical Engineering Department. The machine was licensed through Stanford's Office of Technology Licensing and is being manufactured and shipped by STORZ Instrument Company of St. Louis, Mo., which specializes in the sale of opthalmic equipment.

The scanner may be used for imaging small body parts, Walker said, but it was designed primarily for opthalmic exams.

The machine is used every Tuesday at the Stanford Eye Clinic under Susal's direction. "It has the clinical features that one would expect from a whole new generation of technology," Susal said.

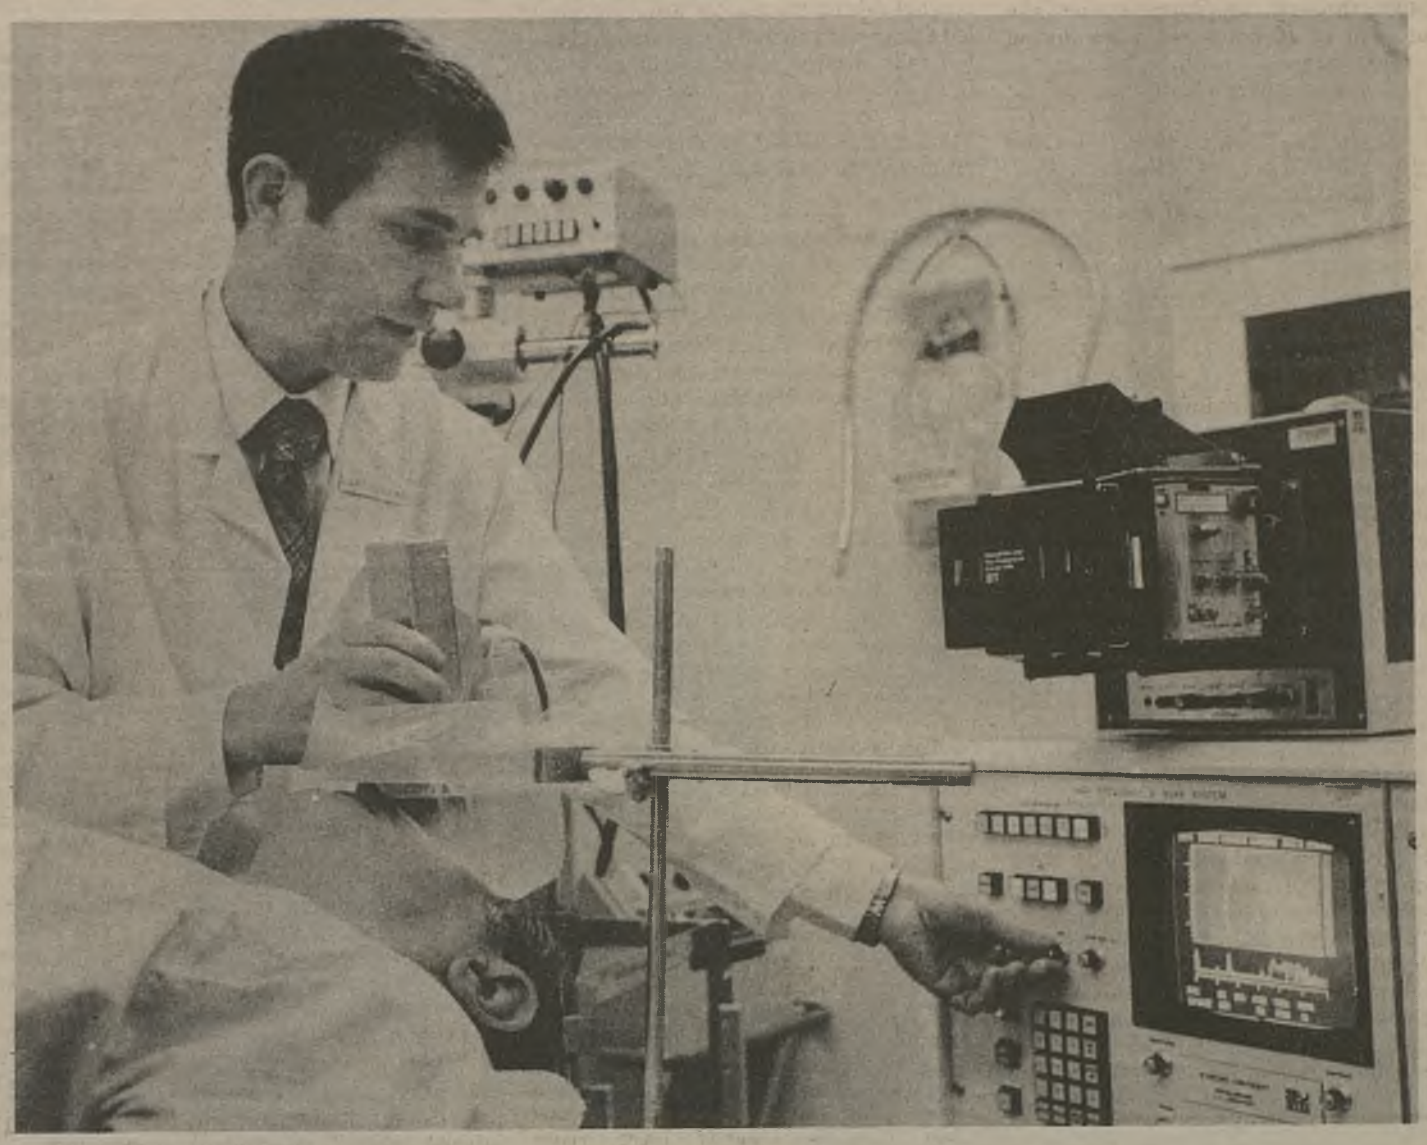
The patients examined by the scanner have special problems, according to Walker.

"Usually the nature of the problem is that there is something wrong with the eye that makes it difficult or impossible to see into it visually," he said.

For example, the patient might have a cataract or a hemorrhage from an accident. The opthalmologist then needs to determine the feasibility of surgery, and "the only way to find out is to use ultrasonic imaging," Walker said.

Machines called static B-scanners have been used in the past but they are not able to provide any information about movement within the eye, which is important in telling if a retinal detachment can be repaired.

A B-scan instrument is one which produces a cross-sectional image of the part of the body that is being studied.



The probe has 32 transducer elements on the front of it, and in the case of the eye, the transducer face is placed against a special liquid on either the cornea or the eyelid, depending on the case. Ultrasonic beams are sent out from the transducer elements in a sequence, forming the scanning process.

"Works like radar"

"It works like a radar system, so if there's anything out there that produces a disturbance in the medium, either a tissue or changes in the type of medium, like going from water to the vitreous humor that's inside the eye, you get an echo," Walker said.

The transducer is a special type of electronic material which translates an electrical force applied to it into sound waves. When ultrasonic echos come back from the eye, they are converted back into electrical signals and then amplified in the probe and sent to the computer behind the television screen.

Each transmission and echo sequence takes 80 millionths of a second. The entire sequence occurs 60 times per second, and the television display that is on the main instrument is synchronized with this time period.

Alan Susal, a physician specialist in opthalmology, views a television-like picture of events in the eye using the A/B Scan.

Usually the nature of the problem is that there is something wrong with the eye that makes it difficult or impossible to see into it visually.

—Terry Walker

"So you get 60 complete ultrasonic images a second on the screen so that it produces a real-time moving image on the display, and that's an important feature," Walker said.

Machines in the past were only capable of displaying an image eight of 10 times per second, according to Walker, and therefore, the image would jump or flicker on the screen. "On this one the scanning is fast enough at 60 times a second so that you get a perfectly smooth motion, just like watching ordinary TV or a movie," he said.

A problem in producing a real-time image is that it is necessary for the returning echo to be matched up with the transducer element it was sent from. The matching process, called electronic multiplexing, is done with special integrated circuits developed in the Integrated Circuits Laboratory at Stanford.

The circuits, which Walker referred to as "a key ingredient to the production of this type of instrument," were first developed by electrical engineering Prof. James Plummer under an NIH grant on ultrasonic imaging. Walker and Plummer modified them for the A/B Scan and they are now being produced for STORZ by a commercial firm.

When the echos from the transducer get to the main instrument, they are amplified and processed by a "fairly sophisticated radio receiver."

"That's all handled by complex digital electronics custom-made specifically for this," Walker said.

Stored memory

By designing a memory unit that is divided into many sections, the scan's designers were able to produce another innovation: the data is stored into a memory unit at the same time it is being presented on the television screen.

The information is not only stored in the computer, but it can also be put onto a videotape, which can be used in any standard video player. "The doctor can then play it back at his convenience later and reexamine the patient and see if he missed anything," Walker said.

Markings, such as patient number and lines indicating measurement, normally on the machine's screen are also put onto the tape.

The screen has two main displays: the upper region corresponds to the B-scan. The lower to something called an A-scan.

The A-scan is generated by a separate circuit, "which allows you to select some part of the center of the image and display as a function of distance, the strength and echo," according to Walker.

The computer that controls the whole system is "user-friendly" or user-oriented, Walker said. "That is to say all of the controls on the control panel were thought out very carefully as towards what the user wants to do, not necessarily what the machine wants to do."

Three buttons on the probe also provide a convenience for the physician. They are duplicates of buttons on the main instrument but allow the doctor to examine the patient and look at the display without having to reach over to it.

One of the buttons is for "frame freeze," which allows the doctor to study an image for a longer period of time. Walker said that an opthalmologist might stop the picture and then instruct the computer to set some marks on the screen and measure the distance between them, equivalent to the distance in the eye.

Precise measurements are important when a patient needs a cataract lens replacement, Walker said, "because the lens which is put in has to have the proper strength or the person won't be able to see without using strong glasses."

Five Stanford experts discuss whether growing trends to ...

BY DONALD STOKES

The possibility of a world trade war, sparked by the growing wave of protectionism in many countries, including the U.S., was discussed by five Stanford experts on the economics of world trade.

They were interviewed after the virtual deadlock which occurred at the December meeting of 88 of the world's trade and foreign ministers at Geneva. The meeting was unable to agree on any measures to stop the drift to protectionism, a drift that could wreck the free trade which has marked the postwar prosperity of the free world.

The world economic conference did not address itself to the real problem, said **Gerald Meier**, professor of international economics at Stanford's Graduate School of Business.

"We are in a worldwide depression," he said. "World trade is absolutely flat. Nations profess free trade but they practice protection, including this country, which has quotas on auto, steel, sugar and so on.

"The crucial problem at the ministerial meeting in Geneva was what to do about market safeguards, and nothing was done about it. The fact is that countries are bypassing GATT (the General Agreement on Tariffs and Trade). What is needed is to bring them back under some code of conduct as to when to impose market safeguards, and under what conditions. Of course, it is all aggravated by this worldwide depression.

"The 5,000-word statement issued at the end of the conference simply said in effect that the problems would be considered by the interested parties."

Asked whether a world trade war was in prospect Meier replied: "We are already in a trade war. We are all acting in a competitive beggar-your-neighbor fashion. We have quotas, import duties and export subsidies—nothing was done at the world conference about export subsidies.

"Here in the U.S. we have had a bill introduced for 'reciprocity,' which in fact is direct retaliation against Japan. The United Auto Workers are proposing local content legislation, and so on."

Meier agreed that part of the problem lay in the overvaluing of the dollar, and high interest rates. "What is needed is growth in the economies of the O.E.C.D. (Organization for Economic Cooperation and Development) countries. We have all been worrying about this for some time, largely because we are in an anti-Keynesian world. In the Keynesian world we had growth.

"Now we must replenish the International Development Association under the direction of the World Bank. We must also increase quotas under the International Monetary Fund."

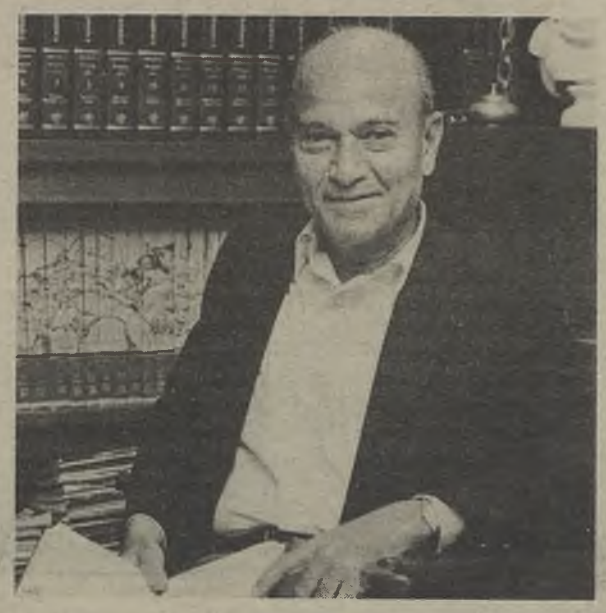
Prof. Ezra Solomon, Dean Witter Professor of Finance at Stanford's Graduate School of Business, said:

"The possibility of an international trade war may seem a very tangible thing, but I do not think such a war is actually coming. Especially as I expect that the Japanese will soon be delivering something on a bilateral basis.

"We have been growing increasingly edgy with the Japanese and have made our feelings known to them increasingly sharply. By dint of repetition I think we are getting our message across.

"One hopeful fact is that the Japanese now have a new leader who is in a position to take a position that is different from his predecessor. I was in Japan a few weeks ago and I realized that the Japanese are aware they have a serious problem on their hands.

"Protectionism in any form would be a disastrous way of settling our problems. Its net effect would be to increase the already high level of unemployment all over the world. Protectionism simply passes the burden of unemployment from one country to another, and that is a game anybody can play.



"It is foolish to expect that any nation is smart enough to get the edge over all other nations. We have an enormous trade surplus with Europe, for example, and if we misbehave with the Japanese, with whom we have a deficit, we obviously would be inviting the Europeans to misbehave vis a vis us.

"Protectionism was tried in the 1930s, when there were similar problems of worldwide recession, and the results were disastrous. It is possible that protectionism was one of the seeds of World War II.

"I hope that the world is not going to try protectionism again, that short-term politics are not going to triumph over the long-run interests of the world.

"However, the bigger the world's problems become, the more chance there is that people will seize on dumb solutions."

Asked whether the dollar was overvalued, and so caused much imbalance in world trade, Solomon said: "That is a temporary problem and is not likely to last. The dollar has already come down quite a bit relative to the Japanese yen.

Ezra Solomon

"Return to Keynesiasm? That is a vague label. Keynes wrote for 30 years and said many things. I do not think that if Keynes were alive today he would suggest larger budget deficits than the world is running already. The U.S. budget this fiscal year will be just under $200 billion!

"There is a deep structural adjustment that will have to be faced over the next four to five years. I refer to the change in energy prices. I don't see how the price of oil can go from $2 a barrel to $32 without having a profound effect on the viability of many industries throughout the free world. We have to face up to this fact.

"It was not so much the transfer from oil importers to oil exporters (which was disruptive enough) but the fact that, at the current price of oil, much of the plant and equipment which had been put in place based on $2 oil, is no longer economically viable.

"A large part of our mainstream technology in this country was critically based on cheap oil.

"The Russians have a surplus of oil, but they too are suffering from the same industrial problem. Because the value of oil is now so high, they also have to conserve on its use."

Asst. prof. John Cuddington of the Economics Department believes that the world economic conference at Geneva was held at a very unsuitable time. "With the world in its present recession it was very difficult for the negotiators to talk about further trade liberalization, because of the fears that liberalization would hurt their domestic industries."

Asked about the various measures which many countries were now taking to restrict imports outside tariffs, Cuddington replied that there were many rules under the GATT which controlled them. "They have been in force at least since the 1974 Tokyo round of GATT talks.

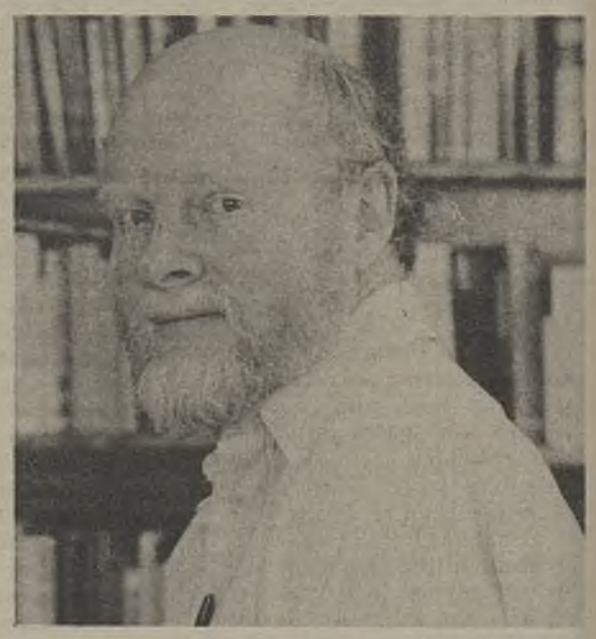
"Many of the protectionist policies now in force are flagrant violations of GATT, although individual countries have justification for what they are doing, or think they have, in terms of escape clauses, etc.

"One of the problems is that the enforcement mechanism and ways of complaining about violations of GATT rules are not as good as they could be. There is no international policing mechanism which can determine that the rules are being broken and impose sanctions for their violation.

"Rather, the countries involved must reach negotiated settlements. One of the hopes of the U.S. delegates to the conference was that they would be able to establish a better mechanism for dealing with GATT violations.

"The Europeans, in particular, were quite reluctant to put any teeth in the existing rules. So I would say that, rather than new rules the major problem is in enforcing the rules we do have, particularly in enforcing the rules on non-tariff barriers.

"In the 1962 round of GATT talks, tariffs were cut to pretty low levels. In the 1974 round the attention was focused on those non-tariff barriers. It is much more difficult to negotiate reductions of these sorts of impediments to world trade, and to enforce them.



"Current examples of non-tariff barriers abound, such as the French directing that all Japanese videotape recorders must clear the French customs at the small out-of-the-way inland town of Poitier.

"This is only one example. The Japanese restrict imports in their own subtle ways. I hear all sorts of anecdotal stories about the measures which the Japanese use to make it difficult for imports to get into Japan."

Ronald McKinnon, professor of economics, believes that the overvalued dollar is the source of most of the economic woes of the world.

"The global depression has a clear monetary origin which is not visible in American monetary statistics but becomes obvious when one looks at the monetary contractions going on in other reserve-currency countries," he said.

"Because of unduly tight American monetary policy, the dollar has overappreciated on the foreign exchanges, and foreign central banks have been forced to reduce their own money supplied to

Ronald McKinnon

prevent their currencies from depreciating further.

"Because of the overvalued dollar, the major burden of adjusting to unduly tight money in this country has fallen disproportionately on our tradeable goods industries—farming, manufacturing and mining, whether they be exporters or import

continued on next page

...economic protectionism is heading world into a trade war

substitutes.

"Not surprisingly, the severe depression in these industries has heightened calls for protectionism. The call is for quotas or tariffs on imports and subsidies to exports. There is the program to dump butter abroad, the politically taxing demands on foreign governments, such as Japan, to open their markets further to American products.

"But of course these protectionist programs seriously undermine our free-trade stance (and that of GATT) and are likely to be with us indefinitely, long after the monetary disalignment, giving rise to the overvalued dollar, may have disappeared.

"Clearly, the preferred solution is for the Federal Reserve Bank to expand the U.S. monetary base *relative* to those of the German Bundesbank and the Bank of Japan, so that the dollar comes down against the deutschemark and yen.

"The aggregate monetary base of the three countries would then expand somewhat, but to an extent carefully delimited so as to allay fears of future inflation."

Yuan-Li Wu

Yuan-Li Wu, consultant and visiting professor at Stanford's Hoover Institution from University of San Francisco, said:

"I think the inability of the world conference to resolve the various differences really reflects the longstanding problems that exist, and which have been made worse by the worldwide recession. This is particularly so in connection with agriculture.

"If you look at the auto problem we have with Japan, or the steel problem with Europe, these are really issues of Detroit or Pittsburgh workers against Japanese workers. Whom of these should lose more or get more out of the world economy?

"In the long run it is really a struggle for a larger share of the world's product, and over who should bear more cost in adjusting to changing conditions.

"The same is true not only of our relations with the free market countries, but also with the Soviet-type countries. In our dispute about the pipeline sanctions problem, for example, should Germans and Italians be allowed, from our point of view, to supply the Soviet Union in a way that strengthens the U.S.S.R. militarily? In effect to increase our own arms burden and make our taxpayers pay more?"

Asked his assessment of the possibility of an international trade war, Wu said: "I believe that the economic relationship and the defense relationship are part of the same problem. We cannot resolve either one separately. In the past we have always thought that we could separate them. We continue to hope that. But directly or indirectly we have always been forced to face the fact that if we do not resolve our economic disputes we shall weaken our alliance.

"If we do not have an understanding of how to deal with the Russians, and have a uniform approach to them, then we shall all have to suffer the consequent impact on our economic relations with them.

"We keep on trying to separate the two issues of economic and defense relationships, when really they cannot be separated.

"It is not enough to say to ourselves, 'We have NATO to take care of our defense, so now we can fight over economic matters among ourselves.' "

— **Donald Stokes**

Tresidder Union plans big celebration of 20th birthday

Tresidder Memorial Union celebrates its 20th anniversary this quarter with a celebration of the arts which will include a jazz series, classical music, and a film series.

As a special treat, Tresidder will offer a free trip for two to New York City, through the generosity of Sequoia Travel.

Highlights of the anniversary program schedule include an Espresso Jazz Series in the Coffee House, the Sunday Festival Series (classical music), and the Great Directors Film Series featuring films by Godard, Antonioni, Oshima, and the American avant garde.

A dance lecture/demonstration, a lecture/slide presentation by Aldo Rossi, a student spotlight program, and the Jing Lyman lecture series on Women and the Performing Arts sponsored by CROW and the Lively Arts are other offerings during winter quarter.

A schedule of events and information are available at the Tresidder Information Center, 497-4311.

* * * *

Tresidder Union's groundbreaking in April 1961, came after 14 years of planning that began with President Donald Tresidder's vision of a student activities center which would include the Bookstore, post office, Old Union, Dinkelspiel, and Tresidder Union.

As president of Stanford from 1943 to his death in 1948, Tresidder was noted for his commitment to serving the needs of students and enhancing their academic, social, and recreational experience at Stanford.

His ideas prompted the Board of Trustees to establish Tresidder Union and to determine its mission to be "part of the informal educational program of the University. Its committees, boards, and staff shall present a social, cultural, recreational, and intellectual program for the whole campus."

Tresidder opened its doors in October 1962, and in its first year housed 290 programs or events (128 of them sponsored by the Tresidder Programs Board) and 1,383 meetings.

Dr. Chester Berry, Tresidder's first director, had the goal of balancing retail services and programming—"The policy is to make money downstairs and spend it upstairs." He was enthusiastic about the Union's potential for attracting student involvement and providing high quality programs.

Although Tresidder has not undergone any major expansion in its first 20 years, its service areas have constantly evolved as the needs of the campus community evolved. A full-service bank, ticket office, and the information desk were added on the upper level.

Downstairs, a small, informal coffee house that began in the cafeteria moved into the table tennis area, and the overwhelming popularity of pinball and video games has crowded out most of the other table tennis and billiards tables. Only the bowling alley and hairstyling have remained virtually unchanged.

Currently, Tresidder Union offers a coffee house, cafeteria, store (the service with the highest customer usage), a travel agency, pastry shop, recreation center, ticket office (handling Ticketron and BASS as well as campus events), information center, full-service bank, hairstyling shop, meeting rooms, lounges, patios, office space, and a satellite food service at Encina Station. Also housed there are the ASSU office and the Office of Student Activities.

"Staying responsive to the campus community is a continual process," says Director Ellie Oppenheim. "As quickly as some needs change or diminish, others become evident and need attention."

A recently completed long-range space use plan for Tresidder by its Union Board includes prompt attention to the design and purchase of additional furniture for the outdoor patios and refurbishing of the second floor meeting rooms.

Other, longer-range plans include the remodeling of the lounge spaces, relocating the information desk to the first floor, and the elimination of bowling so that the store can be moved to the bowling area.

The fight against gonorrhea:

turning up new genetic clues

Stanford microbiologists are using genetic engineering techniques in an attempt to "pull the teeth" of the organism that triggers gonorrhea.

By manipulating the genes of gonococcus bacteria, the scientists have, for the first time, found a way to test an enzyme long suspected to be a weapon the bacteria use to produce the malady.

"If the enzyme turns out to be as important as we think it may be, it could be useful in constructing new ways to provide protection against gonorrhea," said Dr. Stanley Falkow, chairman of Stanford's department of medical microbiology.

Knowledge about the enzyme may lead to a vaccine or similar combatant against gonorrhea, Falkow said.

A major obstacle to creating a useful gonorrhea vaccine has been the gonococcus bacterium's ability to disguise itself, said Falkow.

Most bacteria wear a membrane coat that is studded with protein tags. Cells in the human immune system use these tags to identify the foreign bacteria, which they then destroy.

But the gonococcus can mutate and subtly change the configuration of its proteins, effectively camouflaging itself against the body's defenses.

"What you would like to do with an organism that can change its face like that is pull its teeth so that it can't cause an infection," Falkow said. "In other words, it could still multiply in the body, but not cause tissue damage."

The "tooth" in the case of gonorrhea may be an enzyme, called "IgA1 protease," that Falkow and a graduate student, J. Michael Koomey, have studied.

The bacterium uses the enzyme as a chemical cleaver that snips in two the normal antibodies a healthy person makes to fight off infection.

In response to an increasing number of invading bacteria, the human body produces more antibody. In turn, the bacteria produce more enzyme to destroy the antibody. The infected person loses the battle as he develops the genital sores and sometimes serious complications associated with gonorrhea.

Koomey and Falkow have identified the gene that is responsible for "telling" the bacteria how and when to produce the enzyme. Through a series of steps, described in the December *Proceedings of the National Academy of Sciences*, the scientists have been able to eliminate that single gene from the bacteria, creating an organism that is like gonococcus in every way, except that it can't make the critical enzyme.

The "impotent" organism now serves as a research tool in understanding the role of the enzyme in causing disease.

Normally, the next step in research would be to compare the responses of laboratory animals injected with either

". . .The whole basis of medicine really should be preventative."

—Stanley Falkow

gonococcus or the engineered bacteria. But the crucial enzyme destroys only one specific human antibody, which is not present in animals.

This specificity makes the usual testing of the virulence of the bacteria in rodents and primates impractical, Falkow said, and has slowed research.

"If we can prove that the enzyme plays a role in disease, there are research groups interested in carrying the work a step further, to determine whether or not the engineered bacteria could be useful in providing protection against disease," Falkow said.

Although penicillin and its derivatives can effectively stop most acute bouts of gonorrhea, the antibiotics are only a temporary solution to the sexually transmitted disease, he added. Already, virulent strains of the bacteria have evolved that are resistant to penicillin.

"Another important reason we're interested in this particular enzyme is that it is also found in several organisms that cause meningitis (a dangerous infection of the membranes that surround the brain and spinal chord)." In contrast to gonorrhea, meningitis is not easily treated with antibiotics and is often fatal.

"The three major forms of bacterial meningitis all probably have this enzymatic strategy," Falkow said. "So we aren't just addressing the problem of gonorrhea, but also the more general question of the strategies bacteria use to cause disease.

"From the 1940s through the '60s, it was usually felt that through the use of antibiotics, infectious diseases caused by bacteria would be conquered, that we'd simply be able to treat them," Falkow said. "But through the advent of resistance, it became apparent that this was not going to be possible in many cases.

"There's another fundamental flaw in antibiotics," he added. "You have to wait for someone to get ill, and the whole basis of medicine really should be preventative."

—Deborah Franklin

HMP update. . .

Revised plans retain scope, but reduce initial activity

Planning for the new construction and remodeling of Stanford University Hospital continues, though with some reductions in the amount of initial work to be done.

The Hospital Modernization Project staff reported at the regular Dec. 15 meeting of the Board of Hospital Directors that these revisions would not reduce the scope of the master plan for the Hospital.

Planners and architects had been working during the past several months on belt-tightening measures for the project. The revised plans are designed to take into account uncertain future reimbursement levels and a changing economic climate, according to Elvia Garwood, director of the project.

"Our needs for a project of the same scope as originally planned have not changed," she said. "But we wanted to prepare for a less favorable financial climate, and build into the plans somewhat reduced initial construction and modified remodeling phases. This will extend the time for completion of some parts of the project, but preserve the modernization program objectives. The design takes into account construction options which may be included when the financial picture improves."

The new plans call for construction of a new addition near the north end of the present Hospital which would be devoted entirely to direct patient care. Earlier plans had called for three structural elements with part of each devoted to administrative and support activities.

A planned new wing for diagnostic and treatment services is also reduced in the initial construction phases. Eighteen new operating rooms would be constructed, instead of the original 22. Four existing operating rooms, two at the main center and two at Hoover, would be maintained.

The modernization is designed to take place in three steps, beginning with completion of the Phase I building expansion of 1978, then adding in new construction a diagnostic and treatment wing and the first segment of eight new nursing units of 22 to 24 beds each, and lastly remodeling existing areas to meet building codes.

Other features of the revised project are:

- relocation of some acute care and intensive care nursing units, the coronary care unit, and pediatric nursing unit to what will be newly constructed areas;
- a centralized Materials Management area;
- expansion and remodeling of the Dietary Department;
- consolidation of clinical laboratory functions;
- relocation of some medical/surgical beds from Hoover Pavilion;
- closer proximity of new nursing units to existing units;
- reduction of the proposed connecting atrium;
- location of a heliport on the roof of the diagnostic and treatment wing.

These first steps allow for the closing of 83 beds at the Hoover Pavilion. The long-range plan calls for complete closing of Hoover and the beds are accommodated in subsequent new construction at the main center.

Current plans also take into account the consolidation of Children's Hospital at Stanford that ultimately will be located adjacent to the new nursing units at SUH.

The HMP staff will be meeting with Medical Center departments and services during the next several months to develop detailed department layouts. During that time materials are being prepared to submit to state and local agencies for Certificate of Need review. Construction documents also will be developed and submitted for local and state approval. Construction could begin as early as April, 1984.

As outlined to the Board of Hospital Directors, the initial stage of the project would have a construction budget of $62 million and a total project budget of $100 million. Earlier budgets were $78.4 million for construction and $123.9 million total project cost.

Sheldon King, executive vice president and director of SUH, said the new directions represent "a very solid plan, which meets our critical needs for bringing the physical structure of the Hospital into balance with the advanced state of care provided to our patients."

The project focuses more on modernization than expansion of services, with only six new beds (for neonatal intensive care) added to the total current bed capacity of 663.

The Hospital modernization is being designed by the Naramore Bain Brady Johanson Group, an architectural firm based in Seattle with an office in Palo Alto.

—Barbara Battino

Medical Faculty Openings

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

A tenure track faculty position at the assistant professor level is available in the division of emergency medicine, department of surgery, at Stanford University School of Medicine.

Candidates should have strong interest in basic or clinical research, and/or EMS health services delivery research. The position comprises half-time research, and half-time clinical care directly supervising housestaff and students. There will be limited administrative responsibilities.

Candidates must be emergency medicine board eligible. Candidates with demonstrated research experience or training will be preferred.

Applicants should send current curriculum vitae, bibliography, and three reference names to: Michael Eliastam, M.D., M.P.P., Division of Emergency Medicine, P1016, Stanford University Hospital, Stanford, CA 94305.

Low cal diets and heart attacks: a warning

Persons on diets of 800 kcals or less per day may be endangering their health even if under a doctor's supervision, say both a physician and a dietitian at Stanford University Medical Center.

"It is certainly sound advice for persons to work with their physician when starting a diet. But extremely low calorie diets may cause a breakdown in structural protein, including heart tissue," said Dr. Peter Rudd, assistant professor of medicine.

"With a breakdown in heart tissue comes a risk of cardiac problems. These can occur suddenly and without warning. Even if a patient is hospitalized and constantly monitored, heart problems may still occur. Some are easily corrected, but others could be fatal," said Rudd, an internal medicine specialist.

Rudd and Stanford University Hospital registered dietitian Jane Woeckener were interviewed separately in the wake of public interest triggered by the death of a Bay Area woman who reputedly adhered to a low calorie diet and by articles offering reassurances about various diet plans.

"There are no easy answers when it comes to dieting," said Woeckener, who serves as assistant director of dietetics at SUH. "But the safe and sensible way to lose weight involves eating a wide variety of low calorie foods from the basic four food groups (dairy, meat, fruits/vegetables, breads/cereals) and planning a slow, steady weight loss of about two pounds per week.

"Diets below 1,200 kcals for women and 1,500 kcals for men are generally not recommended because they almost always are lacking in important nutrients needed to meet minimum Recommended Dietary Allowances (RDAs) and to maintain health." (Kcal is short for kilocalorie and is the commonly accepted measurement of the energy value of food.)

"Behavior modification and changing the attitudes and habits which lead to being overweight in the first place are crucial components of weight loss. Crash diets with temporary results do not significantly lower the risks associated with obesity," Woeckener added.

Both Woeckener and Rudd cited recent studies suggesting that diets of fewer than 800 kcals per day are potentially dangerous. These studies, Rudd noted, examined several different nutritional regimens. The number of calories and variety of components appeared to be more important than the specific content of the diet, he said.

Woeckener and Rudd said that an extremely low calorie diet may be desirable only when someone is so obese that the risk of sudden death is high unless weight loss begins quickly.

"In these circumstances, the patient frequently is already hospitalized. Close observation will not eliminate the risk of sudden death while rapidly losing weight but would at least permit health professionals to respond quickly to a cardiac arrest," Rudd said.

He added that the heart is especially vulnerable to damage on a low calorie diet, even if protein is its main component. The addition of modest amounts of carbohydrates may reduce breakdown of the body's structural protein and may help protect the heart.

"But there have been reports of lowered potassium, calcium and magnesium, which could make irregular heart rhythm more likely. These electrolytes (blood minerals) are necessary, and they are best provided within the context of a well balanced diet," he added.

Among the studies cited by Rudd and Woeckener was one published in the April 1981 edition of *The American Journal of Clinical Nutrition*. Authors included Harold E. Sours, M.D., formerly of the Bureau of Epidemiology of the Center for Disease Control in Atlanta, and Victor P. Frattali, deputy director of the division of nutrition of the Food and Drug Administration, which currently is examining low calorie diets.

The article studied 17 individuals who died of heart attacks suddenly after long periods on very low calorie diets, consisting entirely or primarily of protein.

"The deaths appeared to be independent of type of medical supervision received during the diet, daily dosage of potassium supplementation and biological quality of the protein product used," the authors said. The 17 individuals had been on diets of about 300 to 400 kcals per day.

"We conclude," the article stated, "that use of very low calorie weight reduction regimens should be curtailed until further studies determine what modifications if any can insure their safety."

Contacted in Washington, Frattali said the article represented the research of himself and colleagues and did not indicate an official agency endorsement or warning. Officially "we're trying to keep ourselves informed in regard to low calorie diets," he said.

On Dec. 30, the FDA issued a public statement that diets under 400 kcals per day "are physiologically unsound regardless of their overall nutrient composition.

"FDA believes their use should be considered experimental and patients should have full knowledge of the risks, and undertake the diet only with proper medical supervision."

Diets under 800 kcals per day should be used only under proper medical supervision, the FDA said.

Laurence Kedes

Roger Allen Warnke

Andrei Calin

Trustees approve faculty promotions

Three Medical School faculty members have received advancements approved last month, Dec. 13, by the Board of Trustees.

Dr. Laurence Kedes became a professor of medicine (hematology), Dr. Roger Allen Warnke was promoted from assistant to associate professor of pathology, and Dr. Andrei Calin was appointed associate professor of medicine (clinical).

Kedes' primary research interests lie in the fields of molecular genetics and molecular embryology. He has achieved national recognition for his studies involving genetic engineering.

In recent years he has expanded his interests into application of artificial intelligence and computer programming to biology.

Kedes has served as director of admissions of the Medical School. He received his M.D. from Stanford in 1962. He joined the Stanford faculty as an assistant professor in 1970, when he also began serving as a staff physician at the Palo Alto Veterans Administration Medical Center. He became an associate professor in 1976.

Warnke has been recognized as a leading researcher into diseases of the blood, particularly the classification of lymphoid tumors.

He became an intern in pathology after receiving his M.D. from Washington University, St. Louis, in 1971. He became an assistant professor in 1976.

Calin serves as chief of the rheumatology section at the PAVAMC. He received his medical training in England and joined the Stanford faculty as an assistant professor in 1976. He has published numerous articles and book chapters in his primary field and on medical anthropology.

County facilities to care for working poor

Stanford University Medical Center physicians were notified last week by Chief of Staff James Silverman that because of the state's restructuring of the Medi-Cal program January 1, the responsibility for care of Medically Indigent Adults (MIAs) is being transferred to county governments.

This means that there will be no reimbursement to the Hospital for any care given to such patients, and they should be referred to county health facilities.

MIAs are generally low income adults between 21 and 64 years of age, who have major medical needs, are not otherwise eligible for Medi-Cal, and who cannot pay their hospital or doctor bills. They are often called the "working poor."

The MIA program is separate from a program that grants contracts to hospitals for inpatient care of remaining Medi-Cal patients. Announcement of hospitals to be awarded Medi-Cal contracts in Santa Clara County is expected soon.

Both community and faculty physicians at Stanford were sent information about the new law in a letter from Dr. Silverman. He noted that patients who are not covered by private health insurance, Medicare, Medi-Cal, or who cannot pay for hospital health care services, will be referred to county health facilities, based on their county of residence.

The physicians were asked to refer MIA outpatients to county clinic facilities. Inpatients will only be admitted to Stanford if emergency care is needed, and they will need to be transferred when their condition stabilizes. Emergency care will be provided regardless of the patient's ability to pay.

Santa Clara county residents will be directed to Santa Clara Valley Medical Center, 751 Bascom, San Jose, telephone (408) 279-5100.

San Mateo county residents, to Chope Community Hospital, 222 W. 39th Avenue, San Mateo, telephone (415) 573-2222.

Residents of San Francisco county will be referred to San Francisco General Hospital; Marin county residents to Marin General Hospital; Alameda county residents to Highland General Hospital, Oakland; and Contra Costa residents to Contra Costa County Hospital in Martinez.

Before the new law, MIAs could receive Medi-Cal benefits at any hospital in the area. The state reimbursed the hospital a percentage of its cost of providing the care. Under the new law, these patients can no longer receive public assistance benefits at whatever hospital they or their physician choose, but must use county-designated facilities.

MIAs comprise about three percent of the total patient population at Stanford, or about 1,000 patients per year.

In the Emergency Department, Stanford emergency physicians will continue to treat all patients, including MIAs. But MIAs who need hospital admission will be treated and then will need to be transferred to a county facility when their condition is stabilized and they can be safely transported.

According to Dr. Michael Eliastam, director of Emergency Services, "conditions such as serious trauma, heart attack, or any other situation where immediate care is required, will certainly be treated at Stanford." However a patient who may need elective surgery, as for hernia repair, which is not an emergency, will be informed of the need for surgery or other care and will be advised to go to a county facility.

The change in law will affect approximately 270,000 Californians. For many it may mean changing the doctors and hospitals they are accustomed to.

According to the law, some persons in the MIA category will continue to receive Medi-Cal benefits after Jan. 1 at whatever facility they or their physicians choose. These include individuals in skilled nursing or intermediate care facilities, medically indigent children, pregnant women, and refugees in the United States less than 18 months. —Barbara Battino

Medical School's affirmative action gets mixed acclaim

Despite inflation, cuts in funding, and an adverse climate for higher education, the School of Medicine has maintained its commitment to affirmative action, according to a faculty report recently made public.

Still, the Faculty Affirmative Action Committee added, there is much progress to be made in the area of minority recruitment at the Medical School, especially for minority faculty.

Minority representation in the various student categories as percents of the totals for 1981-82 was as follows (figures include Asian Americans, who, although not considered a disadvantaged minority by Stanford's internal criteria, must be included in statistics for federal reporting purposes):

- **M.D. degree candidates:** 34 percent;
- **Masters candidates:** 9 percent;
- **Ph.D. candidates:** 12 percent;
- **Housestaff (interns and residents):** 13 percent;
- **Postdoctoral fellows:** 7 percent.

Discounting Asian Americans, however, under nine percent of the total number of masters candidates, medical students, Ph.D. candidates, housestaff, and postdocs was comprised of minorities.

The percentages for women were:

- **Medical students:** 34 percent;
- **Masters candidates (mostly physical therapy students):** 81 percent;
- **Ph.D. candidates:** 31 percent;
- **Housestaff:** 27 percent;
- **Postdoctoral fellows:** 30 percent.

According to Dr. John Steward, associate dean for student affairs, "Women, like Asian Americans, are not considered a disadvantaged group, and there is no longer a special effort required to recruit them as students."

"All statistics on health, education, income, welfare, etc., identify the Black Americans, the Hispanic Americans, and the Native Americans as our currently disadvantaged citizens," states the report.

As documented, disadvantaged minorities were rarely found in the graduate programs or postdoctoral fellowships, where they could be prepared for academic posts.

"Changing this situation should be a top priority in affirmative action in the coming years," the report asserts.

"Faculty members traditionally come from a pool of postdoc M.D.'s and Ph.D.'s, so it's important to see who is 'in the pipeline' for future appointments at Stanford and elsewhere," explained committee chairwoman Alberta Siegel, professor of psychology.

The School made no progress in recruitment of minority faculty in 1981-82, as was true the previous year, the report found.

Women, however, comprised 23 percent of the 22 faculty members appointed, compared to 15 percent the previous year.

Still, the report indicates that for the past two years all faculty appointees at a rank higher than assistant professor were white males.

Siegel explained her committee's role in seeing to it that all faculty searches are widely advertised, and conducted along affirmative action guidelines.

Dr. John Wilson, associate dean for academic affairs, said, "As I sense it, the faculty and department chairmen are committed to affirmative action and the spirit of it as well."

The problem with disadvantaged minorities, he said, is "not that we don't look for them, but there really aren't large numbers of them to consider for the posts we have available."

He explained, "The standards for faculty appointment at Stanford are the same for all applicants. It's when you have two equally qualified candidates—which would happen very rarely—that you'd apply the principles of affirmative action in the selection process."

Steward said, however, that in considering disadvantaged minority students' applications to the M.D. program, the Admissions Committee may place a different emphasis on some of the information it is reviewing. "We tend in these cases to look more at the 'distance traveled'—the promise and potential of an individual—as opposed to tangible achievements."

This fall's entering class, he said, enrolled 65 percent of the minorities who had been accepted to the School; the figure for non-minorities was 53 percent. "I think this had to do perhaps with the fact that we made a large effort to recruit minorities," he said, adding that there are "few medical schools in the U.S. that do better than we do in meeting financial aid needs."

Still, "One major reason we lose many medical students who would otherwise come here is the cost of coming to Stanford, considering tuition and other living expenses," said Diane Winkle, director of the Office of Student Affairs.

The Medical School tuition for the 1981-82 year was $8,340. Currently it's $9,591, and the estimated tuition for the 1983-84 year is $10,932.

More than 80 percent of Stanford's medical students receive at least some financial assistance. Proposed federal legislation may result in a 50 percent decrease in available low-interest funding for student loans, according to the School's financial aid administrators' predictions.

Students and administrators fear that the number of applicants to medical school—at Stanford and elsewhere—will decrease. Those who do apply will most likely be from a more homogeneous segment of society.

Steward noted that the current year's minority representation in the School's student body has dropped by one or two percentage points since 1981-82. "This is a national phenomenon right now, which we're hoping is not a trend," he said.

"Stanford traditionally has done very well in recruiting disadvantaged minority M.D. candidates. National figures for the 1980-81 year indicated that of the 117 medical schools in the U.S. (excluding three with predominantly minority student bodies), Stanford had the third highest percentage of minority students." Only three of the 117 schools had greater than 20 percent disadvantaged minority enrollment, Steward said, and Stanford was one of these.

He added, "Our financial aid programs are adequate for awhile, but we aren't sure what will happen after the next couple of years. But with the School's goal of producing academicians and researchers, who are among the lowest paid in medicine, we must provide aid to encourage students to pursue these areas."

The hiring of an assistant dean for student affairs to attract outstanding minority students headed for academic careers was recommended by the School's faculty senate last spring. While no formal search is yet under way, a committee headed by Dr. Roy Maffly, director of Admissions, is defining criteria for such a post.

For the 1981-82 year, the members of the Faculty Affirmative Action Committee were the following members of the School's tenured faculty: Margaret Billingham, M.B., associate professor of pathology; Byron Brown, Jr., Ph.D., professor of biostatistics; Gary Gray, M.D., professor of medicine; Michael Marmor, M.D., associate professor of surgery; Eric Shooter, Ph.D., professor and chairman of neurobiology; and Dr. Siegel.

Psychiatrist advocates relaxation for tension headaches

"People feel so much better when they're not dependent on drugs. . ."

—Stewart Agras

The best aspirin substitute for a tension headache might be relaxation training, biofeedback, or perhaps even a nice hot bath, says a Stanford psychiatrist.

Besides avoiding the small but ever present medical risks of any medication, people who turn to nonpharmaceutical solutions for simple tension headaches receive "an extra dividend, a philosophical advantage.

"People feel so much better when they're not dependent on drugs," explained Dr. Stewart Agras, professor of psychiatry and director of Stanford's behavioral medicine clinic.

"There is a growing feeling that people should take control of their own health care. What better way than to shift from drugs—a passive solution—to self-management."

The holiday season is a time of high stress for many people, a time when the muscles in the neck and head are prone to stiffen, producing a classic tension headache.

"For many people the answer is as simple as a warm, relaxing bath. Or perhaps they just need to stop for a moment and take the time to calm down."

For more persistent headache problems, Agras said, relaxation training or biofeedback might help.

"Although we do not have scientific research comparing the effectiveness of these techniques with such drugs as aspirin, aspirin substitutes or mild tranquilizers, we have found in the clinical setting that many patients have had excellent results. Some patients have become headache-free using these techniques after having used medication for years without success.

"We also have 15 or 16 thorough studies conducted around the country which show that biofeedback and relaxation training are more effective than placebos ("fake" pills which subjects believe are real medicine)."

Typically, relaxation training involves seven or eight weekly sessions where patients are coached in how to consciously make various muscles of their body become tense and then relax. Patients practice at home for 20 minutes every day using tape recordings which reinforce the message learned in class.

Biofeedback involves many of the same techniques but uses electronic equipment to show a visual picture or audio interpretation of blood pressure or heart beat. This enables the patient to strive consciously to alter symptoms of tension positively.

"Most people would want to try relaxation training first before being hooked up to $20,000 worth of equipment," Agras said.

Agras cautioned that "since headaches can sometimes be symptoms of more serious problems, people might be well advised to check with a physician to rule out the possibility that their headaches are being caused by something more serious than tension."

Everyone clearly is not a candidate for relaxation training or biofeedback, Agras said, "but if you're getting a tension headache just about every day for about 20 minutes, it might be something to consider."

Agras said relaxation training and biofeedback are becoming widely available through clinics, community colleges or on referral from physicians. Stanford provides such services under the auspices of its behaviorial medicine clinic.

The psychiatrist said he won't rule out the use of an occasional aspirin, aspirin substitute or mild tranquilizer. He said aspirin itself seems to be the most effective of the three groups, and that its potential side effects—such as stomach upset or ringing of the ears—are usually not serious.

And for non-tension headaches, the ones that occur in minor epidemic form during the holidays from overeating or too much drinking, Agras recommends:

"Moderation, or if that fails, a large glass of water or perhaps juice. These headaches are caused by a loss of body fluid."

Distressed economy witnesses present oversupply of nurses

Two years ago Stanford University Hospital, like all hospitals, faced a severe nursing shortage. Today, in a completely reversed situation, it is finding itself with too many nurses.

"We are not doing any hiring," said Duane Walker, R.N., M.S., director of SUH nursing services. "Two years ago the turnover rate was 37 percent, which was very low nationally. Now it is less than one percent."

What's more, Walker added, nurses want to work more hours. "Sixty percent of the nurses here are the primary wage earners. They can't afford to work less than full-time anymore," he said.

Three units at SUH have closed indefinitely because of low patient census. The nurses and patients have been transferred to other units. Unlike many other hospitals, Walker said, SUH has not laid off any nurses. Instead, they are being asked to take a day off—about one each month—to compensate for the decreased need for their services.

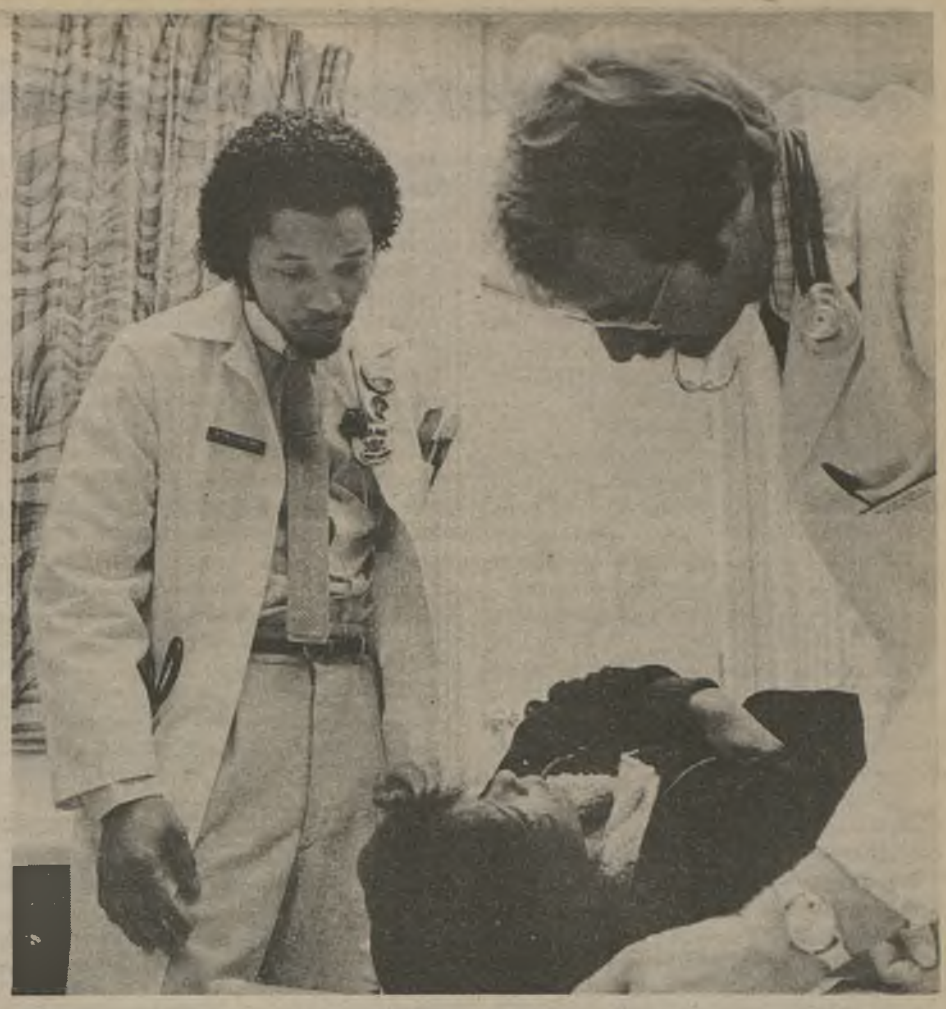
"The nurses are responding very well. They would rather take a day off than see their colleagues laid off," Walker said.

"It's much more difficult to have too many nurses than not enough nurses. The feelings are much more intense when they see less money in their paychecks. We are trying to be fair, however. We're working closely with the nurses' union to ensure job security," he continued.

With the oversupply of nurses, the massive recruiting efforts of two years ago have been cut back as well. SUH representatives used to go on about 20 recruiting trips each year, in addition to attending all nursing conventions, Walker said.

Now, they have combined their efforts in about ten trips per year. "We still want to maintain our visability," he explained, "so we can continue to attract the best nurses."

In order to do this, they are keeping up their marketing efforts. "Rather than saying 'come to Stanford,' we market the research, education, and work programs we have here. We still get a lot of inquiries from nurses all over the country," he said.



The current situation is the opposite of two years ago, when nurses had their pick of jobs. Hospitals actively recruited them, offering every possible incentive from flex-time scheduling to monetary bounties to get them to come to work.

Walker credits the distressed economy with causing the oversupply. People are unable to afford health care, foregoing elective procedures and keeping essential hospital stays to a minimum.

The result is too many empty beds; many hospitals have been forced to close entire units due to low census. An annual American Hospital Association survey showed a 13 to 21 percent decrease from 1980 to 1981 in the number of nursing job vacancies. And high unemployment rates are forcing many nurses, who would otherwise choose not to work, back into the job market.

Nursing schools are responding to the oversupply by cutting back on their programs and the number of students they accept, Walker said. "If the economy comes around the situation will change, and there will be a shortage again," he predicted.

—Shirley Kraus

Physician assistant Al Coleman (left) and Dr. Malcolm Gordon tend a patient at Drew Medical Center in East Palo Alto. Coleman is a graduate of the Stanford-Foothill Primary Care Associate Program.

Applicants sought for PA program

Qualified minority candidates for the Primary Care Associate Program are currently being recruited by the Community Outreach Project at Stanford University Medical Center.

Application forms for the first-year class beginning September, 1983, are now available upon request, and along with all supporting documents must be returned by March 15, 1983.

The two-year program trains highly skilled health providers called physician assistants (PAs). Selected are mostly students showing a strong commitment to work in medically underserved communities. Through the program, they gain the academic and clinical experience they need.

PAs and family nurse practitioners function in association with physicians in the maintenance and delivery of primary health care in areas—primarily rural or inner-city—in which there is a shortage of physicians. PAs can handle many medical tasks.

The Primary Care Associate Program was established at Stanford in 1973, and is administered in cooperation with Foothill Community College in Los Altos. The program is run jointly with a consortium of community colleges around the state.

The first year of training is spent in pre-clinical classroom work at one of the consortium colleges. Clinical work carried out during the second year is coordinated through Stanford and consists of didactic and clinical teaching at the Medical Center as well as preceptorship training with a physician in the community.

The Community Outreach Project was initiated in 1980 by the Primary Care Associate Program specifically to recruit minority applicants.

To obtain application forms or for further information regarding a career as a PA, contact George Villaneuva at the Primary Care Associate Program, 703 Welch Road, Suite F-1, Palo Alto, CA 94304; or phone him at (415) 497-6431. Applicants must be U.S. residents or have a permanent visa.

...News Notes...

In its latest newsletter, the Medical Center Auxiliary instructed its volunteer members to go directly to Emergency if they have chest pains, bypassing Personnel Health. Auxiliary members are responsible for their own bills, it said, but immediate medical attention is important.

* * * *

The Human Resources Development Department (HRD) now has available its winter schedule of classes, to run from January through March for interested employees.

Classes include such topics as Spanish for Medical Personnel; Anatomy and Physiology; and more.

To obtain a listing of courses and/or to register, call HRD at 497-6868.

A financial planning model for estimating hospital debt capacity has been developed and published by Dr. David Hopkins, director of analysis and planning at SUMC; Dan Heath, associate director of finance at SUH; and Peter Levin, formerly executive director of SUH and currently dean of the School of Public Health at the University of Oklahoma.

The model described was formulated during the early stages of planning for Stanford University Hospital's major renovation and construction program, the HMP. Computer analysis was used.

The Stanford administrators' paper was published in the July-August issue of Public Health Reports. *A more simplified version of their model is now being used in projects at a number of other hospitals.*

The Recreation Center at Tresidder Union is seeking members for a new Medical Center bowling league to begin Jan. 20. The league will consist of four-person mixed teams and will bowl 5:30 p.m. Thursdays.

Beginners and intermediates are encouraged to join, since this league will give teams at all skill levels a chance to win trophies donated by the Tresidder Recreation Center. Those interested may sign up as a team or individually.

An organizational meeting will be held 5:30 p.m. Thursday, Jan. 13, with free bowling to follow. League play will continue for 14 weeks, with championship games on April 21. Total cost is $3 per bowler per week. Discount cards are available to league bowlers for special open play rates.

Other leagues are also available at other times. For further information contact Cheryl St. Clair at 497-4616.

Wanted: Research Subject Volunteers

Female volunteers aged 40-80 are being sought by the division of clinical pharmacology to participate in an ongoing drug study at Stanford. Needed are healthy, Caucasian, non-smoking females, who are currently taking birth control pills or estrogen.

Entitled "Comparative Drug Metabolism: Effects of Aging in Man," the study examines age-related changes in liver clearance of drugs metabolized by different pathways. Principal investigator is Dr. Terrence Blaschke, chief of the division and associate professor of medicine and pharmacology.

The study began in January, 1981, and plans are to recruit 13 more subjects within the next four to six months.

Subjects will spend one week in the clinical research center at Stanford. Three relatively non-toxic drugs will be administered to the volunteers. (Side effects, if any, are minimal, according to research nurse Marni Brown.) Blood samples will be taken, with the purpose of observing how the different drugs are broken down in the liver.

Subjects are currently sought for the weeks of Jan. 17 and 24. Participants will receive compensation.

For further information, call Brown at 497-5266.

Clinic to focus interdisciplinary treatment of diabetes

A new clinic to specifically address the health care needs of the diabetic patient will open Thursday, Jan. 6, at Stanford University Medical Center.

An idea that's been considered for some time in the Division of Endocrinology, the Diabetes and Metabolism Clinic is finally coming to fruition for a variety of reasons, according to Dr. Fredric Kraemer, the endocrinologist slated to head it.

"Until now we've treated diabetic patients in the Endocrinology Clinic, but we were unable to deliver as comprehensive care as we'd like to." This, he said, was because of complications associated with the disease, and because of the necessary patient education involved.

"But besides directly helping patients, the new clinic will help investigators to gather more of our own data by concentrating all diabetic patients within a single unit where their problems can be studied by the variety of specialists who have interests in them."

Until now, he said, "We would refer diabetic patients with neurological complications to the Neurology Clinic, renal complications to the Renal Clinic, and so forth. With the new clinic, we plan to include experts from a variety of specialties on the regular staff.

"We hope that communication among the various physicians will be improved," he added.

Some of the specialists participating in the clinic will be podiatrists, nutritionists, nephrologists, neurologists, and ophthalmologists. Drs. Gerald Reaven, professor of medicine and chief of the Gerontology Division, and Michael Greenfield, clinical assistant professor of medicine, will be the two other staff endocrinologists.

"Most of the major complications associated with diabetes," explained Kraemer, "affect a patient's renal function, peripheral nervous systems, or eyes. There can be peripheral vascular disease too, showing up symptomatically first as infections or sores on the feet, and sometimes leading to amputation."

But if physicians can identify these problems early in treatment of the diabetic, he said, "we can try to prevent their progression, although success with this type of intervention remains to be proven for all of the symptoms."

Thus the major impact of the new clinic, as Kraemer sees it, will be in the aggressive metabolic control of glucose levels in hard-to-manage diabetic patients.

"Although we'll be seeing all diabetic patients, the uncomplicated ones will return to their primary physicians for follow-up care," he said.

The Diabetes and Metabolism Clinic is being set up as part of the Endocrinology Clinic. "Our division has recently been expanding," Kraemer explained, "and with the addition of new faculty we have increased clinical capabilities which allow us to undertake a project like this.

"It was decided that when new faculty members with interests in metabolism were added, we'd head the Endocrinology Clinic in this direction," said the newly appointed assistant professor of medicine, who for the past four and a half years has worked as a postdoctoral fellow at Stanford.

The new clinic will improve comprehensive care for diabetic patients, Kraemer predicts, since the care will be delivered in a focused, "rather than in a scattered fashion."

He is hoping, for example, to effectively involve the nursing staff in educational efforts, such as the teaching of home glucose monitoring.

The clinic will see adult patients with both insulin-dependent and non-insulin-dependent diabetes, said Kraemer. The former type, he explained, usually but not always begins in childhood, while the latter type is often "adult-onset."

"Insulin-dependent diabetics absolutely must have insulin for their entire lives," he said. "Non-insulin-dependent diabetics have increased blood glucose, and while they're sometimes treated with insulin, they can also often be treated with oral agents or diet."

The reasons for the two types of diabetes are different and their management is often different, Kraemer said, but they can lead to the same kinds of complications.

The clinic will also treat non-diabetic patients who have lipid abnormalities, such as elevations in cholesterol or tryglycerides, Kraemer said.

It is to be located at the Medical Specialties Clinic on the first floor of the Boswell Building. To make appointments, patients or referring physicians should call Ingrid Gallo, at 497-5947.

—Lisa Ames

Students learn medical cost containment

The education of most medical students includes anatomy, pathology, and the usual basics. Students at Stanford University School of Medicine learn the basics, and much more.

In a novel addition to what perhaps is the core of medical education, clinical medicine, students are learning how to make clinical decisions incorporating a relatively new medical concept—cost containment.

"Health care costs have become a real concern in the past decade, so there is a big interest in cost containment," said Dr. Harold Sox, Jr., associate professor of medicine (clinical).

"The course we teach has come into its own time. It wouldn't have been taught five or ten years ago," added Dr. Keith Marton, assistant professor of medicine.

The concept behind the course, Sox explained, is that costs are generated by physician decisions about the treatment of their patients. What test to administer, whether to admit patients to a hospital, and how long to keep them there, for example, all affect the total cost of health care. If physicians learn to make the best possible decisions, the costs will be kept to a minimum.

Physicians, estimates show, control as much as 91 percent of expenses for hospital services, and 76 percent of expenses for physician services.

Sox and Marton teach students to make decisions by using probability to express their uncertainty about the diagnosis, and something called Bayes Formula, an algebraic formula that "allows the clinician to answer the all-important question: 'how likely is it that my patient with this test result has disease X?' "

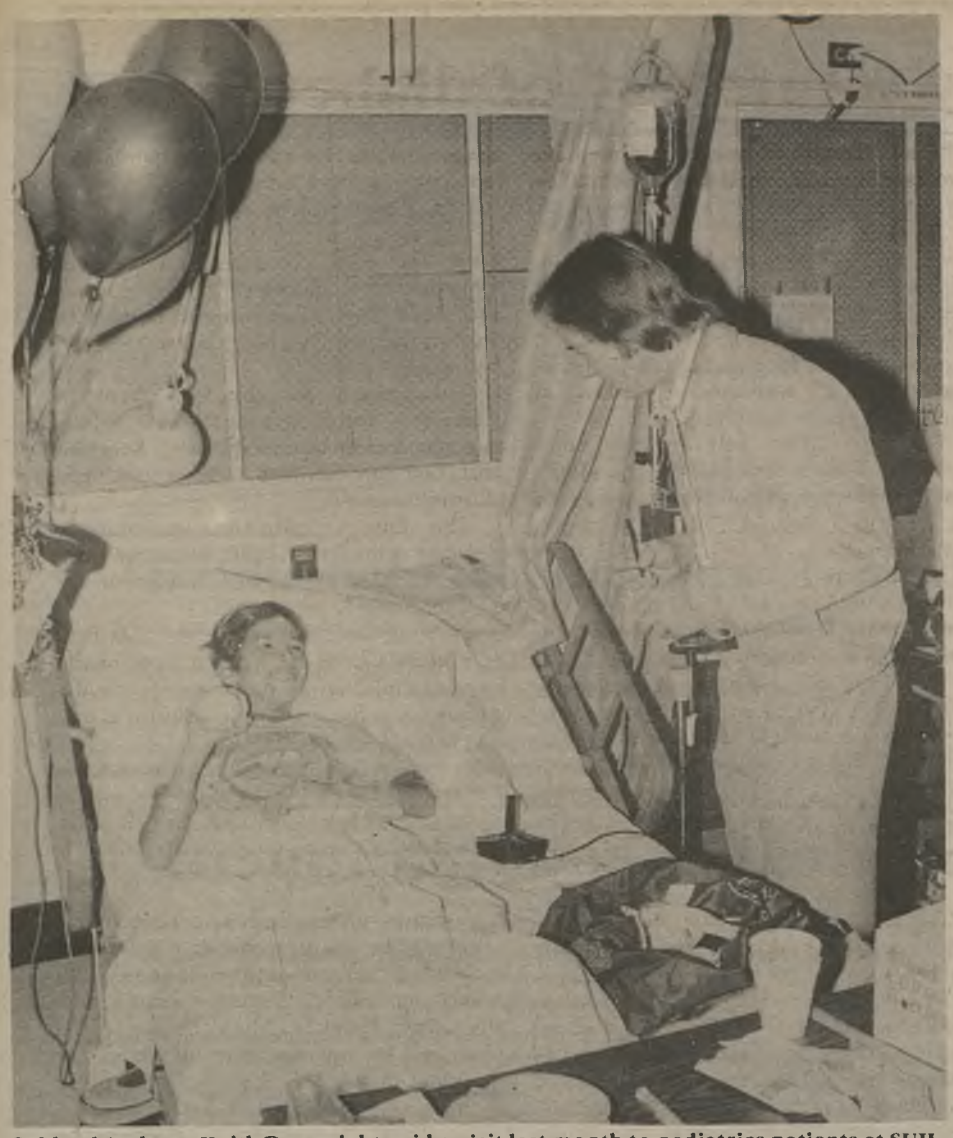
Consider, for example, a patient in the hospital recovering from a hip replacement, Sox said. Suddenly, he experiences shortness of breath, and his heart rate elevates. His physician immediately thinks he may have pulmonary embolus, a blood clot that starts in the legs and sometimes travels to the lungs.

Any of three tests could possibly determine the cause of the patient's symptoms. To determine which test to give, Sox continued, the physician must know how likely it is that the patient does, in fact, have pulmonary embolus, based on the history and physical examination; the frequency of false positive and false negative results; and the minimum probability at which the physician would treat the patient for pulmonary embolus.

On the basis of this knowledge, the physician can determine which of the three tests will be of most value, and administer it without wasting time and money administering the other two.

While this formal procedure may seem unnecessary for physicians with years of diagnostic experience, it is a boost for medical students or new physicians.

Sox and Marton also teach students decision analysis, using a "decision tree" to weigh the benefits and doubts of alternative treatments.



"The attitude used to be to try one alternative, and if that didn't work, try the next option on the list," Sox said. "We teach students to determine which test is best to administer, and to forecast the effects of various tests' results on what they would do for the patient, in order to decide which is the best treatment option."

Not only is the subject matter innovative, but the way in which it is taught is unique also. Sox, who started researching medical decision making about 10 years ago, got together with Marton and Michael Higgins, Ph.D., a medical decision analyst.

Medical Center employees gathered at noon several days last month to sing holiday songs and carols in patient and visitor areas of the Hospital. "More employees joined in the caroling this year than in previous years," said Bill Gilmore of Personnel, coordinator of the event, "and we found it very satisfying." Besides the employee singing, there was caroling at SUH throughout Christmas week by many visiting community groups.

Oakland A player Keith Drumright paid a visit last month to pediatrics patients at SUH. Here, Anthony Longo of Phoenix, Arizona, gets a chance to chat with Drumright, who gave out autographed baseballs along with the team's totehags.

Cost control. . .

continued from page 16

With a two-year grant totaling almost $59,000 from the Schering-Plough Foundation through the National Fund for Medical Education, they put together a series of lectures on medical decision making, and recorded them on videotape.

Over the past two years, they've tested various methods of teaching the material. The best, they've concluded on the basis of a controlled study, is tutored videotape instruction. A small group of students watches the videotapes, and a tutor is present to answer questions, emphasize specific points, or be of assistance in any other way necessary.

"We are really impressed by the students' interest in the material," Sox said.

The team has already sent the videotapes to two other medical schools, and is working on a handbook to go along with them. "There is no comparable opportunity at other medical schools to learn about medical decision making in this way," Sox said.

"We've gotten a lot of requests for the materials. We'd like to make them more available to other schools."

—Shirley Kraus

Construction Corner

The Boswell Building Renovation activities to take place this month are:

Information Booth: This modular work station is situated at the front entrance. It is being installed during the first stage of construction so that patients will have a convenient spot to inquire as to the construction or location of their clinics. The construction for this area was scheduled to begin Jan. 3, to take approximately one week. The project involves drilling through the floor to install cables for the CRT, electricity and telephones.

Balconies: The footings will be poured for the enclosed balconies, four of which will be inside the Radiation Therapy area and six outside Radiation Therapy by the landscaped area. Although clinic space will not be involved, the clinic atmosphere will be affected. The construction activities involved in this stage are saw cutting, use of jack hammer and roto hammers, low velocity shots, compressors and welding machines. Noise and dust may be expected.

Pasteur Drive: The construction group has been assigned temporary space to store supplies and trailers in the center divider. Though not an attractive addition to landscaping, this was considered more desirable than utilizing space in a parking lot.

The planned construction hours are 7 a.m. till 4:30 p.m., Monday through Friday.

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

WEDNESDAY, JANUARY 5

New hours effective at the Stanford University Blood Bank: noon to 6 p.m. Mondays; 8:30 a.m. to 7:30 p.m. Tuesdays and Thursdays; 8:30 a.m. to 6 p.m. Wednesdays; and 8:30 a.m. to 3 p.m. Fridays.

Basic Science Research Colloquium: "T-cell Receptor for Antigen A Conundrum"—Dr. C. Garrison Fathman. 5 p.m., Fairchild Auditorium.

Div. of Orthopedic Surgery Grand Rounds: "Biomechanics of Acetabulum"—Dennis Carter, Ph.D. 8:30 a.m., M114.

Dept. of Neurology Grand Rounds: "Acetylcholine Receptors in Myasthenia Gravis"—Dr. Marjorie Seybold (of UCSD). 5 p.m., C364.

THURSDAY, JANUARY 6

Stanford HELP Center: "One in Ten," a film—New Options for Women with Breast Cancer. Discussion will follow, led by Dr. Anthony Howes of the Department of Radiology. Noon to 1:30 p.m., small lounge, Tresidder Union.

Dept. of Biochemistry Seminar: "*In Vitro* Analysis of Methyl-Directed Mismatch Repair in *E. coli*"—Dr. Paul Modrich (of Duke University). Noon, M316.

Dept. of Medical Microbiology Seminar: "The Molecular Basis of Antibiotic Resistance in Streptococci"—Dr. Vickers Burdett (of Duke University). 9 a.m., 3rd floor conference room, Fairchild Bldg.

Registration deadline: Nursing Educational Services course on "Burnout: Treatment and Prevention," to be held Jan. 20. Course will address causes of and "intervention methods" for burnout in oneself and others. For further information, call Carole Kidder at 497-6366.

Special Seminar: "Cytometry in Haematology and Immunology"—Professor J.S. Ploem (of Univ. of Leiden, The Netherlands). Topics to include: combining of flow cytometry with image analysis, cytometry in transplantation research, and reticulocyte testing. 4 p.m., Genetics Library, S336.

FRIDAY, JANUARY 7

Dept. of Structural Biology: "Molecular Mechanisms of Promoter Selection in Gene Transcription"—Dr. Cheng-Wen Wu (of SUNY at Stony Brook). Noon, Fairchild Building, D102.

MONDAY, JANUARY 10

Dept. of Structural Biology Seminar: "Maximum Entropy and the Foundations of Direct Methods in the X-Ray Phase Problem"—Dr. Gerard Bricogne (of Columbia University). Noon, Fairchild Bldg., Rm. D102.

TUESDAY, JANUARY 11

Nursing Educational Services Critical Care Course Level II: "Abnormalities of Coagulation." Course will include background information, theory, and case study exercises. Fee required. For further information, call Carole Kidder at 497-6366.

Dept. of Dermatology Special Lectures: "Treatment of Active Disease of the Nervous System"—Dr. Lawrence Steinman. 10 a.m., R136.

Dept. of Biochemistry Colloquium: "New Rapid DNA Sequencing Methods, and Analysis of Genes and Processed Genes of Cytochrome C"—Dr. Ray Wu (of Cornell University). Noon, M114.

WEDNESDAY, JANUARY 12

Dept. of Structural Biology Seminar: "Splicing of the Ribosomal RNA Precursor of Tetrahymena: RNA Recombination Directed by a Ribosyme"—Dr. Thomas Cech (of Univ. of Colorado at Boulder). Noon, M114.

MONDAY, JANUARY 17

Dept. of Cardiology John Kent Lewis Memorial Lecture: "Age Associated Alterations in Cardiac Function and Exercise Response"—Dr. Myron Weisfeldt (of Johns Hopkins University). 5 p.m., Fairchild Auditorium.

THURSDAY, JANUARY 20

Dept. of Pharmacology: Windsor C. Cutting Memorial Lecture. Featured speaker will be Dr. Stanley Cohen (of dept. of biochemistry, Vanderbilt University.) 4:15 p.m., Fairchild Auditorium.

SATURDAY, JANUARY 22

Association of American Medical Colleges: Symposium on medical education, chaired by Dean Dominick Purpura, with panels led by Drs. Robert Cutler, Roy Maffly, and John Steward. Topics will include promoting broad baccalaureate education, acquisition of computer skills, and methods of dealing with stress.

WEDNESDAY, JANUARY 26

American Heart Association—Fifth Biannual Symposium on Cerebrovascular Disease: Speakers will include several Stanford faculty members. CMA credit toward certificate is available. Reservations are required before Jan. 21, and there is a fee. 8:30 a.m. to 5 p.m., LeBaron Hotel, 1350 N. First Street, San Jose. For further information, call the AHA at (408) 247-8555.

SATURDAY, JANUARY 29

"Medical and Health Care Uses of Cable Television"—A community conference sponsored by the Palo Alto Medical Foundation and Stanford University Hospital. 8:30 a.m. to 1 p.m., Palo Alto Medical Foundation Auditorium. For reservations and information, call Carroll Harrington at 326-0882.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Board of Trustees report

Research grants rose during past year to monthly average of $14,615,621

The Board of Trustees took the following actions at its meeting on December 14, 1982:

1. Approved actions already taken by the Office of the Vice Provost and Dean of Graduate Studies and Research to enter into contracts and grants for research for the month of September, 1982, totaling $4,444,268 and for the month of October, 1982, totaling $27,490,203. The monthly average of such awards for the twelve-month period ending October 31, 1982, was $14,615,621, compared with $12,378,173 for the corresponding period the year before.

2. Accepted gifts received during the month of October, 1982, totaling $7,584,845 and during the month of November, 1982, totaling $8,728,920.

3. Accepted statements that:

a. Autumn revisions in the Operating Budget for 1982-83 provide for a net increase of $1,010,858 or 0.49 percent of the budgetary base (compared with a similar net increase of $2,704,000 in 1981-82).

b. Needs for expenditure in the Conditional Budget for 1982-83 total $6,237,000, and income is expected to be $5,068,000, leaving a gap of $1,169,000.

c. The balance of the Operating Budget Reserve for 1982-83 was $2,695,000 on August 31, 1982, and is projected to remain that at the end of the fiscal year on August 31, 1983.

4. Authorized the addition to Unrestricted Funds Functioning as Endowment of fifty percent of net rental income earned after September 1, 1983, from the Stanford Endowment Lands (other than residential areas for faculty and staff and from investment in the Stanford Shopping Center).

5. Authorized the vice-president for business and finance to invest an additional amount of up to $9,300,000 from the Merged Investment Pools to provide funds for second-mortgage coinvestment to eligible faculty and senior staff; also authorized various modifications in the program.

6. Authorized the vice-president for business and finance to provide additional parking at the Stanford Shopping Center through construction of a parking structure and approved the option of a sale and leaseback with option to repurchase if this transaction results in a net savings to the University.

7. Ratified action taken between meetings to permit the vice-president for business and finance to convert investment in Property Capital Trust from convertible preferred shares into common shares.

8. Heard a report on revenue from holdings in oil, gas, and minerals.

9. Approved the concept and site for the Research Animal Facility I.

10. Heard a report on the Long-Range Financial Forecast.

11. Approved the concept for renovation of the south wing of the building at 800 Welch Road and authorized further planning.

12. Approved the concept and site for a new tennis court and a new office and players' lounge for the varsity tennis program.

13. Approved the concept and site for a new cogeneration plant to produce electricity for the main campus and steam and chilled water for both the main campus and the Medical Center; authorized additional funding of $370,000 (for a total of $1,120,000) to continue design for it; and authorized provision of the additional funds from an interim advance from external borrowings for General and Research Equipment.

14. Approved the concept for the Electronic Communications Project consisting of new systems for telephone and Energy Management and Control and of the Stanford University Network (SUNet); authorized additional funding of $600,000 (for a total of $782,000) for design; and authorized provision of these funds from an interim advance from external borrowings for General and Research Equipment.

15. Approved the concept for connection of Willow Road from Arboretum Road to El Camino Real.

16. Approved the purchase of the IBM 3081 computer, presently leased from the IBM Corporation, for an amount not to exceed $1,960,000 and authorized financing the purchase from external borrowings for General and Research Equipment.

17. Authorized the transfer to endowment of $1,231,587 from the Stanford Land Development Fund to meet the requirements of a grant from the Ford Foundation for support of "training and research on international security and arms control.'

18. Authorized the vice-president for business and finance to execute agreement for a loan of $74,800 with the California Energy Commission.

19. Received annual reports from the Auxiliaries and Service Centers and the Office of Technology Licensing.

20. Established the Edgar F. Kaiser, Sr., Professorship.

21. Established the A. Calder Mackay Professorship in Law.

22. Established the Ernest C. Arbuckle Professorship in the Graduate School of Business.

23. Established the Robert E. Paradise Professorship in Natural Resources Law.

24. Bid a very fond and respectful farewell to Trustee W. Parmer Fuller III who leaves the Board on January 6, 1983, after many years of distinguished service.

25. Heard a report from Fred S. Eyerly, mayor, and William Zaner, city manager, of Palo Alto.

26. Heard a report from John Freccero, Rosina Pierotti professor of Italian literature, on "The New Alliance: Comparative Literature in the Eighties."

27. Amended its "Statement on Investment Responsibility Concerning Endowment Securities" of December 27, 1977, to reflect recommendations from the Commission on Investment Responsibility (CIR) of 1981-82.

Five promotions, 13 appointments announced

On December 14, 1982, the Board of Trustees made the following appointments, effective January 1, 1983, unless indicated otherwise:

PROMOTIONS:

Savas Dimopoulos, associate professor of physics, effective 12/1/82; John L. Hennessy, associate professor of electrical engineering, effective 9/1/83; Thomas J. Hughes, professor of mechanical engineering; Laurence J. Kedes, professor of medicine; Roger A. Warnke, associate professor of pathology.

REAPPOINTMENTS:

David K. Larue, assistant professor of geology, effective 4/1/83.

APPOINTMENTS:

Joan Bresnan, professor of linguistics, effective 9/1/83; Andrei Calin, associate professor of medicine; Mark M. Davis, assistant professor of medical microbiology, effective 5/1/83; Stephen P. Fortmann, assistant professor of medicine; Peter Galison, assistant professor of philosophy and, by courtesy, of physics, effective 12/1/82; James S. Harris, professor of electrical engineering; Fredric B. Kraemer, assistant professor of medicine; John M. J. Madey, professor of electrical engineering and the High Energy Physics Laboratory; Edward S. Mocarski, assistant professor of medical microbiology; Robert V. Rouse, assistant professor of pathology; Stephen D. Smith, associate professor of pediatrics; Eckard Weber, assistant professor of psychiatry and behavioral sciences.

REPORT MATTERS:

Richard V. Allen, appointed senior fellow, by courtesy, in the Hoover Institution, effective 11/14/82.

Annelise G. Anderson, appointed senior research fellow in the Hoover Institution, 1/1/83 to 12/}1/87.

Timothy F. Bresnahan, assistant professor of economics, appointed assistant professor, by courtesy, of economics in the Graduate School of Business, 9/1/82 to 8/31/85.

Dennis R. Carter, associate professor of mechanical engineering (research), appointed associate professor, by courtesy, of surgery (research), 10/1/82 to 8/31/87.

David R. Cheriton, assistant professor of computer science, appointed assistant professor, by courtesy, of electrical engineering, 9/1/82 to 8/31/84.

George M. Homsy, professor of chemical engineering, appointed professor, by courtesy of petroleum engineering, effective 1/1/83.

Thomas H. Henrikson, appointed senior research fellow in the Hoover Institution, 11/1/82 to 10/31/87.

Venkataraman Srinivasan, professor of marketing and management science, GSB, appointed the Ernest C. Arbuckle professor of marketing and management science in the Graduate School of Business, effective immediately.

Susan M. Treggiari, professor of classics, appointed professor, by courtesy, of history, effective 12/1/82.

Howard R. Williams, Stella W. and Ira S. Lillick professor of law, emeritus, appointed the Robert E. Paradise professor of natural resources law, 9/1/83 to 8/31/84.

EMERITUS FACULTY APPOINTMENT:

Dudley Kirk, Dean and Virginia Morrison professor of population studies and professor of sociology, emeritus, effective 1/1/83 (early retirement).

DuPrau exhibits work at I-Center

The big Squeeze and other acrylic paintings on canvas by Dolly DuPrau of Atherton will be exhibited at Stanford's International Center from Jan. 5-30. A reception for the artist will be held from 5-7 p.m. Friday, Jan. 7, at the Center.

A suggestion that a common household object might serve as the stimulus for a painting brought about DuPrau's series based on an orange squeezer. Continued study of the squeezer's shape and function led to an imaginative exploration of its possible role in a fantasy world. Selecting a single "still-life object" for repeated representation in this inventive group of paintings has freed the artist to explore some of the more formal considerations of painting and her own sense of whimsy.

The exhibition will also include a number of DuPrau's landscape paintings of nearby California scenes and figure paintings.

Born in Pittsburgh, Pa., the artist is a graduate of Carnegie-Mellon University. She has lived and painted in the Bay Area for many years and her award-winning watercolor and acrylic paintings have been exhibited throughout Northern California.

The exhibit is open for viewing from 8:30 a.m. until 11 p.m. on weekdays and from noon until 11 p.m. on weekends.

A *Big Squeeze* by Dolly Du Prau

Recreation facilities schedule

Encina lockers and showers—M-F 7:30 a.m.-9 p.m.; SS 9 a.m.-6 p.m.

Roble lockers and showers, weight training facilities—M-F 8 a.m.-12 midnight; Sat 9 a.m.-8 p.m.; Sun noon-8 p.m. Lockers available beginning Jan. 10.

Olympic Gamefield (starts at Angell Field), **Perrier Parcourse** (starts near Roble dorm), and **Angell Field track**—Open every day during daylight hours.

Angell Field infield, Taylor Field, and **IM Fields**—Reserved only; call 497-0505.

Maples Pavilion—M-F noon-1 p.m. (Show ID)

Roble Gym floor—Morning, afternoon, and evening hours for open recreation, volleyball, badminton, and basketball posted at Roble Gym for every day except Sunday. (Show ID)

Roble Pool—M-F noon-1 p.m. faculty/staff only; TTh 1-4:30 p.m.; M-W,F 3-4:30 p.m.; closed SS. (Show ID)

deGuerre Pools—M-F noon-2 p.m.; M-F 5:30-7 p.m.; SS family swim, 50-meter pool noon-4 p.m. (Show ID)

deGuerre Courts—M-F 10-11 a.m. phone in reservations only (497-2210); M-F 11 a.m.-11 p.m.; SS 9 a.m.-11 p.m. (Show ID)

Tennis courts—Sign-up sheets are posted on court bulletin boards for the next day's play: Encina Courts 8:30 a.m.; Roble Courts 7:45 a.m.; Varsity Courts 5:10 p.m. FSS sun-up to sun-down; M-Th when no classes are scheduled; M-F noon-1 p.m. reserved for faculty and staff only at Roble and Encina courts.

Encina Volleyball Courts—Every day during daylight hours.

Encina Weight Room—M-Th noon-2 p.m., 3:30-8:30 p.m.; F noon-8:30 p.m.; SS noon-5 p.m.

Roble Field—Check schedule at Roble Gym office.

Roble Gym dance studio, studio 42, and room 33—Check at Roble Gym office.

Golf Course driving range—M-F 8:30 a.m. to one hour before dark; SS, holidays 7 a.m. to one hour before dark.

Golf Course—Closed Mondays; Tuesdays, priority ladies; T-F first available starting time; SS, holidays first available starting time after 11 a.m. You must obtain the starting time in person and show ID at the Pro Shop.

Tresidder Recreation Center—M-Th 8 a.m.-midnight; F 8 a.m.-1 a.m.; Sat 10 a.m.-1 a.m.; Sun 10 a.m.-midnight (no bowling unitl 10 a.m.).

Check the boards at any facility for the current hours. For more information or to tender suggestions or comments, call Recreation Coordinator Shirley School at 497-3089.

HIP wants to keep you feeling good

The healthiest lunch break around is offered by the Stanford Health Improvement Program (HIP), with the goal of helping the Stanford community to maintain or improve personal health.

The side effects are ominous: you may meet like-minded people, enjoy fun activities, learn more about yourself, utilize campus facilities, and feel and look better.

The following HIP courses are offered winter quarter to all faculty and staff and their families.

Walk/Jog/Run—(Walking 1 plus miles, beginning jogging 0-2 miles, jogging 2-3 miles, and running more than 3 miles); M-W-F 12:10-12:50 p.m., Jan. 17-Mar. 25, at Roble Field. Fee $5.

The Joy of Swimming—(Individualized instruction at all levels), M-W-F noon to 1 p.m., Jan. 17-Mar. 25, at deGuerre Pool. Fee $5.

Aerobic Movement/Workout—Stretching, aerobic and toning exercises to music), three sections:

Section 1—T/Th noon to 1 p.m., Jan. 18-Mar. 10, Roble Gym room 33. Fee $20.

Section 2—T/Th 1-2 p.m., Jan. 18-Mar. 10, Encina Gym wrestling room. Fee $20.

Section 3—M/W 5:30-6:30 p.m., Jan. 17-Mar. 9, International Center assembly room. Fee $20.

Weight Management for Health—Increases awareness of eating habits and develops individualized strategies for modifying these behaviors using a problem-solving approach. Th 5:15-7:15 p.m., Jan. 27-Mar. 3, Cowell Student Health Center meeting room. Fee $25.

Q.U.I.T. Smoking—Problem-solving skills and an array of strategies for resisting the urge to smoke, from which members develop individual plans. T/Th 5:15-6:45 p.m., Jan. 25-Feb. 22, at the Stanford Heart Disease Prevention Program, 730 Welch Road, Suite B. Fee $30.

How to Manage Stress—Increases awareness of stress-producing situations and replaces stressful response behaviors by teaching a variety of methods for eliminating or coping with stress. M 5:15-7:15 p.m., Jan. 24-Mar. 7, at Med Center M121 conference room. Fee $25.

The courses offered by HIP focus on increasing awareness of unhealthy habits and presenting a how-to approach for maintaining a healthy lifestyle. HIP is sponsored by the Benefits and Records Office and administered by the Stanford Heart Disease Prevention Program.

To register send name, ID mail address, campus phone number, the class you want to register for, and a check payable to Stanford University through Campus Mail to HIP, 730 Welch Road, Suite B.

For more information phone the HIP office at 497-7940.

Roble dance classes begin

Stanford Dance Quorum offers a variety of classes for students, faculty, staff, and their families. The winter quarter schedule includes instruction in ballet, jazz, and floor barre alignment. All classes meet in Roble Dance Studios, 375 Santa Teresa Street, beginning Tuesday, Jan. 4.

Elizabeth Larkam teaches two levels of ballet on Monday and Wednesday evenings 6-7:30 p.m. and 7:30-9 p.m. Ballet for all levels meets Saturdays, 1:15-2:45 p.m. Lisa Burnett teaches floor barre Tuesday and Thursday evenings, 6-7 p.m. and Saturdays 12 noon-1 p.m. Jazz with Elizabeth Gustafson meets Monday and Wednesday, 6-7 p.m.

There are quarterly membership dues for Stanford Dance Quorum and a fee for classes. Stanford Dance Quorum is a nonprofit student organization in operation the entire calendar year. Stanford students, faculty, staff, and their families may register for classes. The public is invited to participate in special events such as master classes, workshops and film series.

For additional information and registration, call Stanford Dance Quorum, 497-4254.

Left,
Hsueh-Yung Shen

Right,
Helene Wickett

Wickett, Shen in four-hand concert

A rare opportunity to hear music for piano four-hands, performed by Hsueh-Yung Shen and Helene Wickett, will be presented free by Stanford's Music Department at 8 p.m. Saturday, Jan. 15, in Dinkelspiel Auditorium.

The program will include Schubert's ambitious *Grand Duo, op. 140*; the world premiere of Shen's *Diurne*, written expressly for Shen and Wickett; and Stravinsky's *Rite of Spring*.

"I picked the title *Diurne* to mean the opposite of *Nocturne*," explains Shen. "The piece is French-influenced—lush and impressionistic.

"*Rite of Spring* is, of course, an orchestral ballet, but Stravinsky also wrote a four-hand version of it. He did it in haste, though, and Helene and I have made certain revisions of his score, so it will be a very personal version of the work."

Shen, formerly on the music faculty at Stanford, is presently a freelance pianist, percussionist, and composer.

Wickett is a young pianist of international repute from the Peninsula. She has soloed with the San Francisco Symphony and many European orchestras, and leaves in February for her fifth annual European concert tour.

Shen and Wickett both studied with Boulanger in Paris in their early teens. "We speak the same language," says Shen—very important when sharing a keyboard!

Pottery workshop welcomes potters

The Stanford Pottery Workshop will offer beginning courses this quarter, on Tuesday or Thursday evenings.

Classes will emphasize wheel-thrown ware, including specific forms such as teapots, mugs, juicers, and casseroles. No prior experience is necessary. All tools are provided (wear old clothes).

Sign up at 7 p.m. Thursday, January 6, in the basement of the Wilbur dormitory complex (across the hall from the student laundry facilities), or call 497-1471 between 4 and 5 p.m. weekdays, for early registration or further detail. Faculty, staff, spouses, and any other members of the Stanford community are welcome to join the Workshop and take the class.

Bowling leagues want new members

The Tresidder Recreation Center is seeking members for its faculty and staff bowling leagues, now getting under way for winter.

Daytime leagues with current openings include the "Bowl for Lunch Bunch" offered on Tuesdays, Thursdays or Fridays at 12 noon. These leagues consist of two-person teams bowling two games over lunch hour.

Evening leagues with current openings include the 6 p.m. mixed fours or 8:30 p.m. trios on Mondays and Tuesdays; 8:30 mixed fours on Wednesdays; and the 5:30 p.m. Stanford Hospital mixed fours or the 7:30 p.m. faculty/staff mixed fours on Thursdays.

All leagues are handicap and include three games per week.

Discount cards are available for all league bowlers. Prearranged teams or individuals desiring placement with a league should sign up at the Recreation Center or call 497-4316.

Tennis lessons

Tennis lessons (six pupils per group) will again be offered to staff and/or their families on weekday mornings or Saturday mornings. Players are grouped by ability in these classes taught by Dick Gould's staff. Call 497-1160 on weekday mornings to receive detailed, printed information and registration form. Lessons begin week of January 17.

More dance...

Noon classes

Dance Quorum will sponsor two noon-hour dance classes during winter quarter in Studio 42 of Roble Gym.

Beginning Jazz Dance, with instructor Kim Morris, will meet Tuesday and Thursday, beginning Jan. 4.

Intermediate Modern Dance, with Joy Weston, will meet Wednesday and Friday, beginning Jan. 5.

The class fee is $40 for the 10-week quarter.

Both classes offer a thorough workout within the framework of dance technique. Participants should wear leotards and footless or stirrup tights.

To register, come to a class. Checks should be made payable to Dance Quorum.

Children's dance

Children's Dance at Stanford offers classes in creative movement, modern dance, and ballet for girls and boys ages 3 to 13. During the nine-week winter session beginning classes will meet once a week on Wednesday and Friday afternoons and Saturday mornings.

For information on all dance classes, call 497-4254.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

42430-LL (JCC:5588) LIFE SCI RES ASST I: 75%; work both w/ lab mice & w/ mammalian cells in tissue culture; perform theory-related work requiring initiative & judgment based on an understanding of sci involved; work involves a study of modifying influence of selected compounds on response of cells, tumors & normal tissues to radiation & to some chemotherapeutic drugs; investigations will involve quantitative assays for tumor cell killing & DNA damage & its repair; QUALFICIATIONS: Bachelor's degree or equiv exp; exp w/ clonogenic assays of mammalian cells in tissue culture; exp w/ biochemical assays, mouse surgery, record keeping & data analysis also an advantage.; C05; $1253-1565.

33241-TC (JCC:5588) LIFE SCI RES ASST I: A lab position studying somatomedin, a peptide growth factor & its inter-relationship w/ other hormones; setting up radioreceptor & radioimmunoassays of hormones, calculating & analyzing results; as part of radioreceptor assays, column chromatography of plasmas & lypohilization of samples are nec; expected to aid w/ bioassay & animal procedures & participate in genl lab duties; will plan & carry out experiments based on broad protocols, etc; QUALIFICATIONS: familiarity and/or exp w/ radioimmunoassay tech required; BS in basic sci or equiv in exp; prefer some lab exp.; C05; $1670-2086.

25921-AW (JCC:7694) PLANT MAINT SUPVR ASST: Bldg Services Mgr is respon for the overall cleanliness, sanitation, & appearance of Tresidder Memorial Union; He/she is respon for maintaining all physical area of the facility including but not limited to furnishings, fixtures, carpeting, drapery, floors & walls; includes all exterior areas, including but not limited to patios, loading docks & deck; maint cleaning schedules, suprv custodial staff, make approp expenditures; maint inventory control & conduct regular bldg inspections; QUALIFICATIONS: Min 2 yrs institutional cleaning & maint exp required; min 2 yrs suprv exp including surpv full-time permanent staff in an instutional setting required; fluency in written & spoken English; prov ability to organize & follow through detailed projects w/ genrl suprv required; Univ exp pref.; S10; $1716-2150.

32586-JB (JCC:2120) ACCOUNTANT I: Responsible for filing grant fiscal reports in an accurate timely manner, having a thorough knowl of agency & univ requirements, & prov backup to contract report desks; prep grant/contract financial reports to agencies; review documentation of expenditures to ascertain allowability; work w/ dept's to resolve problems; assist in reconciling cash on hand to general ledger; review policy changes & alert suprv to possible problems; answer agency correspondence & questions about policy & procedures; etc; QUALIFICATIONS: B.A. acctg or 4 yrs of acctg exp; knowl of univ acctg/reporting for government grants/contracts helpful; must be able to work independently; must use tact and good judgment; must be able to communicate effectively orally & in writing;; C05; $1670-2086.

32592-JB (JCC:2120) ACCOUNTANT I: Responsible for filing grant fiscal reports in an accurate timely manner, having a thorough knowl of agency & univ requirements, & prov backup to contract report desks; prep grant/contract financial reports to agencies; review documentation of expenditures to ascertain allowability; work w/ dept's to resolve problems; assist in reconciling cash on hand to general ledger; review policy changes & alert suprv to possible problems; answer agency correspondence & questions about policy & procedures; etc; QUALIFICATIONS: B.A. acctg or 4 yrs of acctg exp; knowl of univ acctg/reporting for government grants/contracts helpful; must be able to work independently; must use tact and good judgment; must be able to communicate effectively orally & in writing;; C05; $1670-2086.

29255-JB (JCC:6306) R & D ENGR II: Must work independently to create original designs for experimental robot equip't; make decisions concerning inhouse fabrication of parts or procurement fr outside vendors; vendor liaison; supv & participate in fabrication of parts & in bldg the product; QUALIFICATIONS: must have Mechanical Design exp; prefer an engrg degree & extensive exp in area of controls & robotics.; C99; $2113-2724.

33328-LL (JCC:6406) SCI & ENGR ASSOC I: Design, assemble & maintain high pressure & temperature equip't used to measure physical properties of rocks; design & run data acquisition sys, using minicomputers; work w/ grad students to develop & implement their experimental res programs; supv tech activity in lab involving 8-12 students & sr. technician; QUALIFICATIONS: strong bkground in computer controlled physical data acquisition & exp in high pressure & temperature equip't; bkground in geology, geophysics or petroleum engrg desirable; ability & interest to guide grad students in tech aspects of their res essential; ability to solve problems & innovate important; exp in res highly desirable.; C99; $1854-2312.

36357-JB (JCC:2160) ACCOUNTANT II: Forecast cash requirements for gov't grants & initiate cash requests when approp, based on analysis of expenditures & knowl of applicable gov't regulations; reconcile cash receipts to awarding agency records; report cash transactions as required; monitor availability of funds on each letter of credit to insure cash can be drawn when needed; supv 2 acctg assts; review & approve acctg documents; work w/ Sponsored Projs Offc & academic depts to resolve funding problems; prep mgmt reports as needed; QUALIFICATIONS: BA/BS in acctg or equiv work exp, plus 3 yrs of prof'l acctg exp; analytical ability & familiarity w/ computerized acctg sys essential; knowl of microcomputer applications & gov't regulations helpful; supvry exp desirable; requires good oral written commu skills, tact & sound judgment; must be detail-oriented, and extremely accurate.; C06; $1854-2312.

36287-JB (JCC:6306) R&D Engr II: Work closely w/ scientists to develop conceptual designs for precision optical/mechanical research instrumentation for use in synchrotron radiation beam lines & then calculate temperature distributions & thermal & mechanical stresses & accompanying deformations of metal surfaces & optical components heated by intense x-ray beams; will also expedite procuremt & fabrication of new eqpt as needed; perform mechanical engrg analysis of proposed future designs of synchrotron radiation sources, beam lines, windows, monochromators & related instrumentation, in support of proposals for future facilities; QUALIFICATIONS: M.S. or Ph.D. in Mech Engrg w/ ability to perform complex heat transfer & material stress calculations essential; working familiarity w/ computer solutions of such problems highly desir; ability to read & interpret engrg drawings; familiarity w/ machine shop & fabrication techniques essential; C99; $213-2724

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Jan. 11, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

SLAC

95044-JM (JCC:6646) SR S&E TECH - ELECTRON OR TRAINEE: TMS Unit; serv simple & complex trouble calls of installed commu equip't, such as computer terminals, printers, cables, etc; perform maintenance on terminals & assoc equip't; make field connections, terminations & test remote terminals & spec interface equip't; write diagnostic routines; QUALIFICATIONS: AA degree in electronics or equiv knowl plus a couple yrs related exp; basic ability to use test instruments; exp installing/maintaining computer terminals; able to lift & transport approx 50 lbs & work in confined areas & in excess heat, cold, & dust.; A34; $1901. APPLY AT SLAC

91998-JM (JCC:2596) SECY II-SPEC: Prov sec'l serv to large group of physicists; type forms, corresp & manuscripts using physics/engrg terminology; screen phone calls; make travel arrangements & prep expense reports; keep time reprts; arrange conferences & mtgs; maintain files & offc supplies; operate various offc machines; QUALIFICATIONS: ability to carry out a wide variety of duties independently; ability to operate word processor/computer or be willing to learn; typ 60; several yrs offc exp; knowl of punctuation, syntax & spelling; exp in tech typing using Greek & math symbols.; B12; $1310-1440. APPLY AT SLAC

93353-JM (JCC:8880) Theoretical Physicist: Work on advanced concepts of high gradient accelerators & high power radio frequency sources; first respon to develop analytic and/or numerical techniques to design & diagnose high power klystron tubes needed for energy upgrading of a linear accelerator; QUALIFICATIONS: Ph.D. in physics or EE or equiv w/ extensive exp in areas of plasma physics, electrodynamics & particle beam transport; expertise in application of electromagnetic modeling methods required; familiar w/ field of high intensity accelerator theory & beam transport.; C99; $2600-3800. APPLY AT SLAC

Bargaining unit

31086-PB (JCC:1728) PORTAL MONITOR: TMS Unit; 50% time; various hours; occupies Portal Monitor Booth at lobby entrance during assigned hours & examines patrons' briefcases & bookbags, etc to determine that lib mat'ls are properly charged out; enforces lib regulations; transfers turnstile sount of patrons to tally sheet for each hour & maint other stats as apporp; answers questions regarding lib services, locations, etc; opens or closes bldg as scheduled; performs misc tasks as scheduled; other duties assigned; QUALIFICATIONS: Previous public service experience; punctuality & dependability; some college and/or lib experience is desirable.; A09; $6.08.

24645-PB (JCC:5786) LAB ASST I: TMS Unit; M-F, 8-5 or 1-10 pm; Assist in the preparation for undergraduate student laboratory course; prepare and sterilize solutions; pour media, set our glass ware and equipment; keep lab clean; some dishwashing; work with minimal supervision; QUALIFICATIONS: Prefer some familiarity with biology and chemistry; able to use balances, ph meter, autoclave; familiar with simple scientific terminology.; A13; $6.68.

32393-PB (JCC:5835) ANIMAL CARE ASST I: Responsibilities will include custodial care for animals (rats, mice) housed in the animal care facilities; clean cages, feed and water, perform general cleaning of areas; sterilizes cage equipment, botties and sawdust; QUALIFICATIONS: Ability to follow very detailed and written instructions; habits of cleanliness and neatness; willingness to handle animals; familiar with animalfacility and use of autoclave; has to handle 25-30 lb bags of feed; must be able to where there is sawdust;; A12; $6.54.

43537-AW (JCC:5308) Sr. Computer Operator: TMS Unit; shift work, wkends, & holidays; journey level position requiring considerable judgment in analyzing/resolving processing needs & problem conditions; operate in an environ housing several processing units fr several different vendors; make alterations or adjmts to sys w/in prescribed limits to improve overall computer performance; able to perform all requisite console operations; prov tech guidance to & limited coord of a group of operators; clean equip't; locate/file magnetic tapes, etc; QUALIFICATIONS: 33 mos exp in computer operations or equiv work exp; able to operate computer I/O console equip't so as to demonstrate knowl & understanding of computer fundamentals; demonstrated proficient application & comprehension of English lang & arithmetic skills; knowl & exp w/ IBM hdwr & in operation of sys using MVS/JES2; familiarity w/ Data Genl, HP, or Digital equip't preferred; ability to lift 50 lbs; may require working alone, odd shifts, overtime & holidays.; A30; $ 9.97.

33347-LL (JCC:6604) SR S&E TECH - ELECTRO MEC: TMS Unit; construction & operation of sys to measure wave propagation in rocks, as well as fluid flow, deformation & strength; help res assistants w/ various experiments in rock physics; prov tech support for a comprehensive study of physics of wave attenuation in porous rocks w/ fluids; help design mech transducers for rock deformation studies; prov tech assistance in studies of the role of pore pressure in rock deformation; may help in designing & running data acquisition sys using minicomputers; QUALIFICATIONS: knowl of application of piezoelectric & other electrical-mechanical transducers; exp in bldg & using liquid & gas pressure vessels; ability to analyze wave forms to obtain velocity & attenuation in rocks; knowl of physical processes involved in fluid flow thru rocks; exp in rock physics highly desirable, particularly in sedimentary rocks; bkground in computer controlled physical data acquisition desirable.; A34; $10.97.

33565-JB (JCC:6596) S&E Tech: TMS unit; 50%; pick up chemicals fr labs; segregate chemicals by reactive groups; able to recognize hazards & chemical compatibilities; interact w/lab personnel & edu them in proper pkging & storage of chemical waste; recognize chemicals that could be recycled & encourage recycling in labs; perform inspections & rept problems; order & maintain supplies for waste disposal; collect environmental samples; analyze & test samples under direction of Health & Safety professionals; QUALIFICATIONS: must be exp'd in handling chemicals; college chemistry nec; accuracy, neatness, attn to detail, self-direction desir; 18 yrs of age or older; licensed driver; physical strength needed to handle containers of up to 55 gallon drums, manual dexterity reqd; A28; $9.5.

1349-AW (JCC:3606) MAILING MACHINE OPR I: Receive mail fr Univ Dept; organize mail by Univ acct/type & destination of mail; affix postage & place in sacks for delivery to Post Offc; keep daily logs of all postage transactions; operate a limited number of mailing machines & related equip't; sorting mail by zip codes; QUALIFICATIONS: some knowl of postage rates & mailing machine helpful; ability to do simple math calculations & pay atten to detail; must have equiv to high sch'l reading & math ability.; A12; $6.54.

33289-TC (JCC:5638) LIFE SCI TECH I: 50%; simple cell culture: prep of media, solutions, sterilization of apparatus, cell counting; use of basic lab equip't: balance, freeze-drier, sterile hoods, filtration, etc; DNA & protein assays, on a routine basis, supervised; use of spectrophotometer; prep of human & animal skin for cell harvest; QUALIFICATIONS: high sch'l diploma or equiv w/ chemistry; prev lab exp desirable.; A18; $7.5.

18939-PB (JCC:7324) FOOD SERVICE WORKER IV: TMS Unit; Mon, Tues, Wed, 6-3pm; Sat, Sun, 7-3:30pm; high quality food prep, portion control, & sanitation procedures required; cooks breakfast & lunch for 350 to 400 people; prep all hot food on wkdays & for brunch on wkends; brunch counts are about 400-500 people; respon to open kitchen; work w/ other cooks & helpers; give instructions to student helpers or kitchen helper when working w/ you; English instructions; must work on clean up of kitchen & equip't; QUALIFICATIONS: exp in large volume cooking & basic knowl of high quality food prep; able to read & speak English; able to stand for long periods & lift heavy loads; must work wkends.; A20; $7.91

29676-JB (JCC:7654) CUSTODIAN: TMS Unit; 7:30-4pm; performs daily cleaning, mopping, waxing, vacuuming, cleaning restrooms, etc; washes walls & woodwork by hand or using industrial equip't; spot cleaning, shampoos, waxes, dusts & oils furniture; QUALIFICATIONS: knowl of cleaning & waxing methods & mat'ls used in light cleaning; knowl of related safety procedures.; A13; $6.68.

Nonexempt

29960-BP (JCC:2078) ADMIN ASST I (N): Grant & contract admin for entire faculty, incl prep of budgets, coord of submission of proposals to granting agencies; monitor monthly budget statements for dept operating, salary & gift accts; monitor 6 profs' res grants using budget statements; supv half-time offc assistant & offc staff; answer questions requiring judgment, knowl & interpretation of Univ policies & procedures; keep personnel & payroll records; act as dept contact for maintenance of physical facilities; act as dept property administrator; QUALIFICATIONS: typ 65; excel verbal & written skills required; proven ability to prep financial reports; work accurately w/ detailed information; prev exp in academic environ extremely desirable; familiarity w/ Univ procedures & policies helpful; send appl/resume to Sally Tremaine, Chemistry Dept.; B16; $1593-1671.

36583-BP (JCC:2454) OFFICE ASST II: Assist admin assistant w/ daily maintenance of automated student record file; expected to become familiar w/ guidelines governing the aid programs available to Stanford students & procedures followed in making award; assist w/ output of automated sys; proofread aid notices; respon for mailing of notices; prov assistance w/ other program functions, such as assessment of financial aid applications using Uniform Methodology, typing, phone work & some filing; QUALIFICATIONS: typ 50; clear, legible handwriting for preparing of key punch documents; demonstrated ability, w/out close supvn, to work accurately w/ numbers & repetitious assignments; exp w/ an automated sys helpful, but not nec; send appl/resume to Sue Wood, 214 Old Union.; B09; $1130-1189.

29256-BP (JCC:2596) SECY II-SPEC Prov full sec'l serv to 1 professor in conjunction w/ 3 other profs; typ corresp class notes, reports, proposals & tech papers; maintain files; make travel/hotel arrangements; proofread articles for journals; plan & coord seminars; keep track of profs' calendars; screen phone calls; QUALIFICATIONS: typ 70; s/h helpful; min 3 yrs sec'l exp; fast accurate typing (tech typing exp, equations, tables, figures, or willing to 1 learn); ability to exercise judgment; well organized/ability to handle work-flow fr various sources; facility in use of English grammar & spelling in editing/writing required; good inter-personal skills; send appl/resume to Prof. Hesselink, Durand 377.; B12; $1310-1373.

29443-PM (JCC:2596) SECY II-SPEC: Sec to several faculty members in different GSB teaching areas; prep & typing of course mat'ls, manuscripts, drafts, res papers & genl corresp, incl tech equations (Greek & mathematical); tape transcriptions; make travel arrangements, keep calendars, & other routine sec'l duties; QUALIFICATIONS: typ 60-70; several yrs of sec'l working exp, preferably in an academic enviorn; excel typing, spelling & grammar skills; self starter; familiar w/ or willing to learn MUSE word processing; history of dependability also desirable; send appl/resume to Katherine Bostick, Room 248K, Grad Sch'l of Business or call 497-2187.; B12; $1310-1373.

Hospital

COORDINATOR OF VOLUNTEER SERVICES—COMMUNITY RELATIONS (B-304): Responsibilities: The Coordinator of Volunteer Svcs is responsible for the appropriate planning, implementing, monitoring, & coordinating of volunteer svcs in Stanford University Hospital. This dept manager's main function is to assist Hospital in delivery of health care by instituting, monitoring, and/or carrying out programs that recruit, retain, & reward volunteers. The Coordinator reports to the Director of Community Relations & works closely with the SUMC Auxiliary, The Chaplaincy Office, & other ongoing volunteer activities of the Hospital. Qualifications: Graduation from an accredited college or univ with degree in sociology, psychology, or mgmt, or appropriate experience preferred. A minimum of 5 yrs of administrative or supervisory experience in health care institution or in Community organization setting as a volunteer. Demonstrated supervisory ability & effective basic communication skills, reqd. Ability to use tact & develop the capabilities of others is essential. Thorough knowledge of the local community. Permanent. M-F, $25,209-$37,814 annually. Please contact Bradlee Yochem at 497-6361 or send resume to Employment & Recruitment (SUH), 770 Welch Rd, Suite 100, Palo Alto, Ca. 94303.

Staff employment opportunities

Jobs/continued from page 21

27089-PM (JCC:1747) LIBRARY SPEC I: Work in Catalog Dept of Western Lang Collections, Hoover Institution Lib; keys in bibliographic records fr worksheets into RLIN database; corrects coding error that are received on-line during inputting process; files catalog cards, etc; QUALIFICATIONS: typ 45+; atten to detail; good clerical skills; demonstrated ability to learn RLIN II or other automated sys; reading knowl of one or more foreign langs; send appl/resume to J. Kladko, Hoover Institution, Stanford, CA 94305, 497-2054.; B10; $1189-1246.

31083-PM (JCC:1755) LIBRARY SPEC II: 50%; fixed term 1/5/83-8/31/83; performs duties in Genl Reference Dept; searching & verification duties; searches automated data bases such as RLIN, SPIRES & RLG conspectus on-line; searches card catalog & bibliographic tools; prov clerical support in completing forms such as transfer, cancel conservation forms; retrieves & charges mat'ls, both fr STK & other campus libs; typ & photocopies bibliographic instruction mat'ls; reserves rooms & equip't 1 for bibliographic instruction sessions, etc; QUALIFICATIONS: typ 40; ability to learn a variety of sys & procedures; ability to work independently; prev public service exp; prev lib exp; bkground in Social Sci desirable; exp in a univ or res lib also desirable; contact Bob Johnson, Green Lib, Room 223 (497-3152).; B12; $655-687.

31084-PM (JCC:2454) OFFICE ASST II: 50%, fixed term 1/1/83-8/31/83; 9am-1pm; performs duties in Lib Personnel Offc; answers, screens & routes incoming phone calls; receives visitors to offc and/or prov informa as requested; typ routine forms, memos & corresp; peforms genl filing; sort mail, etc; QUALIFICATIONS: typ 45; demonstrated clerical & organizational skills; atten to detail; prev exp in dealing w/ the public; ability to maintain confidentiality as demonstrated in prev exp; prev lib exp desirable; contact Bob Johnson, Green Lib, Room 223 (497-3152).; B09; $565-595.

32379-PM (JCC:2454) OFFICE ASST II: 50%; filing, prep of letters for consult case; answer phones; xeroxing, etc; locating mat'l in lib as needed for faculty; helping offc sec w/ various minor duties; QUALIFICATIONS: typ 50+; able to work independently; judgment in dealing tactfully & informatively w/ matters pertaining to autopsies as well as other dept matters; ability to learn quickly; contact: Phyllis Abuan, 497-6265.; B09; $565-595.

6623-PM (JCC:2554) SECRETARY II: 50%, 1-5pm; typ corresp, forms & manuscripts for prof & members of group fr dictaphone & rough drafts using dictaphone, typewriter & word processing sys; handle dept mail; make travel arrangements for prof; act as bkup when needed for other members of offc staff; answer phones; xeroxing; genl offc duties; prof's lab is engaged in research on psychophysiological aspects of sex; QUALIFICATIONS typ 55-60; good typing skills; exp w/ word processor preferred; use of dictaphone; good phone answering skills; good interpersonal skills; send appl/resume to Gweneth Wood, Physiology Bldg Room 2.; B11; $623-655.

32256-BP (JCC:2554) SECRETARY II: Sec to the Fellows; 9 month continuing position during academic yr; accurate finished typing of manuscripts, class mat'ls, corresp; serve as receptionist, screen variety of calls/inquires concerning programs; sort mail; make travel arrangements; prep univ forms; asst w/ conference/lecture arrangements; set up & maintain file sys; maintain offc supplies; QUALIFICATIONS: typ 65; knowl of word processing (IBM Displaywriter preferred); excel English grammar & spelling essential; ability to carry out wide range of assignments w/ min of supvn; prev exp in academic setting desirable; 2-3 yrs of approp sec'l exp; able to deal effectively w/ a variety of people; send 1 appl/resume to Virginia Shrader, Humanities Ctr, Bldg 300, Rm 302.; B11; $1246-1310.

43503-PM (JCC:2562) SECRETARY III: Sec to Chairman, Dept of Medicine; respon for high volume dictation, manuscript, grant typing; complex scheduling of appts & mtgs; handle confidential informa & calls w/ tact & discretion; interaction w/ faculty, housestaff, students, Univ & other officials in connection w/ Chairman's work; QUALIFICATIONS: type 75; s/h optional; strong typing & English skills; exp w/ dictation equip't & business corresp; knowl of or willingness to learn Xerox 860; flexible; ability to work under pressure & use independent high level judgment; send appl/resume to Sally Mixer, SU Med Ctr, S-102.; B14; $1440-1514.

22521-PM (JCC:2562) SECRETARY III: Full-range sec'l serv for profs & chairman; handle diverse set of assignments on an equal prior basis; prep of draft & final copy manuscripts, reports, speeches, grants, fellowship proposals using IBM word processor; mgmt of substantial corresp incl screening & organizing large volume of mail; answer calls; make appts; set-up mtgs; make travel arrangements & accommodations; scheduling seminars' & Wednesday Club speakers respon, etc; QUALIFICATIONS: excel typing, grammatical & proofing skills; ability to compose letters fr oral instructions; ability to use word processing equip't or willingness to train; knowl of scientific 1 terminology helpful; prior exp in academic setting desirable contact: Lore Karrer, 497-6559.; B14; $1440-1514.

32942-PM (JCC:2596) SECY II-SPEC: Prov full sec'l serv to Faculty in Endocrinology Div of Dept of Med; typ corresp & manuscripts fr long hand & transcription, incl careful proofreading of final drafts; use Xerox word processor; answer telephones; screen & route calls, incl some patient consultation requests; set up & maintain filing sys; sort mail; make travel arrangements & prep expense reports; prep purchase reqs for lab supplies; QUALIFICATIONS: typ 65; fast accurate typing; knowl of or ability to learn Xerox 860 word processor; well organized & able to handle work coming fr several people; good interpersonal skills; knowl of scientific & med terminology desirable; good written & oral commu skills; send appl/resume to Mary Driscoll, Med Ctr S005.; B12; $1310-1373.

29442-PM (JCC:2596) SECY II-SPEC: Sec to several faculty members in different GSB teaching areas; prep & typing of course mat'ls, manuscripts, drafts, research papers & genl corresp; tape transcriptions; make travel arrangements; keep calendars; very heavy technical typing load (equations, use of math & Greek symbols); QUALIFICATIONS: typ 60-70; several yrs of sec'l working exp; preferably in an academic environ; excel typing, spelling & grammar skills; have initiative, be able to prior & to work under pressure; familiar w/, or willing to learn MUSE word processing; history of dependability also desirable; send appl/resume to Katherine Bostick, Rm. 248K, GSB or call 497-2187.; B12; $1310-1373.

33331-PM (JCC:2596) SECY II-SPEC: 50-75%; sec'l serv for a faculty member & a group of grad students; typ tech manuscripts, res proposals & reports, using a computer text editor; make travel arrangements; answer phone; maintain files; mail reprints; maintain mailing lists & reference lists; QUALIFICATIONS: typ 65; good verbal & written commu skills; good English usage & spelling; able to interface effectively w/ faculty, staff, & students; familiarity w/ Univ forms highly desirable; computer text-editing exp or willingness to learn required; send appl/resume to Amos Nur, 365 Mitchell.; B12; $655-687.

30391-TC (JCC:5932) CLINICS STAFF NURSE III: Survey Ctr Supvr in Salinas for Stanford Heart Disease Prevention Program's Community Study; daily mgmt & supvn of 3 proj staff (incl major respon for hiring, training & evaluating performance); recruitment & scheduling of participants in survey, conducting med & behavioral interviews, obtaining med & physiological measurements on survey participants; maintaining records & files, etc; QUALIFICATIONS: valid RN license in Calif w/ at least 3 yrs' exp in a public health setting; supvry & med records abstracting exp & exp in clinical research required; commu easily w/ wide range of people; perform interviews to collect accurate, standardized informa; ability to abstract med records; familiarity w/ nec equip't to obtain blood pressure, blood samples, height & weight & conduct low-level exercise test; bilingual English/Spanish preferred.; K03; $1981-2144.

33713-PM (JCC:2714) MED SERV ASST III-SPEC: 7:45-4:30; patient contact & payment arrangements on balances due dept; determines patient's ability to pay & makes approp credit arrangements if nec; review & process assignments of amounts for collection; review & maintain files of accts in which notice of bankruptcy or probate has been filed;review & maintain all delinquent amounts, etc; QUALIFICATIONS: must possess excel abilities in commu fully w/ patients, family members, peers & mgmt regarding matters of extreme sensitivity; bkground in genl health care business setting; retail-consumer credit or collection environ; good offc skills; 1 yr college exp or related exp; contact: Mike Bass, 525 University Ave. Suite 400.; B12; $1310-1373.

13017-BP (JCC:2554) SECRETARY II: Acts as undergrad sec; keeps student records; processes class records; works w/ undergrad student organization; liaison for student/alumni activities; typ letters, reports, syllabi, bibliographies & recommendations; heavy interaction w/ faculty & students; bkup for Dept Sec on phones & w/ visitors, & interprets dept & univ policies; operates offc machines, etc; QUALIFICATIONS: typ 65; excel grammar, commu & typing skills; knowl of or willingness to learn word processing; deal effectively w/ students, faculty, & staff; detail-oriented & well-organized; capable of working effectively under pressures of deadlines, interruptions & activities of a busy offc; send appl/resume to Barbara Wawrzynsk, History Dept.; B11; $1246-1310.

31085-PM (JCC:1755) LIBRARY SPEC II: Processes books on-line with MARC, LC & RLIN member copies, including: compares books to bibliographic record to ensure accuracy, makes bibliographic changes as necessary, uses RLIN II system to update descriptive cataloging for mat'l in languages & classifications to conform w/ current SUL cataloging policy; searches MARC, SUL main catalog, Lib of Congress printed copy, Name Authorities, Monograpgic Series to verify name headings & series treatment; types authority cards for personal & corporate name headings; etc; QUALIFICATIONS: attention to detail; prev lib exp, pref w/ technical processing; reading knowl of one Western European language; ability to work independently; exp w/ automated system; prev exp with RLIN II desirable; send appl/resume to Bob Johnson, Green, Room 223, (497-3152); B12; $1310-1373.

17846-PM (JCC:2512) OFFICE ASST III-SPEC: Answer phones; route calls; type messages; type routine letters, memos, forms, manuscripts grants; operate xerox 860 word processor (will train); order & maint supplies; transcribe from dictaphone; maint files; photocopy documents; handle appts, etc for Chief of Immunology; generally asst admin asst; learn medical terminology; QUALIFICATIONS: Type 65 wpm; must be an excellent typist & speller; good interpersonal skills; willingness to leran medical terminology; send appl/resume to Claire Wolf, Med Cntr M215, 497-7900.; B12; $655-687.

30479-BP (JCC:2554) SECRETARY II: W/ other sec to prov sec & clerical support to 10 professional staffin the Offc of Benefits & Records (Personnel); type correspondence & special reports from written drafts, shorthand notes, & dictating equip w/ particular attention to spelling, grammar & format; serve as receptionist for staff; screen calls & direct them (for 10 lines) & visitors; maint calendars, schedule appts, mtgs & mtg rooms; take, draft & circulate minutes for mtgs; prov admin support on spcl projects; write & run simple computer programs to produce stat reports & labels; using CRT terminal enter data into computer; QUALIFICATIONS: Min 2-3 yrs sec exp; basic skills including dictaphone; word processing skills (or willingness to learn) pref; exp with WYLBUR and/or other interactive computer system pref; send/appl resume to Jeannie Thomas, Old Pavilion, Personnel Dept.; B11; $1246-1310.

31087-PM (JCC:2596) SECY II-SPEC: Manages the Assoc Dir's calender & time, schedules & commits the Assoc Dir to mtgs & conferences; organizes & schedules mtgs of sev'l groups; manage the flow , control, prioritization & distribution of incoming & outgoing mat'ls in English & a variety of foreign languages, including correspondence, reports & publications; manages file system; types a variety of mat'ls; initiates routine correspondence w/ vendors, etc; types Latin, French & Italian on occasion; takes transcription; photocopies; asst in prep of budget; etc; QUALIFICATIONS: Prev sec exp; prev public service exp; attention to detail; demon ability to use transcribing machine; demon organz'l skills; reading ability in French, Italian, German or Latin; background in humanities or soc sci desirable; knowl of and/or exp inacademic lib; send appl/resume to Bob Johnson, Green Lib, Room 223 (497-3152).; B12; $1310-1373.

33710-PM (JCC:2454) OFFICE ASST II: 7:45-4:30; representing Faculty Practice Program & maintaining good patient relations; respon for receiving incoming patients, vendors & visitors; notifies indiv of arrival of visitor & maintains log of walk-in patients; respon for proper appearance of lobby/reception area incl availability of coffee & magazines; operates a multiple automatic Horizon Telephone switchboard; monitors Aid sys sequencer & maintains records of calls; trains relief personnel; respon for prep & typing of requested insurance billings; QUALIFICATIONS: typ 35; requires good manual dexterity, pleasing telephone voice, & good verbal skills; min of 1 yr's training/exp in operating a telephone switchboard w/ reception respon; knowl of genl offc equip't; some knowl of med terminology; contact: Ginger Hummer or Robbin Moreno, 525 Univ. Ave., Suite 400, Palo Alto, CA.; B09; $1130-1189.

Rental housing

HOUSING AVAILABLE

□ **June to Oct. 1, '83:** Furn. campus hse, 4BR/2BA, + cottage BR. 4 carport, auto sprinklers, full solar hot water. $1200/mo. incl. gardener, water. Gas & elec. xtra. Deposit + 1st mo. rent req. Call 858-3941 (day), 327-5790 (eve).

□ **Jan. 15 thru Dec. 31, '83:** Furn. contemp. hse close to campus ctr, 2000 sq. ft. 2BR/2BA, 2 studies (can convert to BR), FR, frpl, piano, lush atrium, wooded lot. $1350/mo. incl. gardener, water. Call 857-0479 or 497-9477 (day).

□ **Jan. 10 to June 20, '83:** Lux. condo, fully furn. 2BR/2½BA, study, LR, all appl. Pool, sauna, 24 hr. security. Adult cpl. Call 324-0457.

□ **Regularly avail.:** 1 & 2BR furn. and unfurn. apts. & twnhses, & 3BR/2BA hses. in Palo Alto & Menlo Pk in good nghbrhds. Close to campus. $525 to $800/mo. Call Shirley, (415) 493-2321 or Jane, (415) 968-4957.

□ **NOW:** So. Lake Tahoe, ski cabin. 2BR, frpl, color TV, phone. Adj. to Nat'l forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk. (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3142).

□ **Now:** Furn. rm, w/ktchn priv, DW, W/D, share LR w/frpl, garden, gar. So. Palo Alto hse. $275/mo. + 1/3 util. Call Rose, 856-3792.

□ **NOW:** Prof. male seeks M/F rmmate to share lge 3BR/2BA hse in Foster City. LR/DR, atrium, frpl, skylights & more. See to appreciate, good location. $325/mo. + ½ util. Call John, (415) 572-9850 after 7 pm.

□ **Beg. Feb. 1, '83:** Studio in rear of Menlo Pk hse, fully furn. & equipped. $325/mo. incl. all util (xcept phone) wkly clean., linen change. Nonsmoker, no pets. Call Dr. Lenkey, 322-3717.

HOUSING NEEDED

□ **NOW:** Reliable Stanf. staff seeks hsesit. Pref. long term, 3 to 6 mo. but will consider shorter per. Will give excellent care to hse, pets, plants, yd. Loc. refs. Call Donna, 497-3967 (day).

□ **Sept. '83 thru summer '84:** Visit Prof, Operations Rsrch seeks 3-4BR hse on campus for self, wife & 2 girls. Stanf. refs. Write A. Tucker, Applied Math, SUNY, Stony Brook, NY 11794 or call eves (516) 751-3283.

□ **CHRISTMAS VACATION HSESIT:** Out of the area Univ. faculty person available to hsesit this vacation. Local contact and refs at 851-1361.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Carpools

Ride or form a carpool from Fremont to Stanford. M-F, 8-5. Call Evelyn, 7-1555.

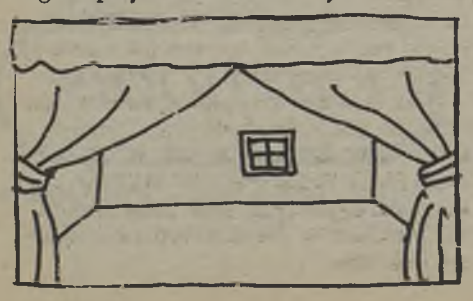
St. Basil's Cathedral in Moscow is part of Jack Kollman's Faculty Club exhibition.

Kollman presents lecture, exhibit

Stanford and Palo Alto area residents will have a double opportunity to experience old Russian art and architecture in a lecture and a photographic print exhibit to be given by Dr. Jack Kollmann, associate of the Center for Russian and East European Studies at Stanford University.

On Tuesday, Jan. 11, Kollmann will give a slide-illustrated lecture entitled, "Medieval Moscow Encounters the Renaissance: Italian Architects in the Kremlin, 15th-16th Centuries," at 4:15 p.m. in Room 4 of the Cummings Art Building, Stanford University.

Kollmann will also present a color photographic print exhibit, "Photographs of Old Russia," in the Faculty Club from Jan. 17 to early March. A reception will be held at the Faculty Club from 4:30 to 6:30 p.m. Tuesday, Jan. 18.



Kollmann, a specialist in the history of the Russian Orthodox Church and of old Russian art and architecture, has taught at Wellesley College, Boston College and Harvard University Extension, and has had several one-person photographic exhibits in Boston, New Haven, and New York City. He is currently working on a book on the Russian Orthodox Church under a grant from the National Endowment for the Humanities.

In his several visits to the Soviet Union, including two academic years spent there, Kollmann has studied and recorded in photographs the rich artistic and architectural heritage of traditional Russia.

Want to try out for *Don Juan?*

Auditions for the Stanford Drama Department's Graduate Directing Workshop production of Moliere's classic comedy, *Don Juan*, will be held at 2 p.m. Sunday, Jan. 9 and at 7 p.m., Monday, Jan. 10 in Room 205 on the second floor in the back hall of Memorial Auditorium.

The play will be directed by second-year graduate student Laurence Maslon, who was the associate director of *King Lear* and *The Good Soul of Setzuan*, both recently presented by the Drama Department. He has also directed several original plays off off-Broadway.

Don Juan, which will be performed March 2-5 in the Nitery, occupies a special place in the canon of France's greatest playwright. Moliere used the already famous legend of Don Juan as the basis of his play, and it proved a great success when it was first performed in February 1665.

However, the highly scandalous material caused the play to be withdrawn from the stage. Only in the last 30 years has it achieved the preeminence it deserves. It combines scandalous observations about life and religion, humanistic philosophy, and outrageous slapstick. It is a seventeenth century *Everyman*; an episodic journey through life with history's greatest lover.

This production will set the play in Sicily in 1920, supporting the modernity of the play. It will combine a Fellini-esque world with a Chaplin-esque sense of comedy.

For further information, call 497-2576.

Festival of Chinese films slated for month of January

The Center for East Asian Studies at Stanford will sponsor a Chinese Film Festival at 7:30 p.m. Tuesday and Thursdays in Memorial Auditorium during the month of January.

Six films provided by the Chinese consulate in San Francisco will be shown. All are in Chinese. Except for "New Year Sacrifice" and "Fifteen String of Cash," all have English subtitles. Synopses of these two will be available at the door. A $1.50 donation will be requested.

The schedule follows:

Tuesday, Jan. 4: "New Year Sacrifice (1956)." In this famous Lu Hsun story, the life of a young maidservant is gradually destroyed through the cruelty of fate and the callousness of society.

Thursday, Jan. 6: "Two Stage Sisters (1964)." During the turbulent years of 1935-50, two sisters end up taking separate paths in pursuit of a stage career. Voted best film to premiere in 1980 at the National Film Theater in England.

Thursday, Jan. 13: "Troubled Laughter (1979)." Nightmare and fantasy interludes are used to help convey the difficulties of being a reporter during the "Gang of Four" days in this imaginative new film.

Tuesday, Jan. 18: "The Second Handshake (1980)." The hopes and dreams of two young scientists in love are frustrated when parental interference and Sino-American hostilities change the course of their lives. Based on a popular underground novel which was banned by the Gang of Four for its focus on love and on intellectuals.

Tuesday, Jan. 25: "Fifteen String of Cash (1956)." A drunken butcher's joke turns into a complicated murder case in this creative screen adaptation of a traditional Chinese Kunqu opera.

Thursday, Jan. 27: "Li Shuangshuang (1962)." Through the use of comedy, this film highlights two real social issues that were creating problems in the countryside: male dominance and excessive Party pressure for communication.

Two experts talk about inventions

Two speakers will discuss invention in a free public program sponsored by the Associates of the Stanford University Libraries at 3 p.m. Sunday, Jan. 16, in Annenberg Auditorium.

Lynn T. White, UCLA professor of history will speak on "Technological Invention in the Western Middle Ages." Niels J. Reimers, director of technology licensing at Stanford, will cover the inner workings of a university technology licensing program from the laboratory to the market in a talk entitled "Sex Attractants, Acoustic Microscopes and Hybridomas."

A reception will follow in the Louis R. Lurie Rotunda of the Cecil H. Green Library.

White, who is both a former Stanford professor and a former president of Mills College, will emphasize specific inventions which are related to books and reading and will place them within the context of the technological movement during the Middle Ages.

The program and the reception are open to the public. There is no charge.

Jacques Taddei

French organist to perform Jan. 12

Stanford's Music Department will present French organist Jacques Taddei in a free concert at 8 p.m. Wednesday, Jan. 12, in Memorial Church.

Taddei is both an international performer and director of the National Conservatory in Rueil-Malmaison near Paris where he teaches piano and organ.

On Jan. 12 he will perform the *Fantasie and Fugue on B-A-C-H* by Liszt, the *B minor Chorale* of Franck, and several movements from Vierne's *Second Symphony for Organ*. His program will conclude with an improvisation on submitted themes.

Taddei won first prize in piano performance at the Paris Conservatory and in 1980 was awarded grand prize in the improvisation competition at Chartres Cathedral. He is a guest of university organist Herbert Nanney.

Don't fear age 39, says Help Center

"There is Life After 39!" is the title of a Help Center workshop for men and women at this crucial stage of life, to be presented from noon to 1:30 p.m. Tuesday, Jan. 18, at the Help Center.

Jean Green, licensed clinical social worker, will be guest speaker.

Participants will consider these questions: How happy are you with decisions you made in young adulthood? and are you considering some changes?

Space should be reserved before Monday, Jan. 13, by calling 497-4577.

Breast cancer workshop

"New Options for Women with Breast Cancer" will be presented from noon to 1:30 p.m. Thursday, Jan. 6, in the Tresidder small lounge.

The film "One in Ten," made by Kate Sphor with the Film and Television Production Center of the Department of Communication, will be shown as a vehicle for promoting discussion of breast cancer and the multiple options for treatment.

To register, call the Help Center at ext. 7-4577.

The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Medical Center, and SLAC employees and their immediate families. All workshops, seminars, and counseling sessions are free.

Vicky Holt

Bella Lewitzky

Women in the Performing Arts series; Holt and Lewitzky open Lyman lectures

"Women in the Performing Arts: Lectures and Performances" will be the theme of the winter-quarter Jing Lyman lectures, sponsored by the Center for Research on Women and the Lively Arts at Stanford.

Vicky Holt, Stanford's director of events and services, will open the series with a talk on the historical perspective of "Women's Role in the Performing Arts" at noon Wednesday, Jan. 5, in Terman Auditorium of the School of Engineering. Holt and Margo Davis, former CROW assistant director, are coordinators of the series.

Bella Lewitzky, founder of the Bella Lewitzky Dance Company, will give a lecture-demonstration at noon Wednesday, Jan. 12, in Terman Auditorium. Lewitzky chose to defy tradition by founding her dance company in the West, rather than New York, and by marrying and raising a family while continuing her career.

Nancy Reich of the Manhattanville College Department of Music, will discuss "Clara Schumann: Artist and Woman" at noon Tuesday, Jan. 18, in Terman Auditorium.

Sylvia Glickman, director of chamber music at Haverford College, will give a piano recital featuring women composers at 8 p.m. Tuesday, Jan. 15, in Dinkelspiel Auditorium. Tickets for her performance are available through the Tresidder Office (497-4317).

The Robin Flower Band will perform at 8 p.m. Tuesday, Feb. 1, in Dinkelspiel. Tickets also are available through Tresidder.

The all-women band includes a mandolin, fiddle and electric guitar. Based in Oakland, the blue grass group already has produced three albums, *Galaxia*, *Flying Fish*, and *Green Sneakers*.

Daphne Muse of the Mills College Ethnic Studies Program, will discuss "Black Women in Jazz" at noon Wednesday, Feb. 9, in Terman.

"Moments of Being," a program of music and dramatic readings based on Virginia Woolf's diary, is scheduled for 8 p.m. Tuesday, March 8 in Dinkelspiel.

Program participants from the Stanford Music department will include Lila Stuart, soprano; Jodi Gandolfi, pianist; Nancy Beagle, actress; with music by Dominic Argento.

Additional performances will be announced later.

Other winter quarter events outlined in the "CROW Newsletter" include a conference on "Communities of Women," sponsored by *Signs* magazine, from 10 a.m. to 4 p.m. Sunday, Feb. 20, in Annenberg Auditorium. Keynote speaker will be Wellesley College President Nannerl Keohane, former Stanford political science professor.

Eleanor Holmes Norton, of the Georgetown University School of Law, will speak at 8 p.m. Monday, Feb. 21, in Kresge Auditorium of the Law School. She formerly headed the Equal Employment Opportunity Commission.

"Having a Baby: Personal and Political Considerations" will be discussed from 2 to 5 p.m. Friday, March 4, in Tresidder Memorial Union Room 270.

"Women's History: The Mainstream and the Margin" will be discussed at 2:30 p.m. Thursday, March 10, at the Bechtel International Center. This program is cosponsored by the American Association of University Women.

Further information may be obtained by calling CROW at (415) 497-1994.

Oscar Shumsky, violinist, to perform Friday

The Lively Arts at Stanford will present Oscar Shumsky, violin, in collaboration with David Gross, piano, at 8 p.m. Friday, Jan. 7, in Memorial Auditorium.

The program will consist of Bach's "Partita No. 1 in B Minor for Solo Violin"; Beethoven's "Sonata for Violin and Piano, Op. 96, in G Major"; Smetana's "Aus der Heimat" ("From the Homeland"); and Franck's "Sonata in A Major for Violin and Piano."

Shumsky, long considered a "violinist's violinist" for his sensitivity, integrity, and skill, was a child prodigy. At the age of eight he appeared as soloist with the Philadelphia Orchestra under Leopold Stokowski. He became the youngest pupil ever to be accepted by Leopold Auer, the great Hungarian violinist and pedagogue. In this early career, he performed with the Boston and Baltimore Symphonies and the New York Philharmonic, as well as with the Philadelphia Orchestra.

After Auer's death, Shumsky studied with Efrem Zimbalist at the Curtis Institute of Music. In the years immediately following his graduation in 1936, he served as solo violinist for NBC Radio's weekly broadcasts, as a member of Toscanini's NBC Symphony, and as first violinist of the Primrose Quartet.

Shumsky is an outstanding violist as well as violinist, and pioneered the recital for both violin and viola in the early '50s. In 1962, he received the Ford Foundation Award for outstanding achievement as a violinist. He served as conductor and music director for the Stratford Music Festival in Canada for a number of years. Since that time, he has maintained parallel careers as soloist, chamber music performer, conductor, and teacher.

Oscar Shumsky

Shumsky has been on the violin faculty of the Juilliard School of Music, the Peabody Conservatory, the Curtis Institute, and Yale University. His recent recordings of the Bach solo violin works and Mozart Violin Sonatas with Arthur Balsam have been highly acclaimed. His latest recording project is the complete works of Fritz Kreisler, an early mentor, which includes over 100 works.

Gross studied piano with Arthur Loesser at the Cleveland Institute of Music, and has performed in concert with members of the Cleveland and Chicago Symphonies, and as a soloist with the Chicago Chamber Orchestra.

In addition, he has played with Arnold Steinhardt, Jaime Laredo, and Alexander Schneider at the Marlboro Music Festival. He is a resident of Portola Valley, was formerly on the urology and radiology faculties at Stanford Hospital, and is now a physician at O'Connor Hospital in San Jose.

For ticket information, call Tresidder ticket office, 497-4317, BASS, and other Bay Area ticket agencies.

Music Department: popular trio Sunday

A popular clarinet/cello/piano trio opens Stanford Music Department's winter quarter concert series at 8 p.m. Sunday, January 9, in Tresidder Lounge. Members of the trio are William Menkin, clarinet; Aileen James, piano; and Roger Emanuels, cello.

James and Menkin are both freelance musicians with D.M.A. (Doctor of Musical Arts) degrees from Stanford. Cellist Emanuels is a member of the San Jose Symphony.

Their program will include Milhaud's "Duo Concertant for clarinet and piano," written in 1956; the world premiere of "Trio," by Music Department lecturer Jonathan Berger; "Cello sonata, op. 40" by Shostakovich; Beethoven's melodic "Trio, op. 11"; and a lighthearted "Fantasy for clarinet and piano" by Rossini.

Tickets for the January 9 concert are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and the door.

Conflict in Asia talk at I-Center

"Conflict in North East Asia: The People's Republic of China, Taiwan, Korea" is the topic of the first Tuesday luncheon talk in the winter quarter series at the Bechtel International Center at noon, Jan. 11.

Harry Harding, Jr., associate professor of political science at Stanford, is featured speaker. Harding, a noted authority on Sino-American relations, is a member of the US-PRC Joint Commission on Scientific and Technological Cooperation and of the National Committee on US-China Relations. He has conducted research in Taiwan and Hong Kong and has visited the People's Republic of China numerous times.

His publications include *Maoist Theories in Policy Making and Organization*, *Cultural Revolution in China*, *China's Quest for Independence: Policy Evolution in the 1970s*, and *China Under Threat: The Politics of Strategy and Diplomacy*.

During winter quarter programs will focus on more specific regional and issue cases, and in the spring, on ideas and plans for the resolution of acknowledged problems. Future winter quarter Tuesday talks will cover India's development, new leadership in the USSR, Poland's economic problems, the superpowers and militarism, acid rain, Latin America's political and economic chaos, and the new Swedish politics.

Tickets for the luncheon, at $2.50, are now on sale. Brown baggers are also welcome at no charge. For information, phone 497-1831.

Women in Sciences: Berlin on DNA

Vivian Berlin, Ph.D. candidate in biological sciences, will speak on "Recombinant DNA Technology: the Transformation of Biology" at 4:15 p.m. Thursday, Jan. 13, in Room 420-041 (entrance in the basement of the Math Department).

Her lecture is one of a series sponsored by Stanford Women in Science and Engineering (WISE). The series is designed to promote interdisciplinary discussion by providing a regular forum where nontechnical lectures are followed by informal discussion over refreshments.

The lectures are cosponsored by the dean of graduate studies and research. Other talks this quarter will be given by math Ph.D. candidate Ruth Williams and electrical engineering Prof. Susan Owicki. All members of the Stanford community are welcome.

Calendar

Calendar items should be delivered to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Jan. 5, to cover the week of Mon., Jan. 17 through Sun., Jan. 23.

Events must now be submitted on forms. Those wanting copies should call Events and Services, 497-2551.

LATE ANNOUNCEMENTS

Wed., Jan. 5. Book Sale: Books and periodicals in many fields. Hardbound $1.50 and up, paperbacks 25 cents and up, periodicals 10 cents. 11 a.m.-1:30 p.m. Green Library, West Wing, first floor, Room 101.

Computer Systems Laboratory Seminar: "Cryptographic Protocols and Statistical Database Security" with Dr. Dorothy E. Denning, Purdue Univ. 4:15 p.m. Skilling Aud.

Thurs., Jan. 6. Solid Mechanics Seminar: "Project Cognac, the World's Deepest Offshore Platform" with Prof. Emer. Louis London. 4:15 p.m. Skilling Aud.

Stanford Film Society: "City Lights" with Charles Chaplin; and "Sherlock, Jr." with Buster Keaton. 7:30 p.m. Kresge Aud. $2.

Fri., Jan. 7. Structural Biology Dept. Lecture: "Molecular Mechanism of Promoter Selection in Gene Transcription" with Dr. Cheng-Wen Wu, SUNY at Stony Brook. Noon. Fairchild Bldg., D102.

Materials Science and Engineering Dept. Colloquium: "Semiconductor/Liquid Junctions" with Nathan S. Lewis, S.U. 3:30 p.m. Peterson Laboratory, Room 550A.

Law School Film Society: "Philadelphia Story." 8 p.m. Kresge Aud. $1.50.

Sun., Jan. 9. Music Dept. Concert: William Menkin, clarinet. With Aileen James, piano. and Roger Emanuels, cello. Milhaud—Duo Concertant for clarinet and piano; Jonathan Berger—Trio (world premiere); Beethoven—Trio, op. 11. 8 p.m. Tresidder Lounge. $4/$2.

MONDAY, JANUARY 10

Structural Biology Dept. Lecture: "Maximum Entropy and the Foundation of Direct Methods in the X-Ray Phase Problem" by Dr. Gerald Bricogne, College of Physicians and Surgeons, Columbia Univ. Noon. Fairchild Bldg., Room D102.

Biological Sciences Dept. Seminar: "Major Histocompatibility Gene Complexes: Molecular Diversity and Regulation in a Multigene Family" with Dr. Pat Jones, S.U. 4:15 p.m. Room T175, Herrin Hall. Open to the public.

Stanford Film Society: "Broken Blossoms," a story of London's Chinatown, and "Strike." 7:30 p.m. Kresge Aud. $2.

Wrestling: Vs. Arizona State. 7 p.m. Maples Pavilion.

TUESDAY, JANUARY 11

Stanford Staffers: Assoc. prof. Curtis N. Runnels, Classics Dept., shows slides and talks about the Stanford team of professors and students in the course of their archaeological research project. Noon. Anthropology Museum., Bldg. 110. Bring bag lunch. Open to all.

I-Center Tuesday Lecture-Lunch Series: "Conflict In NE Asia: The People's Republic of China/Taiwan/Korea" by Assoc. Prof. Harry Harding, Jr., Political Science Dept. Noon. I-Center. $2.50 includes hot lunch. Brown baggers welcome.

Tower Talks Presents: "A National Security Model" by Bruce Bueno de Mesquita, visiting scholar. 3:30 p.m. Lou Henry Hoover Room, Hoover Tower. Public cordially invited.

CREES Lecture: "Medieval Moscow Encounters the Renaissance: Italian Architecture in the Kremlin, 15th-16th Centuries" by Dr. Jack E. Kollman, Jr. Slide illustrated. 4:15 p.m. Room 4, Cummings Art Bldg. Public cordially invited.

WEDNESDAY, JANUARY 12

Structural Biology Dept. Lecture: "Splicing of the Ribosomal RNA Precursion of Tetrahymena: RNA Recombination Directed by a Ribozyme" by Dr. Thomas Cech, Univ. of Colorado, Boulder. Noon. Lecture Room M114.

CROW Women in the Performing Arts Lectures: "Women and Dance" by Bella Lewitzky, founder of the Bella Lewitzky Dance Company. Noon. Terman Aud. Public cordially invited.

Electronics in Medicine Seminar: "Image Processing for the Visually Impaired" with Dr. Sally Wood Stanford/VA RR&D Center. 4:15 p.m. McCullough 134.

Computer Systems Laboratory Seminar: "A Small Talk Machine" with Alan Shiffman, Fairchild. 4:15 p.m. Skilling Aud.

Basic Science Research Colloquium: "Mechanism of Sensitization of Tumor Cells in Alkylating Agents by Nitroimidazoles" with Dr. J. Martin Brown, S.U. 5 p.m. Fairchild Aud.

THURSDAY, JANUARY 13

Stanford Women in Science and Engineering Lecture: "Recombinant DNA Technology: The Transformation of Biology" by Vivian Berlin, doctoral candidate in Biological Sciences Dept. 4:15 p.m. Room 420-041 (entrance in basement of Math Dept.). All members of Stanford community welcome.

Condensed Matter Physics Seminar: "Defects in Glassy Se: An Anderson Negative-U Center?" with David van der Bilt, UC-Berkeley. 4:15 p.m. Applied Physics 200.

CEAS Lecture: "The Rise of Nakasone, Japan's new prime minister, in the Context of Japanese Political Development" by Prof. Kan Ori. 4:15 p.m. Room 238, Lou Henry Hoover Bldg.

Solid Mechanics Seminar: "Mixed-Mode Fracture of Composite Materials" with Prof. H. T. Hahn, Washington Univ., St. Louis. 4:15 p.m. Skilling Aud.

January Chinese Film Festival: "Troubled Laughter" (1979). Nightmare and fantasy interludes are used to help convey the difficulties of being a reporter in the "Gang of Four" days. 7:30 p.m. Memorial Aud. $1.50 donation.

CEAS/East House/Okada House/History Dept. Film: "Night Drum" dir. by Tadashi Imai. A woman is seduced by a charming musician and her husband kills both, destroying himself by the act. 7:30 p.m. Bldg. 420, Room 41, Psychology Dept. Free.

Observe the orchid at Green Library

The Department of Special Collections has published *The Orchid Observed: Five Centuries of Botanical Illustration*, a catalogue of the collection of orchid books it is exhibiting through Jan. 11.

Through a gift from Glikbarg Foundation, a revolving fund has been established to help underwrite costs of exhibit catalogues and publications. *The Orchid Observed* is the first catalogue produced with support from the fund.

William K. Glikbarg's collection of botanical books and several volumes from the Stanford collection are on view through next Tuesday in the Lurie Rotunda of the Green Library, surrounded by live specimen orchids loaned by Rod McLellan Co.

The catalogue presents 40 illustrations included in the exhibit, depicting the evolution of orchid illustration. Fifteen of the catalogue reproductions are in color.

The earliest illustration is a woodcut of *Triorchis sera* from Leonhart Fuchs' *De historia stirpium*. A medical doctor, Fuchs published his herbal in 1542. The genus Fuchsia later was named in his honor.

In her introduction to the catalogue, exhibit curator Sara Timby explains that the 19th century "was the orchid's grand period in Western social history. Thousands of new species were discovered around the world by highly competitive orchid hunters, and wealthy gentlemen-growers and commercial houses vied to obtain new and unique plants.

"Beautiful hand-colored engravings and lithographs were featured in the sumptuous books produced to cater to the new orchidomania, and by the end of the century the growing market for books with color plates contributed to the development of chromolithography."

in his introductory notes for the catalogue, Glikbarg says he became interested in collecting orchid books when he saw 19th century chromolithographs.

The 96-page catalogue is available for $10 at the exhibit.

I-Center Other Cultures Film Series: First night of the January Australian Mini Film Festival. "Pictures That Moved: 1896-1920" documents the film industry from its beginnings up to WWII"; and "Sydney" of the "Cities of the World" series, narrated by author/feminist Germaine Greer. 7:30 p.m. Bechtel International Center. 75 cent donation requested.

FRIDAY, JANUARY 14

Materials Science and Engineering Dept. Colloquium: "Microduplex Structures: Advantages and Disadvantages" with prof. Gareth Thomas, UC-Berkeley. 3:30 p.m. Peterson Laboratory, Room 550A.

Numerical Analysis Seminars: "Richardson's Iteration for Non-Symmetric Matrices" with G. Opfer, Hamburg. 4:30 p.m. Math 380C.

Stanford Law School Film Society: "The Front." Woody Allen in a serious role. 8 p.m. Kresge Aud. $1.50.

Music Dept. Concert: Alma Trio. Andor Toth, violin; Gabor Rejto, cello; Adolph Baller, piano. Beethoven—Trio in B-flat Major, op. 97, "Archduke"; Bloch—Sonata for cello and piano; Brahms—Trio in B Major, op. 8. 8 p.m. Dinkelspiel Aud. $4/$2.

Archaeological Institute of America Lecture: "Greek Towers (Pyrgoi)" by Mark Munn, S.U. 8:15 p.m. Room 370 (opposite the Physics Tank). Public cordially invited.

Women's Swimming and Diving: Vs. Long Beach State. 1 p.m. deGuerre Pools.

SATURDAY, JANUARY 15

Music Dept. Concert: Hsueh-Yung Shen and Helene Wickett. Music for piano four-hands. Schubert—Grand Duo, op. 140; Shen—Diurne (1982); Stravinsky—Rite of Spring. 8 p.m. Dinkelspiel Aud. Free.

Men's Rugby: Vs. Hastings Law School. 1 p.m. Maloney Field.

Wrestling: Vs. UC-Davis and Humboldt State. 5 & 7 p.m. Maples Pavilion.

SUNDAY, JANUARY 16

University Public Worship: Students Worship Service, 8:30 a.m.; Francis Geer, asst. dean of the chapel, 11 a.m.

Men's and Women's Swimming and Diving: Stanford Relays. 1 p.m. deGuerre Pools.

The Lively Arts at Stanford: Musical Offering Chamber Ensemble. Five instrumentalists playing violin, oboe, bassoon, cello and harpsichord perform a program of Telemann, Boismortier, Zelenka, Bach, Corelli and Handel. 2:30 p.m. Dinkelspiel Aud. $9.50, $8.50; students $3 off these prices.

University Libraries Associates Lectures: "Technological Invention in the Western Middle Ages" by prof. Lynn T. White, History Dept., UCLA, and "Sex Attractants, Acoustic Microscopes and Hybridomas" by Niels J. Reimers, director of technology licensing at Stanford. The topic of both lectures is "Invention." 3 p.m. Annenberg Aud. Public cordially invited.

ASSU Sunday Flicks: "Missing." Jack Lemmon in an excellent performance of political intrigue. 7 & 9:30 p.m. Memorial Aud. $1.50.

Tresidder Concert: Suzanne Macahilig, piano. Bach—French Suite in G Major; Beethoven—Sonata in E-flat Major, op. 7; Copland—Piano Variations; Ravel—Valses Nobles et Sentimentales; Chopin—Fantaisie—Impromptu, op. 66; Scherzo in B minor, op. 30. 3 p.m. Tresidder Lounge. Free.

EXHIBITS

Ski Experience. Early and rare photographs of Ansel Adams. Some sixty prints made at the request of Donald and Mary Curry Tresidder of the Yosemite Camp and Curry Company. Stanford Museum, Miedel Room. January 18-March 20.

Recent Acquisitions. Paintings, drawings, sculptures and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. January 11-February 20.

Inventions. An exhibition of books and manuscripts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. January 15-April 8.

Christmas Books from the Mary Schofield Collection. Children's books. The Exhibits Gallery, second floor, West Wing, Green Library. Through January 28. 8-6 Mon.-Thur., 8-5 Fri., 9-5 Sat.

The Big Squeeze and Other Works by Dolly Du Prau. Acrylic on canvas. Reception, Fri., Jan. 7, 5-7 p.m. Bechtel International Center. January 5-30.

The Orchid Observed. Five centuries of botanical illustration and exhibit of books from the collection of William K. Glikbarg and the university libraries. Lurie Rotunda, Dept. of Special Collection, second floor, West Wing, Green Library. Through January 11.

CAMPUS REPORT

Volume XV, Number 15 | A publication for Stanford University faculty & staff | January 12, 1983

Most faculty seen working on computer

Within four years, four out of five Stanford professors will have microcomputer-based professional work stations in their office, home, or both, the Center for Information Technology believes.

Its prediction compares with a recent survey report that 60 percent of Stanford faculty and staff now use a computer terminal or word processor at work and 25 percent use terminals at home. The survey covered only those living on campus or in Palo Alto.

Data compiled by CIT last September showed the University has 17 mainframe computers, 343 minicomputers, and hundreds of microcomputers and word processors.

In a report distributed to the Faculty Senate Thursday, Jan. 6, CIT Director Edward E. Shaw, associate provost for information systems, said a "realistic prediction" for January, 1987 is that:

1) All, or almost all students will have microcomputers or easy access to them;

2) A majority of professional staff will have microcomputer-based workstations;

3) All support staff will use, as needed, computer-based technologies in their work;

4) More than half of the University's scholarly output will be in machine readable format—and the proportion could easily be higher;

5) All of the University's 250-plus departments, academic and administrative, will have office information systems supporting departmental activities;

Donald Kennedy does not empty his own wastebasket every day--this was a ceremonial act. See page 2 for the dumpster story.

University may trim tuition, salary hikes

Responding to changes in both the economic and political climate, Stanford may lower its projected tuition and salary increases for 1983-84, Provost Albert Hastorf told the Faculty Senate Thursday, Jan. 6.

The University may also move away from its long-held policy of seeking full cost recovery on government sponsored research, President Donald Kennedy said, a change he advocates "with considerable reluctance."

"I think there's a helluva big depression out there," psychologist Hastorf told his faculty colleagues.

The University may "substantially lower" its previously projected tuition increase of 12 percent for 1983-84, he said. The Board of Trustees will set the rate at its February meeting. Stanford's current tuition is $8,220.

Undergraduate admissions applications currently are running about 800 ahead of last year. But Hastorf said "I feel strongly we've been driving tuition (increases) too hard and fast. We've got to get (the rate of increase) down."

The University's long-term forecast, discussed with the Senate last fall, assumed tuition would rise six percent

continued on page 6

Substantive progress in affirmative action

During the past four years, Stanford has made substantive progress in affirmative action, according to Santiago Rodriguez, the University's affirmative action officer.

There has been "very slow but consistent growth" in the proportion of minority employees in exempt job categories (ranges C-4 through 10), he noted in an interview. This has increased from 13.6 to 16.4 percent since 1978.

"All levels of management continue to require special attention," according to the University's latest affirmative action report, published Wednesday, Jan. 12, in *Campus Report*. (See 12-page center insert).

The University needs to focus on recruitment of minorities for middle and upper level management positions, Rodriguez believes. This is particularly true for blacks and Hispanics.

For women, the focus should be on upward mobility, since "the talent is already here."

More than two-thirds of the total University workforce is female. Women now have more than half the exempt jobs outside traditional clerical areas, he noted.

On the faculty side, the report notes that there were 12 women among the tenure-track appointments in the School of Humanities and Sciences. The women included two blacks and one Hispanic. In addition, one black male faculty member was appointed.

This is the highest number of women and minorities appointed in the School during the past decade.

In addition, there were nine promotions to tenure, of which five were women, including one Asian.

The dean is considering granting additional funds for campus interviews of women and minorities who are among the finalists in faculty searches. Often departmental funds are not sufficient to cover more than one or two finalist interviews.

In the Medical School, the report notes, increased minority representation is "highly dependent" on a broader pool of research-oriented faculty candidates.

Last year's student enrollment was 34 percent female and 33 percent minority, placing Stanford "at the forefront of medical schools in the nation with respect to affirmative action in student affairs."

In other areas, Rodriguez noted that the University has appointed a policy group on programs for disabled people and may soon name a policy group on affirmative action. This would review past progress and suggest where the University should move over the next three to five years.

Queen, Duke coming to Stanford

Queen Elizabeth and her husband, the Duke of Edinburgh, will be the lunch guests of Stanford President and Mrs. Donald Kennedy at the President's House March 3.

The visit will take place during the royal tour of California.

Guests at the lunch will include representatives from various parts of the Stanford community, including students, says Jeanne Kennedy, who is director of community relations for Stanford University Hospital.

This will be the first time that a British head of state has officially visited Stanford. A member of the royal family, Prince William of Gloucester, who was first cousin to Queen Elizabeth, was a graduate student at Stanford during the academic year 1963-64, having come from Cambridge University, England. He was killed in a plane accident in 1972.

After the lunch the royal party will visit the Hewlett-Packard plant in Silicon Valley and then return to San Francisco. That evening there will be a civic reception and dinner in their honor at the Palace of the Legion of Honor, hosted by President and Mrs. Reagan.

Hoover House

The President's House on the Stanford campus, named after its first occupants, U.S. President Herbert Hoover and his wife, was formally dedicated as a California State Historical Landmark in 1978, and is also recorded in the National Register of Historical Places in Washington, D.C.

Mrs. Herbert Hoover often sat in on the planning of the house, which was designed by A. B. Clark and his son, Birge Clark. She was supplied with sketch pads and a drafting table so that she could work along with the draftsman, Charles Davis. The plans and decor were often changed even when construction was underway.

The house is built of reinforced concrete and is embedded in the side of Reservoir (San Juan) Hill, a site chosen by the Hoovers for its magnificent view of the lower Bay and mountains.

The house has three floors: the lower level has guest rooms; the middle level includes the dining room, kitchen, master bedroom and study; there are two bedrooms and a study on the top level.

There are fireplaces in most rooms, including the lobby and main terrace. Terraces on each level are connected by staircases. The beamed ceiling in the living room is lighted by 300 25-watt lamps hidden in the coving.

NLRB charges USW

The National Labor Relations Board has set a hearing for March 24 on charges that United Stanford Workers engaged in unfair labor practices when its members and supporters picketed four construction sites during a month-long strike against the University in September.

In its complaint, the NLRB alleges that USW engaged in unlawful secondary picketing at construction sites at Stanford Linear Accelerator Center, the Cardiovascular Research Building, the Peter Coutts housing project, and the new student housing complex.

A location for the 9 a.m. hearing has not yet been announced.

Parking fines raised

Captain William Wullschleger of the Stanford Police reports that the penalty for nonhandicapped people who park in spaces reserved for the handicapped is now $52 (a $50 fine plus $2 assessment for new jails).

That gives some additional incentive to leave those extra-wide spaces available for the people who really need them. Their cars are marked by special decals, plates, etc., so that officers can tell whether to ticket or not.

Dumpster disguise duly dedicated

Two structures of "unclaimed parentage, uncertain utility, and unarguable aesthetic merit" were dedicated in a ribbon-cutting ceremony Monday morning, Jan. 10, by top Stanford officials.

The objects of the tribute were the recently built arcade connecting the President's Office to Building 170 and a nearby dumpster enclosure.

The ceremony was witnessed by approximately 25 persons.

The dumpster, President Donald Kennedy told the crowd, is a tribute to the "sensitivity of this organization. Just a few murmurs of dissatisfaction from Building 10 about the levels of trash accumulation around the unadorned dumpster resulted—presto!—in this splendid, brown metal cocoon, complete with tasteful ascending staircase for more convenient dumping."

Dubbed "Mem Dump" by Kennedy, the structure is said by some to resemble a gallows, but ceremony organizer Andy Doty of Public Affairs labeled it a "surplus paper collection station."

Also speaking at the dedication was Vice-President for Public Affairs Robert Rosenzweig, who Doty said would soon depart for the "greatest dumpster of them all" (Washington, D.C.).

Rosenzweig told observers they should be "reassured that in times of financial crisis and budget reduction, this generous University treats its trash so well."

Kennedy called the dumpster "not only a functional triumph, but an artistic one as well. Faithful to the Stanford tradition of harmonic architecture, it took its inspiration from the magnificent arcade between these two buildings—that inspiring structure which, in addition to uplifting our thoughts and gaze, permits rain to enter while allowing fire trucks to pass beneath."

Rosenzweig worried aloud that the "memory of this Taj Mahal of garbage dumps and its remarkable neighbor" would "dim" Kennedy's other presidential achievements, which "include such highlights as the singular Stanford 'Cardinal,' lunch with the Queen, and the Super Bowl."

"I dedicate myself and my colleagues to the sober task of feeding this with evermore-esoteric, higher-quality waste," Kennedy said as he dropped a basket of trash and the text of his remarks into the "Mona Lisa, not the Taj Mahal, of dumpsters."

Be a resident fellow for 1983-84

Faculty members interested in working with undergraduates in the University's residential education program are invited to apply for 1983-84 Resident Fellow positions.

Resident Fellows set the educational direction for the residence and stimulate students to value and take advantage of learning opportunities in the house. Fellows are responsible for supervising a staff of Resident Assistants (usually upperclass undergraduate and graduate students) and for planning educational programs and activities which bring faculty into the residence, encourage discussion of topical issues, supplement regular curricular offerings, and stimulate the exchange of ideas, cultural experiences, and interests.

Resident Fellows also coordinate the advising program, respond to counseling problems, encourage residents to develop a sense of community, maintain standards for student conduct, and attend to administrative matters.

Resident Fellows live in cottages or apartments in or adjacent to student residences. With the completion of the Governor's Corner neighborhood next fall, there will be 33 Resident Fellow places, with accommodations for single Fellows, couples and families with children.

Members of the faculty who are interested in sharing their academic interests with undergraduates and involving their faculty colleagues in the residence are encouraged to apply. University staff members in senior positions who have a teaching relationship with undergraduates are also eligible to apply, but preference is given to members of the Academic Council.

Appointment to Resident Fellow positions is made by the Dean of Student Affairs. For more information about Resident Fellow positions and application materials, call Norman Robinson, associate dean of student affairs for residential education, 311 Old Union, at 497-3044. Applications are due Monday, January 31.

People

Prof. Joseph B. Keller, mathematics and mechanical engineering, presented three lectures in December as the 25th annual Weizmann Lecturer at the Weizmann Institute of Sciences in Rohovot, Israel.

The first two, on mathematical aspects of animal activity, concerned mathematics of sports and the crawling of worms and other locomotion problems, respectively. The third lecture was on the theory of weak nonlinear waves and shocks.

Prof. John W. Fondahl of the Stanford Department of Civil Engineering has been elected one of the first four fellows of the Project Management Institute.

Director of the graduate program in construction engineering and management, Fondahl joined the PMI in 1949 and served as its president in 1974-75 and chairman in 1976-77.

The fellow award is based on "significant and continued contribution to the PMI" and Promoting "professionalism in the field of project management."

A fellow in the American Society of Civil Engineers, Fondahl was named the Charles H. Leavell professor of civil engineering in 1977. A director of Caterpillar Tractor Co. and Scott Company of California, he has served as a visiting professor and conducted courses in construction in more than a dozen countries since 1964.

New scholarship honors Nakanishi

Kenji Nakanishi, the first student from Roosevelt High School in East Los Angeles to attend Stanford, was a promising young executive at Occidental Petroleum Corporation in Los Angeles until the morning of Sept. 25, 1978.

On that day he boarded a short PSA commuter flight from Los Angeles to San Diego and died, along with all 143 others aboard, when their big jet collided in mid-air with a small plane. He was 31, and had earned three Stanford degrees: B.S. and M.S. in 1970, and M.B.A. in 1972.

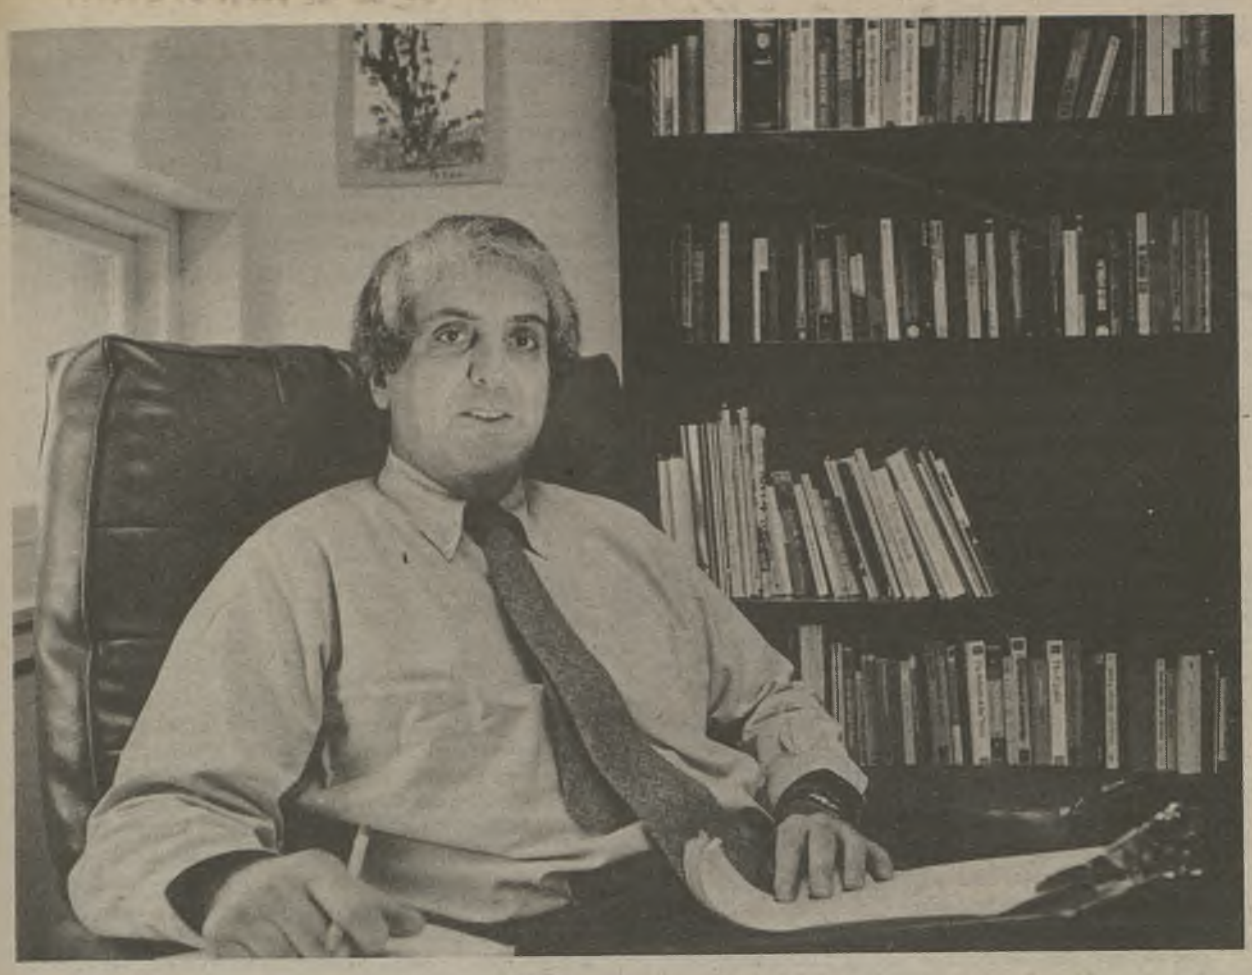
Recently his widow, Nadine, presented Stanford University with the Kenji Nakanishi Memorial Scholarship, a permanently endowed fund contributed by hundreds of friends and classmates of her late husband. This scholarship will be awarded with preference to a student from Roosevelt or another high school in East Los Angeles.

While at Roosevelt, Kenji was one of a group of students inspired by Nina Elkind West (BA/MA '61), a dedicated teacher who was responsible for a number of students who attended Stanford. Nina, now an attorney in Orange County, and her husband Robert, a home builder, (BA '61, MBA '70) have been major contributors to the fund.

Kenji was born in Hiroshima in 1947 and was raised on a small farm. He and his parents emigrated to the U.S. in 1958, and he grew up on the east side of Los Angeles.

At Stanford, where he was a resident assistant in Burbank House, Stern Hall, he earned a B.S. in engineering and an M.S. in industrial engineering. He graduated magna cum laude and Phi Beta Kappa. After getting his M.B.A. in 1972, he worked for a CPA firm, Arthur Young and Co., and then joined Occidental, working in financial planning and analysis.

He and his wife, who met in junior high school, were married in 1971.



CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Lucio Ruotolo

Virginia Woolf puzzle will be probed by Ruotolo and graduate students

BY DONALD STOKES

An expurgated section of Virginia Woolf's autobiographical essay *A Sketch of the Past* will soon be studied by graduate students of Lucio Ruotolo, professor of English at Stanford.

Considered by some to be a Freudian analysis of her father by the famous English novelist, essayist and critic, the essay states that she was then reading Freud for the first time.

"My students and I will consider why that portion was removed from the larger manuscript," said Ruotolo in a campus interview. "it is an extremely interesting study."

Is Woolf sympathetic to her father? asked the interviewer. What does she say about him?

Ruotolo smiled: "Take my seminar and find out!"

Ruotolo has for the past decade been a path-finder in the rise of Woolf's literary reputation, and is considered a central authority on her re-evaluation.

He pores over her manuscripts for a part of each day. "My research into Woolf is directly related to what I do in the classroom," he says. "The research is very much involved in my teaching. The ability to make use of unpublished manuscripts, such as the 14-page description of her father which surfaced recently in England, and which I shall use in this quarter's seminar, enables my students to be on the cutting edge of Woolf studies. It will not appear in print for some time.

"I have read all of Woolf's diaries in holograph, and often it takes days to read a few pages. Trying to decipher her handwriting is painful, to say the least. It becomes particularly difficult to read when she was depressed."

Ruotolo teaches a course in Virginia Woolf every year (to graduates and undergraduates in alternate years). He finds the response of students a challenging one.

"The presence at Stanford of (Prof.) Peter Stansky and Will (Prof. Wilfred) Stone, both distinguished scholars of the Bloomsbury school of Intellectuals, has made Stanford a particularly attractive center for the study of Virginia Woolf. I have been teaching about her for about a quarter of a century, and in spite of predictions that interest in her would flatten out, that has not proved to be true.

"In earlier years many regarded her as essentially a derivative writer. Yvor Winters, one of Stanford's best-known critics, referred to 'the iridescent trifling of Mrs. Woolf.' Even more sympathetic readers tended to regard her at best as a second-rate Joyce.

"One of my close friends, a very distinguished English academic, once said to me, 'Reading Virginia Woolf is like trying to negotiate an unsigned check.'

"All that has changed. Even those who dislike her writing now do so, it seems, with discernible respect."

The tumult of the 1960s caused Ruotolo to write a book called *Six Existential Heroes: The Politics of Faith* (Harvard University Press, 1973) which received Harvard's Thomas J. Wilson Memorial Prize for the best first book. The work brought his name to the attention of literary circles.

The book grew out of the notion of a hero who develops in relation to a world he seeks to remedy," said Ruotolo. "My object was to redefine the notion of an existential hero in more political terms.

"There was a tendency to think of existentialism as an essentially apolitical position, which regarded the human condition in terms that could not affect it.

"The characters in my book were committed to the idea that it was the means of social action which called for revision.

"One of the phrases I rather liked was in Ralph Ellison's *Invisible Man*: 'Can politics ever become an expression of love?' In other words does politics by definition have to become a manipulative enterprise?"

The opening chapter in Ruotolo's book concerned Virginia Woolf. This chapter caused considerable stir, and many early readers took issue with Ruotolo's views on Woolf's importance in a sociopolitical perspective. The arguments thrust Ruotolo into the center of the re-evaluation of her work then occurring.

In 1970, after he had been teaching, researching and lauding Woolf for a decade, Ruotolo joined with a small group in the Modern Language Association, members who similarly felt that her work had been neglected.

From the first meeting in New York, and a subsequent symposium at Santa Cruz, where

To me, existentialism is an affirmative optimistic position...Rejecting all aspects of stasis, is it's philosophy which celebrates change.

—Lucio Ruotolo

Ruotolo presented a paper on *Mrs. Dalloway*, a new direction in Woolf studies began to emerge.

"Partly as a result of my teaching and writing, I like to think that Woolf is now accepted as one of the great novelists of the 20th century," said Ruotolo.

For nine months, Ruotolo lived in the Woolfs' English home—Monk's House, Sussex—where he edited *Freshwater*, a humorous play Woolf wrote about her great-aunt, the famous Victorian photographer Julia Margaret Cameron. The play was discovered after Woolf's death by suicide in 1941.

The first public production of that play was given in 1974 at the Stanford Museum through the efforts of Ruotolo together with Anita Mozley, curator of photography; respectively they played the parts of Mr. and Mrs. Cameron. It was directed by one of Ruotolo's graduate students, David Richman.

While living in Monk's House, Ruotolo examined fan mail which had streamed across the Atlantic to the novelist, mostly from women living in small-town America. Their common message was that they had never written to an author whose published words were so close to their own thoughts.

It is a remarkable sociological fact that the response to Woolf has been much greater in America than in her native Britain," said Ruotolo, "and often from a class of relatively unsophisticated readers who might well have found her experimental techniques difficult if not inaccessible."

Ruotolo became involved in editing several of Woolf's more important manuscripts, in writing articles about her, and in contributing to books dealing with her works.

He is now preparing a book *Virgina Woolf: The Unguarded Moment*, on the theme of "interruption" in her novels. One chapter from the book appeared recently in Ralph Freedman's volume *Virginia Woolf: Reevaluation and Continuity* (University of California Press, Berkeley).

Ruotolo was a founding editor, in 1973, of *Virginia Woolf Miscellany*, a newsletter that was launched with two Stanford graduates, Ellen Hawkes Rogat and Peggy Comstock, and the well-known Woolf scholar J. J. Wilson (B.A. Stanford). Prof. Peter Stansky has replaced Comstock as one of its four editors.

The six heroes featured in Ruotolo's first book, *Six Existential Heroes* were, besides Woolf, Graham Greene, William Golding, Bernard Malamud, Ralph Ellison, and William Faulkner. Would most people agree that those six writers were existentialists? asked the interviewer.

Ruotolo laughed: "I'm not at all sure that the six themselves would agree! I met Malamud at a Stanford party, and it was rather an intimidating moment when we were introduced. To my relief he said, 'You hit the nail right on the head!' "

What did Ruotolo mean by his description of an existentialist hero as "enduring in the posture of

continued on next page

Ruotolo/ continued from page 3

faith?" Faith in what? In nothing?

"A recurring criticism of existentialism is its supposed disposition to pessimism, anarchy and disillusion, that it remains essentially a destructive posture.

"I assume that the courage to raise the question 'If not something, why not nothing?' is linked with the capacity to suspend, at least provisionally, traditional solutions and to entertain often radically new procedures.

"The existentialists I deal with tend to agree that our culture, despite its self-styled modernism, remains overly dependent upon essentialy hierarchical values, that we tend in art as in politics to risk as little as possible.

"This is a central theme in Virginia Woolf's writing. She would break a legacy of dependence, exemplified for her through women's historical subordination to men, in order to live and work more creatively.

"To me, existentialism is an affirmative optimistic position which urges us all, in D. H. Lawrence's idiom 'to recoil from things gone dead.' Rejecting all aspects of stasis, it is a philosophy which celebrates change.

"As such it remains threatening as well as dynamic; never pin things down with any certainty and say 'This is it.' "

As part of the inevitable cycle of trends, suggested an interviewer, has existentialism dropped out of the mainstream of current thinking?

"I suspect we have backed away from existentialism for understandable reasons. Frightened about the future of the species, people yearn for permanence in the world, for absolutes to replace the awful uncertainty about whether or not we are going to blow ourselves up.

"This is one of the factors which makes things difficult for the nuclear disarmament movement. People tend to shrink from the idea that there is even a possibility of our utter and complete destruction.

"The existentialist, it seems to me, makes a cogent rejoinder to this—that if one fails to raise these questions one may well be contributing to the end of the species.

"Although it may no longer be fashionable to raise such questions, it appears more critical to do so now than it was in the '60s."

Ruotolo has taught more than 40 different courses at Stanford, covering a very large range, from Shakespeare to the existential hero. He has directed 24 doctoral dissertations (Not all on Virginia Woolf, he observes). He has served as director of undergraduate studies for the English Department and as chairman of the graduate program Modern Thought and Literature.

What sort of teacher does Ruotolo think he is?

"As I get older I find the seminar setting the most invigorating. I find it exciting when we react as a body to a work, when it is the literary text that evokes thought and discourse. I love teaching and feel that I get good results."

The majority of his students give him high marks as a teacher, though a minority says that his enthusiasm sometimes makes him stray from the point.

Ruotolo was deeply involved in the ferment on campus during the 1960s. "I was among those who tried early to find an anti-war candidate to oppose Lyndon Johnson, and I worked long and hard in Eugene McCarthy's first campaign. I debated publicly with such figures as Richard Allan. In 1968 I served as co-president of the Stanford-Palo Alto Democratic Club. It was an exciting if hectic time."

Trying to decipher [Woolf's] handwriting is painful...often it takes days to read a few pages.

Ruotolo grew up in Greenwich Village, New York City, in a Bohemian atmosphere, surrounded by a host of artists, many of whom were to become eminent.

His father was the sculptor Onorio Ruotolo, and his first teacher in kindergarten was Jackson Pollock. The closest friend of the family was Thomas Hart Benton.

The father's first studio was next door to that of D. W. Griffith, the famous motion picture producer-director. Griffith made use of the sculptor's models in planning his sets.

The Ruotolo family moved frequently in a rhythm dictated by the fortunes of the father. "When commissions were coming in well we moved into good apartments, and when they were not we had to move into something less desirable," said Ruotolo.

The earliest recollections of young Lucio were of his father working on busts of well-known people. "I remember when he created a bust of the novelist Theodore Dreiser (it is now in the Smithsonian).

"I once spent a whole day with Dreiser, when my father took me as a child to an exhibition of miniature railroad cars. Father had completed his bust of Dreiser, and happened to meet him there. The two men began a long argument. It continued when the three of us went up to Dreiser's hotel, the Ansonia.

"Their dispute seemed to go on interminably and I grew very bored. Years later my father told me about the man he had argued with.

"It seemed that Dreiser had seen my father's bust of Caruso (now moved to Lincoln Center, but then displayed in the lobby of the Metropolitan Opera House). Dreiser wanted something in the same heroic manner, a classic Roman bust in the grand style, but my father evidently saw Dreiser in more impressionistic terms."

Among the other famous people who posed for works by the elder Ruotolo were Arturo Toscanini (whose bust is in New York's High School of Music and Art), Helen Keller (in the Smithsonian), and Thomas Edison.

"My mother was a Viennese Jew who had come to the U.S. to visit her estranged father," said Ruotolo. "She met my father, a Neapolitan, at the outbreak of World War I. She worked in Brentano's book store, and the family legend is that the manager of the store warned my mother that her Italian friend was 'a dangerous anarchist.' In fact, he had contributed sketches to several anarchist journals.

"After my parents married, my mother virtually became Italian. She learned to speak Italian fluently in the household, but insisted on addressing me only in English. Today, I find myself in the unenviable position of understanding Italian but not really being able to speak it."

Ruotolo remembers affectionately the polyglot world in which he was reared: "Our florist was Greek, the delicatessen was run by a Polish Jew, the newspaper vendor was Italian, and so on. Ever since my boyhood days I have been responsive to that kind of diversity."

While Lucio was still very young, his father turned his attention away from sculpture, although he had built up a considerable reputation, and founded the Leonardo da Vinci Art School. This was meant for working-class people who showed promise in any form of art, and who could not afford tuition. Onorio Ruotolo was director of the school for 25 years. It ran entirely on voluntary contributions.

When World War II came, the funding dried up and the school had to be closed. One of the saddest moments for the Ruotolo family was the closing ceremony held outside the school when the father spoke of his sorrow at being evicted.

A happier day came later, when Lucio was a senior in Friends Seminary High School. The Four Freedoms plaque designed by his father was presented to President Franklin D. Roosevelt. "It was very exciting for me to go to the White House and to meet the President.

"My father was a very close friend of New York Mayor Fiorello La Guardia, and designed his first inaugural medal."

In 1945 he was drafted into the U.S. Army Air Corps and spent two years there. He was trained as a high-speed radio operator. Returning to civilian life he gained his B.A. at Colgate and his M.A. and doctorate at Columbia.

The earliest serious novelist to capture his enthusiasm was Joseph Conrad, whom he recalls reading eagerly during summers at Martha's Vineyard. He also found great pleasure in the Romantic poets, particularly Wordsworth and Keats. He did his theses at Columbia on the English Romantics.

"I was very much influenced at Columbia by Lionel Trilling, as well as two teachers at Union Theological Seminary next door, namely Paul Tillich and Reinhold Niebuhr."

Ruotolo later served as film critic for the journal founded by Niebuhr, *Christianity and Crisis*.

In 1957, three years before getting his doctorate, Ruotolo was appointed an acting instructor of English at Stanford.

He met his wife, Marcia Mauney, an Oregonian, when she was a reporter for the *Palo Alto Times*, now the *Peninsula Times-Tribune*. She later earned an M.A. and prepared to teach French as an early student in Stanford Teacher Education Program. She has worked in area schools as a regular and substitute teacher.

The Ruotolos have three children. The eldest, Cristina, is a sophomore at Stanford, and a violinist who has been selected to solo in a Mozart concerto with the Stanford Chamber Orchestra this spring.

Vanessa, 16, a cellist, and Peter, 14, a baseball fan, are students at Gunn High School.

CIT cuts interactive computing rates on 3081 by 20%, seeks more use

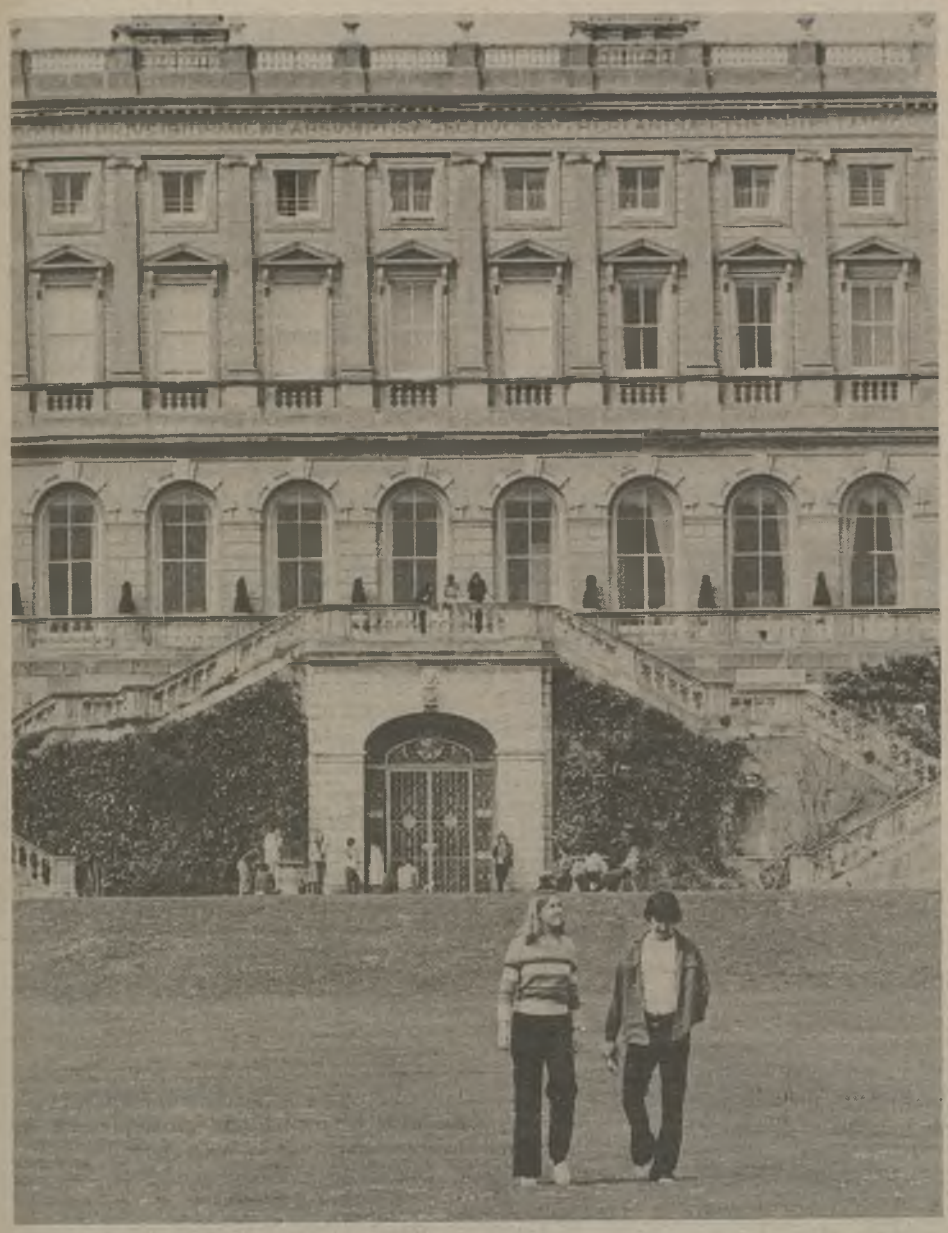
Edgar S. Williams, CIT's director of computer systems and services, has announced that effective Jan. 1, there will be a 20 percent reduction in interactive rates on the 3081 Node, and also that the previously announced 30-second CPU limit on the Low Cost Interactive Computing (LCIC) service is deferred, pending further study and consultation.

CIT intends by these actions to allow the 3081 Node to be of greater service to instructional, research, and administrative users.

The 20 percent reduction in interactive CPU rates is possible for two reasons. First, University officers decided to purchase the 3081 machine and take advantage of more favorable financing alternatives and discounts. This action provides an expense savings that allows the rate reduction.

Secondly, CIT wishes to take a first step to reflect what the 3081 Node rates might be if it were to be used at full capacity. Additional rate reductions would be possible if users could be found for all of the capacity of the Node.

Over the next several months CIT will undertake some special efforts to attract new users and uses. Any assistance University staff might provide in finding new users or uses would work to their benefit through rate reductions.



CIT has deferred the 30-second threshold on the LCIC service because such a limitation does not address all of the Center's concerns.

One of these concerns is that a small number of users might be using large amounts of the CPU during night and weekend time periods to the detriment of other users. Studies conducted by CIT indicate that this is the case. However, there is a larger group of users who require moderate amounts of CPU time in excess of 30 seconds whose needs must be met.

Deferred implementation of the 30-second threshold will allow CIT more time to work with users to investigate alternatives and select the appropriate one for implementation a few months hence. Prior to any implementation, CIT staff will meet with users who would be significantly affected by the change.

Williams welcomes any comments users may have. He may be reached at Cedar Hall, computer account gd.esw, or extension 7-3908.

Stanford in Cliveden: from polo to frisbee to Oxford

The farm country of Buckinghamshire, located 25 miles west of London, is the spectacular site of Cliveden overlooking the Thames.

Cliveden has been associated with the powerful, famous and influential—and now Stanford students are added to the list.

BY TERRY BECKER

Since the first house was built in the 17th century on this spectacular site overlooking the Thames, the name "Cliveden" has been associated with the powerful, famous and influential.

Queen Victoria herself stayed at "dear beautiful Cliveden" for a week in 1886 as the guest of her friend Harriet, Duchess of Sutherland. Oscar Wilde, Rudyard Kipling, Winston Churchill and Franklin D. Roosevelt were all here at one time or another as guests of the illustrious Astor family, the American millionaires who bought Cliveden in 1893.

Perhaps no guests have been more grateful for the chance to stay at Cliveden, though, than the hundreds of Stanford students who have flocked here since 1969 to participate in the Stanford Program in Britain.

For many of those students, the Cliveden way of life has been the highlight of their undergraduate years—a chance to make new friends, to travel and to learn about England and the English in a setting of incredible beauty and serenity.

Despite probably valid criticisms that its rural setting tends to isolate students from the real world, it is a way of life whose passing many students and alumni will mourn when the Stanford Program in Britain is moved to the city of Oxford in Autumn, 1984.

Located just 25 miles west of London in the farm country of Buckinghamshire, Cliveden is actually the second home of the Stanford Program in Britain. Before that, from 1966 to 1969, the program was based at Harlaxton Manor in Lincolnshire, about 100 miles north of London.

"The problem with Harlaxton was that it was rather in the middle of nowhere," explains George Docker, the jovial Australian director of the program since 1966. "Students who wanted to visit London were more or less forced to go for the weekend—it wasn't very satisfactory."

The move to Cliveden, Docker recalls, was prompted by a newspaper article placed by the British National Trust citing the need for tenants at Cliveden, which had been vacated by the Astor family in 1966. The house and estate had been give to the National Trust in 1942 with the fortunate stipulation that they should ultimately be used to further understanding among English-speaking nations.

Stanford seemed able to fit that requirement and after some delay a deal was struck. Stanford agreed to move into Cliveden in March 1969 at a rent of 3,000 pounds per year. A problem with the 10-year lease at Harlaxton was neatly solved when the University of Evansville, Ind., took over that house.

The current program of study at Cliveden, where students may come for one or two quarters, take the classes of their choice and travel freely when and where they choose, is very different from the one which was used at Cliveden in the early 1970s.

"Back then the students all came over together in the same plane and they all went home together, the whole lot," Docker laughs. "Everyone took the same courses and stayed for six months, either from January to June or from July to December."

British professors lived in the house with the students, Docker notes, and regulations on student activities and travel were strictly enforced.

"There were all sorts of student officers, and the student president was a man of awe-inspiring power," Docker says. "Students weren't allowed to leave the house until Friday evenings, and the president would check bedrooms on Sunday evenings to see that they'd all gotten back in time for Monday classes."

The highlight of each six-month stay, Docker recalls, was the "grand tour," a mid-quarter field trip which all the students took together, first to Rome and Venice, then to Paris and Amsterdam. Luxuries such as this were not to last long, however. First there were financial cutbacks, and then the number of students wanting to come to Cliveden began to drop, at one point to around 30, about half the number today.

"The main reason, I suppose, was Vietnam," Docker explains. "Students wanted to stay at home because that's where the action was. Also they didn't feel that they could come for a whole six months."

Numbers picked up after the introduction of the quarter system, though, and they've been increasing steadily ever since. In recent years Cliveden and Florence, Italy, have consistently been the most popular overseas campuses.

To the many British tourists who come to stroll the grounds today, the sight of 60 American students making themselves at home on this grand estate must come as something of a shock: Ultimate frisbee games have replaced polo and croquet on the lawns, students in jeans and Stanford sweatshirts curl up on the enormous ancient library sofas, joggers weave in and around the neatly-trimmed hedges and "Big Way" yachters paddle their rubber dinghys on the River Thames.

There is a serious side to Cliveden as well, of course. Students may choose from a variety of classes ranging from British history and Shakespeare to courses on the European Economic Community and, most recently, engineering.

The courses are taught in the guest wing of the house by both British lecturers and Stanford-in-California professors eager for a change of scenery and a chance to interact with students on a more personal basis. A good number of students take advantage of tutorials given at local universities as well.

The desire to improve the academic side of the program still further was a major factor behind the recent Board of Trustees decision to move the campus to a number of renovated houses on Oxford's High Street in the heart of that city, about 60 miles northwest of London.

"I am hoping that the Oxford undergraduates will be friendly and that Stanford students will get mixed up with them," Docker says. "An Oxford don will be advising part-time on the academic side of things and it is hoped that this man will bring students into the community. Magdalen College undergraduates are also making friendly noises," he notes.

Docker himself will be retiring when Stanford leaves Cliveden. "I'll move you into Oxford, say cheerio, bless you all, then send you off," he laughs.

One person who will be staying with Stanford after the move is Geoffrey Tyack, a British lecturer in history at Cliveden since 1972 and a firm believer in the value of an overseas study experience.

"In some ways life in California is marvelous, but it's a little provincial in the cultural sense," Tyack notes. "If you look at America's position in the world, it used to be she could go her own way and do just about whatever she liked. That's not so much the case any more. Americans need to have more contact with the outside world, especially Stanford students, when you consider what kind of jobs they go into after they graduate."

Tyack, who is an Oxford history graduate himself, feels that Stanford's move to Oxford will be a beneficial one. "In the academic sense, it's bound to be a good thing. On the other hand, comraderie among the Stanford students won't be so easy. It will be more of a culture shock definitely," he notes.

"You've got to remember that Oxford has an extremely high opinion of itself—it sees itself as the center of the universe. People there won't come running out to you with open arms. Students will find that it's not so easy to adapt, but those who do will be the better for it."

'In the politics of indirect costs, history is against us'—Kennedy says

continued from page 1

faster than inflation, which also was projected at six percent for 1983-84.

The long-term forecast projected salary increases one to two percent higher than inflation, or seven to eight percent for next year. "It is now clear to me that we cannot maintain that rate of increase," Hastorf said.

"Barring powerful contrary arguments, we expect to recommend to the trustees that we hold the indirect cost rate (on federally sponsored research) at 69 percent for 1983-84," he added.

"This is a clear commitment, on our part, of crucial importance to the research enterprise at Stanford and to the support of our federally funded investigators."

In response to questions, Vice Provost Gerald Lieberman, dean of graduate studies and research, indicated that full recovery of research costs could result in an indirect cost rate of 81 to 84 percent next year. The higher rate would include costs already incurred, which are carried forward over a three-year period. It also would reflect slower growth in total research volume than previously projected; this tends to increase the indirect rate because certain fairly fixed costs are spread over fewer projects.

Political climate

In December, Lieberman told the Senate, "In Washington's current political climate we are not likely to see any significant overall increase in federal research funding," which accounted for 90 percent of Stanford's total research volume of $136 million in 1981-82. Total indirect costs allocated to research are expected to exceed $60 million this year. Space-related expenses—heat, light, and maintenance, for example—account for almost half of all indirect costs.

"In the politics of indirect costs, history is against us," Kennedy told the Senate. "There is a perception among some Congressmen that indirect costs have risen too rapidly, that universities are somehow getting more than the amount to which they are entitled.

"The complexity of the process of indirect cost recovery makes it no easier to explain to Congressmen than it is to principal investigators (on federally funded research projects)—many of whom are also troubled, though for different reasons.

"At Stanford, we have always pursued a policy of full recovery, and that has been endorsed by the (Stanford faculty) Committee on Research and other groups that have included principal investigators.

"But to pursue full recovery now would, we think, require going to rates that would seem unacceptable to most principal investigators here, and might indeed cause damage to their programs.

"And if several universities were to engage in a round of further significant increases in indirect costs, it might well hasten the application of some arbitrary limit upon overhead rates by Congress—a limit that might prove even more damaging than restraint now."

Former commissioner of the Food and Drug Administration, Kennedy was a leader among major university presidents in successfully opposing a National Institutes of Health proposal last year to simply cut reimbursement of authorized indirect costs by 10 percent as an economy move.

This "terrific battle. . .surfaced the problem of indirect cost recovery. . .in a dramatic fashion," Kennedy observed.

"So we shall quite probably, over the next several years, forego a good deal of indirect cost recovery that government rules now entitle us to. I want it understood that I advocate this with considerable reluctance.

"But there are times in which an expedient policy is the best policy, and this is one of them."

In 1983-84, he said, Stanford finds itself caught "amidst two alarming trends": 1) the long-term effects of inflation and government reductions in "controllable" expenditures and 2) "a saturation in the volume of sponsored research" nationally.

"That means that our indirect cost recovery will not continue to increase, as it had in past years, and may even start to drop." Just last year, the University negotiated an increase in its indirect cost rate from 58 per cent to 69 percent of direct costs.

Admitting a "change of heart," Kennedy said he now has been persuaded by Lieberman and fellow faculty researchers that high indirect cost rates may be a factor in the awarding of research grants.

If the University fails to recover the full costs of research, it "pays a price" in the diversion of unrestricted funds to this purpose, he admitted.

"We're all anxious to return to full (cost) recovery," he added. "We hope (this change) is a temporary, self-denying ordinance."

Rising tuition

Hastorf said that, nationally, major research universities now are "very deeply concerned" about rising tuition and indirect costs.

"The atmosphere in the land is to get a much tighter grip on both," he observed.

"We're going to struggle mightily to get those (indirect) costs down," he emphasized. About $13 million in indirect cost pools would need to be cut to achieve full recovery without a higher rate, he indicated.

Kennedy noted that, in theory, it is possible for an institution to make cuts that are disproportionately heavy on administrative services and still experience an increase in overhead rates.

This can—and has—happened when uncontrollable components of indirect cost pools are allocated more heavily to research than to instruction. Rapidly rising energy costs are one example. Changes in accounting rules which treat depreciation differently or integrate the intensiveness of space use into the calculation of indirect costs may have this effect. "All of those things happened in the recent past," he said.

While the University will give "a good shot" in trying to reduce indirect costs, he added, "I hope my colleagues are under no illusions about what that will mean. It will mean degraded services to which we have all become accustomed.

"We will explain as best we can what the relationship is (between cuts in costs and reductions in service) as it occurs, but we want you to understand that there's no free lunch."

In November, Hastorf announced plans for a three-year $10 million belt-tightening effort, what he called "the third major budget reduction episode in 15 years."

The responses to date have been to "trim, squeeze, and shave," he said. "It does not appear that the 1984-85 budget can be balanced without more rigorous initiatives. . . .

"We are going to need to look at the overall size of the University in relation to its sustainable support. . . . We must control administrative support services and increase some of the risks we take in accomplishing our primary purposes of teaching and scholarship.

"We will not be able to monitor ourselves and plan our support services with quite the precision we have in the past. We shall strive for high quality in all that we do; it will have to be a leaner form of quality."

Faculty size

During Senate discussion Hastorf said "It may well be that. . .we may not be able to have. . .as large a faculty."

But such a reduction would be "the last one" in priority, he added.

Asked if there had been any discussion of increasing the size of the student body Hastorf said there had been none. "I'm not sure that just increasing the number of tuition payers is a real solution to the budget problem."

The only area where the University has made a "calculated effort" to expand enrollment has been in some master's degree programs.

Hastorf said he was "deeply concerned" at the possible effect of enrollment growth on the quality of instructional programs. The emphasis now is on "increasing the ambiance for undergraduates."

Asked about private gift support, Kennedy said he hopes for another record year in fund-raising. The University is making a concerted effort to obtain more unrestricted gift support.

From a financial standpoint, he said, the University's decision to permit Stanford Stadium's use as the 1985 Super Bowl will probably prove "a wash transaction."

The National Football League will help fund improvement in some "horrendously inadequate" facilities at the stadium, but this benefit may be offset by the extra cost required to produce the event.

The main reason the University agreed to host the event was "the opportunity to do something for our friends and neighbors, as opposed to being cast in the role of dog-in-the manger" with San Francisco, Palo Alto and others who expect the event will benefit the Bay Area.

—Bob Beyers

Monday seminars in radioscience

A series of radioscience seminars will be held on successive Mondays at 4:15 p.m. in Room 134 of the McCullough Building. Sponsored by the Department of Electrical Engineering, they will be followed by wine and cheese.

Jan. 17: Robert Strangeway from Lockheed; "Magnetospheric Convection and the Associated Signatures of Geosynchronous Altitudes."

Jan. 24: Alan Waterman of Stanford; "Clear Air Radar Measurements of Upper Troposphere and Lower Stratosphere from Aracibo."

Jan. 31: John Vesecky of Stanford; "Remote Sensing of Polar Ice Using Satellite Altimetry."

Feb. 7: Ken Harker of SRI International; "Radiation from Pulsed Electron Beams in Space Plasmas."

Feb. 14: Hiroshi Matsumoto from Kyoto University in Japan; "Computer Simulation of Wave-Particle Interactions."

Feb. 21: No seminar; President's Day.

Feb. 28: Jan Martin of Stanford; "Radio Occultation Studies of the Solar Corona."

Mar. 7: Vince Wickar of SRI International; "Incoherent Radar Measurements of the Ionosphere."

Health and safety report

Accidents and Injuries Occurring Dec. 13-30

Communication design series

A series of free, public Communications Design Seminars will be held on successive Tuesdays at 4:15 p.m. in Room 128 of the McCullough Building, Stanford University.

Jan. 18: Alan Podel, consultant; "A GaAs Monolithic Integrated Circuit for 4 GHz Satellite Receivers."

Jan. 25: Rafael Mantill-Montalvo of Stanford; "Performance of the LSB Speech Synthesizer."

Feb. 1: K. Mohiuddin of IBM and Stanford; "Performance of an Advanced Character Recognition-Compression Technique."

Feb. 8: Ruming Chen, visiting scholar from China; "Interference Between Satellite Systems with Different Signal Modulations."

Feb. 15: Rolf Dyce of Equatorial Communications; "The Use of Spread Spectrum Modulation in Small Satellite Earth Stations."

Feb. 22: To be announced.

Mar. 1: To be announced.

Mar. 8: Chih-Lin I of Stanford; "Power and Frequency Performance of Modems for Satellite Data Communications."

Alpha Sigma Phi's declaration of independence sent to national fraternity

The Stanford chapter of Alpha Sigma Phi fraternity has relinguished its national charter, affirming its desire to operate as a student living group open to both sexes with no subjective membership criteria.

The decision to withdraw from the national was made unanimously by 30 members at a chapter meeting Wednesday, Jan. 5. The local, which plans to call itself Alpha Sigma, has 50 members, evenly divided between men and women, at its University-owned residence, 585 Cowell Lane (off Campus Drive, near Cowell Health Center).

At Stanford since 1917, the chapter admitted women members in 1973. It has been on suspension by the national since 1981.

The chapter has about 600 alumni on its mailing list. All will be invited to celebrate the local's status Friday, Feb. 25.

Members continuing as students have priority for returning to the chapter house in the University's draw system. Alpha Sigma has consistently ranked among the top three preferences among more than 50 different housing choices for undergraduates.

Dayna Goldfine, chapter president and member of the Associated Students Council of Presidents in 1980-81, sought unsuccessfully to have the national fraternity permit chapters to admit women.

When the national suspended the chapter, it cited its initiation of women, lack of selectivity, and failure to meet minimum standards of the national, such as distributing newsletters. The national council was scheduled to review the chapter's suspension later this month.

Based in Delaware, Ohio, the national has about 50 chapters.

Brooks to speak on Martin Luther

Peter Newman Brooks from Downing College, University of Cambridge, will present a lecture on "A Lily Ungilded: Martin Luther, The B.V.M. and the Saints" on Thursday, January 20, at 4:15 on the Stanford campus, History Corner, Building 200, Room 205.

Dr. Brooks is the director of Studies in History and in Theology and Religious Studies at Downing College and has lectured in Ecclesiastical History on the Faculty of Divinity at Cambridge since 1970. He has authored several books of essays, the most recent being *Seven-Headed Luther & Other Essays for a Quincentenary*, to be released soon by Oxford Press.

STARTS sponsors many classes

STARTS—Student Arts at Stanford—is again sponsoring a diverse selection of informal, relaxing classes. All are welcome. The classes are supported by a nominal fee, payable at the first session.

Winter quarter classes include ballroom dancing, calligraphy, exercise, kundalini yoga, weaving, bridge, mime, folk guitar, recorder, crochet, and handwriting analysis.

Some are during the noon hour (weaving, recorder, crochet, and handwriting analysis), the rest in the evening.

For more information call STARTS, ext. 7-9671.

Dancer to speak at noon today

Bella Lewitzky, one of the major choreographers in contemporary dance will give a lecture-demonstration at noon Wednesday, Jan. 12, in Terman Auditorium at Stanford.

Lewitzky's lecture will be the second in a series sponsored by the Center for Research on Women and the Lively Arts at Stanford on the subject of "Women in the Performing Arts."

Lewitzky is the founder of the Bella Lewitzky Dance Company.

Her lecture-demonstration is free and open to the public.

Letters to the editor

Dean Wessells discusses weight given University service in tenure decisions

To the editor:

This letter is prompted by various statements that have appeared in newspapers during the spring of 1982 and in more recent weeks. All of these have addressed the denial by our office of tenure to Asst. History Prof. Estelle Freedman. It would be improper for any University officer to comment publicly on the details of a specific case. Nevertheless, such confusion has been in the air that these general comments are meant to provide background on the tenure process at this University.

The primary criterion for tenure at an institution such as Stanford is *quality of mind* as demonstrated by published scholarship and the teaching record. The ways in which scholarship and teaching are evaluated and judged have been written about at length by Provost Albert Hastorf, by me and by many others, and need not be reviewed again here. However, the so-called "service" category of faculty activity does warrant comment.

Service is a part of every faculty person's professional life. It may include student advising, committee work, participation in extradepartmental programs, serving on national committees, membership in professional organizations, and a variety of other activities. While such activity is important, the service category can never overcome deficiencies in either of the two primary criteria used to judge tenure, quality of scholarship and quality of teaching.

Too many examples exist here and elsewhere of a person promoted on the basis of strong service activities in one year proving in later years to have lost the fire that made him or her so effective while young. Without the strength in scholarship that sustains fine teaching and service, such individuals short-change generations of students. In addition, those persons occupy precious faculty positions that should be available to the first-rate young people entering careers in the scholarly profession.

The important goals of Affirmative Action for minority group members and women are pertinent to the way the "service" category is taken into account in the tenure judgement. The report of the Committee on the Stanford Professoriate concluded that basic standards in scholarship and teaching should not be bent in order to achieve the goals of affirmative action.

In the years since the report, a policy on service in the tenure equation has evolved and may be summarized as follows: in cases where a candidate is judged truly "borderline" in scholarship or teaching, so that the vote reasonably might go either way, then the quality and nature of university service may be considered as a factor. This policy recognizes that minority group members and women on the junior faculty are frequently subjected to special demands on their time that necessarily detracts from time available for scholarship and teaching.

It is the obligation of reviewing bodies and deans to judge carefully whether a given candidate for tenure falls in the "borderline" category in scholarship or teaching, and if so, then to consider and evaluate any special contributions of that individual in the service category.

The reader should note that being a faculty member of physics, classics, economics, Latin American studies, human biology, and other administrative units is not a criterion for tenure. For many years it has been practice in the School of Humanities and Sciences at Stanford to make the decision about investing a tenure position in a particular field or discipline at the time an initial search is authorized to a department and an appointment is made. Thus, when a person is hired as a medieval historian, a developmental psychologist, or an organic chemist, the individual is free to work as effectively as he or she can as scholar and teacher. The young person does not work for six years under a cloud of uncertainty about whether the field itself may be judged inappropriate at the time of tenure review, with the result that tenure could be denied irrespective of the person's qualifications. In other words, we do not include an "administrative" factor in the tenure equation.

Those who argue for tenure on the basis of academic field or of service to some unit of the University are asking that such an administrative factor be used. But if it is, it can be used for or against candidates. At present, being a critically important participant in Latin American studies or feminist studies, being Stanford's only teacher of a rare language, or whatever, is not held for or against the person up for consideration. Similarly, whether the person is a Marxist, a member of the Moral Majority, or has behavioral quirks is irrelevant. By placing the administrative factor "up front" at the time of searching and hiring, we allow the tenure process to focus where I believe it should, on the individual as scholar and teacher.

Finally, those unfamiliar with the tenure evaluation process should be aware of the care with which reviewing bodies examine evidence and draw conclusions. Periodically there is controversy at research universities such as Stanford when an award-winning undergraduate teacher fails to receive tenure. How, it is asked, can this occur?

The answer is that the reviewing bodies of Humanities and Sciences draw conclusions based on a more complete set of evidence on teaching and scholarship than that available to most prize-awarding bodies. Furthermore, awards and prizes may be given for many different reasons other than the quality of scholarship or teaching in the narrow sense. Thus, our evaluators will certainly view with respect awards for teaching, from professional societies, or for books published, but will interpret those awards in light of their own conclusions, after careful examination of the primary evidence and what professional colleagues say in their detailed analyses of the underlying work.

In summary, the tenure decision process is a very complicated one that takes immense time and care. It is the most important type of decision made by university faculties and reviewing bodies. With changing retirement laws, those promoted to tenure in 1983 may still be occupying their faculty positions in 2025 or later. A good portion of their salaries over that span will come from tuition of students not yet born.

Though our system is not perfect, it is necessarily conservative. That is because the impact of mistakes is so lasting and destructive to our mission of scholarship and teaching.

Norman Wessells
Dean of Humanities and Sciences

Terman had extraordinary vision, high standards: Kennedy

Following are remarks by President Donald Kennedy at the memorial service for Emeritus Provost Frederick E. Terman Jan. 4:

For all of us who are here at Stanford to benefit from what Fred Terman did so much to build, this should not be a time of sadness, but a time of reflection on a life fully lived, and a talent successfully and creatively deployed.

It goes without saying, I think, that Fred Terman gave the University much of the shape it has today. Much to Stanford's benefit, and his, he had the good fortune to be teamed with others whose talents complemented his own, and who were able to accept and share his vision of the academic future.

The vision he provided was special and extraordinary, I think, in two particularly important ways. First, it placed great faith in the influence and creative power of particular individuals. That faith was brigaded with a capacity to search others, and see in them qualities that perhaps they didn't even see in themselves.

Of all of the things a dean or a provost must be, he must first be a picker of people. And a picker of people must be a knower and a believer in people. He must also be an astute recognizer of human limitations, alert to special pleading, and tough enough to translate those perceptions into unpopular denials from time to time.

Recognizing talent

Besides the capacity to recognize human talent, to use it creatively, and to perceive when there is not quite enough of it, academic leadership requires an ability to think about the future. In all of the jobs Fred Terman had, there were extraordinary temptations to permit the urgent to preempt the important, to solve the problems of the here and now without somehow ever quite getting to the there and then.

He always showed what I believe modern social scientists call time preference behavior that differed from most of ours. He knew that the shape of the future was likely to be determined by the success of a few initiatives, a handful of appointments, a half-dozen ideas.

He understood perfectly that if you do not give *room* to the initiatives, *attention* to the appointments, *time* for the programs, the future will somehow never get around to happening in the way you hope and expect.

The kind of thing I have just said is frequently said of men who become legends, and sometimes it is quite baseless. In fact, however, I can support my convictions on these points with experience.

I must tell you, with a candor that I think is not out of place even at such occasions, that that experience was not always pleasant. I recall that at some point in the very early sixties I was on a committee that, full of zeal, wanted to go in a particular direction; Fred just wouldn't let it.

And one of the very first faculty appointments I tried to make as department chairman came back out of the Provost's Office a little faster than it had gone in. I think I will not surprise you by telling you that in retrospect, Fred turned out to be right in both instances.

I hope you will also believe he was right when, following the first of these occurrences, he restored by faith and affection by getting my department chairman out of bed early on a Saturday morning to tell him that I had had a good offer from Cal Tech, and that he did *not* care to lose anybody to Cal Tech right then. My point is simply that Fred Terman made the time for people, and for plans.

I also know about these things through the direct experience provided by access to his own audit trail. From time to time, as this Administration plans for the future or reexamines some policy, we find ourselves looking back at the written record of what Fred Terman did or said about a particular problem.

There is, for example, a thorny and troublesome question about how to examine the fiscal relationships between a School and the central University—how to evaluate the contributions made by general University services to the School, and in turn those of the School to the University; and how to translate that understanding into a principled degree of fiscal and policy decentralization. In our thoughts on that subject, we find ourselves coming back again and again to things Fred wrote. Sometimes the concepts have different labels, but they are always there.

And we also find instructive sagas of program-and-department-building. An example is the series of decisions through which he rebuilt Chemistry at Stanford in the 1950s by appointing first Bill Johnson, then Carl Djerassi and then a phalanx of distinguished successors.

Planning far ahead

It might be easy for an outsider to conclude that the successful outcome of that project merely supplied a kind of *post-hoc* rationale that then turned obediently into legend. Not so; what Fred Terman wrote about the strategy at the time of its execution makes it clear that it was a *plan*—that the hoped-for outcome was defined, and foreseen.

There are other accomplishments—the start-ups of high technology corporations that he encouraged, his catalytic role in the development of Silicon Valley; his own pioneering efforts in the development of Electrical Engineering at Stanford. For these he is well known, and they will doubtless be discussed by others.

For me, the more limited vision suffices to make the general case. Each of us who now has responsibilities for the future of this institution owes much to Fred Terman. If we are wise, we will continue to consult his record from time to time, to discover how our present University came to be and even to get some worthwhile advice, still fresh, about particular problems.

But more than that, we had better look to Fred Terman for an example of ***how to think about the future***: about how to let our vision of what should follow guide and control our present actions, instead of merely letting the latter take us, lurching, into an uncertain world.

I suspect it is that notion, above all, that Fred Terman would like us to ponder as we remember him.

Board of visitors picked for Knight fellows program

Appointment of an 11-person "Board of Visitors," drawn from the journalism profession, to provide guidance in establishing and overseeing the new John S. Knight Fellowship program, has been announced by Stanford President Donald Kennedy.

At the same time he also named a seven person "Program Committee," composed of faculty and outside professionals, which will have responsibility for the selection criteria and process and for providing day to day advice and assistance.

Made possible by a $4 million grant from the Knight Foundation of Akron, Ohio, the program will go into effect in 1984-85 and will be named for the founder of the Knight newspaper group (now Knight-Ridder).

It will provide an opportunity for an academic year's period of study for 12 of the nation's most talented mid-career journalists who show promise of making a significant future contribution to the field.

"Both Stanford and the Knight Foundation are committed to making this a program of the highest quality and the outstanding one of its kind.

"It is our hope that the board we are proposing, together with the Program Committee, will keep us in touch with changing needs of the profession and with new opportunities and directions as they develop," Kennedy said.

The Program Committee will be chaired by the University's senior academic officer, Provost Albert Hastorf. Other members will include professors Gerald Gunther, Cromwell Professor of Law; Robert Ward, political science; and John Hulteng, communication.

Representing the profession will be Howard H. Hays, editor and copublisher of the *Riverside Press-Enterprise;* Ralph Davidson, chairman of the board, *Time*, Inc.; and Larry Jinks, vice-president news, Knight-Ridder newspapers.

Named to the Board of Visitors, which will work with the program's officers and report directly to President Kennedy, were the following:

Joann Byrd, executive editor, *Everett* (Wash.) *Herald*;

Robert W. Chandler, editor, the *Bend* (Ore.) *Bulletin*;

Robert Danzig, vice-president and general manager of Hearst newspapers;

John Dotson, senior editor of *Newsweek*;

Jay Harris, Washington bureau of Gannett newspapers;

Lee Hills, editorial chairman emeritus, Knight-Ridder newspapers;

Tom Johnson, publisher, *Los Angeles Times*;

Arch L. Madsen, president, Bonneville International Broadcasters (Salt Lake);

James H. Ottaway, Jr., president and chief executive officer, Ottaway Newspapers;

Jessica Savitch, TV news correspondent, NBC; and

Thomas Winship, editor of the *Boston Globe*.

MathFile now available by computer

MathFile, the online version of Mathematical Reviews, recently became available on the Dialog Information Service which is accessible through all the Stanford University Libraries.

MathFile provides essentially complete coverage of worldwide literature on pure mathematics and of those works in applied mathematics, computer science, physics, engineering, biology, operations research, and other fields that contain new and interesting mathematics.

Among the fields which are searchable online are authors, descriptor or subject codes, journal name, reviewer, language, and publication year. In addition, from July 1979, the full text of the evaluative reviews are also searchable online.

The American Mathematical Society is the producer of this important data base. Taissa Kusma, a representative of the American Mathematical Society, will give a presentation on MathFile at 3 p.m. Thursday, Jan. 13, on the second floor of the Mathematics Department, building 380, in the room across from the elevator.

In addition, on Wednesday, Jan. 19, there will be free searching of MathFile in the Mathematical and Computer Sciences Library on the fourth floor of the Mathematics Department.

Faculty, staff, and students are invited to attend the presentation on the 13th or to stop by the Math/CS Library anytime during the 19th to test out this new version of a well-known data base.

For more information call Math/CS Librarian Harry Llull at ext. 7-0864.

Drive to meet great blood needs

The Stanford University Blood Bank will hold a blood drive from 10 a.m. to 4 p.m. Friday, Jan. 14, in the mezzanine of the Terman Engineering Building.

Faculty and staff are urged to donate blood and, whenever possible, to announce the drive to students and colleagues.

Patients at Stanford Hospital and Children's Hospital often have complex and sophisticated transfusion needs, and the demand for all blood products is high. The two Stanford hospitals combined use more than 100 units of blood each day—in order to support this need the Blood Bank holds drives each quarter on campus.

Call 497-7831 to schedule an appointment or simply drop in between 10 a.m. and 4 p.m. at Terman on Jan. 14.

Publicity workshop set

The Office of Student Activities will present a workshop entitled "Publicity: Getting the Word Out with Efficiency and Impact" at 4 p.m. Tuesday, Jan. 18, at the International Center.

This hour-long workshop will focus on practical tips for the design and implementation of a publicity campaign at Stanford, including flyers and newsletters.

For more information, drop by the OSA or phone 497-3542.

Fred Terman's favorite stories recalled by Halamka, who lives in his basement

Stanford senior John Halamka answered an ad posted at Residential Education and has lived at 445 El Escarpado as Frederick Terman's personal assistant for 10 months.

Halamka is a man after Terman's own heart—he got involved with computers in the sixth grade and runs a $100,000 per year software-hardware business named Colossus out of Terman's basement.

Halamka, who has a double major in medical microbiology and public policy, also spent many evening hours listening to Terman tell his famous stories.

"During the final days of his life," he related, "the stories kept coming, and the sense of humor never faltered.

"On the night before he died, we discussed my impending wisdom tooth extraction and how it could prevent me from speaking for a few days. Dr. Terman countered with 'that will be nearly impossible for you.' "

Below are some of the stories Terman told Halamka, as close to the original as his memory can produce.

Hoover's revolution

Herbert Hoover really had three lives. He had his life before the presidency as an engineer, his life during the presidency, and his life after. The only time he really had fun in life was before the presidency.

One of his poignant memories of his travels and tribulations was his trip to Russia. He was traveling on horseback through the country and stopped in a small peasant village for the night.

He dined at the town's only eating establishment and was ready to leave the next morning. The villagers insisted that he stay. He couldn't miss the great revolution.

Yes, the town was going to have a revolution. Down with the imperialist mayor and town leaders.

The next day at midnight, torches filled the town. The mayor and other political leaders were yanked from their slumber and imprisoned. The people had won, the revolution had succeeded. Now the citizens gathered in the town square to install the new government of the people.

One townman yelled, "We will have a government of the workers, all will be equal!" Another yelled, "And this government of the people will have a leader to guide us!" Two women yelled, "And a council of women will join in the leadership for all!"

The yelling continued throughout the night. By 4 a.m. the townspeople had split into 40 or so different groups. One demanded no leader, others demanded councils, others demanded the old system back.

By dawn the torches faded and the groups dissipated. One unanimous decision had been made: the groups could not agree on anything but their ability to disagree. The revolution had succeeded in creating a mob of sleep-deprived peasants.

As the final diehard militant returned to his domicile, Hoover heard him comment, "Maybe we should have another revolution next week."

Lewis Terman's Ten Commandments for the Emeritus Professor

When my father retired he drew up the Ten Commandments for the emeritus professor, and I think they are true today:

1. Whatever sufferings, disappointments and griefs beset us, we will not feel sorry for ourselves.

2. While doing all in our power to combat the ills that may beset our bodies and our bodies-politic, we will strive to maintain a reasonable degree of philosophical detachment.

3. We will endeavor to keep an open mind toward the newer trends that appear in our respective fields of scholarship and research.

4. We will never commit the ancient folly of condemning wholesale the younger generation.

5. We will not allow our minds to dwell upon, nor our tongues to enlarge upon, our life accomplishments.

6. We will not cultivate the illusion that our most important achievements are probably ahead of us.

7. We will try to keep alive such sense of humor as God in His mercy may have endowed us with, but not by overmuch practice of our stored up reserves of jokes.

8. We will emulate especially those members of our emeritus group who have shown that age is no bar to zest for life and for service.

9. We will not refuse the little services we can render because we are not longer equal to the bigger things we could once have done.

10. We will allow ourselves to be beguiled by the flattery of friends who tell us that we look as young as we did 20 or 30 years ago.

Lewis Madison Terman—1942

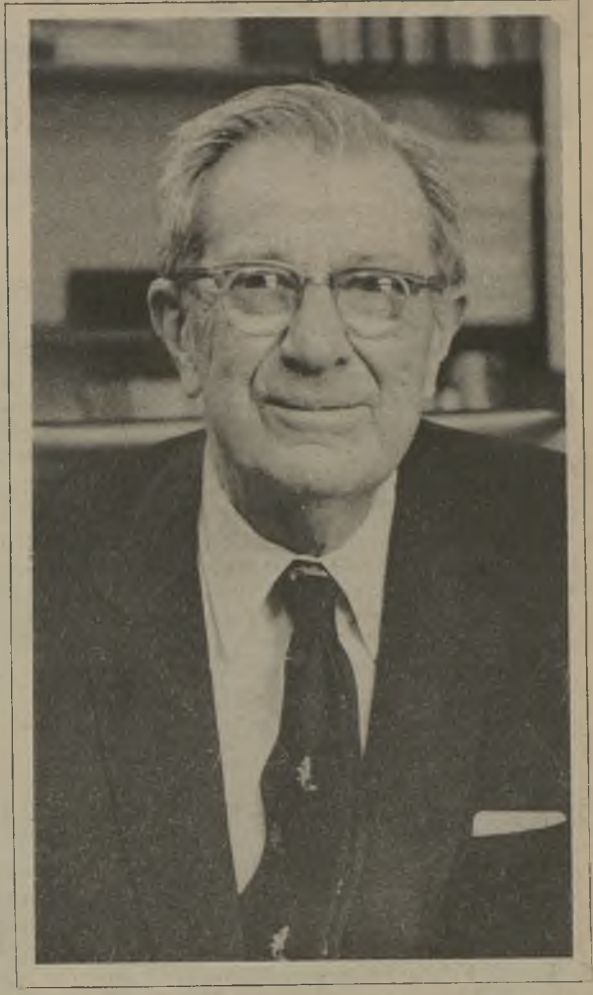
To Build a University

Building a university is no easy task. When I was provost we had the task of planning Stanford's future. What departments would we develop? How would we make Stanford into a world-class University. How could industry help us do it?

Money. Stanford needed money in the form of grants, gifts and contributions to develop. The only way money flows into a university is by having the talent to attract it. The prestige of world-class talent, ingenuity, and insight attracts new talent, more money and builds a successful university.

That is, building a university is based on one principle—excellent people. There is no substitute for excellence.

Of course, Stanford could have hired 1,000 very good people. But in my mind the answer was to hire 10 excellent people. A few excellent people such as Bill Shockley, Arthur Kornberg, and Carl Djerassi built the foundation of Stanford. Their talent has multiplied a hundredfold by attracting gifted students and professors alike to Silicon Valley.



Equipment—that was another problem. Money and people weren't quite enough. They needed equipment to work well.

Al Bowker and I thought that computers would be the way of the future. We started to build a computer science department and to acquire the equipment to go with it. Stanford simply could not afford a computer. We had about $200,000 and IBM wanted a million.

Well, I met the vice-president of IBM at a gathering and found out that universities using the computer got a 20 percent discount. There was another discount of 20 percent for teaching students how to use and care for the computer. Al Bowker convinced IBM to give another 40 percent discount for allowing the night use of the computer to be dedicated to IBM work.

We bought a $1 million computer for $200,000.

Industry and Stanford seem to go together. The experience of industry can't be taught in a university and the talent that industry needs to grow won't be seeded without a university. Stanford has succeeded and I am thankful.

You really should enjoy life before it escapes you. Excellence is possible to achieve without exhausting your mind and body along the way.

—Frederick E. Terman

Fish, skunks and mistletoe

I was never really involved in any sports, except maybe fishing.

Speaking of fish, one fish story I can never forget is David Starr Jordan's. He had an incredible memory. He was the kind of man who could pass through a crowd and introduce them all by name minutes later.

Unfortunately, his real penchant in life was remembering the scientific names of fish. He could recollect everything about any species you showed him, but he had one troubling problem; every time he learned the name of a student he figured he'd forget the name of a fish, because the memory only held so much. I hope he had a few students named Perch, Halibut, and Mackerel.

When I was a boy I used to climb in the hills a lot and I guess I had an entrepreneurial instinct. I used to hunt mistletoe, for the poison oak deterred wives of professors. It was quite a healthy business. Hunting butterflies, turtles and skunks also were favorite pastimes before I got addicted to electrical engineering.

Those early days taught me a lesson. It's so easy to forget the simpler things in life when academia gets in the way. But sooner or later slowing down to enjoy the turtles is something you have to do.

Sam MacDonald, the track maintenance man at Stanford in the '20s, took to the hills in a big way. He turned the pennies he had left over every week into acres of the Santa Cruz Mountains. His legacy was left to Stanford and became Sam MacDonald County Park.

Dorothy and Russell Varian owned what is now Castle Rock State Park and enjoyed many happy moments there. You really should enjoy life before it escapes you. Excellence is possible to achieve without exhausting your mind and body along the way.

Senate report

University may trim tuition, salary increases from previous projections

FIFTEENTH SENATE REPORT NO. 7

Summary of Actions Taken by the Senate
January 6, 1983

At its meeting on 1/6/83, the Senate took the following actions:

1. On the recommendation of the Committee on Academic Appraisal and Achievement, the Senate, by unanimous voice vote, conferred bachelor's degrees on candidates who had met the various requirements for those degrees.

2. On the recommendation of the Committee on Graduate Studies, the Senate, by unanimous voice vote, conferred advanced degrees on candidates who had met the various requirements for those degrees.

3. The Senate, by unanimous voice vote, received the Annual Report for 1981-82 of the Committee on Computers and Information Technology.

Minutes of the Fifteenth Senate
of the Academic Council
January 6, 1983
(Draft subject to approval by the Senate
January 20, 1983)

A meeting of the Fifteenth Senate of the Academic Council was held on 1/6/83, beginning at 3:18 p.m. in Room 180 of the School of Law with Chairman A.L. Fetter presiding. Present were 37 representatives, 9 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 12/2/82 (SenD#2460) were approved as submitted.

Conferral of Degrees

Under the Action Calendar, the Senate, by unanimous voice vote,

1. Conferred bachelor's degrees on candidates recommended by the Committee on Academic Appraisal and Achievement in the Preliminary List (SenD#2454), a Supplementary List (SenD#2455), and a final list of one candidate added by Registrar Mahoney.

2. Conferred advanced degrees on candidates recommended by the Committee on Graduate Studies in a Preliminary List (SendD#2456), and a Supplementary List (SenD#2457).

Report of the Steering Committee

Chairman Fetter announced the names of a number of Senate representatives who are joining the Fifteenth Senate at the start of Winter Quarter, some as alternates for Winter Quarter only, some for the duration of the Fifteenth Senate. These representatives include Dean R. Jaedicke (GSB), and Professors J. Merryman (Law), D. Phillips (Education), S. Rosenberg (Medicine/Oncology) and M. Sunseri (Mathematics).

He also announced that the report to the Ad Hoc Committee to Study the Question of the Length of Academic Terms had been received and would shortly be presented to the Senate, perhaps at the next meeting.

Finally, he reported that the February 3rd meeting of the Senate would be a short one, followed at 4:15 p.m. by the Winter Quarter meeting of the Academic Council. Details of these meetings will be announced later.

Report the President

President Kennedy, after some preliminary comments about the projected British royal visit in March and the Super Bowl game at Stanford in 1985, spoke at some length about the University's budget situation. The text of his remarks appears in *Campus Report* of January 12, 1983. Since the Provost's report was to focus on recent developments in the budget process, questions were deferred until after the Provost gave his report.

Report of the Provost

Provost Hastorf presented a status report on the general budget situation. He indicated that all units have now been asked to report their views of the consequences of reducing their operating budget by 5 percent. Budget requests and proposals for 1983-84 will now be reviewed and decisions made in February about recommendations on tuition, the general salary program, indirect costs, and other major parameters. These decisions will be reported to the School Deans, the Administrative Council, and the Senate in late February or early March. Action will be taken by the Board of Trustees on tuition in February and on the Operating Budget in March.

He commented that there appears to be general understanding of the budget problems, as well as a certain level of relief that they are not even more serious, which obscures the fact that this is the third major budget reduction in 15 years. This has led to conservative responses, i.e., attempts to trim, to squeeze, to shave the budgets. Three key variables are now being reviewed: tuition, indirect cost recovery, and salaries (both faculty and staff). The hardest look is being taken at administrative and other expenses in non-academic areas. As was true in previous budget-cutting programs, proportionately heavier cuts are expected to be made in these areas.

As things now stand, the administration expects to recommend to the Board of Trustees that Stanford hold the indirect cost rate at 69 percent for 1983-84. This is a clear commitment to the crucial importance of the research enterprise at Stanford and to the support of Stanford's federally funded investigators. The administration also is examining the consequences of recommending a substantially lower rate of tuition increase than the 12 percent assumed in the long-range forecast.

The largest single expense item is salaries. Under the circumstances, it becomes clear that Stanford cannot maintain the 7-8 percent base increase projected in the long-range forecast.

Furthermore, it is apparent that the 1984-85 budget cannot be balanced by additional shaving and paring; more rigorous initiatives will be necessary.

The Provost concluded by indicating that Stanford must look at the overall size of the University in relation to its sustainable support, and at the mix between academic programs, student and administrative support services. Cost control must become a central concern. The primary purposes of high quality teaching and scholarship will need to be accomplished with leaner support services.

In the question period which followed these two reports, it was pointed out that even with heavy cuts in administrative costs, overhead rates can go up if uncontrollable expenses allocated more heavily to research than to instruction increase disproportionately, e.g., energy costs. One way to keep overhead costs down is to get the contributors to indirect costs under better control. This will mean degraded services, a consequence for which we should all be prepared.

The gifts programs are doing better, but not fast enough to solve our problems. An important secondary effort is being made to change the pattern of giving toward a pattern of more support for the operating budget—more unrestricted gifts. At present, the overall gift total is less important than the proportion of that total which represents budget-relieving gifts.

The administration was asked to clarify the reasons for the swing away from the traditional Stanford policy on full recovery of indirect costs which was being announced at this meeting, since it is contrary to the Stanford policy espoused in the past. President Kennedy responded that past adherence to a full indirect cost recovery policy was prompted by two reasons: 1) Abandonment of that policy would force us to divert general University funds to balance those costs which we had failed to recover; 2) There was in the past no evidence that a full indirect cost recovery policy put Stanford at a disadvantage in competing for federal funds. Now, under tightened federal funding, there is evidence that such a danger exists. Furthermore, since the publicity occasioned by the NIH attempt to withhold 10 percent of the indirect costs already negotiated, universities appear to be at much higher political risk on the matter of indirect cost recovery.

These historical changes led to the reluctantly—made decision that Stanford should not now push to recover the 81-84 percent of indirect costs it is legally entitled to under present government rules. We can hope to attain a return to full recovery of indirect costs in the future by two means: 1) by doing everything we can now to control the expenses that inflate overhead costs, and 2) by working at a later date to negotiate true indirect cost recovery rates.

To the suggestion that the problem isn't unique to Stanford and that a national response could be more effective, the Provost responded that all major universities appear to share a concern that both tuition rates and indirect costs have risen too high too fast; all of them seem to be struggling to regain control of the forces which have been driving those rates and costs up. Even so, President Kennedy pointed out, Stanford must act unilaterally to make its own decisions, set its own policies, and solve the perceived problem of competitive disadvantage.

Annual Report of C-CIT for 1981-82

Professor J. Miller, Chairman of C-CIT, in presenting the Annual Report, noted that it had been completed in June of 1982 and that a number of interesting and noteworthy developments concerning computers and information technology had taken place at Stanford since that time. He noted that a group of administrators from the Center for Information Technology had been invited to this meeting to talk about CIT and respond to questions about recent developments in computers and information technology. These guests included: Edward E. Shaw, Associate Provost for Information Systems and Director of the Center for Information Technology; Michael M. Roberts, Deputy Director; Michael P. Carter, Director of Instruction and Research Information Systems; David J. Ernst, director of Administrative Information Systems; and William H. Yundt, Director of Network Development.

Professor Miller then summarized the activities of C-CIT in 1981-82 as detailed in the Annual Report (SenD#2443). The committee commended the progress of the campus-wide networking plan at Stanford, but questioned the University position on instructional computing in general, particularly with respect to undergraduates. The committee expressed the view that Stanford need not assume a leadership position in the instructional use of computers but that it should move forward in the field, with planning and innovation. It also commended the administration for having decided to do so by the end of the 1981-82 academic year.

In the discussion that followed Dean Lieberman took exception to the use of the term "funny money" in the report to refer to resources made available by allocation of University funds to CIT. He pointed out that readers of the Annual Report might misinterpret the term as implying no real cost to the University. In fact, those dollars are as real as other dollars, and are generated by the University in the usual ways. If allocated to a unit other than CIT, their loss would in fact effect a reduction in the dollar-bought resources and services of CIT.

In response to a question about the CIT budget and where it is going, CIT's Director, E. Shaw, reported that the total CIT budget amounts to $19.3 million. Of this, $18.1 million (94 percent) is designated for Central Services, and $1.2 million for Investment Programs. The Center is now undergoing the same budget review as other units, with a 2 percent reduction in the budget base this year and a projected 6 percent reduction to come.

Since the Annual Report had recommended that CONTEXT be viewed as two distinct projects to be treated differently, the question was asked if that recommendation had been implemented or if CONTEXT had been eliminated before it could be. E. Shaw reported that the recommendation came at the time when CONTEXT was being reviewed for financial viability. There were not enough subscribers to support the costs, and the funds needed to subsidize it would have been prohibitive. During the summer, therefore, the decision was made to eliminate CONTEXT, transferring users to other services, with transition services provided to ease out those who couldn't transfer immediately.

It was noted that Carnegie-Mellon's leadership in the instructional use of computers came because its administration took the initiative in setting up the program. Professor Miller was asked if his committee had decided that Stanford shouldn't do that. He responded that the possibility was discussed, but not recommended. There was no strong feeling against it; at the same time, there was no strong support for it. E. Shaw added that CIT works closely with Carnegie-Mellon because of shared interests and vendors on projects. He noted that the costs of Carnegie-Mellon student-computing facilities and services are added to the charge for tuition there. Fundamental differences between the two institutions mean that some, but by no means all, of the C-MU applications in this field will be appropriate to Stanford. A relatively small, homogenous university may more reasonably try for a single solution.

Because some concern was expressed about certain of the recommendations in the 1981-82 C-CIT Annual Report, and because the Report was intended to convey information (rather than to recommend any action) and is already seven months old in a field which is experiencing rapid changes, Chairman Fetter proposed that the Senate simply vote to receive the report rather than to accept it, since the latter implies tacit approval of its June 1982 recommendations. The Senate, by unanimous voice vote, received the Annual Report of C-CIT for 1981-82. **continued on next page**

AFFIRMATIVE ACTION PLAN
for Stanford University

I. Reaffirmation of Policy
II. Dissemination of Policy
III. Responsibility for Implementation
IV. Program Analysis
V. Establishment of Goals and Timetables
VI. Program Objectives
VII. Internal Review and Reports
VIII. Community Action Programs
IX. Sex Discrimination Guidelines
X. Minorities and Women Not Currently in the Workforce
XI. Guidelines on Discrimination Because of Religion or National Origin
XII. University Policy on Sexual Harassment

Plan completed by: Santiago Rodriguez, Affirmative Action Officer

Plan approved by: Donald Kennedy, President

AFFIRMATIVE ACTION PLAN for Stanford University

I. Reaffirmation of Policy

The foundation of all policy at Stanford University is the institution's determination to maintain itself as a university of the highest quality. Implicit in that tenet is the University's determination to provide equal opportunity for all employees and applicants for employment regardless of race, color, creed, religion, national origin, sexual preference, age, or sex, except where sex or age is a bona fide occupational qualification. Similarly, individuals with physical limitations are evaluated on their ability to perform a specific job rather than on assumptions about their disability.

The plan for affirmative action described here is intended, in ways that are consistent with those premises, to increase the number and improve the relative position of minority group members and women on the Stanford faculty and staff. And while proportional representation by race and sex is not necessary in every institution in a pluralistic society, Stanford's educational goals are best served if the institution reflects the diversity of our society at all levels.

The University has frequently stated its policy of equal employment opportunity. Because we are committed to avoid discrimination in personnel decisions, we intend to remain an equal opportunity employer. But the mere avoidance of direct discrimination, even where that can be fully achieved, does not by itself guarantee the desired changes in the composition of the faculty or staff.

To achieve such changes requires affirmative action. Hiring decisions that appear to have been reached neutrally may in fact be discriminatory if the applicant pool does not include women and minority group members. The traditional "old boy" networks for establishing criteria, locating applicants, and making recommendations can perpetuate the problem. Positive recruiting is, therefore, basic, and the need for careful review of stated qualifications goes hand in hand with open recruiting. Overly narrow qualifications may artificially and improperly exclude from consideration members of minority groups and women who could assume the responsibilities of a vacant position.

The University is fully committed to an affirmative action program. It consists, in part, of the following elements: 1) a requirement for imaginative and serious search and recruiting; 2) administrative review of hiring practices; 3) analysis of faculty and staff units to determine problem areas; 4) identification of and response to undesirable practices; 5) facilitation of training where possible and consistent with the educational objectives, that permits personal development sufficient for entry to some positions and promotion to others.

Stanford's officers who are responsible for affirmative action believe that these procedures will make Stanford University an affirmative action employer in the best sense of that phrase and will improve the representation of women and minority group members in the faculty and staff.

Donald Kennedy
President
Stanford University
September 16, 1982

II. Dissemination of Policy

Regularly and as often as possible to make the necessary impact, Stanford University informs the total University community and the public of its commitment to affirmative action and Equal Employment Opportunity.

A. Internal —Throughout the University, the policy is disseminated in the following ways:

1. A current statement of Stanford University's Affirmative Action (AA) and Equal Employment Opportunity (EEO) policy statement will be included in all personnel practices and policy manuals.

2. Stanford University's policy statement will be disseminated annually to all employees through the *Campus Report*.

3. The policy will be prominently displayed on bulletin boards where employees or prospective employees enter or congregate.

4. New employees will be informed of the University's policy statement during their initial processing or orientation.

5. Periodically, the subjects of affirmative action and equal employment opportunity will be discussed at senior executive and senior staff meetings.

6. Members of the Affirmative Action Office staff will visit ethnic and feminist organizations, department and unit supervisors, and employees at all levels.

7. A non-discrimination clause will be included in the United Stanford Workers bargaining agreement.

8. The Faculty Affirmative Action Officer meets individually with Deans and Department Chairmen in order to describe the policy, discuss the importance of realistic numerical goals and assist in the development of effective affirmative action.

9. The Faculty Senate, and elective representative group from the Academic Council, has been the forum for numerous discussions of faculty affirmative action objectives. In February 1972, the Senate adopted the following resolution: To implement further Stanford's commitment to women, the Senate of the Academic Council recommends:

- that steps shall be taken that will significantly increase the number of women on the faculty;
- that as a proximal goal, the current proportionate representation of women among new appointees to faculty be maintained; and
- that the Faculty Affirmative Action Officer shall report annually to the Senate on the representation of women among faculty newly hired and promoted during the preceding year.

The annual report of the Faculty Affirmative Action Officer, along with other discussions of matters affecting women and minority faculty members is yearly presented to the University community through the *Campus Report* and the *Stanford Daily*.

B. External

1. Recruiting sources will be given notice of the University's non-discrimination policy.

2. All newspaper employment advertisements will appear in sex neutral columns (male/female) and contain the phrase "An Equal Opportunity Affirmative Action Employer."

3. The University includes an appropriate AA and EEO clause in all purchase order forms, leases, contracts, and business agreements.

4. As appropriate, the University's AA and EEO policy is communicated to schools, colleges, community leaders, and organizations.

5. Letters of compliance with affirmative action policies and the maintenance of nonsegregated facilities are required from appropriate subcontractors and vendors to the University.

III. Responsibility for Implementation

The president of the University, Don Kennedy, has the ultimate responsibility for the implementation of Stanford's Affirmative Action Program. To ensure the effective implementation of the program, he delegated authority and responsibilities as follows:

A. Affirmative Action Officer

The President of Stanford University has assigned responsibility for Equal Employment Opportunity and the implementation of Affirmative Action Programs for the entire University to the Affirmative Action Officer, Santiago Rodriguez, whose responsibilities and authority include but are not limited to:

1. Designing a meaningful Affirmative Action Program and insuring its effective implementation each year.

2. Providing direction to the University Affirmative Action Coordinating Group.

3. Designing, implementing and reviewing all reporting systems that will measure the effectiveness of Affirmative Action Programs.

4. Developing University EEO policy statements and internal and external communication techniques.

5. Assisting the Vice Presidential Groups in preparing and implementing effective review and statistical reporting systems that:

   a. measure effectiveness of University programs by monitoring progress;

   b. indicate remedial action where needed;

   c. determine the degree to which the University goals and objectives have been attained.

6. Participating in discussions with the U.S. Equal Employment Opportunity Commission, the Office of Federal Contract Compliance Programs and other federal civil rights agencies when appropriate.

7. Participating in selected community endeavors and advising management of trends within the minority community and feminist organizations, recommending University involvement with various community organizations when appropriate.

8. Identifying problem areas throughout the University.

9. Making periodic visits to departments within the University to evaluate employment practices and to assist management in arriving at solutions to problems.

10. Keeping top management advised of the adequacy of existing programs and proposing revisions or intensification of efforts to improve University posture in all areas of employee relations with emphasis on women and minorities.

11. Reviewing all informal complaints and charges alleging violation of Title VII of the Civil Rights Act of 1964, as amended; the Age Discrimination in Employment Act of 1976; the Equal Pay Act of 1963; the Rehabilitation Act of 1973; the Vietnam Era Veterans Adjustment Act; the Civil Rights Act of 1866; other applicable federal and state laws prohibiting employment discrimination in conjunction with other relevant University officials.

12. Interfacing with applicable federal and state agencies during complaint investigations.

13. Developing and maintaining an effective University-wide monitoring and tracking system of EEO-related complaints.

14. Keeping the Vice Presidential Groups and department management informed of key government agency rulings and laws affecting employment practices.

15. Providing consulting services to the Vice Presidential Groups and department management with regard to interpretation and analysis of potential discrimination issues.

16. Interfacing with compliance agencies during on-site compliance reviews.

17. Monitoring the University's programs for adherence to University employment policies, e.g., recruitment, selection, placement, hiring, promotion, layoff, termination, compensation, training and development, to insure compliance with EEO rules and regulations.

18. Preparing periodic reports of EEO progress.

19. Reviewing labor/management bargaining agreements to insure compliance with EEO rules and regulations.

20. Representing the University at national, state and local agency meetings.

B. Vice Presidents

The University Vice Presidents have these affirmative obligations within their respective areas:

1. Cooperating with the Affirmative Action Officer in implementing an effective Affirmative Action Program.

2. Becoming actively involved in EEO and affirmative action activities to insure that established goals and objectives are met.

3. Appointing Affirmative Action Coordinator as representative for the vice-presidential group.

4. Reviewing job openings and employees considered for them to insure that minorities and women are given full opportunity for transfer, promotion and training by superiors.

5. Notifying and encouraging minority and women employees to take advantage of University-sponsored training or educational assistance programs.

6. Directing the managers and supervisors to counsel employees on how to meet University performance standards.

7. Insuring that all supervisors and other employees at the University understand and observe the University's policy of Equal Employment Opportunity in performing their work.

8. Insuring career counselling is performed with employees.

9. Insuring that each manager and supervisor is aware that his/her work performance will be evaluated in part on his/her affirmative action performance.

10. Periodically discuss equal employment opportunity issues, i.e. development and status of goals, grievances resolution, training requirements, difference between nondiscrimination and affirmative action, with senior staff member.

C. All Other Supervisors and Managers and Employees

All line managers and supervisors, through orientation and regular discussions with management, are aware that their responsibilities include the implementation of EEO and affirmative action policy on a day-to-day basis.

All employees and managers are responsible for insuring that Affirmative Action Programs work successfully. All employees are expected to bring general or specific EEO/AA problems to the attention of department managers, the Employee Relations Manager or the University Affirmative Action Officer. No employee shall be subjected to harassment or retaliation for identifying problem of an EEO/AA nature to management or other responsible officials.

Periodically, all managers and supervisors should conduct meetings with all other employees to discuss the Vice Presidential Group/department/section affirmative action program, development and status of goals, internal grievance procedure and other EEO/AA related items.

D. Faculty Affirmative Action Officer

The President of the University, Donald Kennedy, has the ultimate responsibility for the implementation of Stanford's AA Program. To ensure effective implementation he delegated the responsibility and authority for Faculty Affirmative Action to the Vice President and Provost, Albert Hastorf, whose activities have included but are not limited to:

1. Developing policies and procedures for appropriately increasing female and ethnic minority representation on the faculty and to insure that the policy is implemented.

2. Reviewing all faculty appointments and promotions to determine whether they are consistent with that policy and the associated procedural guidelines.

3. Assisting search committees in their efforts to broaden the scope of their searches.

4. Designing and implementing internal review and reporting systems to measure the effectiveness of the programs.

5. Publishing EEO/AA policies and procedural guidelines related to faculty hiring and report on progress in faculty affirmative action.

6. Administering the Faculty Affirmative Action Fund.

7. Counseling faculty members who are women or members of minority grups about professional opportunities.

8. Reviewing annual reports from Deans, Department Chairmen and Faculty Affirmative Action representatives in each school on the issue of affirmative action.

E. Affirmative Action Coordinators

Each Vice President designates one or more individual as an Affirmative Acton Coordinator. Coordinators meet regularly as a group with the Affirmative Action Officer and other interested individuals, e.g., the Manager of Employment, to discuss and examine affirmative action issues of general interest to the University as well as to discuss the implementation of appropriate affirmative action in their respective areas. These Coordinators have received the delegated responsibility for monitoring affirmative action progress with Vice Presidential areas from their respective Vice President. Coordinators meet regularly with staff of the Affirmative Acton Office as needed to identify and resolve concerns involving affirmative action within their purview.

IV. Program Analysis

Personnel practices are analyzed regularly to identify possible areas of adverse impact in the affirmative action posture of Stanford University. Analysis is conducted by Vice-Presidential area for staff and by school for faculty.

President/Provost

Comparative data appear to indicate that some progress was made toward achieving affirmative action hiring goals established for 1981-82, despite on-going problems encountered with the recruitment of qualified, competitive minorities for most job groups and women for middle and senior management. All levels of management continue to require special attention. There are few opportunities to hire at the senior and middle levels of management. However, over the past year, we have had some success in placing more women in middle management positions. In the lower management group, where more opportunities to hire exist, the work force is diverse. The diversity fluctuates, however, as some of the lower management staff move to different areas within the University or leave for external employment opportunities.

We continue to encounter difficulty in recruiting programmers and engineers in general, and experience even greater problems with recruitment of minority programmers and engineers despite general recruitment efforts that have been focused on these groups over the past year. Our posture with respect to salaries in these highly competitive job markets and the high cost of housing in this area continue to impede progress toward meeting our goals.

The aforementioned factors have an adverse affect, also, on our ability to attract professional librarians, as well as staff to fill many of our vacancies in other job groups. We continue to recruit with some limited success in the south and west, but encounter problems in recruiting from the east coast because of the substantial costs associated with relocation and the high cost of living in this area. It appears that other economic factors, such as costs related to commuting, also affect our ability to recruit, and often to retain, individuals from other Bay area locations which should provide recruitment sources for minorities, particularly for clerical and other nonexempt jobs.

Business and Finance

Many goals have been met in the past year, despite a slow economy that resulted in both layoffs and low turnover. On the whole we are doing well in hiring minorities and women, but often our recruiting efforts are cancelled out by terminations of goal category employees. Minorities and women have not experienced more turnover than other employees, but their terminations are more visable because of the resulting frustration felt by hiring officers who continue to face apparently unmet goals despite successful recruiting.

We have some job classifications that continually experience underutilization. Some of these jobs share the characteristics of requiring a high level of training or specific experience in fields that offer high salaries e.g. programmers and senior management. This makes recruitment more difficult. There are other areas where these characteristics do not exist and yet where goals remain unmet. We will be concentrating on recruitment in these areas and look forward to another successful year.

AFFIRMATIVE ACTION PLAN for Stanford University

page four

For the most part the goals that remain in our job classifications are for one woman or minority per classification. The noteworthy exceptions are described below along with the single goals.

Underutilization of both minorities and women exists at senior, middle and lower management levels. No vacancies are projected at the senior management levels, but contingency goals have been set in the event that vacancies arise. Some vacancies are anticipated at the middle management level. Past recruitment efforts have not yielded an adequate number of black and female applicants at this level.

Women are markedly underutilized in the shop jobs, which are non-traditional jobs for women. The job groups of construction, mechanics, deliverers, maintenance, and grounds present major recruitment problems.

Hispanics continue to be significantly underutilized in protective services, general clerical, and mechanics job groups. Successful recruitment of clericals has been undone by terminations. Recruitment of Hispanics for protective services continues to be unsuccessful.

Blacks are noticeably underutilized in the facilities professional group. We offered a position to a black this past year and lost the candidate to a more lucrative job off-campus.

Two other job groups show women as being underutilized, dieticians and storekeepers. We believe that the availabilities used for these categories are inappropriate for the actual jobs as they exist in B&F. Single goals exist for the minority groups below in the job classifications listed.

Blacks: miscellaneous professionals, health professionals, programmers, grounds, and labor.

Hispanics: miscellaneous professionals, procurement professionals, programmers, and construction

Asians: Programmers, construction, storekeeper, and machine operator.

We look forward to continuing progress in meeting these goals in the coming year.

Development

The Office of Development continues to experience underutilization of minorities at the professional level, particularly in the Development Officer job group. Additionally, a distributional problem exists in that minorities are not represented adequately in the higher-level positions of the Office of Development. Women, on the other hand, are a significant portion of the exempt workforce and are not underutilized as a group.

Minorities and women are well represented in the clerical job group. However, very few minorities are found in the higher-level non-exempt positions.

Public Affairs

The Office of Public Affairs is marked by small and stable staffing in all job categories, particularly at the management levels. Nevertheless, where opportunities to hire occurred, progress toward our goals is evident.

Underutilization of women and minorities persists at both the senior and mid-management levels and for black and Asians at the lower management level. We anticipate two vacancies in the latter category within the coming year. Past recruitment efforts have not yielded adequate numbers of minorities for these positions in fields traditionally dominated by white men.

We were able to achieve our goals in the artists series and at the miscellaneous professional level (C-6's) by hiring an Asian woman, black man, and a black woman, respectively.

At the general clerical level, where significant turnover exists, we realized considerable progress. Four women (one Hispanic) and one Hispanic man was hired. We continue to be underutilized for Asians in this category.

Underutilization of women, Asians, and Hispanics exists in the Graphic Technical/Technical job group, but some progress toward our goals occurred with the hire of a black male.

It is worth reiterating that the small numbers of people in these job groups, i.e., 1-4, (with the exception of the general clerical) provides little opportunity to make dramatic progress toward our goals, but we will continue to strive or the steady progress we have achieved within the past year.

Legal Counsel

Overall minority and female utilization continues to exceed availability in the attorney category. Two anticipated openings for attorneys were filled, in addition to a third, unanticipated vacancy during the past year. From applicant pools totalling over 300, one black male, one non-minority female, and one non-minority male were hired. Despite an extensive search for qualified Hispanic applicants, which included personal communication with Hispanic lawyers and professors of law, posting of the vacancy announcements in law schools, and posting of the vacancy announcement with Hispanic Bar associations, we were not able to reach our hiring goal of one Hispanic attorney.

In the secretarial category, one Secretary II, Specialist position was filled. The vacancy announcement for this position was distributed to an extensive group of potential sources of minority candidates. The resulting group of 20 applications produced an interview pool of seven women, including one black and three Asian candidates. The successful candidate is an Asian. As in the attorney category, overall utilization of minorities and women continues to exceed availabilities in the secretarial category. In view of our inability to recruit a qualified black secretary into the legal environment, advertising of any new openings which may occur will be intensified, with additional emphasis on expanding the black applicant pool.

FACULTY

Graduate School of Business

During the past academic year the School made a total of ten new appointments. Of these, two are women, one is Black and two are Asian faculty appointments. There was only one tenured appointment and he is a non-minority male who will have a joint appointment in two schools at the University. There were three promotions to tenure and four resignations during the past year. The School has lost a nontenured Asian faculty member due to his resignation from the University.

At the tenured level, the School has set an ultimate five year goal for a woman faculty member. Few anticipated vacancies and low availabilities preclude setting realistic annual goals; however, the school believes that it may be possible to achieve utilization over the next five years. During the past year the School offered a tenured appointment to a woman. The School, the President and the Provost engaged in extensive negotiations in an effort to gain the appointment. Regrettably the candidate ultimately declined the offer and remained on the East Coast.

At the non-tenured level, the School made progress in meeting a goal through the appointment of a black faculty member to the faculty. The School realizes that it remains underutilized in terms of tenured black and non-tenured Hispanic faculty. It must be stressed that availability calculations are exceedingly low for both populations and that there are too few anticipated vacancies for setting realistic goals. There were a total 419 applicants in the searches and, of these, 113 were women, 24 were Asian, 10 were black, 7 were Hispanic and 1 was American Indian.

It is important to note that the School has made good faith efforts to identify and interview, either on campus or at conferences, women and minority candidates. Because of this the percentage of women and minorities contacted in the searches is higher than their percentage representation in the candidate pools.

Though not a goal category, the School continued to experience success in the appointment of women. The two additional non-tenured women faculty who have been offered and who have accepted appointments are to begin in January of 1983. They are noted in the numerical count.

There is also continued progress in terms of non-tenured Asians. Two additional Asian faculty have been appointed to the faculty. The resignation of an Asian faculty member explains why the numerical count has increased only by one.

School of Earth Sciences

The Dean is pleased to report some progress with regard to faculty affirmative action in the School of Earth Sciences despite unfavorable odds during academic year 1981-82. Three tenure track appointments were made within the academic year, two of which were with tenure, and one of those was Asian. One faculty member was promoted to tenure within the reporting period. No women were appointed or promoted during this time.

At the tenured level, the School is underutilized in terms of black, Hispanic and women faculty. No realistic numerical goals can be set for minority faculty given the few opportunities (3) to hire at the tenured level over the next five year period.

At the non-tenured level, women are well represented; 20% of the non-tenured faculty are female and this greatly exceeds the 4.8% availability calculations. The School remains underutilized in terms of minority faculty and the Dean has set an ultimate five year goal to make every good faith effort to reach minority availability.

The Dean recognizes the need to recruit minority faculty and the School has made good faith efforts to assure that all avenues have been, and will continue to be, explored. Unfortunately, it is still true that few minorities elect earth science for graduate study. Availability figures for faculty appointments will remain constant and low until there is a critical number of minority students as undergraduates and graduates in this area. In order to address the issue of building a pipeline of such talent in this area, the School continues to encourage promising young minority scholars to pursue studies at Stanford. The Dean and the faculty have worked with the American Geological Institute Scholarships Committee and the Minority Student Intern Program at the U.S. Geological Survey. These have been sources of favorable developments and work in this area will be continued. Efforts of this kind have been taken not only to increase minority representation within the student body, but also to increase the number of potential faculty members, both at Stanford and elsewhere.

The School's faculty affirmative action officer also serves as the Chairman of the School's Appointments and Promotions Committee. This has been a most effective dual role because the overlap assures constant vigilance with specific efforts to develop diverse applicant pools The faculty affirmative action representative has access to a roster of senior women and has also planned to keep track of promising young minority scholars. This resource was used in a search this past year but the committee found that the individuals on the roster did not meet the specific criteria in the faculty search. This activity will continue as a part of the School's good faith efforts in faculty affirmative action.

Applicant Flow Analysis—At the tenured level, there were only five candidates for the full-time position and none were female. The only ethnic minority candidate was an Asian and he was selected for the position. There

were seven candidates for the half-time tenured position including one female and one Asian.

At the non-tenured level, there were a total of 41 candidates for the full-time assistant professor billet. The pool included two women but no ethnic minorities.

The very small numbers of candidates for two of the three searches reflect the highly specialized nature of the announced vacancies. The fact that no women or ethnic minority candidates could be considered as seriously competitive for these positions is further indication of the limitations in the applicant pool for the field of Earth Sciences.

Terminations and Resignations—During 1981-82, one tenured faculty member, (a non-minority male) was appointed to Emeritus status.

Promotions—During the past academic year, one non-minority male was promoted to tenure.

School of Education

During the past academic year only one search was conducted resulting in one appointment in the School. A woman was appointed with tenure and she will be on the faculty in September of 1983. There will now be four tenured women in the School and progress has been made toward utilization. The School will continue its good faith efforts in the area of tenured women but it must be noted that there will be extremely few opportunities to hire at the tenured level.

At the tenured level, the School continues to be underutilized in the areas of black, Hispanic and other minority faculty. Because the Dean anticipates only two or three vacancies at the tenured level over the next five years, due to low availabilities, the School realizes that extraordinary efforts will continue to be needed to reach availability.

At the non-tenured level, there are a total of only thirteen faculty members and no new searches or appointments took place this year. One non-tenured woman left the faculty at the end of a nontenure track three-year appointment so there are now four non-tenured women in the School. It is important to note that two of these women are not on a tenure track appointment. The School is utilized in terms of non-tenured Hispanics but remains underutilized in the area of black and Asian faculty. The Dean notes that the School finds itself in a difficult situation because he anticipates that there will only be five new opportunities to hire over the next five years and that availabilities continue to be low for this group.

The School of Education is concerned about its lack of black faculty, even though it made progress in hiring women and Hispanics. In the one tenured search that took place this year, resulting in the appointment of a tenured woman, the Committee did make extra efforts to identify potential black applicants. The Committee advertised the position in places where it would come to the attention of black scholars and, also sent letters to black educators. A faculty member in the Committee developed this targeted dissemination list. Unfortunately, this did not result in any black candidates in the final short list. Currently, the Dean, the affirmative action officer and other faculty are seeking to identify tenurable black faculty and have found one candidate in particular of great interest with whom they have been in contact. The School has also sought the assistance of prominent national Deans of other School's of Education throughout the country in carrying this informal search to successful completion.

School of Engineering

During the past academic year, the School of Engineering made a total of six tenure track appointments. Five were made at the nontenured level, among them being two women and an Asian male. However, one of the women will not begin her appointment until the 1983-84 academic year. The tenured appointment was a non-minority male.

In the area of women faculty, the School is making excellent progress. Overall, the percentage of women on the faculty far exceeds their meager availability. This is particularly evident from the review of the six searches conducted this past year. Among the over 500 applicants, only four women were in the finalist pools. The School appointed two additional non-tenured women. However, while the School is utilized well in excess of availability for women at the non-tenured positions, the School expects that this past year's pattern is indicative of the continued progress in the future. Specifically, a woman who was hired originally several years ago at the non-tenured level was reappointed with tenure status this past year. Given the School's record on promotion and retention of junior faculty and our success in hiring women at the non-tenured level, they expect to bring their utilization at the tenured level up to the availability within five years by promotion.

There were a total of three resignations from the faculty and one non-reappointment. Three faculty retired to Emeriti status. Of the three reappointments with tenure, one was a woman faculty member.

In the area of minority faculty, the School is not so sanguine. Among the over 500 applicants to the six searches, there were six Asians in the finalist pool and one of the appointments was an Asian. However, not a single black or Hispanic was in the applicant pool. The School makes a particular effort, not only to place ads in key national journals, but also to make direct mailings to all known sources of qualified applicants, e.g., department chairs, affirmative action groups, and even to potential candidates. In one search last year, a qualified black was identified but he declined to be considered for the search. Thus, while the School finds that it is utilized at the tenured level for blacks and Asians, and at the nontenured level for Hispanics, it is underutilized in other areas. The School expects that over time it will achieve a balance in the Asian area because a critical number of Asians apply and, as evidenced by this year's search results, they have been hired. The same hope cannot be voiced for blacks and Hispanics. Unless a significant applicant pool exists, the School cannot hire them. Unfortunately, the School has found that their appearance in candidate pools is almost random rather than a regular occurrence in a bona fide pool. For example, the School did find and hire a Hispanic in 1980-81, but no black or Hispanic surfaced as applicants for searches this year. The School shall continue to make strong efforts to find qualified minorities for future faculty billets.

The School is also attacking the problem in a positive way by working hard to train minority Ph.D.'s in their own graduate programs in Engineering. In this way, the School believes that it is helping to increase the national availability to truly qualified applicants.

The Associate Dean for Research of the School continues to be the faculty affirmative action representative. He monitors each faculty search to assure that advertisements are placed and that the search committees give full attention to the affirmative action aspects of the process. In addition, he serves on the School's Executive Committee which reviews and approves all appointments. Prior to their submittal to the Executive Committee, each set of appointment papers is also reviewed by the Dean's staff to assure, among other things, that all aspects of the University affirmative action procedures have been followed.

School of Humanities & Sciences

During the past academic year the School has made a total of 27 tenure-track appointments. Of these, we appointed 12 women (2 blacks, and 1 Hispanic) and 1 black male faculty member.

At the tenured level, there were a total of 6 new appointments including 1 woman faculty member in the Humanities area. At the nontenured level, there were a total of 21 appointments. Over half (12) are women, including 1 Hispanic and 2 blacks, and 1 is a black male. This is the highest number of women and minorities appointed in the School during the past decade.

The School has also experienced continued success in its goal of retaining and promoting women and minorities. There were a total of 9 promotions school-wide and of these, 5 are women, including 1 Asian woman.

There were 7 faculty members who retired to Emeritus status, including 1 woman. Nine faculty members resigned including 1 Asian and 1 woman. Regrettably, 2 tenured women died. Fourteen assistant professors were not given continuing appointments and of these, 4 were women.

Humanities—In the Humanities, there were a total of 18 new appointments to tenure track positions. They include 11 women (1 black and 1 Hispanic) and 1 black male faculty member. At the tenured level the School appointed 1 woman and 2 men. Of the 15 non-tenured appointments, 11 are women, including 2 blacks, and 1 Hispanic.

There were a total of 5 promotions to tenure in the Humanities and, of these, 3 are women. At the tenured level, goals have been set for additional tenured women; the goal for 1981 was to have at least one additional woman at tenured status. In fact, the School exceeded this goal through the appointment of a tenured woman and the promotion of 3 other women to tenure. Regrettably, a tenured faculty woman died during the past academic year.

At this time there are appointment negotiations underway for an additional tenured woman, but the outcome of that decision will not be known until later this year. The Dean estimates that there will be about 20 opportunities to hire over the next five years, and the School has again set a goal for an additional tenured woman on the Humanities faculty. Though this area has exceeded availability and is utilized in terms of women and minority faculty members at the non-tenured level, the Dean emphasizes that the commitment to affirmative action and continued diversity on the faculty remains as an integral part of future faculty searches.

Social Sciences—In this area, there were only 2 new appointments, 1 black woman and 1 non-minority male. Both of these appointments were at the non-tenured level.

There were also 2 promotions to tenure; both are women, 1 of whom is Asian. At the tenured level, progress has been made toward reaching utilization in terms of tenured women. The annual goal of adding at least one tenured woman was exceeded, with 2 promotions to tenure. Regrettably, a tenured woman faculty member died and thus, the actual number of tenured women is only increased by 1. The Dean has set ultimate and annual goals for tenured women, and the School will continue its good faith efforts in this area.

There was also a .7% underutilization of tenured black faculty. A combination of low availabilities and fewer anticipated opportunities to hire at the tenured level do not enable us to set an annual goal. However, an ultimate goal over the next five years has been set to arrive at utilization for black faculty.

The Social Science area is fully utilized in terms of women and minorities at the non-tenured level. The School has continued to make progress in the area of non-tenured blacks. The additional appointment of a black faculty member exceeds the availability calculations.

Natural Sciences—There were a total of 7 new appointments in this area, none of whom were women or minorities. At the tenured level, there were 3 new appointments, 1 at half-time status.

Since one of the tenured women retired to Emerita status during the academic year, this exacerbated under-

AFFIRMATIVE ACTION PLAN for Stanford University

page six

utilization of women at both the tenured and non-tenured level. There is also underutilization of minorities and the School has not yet met annual or ultimate goals in the natural sciences.

At the tenured level, the Dean estimates 10 tenured vacancies over the next 5 years and ultimate goals have been set for women and minorities. Though the School hired a tenured woman faculty member during the 1980-81 academic year, the total number of tenured women declined because of 1 retirement. Extremely low availabilities and few anticipated vacancies over the next 5 years precludes setting of realistic annual goals but there are ultimate 5 years set for women and minorities.

At the non-tenured level, the School is underutilized in the natural sciences in terms of blacks, Asians and women. The Dean estimates 15 vacancies over the next 5 years and ultimate goals have been set to meet availability for women and minorities.

The Natural Science area includes the departments of Applied Physics, Biological Sciences, Chemistry, Computer Science, Hopkins Marine Station, Mathematics, Physics, and Statistics. These areas have continued to be the most national under-represented in terms of women and minorities. Availabilities are extremely low and our own applicant pool confirmed this status. In the 7 appointment searches, there were a total of 787 applicants; of these only 82 were women, and only 1 Hispanic was identified.

Action Oriented Plans—In order to continue addressing faculty affirmative action concerns, the Dean has maintained the appointments of faculty affirmative action officers in each of the departments in the School. These faculty members serve as a departmental resource on the affirmative action aspects of faculty searches and appointments.

During the past academic year, the Dean and the Vice President & Provost met with a representative group of the School's faculty affirmative action officers. Their discussion centered around successes and problems in the area of recruitment and retention of women and minority faculty members. Several specific activities will be implemented during the 1982-83 academic year. The Dean is considering granting additional funds to facilitate campus interviews of women and minorities who are among the finalists in a faculty search. Often departmental resources are insufficient to cover the cost of campus interviews for more than the top 2 finalist. Interviews on campus are a critical factor in ultimate faculty appointments, thus, the School will undertake this added good faith effort. Several departments will make an attempt to identify promising women and minority graduate students at other national research institutions. It is important to identify early those women and minorities who show potential for future faculty appointments. Visiting appointments, replacing a faculty member who is on leave, will also be explored for promising women and minority scholars.

The Dean has continued to express a firm commitment to the School's faculty affirmative action efforts. The affirmative action aspects and the documentation of faculty searches have been strengthened.

Applicant Flow—In the Humanities, there were a total of 1509 candidates. Of these, 708 were women, 5 Asian, 8 black, 5 Hispanic and 3 American Indian.

In the Social Sciences, there were a total of 167 candidates. Of these, 7 were black, and 24 were women.

In the Natural Sciences, there was a total of 787 applicants. Of these, 82 were women; there was only 1 Hispanic and no other identifiable minorities in the pool.

Lecturers—During this reporting period there was little change in the Lecturer workforce in the School of Humanities and Sciences. There has been one resignation, that of a woman Lecturer. Note that 56% of all Lecturers with a half and full time appointment are women and that 13.7% of this group is minority. There is an underutilization of black Lecturers and the situation is exacerbated by low availabilities (3.1%) and only 4 anticipated vacancies over the next five years. The School will make every effort to achieve utilization over the ultimate goal period.

The Institution of National Searches for all new Lecturer positions has not been a significant assistance in the past. However, the School will continue to place emphasis casting the widest possible dissemination of job opportunities in this area. A memorandum describing the Lecturer category and guidelines for selection, retention and advancement is included as background in this report.

School of Law

During the 1981-82 academic year the Law School extended offers (subject, of course, to University approvals) of appointments to four people as regular faculty members. In addition, John Hart Ely was appointed to the faculty following his selection as Dean by the President. Of the four offers, one was to a tenured position and three non-tenured. The offers were made to one black male and three non-minority candidates.

The selection procedure used in searching for and appointing candidates has been described in previous reports. The process followed during 1981-82 was basically similar to that of previous years. The major difference was that more of the process focused on finding people to reach in particular departures and retirements. Thus, in addition to our general people in the fields of Asian Law and Natural Resources. As in the past, the Appointments Committee actively searched for minority candidates for every vacancy.

For the year 1981-82, the Committee was chaired by Professor Michael Wald and included Professors Thomas Grey, Thomas Jackson, and John Merryman. Acting Dean J. Keith Mann served ex officio. The Committee was looking to fill three to four vacancies at both the junior and senior levels. As noted, these included specific area searches and a search for qualified candidates regardless of area.

Altogether ten candidates were invited to visit the School, including two blacks and one woman. Several other women and blacks were contacted to determine whether they would be interested in entering teaching but none of them was at this time. Of the ten candidates who scheduled visits, eight actually came, with one woman and one black withdrawing to accept other employment. Offers were made to three of these people, including one black, but none was accepted. (The offer to the black practicing attorney was not rejected. Rather, it was mutually agreed to withdraw and to renew discussions after some six months.)

A tenured offer was also extended jointly with the Graduate School of Business to a non-minority group candidate who was visiting at the Business School and co-teaching a Law School course. This offer of a joint appointment was accepted recently.

In addition to regular appointments we also tried to recruit minority group members as visitors. One Hispanic will continue a year's visit during the first half of 1982-83. One woman declined an invitation to visit.

We are now beginning the appointments process for 1982-83. Professor Barbara Babcock will chair the Committee.

School of Medicine

Basic Sciences—According to our Faculty Utilization Analysis, the Basic Sciences had a numerical contingency goal to appoint one additional tenured woman in 1981-82.

This goal was not achieved. However, it should be pointed out that a very limited number of new appointments are made to the faculty in the Basic Sciences each year. Such appointments are usually at the level of Assistant Professor which is a non-tenured rank.

During the period covered by this report (09/02/81-09/01/82), there were only three new faculty appointments in the Basic Sciences as follows:

Genetics, Assistant Professor, Woman - white; Medical Microbiology, Assistant Professor, Male - white; Neurobiology, Professor and Dean of the School of Medicine, Male - white.

As shown in the above listing of new appointments, one woman (non-tenured) was added to the Basic Science faculty during the 1981-82 reporting period.

We will continue during 1982-83 to seek to reach the only remaining unachieved affirmative action objective in the Basic Sciences; that is, the numerical contingency goal of adding another tenured woman to the Basic Science Faculty.

Clinical Sciences—The up-dated Faculty Utilization Analysis shows the following numerical goals for 1981-82 in the Clinical Sciences:

1 minority (tenured); 1 black (non-tenured); 1 minority (non-tenured).

Additional numerical contingency goals for 1981-82 were:

1 black (tenured); 1 Hispanic (tenured); 1 Asian (tenured).

Women Faculty—The records of new appointments, promotions and terminations in 1981-82 provide the following relevant information regarding the affirmative action status of women in the Clinical Sciences:

1 woman promoted to tenure; 4 women appointed (non-tenured); 3 women terminated (non-tenured).

Net gain in Clinical Sciences: 1 woman promoted to tenure; 1 additional women (non-tenured) appointed.

The record shows that projected numerical objectives with respect to women in the Clinical Sciences have been met previously and continue to be maintained.

Minority Faculty—The above-mentioned attachments on appointments, promotions and terminations show the following changes in minority faculty representation in the Clinical Sciences:

1 Asian (non-tenured) appointed; 1 Hispanic (non-tenured) resigned.

These data indicate that there has been no change in minority faculty representation in the Clinical Sciences during 1981-82.

It can be concluded from the above statistics that:

(1) Numerical goals with respect to women in the Clinical Sciences were previously achieved and this standard was maintained in 1981-82.

(2) No progress was made in 1981-82 toward reaching the numerical and contingency goals which have been established for minority faculty in the Clinical Sciences. It is therefore necessary to carry forward into 1982-83 the above-listed numerical and numerical contingency goals for minority faculty which were established for 1981-82.

Comment—As was pointed out in the Affirmative Action Progress Report for 1980-81, the fundamental reason for difficulty in meeting minority faculty goals is the limited availability of qualified candidates in the applicant pools identified by our intensive nation-wide searches. We continue to study this problem by carefully documenting each search. The Total and Definitive Applicant Pools of candidates found on the 20

searches conducted in 1981-82 are analyzed in Attachments 4 and 5 with the following results:

- Total Pool: There were 908 applicants, 12% were women, 6% were Asian, 1% were black and 1% was Hispanic.
- Definitive Pool: One hundred and five applicants, 11% women, and 8% were Asian.
- The 3 to 8 most highly qualified applicants from the Total Pool who were evaluated as final competitors for the vacant position.

All the women and all the minority members of the faculty are listed in Attachments 6 and 7. These attachments show that there were 38 women faculty, representing 10% (38/393) of the total faculty; and that there were 16 minority faculty, representing 4% (16/393) of the total faculty in the School of Medicine on 9/1/82.

The solution to the problem of increasing minority representation on faculties of research-oriented medical schools such as Stanford is highly dependent on augmentation of the pool of speciallyqualified minority candidates for faculty appointment. This is a process that has, for historical reasons, only begun to occur to any significant degree with recent years. The preparation of colleges, universities, medical schools and graduate programs in basic medical sciences nationwide. Four years of college or university, followed by 4 or more years for an M.D. or Ph.D. degree must be followed by 3-8 years of postdoctoral training. Altogether, the time required by an individual from the beginning of college or university to eligibility for faculty appointment is at least 12 to 15 years. This approximates the duration of effective affirmative action in the institutions of higher learning in this country. The current limited availability of minority candidates for faculty appointment is the direct result of these background conditions.

Under existing circumstances, assessment of a medical school's affirmative action record should properly include a consideration of the composition of its medical student body which at Stanford in 1981-82 included 34% (134/396) women students and 33% (131/396) minority students. The comparable percentages in 1980-81 were 33% women students and 26% minority students.

These data place Stanford University School of Medicine at the forefront of medical schools in the nation with respect to affirmative action in student affairs. They are also indicative of the faculty's commitment to affirmative action goals by the education of significant numbers of women and minority physicians. This commitment is further demonstrated by the documented extent and thoroughness of searches for minority candidates for faculty appointment. We are confident that these efforts will in due course be reflected in increased minority representation on the faculty.

As an incentive and specific objective in this regard, the numerical and numerical contingency goals for 1981-82 as shown in Attachment 9 will be carried forward into 1982-83.

Academic Staff-Research

The Academic Staff-Research (AS-R) consists of Research Associates and Senior Research Associates in engineering, and the life, social, and physical sciences. Members of the AS-R normally work under the direction of faculty principal investigators and participate in externally-sponsored projects at levels usually requiring the equivalent of doctorate degrees.

Overall, the University has made significant affirmative action progress statistically according to the availability data and vacancies filled during 1981. Even so, Stanford is still concerned about the small numbers of blacks and Hispanics among the AS-R, although we are not optimistic about the prospects for improvement in the near future. In order to portray a more accurate picture of the employment of AS-R at Stanford University, data for the period 1/1/81-12/31/81 were used. There is far less activity, hiring and terminations, at the first of the calendar year than the beginning of the academic year, perhaps in large part because many new AS-R appointments tend to begin during September. In addition, any data presented effective on or around September 1 may not be complete due to inevitable delays in processing paperwork. The disadvantage to presenting data, particularly as they relate to hiring goals for the following year, is that eight months will have passed at the date of this reporting. However, the University views affirmative action as an on-going and continuing commitment. While the definition of goals using availability and anticipated vacancies is a useful measurement, the University wants to see no less than "availability representation" among the AS-R, as indicated in Table V. (Tables available from Affirmative Action Office on request.)

Table I shows the total AS-R as of 12-31-80 and 12-31-81 with new hires and terminations that occurred during that period. The proportion of non-minority women decreased one percent while minority males increased one percent. Tables II and III show in greater detail by job classification and affirmative action category the number of new hires and terminations.

Table IV shows affirmative action hires during 1981 as compared to goals for that period. While the University met or exceeded the goals in almost all cases, there remains the goal of increasing female representation among the Physical Science Research Associates by one, based on availability statistics and anticipated vacancies, as shown on Table V. All other goals on Table V were developed to bring the percentages of affirmative action representation among AS-R in line with the percentages of availability.

From 1/1/82-8/31/82 we made affirmative action progress by the appointment of one black Social Science Research Associate. However, blacks continue to be underutilized as well as Hispanics. As indicated in the Dean's report to the Senate of the Academic Council of April 15, 1982, 62% of all AS-R hires during 1981 had just completed their doctorate degrees or postdoctoral appointments at Stanford. The phenomenon is due to the training received by these individuals which makes them unique resources to be principal investigators as prospective AS-R members. Because such a high proportion of AS-R appointments are recent Stanford graduates or post-docs, one would, therefore, look at graduate student populations as an indicator of future AS-R employment—and one might then be discouraged. Given that increasing numbers of women are entering the sciences and engineering, there is optimism about achieving the goal for females. However, the same optimism can not exist regarding the prospects of increasing the number of Hispanics and blacks because of the decline in their representation in graduate schools over the last several years. Lastly, there are uncertainties about levels of federal research funding which may result in declining support for AS-R positions and opportunities for new hires during 1982.

The search requirement in the form of advertising locally and nationally have improved the affirmative action situation somewhat in that we tend to get proportionately more affirmative action hires as a result of searches than result from the graduate student/post doc pool. We, therefore, will continue the search requirements as well as encourage as many open searches as possible.

V. Establishment of Goals and Timetables

In the major organizational units, appropriate goals for minorities and women have been set where underutilization has been identified and opportunities to hire are anticipated. Where underutilization has been identifed and opportunities to hire are not anticipated, goals were set contingent upon unanticipated vacancies. In the analysis, Long Range Goals, the year the full utilization is expected, were determined by considering the following factors:

1. The job groups identified as underutilized;
2. anticipated personnel activity for the current year and forthcoming years;
3. availability trends (employed and unemployed);
4. degree of underutilization; and
5. University current and future and programmatic needs.

Efforts were made to project goals and time frames which are realistic, significant, measurable and attainable.

If there is a significant increase or decrease in the workforce which will have substantial effect on the goals established in the current plan, the goals will be adjusted appropriately and circumstances leading to the required change will be explained.

VI. Program Objectives

As in Section IV of this plan, we hve addressed each Vice Presidential area for staff separately.

President/Provost

We will continue to make a serious effort to achieve more diversity of staff. Search and selection procedures for professional positions, revised and implemented last year, will continue to be monitored closely. Emphasis will be placed on the design of search strategies, the length of search, and the scope of advertisement and general recruitment efforts will be factors emphasized for searches in job groups requiring attention to attain or make greater progress toward goals. Again this year, those job groups with the greatest impact institutionally, and which present problems with respect to goal attainment, have been designated as the highest priority for staff support for searches.

Emphasis will be placed, also, on developing trainee positions Hiring officers will be encouraged to utilize the Stanford Employment Experience (S.E.E.) program—a new University-wide program designed to recruit entry-level clerical staff. The focus of the program is directed toward the recruitment and development of minimally skilled affirmative action candidates, and it is hoped that the program will contribute significantly to our goal of attaining a more diverse clerical staff.

Business and Finance

We will continue to develop the consciousness throughout the Vice Presidential area that women and minorities should be fully utilized. To this end we will continue a training program of supervisors and hiring officers that was begun this past year. As part of the process of placing priorities on affirmative action issues, the Vice President has asked his senior staff to report at the regular staff meetings whenever an appointment or promotion is made into an affirmative action goal category. These reports are being solicited whether or not the person involved contributes to our affirmative action goals.

We will continue to place special emphasis on affirmative action in the management development program. Qualified applicants will be encouraged to apply for management positions through a development program aimed at giving them clear advancement paths.

AFFIRMATIVE ACTION PLAN for Stanford University

page eight

We will actively recruit women and minorities for all areas in the trades and crafts, and will make affirmative action in this area part of the performance evaluation of managers and supervisors.

Development

In the professional area, we will need to continue to improve our recruitment efforts to attract more minorities into Development Officer positions. In addition to utilizing traditional recruitment efforts, we will continue to refine the minority alumni recruitment effort begun last year. Strategies in this context include soliciting the support of alumni in identifying persons who, since graduation, have been exposed to fund-raising, marketing, or public relations efforts, and who might be interested in returning to work in the Development Office.

The analysis of the Development Office's training needs reported as underway in last year's report is now complete. Implementation is taking two forms: 1) Encouraging staff to upgrade skills identified as basic in development work and, 2) implementing an expanded orientation program. This process should assist minority employees in their progression toward higher-level positions.

Public Affairs

The areas of recruitment, searches, supervisors training, and staff development will be the focus of our affirmative action efforts in the coming year.

We will continue to engage in vigorous recruiting methods through vacancy announcements, newspaper ads, and networking at the personal and professional levels (professional "trade" organizations). Networking has proven to be the most successful method of recruitment in achieving our goals in the past.

The affirmative action coordinator will continue to personally participate in those searches bearing the greatest institutional impact in order to closely scrutinize and guide the process.

The supervisors training course in affirmative action methodology and issues was attended by 90% of the supervisors this past year. There will be a concerted effort to include all supervisors participation in regularly scheduled sessions in the coming year.

This year a woman will be placed in the management development program as our candidate — an occurrence we hope will become practice as we attempt to increase the presence of women and minorities in management positions. Greater emphasis will be given to staff development by encouraging and promoting the participation of clerical staff in courses and training.

University Counsel

Although no vacancies are anticipated in the department during the coming year, should openings occur, searches will again focus on meeting our established contingency goals in each category.

As has been the practice in the past, searches which may occur due to unanticipated vacancies in the attorney category will be conducted on a national level with specific emphasis on reaching our contingency goal of hiring a Hispanic attorney.

Due to the need for the exercise of increased professional responsibility in several areas of University law, a non-minority female Legal Assistant who has recently completed her law degree will be reclassified to Assistant Staff Counsel effective 9/1/82, further increasing the utilization of females in the attorney category.

As previously, contingency goals have been set for all minority groups in the Legal Assistant category although minority availabilities and turnover in this category are relatively low.

A contingency goal for the hiring of one black secretary has been set for the secretarial category.

Since availability is low for this group in this category, and our efforts to recruit a black secretary into the legal environment have not succeeded, our efforts to reach potential black candidates through advertising will be intensified should an opening occur.

ACTION ORIENTED PROGRAMS (FACULTY)

1. Financial Flexibility

The Faculty Affirmative Action Fund, created and funded in 1971, continues to function as a mechanism for taking advantage of opportunities to enhance affirmative action. There has been a consistent increase in the value of the Fund. In 1971 the amount was $50,000 and this allocation remains active for 1982-83.

The Fund's general purpose is to facilitate the appointment of individuals who are outstanding scholars and teachers, who are expected to contribute significantly to the University's educationals needs, and who may not fit exactly the specifications of an existing opening. The Fund has been used to:

a) supplement existing departmental or school budgets so that a highly desirable individual can be hired, when appropriate, at a higher rank than was anticipated when the position was defined.

b) allow departments and schools to anticipate retirement in taking advantage of available talent. Therefore, the Fund can finance the appointment of outstanding individuals whom the departments and schools want to add to their faculties but for whom no budget position will exist until a faculty member retires, perhaps three or four years later.

c) anticipate, and when appropriate, increase partial faculty billets and, on special occasians, to create a new billet.

Since its inception, several faculty affirmative action appointments have either been totally or partially supported by these budget-based funds. On a separate basis, any savings from these funds will continue to be used on a one-time basis to support activities that, in both direct and indirect ways, enhance the faculty affirmative action concerns throughout the University.

2. Faculty Review

The following activities were maintained and reviewed during 1981-82 by the Faculty Affirmative Action Office.

a) Review of faculty search committee plans. At the time that the search committees were formed, the Provost's Office was notified in writing of the names of the committee members and chairperson, and of the proposed description of the discipline or field in which the appointment was to be made. The Provost's Office then frequently called different search committee chairpersons and talked about the committee's plans for nationally disseminating search descriptions. This process enabled us to more successfully anticipate search areas and work with the faculty committees charged with conducting those searches. We will continue this activity this coming year and also work with faculty affirmative action representatives that have been appointed for each school.

b) The Provost's Office reviewed data on applicant flow showing the number of women, Blacks, Asians, Hispanics, Native Americans and non-minorities who were formal applicants for the faculty positions. We note that the search reports are more informative than in previous years and we will continue to request this information from search committee reports.

c) We have consistently reviewed each search report for new appointments in order to insure that they completely describe the specific procedures related to the affirmative action aspects of the search as described in the Faculty Handbook and in the "Appointments and Promotions" forms. The Provost and his staff have been able to more accurately determine all of the good faith efforts in the area of faculty affirmative action.

d) We have maintained annual data on new hires, promotions, terminations and resignations, and recalls by job group for faculty and other academic staff.

e) We reviewed progress on the numerical goals and the effectiveness of action oriented programs with the Deans of each School. We have found the annual report format extremely helpful with this activity.

f) We have issued the annual report to the Faculty Senate on the representation and status of women and minorities on the faculty. (A copy of this report is attached for your perusal).

g) The Provost's assistant met with the majority of faculty affirmative action representatives to discuss specific problem and progress areas in their respective disciplines.

h) The University and the Affirmative Action Office hosted a meeting of Ivy League Affirmative Action Officers in which issues and strategies for faculty affirmative action were discussed.

i) The Provost and his staff convened a series of meetings to discuss faculty affirmative action concerns. Included among the groups were the Deans Advisory Council, Senior Women Faculty, Chicano Faculty, Feminist Students and a sub-group of school and departmental faculty affirmative action representatives.

3. University Committee on Faculty Affirmative Action

The University Committee on Faculty Affirmative Action, under the general guidelines of President Kennedy's letter of August 1, 1980 was charged to make recommendations to the President, the Provost, and the Faculty Affirmative Action Officer, and appropriate administrative officers concerning the processes and results of affirmtive action (women and ethnic minorities) in appointments to the Stanford professoriate. During this past academic year, the President appointed a committee which consisted of fourteen members. They were charged with making recommendations on such matters as:

a) the identification of women and ethnic minority members for openings at both tenured and non-tenured levels in the Stanford professoriate, with the aim of increasing the numbers of women and ethnic minority members in the faculty.

b) the selection and recruitment of women and ethnic minorities for the Stanford professoriate. Recommendations should include criteria for selection and provision of appropriate incentives necessary to maintain individuals of high quality in the appropriate numbers and should also include the development of special avenues for increasing the numbers of women and ethnic minorities on the Stanford Faculty.

c) the retention and promotion of women and ethnic minorities on the faculty. Recommendations should include procedures for providing research opportunities and teaching support that will allow each individual to achieve his or her potential. The procedures should also make provision to insure that existing and/or future evaluation methods operate fairly and equitably.

d) procedures for advising and aiding women and ethnic minority members of the professoriate and for monitoring the progress of their careers and advancement through the professorial ranks.

e) procedures for identifying and eliminating the underutilization of women and ethnic minority members in the professoriate of the various departments and schools of the University.

f) procedures for dissemination of information and advice concerning the philosophy, rational, and legal aspects underlying affirmative action in professorial appointments at Stanford and for the mobilization of understanding and support of such action.

g) the establishment of a process for monitoring the progress of faculty affirmative action. Recommendations should include methods for evaluating the faculty affirmative action programs which include consideration of the processes used rather than simply the results achieved. Such methods should, for example, include publication of data in a form which would be suitable, among other things, for the inclusion in the Annual Report on Faculty Affirmative Action presented to the Senate of the Academic Council.

The Committee consisted of fourteen members of the Academic Council with at least one member from each of the seven schools, two graduate students, and a representative of the Vice President and Provost's staff who served as an ex-officio member without a vote. The Committee met numerous times during the academic year and submitted a report to the President and Provost addressing these issues.

4. Affirmative Action Efforts in Graduate Education

Graduate education of both minorities and women plays a critical role in faculty affirmative action; there can be no minority or female faculty in universities without minority and female graduate students. Stanford has recognized the importance of increasing the number of women and minority students in its graduate programs through support of the Office of the Dean of Graduate Studies and Research. 1981-82 was notable in the work of this office; for the first time, three full-time minority Assistant Deans were appointed. The Dean of Graduate Studies and Research now oversees one Associate Dean and three Assistants who together are responsible for the recruitment of women and minorities to Stanford's graduate and professional programs. In addition to the responsibilities of recruitment, the staff members provide advice and counsel to graduate students and coordinate programs to support the academic progress of the four targeted minority groups: Blacks, Chicanos, Native American Indians, and Puerto Ricans. The Dean also participates in planning and evaluation of special projects and the graduate affirmative action program; work closely with members of the University community and national and regional committees in the areas of graduate affirmative action and advancement; and participate in drafting proposals to agencies for the funding of programs relating to minority students. In 1981-82, examples of these responsibilities included:special orientation programs and workshops for new and continuing minority graduate students; recruitment trips to 81 campuses across the country and 8 American Indian reservations; participation in both the National and Western Name Exchange Programs; coordination of the summer visit of an undergraduate biologist from a Black college that participates in the NIH funded Minority Access to Research Careers Program (MARC); organization of a 2-week summer Faculty Networking Program at Stanford for faculty from institutions with large minority enrollments. This program had two goals: to inform the advisors of minority undergraduates about graduate opportunities at Stanford and to offer an opportunity for faculty development. An institutional grant to Stanford from the Graduate and Professional Opportunities Program (G-POP) covered the major costs of this workshop. Assistance with the planning and organization of the third Native American Educators Conference at Stanford, together with an American Indian Festival week that culminated in the annual Stanford Pow-Wow, and in organizing the Stanford Chapter of American Indians in Science and Engineering. Production of a new brochure and flyer to provide information on graduate opportunities for minority students at Stanford. One of these publications was particularly designed to encourage minority students to consider study for the Ph.D degree. Completion of a preliminary report on the study of the minority graduate experience at Stanford that focused on graduate students admitted between 1974 and 1979. Continued work with individual Departments and Schools to increase the number of minority graduate students. This effort has included both a University-wide graduate student recruitment committee and faculty liaison officers in individual departments in the School of Humanities and Sciences.

Affirmative Action efforts for graduate women have concentatrated on women in the sciences and engineering. A 1980 report from the National Science Foundation noted that women still remain the largest pool of talent available for increasing the size and quality of the science and engineering labor force. In addition to recruitment visits to colleges and universities, the Office of Graduate Studies and Research was responsible for the production of Stanford Women in Science and Engineering. Six thousand copies of this booklet were produced with financial support from three local corporations. A copy of the booklet was sent to the Career Center of major colleges and universities across the country and to every woman who completed an application for a Stanford graduate program in science and engineering.

We are currently seeking corporate support to begin a comparative study of graduate men and women in science and engineering programs at Stanford. This study will begin in January 1983, and two corporations have already made a commitment to help with this work. The results of the study will influence future efforts in the recruitment and retention of graduate women in science and engineering. 1982-83 will also include the introduction of a seminar series for graduate women in the mathematical sciences that we hope will reduce the academic isolation of graduate women in individual departments.

5. Research Centers

A number of research centers focusing on scholarly issues of general interests as well as specific interests to several constituencies are recognized, supported and encouraged by the University. Specifically, these bodies are: Center for Research on Women, Center for Chicano Research, and Afro-American Studies Program. While focusing specifically on intellectual issues, the Centers have also provided a focal point for staff, faculty and students for the cited communities. Stanford also maintains a Cultural Center for Native American Students that is staffed by a Dean in the Student Affairs Office.

VII. Internal Review and Reports

Staff Review

As a minimum, the following activities will be audited by the Affirmative Action Office.

Weekly:

Review data on each new applicant, showing: Name of applicant; week of application; EEO category; type of application filed (resume or application form); type (external, internal, layoff); veteran or handicap status).

Quarterly:

1. Review applicant statistics by major job group, Universitywide and by vice presidential area, showing: Number of males/females; number of black, Asian, Native American, Hispanic, non-minority applicants; number of veteran and handicapped applicants.

2. Review hire statistics by job group, University-wide and by vice presidential area, showing: Number of males/females; number of black, Asian, Native American, Hispanic and nonminority hires, number recalled from layoff hires, number of veteran and handicapped hires.

3. Review rejection statistics by job classification Universitywide, by vice presidential area and by department within vice presidential area. The reason for rejection for a particular applicant relative to a particular job will be kept manually (by departments for clerical and office).

4. Review promotion, termination and layoff statistics by job classification, University-wide and by vice presidential area, showing: Number of males/females, number of blacks, Asians, Native Americans, Hispanics, and non-minorities; number of veteran and handicapped hires.

5. Review progress towards numerical and non-numerical goals.

6. Review effectiveness of programs designed to assist in obtaining goals.

7. Review training education, supervisory, and management development programs.

8. Review procurement practices for appropriate clauses in purchase orders, lease sub-contracts, receipt of Certificates of Compliance.

9. Check technical phases of compliance such as bulletin board notices and EEO poster placements.

10. Review effectiveness of recruiting sources in referring minority and female applicants.

Annually:

1. Analyze distribution of minorities and women in the workforce.

2. Review applications forms for conformance to applicable state and federal laws and Stanford University policy.

3. Review seniority policies and practices for signs of disparate effect.

4. Review all employee compensation and benefit programs to determine equal application.

5. Review internal and external dissemination of EEO policy.

6. Review collective bargaining agreements to insure they contain the required EEO clause and do not include discriminatory provisions.

7. Review employees salaries to determine if there are inequities.

Reports:

Factual, concise, and informative reports will be prepared for management. They will include information on progress toward goal achievement, problem areas, observations recommendations, and summarized statistical data on applicant flow, new hires, promotions, terminations, tranfers, layoffs, recalls, and salary inequities.

1. Quarterly: EEO Progress Report

2. Semi-Annually: Report to the Office of Federal Contract Compliance Programs

3. Annually: Affirmative Action Program

4. Annually: EEO-6 Report

Faculty Review

As a minimum, the following activities will be reviewed by the Faculty Affirmative Action Office.

1. Review of Faculty search committee plans. At the time that the search committee is formed, the Provost's office will be notified in writing of the names of the committee members and chair, and of the proposed description of the discipline or field in which the appointment is to be made.

2. Review data on applicant flow showing: number of women, blacks, Asians, Hispanics, Native Americans, and nonminorities who were formal applicants for the faculty positions.

3. Review search reports for each appointment in order to insure that they completely describe the specific procedures related to the affirmative action aspects of the search as described in the Faculty Handbook and in the "Appointments and Promotions" forms.

4. Maintain annual data on new hires, promotions, terminations and resignations, and recalls by job group for faculty and other academic staff.

5. Annually review progress with the Deans on the numerical goals and the effectiveness of action-oriented programs designed to assist the institution in correcting underutilization where indicated.

6. Annually report to the Faculty Senate, as per its 1973 legislation, on the representation and status of women and minorities on the faculty.

7. Semi-annual report to the Office of Federal Contract Compliance Programs.

VIII. Community Action Programs

Stanford University actively supports community programs that are designed for the benefit of community members in general. Many employees participate in community programs outside of those supported by the University.

1. The Youth Opportunity Program, which began in 1968, provides work experience for financially disadvantaged high school students, coupled with educational and vocational counselling.

2. The Stanford Employment Experience (SEE) Program is a University administered program designed to assist the University in meeting staffing needs while making a positive impact on affirmative action goals. The program is focused on (but not limited to) the economically disadvantaged, handicapped, and minority populations. Program applicants are referred to the University by a group of selected community agencies working in the Stanford area to teach skills to the population groups targeted by the program. Program participants are classified as trainees for a period of six months while receiving on-the-job and other training to allow them to develop the full range of skills required for the position. The positions that the trainees occupy are full-time permanent positions. Supplemental training, evaluation, and counseling services are provided by the Stanford Employment Experience Program staff.

3. The Mathematical, Engineering and Science Achievement (MESA) Program identifies minority high school students, in the local community, and assists in preparing them to enter the mathematical, engineering and science fields.

4. Advocates for School Arts Program is a support group made up of parents, teachers and administrators advocating stronger, more comprehensive arts programs in the Palo Alto Unified School District.

5. The Community School of Music and the Arts is a non-profit community based school which provides individual and group lessons in music, drama, dance and crafts.

6. Stanford University employees and students present performances at Peninsula Volunteers Little House, which is a senior citizen center in Menlo Park, California.

7. Faculty and staff in the Department of Pediatrics participate in screening for sickle cell anemia in the local communities.

8. The Department of Family, Community, and Preventive Medicine faculty works with the Charles Drew Medical Center in East Palo Alto and the Community Health Center in Alviso.

9. Following are some organizations and programs that Stanford University utilizes and in which employees of the University participate:

A. General

Palo Alto Employment Development Division
San Jose Employment Development Division
Students Active Toward Community Health (SATCH)
American Association for Affirmative Action
Career Days at San Jose State University
Mid-Peninsula Urban Coalition
National Alliance of Business
Alameda County Human Relations Commission
American Society of Personnel Administrators
Bay Area Construction Opportunity Program

B. American Indian

American Indian Center
Society for the Advancement of Chicanos and Native Americans in Science

C. Asian American

International Rescue Committee
Chinese for Affirmative Action
Asian, Inc.
Oakland Chinese Community Council
Asian Americans for Community Involvement
Asian Law Caucus
Asian American Caucus, California Personnel and Guidance Association
Japanese American Citizens League
Southeast Asian Refugee Resettlement Center
Asian Pacific Personnel Association (APPA)

D. Black

Opportunities Industrialization Center West (OICW)
Peninsula Association for Black Personnel Administrators (PABPA)
National Urban League NAACP

E. Feminist

Mayfield Career Center
Resource Center for Women
National Organization for Women (NOW)
Federally Employed Women (FEW)
National Women's Political Caucus
Women's Opportunity Convention
Women in Apprenticeship

F. Hispanic

Chicanos for Creative Medicine
La Raza Medical Association (LARAMA)
Operation SER
American G.I. Forum
Mission Hiring Hall
Personnel Management Association of Aztlan Image
Bay Area Hispanic Employment Council
League of United Latin American Citizens (LULAC)
National Association of Latin Elected Officials
Mexican American Political Association
Vacancy Outreach Service
Society for the Advancement of Chicanos and Native Americans in Science
Council of Spanish-Speaking Mental Health and Health Services Organizations (COSSMHO)

G. Physically Limited

West Bay Committee for Employment of the Handicapped
San Mateo County Department of Rehabilitation
Electronic Industries Foundation/ADEPT
Santa Clara Committee for Employment of the Handicapped
Deaf Self-Help
Center for Independent Living
Sensory Aids Foundation
Community Resource for Independent Living

10. The Panel on External Affirmative Action appointed by the President meets regularly to review Stanford University's role in influencing the affirmative action policies of its subcontractors and vendors.

11. The Affirmative Action and Training Committee exists to resolve issues of mutual interest to the University and its largest bargaining unit. One of its chief interests is a systematic review of internal apprenticeship programs from an affirmative action perspective.

IX. Sex Discrimination Guidelines

A. Recruitment

All jobs are open to individuals of both sexes, and it is University policy that there are "no men's and no women's jobs at Stanford University." No sex preference is listed in advertising.

B. Selection and Placement

We do not have job categories for which there are bona fide occupational qualifications for sex, and all positions are open to members of both sexes.

C. Training

Currently, there are a limited number of affirmative action training programs at Stanford University. Training of all new entry level employees is a standard practice.

D. Promotion and Transfer

The University-wide employment system allows all employees, regardless of sex, to apply for positions which offer promotions or transfers.

E. Retirement Policy

The retirement policy applies equally to both men and women.

F. Physical Facilities

Physical facilities are provided equally for men and women.

G. Legal Policy

Stanford University's employment policies do not discriminate against either sex.

H. Married Employees

Married and unmarried men and women are treated equally in all personnel actions and benefits.

I. Childbirth Leave

The leave is granted at the request of the employees, for the period of time during which the employee is incapable of performing her job effectively because of disability due to normal pregnancy, delivery, or post-childbirth recovery. The leave extends until such time as the employee is capable of working once more.

1. Supervisors may request a written notification of the need for leave from the employee, identifying anticipated date of leave and date of return from leave.

2. The employee may charge against accrued sick leave the number of days on which she is physically unable to work. Vacation may be used during childbirth leave. Remaining portions of this leave are without salary.

3. If medical complications of normal pregnancy and delivery incapacitate the employee for the purposes of work after the agreed-upon date of return to work, the situation is treated like any other medical disability.

4. If the employee wishes, for the purpose of infant care, to take leave that extends past six weeks after delivery, an "infant care" leave of absence without salary must be arranged with the supervisor.

J. Infant Care Leave

Subject to departmental approval, regular employees may receive personal leave up to six months for the purpose of infant care after delivery of a new infant in the family. Either men or women may request such leave, but this leave is at the department's discretion and is not guaranteed. Days of leave for the purpose of infant care may not be charged against sick leave.

X. Minorities and Women Not Currentiy in the Workforce

We have carefully reviewed and analyzed the applicable internal utilization data and external availability and unemployment statistics included in Section IV of this AAP. There are sufficient numbers of minorities and/or women in the workforce, with either the requisite skills, who are trainable, who are actively employed, or who are seeking employment, to meet the anticipated needs of Stanford University. Therefore, we see no need at this time to undertake special programs to recruit minorities and women not currently in the workforce. Should circumstances change we will take appropriate measures and implement those programs necessary to recruit and utilize minorities and/or women who are unemployed and not seeking employment.

IX. Guidelines on Discrimination Because of Religion or National Origin

A. Policy

It is the policy at Stanford University to provide equal opportunity in employment on the basis of merit and without discrimination because of religion or national origin.

B. Implementation

Stanford University takes affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to religion or national origin. Bidders or prospective contractors or sub-contractors must submit, as part of their compliance reports, a written statement to the effect that the signer's practices and policies do not discriminate on the basis of religion or national origin, and that the signer will affirmatively cooperate in the implementation of said policy.

C. Accommodations to Religious Observances and Practices

. Stanford University will accommodate to the religious observance or practice of an employee or prospective employee as long as it is reasonable and will not cause an undue hardship on the conduct of the University's business.

XII. University Policy on Sexual Harassment

It is the policy of Stanford University to maintain the University community, as place of work and study for staff, faculty, and students, free of sexual harassment and all forms of sexual intimidation and exploitation. All students, staff, and faculty should be aware both that the University is concerned and prepared to take action to prevent and correct such behavior, and that individuals who engage in such behavior are subject to discipline. Conduct between students is governed by the Fundamental Standard.

The determination of what constitutes sexual harassment will vary with the particular circumstances, but it may be described generally as repeated and unwanted sexual behavior, such as physical contact and verbal comments or suggestions, which adversely affects the working or learning environment. Coercive behavior, including suggestions that academic or employment reprisals or rewards will follow the refusal or granting of sexual favors, constitutes gross misconduct and will not be tolerated. In such cases, a single incident would establish grounds for action.

Anyone who is subjected to offensive sexual behavior is encouraged to pursue the matter through the informal or formal procedures described below. Generally the informal procedures afford an opportunity to explore a problem and consider alternative means for its resolution.

Informal Procedures

1. The Ombudsman's Office Procedure

Without feeling constrained by specific definitions, faculty, staff, and students should feel free to make complaints concerning allegation of sexual harassment to the Office of the ombudsman. If requested, complaints will be provided by the Ombudsman's office. No investigation or action against the person accused will be taken on behalf of the person complaining, however, unless the complainant consents to be identified to the one accused in connection with the investigation.

On the request of the person making the complaint, the Ombudsman will consult with the designate of the Provost (in the case of a member of the faculty or academic staff charged with sexual harassment); the Vice President responsible for the employee's working area (in the case of a staff member charged with sexual harassment); or the Office of the Dean of Students (when the person accused is a student).

Appropriate sanctions or other corrective measures will be decided upon by these officials, if it is determined by them that proscribed behavior has occurred. As in any other case in which official action is taken, if an accused employee disagrees with the determination of the appropriateness of the corrective measures, that individual may contest them through the regular faculty or staff grievance procedures. In the case of students, or if disciplinary action is considered appropriate, the student judiciary process will be followed.

2. Other Formal Processes

Staff complaints may also be brought to an Employee Relations Representative in the Personnel Office for informal handling, in which the procedure will resemble that for the Ombudsman's Office described above. Requests for confidentiality will be observed by Employee Relations Representatives to the extent consistent with protecting the welfare of other employees.

All employees should also feel free to discuss sexual harassment problems directly with their immediate supervisors, or with the next-level supervisors (including department chairs and deans in the case of faculty and academic staff), and ultimately with the cognizant vice president, if the situation has not been resolved to the satisfaction of the complainant. Supervisors have general responsibility for the maintenance of the working environment, and have the authority to institute disciplinary procedures when appropriate.

Similarly, students may wish to consult directly with the Office of the Dean of Students, with the supervisor of the person complained of, or, for support and advice, with the Title IX Officer (Sally Mahoney, Registrar and Associate Provost), their advisors, resident assistant, or a counsellor at Cowell.

Formal Grievance Procedures

Depending on the University position of the individual who feels he or she has been sexually harassed and the particular circumstances, one of the established formal grievance procedures for faculty, staff, and students may also apply. In those cases, the formal procedures may be used either instead of or in conjunction with the informal procedures. Informal procedures will not, however, extend the normal time limit or making a formal complaint. If the individual concerned wishes to pursue the grievance, he or she should be sure to check the rules for the applicable procedure and file on time.

Formal grievance procedures at Stanford are listed below:

- Non-Academic Staff Grievance Procedure (see University Guide Memo 22.10)
- Collective Bargaining Agreement for union members
- Academic Staff Grievance Procedure (see Academic Staff Handbook)
- Faculty Grievance Procedure (see University Guide Memo 21.4)
- Student Academic Grievance Procedure (see Stanford University Bulletin, Information and Regulations Governing Student Conduct and Procedures for Their Enforcement)
- Student Employee Grievance Procedure (see University Guide Memo 61)
- Student Non-Academic Grievance Procedure pursuant to Title IX (consult Sally Mahoney, Associate Provost and Registrar).

Kennedy, Hastorf on Super Bowl, Queen's visit, budget

Following is a report to the Faculty Senate Jan. 6, 1983, by President Donald Kennedy.

Mr. Chairman, I begin with two report items. More properly, they are items *already* well reported, on which I want to place an additional gloss of explanation. They are extraordinarily disparate, yet in one way similar. I refer to the Royal visit to take place in March, and to the less imminent—but to some, no less exciting—staging of the Super Bowl in Stanford Stadium in January of 1985.

First, regarding the visit of Queen Elizabeth and Prince Philip. Stanford—in particular Stanford Hospital—was approached in November by the British Consulate and those in our government responsible for arranging the royal visit.

A half-day on the Peninsula had already been made part of the program, and the hospital—along with several other Stanford sites—was considered as a possible place to visit. The time schedule was tight, and it was ultimately decided to drop the hospital idea on the grounds that similar visits were part of the Queen's itinerary elsewhere.

Eventually the British planners decided, wisely I think, that universities are really about people rather than places, and that the most appropriate way to include Stanford in the Queen's visit would be to have her see the campus and have lunch at Hoover House with people from this community.

That is what we are now engaged in planning. As you might well imagine, the main difficulty we shall have, apart from cramming an adequate amount of protocol into your obedient servant, is the allocation of a scarce resource, that is, places at the luncheon. All I can say at the moment is that there will be students, there will be faculty, and there will be some others. I think we can make some new friends for Stanford, and I think that for us—all of us—it will be a significant and interesting experience.

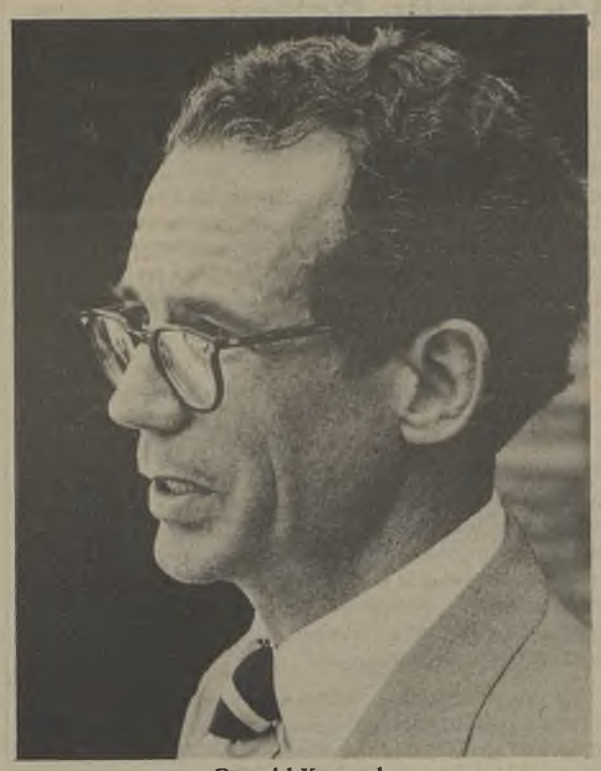
Super Bowl

The plans for the Super Bowl also involve a scarce resource—in this case, Stanford Stadium. Groups from the city of San Francisco, including the mayor and representatives of the Board of Supervisors, have been trying for some years to bring this event to the Bay Area.

This year's effort received early encouragement, and became very serious indeed. There was strong endorsement from other communities along the Peninsula, including our immediate neighbors—who think for the reasons having to do both with economics and public relations, that it will prove to be a great boon. And Stanford Stadium, it developed early, is the *only* stadium in the Bay Area that is even remotely possible as a game site.

Our own enthusiasm, understandably, was not quite as high as that in the neighborhood at large. It means, inevitably, some diversion of administrative staff time, and perhaps some commitment of University resources a little earlier than we might have chosen to commit them otherwise. On the plus side, there should be favorable attention to the University's facilities and its friendliness, and for our athletic programs. And—in my judgment, dwarfing all these—there is the opportunity to do something *for* our friends and neighbors, as opposed to being seen as dog-in-the-manger.

We therefore decided to abet these efforts, and we have now a tentative commitment to the game. I say tentative because no contract has been signed, but we expect one will be soon. We have, after all, not inconsiderable experience in putting on football games that fill Stanford Stadium. All game expenses will be defrayed. We will participate with some San Franciscans in fund-raising for physical improvements, many of which Stanford would have to make in the long run anyhow.



We expect the vast majority of this fund-raising to be from entirely new prospects, who would not give for other purposes. In that sense, we expect to gain something. But we shall have some limited costs as well, and I do not view it as likely that in the end we will have either gained or lost significantly in a financial way.

What in the world is similar about these two events? Simply that neither is centrally related to our academic purposes, and thus either could be termed an extra expenditure of institutional time and energy; and yet each serves, in its way, to relate Stanford in a positive way to other communities important to us. Both I think, are highly worth doing.

The budget outlook

Now I want to turn to a matter that is both more significant and more urgent: the budget situation in which we now find ourselves at Stanford. The Provost and I are both going to spend some time on this topic, I in an introductory way and he more substantively. We have agreed that I shall begin with an overview of our present budget situation, in an effort to give you some idea of its origins and its seriousness. You may have heard some of this before; but it is both important and complicated enough to risk repetition.

We find ourselves caught for 1983-84 amidst two

Donald Kennedy

alarming trends. The first, which has been in existence for several years, consists of the combined effects of inflation and government reduction in "controllable" expenditure categories—which means many of the ones most important to us.

Just to keep a balanced budget in the face of energy costs that have been inflated at a compound rate of nearly 25 percent per year for five years, of our needs to improve salaries and benefits, and of shortfalls in government support of student financial aid and other programs, has made it necessary for us to move tuition—the only revenue source over which we have any policy control—several points ahead of inflation. That experience has been common to most private universities in our quality sector.

Now we face a second phenomenon: a saturation in the volume of sponsored research. That means that our indirect cost recovery will not continue to increase, as it has in past years, and may even start to drop.

In addition to the strong budgetary challenge this gives us, it also poses a vexing policy problem. I plan to discuss this matter in my winter quarter report to the Academic Council next month, but let me give a very sketchy account of it here.

For the last few years our indirect cost rate has, for various reasons beyond the scope of this discussion, been held at 58 percent. We negotiated a new rate just last year using the new government account principles set out in the revised OMB Circular A-21. The result was an increase of 11 points in the negotiated indirect cost recovery rate. The jump came from two sources: first, some rebound from the "held" rate of the preceding few years, and second, new rules which allowed us to allocate costs more accurately to research and to recover them.

Two additional factors tend to drive the rate up further. The first is that in some of the years during which the negotiated rate was held at 58 percent, especially the last, we were in a position of under-recovery—that is, government audits of our actual costs after each year ended showed that in reality we had been entitled to *more* indirect costs than we received under the negotiated rate.

Government policy under these circumstances requires that the under-recovery be carried forward, and recaptured by the universities through a permitted increase in subsequent rates: the under-recovery is carried forward until the rate is changed and it is recaptured. We accumulated a significant carry-forward, most of it in the last year. This is money the government owes us, but which we can reclaim only by increasing the overhead rate.

Furthermore, there is a relationship between research volume and the rate. Many of the indirect costs associated with sponsored research are fixed costs. When the volume of research goes down, these fixed costs are spread among a smaller number of projects, so the rate inevitably rises.

In the **politics** of indirect costs, history is against us. There is a perception among some congressmen that indirect costs have risen too rapidly, that the universities are somehow getting more than the amount to which they are entitled. The complexity of the process of indirect cost recovery makes it no easier to explain to congressmen than it is to principal investigators—many of whom are also troubled, though for different reasons.

At Stanford we have always pursued a policy of full recovery, and that has been endorsed by the Committee on Research and other groups that have included principal investigators. But to pursue full recovery now would, we think, require going to rates that would seem unacceptable to most principal investigators here, and might indeed cause damage to their programs.

And if several universities were to engage in a round of further significant increases in indirect costs, it might well hasten the application of some arbitrary limit upon overhead rates by the Congress—a limit that might prove even more damaging than restraint now.

So we shall quite probably, over the next several years, forego a good deal of indirect cost recovery that government rules now entitle us to. I want it understood that I advocate this with considerable reluctance. But there are times in which an expedient policy is the best policy, and this is one of them.

Against this background of political economy, the provost is now prepared to discuss in more quantitative terms the most recent developments in the budget process.
1/7/82

Following is an outline of remarks prepared by Provost Albert Hastorf on the University budget for 1983-84, given to the Faculty Senate Jan. 6.

1. Where we are in the process:

Discussions about needs and budget reductions have been held with deans and other principal officers; Bill Massy has done likewise with his directors.

Their budget letters have been received. (These confirm their requests and proposals for 1983-84.)

Next stages include: 1) review of these requests and proposals and 2) examination, discussions, and decisions about recommendations on tuition (in February), general salary program, indirect costs, and other major parameters.

Reports to deans, administrative council and Senate in late February or early March.

Action by Board of Trustees on tuition (in February) and operating budget in March.

2. Our assessment of response so far.

There is general understanding that our budget problems are serious; however, a certain level of relief that they're not even more serious has obscured the fact that this is the third major budget reduction episode in 15 years.

As a consequence, the responses have been what I shall call conservative, i.e., trim, squeeze, shave, etc.

Three key variables are still being reviewed: tuition, indirect cost recovery, and salaries, both faculty and staff.

The hardest look is being taken at administrative and other expenses in the non-academic areas. As was true in previous episodes of budget cutting, we expect proportionately heavier reductions to be made in these areas.

3. What will be happening next:

A. Barring powerful contrary arguments we expect to recommend to the Trustees that we hold the Indirect Cost rate at 69 percent for 1983-84. As the President remarked this is a clear commitment on our part of crucial importance to the research enterprise at Stanford and to the support of our federally funded investigators.

B. We will be paying considerable attention in the next few weeks to the tuition recommendation that we will make to the Board of Trustees. We shall be examining the consequences of a substantially lower rate of increase than the 12 percent assumed in the long-range forecast, hoping that ways can be found to reduce the rate of increase.

C. Our largest single expense item is salaries. We have been taking a hard look at whether we can maintain the 7-8 percent base increase projected in the long-range forecast, and it is now clear to me that we cannot maintain that rate of increase.

D. Because much of the response to the need to cut budgets is, at this point, what I shall call shaving and paring, here and there, it does not appear that the 1984-85 budget can be balanced without more rigorous initiatives.

4. Conclusion:

1. We are going to need to look at the overall size of the University in relation to its sustainable support, and at

2. The mix between academic programs, student and administrative support services.

3. I believe that we must make cost control a central concern—to make it, if you will the independent variable so as to impact both indirect cost recovery and tuition. The implication is that we must control administrative support services and increase some of the risks we take in accomplishing our primary purposes of teaching and scholarship.

We will not be able to monitor ourselves and plan our support services with quite the precision we have in the past.

We shall strive for high quality in all that we do—it will have to be a leaner form of quality.

Senate/ continued from page 10

Report on the Center for Information Technology

Chairman Fetter then called upon the Senate guests from CIT to present their comments on the Center's services to the University.

E. Shaw, Associate Provost for Information Systems and Director of the Center for Information Technology, called attention to the document distributed at this meeting, entitled Institutional Programs and Services in Information Technologies and Computing at Stanford (SenD#2465). Major portions of this document appear in *Campus Report* of January 12, 1983. He presented an overview of the document, emphasizing the importance of developments occurring at individual and departmental levels and their impact on CIT's Investment Programs and Central Services. The overview included a general projection of what the information technology and computing environment would be like at Stanford four years from now, in January 1987. He pointed out that Stanford allocates its resources for information technologies in two ways: in Investment Programs (currently involving three high priority activities: SUNet, the Campus Network; the Microcomputer Program; and the Departmental Information Systems Program), and in Central Services (currently providing diverse services to over 2,000 individuals).

M. Carter, Director of Instruction and Research Information Systems, commented on the development of the Microcomputer Program in helping people learn about using technology in instruction and research and, specifically, about the establishment of a Microcomputer Instructional Laboratory as a training facility for the TIRO Project, a program of the Dean of Humanities and Sciences to introduce microcomputers into the Humanities. This project will include, for example, a program for training 130 or more Humanities professors to use computes in their research and teaching, e.g., in the teaching of writing. In this process, the CIT staff expects to gain a better background for advising individuals and departments who must make decisions about the technological equipment which is most appropriate to their needs and, at the same time, fully compatible with the projected University-wide network.

William Yundt, Director of Network Development, commented on the service objectives of SUNet and on its costs and technological aspects. Dependence on telephone wires, as at present, is an expensive and inefficient alternative. The projected SUNet conduit and cable system will be less expensive, yet will accommodate thousands of terminals for relatively easy interconnections to a variety of computers. It will also transmit video signals on the same network. It is a reliable, low-risk system, and has already been chosen by a numer of institutions, including Cornell, Brown University, the University of Arizona, and Carnegie-Mellon. The system will permit departments to make local decisions about terminals and is flexible enough to permit innovative developments. Within the next few months, CIT intends to provide more information and advisory services to departments to help them plan to take maximum advantage of SUNet.

D. Ernst, Director of Administrative Information Systems, commented on the establishment of the Department of Information Systems for the purpose of advising University departments in the purchase of equipment for information processing compatible with major University administrative systems. Fifty to 75 departments annually use this department at CIT. One recent innovation has been the development of a system for tracking expenditures on contracts and grants, a system which has proved to be very efficient and has a growing number of subscribers.

Deputy Director M. Roberts talked briefly about Central Services at CIT. Obviously, the spread of minicomputers and microcomputers has diminished the role of Central Services at CIT. It now represents less than half of the computer use on campus and is expected to decline proportionately in the future. In absolute terms, however, because of the growth rate of computer use in general, it is expected to grow about 10-15 percent annually. Maintaining full intercommunication capacity between the Central Services and individual computers is a matter of high priority.

In commenting on CIT service-charging policy, he reminded the Senate that rates are fixed by written guidelines established at Stanford with faculty assistance and that these are subject to periodic faculty review. He noted that hardware developments have permitted some substantial cuts in certain charges, while charges involving labor-intensive services have gone up. The Center has developed rate-systems to accommodate, when possible, off-hour services for those on limited budgets.

On the completion of these remarks, the CIT administrators were asked how it is possible to keep the network system from being overcome by the diversity of individual decisions now being made by people who do not know enough about the University's network plans, or who feel no obligation to consult the University's central planners before installing systems absolutely incompatible with the projected network.

E. Shaw noted that CIT offers consulting services and does not charge for them in the hope that departments and individuals will seek help in making such decisions. Computer purchases are reviewed by CIT, but that may be too late to reverse a decision.

President Kennedy expressed astonishment that any University funds were expended for incompatible equipment. University policy explicitly prohibits that, he stated. E. Shaw commented that, while current guidelines give specifications for potentially compatible equipment which the University will support institutionally, if a department or School wishes to move away from those specifications (knowing the purchased equipment will not be compatible with the University system) it is the prerogative of the administrator of that unit to do so.

Additional concern was expressed that the whole style of CIT appears to be reactive and consultative, and that these two reports are vague and unhelpful. Hundreds of faculty want to know what developments to expect in the next three years and what specific decisions they should make to take advantage of developments. The residential community as well as the academic community should have information, expressed in clear English, which would help them buy personal computers which they know would fit in to whatever network the University develops. More of CIT's work should be prospective, and aimed at helping the academic and residential community understand where we're going so we can keep from individually going off in the wrong direction.

E. Shaw agreed, and indicated that this report is intended to be a first step in that direction without seeming to promote these developments. The response was that whether or not CIT "promotes" the computer revolution is irrelevant; the point is to provide sufficient guidance in clear language so that potential users will know when they are violating a direction in which the whole University has some commitment to go. These reports are unreadable and unhelpful in that regard.

A number of other concerns were expressed: Questions about purchasing personal computers for which answers are not yet available; the fear that such questions will always be six months ahead of the answers; the possibility that we are being "sold" things which aren't usable; the suspicion that information and services promised may never be realized.

The suggestion was made that C-CIT might well follow the pattern of C-Res in holding public hearings each year to encourage feedback and questions, or might develop other ways of promoting dialogue on these issues, e.g., soliciting letters or comments to committee members as other committees have done.

As the discussion drew to a close, Dean Wessells expressed the gratitude of the School of Humanities and Sciences for the initiative taken by the CIT administration in promoting the TIRO Project. Its genesis was a grant from the Pew Foundation. E. Shaw and M. Carter undertook to increase the impact of this initial fund by approaching IBM for a gift of roughly a million dollars, permitting the purchase of 135-150 units for use among faculty in the Humanities. The idea and the follow-through on it were magnificent and the Humanities faculty owes them a debt of great gratitude.

Chairman Fetter thanked the CIT guests for their helpful presentation.

There being no further business, the Senate adjourned at 5:35 p.m.

Clara N. Bush
Academic Secretary

Kennedy, Hastorf, Massy, Bacchetti will speak at forum on tuition tonight

Stanford President Donald Kennedy and three other University officers will participate in a student-sponsored forum on tuition at 7 p.m. Wednesday, Jan. 12 in Dinkelspiel Auditorium.

Sponsored by the Associated Students Task Force on Tuition, the forum will include presentations by Kennedy; William F. Massy, vice-president for business and finance; Vice Provost Raymond F. Bachetti, director of university budgets; and Provost Albert Hastorf.

A question and answer period will follow their presentations.

Formed last year, the task force includes Jon Blum, Paul Barber, David Midgley, and Rick Newman. It seeks to research alternatives to double-digit tuition increases, emphasizing solutions that involve student participation.

The Board of Trustees is scheduled to consider recommendations for 1983-84 tuition at their February meeting.

Ph.D. oral exams

TUESDAY, JANUARY 18

Rosalind A. Grymes, cancer biology, "Molecular Characterization of RadLV (Radiation Leukemia Virus)," 3:15 p.m., Cancer Biology Research Lab Conference Room.

WEDNESDAY, JANUARY 19

Frederick P. Trebino, applied physics, "Subpicosecond Relaxation Studies Using Tunable-Laser-Induced Grating Techniques," 3 p.m., Applied Physics 200.

THURSDAY, JANUARY 20

Eric Keith Gustafson, applied physics, "CARS Spectroscopy in a Supersonic Jet," 2 p.m., Applied Physics 202. **Yvonne Ying Hsieh**, French, "Malediction, Grace and Fatalism in the Mysterious World of Andre Dhotel," 2:15 p.m., Bldg. 260, Room 274. **Roger C. Strawn**, mechanical engineering, "Flowfield Prediction and Design of Internal Passages with Strong Viscous—Inviscid Interaction," 3 p.m., Bldg. 300, Room 300.

FRIDAY, JANUARY 21

Jean-Pierre Benoit, economics, "Entry with Exit: An Extensive Form Treatment of Predation with Financial Constraints," 9 a.m., Encina Hall 414. **James E. Fields**, economics, "Essays in the Role of Quality in Oligopolized Industries," 2:15 p.m., 414 Encina Hall.

I-Center slates winter film series

The International Center's winter quarter Other Cultures Film Series features an Australian Mini-Film Festival during the month of January. Each Thursday at 7:30 p.m., beginning Jan. 13, special door prizes and Australian beer and wine tasting will provide added interest to the noteworthy film documentaries.

Pictures That Moved: 1896-1920 is the first of three films that document the Australian film industry from its beginnings up to World War II. They depict life in Australia in all its aspects through the early movie-makers and their efforts, ranging from newsreels to features.

The second film is *Sydney*, narrated by feminist, writer and professor Germaine Greer. "There are many beautiful cities of the world, but I think there is only one city whose beauty still belongs to the people," comments Greer, the keynote of whose tour of Sydney is the city's accessibility and its goal of well-being and pleasure.

There is no charge, but a 75 cent donation is requested at the door each week. For more information, phone 497-1831.

Thomas to read poetry

A free public "Evening of Poetry and Story-Telling from Around the World" will be given by Tael Thomas at 8:15 p.m. Tuesday, Jan. 18, in the Memorial Church Round Room at Stanford.

A Bay Area poet, Thomas will render ancient Greek lyrics in the original Greek, American poems, Hobo stories with shadowboxing, Hawaiian chants and pygmy songs, and loon calls and blue hoots.

Check social security!

All those who care about what they're going to live on after retirement should look at their paychecks to be sure the correct social security number is thereon.

The advice comes from Payroll Manager Bob Behr, who doesn't give a lot of advice—but what he does is crucial.

Medical Center MEMO

Examining changes and challenges in preparing future M.D.s. . .

A special day in the academic life of the Medical School

What is a proper balance between generalism and specialism? What are the requirements and skills that permit individuals to become well-educated and well-trained physicians who possess a broad perspective of society, extensive knowledge of biomedical sciences, experiences in the several defined areas of clinical medicine, and an incentive to continue their education throughout their careers?

These and other topics will be discussed during a one-day symposium on the "Education of a Physician" organized by the Stanford University School of Medicine Saturday, Jan. 22.

The meeting will begin at 8:30 a.m. in Fairchild Auditorium and will be a very special day in the academic life of the School of Medicine, according to Dean Dominick Purpura.

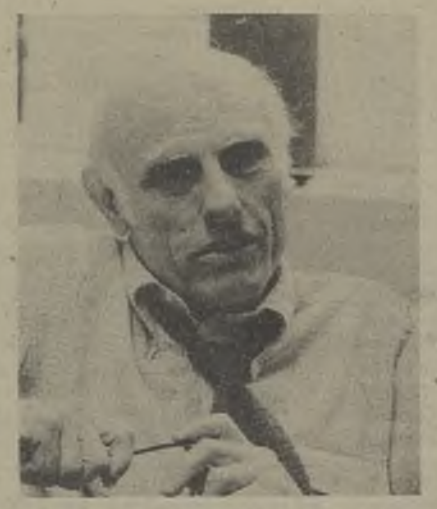
"During the past several decades," said Purpura, "medical knowledge, science, and technology have expanded at a remarkable rate. This expansion has had profound effects on the content of undergraduate, graduate, and continuing medical education and on the practice of medicine.

Specialism and subdivision

"Many of the changes that have occurred in undergraduate and graduate medical education were stimulated by the growth of specialism. It has led in most medical schools to multiple subdivision of the classic broad disciplines of medicine and surgery.

"The changes have led to the establishment of semiautonomous units functioning at times in less than optimal fashion to achieve the institution's educational goals.

"The hazard of excessive fragmentation is that subspecialties, as they develop administrative autonomy, often become increasingly separated from the educational philosophy of the parent discipline.



Dominick Purpura

Robert Cutler

Roy Maffly

John Steward

"Technologic skills may be emphasized at the expense of the broad education needed by graduates to select a specialty knowledgeably and to provide general medical care."

Because of these factors, Purpura explained, the American Association of Medical Colleges (AAMC) has undertaken a detailed examination of The General Professional Education of the Physician and College Preparation for Medicine.

Twenty-one professional societies and 92 medical schools have agreed to participate in the project, funded jointly by the AAMC and the Henry J. Kaiser Family Foundation of Menlo Park.

As part of the study, Purpura said, Stanford has planned the special symposium during which selected topics dealing with essential knowledge, fundamental skills, and personal qualities, values and attitudes will be discussed by faculty and student panels.

Reassessment a must

"It has been often said that one of the perennial obsessions of universities is the revision of curriculum," Purpura commented. "To this might be added preoccupation with the 'premedical syndrome,' the compulsion to reassess what skills should be taught, and the necessity for agonizing reapproval of the product of a modern science and technology-oriented medical education."

He urged all members of the Stanford medical community to attend and share their views on these critical issues.

The symposium will feature three panels: on "Essential Knowledge," chaired by Dr. Robert Cutler, associate dean for medical education; on "Fundamental Skills," chaired by Dr. Roy Maffly, chairman of the admissions committee; and on "Personal Qualities, Values and Attitudes," chaired by Dr. John Steward, associate dean for student affairs.

Dr. Purpura said ideas generated at the meeting will be part of the presentation he will be making to a regional meeting of the AAMC Task Force scheduled Jan. 27-28 at the University of California in San Francisco. *(See box below.)*

—Spyros Andreopoulos

UCSF to host regional hearings on medical education

The University of California, San Francisco School of Medicine will host Western Regional hearings of the Association of American Medical Colleges' panel on the General Professional Education of the Physician and College preparation for Medicine on Jan. 27-28, 1983. The panel is the advisory group to an AAMC three-year study, supported by a grant from the Henry J. Kaiser Family Foundation, to review and appraise the eight-year period of the general education of the physician that in most institutions begins with entry into college and ends with the award of the M.D. degree.

Steven Muller, Ph.D., president of the Johns Hopkins University and the Johns Hopkins Hospital, is chairman, and William P. Gerberding, Ph.D., president of the University of Washington, is vice-chairman of this 18-member panel. Its members are drawn from four-year colleges and universities, from U.S. and Canadian medical schools, and from the practice of medicine.

After considering a broad spectrum of concerns about the general professional education of the physician and college preparation for medicine, the panel has concluded that to adapt their educational programs to future physicians, medical school and college faculties face four major challenges:

- **the rapid growth of knowledge applicable to the care of patients and the treatment of disease;**
- **the ascendency of complex technology and procedures in the diagnosis and treatment of patients with overt or potential disease;**
- **the coalescence of physicians, other health professionals, and hospitals into complex systems, which is paralleled by a concentration of the financial support for medical care in governmental and private agencies; and**
- **the mounting evidence that physicians are having difficulty coping with the rapid progress in medical care and in adapting to demands placed upon them by their patients and by the profession.**

A total of 92 U.S. and Canadian medical schools and 21 biomedical science professorial organizations have joined this effort in initiating local discussions of faculty and students in addressing three domains identified by the panel: the essential knowledge that all students must acquire to provide the foundation for later specialized education and for continued learning throughout their careers; the fundamental skills that students should acquire to gain essential knowledge; and the desirable traits that students should develop during these eight years, and how faculty might best select students capable of cultivating these traits and foster their development.

Working Groups appointed by the panel are addressing these areas from the national perspective. Thirty-eight U.S. colleges and universities, chosen to represent the schools from which medical school applicants and matriculants are drawn, have been invited to participate in this phase of the project.

Presentations from Western region institutions and organizations in dialogue with the AAMC panel will be made in Cole Hall, Medical Sciences Building, 513 Parnassus Avenue, from 9:30 a.m. to 5 p.m. Jan. 27, and from 9:30 a.m. to noon Jan. 28. Faculty, students, and practicing physicians are invited to attend. An opportunity is being provided for comments from them as well.

The final report of the project is planned to be presented at the AAMC Annual Meeting in November, 1984. Interim reports will be disseminated for comment during the 1983-84 academic year.

Those interested in appearing at the San Francisco hearing should contact August G. Swanson, M.D., project director, AAMC, Suite 200, One Dupont Circle N.W., Washington, D.C. 20036; phone (202) 828-0430.

New season of SMASH lectures to begin this Friday in Fairchild

This week marks the opening of the 1983 winter quarter lineup of S*M*A*S*H lectures at Stanford School of Medicine.

The lecture series—whose full name is "Stanford Medical and Scientific Highlights"—was initiated in 1980 by the Medical School's faculty senate, which now cosponsors it with the Stanford Medical Students Association.

The organizing committee hopes to encourage a wide exchange of ideas, and to provide a forum by which the Medical Center community may be informed of significant medical research and developments at Stanford.

Given by both faculty members and students, the Friday presentations are geared towards all those with basic scientific understanding.

This season's lectures are as follows:

- Jan. 14: "Interferon cloned—and then what?"—Dr. Thomas Merigan, professor of medicine;
- Jan. 28: "Seashells, Vulcans, and the treatment of hearing loss"—Dr. Richard Goode, professor of surgery;
- Feb. 11: "The heart of the matter—the matter of the heart: Endomyocardial biopsy"—Dr. Margaret Billingham, associate professor of pathology;
- Feb. 25: "Custom-tailored antibodies for tumor diagnosis and therapy"—Dr. Ronald Levy, associate professor of medicine, and David Maloney, fifth year M.D./Ph.D. student.

All presentations will take place at 4:30 p.m. in Fairchild Auditorium, with TGIF gatherings afterwards in the lobby.

Irving Schulman

Schulman is new chief of staff at Children's

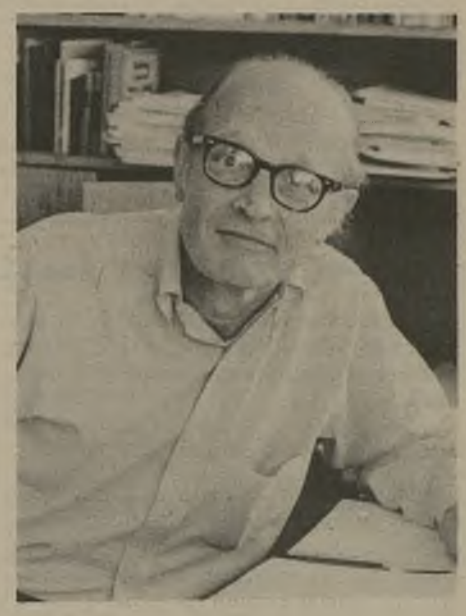
Dr. Irving Schulman, professor and chairman of pediatrics at Stanford, has been appointed chief of staff at the Children's Hospital at Stanford, effective Jan. 1.

The announcement was made by John Williams, executive director of Children's Hospital, following approval by the hospital's board of directors.

The chief of staff position has been filled by Dr. Bruce Parker, professor of radiology and pediatrics (clinical), on an acting basis for the past two years.

Schulman will divide his time among Children's Hospital, the Medical School, and SUH, where he is chief of the pediatric service. He will also be chief of the pediatric service at Children's Hospital.

Schulman will play an important leadership role as planning for the new, consolidated Children's Hospital at Stanford gains momentum in the coming year.



Bunker appointed acting chairman of Anesthesia

Dr. John Bunker has been named acting chairman of the Department of Anesthesia, Dean Dominick Purpura of the Stanford University School of Medicine said Tuesday, Jan. 4.

Bunker will succeed Dr. Philip Larson, who relinquished the chairmanship of the department December 1 after serving for 10 years, Purpura said.

Larson will continue his work as a professor of anesthesia. He is a nationally known expert on pharmacokinetics and pharmacodynamics of anesthetic drugs.

Bunker, who holds dual appointments in anesthesia and the Department of Family, Community and Preventive Medicine, currently directs Stanford's program in health services research. He has authored books on health policy and

John Bunker

had served as chairman of anesthesia from 1960 to 1972.

Bunker will work in consultation with Dr. Ellis Cohen, professor of anesthesia emeritus, according to Purpura.

The Anesthesia Department employs more than 30 full-time faculty members. Under Larson's direction, residency training in anesthesia at Stanford became one of the most sought after programs in the United States. (For the past nine years, up to 4 percent of the graduating students selected anesthesia for postdoctoral training; in 1982 the figure rose to 12 percent.) The department has become well-known nationally for the study of metabolism and toxicity of anesthetic drugs.

Recently, however, the department has been faced with differences of opinion over academic and financial priorities.

The dean declined to elaborate on the specific issues, but he said the appointment of an interim leadership was the best way to begin tackling short-term problems while an external committee reviewed the department as a whole for the purpose of determining its future academic thrust.

When Purpura was appointed dean eight months ago, he announced that he would institute an external review of academic departments in the School of Medicine.

Anesthesia was among the first scheduled for review, he said.

California patients gain access to medical records

As a result of a new California law effective Jan. 1, 1983, Stanford University Hospital patients and former patients now have access to the information in their medical records.

The law guarantees all patients in California the right to inspect or receive copies of their medical record information. Physicians have the alternative to provide a written summary of the record and assume the responsibility for preparing it.

Advance written request and payment of fees is required.

According to the law, requests for inspection must be granted within five working days after receipt of the written request. Requests for copies of the record must be granted within 15 calendar days. If a summary report is prepared, it must be available within 10 working days, or 30 calendar days if the patient has been discharged from the hospital within the previous 10 days or if the record is lengthy.

At Stanford, forms to request medical record information are available from the Department of Medical Records. Information is available from that office only during regular business hours, 9 a.m. to 4 p.m., Monday through Friday. Charges, to be paid in advance, are for clerical services, copying and mailing. The physician may also charge for the time spent in preparing a summary alternative.

Because many medical records are lengthy, patients may limit their request for copies to specific items they need.

Medical Records personnel will not attempt to explain or interpret anything in the record. Patients will be directed to their physician or other health professional for assistance in understanding the information contained in the record.

Access is granted only to living adult patients, unless there is a conservatorship of the person. Then the conservator has the right of access as the patient's representative. If the patient is a minor, the parent or guardian has access unless the minor had the right of consent to the treatment given.

There are special requirements relating to the release of information from psychiatric records or alcohol and drug abuse records.

The Hospital and physicians will continue to furnish information necessary for continuing a patient's care when it is requested by another physician or hospital, and consented to by the patient. Normally, insurance companies, schools, employers or other third parties who need information for a record request it directly, with the patient's written consent.

Questions concerning medical record access should be directed to the Correspondence Section, Medical Records Department, at 497-5418.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

The Fleischmann Learning Resource Center celebrated its new home in M202 with an open house Friday. The facility, which moved from M207, features a computer center, four viewing rooms, and a variety of video equipment. It is open 8 a.m.-12 a.m. weekdays, 10 a.m.-10 p.m. Saturdays, and noon till midnight Sundays. For information, call 497-5853.

Guest speaker to discuss control of cell growth

"Epidermal Growth Factor" is the title of the ninth Windsor C. Cutting Memorial Lecture, to be held 4:15 p.m., Thursday, Jan. 20, in the Fairchild Auditorium at Stanford School of Medicine.

The public lecture will be given by Dr. Stanley Cohen, of the department of biochemistry at Vanderbilt University School of Medicine. His presentation is sponsored by Stanford's department of pharmacology.

Cohen is a pioneer in researching hormones which promote the growth of different types of cells, according to Dr. Tag Mansour, professor and chairman of pharmacology. Studies of these hormones lend insight into the control of the growth of normal cells and are hoped to further an understanding of the abnormal growth of cancer cells.

Cohen was co-discoverer of the first factor implicated in the growth of the nervous system in mammals (the "nerve growth factor"), said Mansour. He recently discovered the epidermal growth factor, and is actively engaged in identifying its mechanism of action in cell cultures.

Mansour said that eventually many more of these factors may be discovered. "Cohen's work represents a very important start in the area of the development and differentiation of cells," he said. "His research on the growth and development of mammalian cells may lead us to a rational approach in finding the origin of cancer."

A graduate of Brooklyn College, Oberlin College, and the University of Michigan, Cohen has published widely and been the recipient of many awards.

He is a member of the National Academy of Sciences and has been an American Cancer Society Research Professor of Biochemistry.

The Windsor Cutting Lectureship was established in 1973 by the faculty of the Department of Pharmacology, and is supported by private contributions. It honors the memory of Dr. Cutting, professor and former chairman of the department.

Cutting, who died in 1972, also served as dean of Stanford Medical School from 1953-57, and as dean of the University of Hawaii Medical School, 1963-71.

The lectures are presented by speakers prominent in the field of pharmacology.

Lockheed employees make Hospital the gift of an ECG

Employees of Lockheed MSC donated personal funds to Stanford University Hospital in December to buy a $9,500 heart monitoring device.

The purchase is part of their effort to channel funds "back into the community where our employees reside," according to the group's chief officer.

"Stanford is a local community hospital that provides service to a large percentage of the employees at the Palo Alto/Sunnyvale site, and we want to support the service there," said Barbara Barrett, executive director of the Lockheed MSC Employees "Bucks of the Month Club."

The 16,000 member club has supported Stanford with gifts since 1959. Prior to 1980 the donations were directed toward medical research, but the last three gifts have been earmarked for the Hospital: a state-of-the-art hemodialysis machine, a "Nelson bed," designed to ease the pain of patients recovering from orthopedic surgery, and, this year, an electrocardiogram (ECG) recorder.

The ECG machine monitors the heart rate of open heart surgery patients during the first few days after surgery when the healing heart is sensitive to sudden distrubances that can progress to a full-blown heart attack if not corrected.

Coupled with a machine called a defibrillator, which uses an electrical shock to reestablish the heart's rhythmic beats, the ECG recorder helps halt heart attacks before they cause serious damage. It is a much needed addition to the Hospital's intermediate intensive care unit, according to Stephen Peeps, associate director of corporate relations for the University.

"We're trying to establish a tradition of local support for the Hospital as a unique community resource," Peeps said, "and no one could be setting a better example than Lockheed employees."

Wanted: Research Subject Volunteers

The Sleep Disorders Research Center at Stanford University Medical Center is seeking about 30 volunteers to test the daytime alertness of persons taking sleep medication.

Sue Cohen, a research assistant, said volunteers should be men or women aged 21 to 60 who are suffering from insomnia. They must be willing to take sleep medication during a 21-day period and spend 11 nights and six weekend days at the Sleep Center's lab in Palo Alto.

Three or four separate starting dates will be available through April, Cohen said.

Some volunteers will receive medication while others will get a placebo. Participants will be electronically monitored in the lab at night and perform skill tests during the day to test alertness.

Volunteers will be compensated and receive two free medical exams. Meals will be provided free during the live-in phase. Private rooms and amenities—including free movies—will be furnished.

For further information, contact Cohen at 325-4697.

Symposium on anxiety disorders

Anxiety disorders, such as claustrophobia, fear of heights, and agoraphobia, used to be considered symptoms of other diseases.

Recently, however, psychiatrists have come to view them as separate diseases, and have developed therapies with which to treat them. The Medical School's department of psychiatry and behavioral sciences is sponsoring a one-day symposium to review these developments Saturday, Jan. 15.

Psychiatrists are now using new behavior therapy treatments, in which they help patients confront their fears, said Dr. Walton Roth, associate professor of psychiatry at Stanford and chief of the psychiatric consultation service at the Palo Alto VA.

Antianxiety drugs are being refined in ways to allow their usage for specialized therapies also, Roth added.

Discussing all aspects of anxiety disorder characteristics and treatment will be some of psychiatry's leading authorities, including Drs. W. Stewart Agras, Stanford professor of psychiatry and director of the Behavioral Medicine Program; Philip Berger, Stanford associate professor of psychiatry and director of the Stanford-VA Mental Health Clinic Research Center; Robert Fowles, Stanford assistant professor of medicine and director of the VA's Noninvasive Cardiovascular Laboratory.

Also Leo Hollister, Stanford professor of medicine, psychiatry, and pharmacology and director of the VA's psychopharmacology research; Mardi Horowitz, University of California, San Francisco professor of psychiatry and director of the Center for the Study of Neuroses, Langley Porter Psychiatric Institute; and David Sheehan, Harvard assistant professor of psychiatry and director of the hypnosis and psychosomatic medicine unit at Massachusetts General Hospital.

The course, which will be held at Tresidder Memorial Union, offers continuing education credits for physicians. Tuition for the symposium is $60. Residents, interns, and medical students will be charged $10. For further information, call 497-5594.

Weisfeldt to give cardiology talk

Dr. Myron Weisfeldt, professor of medicine at Johns Hopkins University, will discuss "Age Associated Alterations in Cardiac Function and Exercise Response" at 5 p.m., Monday, Jan. 17, in Fairchild Auditorium at Stanford Medical School.

Weisfeldt serves as director of the division of cardiology at John Hopkins in Baltimore. His major areas of research interests have been in aging changes in cardiac function, ventricular function, ischemic heart disease, and more recently in certain aspects of cardiopulmonary resuscitation.

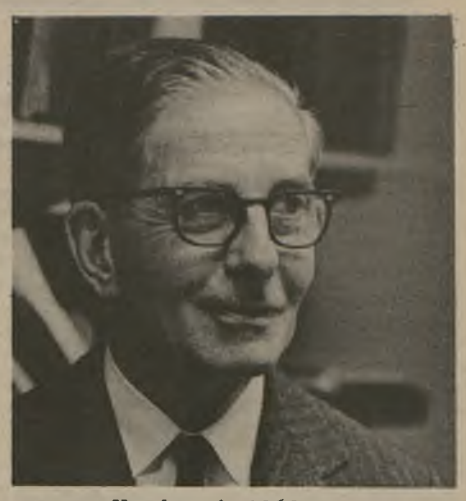
The talk is the 16th John Kent Lewis Memorial Lecture, named in honor of a Stanford physician and scholar who died in 1961. The lectureship seeks to bring outstanding cardiologists to lecture at Stanford, said Dr. Donald Harrison, chief of the cardiology division at Stanford.

The talk is open to the public, and continuing education credit is available for physicians.

Inviting the community in, to meet SUMC by tour

Linda Northway, tour director, pauses with a group of high school students near the Sherman Fairchild research building. Northway has trained a staff of volunteer docents from the Auxiliary.

The program, based in the Office of Public Events, stresses the uniqueness of a university medical center, and the way in which patient care, teaching and medical research coalesce. If a group has special interests, tours can be modified to include specific stops or speakers. For information, call Northway at 497-6389.



Professor emeritus dies at SUH

Dr. Cly Howard Hatcher, professor of surgery emeritus and former chief of Stanford's division of orthopedic surgery, died Dec. 29 at Stanford University Hospital from a massive heart attack. He was 82 years old.

Hatcher came to Stanford in 1960 after 30 years on the University of Chicago's faculty. Following his retirement in 1965, he served as a consultant at Stanford and the Palo Alto Veterans Administration Medical Center, and had a private practice in Palo Alto.

He was a member of numerous professional societies, including the American Academy of Orthopedic Surgeons, the American Orthopedic Association, and the American Medical Association. He was an honorary fellow in the British Orthopedic Association, and served as an orthopedic consultant to the United Nations Relief and Rehabilitation Administration in Greece in 1946.

Hatcher received his bachelor's degree from the University of California, Berkeley, in 1924, and his medical degree from the University of California, San Francisco in 1929. He did postgraduate work in pathology at the University of Innsbruck, Austria. His special interest was bone diseases, especially tumors of the bone.

Hatcher in 1965

Hatcher is survived by three children: Barbara Ann of San Francisco; Nancy Hope Kagan of Chicago; and Henry Clark of Belmont. He is survived by two grandchildren as well. His wife, Annabel Clark, died in 1980.

Memorial services were held Jan. 3. Contributions can be made to the C. Howard Hatcher Memorial Fund at Stanford University.

Thursday's Child dies 6 years later

Talcott Poole, 24, who underwent heart transplant surgery at SUH almost six years ago, died Dec. 17, 1982.

Poole's story had been recounted by his mother in the book *Thursday's Child*, which describes the experience and challenges Poole and his family faced when he had the operation. A t.v. movie based on the book will air Feb. 1 on Channel 5.

Poole's death ultimately was attributed by doctors to effects from the immunosuppressant drugs he was taking.

He had been diagnosed at age 17 as having an enlarged heart due to permanent damage to the heart muscle. After the transplant, however, he led an active life, working on several film crews, traveling, and working towards a film degree at Stanford University.

Construction Corner

West 1B Nursing Station: The installation of a new Hewlett-Packard computerized patient monitoring system on the West 1B Nursing Unit is completed. The updated telemetry system will allow the staff to monitor 18 patients at present, with the capability of expanding surveillance to 24 patients in the future.

The project was coordinated by Erik Lund, project manager, and Richard Booth, construction coordinator.

Laboratory for Division of Oncology: The space vacated by the relocation of the Fleischmann Learning Resource Center will soon be under construction for a new research laboratory for Dr. Ronald Levy of the Division of Oncology. The three-month construction period is scheduled to begin the first week of February.

The project team of Erik Lund and Richard Booth will be responsible for this renovation.

Power Factor Correction: Corrections to the transformers supplying normal electrical power to the Medical Center will be made on two consecutive Sundays in the latter part of January. Users of normal power may experience some minor interruptions of service. The emergency power source is not involved in this upgrade.

The work will be coordinated by Dave Dominguez of the SUMC Facilities Office and Bob Bohnet, foreman, Operations and Maintenance.

Escalators: Renovation of the six SUH Core escalators was completed Dec. 17 by the Schindler Haughton Elevator Co. of San Francisco. Work had begun in June, 1982. Each unit was dismantled, completely cleaned, and closely inspected. All internal parts were either overhauled or replaced. Drive chains were replaced on all units.

New vulcanized rubber handrails, equipped with directional markings, were installed, and foot lighting was reactivated at the bottom and top of each escalator to aid visually impaired patients and Hospital staff.

A contract has been established with the renovating firm for the routine performance of bimonthly maintenance. Aside from some initial squeaking, due to stretching and "seating" of the handrails, the units are performing smoothly.

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard call 497-6389.

WEDNESDAY, JANUARY 12

Dept. of Structural Biology Seminar: "Splicing of the Ribosomal RNA Precursor of Tetrahymena: RNA Recombination Directed by a Ribosyme"—Dr. Thomas Cech (of Univ. of Colorado at Boulder). Noon, M114.

Seminar on Electronics in Medicine: "Image Processing in Reading Aids for the Visually Impaired"—Dr. Sally Wood (Stanford and Palo Alto Veterans Administration Medical Centers). 4:15 p.m., McCullough building (main campus), room 134.

Basic Science Research Colloquium: "Mechanism of Sensitization of Tumor Cells to Alkylating Agents by Nitroimidazoles"—Dr. J. Martin Brown. 5 p.m., Fairchild Auditorium.

Div. of Hematology Conference: "The Control of Migration and Tissue Distribution of Lymphocytes"—Eugene Butcher, Ph.D. Noon, S102d.

Dept. of Clinical Social Work Inservice Education Program Part I: "Couples Therapy"—Cleo Eulau, L.C.S.W. 8:30 to 10 a.m., TF122-C (Psychiatry Bldg.) Parts II and III to be held **Jan. 19 and 26.**

THURSDAY, JANUARY 13

Dept. of Pharmacology: "Actions and Interactions of the Receptors for Insulin and the Insulin-Like Growth Factors"—Dr. Michael Czech (of Univ. of Massachusetts Medical Center). 4:15 p.m., Pharmacology Library R358.

FRIDAY, JANUARY 14

SMASH Lecture: "Interferon Cloned—And Then What?"—Dr. Thomas Merigan. 4:30 p.m., Fairchild Auditorium.

Dept. of Gynecology and Obstetrics Grand Rounds: "Infertility—The Male Factor"—Dr. Robert Kessler. 8 a.m., A336.

Dept. of Pediatrics Grand Rounds: "Foreign Bodies of the Eye in Children"—Drs. Frederick Lloyd, Susan Ryu, and Edwin Baldrey. 8 a.m., M106.

MONDAY, JANUARY 17

Dept. of Cardiology John Kent Lewis Memorial Lecture: "Age Associated Alterations in Cardiac Function and Exercise Response"—Dr. Myron Weisfeldt (of Johns Hopkins University). 5 p.m., Fairchild Auditorium.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827. or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action*

Exempt

29677-JB (JCC:7650) CUSTODIAN WKG SUPVR: 7:30-4; supv the cleaning, training & other duties of custodians; create & maintain a clean, safe, home-like atmosphere for residents; check daily arrival & departure time of each custodian; maintain a daily check of bldgs/grounds & promptly report security, damages, maintenance & housekeeping problems to approp offc; submit monthly report; order supplies; attend approp classes; handle all emergencies at local level; when short of custodial help, perform needed work; QUALIFICATIONS: good supvry skills; demonstrated admin skills; report writing, attendance records & memos; excel commu skills a must; ability to acquire exp & knowl regarding employee relations & USW contract.; S09; $1632.

33197-LL (JCC:5596) LIFE SCI RES ASST II: Maintain cell lines, carry out radioimmunoassay, Elisa assay, T-cell proliferation assay; measure receptor w/ radiometric & morphometric tech; prep & purify protiens fr cell membranes; prep & maintain monoclonal antibodies; design & analyze experiments involving immunotherapy of autoimmune, neurologic diseases; QUALIFICATIONS: bachelor of Sci or equiv exp w/ specific training in biochemistry & immunology; should have significant exp or training in above techniques.; C06; $1854-2312.

30042-AW (JCC:7542) FACIL ENGINEER/COORD III: Fixed term 1/1/83-6/30/85; Assoc Cogeneration Engineer will perform engrg & economic analyses of alternative thermodynamic & electrical designs for a cogeneration plant; respon for proj modeling using Educom EFPM sys; prep & review documents & specifications relating to design, construc & operation of a cogeneration plant; asst in coord work of outside design engrs & consultants; also asst in field operations & inspection activities in coord w/ construc mgr; QUALIFICATIONS: an engrg or an engrg related degree & either a degree in engrg economy or substantial exp & demonstration of knowl in engrg economy analyses; familiarity & exp in modeling using EFPM sys; prior exp of at least 4 yrs working w/ congeneration projs, particularly utilizing gas turbines & waste heat recovery sys or alternatively w/ steam power generating facilities, performing feasibility studies, program planning, design studies & specification writing.; C08; $2464-3139.

25592-VW (JCC:8880) MISC PROFESSIONAL: Respon for writing & administering support for all aspects of state & federal gov't relations; administering a legislative bill serv for state legislation; establishing & maintaining an effective sys for identifying & following bills in Congress & policy initiatives in federal Executive Branch; reading source literature for state & federal issues, then analyzing, summarizing & recommending action on pertinent issues; drafting letters, testimony & other mat'ls; QUALIFICATIONS: knowl of federal & state legislative or policy-making processes essential; rapid reading & comprehension skills nec; excel writing skills; good English grammar, punctuation, spelling & syntax required.; C06; $1854-2312.

SLAC

94656-JM (JCC:1070) Mechanical Engr: Mechanical design & analysis of components & sys for linear collider project involving stress, heat transfer, vibrations, vacuum & cryogenics; coord fabrication, procuremt, assembly & installation of components & sys; supv designers & drafters; BSME or equiv; sevl yrs engrg design & analysis exp; knowl of mech design, stress analysis & shop practice reqd; familiarity w/ computer aided design, vibration analysis, heat transfer analysis & cryogenics desired; $2500-3000; apply at SLAC (854-3300, ext. 2353)

95082-JM (JCC:1070) Mechanical Engr: Conceptual design & tech implementation of linear collider alignment sys in collaboration w/ physicist; maintenance of monument sys in accelerator & storage ring tunnels & on surface & their inter-connection; coord of lab wide alignment requiremts of experimental physicists, engrs & designers; MS or equiv; sevl yrs exp in geodesy, metrology, surveying or closely related field w/ emphasis on geodesy; knowl of statistics; exp w/ use of computers & computer programming; familiarity w/ mech engrg & design functions; $2600-3400; apply at SLAC (854-3300, ext. 2353)

94653-JM (JCC:1070) Mechanical Engr: Design, analyze, construct, install, tst, maintain & improve large experimental eqpt for use in high energy physics res program; supv engrs, designers, draftspersons & technicians; asst w/ preliminary design & cost estimation; BSME or equiv; extensive mech engrg & design exp desired; exp in proj planning, budgeting, scheduling & supvn nec; knowl of mech design; stress analysis & shop practice reqd; familiarity w/ computer aided design tech, high vacuum design, electromagnet design, heat transfer analysis & cryogenics desired; $3000-3800; apply at SLAC (854-3300, ext. 2353)

Carpools

Ride needed SF-Stanford-SF Glen Park/Diamond Heights. Call Brandt, 7-1171.

Join existing carpool. Leaves Homestead and Foothill Expressway to Stanford. M-F, 8-5. Call Jeannette, 7-9627.

I'm looking for a carpool between S.F. and Stanford (preferably from the Haight-Ashbury) 4-5 days/week, approx. 9-5. Please call Nora at 431-9649 eves.

Looking for two persons to join a Mission Noe Valley-Stanford Univ. carpool. M-F, 8-5. Call John, 821-1665, or Yinon, 431-0951.

Ride or form a carpool from Fremont to Stanford. M-F, 8-5. Call Evelyn, 7-1555.

Bargaining unit

44327-TC (JCC:5736) TISSUE TECH II: TMS Unit; 7:30-4; alternate Tues-Sat; cutting 3-5 micron sections of paraffin embedded tissue incl lymph node, spleen, liver, & kidney biopsies w/ a high degree of skill & speed; perform routine H&E & special stains; embedding, coverslipping, & labeling surgical specimens; lab bookkeeping, other misc histology lab duties such as knife sharpening, solution preparation, etc; QUALIFICATIONS: ASCP in Histology preferred (not required); exp as active HistoTech; skills in high quality sectioning w/ speed; ability to commu approp w/ staff & pathologists; work some holidays & wkends.; A30; $ 9.97.

36289-JB (JCC:6604) SR S&E TECH - ELECTRO MEC: TMS Unit; some shift work; asst experimenters in installing experimental apparatus into x-ray areas & ultrahigh vacuum beam lines; respon for radiation safety & radiation safety interlocks; operate ultraviolet & x-ray beam line & computer driven monochromators, trouble-shoot PDP-11 computer sys, radiation protection sys, & vacuum control sys; QUALIFICATIONS: 5-8 yrs exp in an experimental lab or edu'l bkground in physic equivalency; specialized skill in vacuum, electrical, mechanical or computer technology.; A34; $10.97.

36288-JB (JCC:6612) PR S&E TECH - ELECTRO MEC: TMS Unit; undertake projs relating to synchrotron radiation beam lines & ultra high vacuum chambers & components, w/ direct respon for satisfactory & timely completion; set up, test, bakeout, vent, & interconnecting of vacuum subsystems to a larger sys such as beam line; good, accurate record keeping essential; guide users & staff in setting up & performing experiments, w/ emphasis on proper UHV tech, sound tech judgments, & safety; arrange procurements, coord shop fabrications & plan work of technicians; work odd hrs when proj needs; QUALIFICATIONS: 5-7 yrs' exp w/ UHV sys & components w/ thorough knowl of vacuum sci & technology; able to work closely w/ others of very diverse bkgrounds; able to read, understand & make engrg drawings; knowl of machine shop practices; able to design & fabricate small tools or components; thorough working & understanding knowl of helium mass spectrometer leak detectors & quadropole residual gas analyzer w/ subsequent data interpretation.; A39; $12.39.

33386-TC (JCC:8890) MISC TECHNICIAN: TMS Unit; 8:30-5:30; work w/ a metal cutting contour saw, contour sawing thick lead shielding blocks; recycle lead by melting & froming blanks; cut styrofoam moulds accurately w/ hot wire cutter, & pour low melting alloy into these moulds; direct contact w/ personnel preparing X-ray films; making shielding blocks fr marked X-ray film; record-keeping involved for patients scheduled treatment time; QUALIFICATIONS: make program run smoothly; work safely w/ saw & molten lead; keeping eqpt neat & in order; metal shop exp required.; A18; $ 7.50.

15123-JB (JCC:8816) PATROL OFFICER: TMS Unit; shift work (4-10 plan); enforce state & county ordinances; effectuate arrests; able to physically control violent persons; exercise good judgment; self-control in discharge of their duties; perform crime prevention & public relations programs; involves considerable overtime & shift work; able to write involved investigations reports & conduct follow-up; QUALIFICATIONS: 4 yr degree fr accredited college or equiv combination of edu & exp; completion of an accredited P.O.S.T. Basic Peace Officers Academy helpful; min age 21 yrs; weight proportional to height; vision 20/100 correctable to 20/30 each eye w/ normal color vision; good physical condition (must pass agility test); valid Calif drivers license.; P03; $11.24.

15121-JB (JCC:8816) PATROL OFFICER: TMS Unit; shift work (4-10 plan); enforce state & county ordinances; effectuate arrests; able to physically control violent persons; exercise good judgment; self-control in discharge of their duties; perform crime prevention & public relations programs; involves considerable overtime & shift work; able to write involved investigations reports & conduct follow-up; QUALIFICATIONS: 4 yr degree fr accredited college or equiv combination of edu & exp; completion of an accredited P.O.S.T. Basic Peace Officers Academy helpful; min age 21 yrs; weight proportional to height; vision 20/100 correctable to 20/30 each eye w/ normal color vision; good physical condition (must pass agility test); valid Calif drivers license.; P03; $11.24.

15120-JB (JCC:8816) PATROL OFFICER: TMS Unit; shift work (4-10 plan); enforce state & county ordinances; effectuate arrests; able to physically control violent persons; exercise good judgment; self-control in discharge of their duties; perform crime prevention & public relations programs; involves considerable overtime & shift work; able to write involved investigations reports & conduct follow-up; QUALIFICATIONS: 4 yr degree fr accredited college or equiv combination of edu & exp; completion of an accredited P.O.S.T. Basic Peace Officers Academy helpful; min age 21 yrs; weight proportional to height; vision 20/100 correctable to 20/30 each eye w/ normal color vision; good physical condition (must pass agility test); valid Calif drivers license.; P03; $11.24.

15122-JB (JCC:8816) PATROL OFFICER: TMS Unit; shift work (4-10 plan); enforce state & county ordinances; effectuate arrests; able to physically control violent persons; exercise good judgment; self-control in discharge of their duties; perform crime prevention & public relations programs; involves considerable overtime & shift work; able to write involved investigations reports & conduct follow-up; QUALIFICATIONS: 4 yr degree fr accredited college or equiv combination of edu & exp; completion of an accredited P.O.S.T. Basic Peace Officers Academy helpful; min age 21 yrs; weight proportional to height; vision 20/100 correctable to 20/30 each eye w/ normal color vision; good physical condition (must pass agility test); valid Calif drivers license.; P03; $11.24.

Nonexempt

31426-PM (JCC:2078) ADMIN ASST I (N): Respon for operations & supvn of a complex & intricate data entry operation for Faculty Practice Plan; prov data entry functions for posting of charges, adjmts, cash, & master record informa; add'l respon relate to control function of batch balancing in MRI's; work closely w/ registration, admitting, dept mgrs, cash ID, as well as other FPP operations; work w/ Univ Controllers on stop pay checks; prep periodic reports for Asst. Dir, etc; QUALIFICATIONS: posses broad working knowl of physician billing; must have basic understanding of principles of mgmt & supvn related to a professional practice offc setting; good knowl of cash acctg controls & procedures; min 3 yrs exp in a health care position; have analytical & problem solving skills as well as the ability to work & commu w/ people both w/in & outside areas of respon; contact: Mike Bass, A-156 Med Ctr, 497-5888.; B16; $1593-1671.

23596-BP (JCC:2562) SECRETARY III: Prov full range of sec'l serv to Dept Chairman; interface w/ dept faculty, staff, students & w/ other univ staff in various offcs; arrange conferences & mtgs; receive & screen all calls & visitors; open Chairman's mail; typ course mat'ls; prep drafts & final versions of manuscripts, res proposals & annual reports, using variety of text manipulation sys; make travel arrangements & prep expense reports; reconcile monthly expenditure statements; prep fund availability projections, etc; QUALIFICATIONS: typ 65; s/h 100 desirable but not required; approx 2 yrs or more sec'l exp; good commu skills; good English usage; text-editing exp or willingness to learn; knowl of Univ procedures helpful; send appl/resume to Marlie Yearwood, Bldg 460, Room 256.; B14; $1440-1514.

6824-PM (JCC:2462) OFFICE ASST III: 50%; 9-1; typ corresp, manuscripts & lecture notes for courses in Physiology & Immunology; maintain files, arrange appts & schedule for professor; answer phone; sort mail; maintain supplies, bulletin board, copy eqpt; xeroxing; simple record keeping; QUALIFICATIONS: typ 55; tech typing & good typing skills (accurate more important than speed); s/h desirable; send appl/resume to Gweneth Wood, Physiology Bldg Rm 2.; B11; $623-655.

26092-PM (JCC:2618) LEGAL SECY SPEC: Asst in providing legal sec'l support to 3 attorneys & 2 legal assistants; duties incl detailed & accurate prep of legal documents in draft & final form; monitor attorney work flow, track progress of projs & legal matters, maintain litigation calendar, tickler files, etc; asst attorneys in locating & researching mat'ls in law lib and/or complex legal filing sys; answer calls; sort mail; schedule mtgs & appts; make travel arrangements, etc; QUALIFICATIONS: typ 70; 2-3 yrs legal secty exp preferred; equiv exp in highly responsible secty position will be considered; ability to manage work flow associated w/ large volume of legal projs; excel organizational, interpersonal & commu skills; know/learn Wang word processing eqpt; contact: Pat Chor, Bldg 170, Room 205 or P.O.Box N, Stanford, CA 94305.; B16; $1593-1671.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Jan. 18, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

28546-BP (JCC:2562) SECRETARY III: Full sec'l serv to 2 Electrical Engrg professors, res associates & visiting scholars; prep of res contract proposals & budgets; monitoring & projection of spending on current contracts & assignment of expenditures between various contracts; computer prep of tech reports & manuscripts involving high degree of skill in editing & formatting of graphics & text; independence in composing responses to inquiries; QUALIFICATIONS: knowl of text formatting sys available on SAIL & SCORE computers highly desirable; editorial skill ability essential; typ 65; knowl of Univ policies & regulations; requires good English usage & spelling; send appl/resume to J. Hennessy/M. Lieberman, ERL 443B.; B14; $1440-1514.

30741-TC (JCC:2952) GOLF SPORTS ASST I: Work at Stanford Golf Driving Range handling daily functions related to golf play; open & close Driving Range daily; handle sales of balls, sports eqpt, cash register sales; customer relations, phones, answer questions; maintain inventory of merchandise; order supply of balls, clothing, shoes & golf eqpt; keep track of inventory; asst in training 16 driving range hrly personnel ; QUALIFICATIONS: prev golf course exp indicating familiarity w/ golf course regulations & rules of US Golf Assoc; thorough knowl of game of golf & its related eqpt; prev working exp at a golf course, a pro shop—municipal or private; excel commu skills; must have flexibility to accommodate early morning & early evening work.; B09; $1130-1189.

27030-BP (JCC:2554) SECRETARY II: Genl sec'l duties for Dir of Class Agents, Reunion Giving & Student Development programs; frequent interactions w/ other staff members & w/ student & alumni volunteers; asst w/ telephone & personal solicitations & will take increasing respon for prep copy & coord an annual series of mailings to some 60,000 alumni; QUALIFICATIONS: Typ 55-60; excel commu skills; demonstrated organizational skills, reliability & accuracy essential; rapid, accurate typing nec & prior word processing exp desirable (particularly exp w/ Lexitron sys); editorial skills & ability to compose corresp for review will be of value; send appl/resum to Liz Trujillo, 301 Encina Hall, Stanford, CA 94305.; B11; $1246-1310.

Senate discusses future of computing; 130 H & S faculty training on IMB-PCs

continued from page 1

6) Much of the central University administrative data will be on-line and accessible from workstations, terminals or office information systems;

7) The catalogs of the Stanford libraries and of the Library of Congress will be on the institution's central computing node, accessible by individuals from their workstations, and there will be effective access to the library catalogs of the country's major research universities in similar fashion;

8) Use and analysis of large databanks, such as census data, will be an integral part of social science research and teaching;

9) In student computing, most if not all of what is now supported by large mainframe computers will be done on individually owned microcomputers as mainframes evolve toward providing more special purpose services.

Humanities project

Michael Carter, CIT's director of instruction and research information systems, said 130 professors in the School of Humanities and Sciences soon will begin training on IBM personal computers in the Tiro project, funded in part by a grant from the Pew Foundation.

"Personal computers are good devices for learning information technology—people learn faster than on a big machine," he commented. After learning how to use IBM-PCs as word processors, faculty will be encourgaed to do library searches, transmission, and printing.

William Yundt, CIT's director of network development, said a prototype network will be developed for the IBM-PCs "as this explosion continues."

Over the next two years, the Stanford University Network—called SUNet—will become operational. This will provide a less expensive means of connecting computers than telephone lines and will permit the transmission of video signals as well. Current capital cost estimates range from $3.5 to $5.5 million.

"Almost any technical solution is better than what we now have," Yundt told the Senate. Brown, Cornell, Carnegie Mellon, and Arizona are among the universities which have either installed or are planning broad band, coaxial systems, he said. SUNet started five years ago in the Stanford Computer Science Department.

Prof. James R. Miller of the Graduate School of Business, head of the Academic Council Committee on Computers and Information Technology, said instructional computing has been "somewhat underplayed" in importance at Stanford in comparison with such institutions as Harvard. Yale, and Dartmouth.

Planning expansion

While Stanford should not try to "out Carnegie" Carnegie Mellon University, it should seek a "clearly respectable" position and "plan future capacity expansion" in computers rather than reacting to crises.

Contrary to public impression, Shaw said Carnegie is "not giving computers to students." He said CMU is engaged in "a useful experiment" with "very exciting" possibilities which will "benefit Stanford."

Compared to Stanford, CMU is "a relatively homogeneous university" capable of achieving a "single image solution" of its computer needs.

Miller said his committee is currently studying the appropriate level of "computer literacy" for Stanford and tentatively concluded that "Stanford is not the place for one solution."

The needs of scientists and non-scientists differ, he explained. "It would be silly to impose the requirements of one—or lack of them—on the other."

Shaw said he didn't know of any university providing all its students with "free" computers. But he emphasized that "we're working closely" with Carnegie Mellon.

Proliferating processors

During the past three years, more than 150 word processing and office information systems have been acquired by University departments. "The technology has evolved to the point where the purchase of devices that provide only word processing support is no longer an effective alternative," the CIT report said.

David Ernst, CIT's director of administrative information systems, said between 50 and 75 departments now seek help in buying such systems annually.

Prof. Kenneth Melmon, medicine, expressed concern that "people are going off by themselves (and acquiring computer systems) without understanding the consequences." President Donald Kennedy said it would be "outlandish" for the University to permit purchase of equipment that could not at least become compatible with others through a network.

CIT Deputy Director Michael Roberts indicated more than 2,000 faculty, staff and students now use CIT's central services. The IBM 3081 central node in Forsythe hall in a typical month will execute nearly a quarter million individual jobs and interactive terminal sessions and print more than three million pages of paper. The central node includes more than 50 billion characters of immediately accessible stored data and more than 14,000 miles of magnetic tape storage.

Shaw said the "dominant trend" clearly is to provide more computer services close to the individual user and then link users to networks. But the computer explosion is so rapid that there still will be growth in central services.

Budget trimmed

CIT trimmed its budget base about two percent this year and is currently studying additional cuts of up to six percent, he indicated. Its current staff totals 220. Its total budget is approximately $19 million, of which 94 percent goes for services, while six percent is invested in SUNet, the microcomputer program, and the departmental information systems program.

Prof. Carl Degler, history, expressed concern that "we're being sold a bill of goods," particularly on computer access to library resources. He also noted that his department's IBMs were incompatible with fairly recently purchased Xerox equipment.

Shaw replied that the forecast was put up to "test its reality" with the faculty and others. He acknowledged that whole libraries won't be on computer, "but we'll have a piece of it in September."

It's important to know if the 80 percent forecast for faculty computer workstations appears exceptionally wide of the mark, since the networking effort assumes this technology will become very widespread.

Humanities and Sciences Dean Norman Wessells credited Shaw and Carter with the "magnificent idea" of the Tiro project and helping obtain $500,000 in gift support for it. "All the humanities faculty owe (them) a debt of gratitude," he said.

Rental housing

HOUSING AVAILABLE

□ **Beg. Feb. 1, '83:** SHARE 2BR Oak Creek apt w/prof. woman. Tennis, pools, etc. Call Cindy, 326-6660 or lv. message, will return call.

□ **NOW:** SHARE hse w/prof. female. 2BR/2BA, W/D. Interest in solar proj, design, landscaping. Female pref.; mature male considered. Privacy for $400. Write: J. Powell, Box 11425, Stanf. 94305 or call & lv. msge for Stanf. sublet, 494-2611.

□ **Beg. Feb. 1, '83:** Unfurn. spacious hse, 4BR/2BA, frig, stove, DW, w/w carpet, FR, frpl., fenced yd, stor. shed, carport. No pets. So. Palo Alto. 10 min. to Stanf. $1050/mo. + util. Call 329-0797.

□ **Beg. Mar. 1, '83:** Furn. 2BR/2BA apt. w/spectac. canyon view. W/D, pool, tennis, 12 min. to Stanf. Avail. 7 to 9 mo. $900/mo. Call Gay Morris, 326-1200 (day), (415) 591-7085 (eve).

□ **NOW:** Ski cabin, So. Lake Tahoe. 2BR, frpl, color TV, phone. Adj. Natl Forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3141 (eve).

□ **Regularly Available:** 1 & 2BR furn. & unfurn. apts & twnhses in Palo Alto & Menlo Pk, in good nghbrhds & close to campus. Also 3BR/2BA hses. $525 to $800/mo. Call Shirley at 493-2321 or Jane, (415) 968-4957.

□ **Mid-Feb. to Aug. '83:** Furn. hse, Palo Alto 2BR/2BA, very nr. Stanf. Nonsmokers, no pets. $850/mo. + elec. & gas. Call 328-0179.

□ **Aug. 1, '83 to June 30, '84 (flex):** Fully furn. campus hse., 4BR/3½BA, study, library, DR, frpl, pool, view, acre. $1700/mo. incl. grdnr, pool serv. Call (415) 327-5204 or 497-4732 (day).

□ **April 1 to June 15, '83 (flex):** Fully furn. hse. 4BR/2BA, AEK, den, W/D, hot tub on deck. Children ok. Incl. grdnr, swim/tennis club mbshp (across st.). 3 mi. to Stanf. On bus rte. Photos avail. $1000/mo. Call 494-6492.

□ **June to Oct. 1, '83:** Furn. campus hse, 4BR/2BA, + cottage BR. 4 carport, auto sprinklers, full solar hot water. $1200/mo. incl. gardener, water. Gas & elec. xtra. Deposit + 1st mo. rent req. Call 858-3941 (day), 327-5790 (eve).

□ **Jan. 15 thru Dec. 31, '83:** Furn. contemp. hse close to campus ctr, 2000 sq. ft. 2BR/2BA, 2 studies (can convert to BR), FR, frpl, piano, lush atrium, wooded lot. $1350/mo. incl. gardener, water. Call 857-0479 or 497-9477 (day).

□ **Feb. thru Aug. or 1 yr. lease:** Unique contemp. hillside hse. fully furn., 3BR/3BA. Bay view, redwood & glass. Rec. rm w/bar, hot tub, decks. $2000/mo. Call Sylvia Nobleman, (415) 854-7140.

□ **Now:** Furn. rm, w/ktchn priv, DW, W/D, share LR w/frpl, garden, gar. So. Palo Alto hse. $275/mo. + 1/3 util. Call Rose, 856-3792.

□ **NOW:** Prof. male seeks M/F rmmate to share lge 3BR/2BA hse in Foster City. LR/DR, atrium, frpl, skylights & more. See to appreciate, good location. $325/mo. + ½ util. Call John, (415) 572-9850 after 7 pm.

□ **Beg. Feb. 1, '83:** Studio in rear of Menlo Pk hse, fully furn. & equipped. $325/mo. incl. all util (xcept phone) wkly clean., linen change. Nonsmoker, no pets. Call Dr. Lenkey, 322-3717.

HOUSING NEEDED

□ **NOW:** Reliable Stanf. staff seeks hsesit. Pref. long term, 3 to 6 mo. but will consider shorter per. Will give excellent care to hse, pets, plants, yd. Loc. refs. Call Donna, 497-3967 (day).

□ **Sept. '83 thru summer '84:** Visit Prof, Operations Rsrch seeks 3-4BR hse on campus for self, wife & 2 girls. Stanf. refs. Write A. Tucker, Applied Math, SUNY, Stony Brook, NY 11794 or call eves (516) 751-3283.

□ **NOW:** Esc. Vil. family (3) seeks long term 2 or 3BR hse or apt. rental in Jordan Sch. Dist. Refs. avail. Call Davidson, 857-0390.

□ **Beg. Feb. 1, '83:** Postdoc at Med. Ctr., wife, 2 children require 2BR apt. or hse. within bike dist. of Stanf. for 10 mos. Local refs. Call Dr. Maze, (415) 848-3938 (day), 851-2531 (eve).

□ **Feb. to Sept. '83:** Visit. prof. seeks 3BR apt. or hse. on or nr campus. Poss. exchng for lovely flat nr. Tel-Aviv Univ. Call Margret, 497-3910 (day).

□ **Jan. 17 to 28, '83:** Resp. woman w/17-yr-old son seeks temp. hsng before joining husband in Colo. Will gladly care for pets. Call (415) 327-8615.

□ **Spring Qtr '83:** Visit. Eng. prof, wife, 2 children seek fully furn. & equipped 2/3BR hse or apt. Reasonable cost, will hsesit or help. Nonsmokers. Call 493-1059 or 497-2547 (day), lv. messages for Locke.

□ **End Mar. to end June '83:** Visit. prof, wife, nonsmokers, no pets, no children, seek campus hsesit. Call 497-1745 (day).

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Luis Gomez to give Evans-Wentz lecture series on three Buddhist creeds

Luis O. Gomez, professor of Buddhist studies at the University of Michigan, will present the 1982-83 Evans-Wentz Lecture series at Stanford on the topic "Three Buddhist Creeds: Approaches to the Interpretation of Buddhist Dogmatic Formulae."

Cosponsored by the Department of Religious Studies and the Center for East Asian Studies, the three lectures will be held at 8 p.m. Jan. 17, 18, and 20, in the Tresidder Memorial Union Lounge.

The lectures will examine the interpretation of early Buddhist creeds and will clarify problems in understanding these texts in their literary and historical contexts.

Gomez will explore the complexities in the "simple" and "basic" creeds of Buddhism and challenge the assumption that any schematic formulation holds the key to understanding the "essence" of religion.

The first lecture, on Monday, Jan. 17, is entitled: "Variant Forms and Interpretations of the Formula of Causality"; the second, on Tuesday, Jan. 18, "The Logic of the Three Marks"; and the final, on Thursday, Jan. 20, "The Relation of the Four Noble Truths to Other Dogmatic Formulae of Buddhism."

Each will illustrate one methodological approach: respectively, the dating of variant forms of one creed; the internal logic of a dogmatic formula; and the comparison of different formulae.

Gomez is chairman of the Department of Far Eastern Languages and Literatures at Michigan. Born in Guayamilla, Puerto Rico, in 1943, he received the B.A. from the University of Puerto Rico in 1963 and the Ph.D. from Yale University in 1967.

His major teaching and research interests are in the development of Mahayana Buddhism in India and the transmission of Buddhism to Tibet and China. He is the author of numerous articles and books, including a recently published Spanish translation of the *Bodhicaryayatara*.

He is coeditor, with Hiram W. Woodward, Jr., of *Barabudur: History and Significance of a Buddhist Monument* (Berkeley Buddhist Studies, 1981). A major study of the *Bhavanakrama* by Kamalasila, dealing with famous debates between Indian and Chinese Buddhist factions in Tibet in the late eighth century, is forthcoming.

Gomez has served as president of the North American Society of Buddhist Studies (1980-82) and has been on the editorial board of the Berkeley Buddhist Studies Series since 1976. He is a member of the American Oriental Society, the American Academy of Religion, the Association for Asian Studies, Asociacion Espanola de Orientalistas, and Asociacion Latino-Americana de Estudios Afroasiaticos.

The 1982-83 Evans-Wentz Lectures are the 15th in an annual series established in 1969 from a bequest by Walter Y. Evans-Wentz (Stanford, AB '06, AM '07; the University of Rennes, DLitt '08; and Oxford, BSc '09, DSc '31), who traveled extensively throughout the world, spent several years in Tibet where he became a Buddhist monk, and wrote or edited several books on Tibetan religion.

Thursday lunchtime tours at the Museum will feature print techniques during the month of January. This is a Goya aquatint from the famous *Capricbos* published in 1799.

Lunch hour tours of Stanford Museum

A different kind of lunch hour can be had three days a week, by joining a docent tour at the Stanford Museum.

Committee for Art docents will conduct tours at 12:15 p.m. of the permanent collection on Tuesdays, the Rodin collection on Wednesdays, and the print collection on Thursdays.

Other lunch hour tours on selected topics will also be scheduled for Tuesdays and Wednesdays. Weekend tours at 2 p.m. feature the permanent collection on Sundays and the Rodin collection on Saturdays.

Docent tours for private groups may be arranged by calling 497-3469.

Currently on exhibit at the Art Gallery, next to Hoover Tower, are some recent acquisitions of the Gallery and Museum. Both buildings are open 10 a.m.-5 p.m. Tuesday through Friday and 1-5 p.m. weekends (closed Mondays).

All exhibits and tours are free of charge.

Gandolfi plans piano recital Jan. 21

Jodi Gandolfi, newly appointed lecturer in piano at Stanford, will give a recital at 8 p.m. Friday, Jan. 21, in Dinkelspiel Auditorium.

Her program will begin with Haydn's *Sonata in C minor*. Composed in 1771, the sonata is a daring work in the expressive *Sturm und Drang* style. A group of romantic character pieces by Chopin will follow: two etudes, *Berceuse*, opus 57—a florid lullaby, and the *Ballade in G minor*, opus 23.

Gandolfi will conclude her recital with Schubert's "Wanderer" Fantasy, which is based on his well-known song *The Wanderer*, opus 4. This large-scale work served as an important model for later romantic composers.

Gandolfi received her Doctor of Music Arts degree from Stanford last year. Her primary teacher was Adolph Baller. Her doctoral dissertation was a study of early 19th-century accompanied song based on holdings in Memorial Library's rare book collection.

Gandolfi received her B.A. summa cum laude from Cornell and her M.M. from the University of Wisconsin, Madison. She then studied piano, song accompaniment, and chamber music in Germany for two years under a Fulbright-Hayes grant.

Last year Gandolfi performed in New York, the Midwest, and California, and made radio recordings in Berlin and Bremen.

Tickets are $4 general admission, $2 students and senior citizens,

Hsu to lecture on Baroque music

John Hsu, virtuoso viola da gambist and professor of music at Cornell, will lecture at 4 p.m. Monday, Jan. 17, in Tresidder Small Lounge on "French Baroque Musical Rhetoric as seen through French Baroque Viol Technique." He will be a guest of Stanford's Music Department.

Hsu is the Old Dominion Foundation Professor of Humanities and Music at Cornell, where he has taught since 1955, and an artist-faculty member of the Aston Magna Foundation for Music. This quarter he is visiting artist-in-residence at UC-Davis.

Hsu is a graduate of the New England Conservatory of Music, which awarded him an honorary Doctor of Music degree in 1971. A specialist in French viol music, he is editor of the first modern edition of the complete instrumental works by Marin Marais and author of *A Handbook of French Baroque Viol Technique*.

Hsu's recordings by The Musical Heritage Society include the first complete recording of the five suites for viola da gamba by Antoine Forqueray, a series of five discs of *Pieces de viole* by Marais, Bach's three sonatas for viola da gamba and harpsichord, and two discs of Baryton trios by Haydn. Hsu has also recorded over 30 viola da gamba programs for European radio broadcasts.

Hsu's Jan. 17 free public lecture will deal with a few of the basic questions relating to the performance of French Baroque music in general; it will *not* be a lecture on viol playing for viol players.

Auditions set for *Maskarade* musical

Auditions for the spring quarter production of an original musical, *Maskarade*, will be held from 7 to 9 p.m. Tuesday and Wednesday, January 18-19 in Room 205 of Memorial Auditorium on the second floor in the back hall.

Callbacks are scheduled for 7 p.m. Thursday, Jan. 20.

Actors, singers, dancers, acrobats, and musicians are needed, especially those who can tumble, juggle, walk on stilts, or play a conga drum, banjo, or flute.

The production is jointly sponosred by the Department and Drama and the Committee on Black Performing Arts.

Maskarade is written by Prof. Sylvia Wynter of the African and Afro-American studies program and directed by Prof. Sandra L. Richards of the Drama Department, director of the committee on Black Performing Arts. Michael Britt is musical director with choreography by Halifu Osumare.

Set in Jamaica in the 1840s, the play concerns a young couple from the countryside who come to Kingston seeking jobs and recognition through the Jonkonnu festival, an event similar to the Mardi Gras in New Orleans or Carnival in Trinidad. Celebrated during the Christmas season, when slaves had finished harvesting sugar cane, it reversed normal social positions. People on the bottom of society could express their creativity and ambition through elaborate costuming, energetic dancing, parading in the streets and riotous merrymaking. A typical Jonkonnu parade included celebrants masked in cowheads, horseheads, and jack-of-the-greens reminiscent of the Yam Festivals of West Africa.

As customs evolved, servants would borrow from the white planters, incorporating into their presentations parts of Shakespearean plays with French set-girls, harlequin and clown characters. The festivities resulted in a combination of secular elements with sacred implications and incorporated the people's love of the traditional and sophisticated with the novel and the bawdy.

Because the tradition out of which Jonkonnu comes lends itself to a circular, open-air space, performances will be in the courtyard of the Old Union during afternoons of April 6-10 and 13-17. For further information, call 497-2576.

Black community programs celebrate King, poetry, films

King's birthday: rally, celebration planned Friday

The Black Community Services Center of Stanford has organized a week-long series of events celebrating Martin Luther King's birthday Jan. 15.

On Friday, Jan. 14, the Black Student Union will hold a noon rally in White Plaza. The African and Afro-American Studies program will sponsor a Martin Luther King commemorative program at 4 p.m. in Kresge Auditorium. *(Story is below).*

King's birthday itself will be observed at 7 p.m. Saturday, Jan. 15 in Terman Auditorium with a film, "Doubts and Certainties," a Stanford Gospel Choir presentation, and a talk by the Rev. Bill Calhoun of Wo'se Church, Oakland. This event is sponsored by the Black Liberation Month Committee

Further information may be obtained by calling (415) 497-1587 between 10 a.m. and 5 p.m. daily.

Born Jan. 15, 1929 King was the second black American to win the Nobel Peace Prize. Known as the "gentle warrior" for his nonviolent strategies in the struggle for civil rights, King received a popular, enthusiastic response when he spoke at Stanford in the early 1960s.

Ben Guillery, Herman Harper, and Larry Adams (l to r) in *Paul Robeson*

Guillory to portray Paul Robeson

The Stanford Committee on Black Performing Arts will present "Paul Robeson," a dramatic chronicle of the legendary singer's life for one performance only at 8 p.m. Sunday, Jan. 16, in Dinkelspiel Auditorium.

Tickets are $5 regular admission, $3 students and seniors, sold at the door.

Directed by UC-San Diego professor Luther James and featuring Bennet Guillory, the play was produced last season by the Berkeley Stage Company as part of its festival of extraordinary people.

Author Phillip Hayes Dean uses the device of an elderly Robeson reminiscing about his life to trace key events ranging from his admission to Rutgers University and selection as football's first black All-American in 1917, through his outspoken criticism of British colonialism and praise for a Russian society free of racism. It was this outspokeness which cost Robeson his passport and opportunity to present concerts abroad during the McCarthy era of the 1950s.

Bay Area critics have called actor Guillory virtually flawless. His earlier portrayal of Robeson in the documentary on House Un-American Activities, *Are You Now or Have You Ever Been?* won a Bay Area Critics Circle award for best supporting actor. Joining him in what is essentially a one-man show are accompanist Larry Adams and Herman Harper II, who plays a singing Robeson statue.

The Alma Trio: Adolph Baller, Andor Toth, and Gabor Rejto

Alma Trio concert slated Friday

The Alma Trio, ensemble-in-residence at Stanford, will present the third concert of its 1982-83 series at 8 p.m. Friday, Jan. 14, in Dinkelspiel Auditorium.

Violinist Andor Toth, cellist Gabor Rejto, and pianist Adolph Baller will open the program with Beethoven's Trio No. 6 in B-flat, Op. 97, the "Archduke."

The Alma Trio is well known, through concerts and recordings, for its interpretation of this work, which is perhaps the best known in all the trio literature.

The program will continue with its featured work, Ernest Bloch's Suite for Viola and Piano, as transcribed for cello and piano by Baller and edited by Rejto.

Baller's transcription was prompted by his conviction, after many performances of the original (1919) version, that the particularly rich, dark texture of the piano part would be better paired with the complementary tone of the cello.

In a conversation with Bloch's sister, Baller learned that the composer had considered making such a transcription for the same reason, but died before carrying out his plan.

Rejto and Baller have recorded their 1970 cello and piano version planned for this concert.

To conclude the program, the Trio will play the brilliant Trio in B Major, Op. 8, by Brahms.

Tickets are $4 general admission and $2 students or seniors. They may be purchased at the door or at Tresidder Ticket Office (497-4317).

Commemorative for King Friday

The Stanford Program on African and Afro-American Studies will sponsor the third annual service commemorating civil rights leader Rev. Martin Luther King, Jr. at 4 p.m. Friday, Jan. 14, in Kresge Auditorium.

January 15 marks what would have been Dr. King's 54th birthday. He was slain by an assassin April 4, 1968.

In honor of his life's work towards the goals of peace and dignity for all people, students and faculty will read selections from his writings and provide musical memories of his purpose in life.

Film festival slated weekly through February

A Saturday night series of films about black people all over the world, sponsored by Stanford University's Black Liberation Month Film Committee, will be shown weekly during the months of January and February.

Showings will be at 7 and 9 p.m. in Terman Auditorium, School of Engineering; admission is $1.50.

The Black Film Festival arose from a need for a closer and more critical examination of the portrayal of black people in film, and to overcome the lack of films by, about, and for black people.

The schedule is as follows:

Jan. 15: "Doubts and Certainties," a film exploring the life of the late Martin Luther King Jr.

Jan. 22: "Blue Collar," starring Richard Pryor and Yaphet Kotto.

Jan. 29: "Black Girl," by the renowned Senegalese filmmaker Sembene Ousmane.

Feb. 5: "The River Niger," starring Glynn Turman, who will be present at the showing.

Feb. 12: "The Harder They Come," a Jamaican film starring the popular reggae artist Jimmy Cliff.

Feb. 19: "Six Days in Soweto," about the 1976 struggle of South African black youth against apartheid.

Kamau

Kamau to read original poetry

Kamau, (Terry Shelton) will give a reading of his original poetry at 7:30 p.m. Wednesday, Jan. 12, in Ujamaa Lounge, Lagunita Court.

The reading is being sponsored by Ujamaa House and Onelove Productions, Kamau's self-created publishing company.

A 1980 Stanford graduate, Kamau was a resident of Ujamaa his freshman year. In 1981, he finished his first book of poetry, "Dancsinging" a collection of more than 40 poems dealing with subjects ranging from philosophy and culture to relationships and political consciousness.

Kamau has done several readings throughout the Bay Area, including spots on KZSU and KRE radio stations. He also has performed with the Kuumba Ensemble at Stanford. *Dancsinging* will be on sale at the reception which follows the reading.

Calendar

Calendar items should be delivered to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Jan. 12, to cover the week of Mon., Jan. 24 through Sun., Jan. 30.

Events must now be submitted on forms. Those wanting copies should call Events and Services, 497-2551.

LATE ANNOUNCEMENTS

Wed., Jan. 12. Latin American Studies Bag Lunch: "The Current Debt Crisis in Latin America" with Prof. Barbara Stallings, Univ. of Wisconsin. Noon. Bolivar House, 582 Alvarado Row.

Dept of Chemical Engineering Lecture: "The Phase-Change Behavior of Metal-Hydrogen Systems" by Prof. Carol K. Hall, Princeton Univ. 4:15 p.m. Chemical Engineering Conference Room, Stauffer III.

Black Alumni Speaker Series: "Black Health Professionals: Female and Male Perspectives." 6:30 p.m. Ujamaa Lounge.

Fri., Jan. 14. Applied Physics Lecture: Title TBA. Speaker is Dr. Michael Reeken, visiting the Mathematics Dept. 3:15 p.m. Room 380C (Mathematics Corner Basement).

Sun., Jan. 16. The Lively Arts at Stanford Open Rehearsal: By the Musical Offering Chamber Ensemble. 12:30-1:30 p.m. Dinkelspiel Aud. Free.

MONDAY, JANUARY 17

Biological Sciences Dept. Seminar: "Evolution of Drosophila on the Newer Hawaiian Volcanoes" with Dr. Hampton L. Carson, Univ. of Hawaii at Manoa. 4:15 p.m. Room T-175, Herrin Hall. Open to the public.

Numerical Analysis Seminar: "A New Algorithm for Computing Matrix Pseudo Inverses" with Robert Schreiber, S.U. 4:15 p.m. Math 380C.

Stanford Film Society: "Top Hat" and "Christopher Strong." 7:30 p.m. Kresge Aud. $2.

Annual Evans-Wentz Lectures in Oriental Religions: "Various Forms and the Interpretations of the Formula of Causality" by Prof. Luis O. Gomez, Univ. of Michigan. First of three on the theme, "Three Buddhist Creeds: Approaches to the Interpretation of Buddhist Dogmatic Formulae." 8 p.m. Tresidder Union Lounge. Public cordially invited.

TUESDAY, JANUARY 18

The Lively Arts at Stanford/CROW Women in the Performing Arts Lecture Series: "Clara Schumann: Artist and Woman" by Nancy Reich, Dept. of Music, Manhattanville College. Noon. Terman Aud. Open to all.

I-Center Tuesday Lecture/Lunch Series: "Peculiarities of India's Development Experience" by Vis. Prof. Raj Krishna, Food Research Institute. Noon. I-Center. $2.50 includes hot lunch. Brown baggers welcome.

Office of Student Activities Workshop: "Publicity: Getting the Word Out with Efficiency and Impact." Focuses on practical tips for the design and implementation of a publicity campaign at Stanford." 4 p.m. International Center Assembly Room. Information at 497-3542.

CEAS Lecture: "Problems in the Contemporary Chinese Cinema" by Steve Horowitz, coordinator, San Francisco Film Festival. 4:15 p.m. room 238, Lou Henry Hoover Bldg. Open to all.

Solid Mechanics Special Seminar: "Statistical Fracture of Unidirectional Composites" S. L. Phoenix, prof. of mechanical and aero. engineering, Cornell Univ. 4:15 p.m. Durand Bldg., Room 450.

Applied Physics Dept. Lecture: "Applications of Nonlinear Optics, Planetary Atoms and Short Wave Length Coherent Light" with Dr. Richard Freeman, Bell Labs. 4:15 p.m. Applied Physics 200.

January Chinese Film Festival: "The Second Handshake" (1980). The dreams of two young scientists in love are frustrated when parental interference and Sino-American hostilities change the course of their lives. 7:30 p.m. Memorial Aud. $1.50 donation. (English subtitles.)

Annual Evans-Wentz Lectures in Oriental Religions: "The Logic of Three Marks." Second in a series of three on the theme, "Three Buddhist Creeds: Approaches to the Interpretation of Buddhist Dogmatic Formulae" by Prof. Luis O. Gomez, Univ. of Michigan. 8 p.m. Tresidder Union Lounge. Public cordially invited.

WEDNESDAY, JANUARY 19

Men's Rugby: Vs. St. Mary's. 3 p.m. Maloney Field.

Dept. of Chemical Engineering Lecture: "The Phase-Change Behavior of Metal-Hydrogen Systems" by Prof. Carol K. Hall, Princeton Univ. 4:15 p.m. Chemical Engineering Conference Room, Stauffer III.

Computer Systems Laboratory Seminar: "The Design of Low-Cost Peripherals for Personal Computers" with Dr. David Thornburg, Innovision, Los Altos, Calif. 4:15 p.m. Skilling Aud.

Basic Science Research Colloquium: "The Organization and Expression of the Mouse B_2—Microglobulin Gene" by Dr. Jane R. Parnes, Dept. of Medicine/Immunology. 5 p.m. Fairchild Aud.

Wrestling: Vs. San Francisco State. 7 p.m. Maples Pavilion.

Casa Italiana Lecture: "New Trends in Italian Design" by Italian architect Andrea Ponsi. 8 p.m. Casa Italiana , 562 Mayfield. Open to all.

THURSDAY, JANUARY 20

Condensed Matter Physics Seminar: "Organic Metals, Semiconductors and Superconductors" with C. B. Duke, Xerox Webster, N.Y. 4:15 p.m. Applied Physics 200.

Solid Mechanics Seminar: "A Model of the Curing Process of Epoxy Matrix Composites" with Prof. George S. Springer, Univ. of Michigan. 4:15 p.m. Skilling Aud.

History Dept. Lecture: "A Lily Ungilded: Martin Luther, the B.V.M. and the Saints" by Peter Newman Brooks, Downing College, Cambridge Univ. 4:15 p.m. History Corner, Bldg. 200, Room 205. Public cordially invited.

CREES Lecture: "The Struggle Against Stalinism in European Culture: The Contribution of Miroslav Krleza" by Prof. Predrag Matvejevic, Dept. of Literature, Univ. of Zagrab. 4:15 p.m. Polich Room, Lou Henry Hoover Bldg. Public invited.

Women's Basketball: Vs. Arizona State. 5:45 p.m. Maples Pavilion. $2 adult, $1 child.

Stanford Student Jewish Appeal "An Evening of Jewish Humor (Oy!)" with Prof. John Felstiner, English Dept. Campaign, reception and refreshments follow. 7:30 p.m. History Corner, Room 2. Open to all.

Grads in Common Presents: "Coping with the Information Explosion" with panel members John McCarthy, Barbara Gelpi, Paul Kaufman, Juliana Lavendal. First in a series of winter quarter forums to bring together faculty from the humanities and sciences to discuss topics of interest and cross discipline. 3:30 p.m. Tresidder 281. Graduate students urged to attend. Open to the public.

Bechtel International Center Other Cultures Film Series: Second part of Australian mini-film festival. "Passionate Industry" continues the covering of film making, 1920-30; and "'Where Dead Men Lie" portrays a tale by an Australian literary figure, Henry Lawson. 7:30 p.m. I-Center. 75 cent donation requested. Australian beer and wine tasting in the intermission.

Annual Evans-Wentz Lectures in Oriental Religions: "The Relation of the Four Noble Truths to other Dogmatic Formulae of Buddhism." 8 p.m. Tresidder Union Lounge. Public cordially invited. (Final in a series of three lectures.)

Men's Basketball: Vs. USC. 8 p.m. Maples Pavilion. Ticket information at 497-1021.

FRIDAY, JANUARY 21

Applied Mathematics Lecture: "The variety of solutions of elastic-plastic problems" by prof. David Kinderlehrer, Univ. of Minnesota. 3:15 p.m. Room 380C (Mathematics Corner Basement).

Materials Science and Engineering Dept. Colloquium: "Stress and Texture Measurements" with Prof. Gordon S. Kino, S.U. 3:30 p.m. Peterson Laboratory, Room 550A.

Fencing: Vs. CSU-Northridge. 4 p.m. Roble Gym.

Music Dept. Concert: Jodi Gandolfi, piano. Haydn—Sonata in C minor; Chopin—Two Etudes, Berceuse, Ballade in G minor; Schubert—Fantasy in C, "Wanderer." 8 p.m. Dinkelspiel Aud. $4/$2.

STARTS Great Directors Film Series: "Hapax Legomena" by the American avant-garde film maker, Hollis Frampton. In three parts, obliquely autobiographical. 8 p.m. Geology Corner, Room 320. $2.50.

SATURDAY, JANUARY 22

Women's Rugby: SFWRC/Santa Clara. 11 a.m. Maloney Field.

Men's Rugby: B.A.T.S. 1 p.m. Maloney Field.

Fencing: Vs. Air Force. 2 p.m. Roble Gym.

STARTS/Black Liberation Month Film Festival: "Blue Collar" starring Richard Pryor. About labor relations set in the motor-city, Detroit. 7 & 9 p.m. Terman Aud. $1.50 general.

Men's Basketball: Vs. UCLA. 8 p.m. Maples Pavilion. Ticket information, 497-1021.

STARTS Concert: Charles Ferguson and Timothy Lawler, duo guitar. Works by Pachelbel, Bach, Mozart, Falla. 8 p.m. Dinkelspiel Aud. $4/$2.

SUNDAY, JANUARY 23

University Public Worship: Student Worship Service, 8:30 a.m.; Robert G. Hamerton-Kelly, dean of the chapel, 11 a.m.; Catholic Mass, 4:30 p.m.

Music Dept. Concert: Herbert Nanney, organ. Recital to commemorate the 80th anniversary of the dedication of Stanford Memorial Church. 2:30 p.m. Memorial Church. Free.

ASSU Sunday Flicks: "Diner." 7 & 9:30 p.m. Memorial Aud. $1.50.

Music Dept. Concert: The Old Way and The New Way: Vocal Music of the High Middle Ages. Harlan Hokin, Michael Collver, Vismaya Lhi, Paul Vorwerk, singers. 8 p.m. Dinkelspiel Aud. $4/$2.

Stanford Hillel Library Committee: "Books and Bagels—What Did They Call You When You Got Off the Boat?" David Langenberg of the Green Library Reference will comment on Jewish genealogy and genealogical books. 10 a.m.-noon. Refreshments served. Free.

EXHIBITS

Ski Experience. Early and rare photographs of Ansel Adams. Some sixty prints made at the request of Donald and Mary Curry Tresidder of the Yosemite Camp and Curry Company. Stanford Museum, Miedel Room. January 18-March 20.

Recent Acquisitions. Paintings, drawings, sculptures and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. January 11-February 20.

Inventions. An exhibition of books and manuscripts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. January 15-April 8.

Christmas Books from the Mary Schofield Collection. Children's books. The Exhibits Gallery, second floor, West Wing, Green Library. Through January 28. 8-6 Mon.-Thur., 8-5 Fri., 9-5 Sat.

The Big Squeeze and Other Works by Dolly Du Prau. Acrylic on canvas. Reception, Fri., Jan. 7, 5-7 p.m. Bechtel International Center. January 5-30.

Latin American Panel to include State Department

Melvin Levitsky, senior deputy assistant secretary in the U.S. State Department, will defend the Reagan Administration's policy toward Central America in a free public panel discussion at 7:30 p.m. Thursday, Jan. 13, in Kresge Auditorium at Stanford University.

Moderated by Prof. John Wirth, history, director of Stanford's Latin American studies program, the symposium will include four other speakers:

Father Robert Drinan, Georgetown University professor of law, president of Americans for Democratic Action, and former Congressman from Massachusetts (1971-81);

Patricia Weiss Fagen, of the Refugee Policy Group in Washington, D.C., head of the Amnesty International's Refugee Committee, who will have just returned from a fact-finding mission in El Salvador;

Armando Olivas, director of public affairs for Christian Legal Aid (Socorro Juridico Cristiano), a human rights organization connected with the Catholic Church in El Salvador; and

Robert Wesson, senior fellow at Stanford's Hoover Institution.

The symposium is scheduled two weeks before the Jan. 27 deadline for President Reagan to decide whether to certify that human rights abuses in El Salvador have subsided. U.S. military aid to El Salvador cannot continue without such certification.

Symposium participants will discuss the current status of human rights in the Central American region and foreign policy alternatives open to the U.S.

The program is sponsored jointly by the Stanford Central American Action Network, a voluntary organization; The Koret Fund; and the Latin American studies program at Stanford.

CAMPUS REPORT

Volume XV, Number 16 | A publication for Stanford University faculty & staff | January 19, 1983

Bill Durham, Brad Efron named MacArthur fellows

Two Stanford professors Tuesday, Jan. 18, were named MacArthur Fellows by the John D. and Catherine T. MacArthur Foundation of Chicago.

The prestigious awards, which honor exceptionally talented individuals personally, rather than projects, were given to William Durham, assistant professor of anthropology, and Bradley Efron, professor of statistics.

They are the third and fourth MacArthur Fellows on the Stanford faculty. Earlier winners were Persi Diaconis, statistics, and Charles Bigelow, computer science and art. The awards were first made in 1979.

The fellowships provide a sizeable cash grant, tax free, over five years, plus additional financial support for the university. Their purpose is to enable the recipients to devote themselves fully to their own research and creative pursuits.

William Durham
(Profile by Joel Shurkin)

William Durham, 33, assistant professor of anthropology, a leading researcher in biological anthropology, has won a five-year $176,000 MacArthur Foundation award, the Foundation announced Tuesday, Jan. 18, 1983.

Durham believes there is a dynamic relationship between human culture and human genetics. One alters the other and is, in turn, altered itself. He calls this process "coevolution." He has spent several years teaching this principle to undergraduates with such enthusiasm he has been known to get ovations on the last day of his class from the normally cool Stanford students.

He is now writing a book explaining, through case analyses, why he thinks he is right about coevolution.

Durham uses 'coevolution' in a different sense from Paul Ehrlich, although the term originated with that Stanford biologist. Ehrlich studies the coevolution between several species; Durham studies it in relation to only one species: *homo sapiens*. It also is not socio-biology, which argues that culture is largely determined by genetics.

"My message is that culture and genetics are two forms of inheritance interacting with one another, operating even with, to some extent, analogous mechanisms," he says. The world, he insists, is not predictable from the genes.

"The traditional values and beliefs people have are very influential in the process of cultural change in a way that liberates that change from genetic constraints. I think what's missing in sociobiology is the idea of cultural self-selection—that people have criteria, they have values in their minds, and these values influence the course of cultural change."

For instance, the majority of people in the world get ill—sometimes violently ill—if they try to drink milk. They cannot absorb the nutrients.

One carbohydrate in milk is called lactose, which is a molecule so large it must be broken down by an enzyme called lactase. Lactase is produced in the small intestine, and because babies need the nutrients in milk, almost all humans produce lactase when they are young.

But for most humans, the nutritional

Academic calendar report would keep quarter system

Stanford should retain the academic quarter system, on which it has operated since 1917-18, a key committee believes.

But continuing courses and sequences lasting longer than a single quarter should be considered by deans, departments and individual faculty concerned by the limits of the present calendar, the committee suggests.

"For the University's health, diversity of learning must be supported and enhanced," its report states. But "the length of academic terms is not the most important element in that undertaking."

Prof. Edwin Good, religious studies, headed the Ad Hoc Committee to Study the Question of the Length of Terms of Academic Instruction. Its recommendations will be considered by the Faculty Senate in the near future.

In a minority report, Prof. Elizabeth Cohen, education, noted that a recent study of Chicanos on five California campuses showed those on the quarter system at Stanford and the University of California were much more likely to report difficulty in getting their work done on time than those at two state universities on the semester system.

The proportion saying they "often" or "always" went to class without doing the assigned reading was 26.6 percent at Stanford, 22.3 percent at UC, and 18.2 and 14.4 percent at the state universities. Only 9.0 percent of those at a community college felt the same way.

Similarly, the proportion saying they "always," "often," or "sometimes" turn in a paper late was 24.4 percent at Stanford, 18.3 percent at UC, and 13.4 and 17.6 percent at the state universities. Among those at the community college, 19.5 percent sometimes had late papers.

"Methods of teaching should be adopted to the length of the term," Cohen said.

Tuition increases similar to rise in family incomes

College costs nationally rose during the last decade at approximately the same rate as personal income of parents with children in college, according to Stanford Vice-Provost Raymond F. Bacchetti.

Stanford's costs rose somewhat faster, but Bacchetti said he would "make a small wager" that the average rate of increase in personal income of Stanford students' parents "probably exceeds that of the general population.

"So it's a close call as to whether Stanford costs more in relation to income now than it did in 1970."

Citing figures from the National Commission on Student Financial Assistance, Bacchetti said the average increase in both personal income and college costs nationally since 1970 was 7.5 % annually. During the same period, the cost of attending Stanford rose between 10 and 11 %, depending on what factors are included, he said.

The University meets the calculated financial need of all undergraduates.

Bacchetti was one of four University officers who discussed the University's financial status and its current budgetary problems at a widely publicized forum Jan. 12 attended by about 75 students. Other speakers were President Donald Kennedy, Provost Albert Hastorf, and Vice-President for Business and Finance William F. Massy.

Hastorf told the students that administrators were working to bring down an earlier projected 12 percent tuition

Bradley Efron
(Profile by Harry Press)

Bradley Efron had barely learned to read when he began dealing with numbers. By the time he was five, he could add big numbers in his head.

Now he's 44, and the numbers have gotten bigger and bigger, more and more esoteric, and on Jan. 18, they added up into one big payoff when Brad Efron, Stanford professor of statistics, was named a winner of a MacArthur Fellowship by the John D. and Catherine T. MacArthur Foundation.

He was chosen because he is one of the world's leading experts in building and testing theories about the accruing of information.

"It is shocking," says Efron, "how hard it is to understand data if you don't have the proper tools. Our tools—the ones used by statisticians—are powerful, help strip away noise and misleading aspects, and tell you what's there and what's not there."

Efron spends the major portion of his life in what charitably can be called a grungy office in one of Stanford's most famous grungy buildings—Sequoia Hall. In the University's earliest days it was a three-story men's dormitory, the home of the Stanford Rough. It eventually lost its two top stories, and now it's the home of the Department of Statistics and, says Efron, "I love every bit of it."

On his desk is one of those tools he was describing. It's a 24 x 36-inch pad of paper, a sort of drawing pad such as an artist might use. It is almost totally covered with number and mathematical symbols, as the Rosetta Stone was covered with hieroglyphics.

Efron is writing a scientific paper for publication, and these are his thoughts, his words, and he is trying to make sure the theory he has about it all is accurate.

"The world of information is a very large world," he says. "There are lots of things that I, sitting at my desk, might not think of. You know, the genius theory is vastly overrated. Thinking clearly and thinking hard—and for a very long time—is vastly underrated."

Efron spends a considerable amount of time at his work, and says "it is very satisfying when a theory works." But, he adds, "without statistics, how does one go from data to what's true?"

People

Martin Perl to share Wolf Prize

Martin Perl, professor at the Stanford Linear Accelerator Center, is cowinner of the prestigious Wolf prize for physics, for his discovery of the Tau particle, the unexpected third member of the family of subatomic particles called the leptons.

The other winner is Leon Lederman, director of the Fermilab in Illinois, for his discovery of the fifth quark, a discovery that fits comfortably with the physics implied by Perl's work.

Each will receive $50,000.

The Wolf prize was set up by Israeli chemist and businessman Richard Wolf "for outstanding contributions on behalf of mankind. . . . To promote science in all fields and art in all its forms."

Recipients are "scientists and artists outstanding for their achievements for the benefit of humanity and brotherly relationships amongst the peoples, regardless of nationality, race, color, religion, sex or political views."

The first award was made in 1978. One of the winners was Stanford Prof. Carl Djerassi, for his work in chemistry. The official presentation of the prize takes place in the Israeli Knesset (Parliament), and the award is given by the President of Israel.

Perl's discovery concerned a particle 3,600 times heavier than the electron. Previous to his work, physicists acknowledged the existence of four particles which they called leptons (Greek for "light ones,") including the electron, the muon and two kinds of neutrinos. Leptons were so named because they do not appear influenced by the strong force that binds atomic particles together.

Martin Perl

The Tau particle opened an entire new branch of the lepton family tree, and made it logical to assume that scientists looking into another family of particles, the quarks, would find more than the four already discovered. Lederman's group at Fermilab did just that.

SLAC will be holding a party for Perl at the SLAC auditorium at 3 p.m. Tuesday, Jan. 11.

Hoover names Allen fellow

Former National Security Adviser Richard V. Allen has been appointed a senior fellow (by courtesy), Hoover Institution Director W. Glenn Campbell has announced. As a senior fellow, he will continue his study of major issues of international security affairs.

From Jan. 20, 1981, until January 1982, Allen served as National Security Adviser in the White House. Prior to that, he was President Reagan's chief foreign policy adviser.

In November, 1982, the president announced that Allen would be chairman of the Presidential Commission for the German-American Tricentennial, celebrating the 300th anniversary of the arrival of the first German settler in America.

From 1966-1969 Allen served as a senior staff member at the Hoover Institution and was editor of the Institution's *Yearbook of International Communist Affairs: 1968*.

He was a founding member of the Center for Strategic and International Studies at Georgetown University, and is a member of its Advisory Board. He is currently a distinguished fellow at the Heritage Foundation in Washington, D.C., and serves as senior counsellor for foreign policy and national security affairs to the Republican National Committee.

He is also president of the Richard V. Allen Company, a Washington-based international consulting firm.

A native of Collingswood, N.J., Allen received his B.A. and M.A. degrees from the University of Notre Dame and did further graduate work at the universities of Freiburg and Munich.

He has authored or edited several books on international affairs, including *National Security: Political, Military, and Economic Strategies in the Decade Ahead* (New York: Praeger); *East-West Trade: Its Strategic Implications* (Washington: The Center for Strategic and International Studies); *Peace or Peaceful Coexistence?* (Chicago: The American Bar Association); and *Democracy and Communism: Theory and Action* (Princeton: D. Van Nostrand).

Search for VP

Vice-Provost Gerald Lieberman, dean of graduate studies and research, will head a small consultative group to President Donald Kennedy on selection of a new vice-president for public affairs.

Other members are **Profs. Thomas Merigan**, medicine; **Marion Lewenstein**, communication; **Franklin Riddle**, associate controller; and **John Schwartz**, University counsel. The group held its first meeting Jan. 11.

Robert Rosenzweig, current vice-president for public affairs, has been named president of the Association of American Universities and will move to Washington, D.C. later this year.

Sheila Scobba

Stanford senior Sheila Scobba has been named the winner of the Bob Alexander Memorial Scholarship for 1982.

The award, given by the Association of College Unions International—Region 15, recognizes an outstanding student of a member school in California, Hawaii or Nevada, who has shown exemplary performance in student union/student activities work.

The $250 scholarship is presented in honor of Bob Alexander, past director of the Millberry Union at UC-San Francisco, who died in 1976 at the age of 46.

Sheila Scobba

Scobba, a human biology major from Algina, Iowa, has been a member of Tresidder's Space Use and Food Services Committees, several search committees for professional staff members, and chair of the Union Board for the second consecutive year. In addition, she is a Stanford advising associate.

Clarkson Oglesby

Clarkson Oglesby

Emeritus Prof. Clarkson Oglesby, civil engineering, has received the highest form of recognition the American Society of Civil Engineers can bestow—honorary membership in the Society.

Oglesby earned his bachelor's degree in engineering in 1932 and a degree in civil engineering in 1936 at Stanford. After getting some experience in construction, Oglesby returned to Stanford after World War II to start a program for civil engineers with an interest in construction management.

More than 1,000 students have earned M.S. degrees or higher in construction engineering. Oglesby received the Golden Beaver Award for Outstanding Service to Heavy Engineering Construction in 1964.

Since his retirement in 1974 he has continued activities at Stanford and has helped establish programs in Chile, Australia, and South Africa. His book, *Highway Engineering*, is in its fourth edition.

Gerald Gillespie

Gerald Gillespie

The University of Paris and the French Society for Comparative Literature invited **Gerald Gillespie** to participate in an international conference held in the Sorbonne at the end of autumn quarter.

After next speaking at the Modern Language Association convention in Los Angeles on the breakthrough of modern symbolic drama in Goethe's *Faust* II, Gillespie was guest of honor at the Cal Tech production and West Coast premiere of his translation of Tieck's fantastic comedy *Puss-in-Boots*, and addressed Cal Tech's Division of Humanities and Social Sciences on the roots of the modern theater in romantic drama. East Coast productions of the play have been staged at Stony Brook and Cornell.

Gillespie's earlier translation of the modernist manifesto play *Bohemian Lights*, by Pirandello's Spanish contemporary Valle-Inclan, saw its world premiere in the Oxford Theatre Group production at the Edinburgh Festival. Gillespie joined the Stanford faculty in 1974.

Patrick Suppes

Prof. Patrick Suppes, philosophy, is the recipient of the honorary degree of Docteur Honoris Causa. It was awarded Dec. 17, 1982, by the Academie de Paris, Universite Rene Descartes, (the University of Paris V).

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Parmer Fuller III chats with another trustee, Frank D. Tatum, Jr.

Stanford is on reasonably solid financial ground. I think that is partly because it has long been our policy to look ahead very, very carefully, so that we lessen the chances of being blown off course by winds that had not been allowed for.

—Parmer Fuller III

Parmer Fuller III, 'Mr. Stanford' steps down after 25 years

BY DONALD STOKES

For 50 years the Parmer Fuller family has been around the summit of affairs in helping to run Stanford University.

This month Parmer Fuller III stepped down on completion of 25 years service with the Board of Trustees. He was president of the board in the late 1960s while the campus tumult raged, perhaps the most troubled time in the history of Stanford.

His father before him also served a quarter of a century on the board, and was its president from 1944 to 1948.

So many Fullers have been connected with Stanford in some way that an accurate tally is difficult. "The last time I tried I counted over 40 members of my family," said Parmer Fuller in a campus interview.

"It started with my mother and father in the Class of 1910 and has been going on ever since, both laterally and vertically on the family tree. Now that admissions are more difficult the Fuller growth rate is diminishing!"

His very first memory of Stanford was in 1921 when he was eight years old and was taken to his first Big Game in the then new Stanford Stadium. "I can remember it well. Stanford scored the first touchdown and then was defeated 42 to 7.

"I have seen every Big Game since, except for the three years I was away at Law School. I have seen 57 Big Games. I thought that was a record but at the last Big Game they announced over the loud-speakers that someone was attending his 75th in a row. I believe he was over 90. I'll catch up with him yet!"

Fuller was asked whether it was a great burden to be a trustee, in view of the fact that on the fiscal side alone, with the University's half-billion-dollar consolidated budget, a trustee has responsibilities similar to a supervisor of a major city.

"It is certainly a major responsibility, but the day-to-day management is in the hands of highly competent management people. Although confronted with fiscal problems similar to those of other major universities, Stanford is on reasonably solid financial ground.

"I think that is partly because it has long been our policy to look ahead very carefully, so that we lessen the chances of being blown off course by winds that had not been allowed for.

"Today, for example (he spoke just before going into the December meeting of the trustees) we shall be looking ahead very carefully for the next five years, trying to allow for any contingencies that may arise.

"Long range planning has been emphasized during the last 10 years. Before that it was not done in such detail.

"In 1957 when I joined the board the operating budget was $18.5 million. Today it is $208 million, 11 times as large.

"When I first heard that I had been nominated to be president of the board I was in Beirut, of all places. I received a cable from Morris Doyle, chairman of the nominating committee, asking me if I would accept.

"In my cabled reply of acceptance, I said, 'I consider your invitation a combination of high honor and dirty trick.' I said this as I had been nominated while absent and so had nothing to do about it.

"After I was elected, a columnist on the *Stanford Daily* wrote, 'So far as the students are concerned, it's just a dirty trick.' The columnist didn't even know me at the time, but we met later and had a laugh about it.

What distressed me most about that period of confrontation between students and those running the University was the complete lack of any civility in the efforts to secure mutual communication.

"This was the start of the sit-ins, trashings and burnings. At that time I was in the glass business, so a sign appeared on Palm Drive: 'Break a window for Parmer!'

"What I tried to do, not with any tremendous success, was to try to keep the lines of communication open. There was only a small core of about 50 or 60 students with whom one could not communicate.

"I enjoyed friendly relations with many of the student leaders, and I still value the faculty friendships which developed during those uneasy years.

"There was a large number of alumni who could not understand how malcontent students could be allowed to remain as students. We did our best to explain our position to them, but many remained outraged. One alumnus went so far as to write, 'Let's shoot the dissidents; as they did in Mexico—then there were no more disturbances!'

Most of the burden during those years of tumult fell on those trustees who lived in the Bay Area. Probably during my tenure as president of the board I spent 50 percent of my time on Stanford business—and that doesn't count the hours I spent lying awake at night, worrying.

"Those were difficult years. There was sometimes the danger that the University would go up in flames. We managed to come through it all, and I think we came through the better for having handled events with relative calm and restraint."

Fuller spread his arms wide when asked what volume of letters he received during the campus unrest: "I had a file this long. I wrote a great many of the replies myself. The staff also answered a great volume of letters addressed generally to the board, and they did it very well. Don Carlson was most adept in handling vituperative mail."

Fuller is noted for his quick wit and good humor, but when the occasion calls for it he can speak in terms of sentiment and poignancy.

Such a moment came when he was asked to tell the most moving experience of his long connection with Stanford. Without hesitation he said, "I still remember the awful morning when Fred Glover (then Secretary to the University) woke me early in the morning to report that the office of Wally Sterling (president of Stanford 1949-68) had been

continued on next page

Fuller/ continued from page 3

gutted by fire. I was down there within the hour.

"All of Wally's papers and books, the memorabilia of his brilliant career, the manuscripts he had labored on, the things he had prized over the years—all these were in ashes.

"There was nothing I could do, that any of us could do. Those responsible who did it were never caught. It was one of the most shattering things I can imagine happening to anyone.

"The staff stood around, aghast. Some of them were in tears. And Wally, the victim, went around and cheered up everybody.

"My father had a lot to do with bringing Wally to Stanford, and also with bringing Don Tresidder before him. I was president of the board when Wally retired. I said at the farewell gathering that my father had presided when Wally came, and I presided when he left, and that one of us had to be right!

"The campus unrest meant a very wearing time for all of us on the board, made all the worse by the fact that in the middle of the tumult we were trying to find a new president. Of course, the bitterness and violence on the campuses made the search more difficult. It is not in the nature of many people to want to engage in that sort of situation."

Fuller laughed as a memory struck him: "Among the load of advice I got at that time was from an irate alumnus who wrote, 'Forget about hiring an academic as president—get yourself a military man!'

"To be a trustee in those days not only took thick skin but also a little nerve, because several times during those periods, when the fever was at high pitch, rooms were barricaded and meetings broken up. The anger of a mob is always scary.

"In order to survive, you don't have to *be* thick-skinned, you have to give the *appearance* of being thick-skinned. You can suffer inwardly, and I'm sure most of us did."

Fuller recalled that in 1955 he received a call one day from the president of the board, Lloyd Dinkelspiel, asking whether he and President Sterling could come up and see him in his office in San Francisco. "Of course, I was flattered that two such eminent men should want to see me. Secretly, I had the hope that they were going to ask me to become a trustee.

"When they came in my office I sat back, feeling quite pleased with myself. Very soon I learned that they wanted me to become chairman of the Northern California Committee to raise money for the transfer of the Stanford Medical School from San Francisco to Stanford.

"I didn't tell them at the time of my hopes of what they had come for, and my consequent disappointment—one of the biggest of my life, it then seemed. But I did what they asked, and we raised quite a bit of money for the move.

"I knew a great many of the people who were involved in the transfer. It was a ticklish operation, as some distinguished physicians were strongly opposed to the move.

"Well, the move took place, and gradually the negative feelings died down. The move proved to be a very great success. To my secret satisfaction the following year I was asked to become a trustee of Stanford."

During Fuller's presidency of the board he served with three different presidents of the University—Wallace Sterling, Kenneth Pitzer and Richard Lyman, and with one acting president, Robert Glaser. "I think that record of serving with four chief executive officers in the space of four years will stand for a long time in Stanford's history.

"When I attended my last meeting as president of the board, in 1971, my successor, Robert Minge Brown, had prepared the traditional encomium to the outgoing paragon. In the course of reading it he came to a sentence that read 'Parmer Fuller's tenure encompassed times of great difficulty for Stanford.' Before he could go further a trustee, Carolyn Charles, stopped him and said: 'Wait, you didn't say whether he caused them!'

"A number of trustees have retired recently after giving simply superb service to the university. It is a very warm feeling for me to have worked so long with close friends such as Bill Hewlett, Ernie Arbuckle, Ed Littlefield, Ben Duniway, Dick Guggenhime, Dave Packard, the irrepressible Carolyn Charles, John Gardner, Morris Doyle, and Robert Minge Brown, to mention a few.

"Most of us were at Stanford together, give a year or two.

"Five of us were in the same two classes, 1933 and 1934. We were friends then and we are friends now. That is a remarkable span of friendship and history."

To be a trustee in those days not only took thick skin but also a little nerve, because several times during those periods, when the fever was at high pitch, rooms were barricaded and meetings broken up.

—Parmer Fuller III

The trustees are always heavily involved in fundraising for the University. This means a great deal of contact work, traveling, and visits with potential donors. This is often difficult work, but it is rewarding when efforts are successful.

"I am proud of my 25 years of service on the board. Some of the other trustees besides myself are now wearing that mark. This will probably never happen again, for the term of service has now been limited.

"When I first joined the board the term was 10 years, repeatable *ad nauseam*. During my presidency we changed the term to five years, renewable once, which means that the overall limit is 10 years, although one can be reelected after a year's wait.

"I think that way has merit. It provides continuity and also turnover."

Has any attempt been made to get younger people as trustees?

"Yes, that was one of the reasons we arranged to have eight of the trustees elected by the alumni. When we did that we also arranged that of those eight, four should be under the age of 35.

"At the moment the board numbers 31, which may be a little inhibiting to some. We do not have students on the board, but we do include students on our committees."

Fuller talked of the influences which had shaped him. "I was brought up in a home where all the old values were cherished. My father was very demanding, a disciplinarian, but understanding. In fact, the more serious the crisis the more understanding he was. In addition he had a great sense of humor, which sometimes took some understanding on my part.

"As an example of his style, when I became 21 he sent me a telegram here at Stanford which read: 'I congratulate you on graduating from the legal status of infancy into the more desirable category where you are responsible for your own civil and contractual idiosyncrasies.'

"He signed it 'W.P.F. Jr.' "

Great-grandson of W. P. Fuller, founder of the well-known paint company, Parmer Fuller III graduated from Stanford in 1934 and from Harvard Law School in 1937. He worked for the Fuller Paint Company for 25 years and resigned when Fuller merged into Hunt Foods in 1962. After that he headed the West Coast activities of PPG Industries, formerly known as Pittsburgh Plate Glass Company.

He saw war service in the U.S. Navy, rising from ensign to lieutenant commander. His other activities have included directorships of Wells Fargo, Western Pacific Railroad, Yosemite Park and Curry, Pacific Mutual Life Insurance and Hershey Oil.

He is a past president of the San Francisco Chamber of Commerce, a director of the Exploratorium science museum, past president of the Bohemian Club, and a member of the Board of Governors of the San Francisco Symphony Association.

He lives in San Francisco with his second wife, Esther, former wife of Bishop Pike of California. Fuller was previously married to Marylee Harlan and they had three children.

Fuller was asked who was coming along in his family to be eligible to continue the 51 years of Fuller service to the board.

"I have a 44-year-old son, W. P. Fuller, who graduated from Stanford in 1960 and got his Ph.D. here. He has lived and worked overseas most of his life with such organizations as the United Nations Children's Fund and the Ford Foundation. He now works for the State Department as AID chief of mission in Indonesia.

"He keeps kidding me with questions about when he is going to be appointed to the board, and I tell him 'Before Stanford does something for you, you'll have to do something for Stanford!' "

Fuller was asked why anybody would agree to be a trustee, in view of the long hours, the frequent hostility from various groups, and the lack of material rewards.

The man who has given a major part of his life to Stanford replied, "Yes, there were a lot of headaches, frustrations and tears, but also much satisfaction, a lot of laughs, and many wonderful friends.

"Being involved for a quarter of a century with the progress of Stanford University in its never ending pursuit of excellence has enriched my life immeasurably.

"The last 25 years has seen tremendous changes on campus, both physically and academically. There are more Rhodes, Marshall and National Merit scholars, more Nobel Prizewinners and higher ratings for many departments of the university.

"Major positive events in the last 25 years include the highly successful land development program, the building of SLAC, a vastly improved physical plant, including major new academic facilities as well as athletic developments, two dramatically successful fundraising campaigns, two Rose Bowl victories, and a host of other achievements.

"These have been exciting and dramatic years, and it has been a privilege for me to have at least been on the stage."

Give blood at Gazebo noon to 4 p.m. Jan. 27

The Stanford University Blood Bank will take donations from noon to 4 p.m. Thursday, Jan. 27, in the Chemistry Gazebo.

Faculty and staff are urged to give blood and, whenever possible, to announce the drive to students and colleagues.

Call Karen Patterson, 497-2501, to schedule an appointment, or simply drop in between noon and 4 p.m. at the Chemistry Gazebo on Jan. 27.

British also face decline in Slavic studies, Fennell says

BY MILLICENT DILLON

The decline in Slavic studies in the U.S. in the last decades is paralleled by an equal decline in England, says Oxford Prof. John Fennell, currently a visiting professor in history at Stanford.

The University Grants Committee, an advisory council on all higher education in Britain, has recently recommended that Slavic programs in seven universities should be eliminated.

"The British Universities Association of Slavists is up in arms," says Fennell, "but the program at Lancaster has already been cut down."

Fennell, a professor of Russian language and literature and fellow of New College at Oxford, is at Stanford for the year. He notes that the decrease in Slavic studies in England has taken place across-the-board, in secondary schools as well as universities and colleges.

"There has been a loss of interest all the way down the line. It's hard to know the exact reasons."

As in the U.S. British Soviet studies expanded rapidly in the '40s and '50's and then began a precipitous decline in the '60s.

As a leading authority in the field of Slavic language and literature, Fennell has been in on the change from the beginning. He "read" Russian at Cambridge in 1937-38. Bored with German and French, he was inspired to go into the Russian program by "a very remarkable woman teacher, Elizabeth Hill, now Dame Elizabeth Hill.

"Not many people were doing Russian in those days, perhaps only 10 or 20 students a year. It was a new and exotic field."

Fennell spent the war years first as an interrogator of German prisoners and then served as a liaison officer with the Soviet Army. He was called back to England at the end of the war to start an intensive Interservice course in Russian for the Army, Air Force, and Navy.

"Those were heady days," he says. "Lots of people also came to us from the Foreign Office."

This interservice program gave a big boost to Russian studies at the universities. Coming out of the service from this program, men who would ordinarily have gone on perhaps to study Greek and Latin at the universities, chose Russian instead.

Interest in Russian Studies continued high until the end of national service in the 1950s. "Then the numbers of students in our program began to decrease. Interest just seemed to fizzle out."

Changes in the economic situation in Britain were also apparently a factor in the decrease, as in the U.S. The number of jobs in the field began to decline.

"Of those students now in Slavic studies at Oxford, only one-half go on to jobs connected in any way with Russian," he notes. Students who do get employment in the field go on to teaching or to working with the BBC or to becoming interpreters or working in the Foreign Office. Occasionally a student also will go into publishing.

Of the program at Oxford, Fennell notes that it primarily concentrates on undergraduates. At any one given time 100 undergraduates are enrolled in courses.

Students entering this program are required to have a sound background in Russian, usually gained from training in secondary schools. Oxford does not give basic instruction in Russian. In this respect it differs from most American universities, which do incorporate basic language instruction in their programs.

Fennell is the author of a number of scholarly books on Russian medieval history and literature, as well as some basic texts on the Russian language.

He is also the editor of two journals: *Oxford Slavonic Papers*, and *Russia Medievalis*, which is coedited by two other Soviet experts, one in Germany, and one in Warsaw. "Sometimes," Fennell admits, "things get held up in Warsaw."

We English have more trouble getting our students in (to Russia) because in most cases they are allowed in only on an exchange basis. What most Soviet students want to do is to come here and see how your computers work. It is less attractive to them to go to England.

—John Fennell

Generally speaking, however, Fennell encounters no difficulty in eventually obtaining archival material. "Most of my work, after all, is concerned with medieval material, chronicles, treaties, etc. and these are not politically sensitive.

"If I want a manuscript from the Soviet Union, however, rather than go there and hang around and be frustrated by usual delays, I merely write to a colleague there and ask for help in getting it."

Fennell is in continuous contact with Soviet writers and scholars in his field. Even though his work is not in a politically sensitive field, he remains aware on his visits to Russia of the general vulnerability of his scholar-friends.

"One can never quite know how immune they are to the dangers resulting from mixing with foreigners. The possibility does always exist that whatever you say to them and they say to you may be recorded.

"So what people do who want to talk openly is to go for a walk in the streets."

Many Oxford students in the Russian program want to go to Russia to study, but not many English students are allowed in.

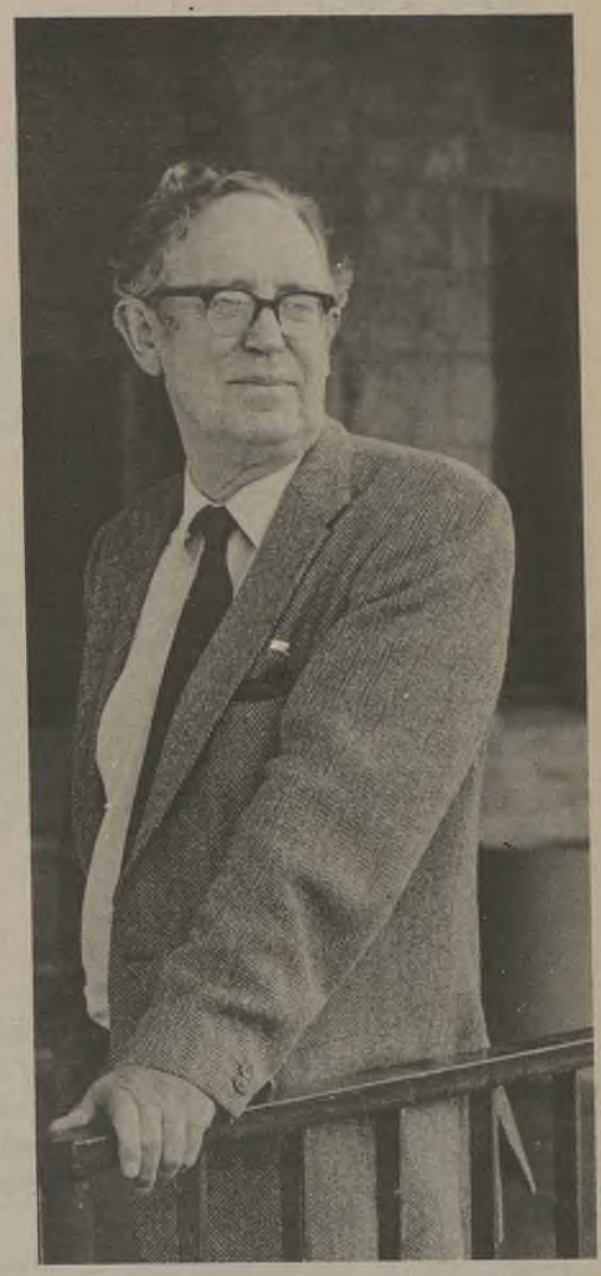
"We English have more trouble getting our students in because in most cases they are allowed in only on an exchange basis. What most Soviet students want to do is to come here and see how your computers work. It is less attractive to them to go to England.

"Some of our undergraduates do go for a year, usually to an out-of-the-way place, a provincial university, where life is very tough indeed.

"Nevertheless, our students are very anxious to go."

Asked if he believes the increasingly harsh political climate since the 1960s has been a factor in decreasing student enrollment in Slavic studies, Fennell says, "It's a terribly difficult thing to say whether students are discouraged from learning Russian by the fact that freedom has visibly lessened as the years go by. I don't think so. After all, in the years after the war there was great enthusiasm, even at the time of the Gulag."

Fennell has encountered considerable difficulty in getting Soviet writers and scholars to come to Oxford. "We've invited many, but they usually don't come. Over the years we have had several who were allowed to come when we invited them to award them an honorary degree.



"But often when I invite scholars, my letters are not even answered.

"Now of course we are getting a number of emigres, including Sinyavsky, Solzhenitsyn, and Voinovich."

At Stanford, Fennell is teaching Medieval Russian history to undergraduates and three literature courses: the history of early Russian literature, a course on Lermontov and Turgenev, and one on Gogol.

Fennell is an ardent admirer of Gogol, whom he considers to be among the greatest writers of the 19th century.

"Gogol's works do not translate accurately," he says. "There is something so surrealistic about the way he writes, the way he uses language, that it just does not translate no matter how hard one tries."

Editor to describe 'Poland Today'

"Poland Today" is the topic of the Jan. 25, Tuesday Luncheon/Lecture at the Bechtel International Center. The featured speaker is Mariusz Ziomecki, Hearst Professional in residence in the Department of Communication, and a Fulbright Scholar at Stanford in 1980-81 as a Professional Journalism Fellow.

Ziomecki holds an advanced degree in economics from Warsaw University and was senior editor of *Kultura*, one of Poland's two national weeklies.

The popular International Center on-going Tuesday series, now in its seventh year of presenting weekly speakers on international topics, is focusing during winter quarter on specific countries or regions which present situations of global concern. Tickets for the luncheon are now on sale at $2.50. Brown-baggers are also welcome at no charge. For more information, phone 497-1831.

Efron, the last *Chappie* editor bounced off campus, wins MacArthur Prize

continued from page 1

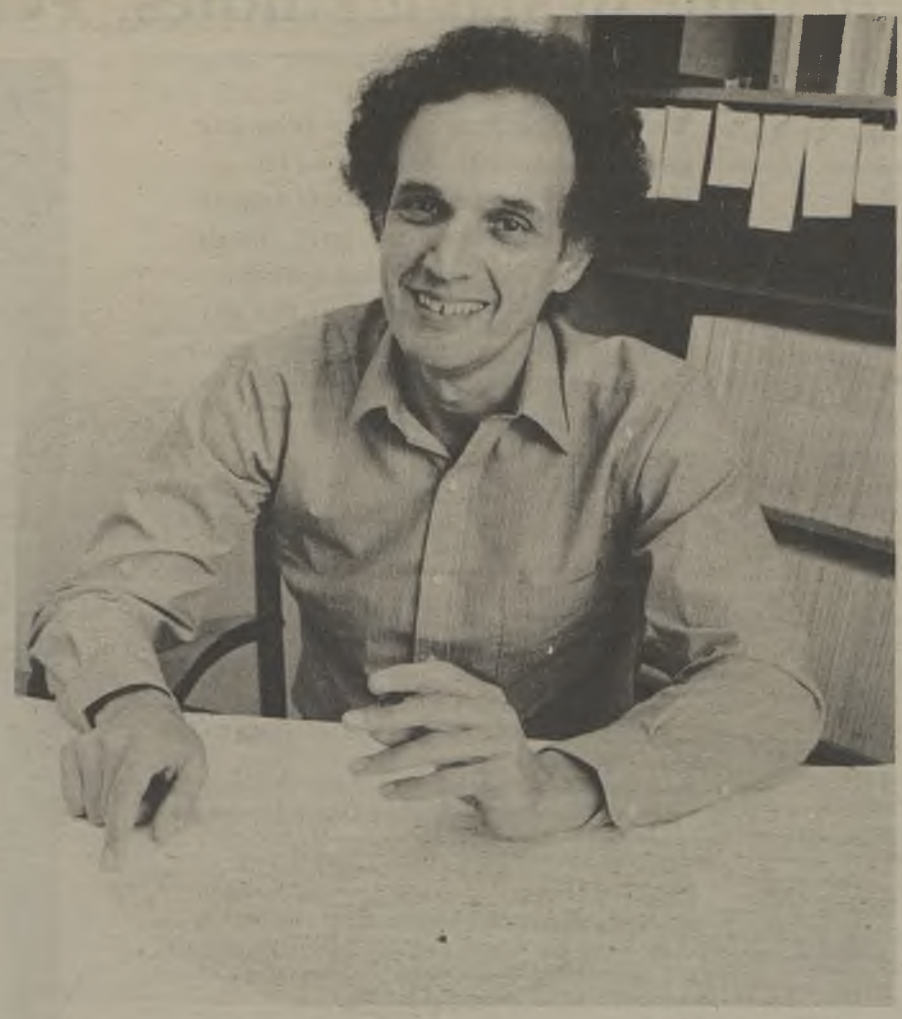
Statistics, he says, is "very much like any other science, in that you have a constituency you have to satisfy. Chemists make their theories fit what happens with molecules; physicists do the same with atoms; and statisticians work with information.

"The problem is that information is not as well defined as are molecules and atoms.

"The goal of statisticians is to help in the accrual of information, which usually involves large amounts of numbers, and then to figure out mathematical systems that make sense out of these abstract figures.

"All that data coming in has to be interpreted—and interpreted correctly. If a person is lazy or incompetent—or, perhaps, crooked—infinite trouble can result. Today, with computers 10 million times faster than the calculator I used when I first came here 20 years ago, the use of that particular tool is much greater, but the correct use thus becomes even more imporant.

"It is important to come up with the right answers, and not fool yourself or lie to yourself. That's where statistics help. It's a very enjoyable detective game."



Total enjoyment

Efron's profession and total enjoyment of his life was made possible, to a great extent, because his father was a baseball and bowling fan, loved statistics, and delighted in sharing the data with his son.

At Central High School in St. Paul, Minn., Efron enjoyed mathematics, and had the good fortune to become a senior the first year National Merit Scholarships were offered. He won, and went to California Institute of Technology. There, he honed his interests, earned excellent grades, and a B.S. degree, then came to Stanford, where he earned an M.S. and Ph.D.

While here, he learned about the applied side of statistics from Prof. Lincoln Moses and Rupert Miller.

Nearly 20 years later, Efron, Moses, and one other statistics professor, Byron Brown, co-authored a book, *Biostatistics Casebook*, published in 1980, which has become a best-seller in its field.

The goal of statisticians is to help in the accrual of information, which ususally involves large amounts of numbers, and then to figure out mathematical systems that make sense out of those abstract figures.
—Brad Efron

"All four of us have joint appointments in biostatistics and work closely with Medical School researchers," says Efron. "The main question they ask is, 'How shall we run an experiment to get the most information?' Typically, they are comparing a new treatment to a standard treatment."

For example, says Efron, Dr. Henry Kaplan, working on treatments for Hodgkin's Disease, had to find a way to make sure that patients who were receiving a new treatment, and those who were controls, would be selected randomly, with all possible "biases" eliminated.

Even the flip of a coin wouldn't be accurate enough, so Efron, in writing his paper containing a solution, called it "biased coins," and his method of random selection now is in wide use.

"We want to extract something from every case we deal with, so future researchers don't have to start from scratch," he says.

In addition to his teaching and research, Efron does outside consulting. "You have to pay attention to the real world," he says, "because it really is there."

Deep appreciation

Efron is deeply appreciative that the MacArthur Foundation has recognized the world of statistics by giving its fellowships to three people in the field, two of whom are in the same department at Stanford.

Among the nation's major research universities, he says, only three—Stanford, California and Chicago—provide strong support to their departments of statistics. In the most recent national survey, Stanford and California were tied for first place in their peers' ratings.

The department now turns out seven or eight Ph.D.s a year—"our students are teaching at many universities," says Efron.

He is chairman of the new Mathematical Sciences program, which offers an undergraduate major.

"Its prospects are terrific," he says, "because in the next three to five years, there is going to be a desperate shortage of mathematicians."

Efron will receive $220,000 tax free from the MacArthur Foundation over the next five years, and his department will receive $75,000.

Without doubt, Efron is the only MacArthur Fellow ever to have been kicked out of a university.

Stanford took that action during Efron's first year as a graduate student. He was editor of *Chaparral*, the humor magazine, and turned out an irreverent parody issue.

"I guess I didn't understand the mores of Stanford," he says. "But Stanford never has held it against me, and I certainly don't hold any grudge against Stanford."

Letters to the editor

Mellor replies to Wessells, says Freedman penalized for feminist studies

Editor, *Campus Report*:

This letter is in response to Dean Norman Wessells' recent comments in your columns concerning the negative tenure decision in the case of Assistant Professor of History Estelle Freedman and the tenure procedures currently followed at Stanford.

I have been personally much dismayed by this negative decision, both because I think Estelle Freedman deserves promotion to tenure at Stanford and because I think subtle biases were at work in the decision-making process.

Currently, the *Stanford Faculty Handbook* states that in order for a person to be promoted to tenure at Stanford, he or she must be an outstanding scholar or teacher and at least very good at the other. There can be no doubt that Estelle Freedman is an outstanding teacher: she was awarded the deans' award for distinguished teaching and received the Dinkelspiel award for her outstanding contribution to undergraduate education.

In helping to construct the curriculum for the new Feminist Studies Program, Estelle was performing not only a community service but also a pedagogical function: the theoretical conception of a feminist methodology and its curricular implementation.

The deans have argued that Estelle Freedman's scholarship is less than "very good." I have read Estelle Freedman's *Our Sisters' Keepers* and agree with those scholars in the field who have reviewed this book in the leading review-journals in American history that it is a very good book: lucidly written, thoroughly documented, and a genuinely original contribution to the field of American social history.

Why then was Estelle Freedman denied tenure? I and many of my colleagues in the feminist community at Stanford share the perception that, despite Dean Wessells' disclaimer, an "administrative" factor did indeed play a role in this particular tenure decision.

In other words, Estelle Freedman was penalized in the tenure discussions surrounding her case for having done exactly what she was hired to do and what the History Department consistently encouraged her to do, namely to teach the bulk of her courses and do the bulk of her research in the field of women's history.

I believe that some scholars, both inside and outside of Stanford, who evaluated her work found this new field of women's history so controversial that they discredited her work within this discipline. But, as professor of history Carl Degler has already asserted, this new field is here to stay.

And unless the Stanford administration actively encourages young scholars to work in this new but rapidly advancing discipline of gender studies, this University shall soon find itself unable to offer a legitimate academic program in an intellectual area of vital and immediate concern to some of our most gifted students.

It is for these reasons that I hope Estelle Freedman's appeal to reverse this decanal decision will be successful. Not only does she deserve to be promoted, but Stanford University needs scholars with her active, productive commitment to research in the new and exciting area of feminist studies.

Anne K. Mellor
Professor of English
Chair, Feminist Studies Program

Word processing staffers can help automate offices

Managers who want to create an automated "office of the future" should tap the personal skills of their word processing staff, a new national study concludes.

Funded by the National Science Foundation, the study examined word processing and office automation in 200 organizations in Washington, D.C., San Francisco, Wichita, and Oklahoma City.

It was headed by Prof. Bonnie Johnson of the University of Oklahoma, now a visiting scholar at Stanford University's Institute of Communication Research.

Most organizations have introduced word processing from the top down, discouraging communication between office workers and those planning automation.

In more than six out of 10 organizations studied, the idea for word processing came from top management. "Typically, little thought was given to managing the machines," Johnson says. "After all, they were regarded as typewriters.

"When the machines were simply set out like pencil sharpeners to be used by people who needed them, the mysterious machines were often ignored because people didn't know how to use them.

"When people were assigned to work them full-time with little training or support, word processing jobs developed a reputation they have in many places today as high pressure, no reward jobs."

Word processing supervisors have been entrepreneurs as well as internal managers. Their skills and first-hand knowledge of operational problems have been responsible for numerous applications that can serve as the basis for operating office automation systems.

—Prof. Bonnie Johnson

Management failure disguised

Management failure was often disguised as technical failure, she notes:

* People were assigned as supervisors who did not want this responsibility;
* Authors were not consulted, even when the new system meant they lost the status of having a personal secretary and felt they had less say over their own work; and
* Word processing operators often regarded themselves as "victims of progress," assigned to a mechanized typing pool.

While many organizations have overcome this initial hurdle after several years, many managers overlook the potential of moving beyond efficient typing to a broad set of administrative applications.

Among the 200 organizations studied, however, many have "grown" office automation systems from word processing: 49 percent maintain inventories, 45 percent keep some kind of data base, 33 percent telecommunicate, 36 percent process records, and 14 percent typeset regularly via word processing systems.

"The capacity to develop even more applications exists in word processing units because 52 percent do some kind of programming, in most cases 'glossary type'; 20 percent have equipment capable of having a basic compiler; and 33 percent already use a text editor or computer for some or all of their word processing," she adds.

"In these places, office systems technology is growing from word processing, though the process is seldom recognized by office automation planners.

"This takes special people and special management. Their attitude must be one of wanting to take the initiative. They must have the support of upper level administrators. They must have support from the personnel department in classifying jobs. They must have a systems perspective that allows them to see their work in terms of a larger whole.

"They must involve all levels of personnel—operators, professionals who keyboard, and those who do not. They must have help from outsiders, usually headquarters, who can not only support technical decisions with regard to procurement of equipment but who spread the word of what others are doing, diffusing innovation among users.

"Today lower equipment prices and user-friendly microcomputers with text editing programs and communication capabilities are making the office of the future with a terminal on every desk a possibility for many organizations. The challenge is to integrate the work done by word processing into the total office system.

"Many word-processing supervisors resist the decentralization of equipment. One told us professionals would have no interest in doing their own keyboarding—but as she spoke we could see a nearby engineer explaining Wordstar to a group of eager co-workers.

"All the large organizations we surveyed are conducting training programs to teach professionals as well as secretaries how to use word processors.

"Word processing supervisors and personnel are often the last people invited to meetings of the office automation planners. The path to developing automated office systems is unclear. Word processing personnel have charted some of the way. Their contribution may be larger than expected.

"Our study points out that word processing supervisors in most cases provided all the management of word processing technology. Executives, after making the initial decision to acquire it, took little interest in the management. In the best cases, supervisors enjoyed a supportive relationship with top management that allowed them to implement the system.

"Word processing supervisors have been entrepreneurs as well as internal managers. Their skills and first-hand knowledge of operational problems have been responsible for numerous applications that can serve as the basis for operating office automation system.

"However, the equation of word processing with 'low clerical' activities leads planners to discount the potential contributions of these people.

"In order to be most helpful in charting the progress of office automation, word processing organizations must have successfully navigated three critical points:

"1) Establishing an efficient management system for turning out requested typing work;

"2) Resisting the temptation to be content with typing requests, and then taking the initiative in reorganizing work flow; and

"3) Recognizing the possibilities for distributed keyboarding and processing, learning to work with professionals and secretaries as part of a total office system."

Word processing report

In a report on "Innovation in Word Processing," coauthored with James C. Taylor, Dennis R. Smith, and Timothy R. Cline, Johnson notes that resistance to new technology is short-lived among users and "applications have not kept pace with equipment capabilities."

While word processing vendors train one or two people per machine initially, this was "not seen as very useful nor adequate." Among both introductory and advanced users, training by coworkers was seen as most useful, followed by training by supervisors.

Pay was the greatest single motivator for word processing, mentioned by supervisors at 29 percent of the organizations studied. The work itself was mentioned as the highest motivator by 23 percent of the respondents.

Working on projects from start to finish and getting an overview of the entire organization contributed to this feeling.

Relationships with coworkers was identified as the highest motivator 19 percent of the time. "As the field matures, turnover rates seem to be levelling off or declining," the report notes.

"Most planning has been done in terms of equipment procurement," even as accessibility to the machines has broadened.

"People responsible for operating the equipment are often the most creative in adapting the technology to the work to be done. These people often lack the perspective of overall organizational structures and mission. Systems planners can provide this perspective, but often have no real sense of daily operating problems and potentials.

"Use and applications can profoundly affect organizational structures, nature of the work, and overall productivity.

Future challenge

"The challenge for the future will be to provide a dialog between all levels of personnel associated with word processing technology to maximize its benefits not only in terms of productivity but also in terms of jobs and personal satisfaction."

Half the organizations studies were private, profit making institutions, more than a quarter were governmental, with the rest nonprofit or regulated organizations.

The largest group of respondents were word processing supervisors.

Findings were discussed last month at a colloquium sponsored by the NSF Productivity Improvement Section in Washington and will be presented Feb. 20 at the Office Systems Research Association conference in Philadelphia.

Copies of the preliminary findings are available on request from Johnson at the Institute for Communications Research, Stanford University, Stanford, Ca. 94305. Phone (415) 497-2507.

Durham says genetics, culture are mutally interdependent

continued from page 1

need for milk ends early in life and lactase production drops to zero. Milk makes them ill.

For the others, the enzyme is produced through life and they can drink milk, obtain the nutrients from it, and even enjoy it.

Lactose tolerance

Scientists have found that adults who are lactose tolerant are usually from Scandinavia, France, or are Americans of European descent. Those who are lactose intolerant, some 80 percent of the world's population, include most Asians, Africans, South American Indians, and American blacks.

Societies in which milk is tolerated tend to be those with a cultural tradition of dairying. The few exceptions are cultures in which milk is processed into cheese or yogurt before consumption.

This raises many questions: why didn't other people intolerant of milk learn to process milk products? Why are northern people able to tolerate milk for biological reasons instead of going the cultural route the way others have? What is the relationship between lactose tolerance and the cultural history of people?

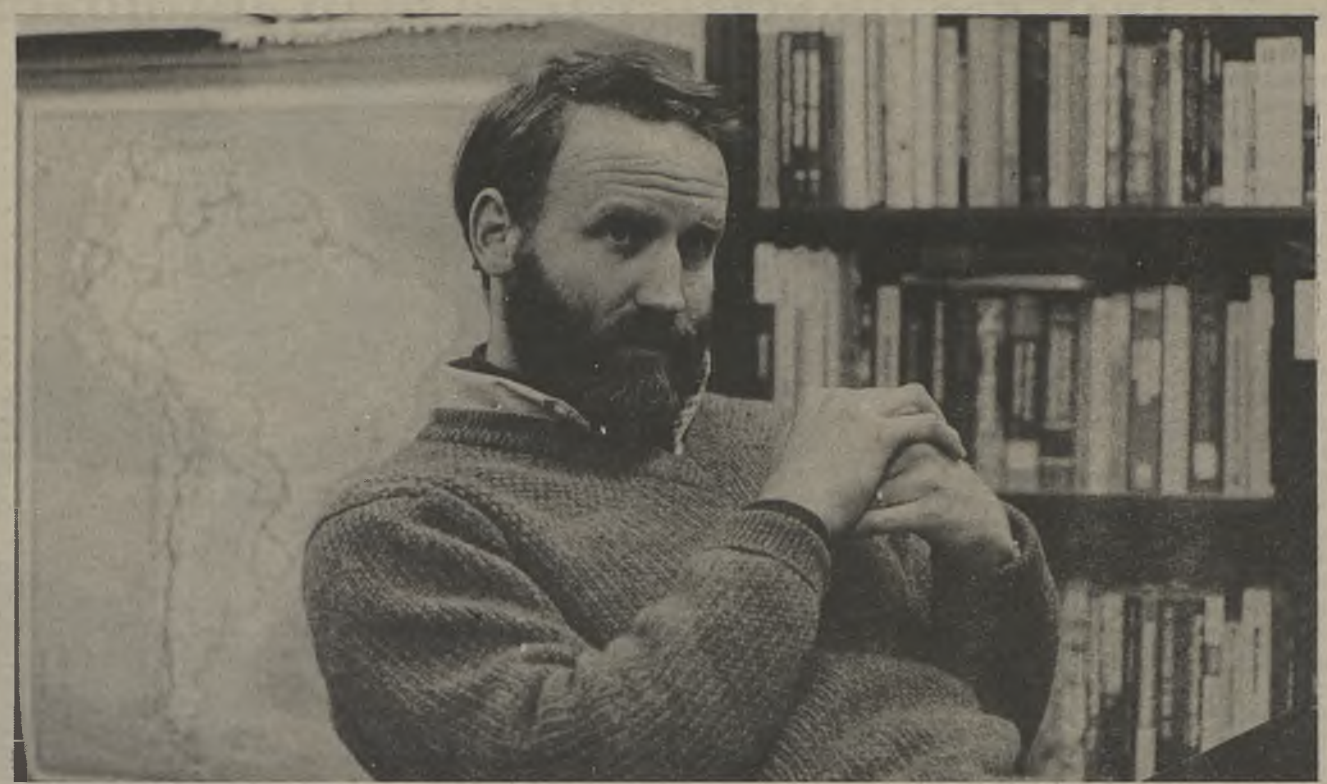
Scientists have found that lactose aids in the absorption of calcium, a main nutrient in milk. Lack of calcium (rickets) was an old scourge in northern Europe.

Another absorbing agent is vitamin D, produced by ultra-violet radiation from the sun. In earlier eras, as humanity moved northward into areas with less sun, natural selection favored lighter skin pigmentation. This enabled northern inhabitants to absorb more sunshine to produce more vitamin D, and to absorb more calcium. But evidently none too much.

People with the lightest skin also tend to be those who are lactose tolerant. Natural selection has provided them with the ability to obtain calcium from milk just the way it enabled their skin to get vitamin D from the sun.

Dairying as cultural response

Dairying was then a cultural response to the biological need for milk.



Durham has traced the changing role of milk and milking animals as a function of latitude in Indo-European mythology.

"Some of the mythological themes of societies and populations ranging from southern India to Iceland, including the Mediterranean countries. . .radiated from some common mythological origin in the southern steppes of Russia," he says. As they migrated, they took with them ancestral mythological themes.

"One of the mythological themes involves a sacrifice of cattle. What I have done is to show that in the south, cattle in the myth are male. . .bulls are sacrificed and dismembered in the creation of the world.

"As you work progressively northward there's a change. First it becomes a female bovine, and eventually far enough north, into Scandinavia, instead of being sacrificed in the creation of the world, the bovine provides milk for adult milk drinkers and gives birth to whole families of giants and superheroes of a sort.

"The interpretation that I give to this is that, on the one hand, the cultural data. . .reflect a process of appropriate nonaccidental adjustment to environmental circumstance, and the genetic system, at the same time, evolving

Bill Durham

in this cultural environment, also moved in the direction of the appropriate lactose absorption capabilities."

Cultural preferences

In the end you get people with a cultural preference, a value and belief system for milk drinking, and the genetics to absorb milk's nutrients.

"Ultimately, what I'm saying is that genetics and culture have coevolved in a very interdependent fashion. Culture has steered the direction of genetic evolution, and culture itself reflects the adaptability of enhanced calcium absorption, and all the advantages that entails in the northern latitudes."

Durham thinks he can prove his point with those cases in which the coevolution system has gone off the track, where there have been maladaptions.

Take the case of the cannibal Fore people of Papua-New Guinea. The Fore suffered from a disease known as kuru, a nerve degeneration disease that eventually leads to complete motor incapacity and death. The disease is practically unheard of anyplace else.

Epidemiologists were at a complete loss to explain the disease as it followed no normal pattern. Kuru first appeared among the Fore in 1922 and became a major health problem in the 1950s.

The Fore had a simple explanation: sorcery.

Impact of sorcery

The disease became so serious the Fore "came to see the end of the world was at hand, they thought their society was doomed and talked about it openly," Durham says. "They even gathered together in mass meetings and harangued one another with accusations of sorcery. . . . This is not a case of people sitting back while their cultural system is overwhelming them, creating a disease and leaving them helpless to deal with it. They sat down, discussed the problem, and actively debated its etiology."

Anthropologists learned that sometime after 1900 the ecology of the area in which the Fore lived changed and they became short of protein. They resorted to cannibalism to make up for the deficiency. Kuru erupted about 20 years later.

Kuru, it turned out, was caused by a virus-like organism that causes scrapie in sheep (or a virus much like it). When other people ate the deceased Kuru victims, they too developed kuru.

Females who prepared the victims almost always got kuru. Men who spent most of their time hunting and got little of their protein from humans rarely got kuru, and noncannibals never got the disease.

When they stopped eating each other, the disease died out.

"What does this tell us? To me it says that there are times when culture, through an internal process of selection, creates customs, rituals, and institutions that can cause. . .unanticipated consequences, like kuru." It also says that people inflicted with these consequences attempt to do something about them, just as the Fore got together to try to solve the problem their way."

San Blas Kuna

Durham has done a great deal of research on the islands off the coast of Panama inhabited by the San Blas Kuna. The Kuna have the world's highest rate of albinism; one out of every 200 Kuna are albinos.

Since albinism is a recessive gene and is a dangerous thing to have in the hot tropical sun, Durham wanted to know why it persists among the Kuna. The Kuna, of course, blame evil spirits.

The Kuna, it turns out, inbreed a great deal. They live in little communities on the islands and rarely marry outside their own island. This passes on the genes for albinism.

The folklore of the Kuna recognizes the problem of inbreeding. It is so ingrained in their mythology that no Kuna can go for long without hearing a legend of a god striking humanity in wrath for a mythical act of incest. This myth gives special force and explanation to the Kuna incest taboo.

Without the taboo, argues Durham, the situation would be much worse and the Kuna's existence would be threatened. "They are producing albinos not because they're marrying close relatives, but as a consequence of endogamy within small villages."

"This is a case where cultural rules and traditions, the beliefs of the people, reduce the deleterious consequences of inbreeding in a way that the genetic system never could."

Durham is a firm believer in student participation in his research.

"In the past several years I've had quite a number of students with very, very good experiences in research. I really think that's one way to bridge what's seen by many people as the traditional gap between research and teaching. Also, from the student's point of view, it's one of the exceptional things about Stanford. . . ."

A Christmas present

Durham got involved with Stanford as a Christmas present. He grew up in the Cleveland area, and while he was looking for a college to go to in the east, his father announced the family was moving to Oklahoma. To make up for this cultural shock, his father offered to let him visit any college of his choice in the west, suggesting Rice, Reed, and Stanford.

He chose to visit Stanford.

"They flew me to San Francisco—here I was, I was 18—they had a rental car for me, reservations at the Holiday Inn. I lived like a king. . . .

"I was crazy about the place. It had the right combination of intellectual excitement for me, with all the other attributes that people recognize here."

He went to Michigan for his Ph.D., doing a dissertation on the then little-known country of El Salvador. This work became a book, *Scarcity and Survival in Central America*, published by Stanford Press in 1979. Although not specifically a study of politics, the book ended with a prediction:

"Knowledgeable observers and former government officials feel strongly that the country, having forfeited the chance for a peaceful agrarian transformation, is now on the verge of a major popular uprising. . . ."

It was published a few months before the uprising began.

When his current book is finished, he hopes to use his MacArthur award to go back to Panama and resume the study of the Kuna.

Latin America becoming less dependent on U.S. TV shows

Latin America is importing less American television programming and producing more of its own, a new Stanford survey of Mexico, Peru, Argentina, Brazil and Venezuela shows.

Results were reported by graduate student Livia Antola and Prof. Everett M. Rogers of the Institute for Communication Research at a conference on the flow of media in the Americas here Dec. 9-10.

While the U.S. remains the dominant exporter of TV programs to Latin America, accounting for about 80 percent of the total traffic, reliance on outside material has diminished, they found.

Where Brazil imported 60 percent of its TV programs in 1973, for example, this year the imported share is only 28 percent.

Venezuela dropped from 50 percent to 35 percent; Chile from 56 percent to 44 percent. Mexico remained unchanged at 50 percent. In Peru, imported programming rose from 60 percent to 70 percent of the total broadcast, while Argentina increased from 20 percent to 33 percent.

In both Argentina and Peru, they noted, TV came under government control in the past decade. Run by officials who often lacked experience and changed frequently, they lost local talent after putting ceilings on actors' salaries.

"Smaller nations in Latin America are still very heavy importers of TV programs," Antola and Rogers said.

"However, some TV slots that were once occupied by U.S. series are now being filled by Latin American telenovelas and comedies. Some U.S. cartoons, once a major import in Latin America, are now being replaced by Japanese cartoons, which currently make up seven per cent of Chile's and three per cent of Peru's imports.

Mexican programs

"Mexico accounts for up to 17 percent of the total imported programs in Chile and Peru. Even in such major TV producing nations as Argentina and Brazil, Mexican imports are three and eight percent of the total TV program hours, respectively."

Mexico, Brazil, Venezuela, and Argentina are the major Latin American TV producers. Telenovelas account for 70 percent of their exports, with another 18 percent comedy shows and 12 percent musicals, films, and variety programs.

Initially patterned after U.S. programs, Latin American shows have now become "a genre in their own right," the researchers said. One example is shows de auditorio, variety programs produced by a local celebrity.

While U.S. programs account for half of all the hours broadcast by Mexico's four TV channels, when audience share is taken into account U.S. programs account for only 33 percent of total viewing, they noted.

Interviews with Latin American TV broadcasters indicated a general trend in viewer preferences toward locally produced programs, followed by those made elsewhere in Latin America, with U.S. programs third.

These preferences are reflected in top 10 audience ratings in a sample week for six different Latin American countries.

All of Mexico's top 10 programs were locally produced. In Venezuela, the "Pink Panther," rated tenth, was the only exception. In Peru, the only exception was "Vegas," ranked seventh. In Brazil, "Hart to Hart" was eighth.

In Argentina, two Mexican produced programs were among the top 10: "El Derecho de Nacer," ranked third, and "Chespirito," eighth. "Disneyland" was ninth.

"The moving force behind the shifts in television flows is the search for profits by commercial TV channels," they noted. "Thus Brazil has promoted exports to Portugal, Spain and Italy, while Mexican TV sells to Italy and the U.S.

"A large number of poor domestic consumers can also add up to a profitable market. In the past decade, the number of TV sets in Latin America has increased about 40 percent. The Hispanic population in the U.S. has grown to an estimated 20 million people, making the U.S. the fifth largest Spanish-speaking nation in the world."

Foreign sales profitable

Production costs usually are met by the domestic market alone. Hence foreign sales are highly profitable.

Censorship and government regulations particular to each country tend to inhibit imports from other Latin American countries and encourage imports from the U.S. Chile limits TV from Mexico, Brazil or Venezuela to only one hour per day per channel, but has no such limit on U.S. shows.

In Argentina, two Mexican telenovelas shown in the afternoon were censored and moved to a night slot. Venezuelan and Puerto Rican telenovelas were censored and are no longer broadcast in Argentina.

In Brazil, "Dallas," "Magnum," and "Starsky and Hutch" began broadcast after the government censored a local series.

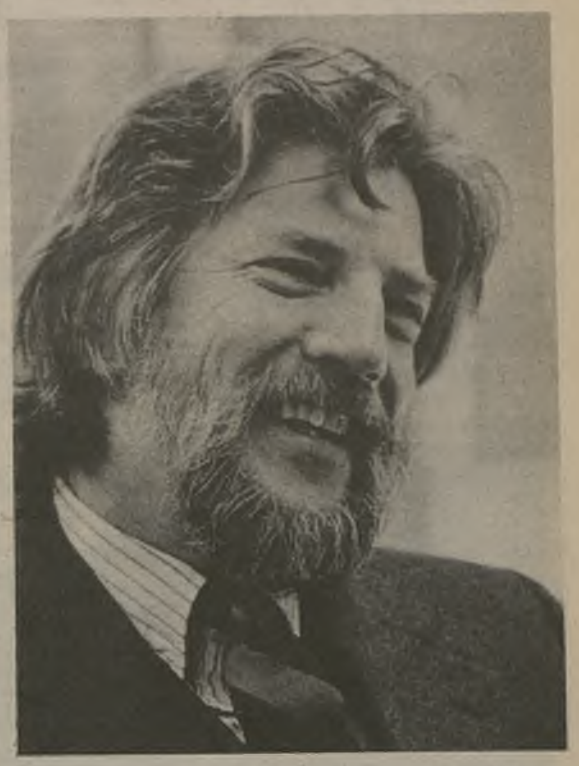
But the flow of TV programs within the region is increasing. Mexico, Argentina, Venezuela, Puerto Rico and Brazil are important exporters, and Peru and Chile will start exporting next year.

A Peruvian and a Brazilian TV executive have suggested a bartering arrangement, where five or six TV systems would each invest $20,000 in making a one-hour program, supplying each of the others with a copy. No funds would change hands, and reliance on U.S. imports would be reduced.

Mexico is still the main gatekeeper for TV program flows between the U.S. and Latin America, due to its geographic location and the concentration of dubbing studios in Mexico City. But this is "beginning to change," they note.

Program dubbing

"Mexico will not buy a TV series unless it is dubbed in Mexico...claiming that Spanish language accent is strongly regional and national and that Mexican audiences will not watch TV programs broadcast in a non-Mexican accent."



Dubbing studios in Mexico try to use a "neutral" Spanish accent that has few identifiable regional characteristics or idiomatic expressions.

In the past two years, however, dubbing studios have opened in Los Angeles, Brazil and Peru, offering speedier delivery, lower rates, and good quality dubbing. Thus future TV flows may shift.

While the heavy flow of U.S. TV programs to Latin America is not balanced by a return flow, the Spanish International Network (SIN) and other Spanish-language stations in the U.S. can now reach most of the 20 million Spanish-speaking people in the U.S.

The moving force behind shifts in TV flows is the search for profits by commercial channels.

—Livia Antola and Everett Rogers

Everett Rogers

SIN commands 77 percent of the Spanish speaking audience in the U.S. It buys 65 percent of its programming from Mexico's Televisa, mainly variety shows and telenovelas.

As cable TV expands from its present penetration of about 30 percent of U.S. households, this pattern also could change. TV producers in Venezuela and Peru are now creating programs with local directors and both local and American actors. The production is in English, with later dubbing in American English for the voices of local actors. These Latin American produced series will be marketed to U.S. cable systems.

"The Latinization of Latin American TV is still rather faint," Antola and Rogers observe. Latin American-made telenovelas are replacing certain U.S. primetime TV series, U.S. feature films, and action adventure programs, although U.S. children's cartoons are still a major import."

Their study was based on interviews with 65 TV officials in Latin America earlier this year, funded by the Stanford Latin American Studies Center.

Stanford geophysicists trace cause of quakes in New Guinea

Two Stanford geophysicists have reported that the collision of two tectonic plates near New Guinea is responsible for many of the faults seen on that island.

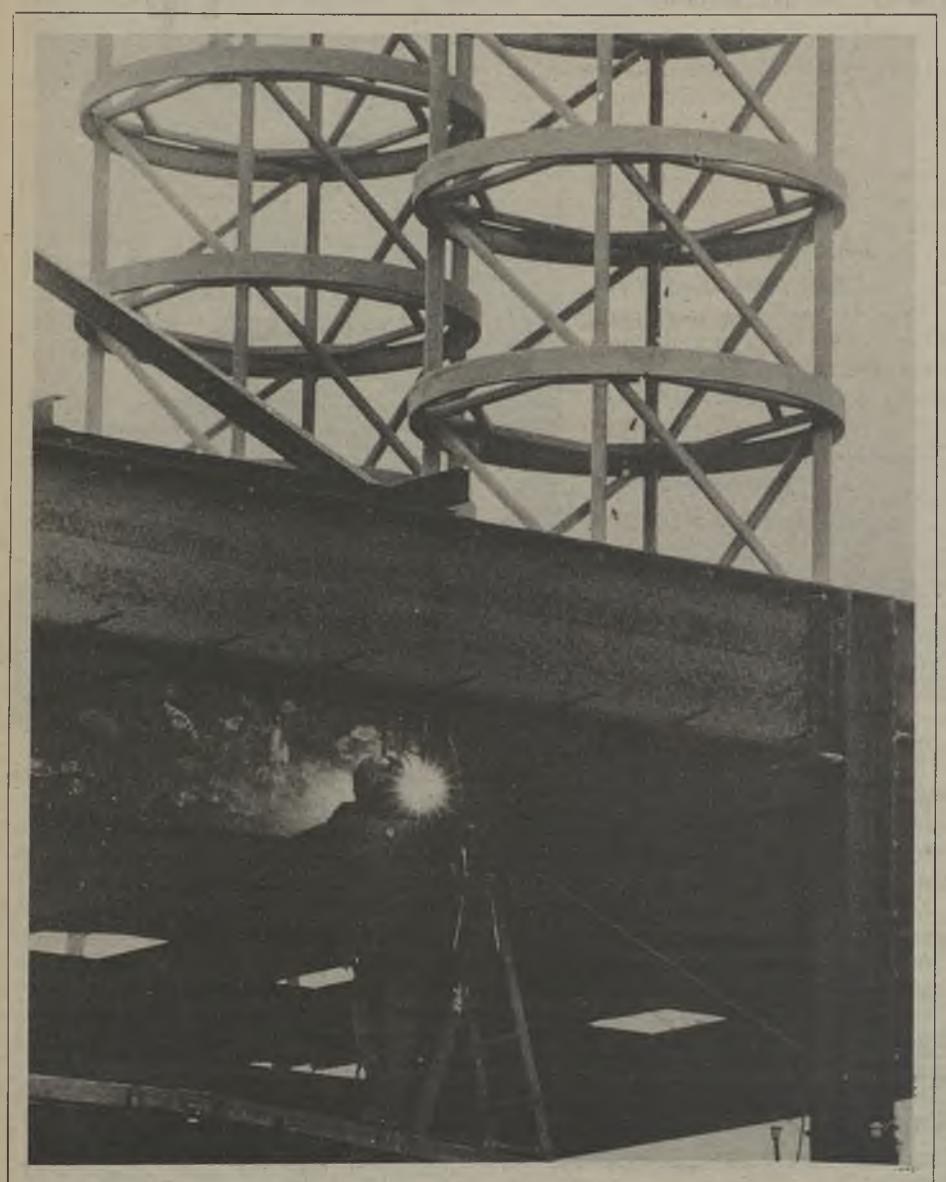
The two, in a paper read Friday, Dec. 10, at the meeting of the American Geophysical Union in San Francisco, used the reports of two major earthquakes in New Guinea and several smaller ones, to produce the data for their findings.

David Kaplan, a graduate student, and Tetsuzo Seno, a post-doctoral student, have studied the western half of the island where the large Indian-Australian plate meets the smaller Caroline Plate. They report that the collision of the plates is responsible for both the strike-slip and thrust faulting on New Guinea.

The two made what are called focal mechanisms, diagrams based on seismic readings. With knowledge of the characteristics of different faults, the motions of plates and regions of high-earthquake potential can be determined more accurately.

In their study, Kaplan and Seno have analyzed new focal mechanisms for 13 earthquakes occurring from 1968 through 1979, including the 1971 earthquake (6.5 on the open-ended Richter scale) in central Indonesian New Guinea, and the 1979 event on Yapen Island (6.3 on the Richter).

Many of these earthquakes represent aftershocks of the large 1971 event. Combining the focal mechanism solutions with depth profiles of earthquakes across New Guinea has led to the development of new ideas regarding the nature of the plate boundary at the New Guinea Trench located off the northern New Guinea coast.



"We believe that the Indian-Australian and Caroline Plates are colliding at an oblique angle to the northern New Guinea coast," they said. "Consequently, two forces exist in the region; one force compresses the two plates while the other force shears them.

"The compressional force does not appear to induce subduction of one plate beneath another at the New Guinea Trench. Instead, the trench is a relic of ancient subduction and the compressional force is producing very steep thrust faults in central New Guinea.

"The shearing force, by comparison, is responsible for several left-lateral strike-slip faults across New Guinea including the western part of the New Guinea Trench.

"We are hopeful that more detailed analysis of the characteristics of specific earthquakes in western New Guinea will allow us to determine relative plate motions more accurately as well as regions of large-magnitude earthquake potential."

Medical Center MEMO

Construction work proceeds on the Ralph and Marian Falk Cardiovascular Research Center, a $14 million project scheduled for completion in October, which will house the academic and research programs of Cardiovascular Surgery and Cardiology. The building is located on the northeast side of the Hospital, between the Medical Center and Stanford Shopping Center.

Coordination in the Clinics

A committee to provide for communication, coordination, and quality control has been formed at the Stanford University Clinics, announced Dr. Lawrence G. Crowley, vice president for medical affairs.

The Professional Practice Committee, including physician representatives from each clinic, will function as "somewhat of a board of directors for the Clinics," said chairman Dr. Ron Merrell, assistant professor of surgery. It has the authority to govern the Clinics under the general guidelines approved by the Executive Board, according to Don Tower, director of the Clinics.

The Committee's responsibilities include ensuring the quality of patient care, recommending policies and procedures for patient care, recommending appointment of physicians to the Clinics staff, and responding and acting appropriately on patient complaints.

"The Clinics represent a large group of multidisciplinary physicians," Merrell noted. "We've never had a great deal of coordination among the physicians. Now with the renovation project underway, it's a good time to coordinate the physicians in their efforts to ensure superior care and patient satisfaction."

"The Committee illustrates our commitment to assuring Clinics patients the most effective, high quality health care," said Tower.

Committee members will be appointed annually, Crowley explained. They will serve on various subcommittees—each responsible for part of the Committee's charge as a whole—including the ancillary, medical records, policy review, and Boswell (Clinics renovation project) subcommittees.

"We wanted the Committee to include active physicians who are deeply involved with the Clinics and familiar with their operation. This is a unique opportunity for them to determine the structure for the future," Tower said.

The Clinics receive about 135,000 patient visits annually, and provide outpatient care by faculty physicians.

They are undergoing a $6.5 million construction, equipment, and remodeling program, scheduled to be completed in 1985. The renovation includes increasing the size and number of clinics to be accommodated in the Boswell Building, and providing for a larger outpatient pharmacy and decongested corridor traffic.

—Shirley Kraus

Ten assistant professors get biomedical research support

The molecular biology of sleeping sickness, effects of psychological stress on the immune system, and the physiology of epilepsy are among the newly funded research topics of ten young scientists at the Stanford University School of Medicine.

Each researcher was awarded a $5,000 allocation Jan. 1 from the Biomedical Research Support Grant, provided twice each year by the National Institutes of Health, and administered by a Stanford faculty committee.

The grant is designed to help young scientists establish research programs in areas of basic and clinical research.

The ten assistant professors awarded one-year grants are: Drs. John Boothroyd (medical microbiology), Christopher Coe (psychiatry), Barry Connors (neurology), Kevin Fish (anesthesia), Andrew Hoffman (medicinendocrinology), Fredric Kraemer (nephrology), Fred Mihm (anesthesia), Edward Mocarski (medical microbiology), Jane Parnes (medicine/immunology), and Paul Ponganis (anesthesia).

What they're doing

Boothroyd will use his grant to study African trypanosomes, parasites that cause "sleeping sickness" in man. A large part of the organism's ability to cause disease is linked to its talent for altering the proteins that stud its membrane coat. Boothroyd is studying the genes that control the changing protein pattern.

Parnes, too, is studying genes, this time as they relate to the human immune system. The several classes of "T-lymphocytes," white blood cells that control the immune system, have unique functions that may be associated with their protein coats. Parnes will investigate the role the proteins play in enabling the T-cells to do their work in battling infection.

Coe will study immunity from a different angle: the effects of psychological stress on immune responses. "Although it is generally acknowledged that stress can compromise resistance to disease," Coe said, "further investigation is still needed to determine how different types of stress affect specific aspects of immune responses."

Epilepsy is the target of Connors' research. Large bursts of electrical activity in the brain signal an epileptic seizure, but between seizures, small abnormal discharges of electricity are often detected in the nerve cells of persons with epilepsy. Connors will study these small events to capture a more detailed picture of the electrical and chemical disturbances that underly epilepsy.

Kraemer is investigating the way hormones regulate atherosclerosis, a clogging of the arteries with fatty plaques. Mocarski is studying the replication of DNA in cytomegalovirus, a variety of herpes virus that can be life-threatening in persons with a suppressed immune system.

Finetuning respiratory therapy is the goal of Mihm's research, as he studies a new method of monitoring the levels of oxygen in a patient's blood.

Anesthesia studies and more

Fish will focus on the effects of the common anesthetic "halothane" on the metabolism of other drugs often given during anesthesia.

The effects of several anesthetic agents on the ability of muscle to contract will be the subject of Ponganis' research. Studies of postoperative patients indicate that volatile anesthetics can, in a few cases, trigger a disease known as malignant hyperthermia, in which the contraction of certain muscles is uncontrollable, and the subsequent rise in body temperature can kill the patient. Ponganis aims to elucidate the mechanism of the interaction between the anesthetic and the muscle.

Hoffman will study three chemical messengers in the brain (epinephrine, corticotropin releasing factor and vasopressin) as they interact to influence the output of the pituitary gland. Hoffman said he is especially interested in the pituitary because of the hormones it activates during periods of stress.

—Deborah Franklin

Boswell project phases announced

The planned phases of construction for the Boswell Building Renovation Project have been confirmed with the contractor, announced Vera Waechter, R.N., assistant director of the Clinics.

The first phase, scheduled for the spring of 1983, will involve only the construction of enclosed balcony additions to the building.

The second phase of construction, to take place from the summer through fall of 1983, will include the first floor south (medical clinics) and the second floor south.

The clinics to be affected during this phase are: Allergy, Endocrine, Gastroenterology, Hematology, Immunology, Internal Medicine, Nephrology, Preventive Medicine, Stanford Medical Group, Cardiovascular Surgery, General Surgery, Thoracic Surgery, and Urology.

The third phase, scheduled for the winter of 1984, will involve construction in the Dermatology and Orthopedics clinics; and the fourth phase, in the summer of 1984, the Ophthalmology offices and clinic.

Finally, from the winter to spring of 1985, the fifth phase of construction will include the Special Procedures Suite, and the Cardiology, Chest, Genetics, and Neurology clinics.

Nurses make exemplary cost-cutting strides

The surgery unit gives out the "golden towel award." Other units post lists of supply costs on the wall. And still others post graphs showing supply usage. Stanford nurses are going all out in their efforts to cut expenses as part of a Hospital-wide cost-containment program.

"Cost-containment has permeated every unit. It's the byword now," said Joyce Miller, associate director of nursing. "We're not decreasing the quality of patient care at all, but we want to make sure we're doing all we can to cut costs."

The nurses' greatest effort has been in using linen more efficiently, Miller said. Their goal is to decrease the amount used for each patient by two pounds from the 1982 average of 21 pounds per patient each day. This alone will save the Hospital $150,400 each year in laundry services, she explained.

"We used to put just one linen cart on each unit, so nurses would take more than they needed to avoid an extra trip," Miller continued. "Now we put a cart on each end of the unit, so nurses can get more linen easily, but only if they need it."

They are also developing new ways to make beds that use less linen, and are discouraging nurses from using heavy blankets—which cost more to clean because they weigh more—to wipe up spills, for example. Staff members of departments such as X-ray and Physical Therapy, who used to automatically grab for linen to use indiscriminately, are being encouraged to use appropriate products, said Miller.

Unfortunately, it isn't all so easy, Miller said. The Hospital has to replace $500,000 worth of linen each year, 80 percent of which loss is unaccountable. Replacement of Operating Room scrub clothes alone costs the Hospital nearly $94,000 each year.

"We want to get everyone sensitized to the problem. We want all staff members to realize that when they take Hospital property it costs money," she stressed.

"There is not much more we can do but to try and control the problem by making the Nursing Service aware of the situation," added James Staight, director of Patient Transport Services.

Aside from cutting linen usage, nurses are looking at other supplies that are being wasted. Switching to a larger size of absorbant pads, used to soak up discharge, for example, is enabling nurses to use fewer pads, Miller said. And rather than prepare products in advance that are not reusable, such as IV set-ups, she added, nurses are being encouraged to wait until the products are actually needed.

Physicians can help out in this area, Miller said, by reconsidering various procedures to determine if they're really necessary.

—Shirley Kraus

Bulimic volunteers needed in study

Volunteers are needed to participate in a study being conducted at Stanford's behavioral medicine clinic, to determine the relative effectiveness of two approaches in the treatment of bulimia—the binge/purge eating disorder.

"We've already seen positive results with the use of group therapy sessions," said Dr. Betty Kirkley, postdoctoral fellow. "Based on those results we're conducting this study, to test two variations of group therapy."

The first treatment groups are already under way, and the next ones should start in about a month and a half, said Kirkley, who needs to hear from potential participants as early as now.

Free treatment for bulimia will be provided to women between the ages of 18 and 49 who binge eat and vomit afterwards. The treatment program will consist of 16 weekly group therapy sessions, with seven people in each group.

Before entering the program, participants will be required to have a thorough medical examination. They will complete questionnaires at the beginning and end of the program.

For further information call Kirkley, at 497-7871.

The community: applying, reaping fruits of research

Just how much a focused outreach effort can accomplish is becoming clear from innovative research projects based at Stanford University School of Medicine.

For over 10 years, a unique approach to reducing death and disability from heart disease has been studied by Dr. John Farquhar and his colleagues in the Stanford Heart Disease Prevention Program (SHDPP).

A major portion of this research aims at determining methods for educating people to alter their lifestyle in order to lower their heart disease risk "profile."

This portion of SHDPP is called the "community studies" because researchers literally are going out into local communities to do their work. (Collaborating with director Farquhar and his medical colleagues are members of other Stanford departments.)

Above, Farquhar participates in an exercise class. The community component of SHDPP is helping develop new methods of reducing the risk of heart disease on a large scale.

Cable t.v. in the health care field

"Medical and Health Care Uses of Cable Television," a community conference designed for physicians, nurses, and other health professionals, will be held 8:30 a.m. to 1 p.m., Saturday, Jan. 29, in the Palo Alto Medical Foundation Auditorium, 920 Bryant Street.

The conference, which is open to the public, is sponsored by the Palo Alto Medical Foundation and Stanford University Hospital. It is coordinated by the Peninsula Community Access Television Association.

Applications of video and cable television in the health care field include education, clinical research, computer data banks, and internal communications, according to Robert Hecht, Stanford division coordinator of Instructional Media in the Medical Center.

Hecht and Michael Yonchenko, Stanford audiovisual director and producer, will present the introductory remarks for the program. Potential uses include video teleconferencing among hospitals, nationally and locally produced health programming, staff training, and a variety of informational uses.

According to Tony Browne, assistant director of public information with the California Hospital Association, more than 300 cable systems are serving nearly 2.5 million subscribers in California. The cable companies feed signals from traditional broadcasters and the special cable network companies.

With the technological improvements and more public awareness, cable franchise agreements with cities and counties are including more community services, such as public access and dedicated channels for special community interests. At Stanford, the University's Cable TV Steering Group, headed by Associate Provost Michael Oman, is working with Palo Alto officials on plans for cable services.

At the conference, Browne will discuss community involvement in the cable franchise and refranchise process.

Speakers also include Dr. David Watts, associate professor of medicine, University of California, San Francisco, who produces the KQED television and radio "Health Notes" program.

Tom Rasmussen, director of satellite operations for the Hospital Satellite Network in Los Angeles, will discuss programming via satellite to health care professionals.

Tom Clayton of Peninsula CATV will moderate a panel discussion with questions from the audience. A complimentary lunch will follow the program.

There is no charge for the conference, but reservations are required because of limited space. Reservations may be made with Carroll Harrington of Peninsula CATV, 348 Waverley St., Palo Alto, CA 94302; or call 326-0882.

—Barbara Battino

Bill Tinsley, self-professed "mountain person," at work—even his route assignment fits in with his outdoor interests.

Getting the mail out, rain or shine

Bill Tinsley wiped a few drops of rain from his sleeve as he walked from his small pickup truck to enter a Welch Road office building.

In the classic tradition of the mail carrier, Tinsley doesn't let the weather stop him. In fact he likes it.

"I don't mind the rain one bit. When it's raining here, I know it's snowing up there in the mountains."

Tinsley is a skier.

"During the past four years I haven't missed many weekends during the (ski) season except by choice. There's only one thing that will get me to miss a weekend on the ski slopes and that is a really, really good party."

Tinsley started skiing about a year after he started work in the Hospital mailroom, where his grandfather, Harry Ball, was the supervisor.

"I wanted a set of skis because all of my friends had them. To tell you the truth, I actually had no intention of using them right away.

"But one of my cousins dragged me up on a hill. And that's all it took."

Tinsley said he never took a lesson. "Basically I'd rate my skill as an intermediate, but I'm not afraid to try an expert slope." He is a member of the West Coast Wheelers Ski Club and gravitates to the slopes in the Lake Tahoe area almost exclusively.

"I like the area, and I have a lot of friends I can stay with on the weekends in the area," he explained. "My co-workers Tim Powell and Pat Brown are also members of the W.C.W.S.C. and we ski together frequently."

And on the off-season, "I still go up to the mountains backpacking. I am a mountain person. I feel better up there. . .It's the air."

Throughout the year, Tinsley also roller skates three nights a week—"I have to keep in shape for skiing."

Even his work assignment relates to his outdoor interests. As one of the most senior of operations supervisor Ron Creamier's 14 couriers, Tinsley could probably get a route that would allow him to stay indoors at the main Hospital complex.

"But I've been on all the routes, and I really like the one I've got now best."

Tinsley, 26, is the only courier-driver among the 14 carriers in the Mail Department and has use of a small pickup truck. But he estimates that he still walks about two miles a day. Most of that foot thumping takes him back and forth from various parking lots to a variety of Medical Center offices leased along Welch Road, where he gets high marks from his mail "customers."

"He's surprisingly mellow, he just doesn't get ruffled," said Carol Jensen, a secretary in Care Review/Risk Management on Welch Road, a skier, and a close friend of Tinsley.

Friends, said Tinsley, are one of the real satisfactions of the job.

"I really enjoy when there's time to talk with people, find out who may have the same interests as I do. I have made a lot of friends" on mail rounds.

Tinsley admits the job can be busy with several thousand pieces of mail, including packages, every day.

"But we always get everything done. Of course on really heavy days I may not get a break."

But break or no break, there are always those weekends.

Tinsley does have other interests, including music. He owns 1,500 45 r.p.m. records, representing rock and roll music from the 1950s and 1960s to the '80s.

He explained, "I enjoy some of the newer groups, like Journey, but my collection is mainly from the 50s."

As for the 80s and beyond, Tinsley said he is looking forward to a career at the Center, "and for now, what I'm doing is just fine."

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard call 497-6389.

WEDNESDAY, JANUARY 19

Dept. of Clinical Social Work Inservice Education Program Part II: "Couples Therapy"—Cleo Eulau, L.C.S.W. 8:30 a.m., TF 122-C (Psychiatry Bldg.). For further information call 497-5091.

Dept. of Neurology Grand Rounds: "Cerebral Evoked Potentials and Somatosensory Perception"—Dr. Ron Angel. 5 p.m., Palo Alto Veterans Administration Medical Center, Bldg. 7, Rm. B108.

Div. of Orthopedic Surgery Grand Rounds: "Porous Coated Total Hip Replacement"—Dr. Emmett Lunceford. 8:30 a.m., M114.

Div. of Hematology Noon Conference: "Mild Hemophilia"—Dr. Robert O'Reilly. Noon, S102d.

Basic Science Research Colloquium: "The Organization and Expression of the Mouse Beta-2 Microglobulin Gene"—Dr. Jane R. Parnes. 5 p.m., Fairchild Auditorium.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Human Left Ventricular Function Immediately Following Cardiac Surgery"—Dr. George Daughters (Palo Alto Medical Research Foundation). 4:15 p.m., McCullough Building (main campus), Rm. 134.

Div. of Radiobiology Research Seminar: "Hypoxic Cell Radiosensitizers: Rationale and Clinical Potential"—J. Martin Brown, D. Phil. Noon, S092.

Div. of Clinical Pharmacology Seminar: "Nitrosodilators and Endothelium-Dependent Vasodilators May Induce Relaxation through Cyclic GMP"—Robert Rapoport, Ph.D. 4 p.m., M110.

THURSDAY, JANUARY 20

Dept. of Pharmacology Windsor C. Cutting Memorial Lecture: "Epidermal Growth Factor"—Dr. Stanley Cohen (of Vanderbilt University). 4:15 p.m., Fairchild Auditorium.

Nursing Educational Services: "Burnout: Treatment and Prevention." 8:30 a.m. to 4 p.m., 701 Welch Road, Suite 327. For further information call Carole Kidder at 497-6366.

Registration deadline: Nursing Educational Services Basic EKG Interpretation Workshop to be held February 3, 10, 17, and 24. Course will focus on cardiac anatomy, physiology and electrophysiology and offer opportunity for practice of dysrhythmia interpretation under guidance of instructors. Continuing education credit is available. For further information, call Carole Kidder at 497-6366.

Dept. of Neurology Seminar: "Calcium Gaba and Sedative Hypnotic Drug Actions Measured Intracellularly in Hippocampal Slices"—Dr. Peter Carlen (of Univ. of Toronto). 11:30 a.m., C364.

Dept. of Biochemistry Seminar: "Genes Effecting Embryonic Development in *Drosophila*—Dr. Eric Wieschaus (of Princeton). Noon, M114.

Dept. of Medicine Grand Rounds: "The National Research Council Report on Diet, Nutrition and Cancer"—Clifford Grobstein, Ph.D. 8:30 a.m., Fairchild Auditorium.

FRIDAY, JANUARY 21

Dept. of Pediatrics Grand Rounds: "PKU Variant"—Dr. Carol Greene. 8 a.m., M106.

Dept. of Structural Biology Seminar: "Primary Events in Vision"—Dr. Peter Rentzepis (of Bell Labs, Murray Hill, NJ). Noon, Fairchild Bldg., D102.

Dept. of Gynecology and Obstetrics Grand Rounds: "Meconium Aspiration"—Dr. Ronald Ariagno. 8 a.m., A336.

SATURDAY, JANUARY 22

School of Medicine Symposium: "Education of a Physician." 8:30 a.m., Fairchild Auditorium. All members of the Stanford Medical community encouraged to attend.

MONDAY, JANUARY 24

Dept. of Gynecology and Obstetrics REI Conference: "Ectopic Pregnancy"—Dr. W. Leroy Heinrichs. 8 a.m., A336.

TUESDAY, JANUARY 25

Tenth Annual Linus Pauling Lecture: "Genes of the Major Histocompatibility Complex"—Dr. Leroy Hood, professor in the Div. of Biology at the California Institute of Technology. Sponsored by the depts. of biochemistry, biology, chemistry, genetics, medical microbiology, structural biology and the Stanford Magnetic Resonance Laboratory. 4 p.m., Fairchild Auditorium. The public is welcome.

WEDNESDAY, JANUARY 26

American Heart Association—Fifth Biannual Symposium on Cerebrovascular Disease: Speakers will include Stanford faculty members. CMA credit toward certificate is available. Reservations are required before Jan. 21, and there is a fee. 8:30 a.m. to 5 p.m., LeBaron Hotel, 1350 N. First Street, San Jose. For further information, call the AHA at (408) 247-8555.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Medical faculty opening

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

The department of pediatrics at Stanford University School of Medicine seeks candidates for appointment to the full-time faculty at the assistant or associate professor level in the division of pediatric nephrology.

Candidates should be certified or eligible for certification in pediatrics and in pediatric nephrology. Candidates for appointment at the assistant professor level must give evidence of training, experience and productivity in laboratory research.

Those who wish to be considered for appointment at the associate professor level must have an established research program.

Responsibilities of this appointment also include medical student and housestaff teaching, training of fellows, and responsibility for patient care.

Interested candidates should send curriculum vitae and names of references to Bruce Tune, M.D., Department of Pediatrics, Stanford University Medical Center, Stanford, California 94305.

...News Notes...

Stanford ICN relief nurse Kathy Kiser is volunteer coordinator for the California Winter Special Olympics, to be held at Mammoth Mountain this year from April 10-15.

The program, a winter experience for the mentally handicapped which includes ski instruction and competition, needs nurse volunteers, said Kiser. The nurses provide a medical back-up, though doctors and paraprofessionals also participate.

Kiser said that 100-150 adolescents and adults from all over the state will join the activities. Lodging expenses for nurses are covered by the program. Nurses who wish further information should contact Kiser at 493-1713. The deadline for volunteers to sign up is March 1.

* * * *

The Medical Center Auxiliary has given over $25,000 this month to the Hospital for the purchase of a new fluorescent microscope in the department of pathology.

The Auxiliary also gave $5,000 to Social Services to cover the patient care emergency funds through April. These funds, contributed by the Auxiliary each year, pay for expenses such as temporary housing and food. An increased need this year caused this month's extra donation, bringing the total for the year up to $14,000.

* * * *

Patricia Toomey has been promoted to the position of assistant director of Medical Record Services, announced director Marion O'Brien-Adineh.

Toomey has served for the past three years as manager of the transcription services, and was instrumental in the successful move of that section. She was also responsible for installation of the current dictation system.

Toomey's new responsibilities will primarily include the management of routine operations for the department. She has many years of medical record and hospital experience, having served at Massachusetts General prior to joining the staff at Stanford.

* * * *

David Tobin has been appointed controller for the Hospital Modernization Project, announced HMP director Elvia Garwood.

A financial and accounting manager, Tobin has a wide range of experience in developing and administering information systems for cost accounting, financial analysis, budget preparation, and construction management reporting. He is familiar with time sharing systems and has programming ability.

Since 1973 Tobin worked for Kaiser Cement Company in Permanente. He received his B.S. from San Jose State University in 1972, and also attended the M.B.A. program at SJSU.

Construction Corner

Lane Medical Library: There will be construction work in the Lane Medical Library beginning this week. Administrative offices are being built on the lower level to relieve some of the office space overcrowding on the main floor.

Study carrells will be rearranged and there will be a slight increase in the present number of seatings. Noisemaking operations will be moved to enclosed spaces to help reduce the amount of noise in the public areas.

The Library apologizes for any inconveniences during construction.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Patiently awaiting their studious owners, parked bikes dot the Medical School scene again these days, as after a holiday break students are back in full swing with winter classes.

Calendar...

continued from page 1

The Stanford students gave the lowest ratings of any of the five groups studied to the perceived soundness of evaluation of their work. This included the student's belief that good work and effort would result in good grades, and that feedback from instructors on written work was sufficient to help the student do better.

Students who perceived that the evaluation was unsound were likely to report putting out less academic effort, undermining their own academic progress.

The committee said that "argument about the calendar is an argument about educational values," which are practically "insoluble."

Proponents of the quarter system believe it exposes students to a broader variety of subjects and faculty members. Students are able to focus on fewer courses at a single time. The shorter term permits better scheduling of continuing courses and sequences. It also fosters learning done in sequential steps.

Semester advocates believe longer terms encourage more reflection on complex material, especially in the humanities and the social sciences. Semesters provide more time for meaningful response to student work, including diagnosis and correction of deficiencies. Where there are sizable writing assignments, longer exposure to material permits more sensible selection of topics for papers. Semesters also permit a reading period prior to final exams.

Harvard, Yale and MIT all use some form of the semester system.

But the committee noted that "Students are able to learn on any system whatever, if they are good students—and ours are."

Besides semesters, the committee examined the possibility of dividing the calendar into six terms of five weeks each, including two or three days for exams. These were called "Golub units" after Prof. Gene Golub, computer science.

Under this system, courses could extend anywhere from one to six "Golubs" per year, with normal quarter-length courses extending over two "Golubs" and semester-length classes the equivalent of three "Golubs."

This would require more year-long planning by students, with good academic advising at the outset. Neither of these is "Utopian," but "neither reflects present reality to (a) desirable degree," the committee said. Graduating seniors have been quite critical of academic advising, particularly prior to choice of an academic major in the junior year.

The use of "Golubs" also might encourage course proliferation rather than tightening up course offerings, the committee said. Courses fulfilling the new distribution requirements might be kept at the two "Golub" level, leading in time to reinstatement of the quarter system.

"If that result can be avoided, the arrangement is well worth more consideration," the report said.

At present, "many courses in the University have too few units (of credit awarded) for the amount of work assigned." In principle, one unit of credit should reflect an average of three hours of intellectual work per week, including class and related work.

Besides Good and Cohen, the committee included Profs. Gordon Brown, earth sciences; Alain Enthoven, business; Lawrence Friedman, law; Charles Kruger, mechanical engineering; John Steward, medicine; Lyman Van Slyke, history; and Stanley Wojcicki, physics; Registrar Sally Mahoney; Alex Markevich, graduate student in physics; and undergraduates Ann Wagenhals, history, and Doris Wilson, political science.

Stay with quarter system, ad hoc committee recommends

Following is a report from the Ad Hoc Committee to study the question of the length of terms of Academic Instruction which will be considered in the near future by the Faculty Senate:

The charge to the committee was adopted by the 13th Senate on May 28, 1981, and the faculty members of the committee had been appointed by October 28, 1981. In early December, 1981, the names of two of the three student members were given, and we decided not to wait for the third. Meetings began in January, 1982. In April, 1982, the graduate student member was appointed by the ASSU.

The charge to the committee is appended to this report. We have not felt it necessary to consult with the other committees of the Academic Council, as we were not proposing any changes in such matters. Most of the committee's effort went into the question of the length of academic terms, and to that subject most of the report is addressed.

The Academic Calendar: Options Considered

The committee was appointed in the first instance because a strong case was made in the Senate for reviewing the quarter calendar, on which Stanford has operated since the academic year 1917-18. As the principal alternative to the quarter system, the semester calendar was the major alternative considered by the committee.

1. **Quarter System**: The three terms of the academic year (the committee has not considered summer session) are all of approximately 10 weeks of instruction, followed by one week of exams. The terms are not all of the same length; spring quarter is regularly about 9½ weeks of instruction, whereas autumn quarter is usually nearly 11 weeks. Autumn quarter instruction begins on Wednesday, between September 25 and October 1, and commencement is on the Sunday between June 12 and 18. Normal undergraduate course load is 15 units, distributed among courses ranging from three to five units. A few courses exceed five quarter units. Graduate course loads vary greatly from department to department. About 25 percent of American institutions now use the quarter system.

2. **Semester Systems**: There are several varieties of semester systems.

a. **Traditional Semester**: Instruction ordinarily begins in about mid-September, and first-semester classes either conclude before Christmas vacation or resume just after New Year's for one or two weeks in January. A reading period and exams occur in January. After a vacation, the second semester begins in early February, and, with a vacation in late March or early April, it ends about the middle of June. The traditional semester was for many years the standard academic calendar in this country. In 1970, 35 percent of the institutions used it, but it has declined greatly in popularity, and in 1981-82, only about four percent of institutions were on that system. The principal objection to it is that the vacation in December causes students to lose momentum gained during the autumn, and the activities for January have a "lame duck" quality. The Stanford School of Law follows a traditional semester, beginning instruction about two weeks before the rest of the University, finishing classes before the Christmas vacation, and spending most of January on examinations.

b. **4-1-4 System**: This is a variant on the semester system in that the autumn semester begins at or about Labor Day and is completed before Christmas vacation. January is an interim term in which students may do individual research or field work, ordinarily away from the campus, for credit equivalent to one course, and the second semester begins at early February and continues until June. The name of the system comes from the fact that the typical semester course load for students is four courses, and one course is done during the January intersession. This system has come to be used more than it was formerly, but not by very much (about 7 percent of institutions in 1970, about 10 percent in 1981). In cold climates, buildings can be closed for six consecutive weeks at the height of the winter.

c. **Early Semester**: The early semester system has recently had the most increase in use. In 1970, about 26 percent of institutions used it, and in 1980 it was up to about 55 percent. On this plan, instruction both begins and ends earlier than in other systems. Autumn semester typically begins in the last week of August or just after Labor Day and is over before Christmas vacation.

In some cases, the second semester begins soon afer New Year's and is completed in late April or early May; in others, winter vacation lasts until the end of January, and the second semester ends in middle or late May. The early semester system avoids the "lame duck" January of the traditional semester, and it also gives students an advantage in the summer job market over those with later ending times (in that respect, the quarter system puts students at a disadvantage). The UC-Berkeley campus will go to the early semester calendar in autumn of 1983-84.

3. **The "Golub" System**: Among other possibilities, the committee looked carefully at only one, a system that is used, we are told, in one school of an eastern university. It was suggested by more than one faculty colleague at Stanford and proved interesting to the deans of Humanities and Sciences. It is a system of six five-week terms, with 2- or 3-day exam periods at the end of each. In effect, it cuts each quarter into two separable terms, with the assumption that most courses will cover more than one term. (The committee puzzled over what to call these terms. Half a quarter is, of course, an "eighth," which seemed not a good word for a term of academic instruction. Since the proposal was made in more than one place by Prof. Gene Golub, chairman of the Department of Computer Science, we came to call these 5-week terms "golubs." (Surely creativity should be rewarded for people with names other than Watt, Ohm, and Hertz.) In this system, courses might occupy anything from one to six golubs. Normal quarter-length courses would take two golubs, normal semester-length courses, three golubs. Some courses would last for only one golub; Computer Science tells us that some of their introductory language courses now occupy five weeks. The system is intriguing because it proposes a way by which both quarter-length and semester-length courses can be accommodated in a single system, a problem to which we will return below.

Educational Values and the Academic Calendar

The question of the academic calendar is not merely that of a convenient way to arrange the year. The committee has become convinced that particular calendar systems embody and sustain particularly educational values. This fact leads, we think, to the insoluble arguments between proponents of quarter systems and adherents of semesters. The arguments range far beyond the calendar.

Advantages argued by its proponents for the quarter calendar are several:

1. Since the normal course load in a quarter is three or more, whereas it is usually four in a semester, students can achieve better breadth by exposure to more subjects and faculty members over a year.

2. With typically fewer courses being taken at one time, students have less distraction of shifting energy and attention from one course to another.

3. Faculty leaves can be scheduled more flexibly, disrupting course offerings less seriously, and visiting faculty can be more advantageously used, even if they come from institutions on the semester system.

4. The shorter term and the flexibility of three terms in a year makes for better scheduling of continuing courses and course sequences and for maintaining students' momentum.

5. The shorter term is a better way of teaching material, including that in which the learning is done in sequential steps, with each step essential for the following ones.

Advantages argued by its proponents for the semester system are as folllows:

1. The longer term is more advantageous for subjects in which the premium is less on mastery of a body of knowledge than on reflection on complex material in terms of methodologies. For this reason many faculty members in the Humanities and some of the Social Sciences prefer semesters.

2. There is more time for meaningful response to student work, for diagnosis of difficulties, and for work to repair deficiencies. (In the debates at Berkeley, it was argued especially on behalf of minority and disadvantaged students that quarters do not permit time to recognize these students' special problems and to meet them before it is too late to help them.) A minority report emphasizing this problem is attached to this report.

3. In courses with sizable writing assignments, a longer time of exposure to the material allows sensible choices of paper topics and permits the sometimes protracted reading and research necessary to comprehend the subject and writing decent prose.

4. A reading period could be scheduled between the end of classes and the beginning of exams. Reading periods in the quarter system make the year inordinately long. (For many subjects a reading period is of no particular value.)

Basically, then, the argument about the calendar is an argument about educational values. Those who think it better that students explore material in depth than that they sample many different subjects are not convinced by the argument that quarters are preferable because they allow students to take more courses. Those who teach material that entails regular assignments carrying students through specific blocks of material that must be mastered in preparation for the next block fail to see the necessity of time to think reflectively over the material, where those who teach materials that necessitates more than one trip through it, no matter how careful (a complex novel, for example, simply requires more than one reading—even more than two readings—for even the beginnings of a critical comprehension), fail to see why a careful stepwise presentation of the material is the best way to teach.

A considerable amount of discussion has led the committee to agree that the University is a diversity in this respect: different disciplines are best taught and learned in different ways. The recognition of that educational and intellectual diversity is in no sense a judgment on the relative value of one academic discipline or one way of learning over another. Though engineering and philosophy may use some of the same mental operations, they also and more importantly use different kinds of mental operations, call for different kinds of learning and teaching—and it is not surprising that their practitioners tend to prefer different academic calendars.

Universities of high quality in this country operate satisfactorily on different calendars. Harvard has traditional semesters, Yale early semesters, Stanford quarters. Nationally admired disciplines at Stanford whose members prefer quarters are taught elsewhere on semesters (e.g., MIT). Disciplines whose members at Stanford tend to prefer semesters are represented here by departments widely acknowledged as leaders in their fields. It is important to say, moreover, that Stanford students generally study effectively and learn well, and they would do so no matter what the academic calendar were. The argument about the calendar has been pursued at nearly regular intervals at Stanford since the 1930s. It seems never to be definitively resolved, we think, for three reasons: 1) the argument is carried on between representatives of different kinds of learning that will and must remain different; 2) students are able to learn on any system whatever, if they are good students—and ours are; 3) since 1917-18, those who prefer the quarter system have always carried the day with a preponderance of votes.

The last point has also characterized the committee. Most of its members prefer quarters, and no more than a minority has wished to recommend a change to any alternative. All members agree that important educational and intellectual issues are at stake in the debate, and that it would be most desirable to find ways of making everybody happy.

The Search for Combination

The committee tried to find workable ways to combine calendars. We thought of a system in which winter and spring quarters, continuing as at present, were accompanied by a semester-length term, beginning about mid-February and ending at the same time as spring quarter, before which, during January and the beginning of February, would be a 5-6 week term in which short courses or intensive courses might be carried on. We thought of simply plastering semesters over the quarters in something of the same way, with the first semester running through most or all of January, and an exam period in early February. In every case, the student members thought that scheduling would be very complicated, and other members of the committee felt that access of students mainly on one calendar to courses on another would be at best difficult. Given the amount of time that students must spend on distribution requirements, such difficulty of scheduling seemed to the committee insuperable.

Some of the same concerns informed the committee's response to the 6-term "golub" system. On first glance it looks very attractive as a way to eat our calendrical cake and have it too, to offer within a single calendar courses on 10-week, quarter-length terms and also on 15-week, semester-length terms. It provides for the possibility of intensive courses lasting five weeks, which might be conceived as introductory to following courses. For example, a 5-week introduction to prosody, with an intensive examination of metric systems and scansion, rhythm, poetic forms, and the like in poetry, might be followed by a 2-golub introduction to poetry, emphasizing the analysis of poems, and, alternatively, by a different course, perhaps focused on the works of a single poet. Thus a single 1-golub course might be prerequisite to more than one succeeding course.

The committee predicts that patterns of courses in the 6-term system would vary considerably. Some departments would arrange their courses almost exclusively in 2-golub units, others in 3-golub units, while some departments would use both ways of arranging courses. Continuing courses would probably be affected hardly at all, though the 6-term system allows for flexibility in scheduling examinations. Language, mathematics, beginning science, and beginning engineering sequences, especially those that last for the entire year, could be arranged in any way that seemed most advantageous for teachers and students. Western culture tracks would not be affected.

The problems would come when students took some courses lasting two golubs, others lasting three, and especially in balancing out schedules over the year. If, for example, in the first half of the year a student had two 2-golub courses and one 3-golub course, at the beginning of the third golub (corresponding to the beginning of winter quarter) that student would presumably enroll in two more courses. Five weeks later, as the fourth golub began, one would search for either another 3-golub course, a 1-golub course, or a 2-golub course lasting across the fifth golub.

continued on page 15

Calendar/ continued from page 14

continued from page 14

(We would predict that few of the latter would be available; 2-golub courses would tend to be scheduled in times corresponding to current quarters, beginning at the first, third, and fifth golubs, whereas 3-golub courses would tend to be scheduled to begin at the first and fourth golubs.) At the fifth golub, the student would fill out the schedule for the rest of the year. At four times during the year many students would have to make course selections, and the availability at all of those times of just the right courses to enhance any student's education might well be even more chancy than it now is.

As a result, we think, students would necessarily plan their courses for the whole year at the beginning of the year. That is by no means a bad thing, but it requires two further assurances: 1) that **Courses and Degrees** accurately present course offerings for the year; 2) that good advising be available to all students at the beginning of the year. Neither of those necessities seems to us completely Utopian and impossible, but neither of them reflects present reality to the desirable degree. The perennial complaint that faculty members do not volunteer in sufficient numbers for general undergraduate advising would need solution.

Another aspect of this and other combinatorial systems that troubles the committee is the possibility that, at a time when a number of members of the University perceive that the curriculum has a luxuriance of courses with considerable overlap of subject-matter, these systems might be a temptation to proliferate courses rather than to tighten up the offerings.

The committee is intrigued with the six-term system, but it is unwilling to recommend its adoption, predicting difficulties in combining two- and three-golub courses in students' schedules. Moreover, the committee fears that all courses for distribution requirements might turn into two-golub courses, losing the leverage that might get students to accept three-golub courses, structured in that way on the best of educational grounds. Before long, three-golub courses would disappear from the curriculum for lack of enrollments, and we would be back on the quarter system. If that result can be avoided, the arrangement is well worth more consideration.

Specific Questions in the Charge

The report thus far has spoken to the first point in the committee's charge from the Senate: "The comparative desirability and efficiency of the quarter system, the semester system, or any alternative system, in the various types of instruction in the University." The committee spent most of its time and energy on that question. We now continue to other questions.

The second part of the charge was: "Measures such as course sequence scheduling, including continuing courses, in the quarter system, the semester system, or other calendar system both to facilitate the teaching of subjects that exist in precise or definable blocks and also to facilitate the assignment of research topics and term papers in those subjects in which writing as such is an important educational component." **Course sequences** need to be distinguished from **continuing courses**. Sequences are groups of courses that cover a body of material in order, but students need not complete the entire sequence to receive credit for any part of it. A continuing course lasts for more than one term, and all of it must be completed for the student to receive credit for any of it. Many sequences are to be found in departments of the humanities and social sciences, but not many continuing courses are offered there. A good many of the series in the sciences and engineering are continuing courses rather than sequences, even though students may receive grades for each term rather than the "N" grade often used in continuing courses. In some continuing courses, such as the Western Culture tracks, it is possible for students to take one quarter in one year and to complete the course in another year, though the practice is not encouraged.

Another kind of sequence is implied by attaching prerequisites to courses. Especially in the humanities, even some advanced courses do not have specific prerequisites. This is often understandably confusing to people outside of those disciplines. But the kinds of learning necessary in such subjects are different from the sequential kinds of learning that much of natural science and engineering finds natural. The study of literature is a matter of expanding sophistication in the application of critical tools to literary texts, and it does not matter whether one applies those tools first to Shakespeare and later to Wordsworth or in reverse order. The study of history likewise does not require that one cover the Renaissance before 19th-century Europe. Thus the order in which subjects are studied is nearly irrelevant in the humanities and many of the social sciences, and a teacher may be able to handle students at different levels of sophistication in the methods of study in the same course without serious disruption.

The committee suggests that the humanities and social sciences might make effective use of continuing courses in order to gain the time necessary to allow better depth of study. For many departments courses lasting longer than one quarter might help to overcome the perceived faults of the quarter system. Such courses might be offered for two quarters as continuing courses, in which the first quarter is prerequisite to the second. But many instructors who favor semesters have argued that, while one quarter is too short for the best learning, two quarters is too long. An alternative is that continuing courses need not extend throughout the next quarter; a course might last, say, five weeks into the second quarter, after which it would be over. Nothing in present regulations forbids doing this. One might, then, offer a course for four units in autumn quarter, continuing for three units in winter quarter. The students would receive "N" grades at the end of autumn quarter. The instructor might continue to hold classes for five weeks or so in winter quarter and at the end of the time arrange for a final examination. Alternatively, an instructor might give an examination at the end of the autumn quarter and use the first five weeks of winter quarter for students to do the research for and write term papers. Perhaps with a good deal of individual consultation.

Such a use of part of a second term would meet another of the typical laments about the quarter system: that it is a really bad calendar for courses in which a sizable amount of writing is called for, especially if during the term the student must search out a manageable but good-sized topic, research it, and write a paper in clear if not elegant prose.

The committee recommends that deans and departments consider experimenting with the calendar in such ways as arranging continuing courses and sequences, together with calculating equitable means of faculty teaching assignments. Such experiments must take great care to avoid impeding access to courses by students from outside the school or department.

The third charge to the committee was to consider: "The desirability and practicality of instituting a required reading period, or of strengthening the dead week concept." It is clear that a reading period before exams, in which no classes are scheduled, is completely incompatible with the quarter system. The shortness of time, about which many faculty members complain in the quarter system, would be exacerbated by substituting a reading period for some days of classes. Moreover, many faculty members have no need for reading periods for their courses. The concept of dead week depends for its efficacy either on an administrative power that can forbid all extracurricular activities during that week or on the cooperation of all departments in not scheduling new assignments, tests or public activities of any kind during dead week. The committee has not been able to think of any alternative way of making sure that dead week is observed.

The committee was asked to consider "The effects that any change in the terms of academic instruction might have on requirements such as the Western Culture, language, distribution, and writing requirements, in addition to the effects on the requirements for the major." Should a change to semesters be made, the committee sees no change in the Western Culture or language requirements. Western Culture tracks last the entire year, and they could be of-

Committee on Length of Terms: Minority Report

The committee report concludes that there is no practicable alternative to the quarter system. This minority report concurs that there is no way to achieve a consensus on this campus to any alternative that involves serious reworking of courses, teaching loads and schedules. It does, however, take issue with the assumption the report makes that Stanford students do well regardless of whether we have a quarter or a semester system.

This assumption stems from the fact that we take in highly selected students and graduate a large proportion of them. However, whether or not the quarter system with its heavy emphasis on exams and papers that have to be prepared on relatively short notice has anything to do with the learning and academic success of students while they are studying at Stanford, is an empirical question. The answer to this question should not be assumed because it leads the faculty to think that they do not have to worry about any problems with the methods they employ in teaching.

The only evidence we have that is relevant comes from a study of Chicanas in higher education sponsored by the Center for Research on Women. This study included a Stanford sample of 237 Chicano undergraduates (148 females and 89 males). The female sample was a total sample and the male sample was a random sub-sample. Response rate was over 60 percent. There were comparable samples from a University of California campus (the only other campus to be on a quarter system) two State University campuses and a community college.

Stanford students varied as to the amount of academic difficulty they were experiencing. Some were reporting low grades, had a record of stopping out and were making slower progress toward their degree than others. This variation occurred within the Stanford sample, despite the finding that Stanford students were making more rapid progress toward their degree than students on any other campus.

Stanford students who saw themselves as less academically able were more likely to say that they did not get their reading done in time for class and that they did not turn in their written assignments on time. (See Table.) Furthermore, Stanford students were more likely to state that this was so than students on any other campus we studied. This finding is consistent with a problem of time pressure we find in many undergraduates and most acutely in non-native English speakers among the undergraduates and graduate students.

Gonzales' analysis of these data showed that the Stanford sample was also lowest of all the campuses on a measure called "Perceived Soundness of Evaluation." Perceived soundness of evaluation was an index of three items: student's belief that good work would lead to good grades, belief that effort would result in good grades, and an item concerning whether or not feedback from the instructors on written work was sufficiently specific to provide guidance to the student in doing better work. Furthermore students at Stanford who perceived that the evaluation system was unsound were likely to report putting out less academic effort thereby undermining their own academic progress (1982).*

What does this mean with respect to the quarter system? It suggests that we do have a teaching and learning problem with some students; and that this problem may well be related to teaching techniques that are ill-suited to the quarter system. We are all well acquainted with colleagues who adapt to the quarter system by simply "talking faster" in an effort to cover materials. It is very common practice to give a final exam and a term paper due at the end of the quarter when it is too late for the student to learn what he or she is doing wrong and how he or she might do better work.

If we are to remain with the quarter system it is essential for Stanford to ask some pertinent questions. How many other students besides the ones in this study are unable to keep up with the peculiar pressures of the quarter system? Considering the academic demands made on students at Stanford, are they receiving timely and specific feedback in order to prevent discouragement and falling behind in their coursework? Methods of teaching should be adapted to the length of the term. The critical issue is not so much whether we have quarters or semesters. A more important question is effectiveness of the teaching, given the constraints of the system we have chosen.

Stanford tuition trails Ivy League by about $150 annually, Bacchetti says

continued from page 1

increase for 1983-84 used in the University's long range forecast.

"We don't want to move tuition at a rate that makes it impossible for students to come here," Kennedy said. Trustees are expected to set next year's tuition rate at their Feb. 8 meeting.

Compared to the seven institutions with which Stanford shares the most candidates for the freshman class, Stanford's current tuition of $8,220 is $150 below their average, Bacchetti said. The seven schools are Brown, Cornell, Dartmouth, Harvard/Radcliffe, MIT, Princeton, and Yale.

Stanford's tuition last year was approximately $100 less than the seven-school average, and during the four previous years it was $50 to $100 above average.

Tuition went up 15.1 percent at Stanford last September, while increases averaged 15.7 percent at the other schools. Princeton plans an increase of more than 12 percent for 1983-84.

Bacchetti said "It's not surprising that institutions that have very similar characteristics have costs that are comparable and therefore have charges that are comparable."

Stanford continues "firmly wedded," Kennedy said, to a policy of admitting undergraduates without regard to ability to pay, and then meeting the full demonstrated need of each student. Between one-tenth and one-fourth of all tuition increases is redistributed to financial aid. Overall, 13 percent of tuition income is used for financial aid, he said.

The proportion redistributed to aid is higher on new tuition dollars because the University has been "making up for the diminution in federal aid programs and a lack of cost rise in the state program," according to Bacchetti. "In addition, we have been making up for the general economic conditions that apply greater allocation on our part to help those families caught in the present recession."

Bacchetti said he thought it was reasonable for tuition to grow at about the rate of personal income "so people's standard of living would not increase relative to the cost of education and the opposite didn't happen either."

Current costs

He estimated the University's four-year cost for a current senior at $60,000 to $70,000. Tuition, room, board, books, and personal expenses total about $43,000. The remainder was covered by endowment, gifts, and other sources of income. The out-of-pocket cost was lower for students on financial aid, he said.

Asserting that education should not be viewed as a product, Bacchetti said "it used to be that tuition was a word that stood all by itself. It wasn't a synonym for something like 'price' and you never talked about markets and marketing in higher education.

"I hope we don't make it into a consumer good like all other consumer goods. There's something very precious, long-term, fragile, and critical about institutions like this that gather so many students and faculty together for one purpose and one purpose only and that is to grow—to grow in knowledge, to grow personally."

Financing education should be a "partnership" of government, public-spirited donors, parents, and the students themselves through summer earnings. Even students not receiving financial aid are being subsidized because tuition does not cover the full cost of the program, he said.

The administration plans to cut about five percent from the operating budget during the next two years, Hastorf told the students. One percent was trimmed last year. Without the budget cutting program, tuition would be driven up "impossibly," he said.

"If we only paid attention to the wonderful ideas deans have, we'd go broke in no time," he joked. "By the same token, if we only pay attention to a totally miserly attitude toward the budget, we'd lose our zest and our vim."

Despite the impending five percent cut, the University has set aside one-half of one percent for new programs, down dramatically from recent years. "It's crucial that we have some atmosphere of a push forward," Hastorf said.

Kennedy told the students they could "influence public policy in a way that helps access to quality higher education, not only for yourselves, but for others around the country."

He jokingly assured the audience that administrators would "not conclude from the relatively low attendance that you are deeply satisfied with the current trajectory of tuition and that we are therefore free to move it as our ambitions suggest."

The forum was sponsored by the Associated Students Task Force on Tuition and the ASSU Speakers Bureau.

Grad student social group forms

Coping with the information explosion and specialization will be the theme of the first two programs organized by a new Stanford student group, Grads in Common.

Created by students from eight different departments, ranging from English to engineering, Grads in Common will meet Thursday afternoons weekly through winter quarter.

The opening program, "Coping with the Information Explosion," is scheduled for 3:30 p.m. Thursday, Jan. 20 in the Tresidder Lounge.

Speakers will include Prof. John McCarthy, computer science, who created the term artificial intelligence and the LISP programming language; Barbara Gelpi, editor of *Signs: Journal of Women in Culture and Society;* Paul Kaufman, special assistant to the director of the Center for Information Technology; and Guiliana Lavendal, manager of the Technical Information Center at Xerox Palo Alto Research Center.

The second program on "Specialization: Where Did It Come From and What's It Doing to Our Professional Lives" will be held at 4:15 p.m. Thursday, Jan. 27, in the Tresidder Lounge.

Speakers will include Prof. Sidney Drell, arms control faculty member and deputy director of the Stanford Linear Accelerator Center; Prof. Anne Mellor, English, head of feminist studies; Prof. Ian Watt, English, director of the Stanford Humanities Center; and Prof. Malcolm McWhorter, electrical engineering, director of the Ethics of Development in a Global Environment.

Further information may be obtained by calling 497-1326.

Pianist Jodi Gandolfi will play works by Haydn, Chopin, and Schubert in a recital at 8 p.m. Friday, Jan. 21, in Dinkelspiel Auditorium. Gandolfi, who received her Stanford D.M.A. last year, is a new member of the piano faculty. Tickets are $4 ($2 for students and seniors).

Calendar...

continued from page 15

fered in two semesters as well as in three quarters. Language courses are likewise continuing courses and it matters little whether the breaks are made once or twice. Distribution and writing requirements might occupy more time for students in a change to semesters. The same predictions would hold true for the six-term system, though freshman writing might be arranged in two-golub rather than three-golub units. The possible effects of changes on majors are so many that they are nearly impossible to predict. The six-term system would probably not alter the unit requirements of majors, but it might require some departments that organize their majors by the number of courses to modify those organizations. A switch to the semester system would entail completely reorganizing major programs throughout the University, rearranging courses within departments, and rethinking structures of curricular programs.

The fifth element of the charge was: "The costs, direct and indirect, that would be involved in any change from the current quarter system." The committee did not compute or estimate costs, since it did not seriously contemplate recommending any change. The main costs would be the indirect ones of the time and energy spent by administration and faculty in the change to a semester system. We think a switch to a six-term calendar would entail much less cost, corresponding only to what schools and departments wished to do.

Sixth, the committee was asked to look into "the desirability of specifying the number of courses rather than the number of units that candidates for the bachelor's degree must complete." Courses are typically offered for three, four, and five units, with a few exceeding five. Except for students who take more than 16 units in any quarter, it is hard to take more than five courses simultaneously, though the phenomenon is not unknown. It must be said that the advantages of the quarter system, involving the intensive exposure to material over a relatively short time, are diluted when a student takes too many courses. How many are too many? The answer varies with nearly every faculty member and every student. If a student's courses are related to one another, five courses may be exhilarating. If they are not, four may be confusing. Some institutions on the quarter system permit students to take no more than three courses per quarter, and some such arrangement may be a way by which the quarter system could work best for the most students in the most disciplines. The committee is unwilling to force such a strait-jacket on its colleagues. The relative flexibility of courses with variable units becomes a bad thing only when a given course requires an amount of work incommensurable with the number of units.

Defining the amount of work to be represented by a unit of credit is difficult. Stanford's principle is that one unit represents on the weekly average three hours of intellectual work, in class and out of it. It is as plausible a definition as any, but it founders on the fact that, for example, for two equally capable students, what is two hours of hard critical reading for one may be five hours of the same for the other.

The committee is not inclined to propose a new definition of the unit of credit. We do suggest that many courses in the University have too few units for the amount of work assigned.

Conclusions

In summary, the committee recognizes with a clarity it did not have at the beginning of its deliberations that there is no such thing as a perfect academic calendar, and that significant educational values that are important to the University at large are rendered difficult of realization on the quarter system.

No alternative systems have commended themselves to more than a minority of the committee, nor do any of its members argue that the current system is completely unworkable. Several complain bitterly that it works badly for their own disciplines (the chairman is one). But the committee has been unable to muster enough unanimity about any systems combining calendrical arrangements to recommend their adoption. We do recommend that deans, departments, and individual faculty members consider experiments to overcome some of the limitations of the quarter system for their disciplines or specific courses within them, by offering sequences and continuing courses. Without question, some faculty members need relief in this matter.

The committee urges that members of the University consider that the different kinds of learning that must be fostered by a complex university, all of them proven by high intellectual attainment, are essential to the cultural tradition that the University represents. For the University's health, diversity of learning must be supported and enhanced. The length of academic terms is not the most important element in that undertaking.

Massy discusses impact of computer-based modeling on university work

William Massy, Stanford's vice-president for business and finance, gave a talk recently on Stanford's experiences during the transition to increasingly sophisticated computer-based administrative support systems.

Speaking before the Annual Conference of EDUCOM, which is a non-profit consortium that involves more than 400 colleges and universities engaged in sharing applications of technology to education, Massy discussed the impact of computer-based modeling capabilities. He specifically described the use of data base management systems, word processing networks, and electronic mail at Stanford, in terms of how the University gets its work done.

Over the period of the last 10 years, and especially during the past two years, Stanford has become increasingly computerized in its administrative functions, and Massy summarized the major innovations for the EDUCOM audience, adding that what has happened at Stanford is not unique among universities.

He attributed the impact of these support systems to "a combination of forces: 1) increased budget pressures, on campus and with respect to research sponsors, that make increased efficiency imperative; 2) a recognition that change in management styles, and in general more professional management, is needed; 3) the availability of new and powerful tools, and the deployment of trained personnel who are capable of adapting the tools as needed and using them in the university environment."

Modeling widely used

Speaking first on modeling, Massy commented that models such as those used at Stanford are now accepted and widely used at many higher education institutions. At Stanford, EFPM (Educom Financial Planning Model) is used to update and run the long-range financial forecast of the University's operating budget every year. This model, the predecessor of which was developed at Stanford, permits sensitivity analysis of key operating and financial parameters. For instance, the needed operating budget support for undergraduate financial aid is modified every time a change in the tuition rate is postulated. EFPM also runs separate long-range financial forecasts for the Housing and Food Service Department, as well as for the School of Medicine.

"The combination of the experience gained using models, the improvements in the sources of data, and model refinements over time, gives the University the ability to rely on what the models are telling us," Massy stated. "We have found this particularly true in times of shrinking resources, as in the present period of financial constraints." The use of such models permits Stanford to anticipate and plan for periods of financial change. The models won't solve problems, but give the University the context in which to evaluate and develop alternative solutions.

Massy also described the facilities renewal model, on which the University's capital budget is partly based. For major capital projects, special models are built to deal with both the operating and the financial aspects of the project. Examples of these projects are the hospital modernization program and the cogeneration plant (for the generation of steam and electricity). Both of these projects have been extensively modeled to analyze risks and benefits to the University.

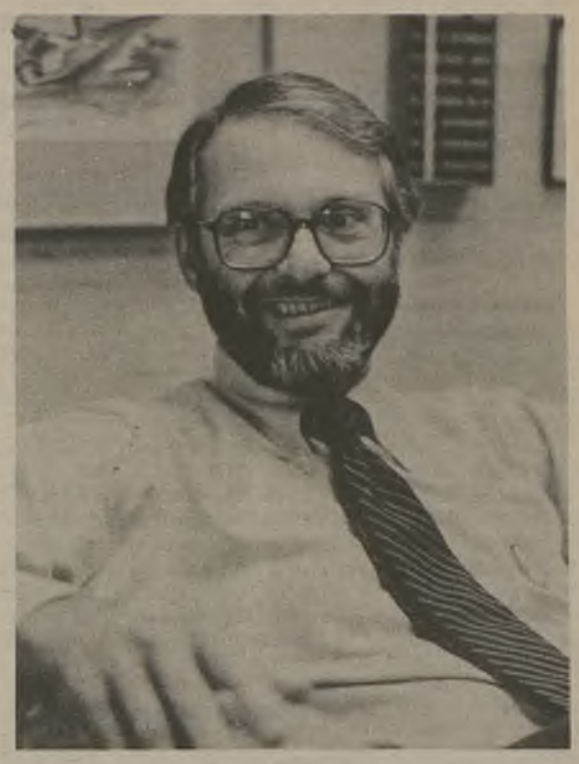
Other models are used to project forward any changes in the University's balance sheet, and to deal with faculty appointment and promotion rates, and the effects of changes in retirement programs upon the age distribution of the faculty.

Balance sheet model

The balance sheet model was developed this past summer by Management and Financial Planning and the Controller's Office. It permits Stanford to observe changes in the University capital structure over time, which allows the University to track the effects of debt financing for such projects as student housing, the telephone system, and the cogeneration plant. The model helps the University determine how much debt capacity is available not only for planned projects, but for major emergencies, such as an earthquake.

"Obviously, the use of models depends on the availablity of good data. The introduction of data base management systems has made it much easier to retrieve and manipulate the data needed for effective model building," Massy observed.

His remarks on data base management systems centered on Stanford's recent choice of SPIRES as the best fourth generation data base management system for the University standard. He noted that this decision was "made at the vice-presidental level—which is testimony to the importance we attach to information technology."



Data base management systems (DBMS) are sometimes referred to by their generation, which means a certain level of technical sophistication and ease of use. The most advanced systems available today are called fourth-generation. SPIRES has been used to develop a large system for inquiry, maintenance, and production of the University's operating budget and for a central data base and support programs for staff salary planning, review, and input to the budget and payroll system. It is being used to develop other key administrative systems: the Network for Student Information, a system for the Office of Development, and a new core accounting system.

Fourth generation equipment

Massy said "I believe that the fourth-generation DBMS approach to administrative systems development will do for that field what the high-level modeling language did for modeling. It is much easier and less expensive to construct the system in the first place. Users can play a direct role, thus tightening feedback loops with respect to the gaining of experience and acceptance of change.

"The systems are user-friendly. It is practical, indeed natural, to change the system as conditions change and/or experience is gained. After a time, change becomes an ongoing and accepted process. The result will be a closer linkage between computer system technology and the everyday working lives of users. Another result. . .will be a facilitation of modeling, as more and better data become more easily available. This will have further implications for the substance and style of management."

Moving to the topic of networking and electronic mail, Massy observed that this technology is "having major effects on communications. . .(which) will rival those of the telephone a 100 years or so ago."

The effects of electronic networking will rival those of the telephone 100 years ago.

—Bill Massy

He outlined the history of Stanford's decision to adopt standards for word processors that would enable them to communicate with each other and with the main computer. Stanford has an extensive network of terminals which is enabling decentralized data input to financial systems as well as text preparation and communication.

Electronic mail

Electronic mail at Stanford was introduced two years ago, and resulted in a new form of communication for managers and officers who have computer terminals in their offices. Massy reported that electronic mail accounts for more communication among these people than any other mode of interoffice communication, aside from scheduling meetings.

"For example," he said, "I send and receive up to 30 messages on an average day. The volume of regular mail received by my office is down by a third or more, and my own dictation is down by more than 50 percent."

Electronic mail is a good way for Stanford managers to keep in touch with the University while traveling, and it is also used as a way to share ideas and confer with many people at once. Stanford's electronic mail system, called CONTACT/EMS, is being used interinstitutionally through the Association of American Universities as well as EDUNET. (EDUNET is a national educational network established by EDUCOM to facilitate and expand a computer-based resource exchange among colleges, universities, and research organizations.)

Massy concluded his talk with a brief description of the wideband computer and video network now under development at Stanford, called SUNet, and the plans for installing the new telephone system.

He observed that plans had been made carefully to assure the University that these new systems will be compatible with long-range goals for communications technology. "The information revolution is upon us," he said. "It is strongly affecting colleges and universities. . .we're really just getting started—the next 10 years will be twice as exciting."

Fuller summaries of Massy's EDUCOM speech are available from Jane Kingston, CIT, Pine Hall 127, ext. 7-4807 or 7-3081 account gd.jlk.

With songs in their hearts and the Mendicants in the van next to them, Counterpoint, Stanford's women's vocal ensemble, will trek down to Southern California this weekend for the annual three-day tour. Leisure World, Stanford's L.A. Juniors Club, and the Manhattan Beach Club are a few of the concerts the two groups have scheduled. For concert booking or more information call (415) 322-0974.

Information technologies and computing forecast

By 1987, 80 percent of faculty will have microcomputers

Following is a report on Institutional Programs and Services in Information Technologies and Computing at Stanford, distributed to the Faculty Senate Jan. 6.

I. Introduction

This document presents a brief overview of the programs and services provided by the University at the institutional level. For those readers who have an interest, more detailed information is available both on the areas addressed below and on other efforts which could not be included if the document were to remain brief.

Part II presents the dominant trend in information technologies, how the University differs from a decade ago and a prediction of Stanford's information technologies and computing environment 48 months from today. Part III summarizes the Investment Programs that are underway in this area and Part IV reviews the central services currently being provided. Part V presents the mission and objectives of the Center for Information Technology. A set of appendices is available on request for those who want additional information.

II. The University in 48 Months

A decade ago Stanford had a small and manageable number of computers on the campus. When we planned for the central computer, we planned for all of computing.

Stanford has more than 400 computers on the campus today and we can expect this number to increase rapidly with the continuing acquisition by individuals of microcomputers and by departments of office information systems.

Avoiding a "computerized Tower of Babel" and thus providing a coherent environment within which the University's programs and services can take maximum advantage of these new technologies has become the principal task and goal of the University's Investment Programs and Central Services in information technology and computing.

An admonition from a University task force report is pertinent: "We caution readers not to underestimate the impact this technology will have on University operations or the efforts and resources required to adopt and manage the new technologies. The effectiveness with which we manage computer-based information technology will, in large measure, determine the future strength of our instructional, research, and administrative programs."

Current trends suggest the following is a realistic prediction of Stanford's information technologies and computing environment in January of 1987, 48 months from today:

* A majority of our faculty, perhaps as great as 80 percent, will have microcomputer-based professional workstations in their offices and/or their homes;
* All, or almost all, of our students will have a microcomputer or will have easy access to one;
* A majority of our professional staff will have microcomputer-based workstations;
* All of our support staff will use, as needed, computer-based technologies in their work;
* More than 50 percent of the scholarly output of the University will be in machine-readable formats and this figure could easily be higher;
* All of our 250-plus departments, academic and administrative, will have office information systems supporting departmental activities;
* Much of the central University administrative data will be online and accessible from workstations, terminals, or office information systems;
* The catalogs of the Stanford libraries and of the Library of Congress will be on the institution's central computing node and accessible by individuals from their workstations and there will be effective access to the library catalogs of the country's major research universities by these same individuals;
* Use and analyses of large databanks (e.g., census data) will be an integral part of social science research and teaching;
* In student computing most, if not all, of what is now supported by large mainframe computers will be done on individually owned microcomputers; the mainframes will evolve toward providing special purpose services.

Much of the above is already occuring as individuals and departments seek more effective and efficient methods of handling and processing information. These projections shape the institution's investment programs and central services in computing and information technologies.

III. Investment Programs

The Investment Programs are those efforts deemed by University officers of highest priority in the information technology and computing area. They are investments in the institution's future. Investment programs are distinguished from service programs (see next section) in that they often do not generate revenue to offset expense.

The current Investment Program involves three high priority activities: SUNet, the campus network; the Microcomputer Program; and the Departmental Information Systems program. Brief descriptions of these efforts follow.

SUNet the Campus Network

SUNet, the Stanford University Network, is charged to provide faculty, staff and students with access to a wide variety of computer-based and videobased resources and services and to provide the University with a wider range of economic alternatives for the provision and sharing of computer and video resources.

Physically, SUNet will include the conduits and cables that connect University buildings, offices and computers, the equipment that allows signals to pass through those cables, and the staff needed to maintain and operate the network.

Currently, most connections with University computers are made with telephone wires. SUNet will provide a separate and less expensive means of connection and will also allow the transmission of video (i.e., television) signals on the same network. But perhaps its most important capability will be to allow relatively easy interconnection of computers and the connection of individuals to a variety of computers rather than just one.

If most departments will have an office information system in four years, it is crucial to establish the most effective means for benefitting from these technologies.

SUNet's physical facilities include broadband (Cable TV-type) technology to provide the ubiquitous campus-wide network for terminals, microcomputers and other low-to-medium transmission speed devices; this backbone network will interconnect more than 100 campus buildings. In addition, SUNet will use a smaller baseband cable system (one version is called Ethernet) to supply high transmission speed intercomputer communications; this component will include perhaps 12-14 buildings and 20-24 computers.

From the user's viewpoint the objective is to provide a single "logical" network. That is, although there will be a variety of physical networks on the campus, the user must be able to move across them seeking the information or services needed as if it were a single network.

The benefits of SUNet will include:

* A significant increase in the ease of communicating written and machine reproducible information and of disseminating ideas and knowledge through evolution of a new method and style of communication.
* Increased utilization of existing computers and a reduction in the expansion of incompatible facilities.
* Introduction of new campus-wide services (e.g., electronic mail, information retrieval) using systems that can most economically and efficiently support them, with reduction of some duplicative services.
* Sharing of scarce and expensive computer-based resources, including stored data, high-speed printers, mass-storage facilities, photocomposers, software and terminals.
* Unification of the piecemeal, uncoordinated activities supporting development and expansion of the many independent and incompatible local networks on campus.
* Containment or reduction of costs of telephone lines for data transmission.
* Increased probability of close cooperation with and assistance from major industrial and commercial enterprises in network development for Stanford's needs, as well as higher probability of funding support from the Government and from private foundations.
* Favorable positioning of Stanford for making use of emerging wide-area and satellite data communications technology for the dissemination of knowledge, for electronic publishing, and for the evolution of related information systems.

SUNet will become operational in phases over the next two years, with the initial production date now for September 1984. Its creation is being led by William H. Yundt, director of network development. Current estimates place the capital costs of SUNet development within a range or $3.5 to $5.5 million. (This compares with a capital cost of $12-15 million for the new telephone system.)

The Microcomputer Program

Over the last year, and with ever increasing speed, the University is witnessing the acquisition and use of microcomputers by our faculty, staff, and students. Microcomputers are being used to support a wide range of activities in the instructional and research programs of the University and to an increasing degree to support the administrative functions of departments, both academic and administrative.

Recognizing the need for the University to provide as much help and guidance as possible, the vice-presidents approved creation of a Microcomputer Program in the fall of 1982 with the following goal:

To encourage and support the introduction and use of microcomputers by the faculty, staff, and students in the University's academic and administrative programs and activities in the most effective and efficient means possible.

The Microcomputer Program is led by Michael P. Carter, director of instruction and research information systems. As part of the Microcomputer Program, IRIS has opened the Stanford Microcomputer Instructional Laboratory Experiment to support special projects in the training and use of microcomputers in instruction and research. Initially, S.M.I.L.E. will be used as a training facility for the Tiro Project, a program of the dean of humanities and sciences to introduce microcomputers into the Humanities. This laboratory, located in Jordan Quadrangle, will serve as a facility for a variety of experiments, including the teaching of writing using microcomputers.

Additionally, and as part of the microcomputer program, IRIS will open a Microlab in Forsythe Hall for the evaluation, demonstration and development of microcomputer systems and software. This laboratory will be available to the campus community and will be staffed by laboratory assistants to help faculty, staff and students in the use of microcomputers systems that are placed there.

Finally, the Microcomputer Program is the focal point for developing the most appropriate ways of supporting microcomputers on SUNet, the Stanford University Network. As noted above, SUNet will become operational over the next 24 months. The needs of microcomputer users for SUNet connections and services will be represented by the Microcomputer Program.

The Departmental Information Systems Program

During the past 36 months more than 150 word processors and office information systems have been acquired by University departments, both academic and administrative. The decisions to acquire these devices were made at the departmental level based on local needs. In June of 1980, guidelines were issued regarding word processors and most of the subsequent purchases involved a small set of commercial vendors whose products could be supported by the institution.

The technology has evolved to the point where the purchase of devices that provide only word processing support is no longer an effective alternative. Rather, devices or systems are now being purchased that offer the capability for a department to increase the capacity of the systems as the need for automated support increases. Office information systems are now being purchased where the emphasis is on the term "systems," meaning modularity and flexibility.

If it is accurate that most of our departments will have an office information system of some magnitude in 48 months, then it is crucial to establish the most effective means for the institution, as well as the department, to benefit from these technologies.

The purpose of the Departmental Information Systems (DIS) program, therefore, is to develop and assist in the

continued on next page

Computing...

continued from page 18

implementation of a technical strategy for Office Automation and its relationship to the institution's major administrative information systems (e.g., financial, personnel, and student data).

The DIS Program is led by David J. Ernst, director of administrative information systems (AIS). Current objectives for the Program are:

* Consultation and advice to departments in determining their requirements for office systems and assistance in the evaluation of alternatives to meet those requirements.
* Study and self-education on how to determine office requirements and the current state of available technology.
* Influencing the design of central administrative systems to reflect the existence of local systems and local needs.

IV. Central Services

The University provides central computing services where there exist economies of scale in shared or combined operations or where there is an institutional need to insure continuity and coherency.

The central services involve the provision of highly capable professional staff to assist users in meeting their information systems requirements, the provision of computer-based services that cannot be met by local capacities, the management of a stable and effective operating environment for computers and related technologies and the provision of ancillary support services.

The array of services is broad and diverse, serving more than 2,000 individual users among the faculty, staff, and student body.

For discussion purposes these services can be grouped into four broad categories: 1) central shared services, 2) dedicated nodes (services), 3) applications and professional services, and 4) computer support services.

In 1982-83 these activities are supported by a staff of 220 with an expenditure budget of $18.2 million, which is approximately 3 percent of the total budgets of those University and Hospital programs receiving support.

Central Shared Services

The 3081 Node is the focus for the provision of central shared services. As the name suggests, the Node is centered on an IBM 3081 computer located in George Forsythe Hall. The 3081 Node is, however, more than simply a large computer.

The Node includes a number of minicomputers that provide telecommunications support, a vast array of computer programs for use by faculty, staff, and students, a large number of devices for the storage of machine-readable data and a set of printing machines including two laser printers.

The 3081 Node provides three broad kinds of services: 1) computer power and programs, 2) storage of machine-readable data, and 3) high speed, high quality printing services.

The 3081 Node in an average month will execute nearly a quarter of a million individual jobs and interactive terminal sessions, has more than 50 billion characters of immediately accessible stored data and over 14,000 miles of magnetic tape storage and will print more than three million pages of paper.

The 3081 Node, and its technical successors, will be an important node on the emerging campus network. It will continue to provide those services that cannot be provided on smaller machines (e.g., access to large data sets and databases) or cannot be economically provided elsewhere (e.g., high speed, high quality and quality printers).

The evolution of this central nodal service has been and will be guided by a principal of "staying in the mainstream." This has and continues to mean remaining with IBM as the institution's mainframe computer vendor.

Dedicated Nodes

Over the past several years it has become clear that neither a single computer nor a single computer vendor could meet all the requirements of the University's diverse academic and administrative programs. Smaller computers that could operate specific programs had to be acquired. Yet, in many instances, the using department did not want to operate a "computer center" and in other instances the smaller machines had to have a direct and effective linkage to the large mainframe.

The University, therefore, began two years ago to offer a service whereby it would operate a computer and its programs where that machine was devoted solely to one purpose or to one user department. Operating economies were achieved and often development economies as well.

At present three dedicated nodes exist that support the Hospital's Patient Accounting System, the Word Graphics department and the Facilities and Services department. In this context, the University also provides support to the Research Libraries Group in the operation of its own computer.

Applications and Professional Services

The provision of highly qualified professional staff to assist individuals and departments is one of the most important Central Services missions. In some instances this assistance is without charge (for example, the consulting office in Forsythe Hall).

Mostly, however, these professional services are provided on a fee-for-service basis. Professional assistance is available in information systems analysis and design, applications programming, systems programming, database systems, computer operations and other technical support areas.

Computer Support Services

A variety of technical services are provided to clients to meet specific requirements, many of them related to major administrative applications. Included in this category are data entry, production control, terminal maintenance, and engineering services.

V. The Center for Information Technology

The Center for Information Technology is Stanford's principal organization focused on institutional efforts in information technologies and computing. The center was created in January, 1980, with a principal charge "to become a highly competent and objective source of analyses about options in information technologies-regardless of which University department or unit plans, develops or operates the particular technology." The Center was created by, and is responsible to, the three University vice-presidents most concerned with these technologies (i.e., vice-president and provost, vice-president for business and finance, and vice-president for medical affairs).

In their enabling memorandum the vice-presidents wrote: "Information and information systems, e.g., computing, networking and so on, are becoming more complex and—at least as they relate to development costs-more expensive. In those instances where the University assumes institutional responsibility for providing these programs and services (as distinct from faculty initiatives, for example) we believe there must be a point at which planning efforts are regularly initiated." This charger has guided the evolution of the Center's programs and services over the past 36 months.

The Center is structured along two axes. The first is a program and services axis that represents the means by which the Center achieves its goals and objectives. These programs and services are pesented in parts III and IV above. The second axis is the traditional organizational model of six line divisions and two support divisions. The Center's total budget for 1982-83 is $19.3 million. Of this, approximately 6 percent, or $1.2 million is allocated to Investment Programs and 94 percent, or $18.1 million represents income and expense in the provision of Central Services.

Energy efficient, high pressure sodium lamps planned for Campus Drive

The golden glow of high-pressure sodium lamps will soon be replacing the blue-white light shed by less efficient mercury vapor lamps on Campus Drive, major entrance roads, and in Stanford's parking lots. The Energy Program Office expects electricity savings worth just under $2 million for the 15-year life of the program, at a cost of about $160,000.

"The major reason for making the change is to provide increased lighting levels while dramatically reducing the lighting costs to Stanford," said Karl Johnson, who heads the lighting program at the Energy Program Office.

Conversion of the 760 mercury vapor lamps to high-pressure sodium will result not only in a 50 percent decrease in operating costs, for savings of over $40,000 a year at today's energy prices, but also in a 15-20 percent increase in nighttime illumination from the fixtures. In addition, as part of their conservation program PG&E will refund almost $14,000 to the University to help defray the costs of construction.

Virtually every segment of the Stanford community contributed to the decision to change to the new lighting. Besides the Planning Office and the Energy Program Office, which coordinated the various groups involved, the plan received the approval of Stanford's Department of Public Safety, the Provost's Office, a student study group, the University Committee on Land and Building Development (comprised of faculty, staff, and students), and the Administrative Council.

The aesthetics of the lights were an important consideration in the process of approving the conversions. The old mercury-vapor lamps highlighted the blue-green portion of the visible spectrum, while high-pressure sodium will emphasize yellow and orange.

"Because of the color differences, we installed high-pressure sodium demonstration sites at Campus Drive West, Roth Way, the blood bank, Roth House and Synergy House," Johnson explained. "We publicized all the issues involved to get people at Stanford to see the lights and participate in this decision. Over 90 percent of the community response was favorable."

High-pressure sodium lights are rapidly replacing mercury vapor lights as the standard outdoor lighting source. Though people tend to resist changes in their environment even when the changes are positive, a study conducted in San Jose showed that six months after high-pressure sodium lamps had been installed, 70 percent of the residents did not freely recall that there had been a lighting change, and 85 percent approved of the new lights when informed of the savings.

In the wake of last year's eight attacks on women at Stanford, safety is a crucial consideration in lighting. Even though the high-pressure lights will increase the lighting levels, studies conducted in urban environments have not been able to show a consistent correlation between lighting and safety. Although Stanford is not an urban environment and the studies may not be applicable, people should be aware that improved lighting does not guarantee improved safety.

All the necessary parts for the conversions have been purchased. The parking lot fixtures will be converted starting the second week of January. The pathway and street light conversions will start in February.

The conversion of all 760 fixtures should be completed by the end of March.

Ph.D. oral exams

MONDAY, JANUARY 24

Mark Albert Johnson, chemistry, "High Resolution Spectroscopic Probes in Chemical Dynamics: Applications to the Study of Intramolecular Interactions in CO_2^+ and Energy Distributions of BaI Produced Under Single Collision Conditions,"
2:15 p.m., Chemistry Gazebo.

TUESDAY, JANUARY 25

Sergio J. Chion, engineering-economic systems, "Some Explanations for the Recurrent Problems in the Balance of Payments of Developing Countries," 2:15 p.m., Terman 329. **Kevin V. Lemley,** physiology, "Effects of Prostaglandin Synthesis Inhibitors on Vasa Recta Erythrocyte Velocities of the Mammalian Renal Medulla," 2:30 p.m., Physiology Library.

WEDNESDAY, JANUARY 26

Carole R. Beal, psychology, "The Development of Knowledge About Cognitive Cueing," 3:15 p.m., 358 Jordan. James D. Milojkovic, psychology, "Children Learning Computer Programming: Cognitive and Motivational Effects," 9:30 a.m., Bldg. 420, room 358.

THURSDAY, JANUARY 27

James Sheng-Chung Chang, materials science and engineering, "Measurement and Control of Oxygen in Liquid Phase Epitaxial Growth of GaAs," 2 p.m., McCullough Bldg., Room 240.

FRIDAY, JANUARY 28

Ajay Chhibber, food research, "The Sources of Inflation and Efficient Anti-Inflationary Policy in India," 2:15 p.m., Food Research 214. **David C. Noice,** electrical engineering, 3:15 p.m., AEL 109 (S.E.L. Conference Room).

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

29679-JB (JCC:7650) CUSTODIAN WKG SUPVR: 7:30-4pm; supv the cleaning, training & other duties of custodians assigned to you; create & maintain a clean, safe, 'home-like' atmosphere for residents; check daily arrival & departure time of each custodian; maintain daily check of bldgs/grounds & promptly report security, damages, maintenance & housekeeping problems to approp offc; submit monthly report; order supplies; attend approp classes; handle all emergencies at local level until proper maintenance personnel arrive; QUALIFICATIONS: good supvry skills; demonstrated admin skills; report writing; ability to acquire exp & knowl regarding employee relations & USE contract; supvry exp required; excel commu skills a must.; S09; $1632-2046.

25924-AW (JCC:2036) ADMIN SERVICES MGR II: Asst Dir respon for all operational, admin, personnel, & budgetary aspects of self-operated & leased services in the union incl: facilities & utilities; a sundries store; a ticket offc; mtg rooms & conference spaces; travel service; a fuil service bank; & hairstyling shop; shall be the renovation & expansion mgr; respon for administerlng some TMU central services incl personnel mgmt; capital budgeting process; clerical & informa support services, etc; in the absence of Union Dir, the Asst Dir shall represent the Dir at mtgs & will act on her behalf; QUALIFICATIONS: require BA/BS or equiv exp; 3+ yrs of mgmt exp; 3+ yrs of mgmt exp; strong organizational skills; strong personal skills; strong interpersonal skills; successful financial mgmtexp; ability to function effectively in a univ setting.; C07; $2113-2724.

44396-DS (JCC:2070) ADMIN ASST II: Act as Personnel Offcr, Offc Mgr & Staff Assistant to the Registrar; coord all hires, w/ assistance fr OAIV for nonexempt staff; trains mgrs & supvrs in personnel policies, incl Affirmative Action; prov informa to staff about Univ policies, benefits, promotional opportunities; asst in cost control & productivity efforts; prov bkup to Admin Asst & Asst Registrars & to manage offc workflow during NSI planning & new sys implementation; reviews monthly budget, projs trends & expenditure patterns; coord budget & salary setting process; res & drafts mat'l in connection w/ Registrar's internal offc & genl Univ respon as Associate Provost; QUALIFICATIONS: requires knowl & work exp in all areas of personnel, budgeting, & supvn; ability to plan, organize, proj & implement; familiarity w/ Stanford policies & procedures preferable.; send appl/resume to Laurie Mathers, Old Union Rm 137; C05; $1670-2086.

23966-TC (JCC:5588) LIFE SCI RES ASST I: 50%; perform radioimmunoassays & related procedures for quantitations of hormones & autoantibodies in a specialized clinical lab & to asst in ongoing res projs; involves occasional prep of biological mat'ls & isolation & radioiodination of proteins used in various tests; processing of blood specimens received for testing; record keeping; maintenance of lab eqpt & ordering of lab supplies; requires ongoing use of theoretical judgment to continously improve accuracy & reliability of the tests performed; QUALIFICATIONS: BS degree or equiv, w/ strong bkground in biochemistry & immunology; familiarity or some work exp in genl lab tech essential; prior exp in radioimmunoassay field & Calif Med Technologist or Clinical Chemistry License essential.; C05; $835-1043.

30040-AW (JCC:7534) FACIL ENGINEER/COORD II: Primary respon is to prov technical support (engrg) to proj mgrs & more senior facilities engrs relating to a wide range of projs incl both bldg & utility sys; capable of performing mechanical engrg design incl prep of design drawings; familiar w/ Univ design standards & other applicable codes & standards; consult engrs & contractors to assure that projs meet all Univ requirements; QUALIFICATIONS: BS in engrg or equiv exp; ability to work independently; good commu skills; proven exp in engrg design & design disciplines, codes & standards.; C07; $2113-2724. 1

Bargaining unit

44328-TC (JCC:5736) TISSUE TECH II: TMS Unit; Mon-Fri, 7:30-4pm; alternate Tues-Sat; cutting 3-5 micron sections of paraffin embedded tissue incl lymph node, spleen, liver, & kidney biopsies w/ a high degree of skill & speed; perform routine H & E & special stains; embedding, coverslipping, & labeling surgical specimens; lab bookkeeping & other misc histology lab duties such as knife sharpening, solution prep, etc; QUALIFICATIONS: ASCP in Histology preferred; exp as active HistoTech; skills in high quality sectioning w/ speed; willing to work some holidays & wkends.; A30; $ 9.97.

44303-JB (JCC:6596) S&E TECH - ELECTRO MECH: TMS Unit; fabrication & assembly of a variety of Electro-Mech components & devices; maintenance, repair & modification of these devices; asst other staff members & visiting researchers w/ mech projs as needed; work fr hand sketches & verbal instructions as well as engrg drawings; QUALIFICATIONS: basic reading & math skills; able to read engrg drawings & use mech measurement instruments; familiar w/ standard bolts size; pipes sizes, & metric conversion; some welding & soldering skills nec; machine tool, electrical, & hydraulic exp helpful.; A28; $ 9.50.

12696-PB (JCC:7300) FOOD SERVICE WORKER I: TMS Unit; sets up counter lines according to procedure as assigned on daily schedule; clean milk machines, water fountains, silver carts; wipe off dining room tables; wash chairs; dust window sills; wipe spills fr walls in dining rooms; clean counter area; clean juice & soft drink machines; water plants; work in dishroom; QUALIFICATIONS: must meet health & safety requirements for food Service workers; follow instructions & work well w/ other employees.; A08; $ 5.95.

Nonexempt

43506-PM (JCC:2462) OFFICE ASST III: Work in Chairman's Offc, Dept of Medicine; asst faculty administrator/perform genl dept'l duties; typ minutes; set up mtgs; maintain files; heavy phones; mailings; asst w/ spec projs/events; QUALIFICATIONS: typ 60; knowl or willingness to learn Xerox 860 word processor; good typing; exp/training in proper use of phones in an offc environment; send appl/resume to Arnee De L'Eau, SUMC S-102D.; B11; $1246-1310.

44329-PM (JCC:2504) OFFICE ASST II-SPEC: Receptionist; answer phones/requests; handle visitors & their guests; maintain patient files; prep reports; asst w/ bookkeeping & financial matters; bank deposits; prep pinks for bindery; log cytology reports in & out; fill requests for slides & reports, accession; searching patient records; QUALIFICATIONS: typ 50; med terminology; good telephone & commu skills; accurate filing skills; typing skills; ability to interact cooperatively w/ staff, pathologists & other med students & clinicians; contact: Leslie Culligan, P-2020 Med Ctr, 497-7211.; B10; $1189-1246.

36181-PM (JCC:2596) SECY II-SPEC: 8-4:30pm; prov sec'l support for res/clinical unit in Div of Gerontology; performs accurate finished form typing on corresp, manuscripts, reports & forms, fr handwritten or typed copy; receives & screens a variety of calls & visitors, some patient contact; knowl of genl offc routine; interested in learning APPLE computer; enter & evaluate clinical data; QUALIFICATIONS: typ 65; med terminology helpful; 2-3 yrs of approp clerical sec'l exp required; work comfortably w/ a diverse group of doctors, technicians, nurses & clerical staff; send appl/resume to B. Barnett, VA Hospital Bldg 2, room 181.; B12; $1310-1373.

27463-BP (JCC:2596) SECY II-SPEC: Approx 60% scientific/engrg manuscript typing of invention disclosures & other mat'l on word processing eqpt (on-the-job training for DATAPOINT eqpt); work directly w/ Patent Engrs/Advisors; sec'l support for group & bkup for Offc Asst; 40% sec'l support for hrs worked, yrly leave record, payroll & statistics, mtg arrangements, telephones, travel, acctg/expenditure forms & followup, filing, mail, misc, etc; QUALIFICATIONS: typ 65 accurately; excel interpersonal skills to interact w/ group & SPO personnel as well as Univ admin staff & faculty; thorough knowl of grammar, punctuation, spelling, & format; 2-3 yrs demonstrated exp intensive manuscript prep, med/scientific terminology, prev word processing & SPIRES exp; 2 yrs college or equiv; send appl/resume to Phyllis Hughes, Encina Hall 40.; B12; $1310-1373.

29522-PM (JCC:1747) LIBRARY SPEC I-Trainee: Subj to temp layoff during summer quarters; Charges out reserve books & other circulating mat'ls; prov genl informa to lib users; issues lib cards, registers patrons, monitors eligibility of the public for access to lib & for borrowing; assts w/ circulation controls based on an electronic security sys; interprets & carries out lib policies & procedures; sends out notices, files & maintains records; answers genl phone inquiries; searches for & retrieves mat'ls for Public Services use; collects fees & fines & maintains cash records; opens & closes lib; may asst w/ simple computer files & machine memory sys; works nights, wkends & holidays, as necessitated by Public Services Dept schedule; QUALIFICATIONS: exp in interpreting & carry out detailed, written policies; phone answering skills needed; able to remain on feet for better part of the day; lib exp is a major advantage; send appl/resume to Karen Kieffer-Gillette, Jackson Lib, GSB, Room 119, 497-2162.; B10; $1189-1246.

Rental housing

HOUSING AVAILABLE

□ **Beg. Feb. 1, '83:** SHARE 2BR Oak Creek apt w/prof. woman. Tennis, pools, etc. Call Cindy, 326-6660 or lv. message, will return call.

□ **NOW:** SHARE hse w/prof. female. 2BR/2BA, W/D. Interest in solar proj, design, landscaping. Female

HOUSING NEEDED

□ **NOW:** Esc. Vil. family (3) seeks long term 2 or 3BR hse or apt. rental in Jordan Sch. Dist. Refs. avail. Call Davidson, 857-0390.

□ **Beg. Feb. 1, '83:** Postdoc at Med. Ctr., wife, 2 children require 2BR apt. or hse. within bike dist. of Stanf. for 10 mos. Local refs. Call Dr. Maze, (415) 848-3938 (day), 851-2531 (eve).

□ **Feb. to Sept. '83:** Visit. prof. seeks 3BR apt. or hse. on or nr campus. Poss. exchng for lovely flat nr. Tel-Aviv Univ. Call Margret, 497-3910 (day).

□ **Jan. 17 to 28, '83:** Resp. woman w/17-yr-old son seeks temp. hsng before joining husband in Colo. Will gladly care for pets. Call (415) 327-8615.

□ **Spring Qtr '83:** Visit. Eng. prof, wife, 2 children seek fully furn. & equipped 2/3BR hse or apt. Reasonable cost, will hsesit or help. Nonsmokers. Call 493-1059 or 497-2547 (day), lv. messages for Locke.

□ **End Mar. to end June '83:** Visit. prof, wife, nonsmokers, no pets, no children, seek campus hsesit. Call 497-1745 (day).

March & April: Visit. surgeon & wife need furn. apt. Immaculate, nonsmokers, non-drinking, no pets or children. Call 854-0781.

□ **Sept. '83 to Sept. '84:** Visit. prof, spouse seek to rent or exchange furn. 2BR in College Terr. or Old Palo Alto. Write or call Rogowski, Pol. Sci. Dept., UCLA, Los Angeles, (213) 397-2379.

□ **NOW:** New staff member looking to rent 3BR, 2BA, hse with yard near campus. Property owner; refs available upon request. Call Edward Escobedo, days 497-2009; nights, 857-0168.

pref.; mature male considered. Privacy for $400. Write: J. Powell, Box 11425, Stanf. 94305 or call & lv. msge for Stanf. sublet, 494-2611.

□ **July 1 to Dec. 31, '83:** Furn. 4BR/3BA hse in Sharon Hgts. Study, FR, sep. DR, 2 frpls, 1/3 acre. $1500/mo. Call 497-3785 (day), 854-7471 (eve).

□ **April thru Sept. '83:** Furn. 3BR/2BA hse in Palo Alto. Frpl, FR, all appl., pool w/solar heat, solar hot water. Dir. bus rte. to Stanf. 10 min by car. Children ok, nonsmokers. Call Sladen, 858-0494.

□ **Mid Mar. to Mid. Nov.'83:** Fully furn. Palo Alto hse. 3-4BR/2BA, LR, FR, lrg. cov. patio. Lush garden, easy keep-up, auto. sprinklers. Adults, no pets. $1200/mo. incl. water. Call 858-0880 (eve), 497-1580 (day).

□ **Beg. Feb.:** Central Woodside. Hse to share w/one other. Quiet, woodsy, clean. Mature, resp. person. $400/mo. Call (415) 859-3451 (day), 851-8336 (eve, wknd).

□ **NOW:** 6 mo. min. Palo Alto Hills, new, furn. 1BR apt. No pets, nonsmoker. Priv. ent., deck w/view. Quiet, 3½ mi. to Stanf. $600/mo. incl. util. Call 948-8575.

□ **Feb. 1 to Aug. 31, '83:** Flat in Paris. Furn, 40 sq. meters, 4th flr (no elev.), 3000 FF/mo. Write Dr. George Agoston, 4 Rue Rambuteau, 75003 Paris, France.

□ **Mar. 25 to June 1, '83 (nego):** Fully furn. 4BR/2BA hse in Palo Alto, FR. $850/mo. incl. gardener. Call 494-1148 or 497-9309 (day).

□ **July & Aug.'83:** Attrac. summer rent. Dwntwn Palo Alto, 1BR/2BA condo, library, balc., pool, secure. Call Pat Mueller-Vollmer, (415) 324-1624 (eve).

□ **NOW:** Tahoe Donner Ski Bowl condo. 3BR + loft, sleeps 10. Color TV, spa. Call Bienenstock (415) 493-8649.

□ **End Mar. to end July '83 (flex):** Fully furn. Los Altos hse on cul-de-sac. 4BR/3BA, 6 mi. to Stanf. Walk to schl, shops, dwntwn. $1200/mo. incl. gardener, water. Call (415) 948-0936.

□ **Beg. Feb. 1, '83:** Unfurn. spacious hse, 4BR/2BA, frig, stove, DW, w/w carpet, FR, frpl., fenced yd, stor. shed, carport. No pets. So. Palo Alto. 10 min. to Stanf. $1050/mo. + util. Call 329-0797.

□ **Beg. Mar. 1, '83:** Furn. 2BR/2BA apt. w/spectac. canyon view. W/D, pool, tennis, 12 min. to Stanf. Avail. 7 to 9 mo. $900/mo. Call Gay Morris, 326-1200 (day), (415) 591-7085 (eve).

□ **NOW:** Ski cabin, So. Lake Tahoe. 2BR, frpl, color TV, phone. Adj. Natl Forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3141 (eve).

□ **Regularly Available:** 1 & 2BR furn. & unfurn. apts & twnhses in Palo Alto & Menlo Pk, in good nghbrhds & close to campus. Also 3BR/2BA hses. $525 to $800/mo. Call Shirley at 493-2321 or Jane, (415) 968-4957.

□ **Mid-Feb. to Aug.'83:** Furn. hse, Palo Alto 2BR/2BA, very nr. Stanf. Nonsmokers, no pets. $850/mo. + elec. & gas. Call 328-0179.

□ **Aug. 1, '83 to June 30, '84 (flex):** Fully furn. campus hse., 4BR/3½BA, study, library, DR, frpl, pool, view, acre. $1700/mo. incl. grdnr, pool serv. Call (415) 327-5204 or 497-4732 (day).

□ **April 1 to June 15, '83 (flex):** Fully furn. hse. 4BR/2BA, AEK, den, W/D, hot tub on deck. Children ok. Incl. grdnr, swim/tennis club mbshp (across st.). 3 mi. to Stanf. On bus rte. Photos avail. $1000/mo. Call 494-6492.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Jan. 25, in Room 132, Tresidder Union.

The sessions are open to all new employees without preregistration.

36143-BP (JCC:2454) OFFICE ASST II: 62.5%; 5 hrs between 11am & 5pm; 9.5-10 mons appt mid-Sept thru mid-June; work in Manzanita Park Offc which is the ctr of admin activity for staff & students in Manzanita & also serves as an information ctr for Manzanita students; respon for & directs offc operations; liaison w/ custodial staff; liaison w/ food service staff; maintenance of Manzanita program budgets; supvry duties; QUALIFICATIONS: thorough knowl of, & ability to perform offc procedures, practices, & methods; ability to win cooperation fr students & faculty of all ethnic bkgrounds; clear & succinct in oral & written commu; typ 45; accuracy w/ numbers & other details; ability to evaluate admin procedures; send appl/resume to Elizabeth Hiyama, 311 Old Union, 497-3044.; B09; $706-743.

Controller's Office workshops set on accounting, travel, payroll

The Controller's Office has scheduled four workshops in February and March. The courses are:

Introduction to the Stanford Accounting System (two two-and-a-half-hour sessions). For employees new to Stanford who monitor either departmental or auxiliary activity expenditure statements. The course includes the organization of the Controller's Office, discussion on account numbers, responsibility for the use of funds and record retention. Practical work includes practice in reading an expenditure statement in forecasting for future results.

Wed., Feb. 2 and 9, 9:30 a.m.-12 noon, Room 112, CERAS Building.

Travel (one two-and-a-half-hour session). For employees who need to understand the University's travel policy (Guide Memo 36.7) to complete travel and expense reports. The Travel Workshop summarizes travel policy, defines allowable travel costs, and provides practice in completing the necessary forms for Advances (SU-34A) and Expense Reports (SU-35).

Wed., Mar. 9, 9:30 a.m.-12 noon, Room 112, CERAS Building.

Payroll Personnel (three two-hour sessions). For employees completing forms related to Payroll-Personnel actions and record keeping. This workshop includes a review of policies and procedures, and practice in completing all necessary forms.

Fri., Mar. 11, 18, and 25, 10 a.m.-12 noon, Room 112, CERAS Building.

Procurement (two two-hour sessions). This new workshop reviews the procurement process along with criteria for choosing the correct form amongst the SU-10, SU-11, SU-12, SU-13, SU-14, SU-15, SU-34A, SU-34B, SU-35, SU-40, SU-41 and SU-43.

Wed., Feb. 16 and 23, 10 a.m.-12 noon, Room 112, CERAS Building.

To enroll in one of the courses, send name, department, campus address and phone number to Alice Forbes, 200 Encina Hall.

Carpools

One person to join existing carpool to Stanford. M-F, 8-5. We meet at Stevens Creek & Wolfe Road, Cupertino. Please contact Ana Errico at 7-0612.

Long-established Berkele, -Stanford carpool seeks new members. Leaves Berkeley, Claremont area 8:15 a.m., leaves Stanford 6 p.m. Elizabeth Traugott 7-4284 or Jon Bendor 7-4480.

Ride needed SF-Stanford-SF Glen Park/Diamond Heights. Call Brandt, 7-1171.

Join existing carpool. Leaves Homestead and Foothill Expressway to Stanford. M-F, 8-5. Call Jeannette, 7-9627.

I'm looking for a carpool between S.F. and Stanford (preferably from the Haight-Ashbury) 4-5 days/week, approx. 9-5. Please call Nora at 431-9649 eves.

Looking for two persons to join a Mission Noe Valley-Stanford Univ. carpool. M-F, 8-5. Call John, 821-1665, or Yinon, 431-0951.

Jobs...

14300-BP (JCC:2454) OFFICE ASST II: 50%; 8-12; typ varied form letters; duplicates, collates, assembles & distributes mat'ls; transfer informa onto & off of forms, codes, posts, makes simple entries; modify, maintain & updates existing computer program; knowl of Wylbur helpful but can be trained; asst other offc staff in answering phones, making reservations & answering genl questions regarding Faculty Club; QUALIFICATIONS: typ 45; good spelling skills; thorough knowl of English grammar; atten to details & accuracy essential; contact: Pat Heeger, 497-4325.; B09; $565-595.

17846-PM (JCC:2512) Offc Asst III-Spec: 50%, 1-5pm; answer pones; route calls; type messages; type routine letters, memos, forms, manuscripts, grants; operate Xerox 860 word processor (will train); order & maint supplies; transcribe from dictaphone; maint files; photocopy documents; handle appts, etc for Chief of Immunology; generally asst admin asst; learn medical terminology; QUALIFICATIONS: Type 65 wpm; must be an excellent typist & speller; good interpersonal skills; willingness to learn medical terminology; send appl/resume to Claire Wolf, Med Ctr M215, 497-7900; B12; $655-687

Apples, IBM-PC costs reduced

Procurement has entered into agreement with a firm in San Francisco whereby Stanford University and its faculty, staff and students receive 25 percent discount (or more in some cases) off factory list prices for IBM-PC and Apple II personal computers and related software and peripherals.

In addition, free delivery and installation is provided. Several local companies have offered varying discounts ranging from 20 percent to 30 percent off list prices but not for all items and in some cases without free delivery and installation.

Copy machines

Departments desiring new or replacement copiers now have the opportunity to view some of the more cost-effective and better copiers currently on the market. We have made on-going arrangements with various copier companies to provide demonstration models of low and medium volume copiers. Dependent upon current need, we will have available as many as six or seven kinds of copiers at any given time, so the departments looking for new copiers might have an opportunity to look at and try them out.

These copiers will be available at Procurement, 851 Welch Road. Anybody interested in looking at them should call Pete Quey, 497-1757, for a list of what copiers are currently available and an appointment to see them.

Mexican film

Les Blank, well-known filmmaker and "folk biographer," will accompany a special showing of his film, *Chulas Fronteras*, at 7 p.m. Thursday, Jan. 20, in the Casa Zapata lounge at Stanford. A reception will follow with food, antojitos, music and "ambiente."

For more information stop at Casa Zapata in Stern Hall or call 497-3297.

Windham Hill (above are Ira Stein and Russel Walder) will help Tresidder celebrate its 20th birthday with a concert at 8 p.m. Saturday, Jan. 22, in the upstairs lounge. The two will perform pieces from their debut album, 'Elements.' Admission is $5.

Tresidder's birthday party offers cake coke, Toons, films, trips

Tresidder Union will celebrate its 20th birthday this weekend.

"American Graffiti," starring Richard Dreyfuss and Ron Howard, and directed by George Lucas, will be shown at 4, 6:30 and 9 p.m., Thursday, with a general admission charge of 75 cents. Children are welcome at the early showings.

Friday will feature price rollbacks. From 10 a.m. to noon, Marcel's will offer a doughnut for a nickel. At noon, Union Crossroads will feature goodies from a converted malt shop, tunes on a special '60s jukebox, and rolled-back prices on specific items. The good old days of 30-cent cherry cokes and vanilla rootbeers can be recalled from 2 to 4 p.m. in the Coffee House.

The Recreation Center will offer reduced prices all day, with bowling at 35 cents a game and billiards for 60 cents an hour.

A zany birthday celebration follows Friday at noon. Marcel will bake a Tresidder Union cake, which will be cut and distributed as long as it lasts. The Toons, a well-known San Francisco rock 'n' roll band, will sing on the front patio.

The Great Directors Film Series will show films of the American Avant-Garde by Hollis Frampton in the Geology Corner, located in the outer quad across from Skilling Auditorium at 8 p.m. Friday. Featured will be "Nostalgia," "Poetic Justice" and "Critical Mass." Admission is $2.50.

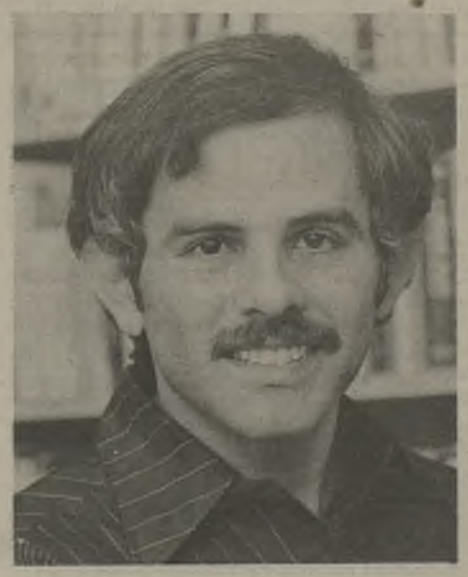
The Coffee House will feature Eve Bluestein, with bluegrass, from 9 p.m. to midnight. Admission is free.

A suitcase party from 8 p.m. to midnight will offer a lucky winner a weekend trip for two to New York, a room in the Waldorf Astoria Hotel, tickets to a Broadway play, and after-theatre dinner at Sardi's.

The winner must be present at the dance to win, and will be whisked away to the San Francisco Airport immediately upon winning. The trip is provided by Sequoia Travel. Rock 'n' roll dancing music will be provided by "Rescue." Admission is $2.

Saturday features "An Evening with Windham Hill" with Ira Stein and Russel Walder in Tresidder Union Lounge at 8 p.m. Admission is $5.

The weekend birthday events are part of a quarter series of programs, Winter Fete, sponsored by Tresidder Union in conjunction with its twentieth anniversary.



Islas to teach short evening course

Ernest Hemingway and F. Scott Fitzgerald are two of the most popular American writers of this century. Much like ours, the world they portrayed was one of violence and decadence, romance and courage.

The writings of these two powerful authors will be examined in a four-part evening seminar sponsored by the Stanford Alumni Association beginning at 7:30 p.m. Tuesday, Jan. 25.

Stanford English Prof. Arturo Islas, recipient of the 1976 Lloyd W. Dinkelspiel Award for outstanding contribution to undergraduate education, will teach the course which will be held on campus Jan. 25, Feb. 8 and 22, and March 8.

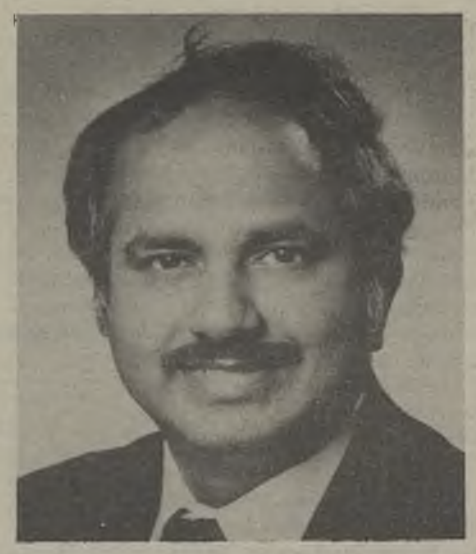
For more information, please contact Risa Forister at the Stanford Alumni Association, 497-2021. The seminar is open to the public.

Arturo Islas

The Paul Taylor Dance Company will perform in two different programs at 8 p.m. this Thursday and Friday, Jan. 20-21, in Memorial Auditorium. Above is 'Mercuric Tidings,' which will be part of Friday's program. In addition to the two performances (tickets are $11.50-8.50 with $3 off for students and seniors), the company will give a free lecture/demonstration at 8 p.m. Wednesday, Jan. 19, in Memorial Auditorium.

Robotics expert will give three lectures next week

Computer science Prof. Raj Reddy, director of the Robotics Institute at Carnegie-Mellon University, will deliver the George and Sandra Forsythe Memorial Lectures on Jan. 24, 26, and 27 at Stanford.



A recipient of one of the first Ph.D.s awarded by Stanford's Computer Science Department, Reddy is known for his work on speech understanding and other signal interpretation systems which have led to a number of important techniques in artificial intelligence.

The first lecture, at 7:30 p.m. Monday, Jan. 24, in Skilling Auditorium, will be "Technologies for Learning," exploring trends in computer technology and their implications for learning and education. Reddy will also present a research agenda of several problems in learning which may be solved with the availability of low-cost supercomputers.

The second, "Unsolved Problems in Artificial Intelligence," will be given at 7:30 p.m. Wednesday, Jan. 26, in Skilling Auditorium. A number of knowledge-intensive artificial intelligence tasks will be examined which, while conceptually possible, may not be done for decades because of the lack of adequate tools, professionals, facilities, and techniques. Some of the necessary conditions for making these problems solvable will be explored.

A third, more technical talk titled, "Task Oriented Computer Architectures," will be given at 4:15 p.m. Thursday, Jan. 27, in Jordan 040.

The talks honor the memory of computer science pioneers George and Sandra Forsythe. George was the founder of Stanford's Computer Science Department and as its first head nurtured it through its formative years. Sandra was an influential

Raj Reddy

textbook writer and educator in computer science. The Forsythes encouraged young people to pursue academic careers and were always interested in the educational process.

Prof. Gene H. Golub, head of the Computer Science Department, observed, "We are honored to have a distinguished alumnus return to Stanford to share with us his thoughts on problems of such importance to the field of computer science."

Seminars planned on geothermal techniques

The Stanford Geothermal Program seminars will be held at 1:15 p.m. Thursdays in Room B67 of the Mitchell Bldg. The schedule for this quarter is as follows:

Jan. 20: "Planning Commercial Development at the Geysers," by SAI Engineers.

Jan. 27: "High Temperature Well Testing Instruments," by Sally M. Benson of the Lawrence Berkeley Laboratory.

Feb. 3: "Geothermal Energy Development at the Geysers," by Robert Lindquist, former chief engineer at Magma Thermal Power.

Feb. 10: "Hydraulics of the Klamath Falls Geothermal System," by Edward Sammel, U.S. Geological Survey.

Feb. 17: "Use of Gravity in Evaluating Reservoir Characteristics of East Mesa," by Tsvi Meidav of Trans-Pacific Geothermal.

Feb. 24: "Application of Geochemistry to Understanding Geothermal Systems," by Robert W. Potter II of Occidental Research Corporation.

Mar. 3: "High Temperature Geothermal Developments in the Basin and Range Province," by W. Richard Benoit of Phillips Petroleum Company.

For more information, call Jon Steinar Gudmundsson, 497-1218 or 497-4744.

Program on financial management

A three-session financial managing program for faculty and staff will be held from 7 to 9:30 p.m. Thursdays, Feb. 3, 10, and 17, in the SLAC Auditorium.

The free program, which is open to spouses, is conducted by a financial specialist from Waddell and Reed, Inc. of San Jose and sponsored by Benefits and Records, according to Manager Jeannie K. A. Thomas.

It is free of product identification and provides an opportunity for individual counseling and free computerized financial analysis for each faculty and staff member who so desires.

Topics to be discussed include financial planning as an economic tool, detecting and coping with the effect of inflation, tax planning and tax reduction strategies, preparation of your financial plan, effective credit management, current market conditions, developing your investment program, retirement planning, identifying realistic insurance needs and reducing costs, and estate planning.

Preregistration is not necessary. Questions may be directed to benefits specialist Mary Simonton, 497-9393.

CalTech expert to give Linus Pauling lecture

Prof. Leroy E. Hood, chairman of the Division of Biology at California Institute of Technology, will give the tenth annual Linus Pauling lecture at Stanford.

His free public talk on "Genes of the Major Histocompatibility Complex" is scheduled at 4 p.m. Tuesday, Jan. 25 in Fairchild Auditorium of the Stanford Medical Center.

Hood received the Howard Taylor Ricketts medal from the University of Chicago in 1980 for "outstanding accomplishments in the medical sciences" and was elected to both the National Academy of Sciences and the American Academy of Arts and Sciences last year.

He has played a leading role in deciphering the structure, organization, rearrangements and evolution of antibody genes. These studies have provided fundamental insights into how relatively modest amounts of genes can generate enormous amounts of information through the combinatorial scrambling of gene segments and somatic mutation.

He also has pioneered the development of a unique microchemical facility at Caltech which contains instruments for the analysis and synthesis of genes and proteins. This may be used with two other biotechnologies—the recombinant DNA and monoclonal antibody techniques—to isolate and characterize interesting genes with speed and precision.

More recently, Hood's laboratory has started to analyze genes of the major histocompatibility complex. These genes play a fundamental role in regulating several aspects of the vertebrate immune response.. This system provides a unique opportunity to employ recombinant DNA and microchemical instrumentation techniques to determine how communication occurs between cells.

Ramsey to speak on atomic clocks

Norman Ramsey, the Higgins professor of physics at Harvard, will give a free public lecture on "Atomic Clocks" at 8 p.m. Tuesday, Jan. 25, in the Physics Lecture Hall at Stanford.

He is the 12th person chosen to give distinguished lectures in memory of Prof. Leonard I. Schiff of the Stanford Physics Department.

Ramsey will give a specialized talk on "Experiments on Time Reversal Symmetry and Parity" at 4:15 p.m. Wednesday, Jan. 26, in Physics Lecture Hall.

Ramsey is the author of books on *Experimental Nuclear Physics*. *Nuclear Moments*, *Molecular Beams*, and *Quick Calculus*.

His experimental work has ranged from molecular beams to particle physics. It has concentrated on precision measurements of the electric and magnetic properties of nucleons, nuclei, atoms and molecules.

President of the American Physical Society in 1978-79, he has been chairman of the Board of Governors of the American Institute of Physics since 1980.

From 1966 to 1981 he was president of the Universities Research Association which operated the Fermi National Accelerator Laboratory. Many years earlier, he was executive secretary of the scientists who established Brookhaven National Laboratory.

Skiing on Lembert Dome, Yosemite High Sierra **by Ansel Adams 1930**

Ansel Adams' 'Ski Experience' photos at Stanford Museum

"Ski-Experience," early and rare examples of Ansel Adams' work, are on display at the Stanford Museum through March 30.

The photographs were made in 1929 and 1930, at a time when Adams was finding his way toward the photographic technique that would enable him to communicate what he felt about what he saw. The comparatively small size of the photographs, the delicacy of their treatment, the sureness of their design and their fine quality proclaim them as the works of the young man who would become recognized by the world as a master of the photographic art.

The prints in the exhibition were made at the request of Donald and Mary Curry Tresidder of the Yosemite Camp and Curry Company (Dr. Tresidder later became the fourth president of Stanford University). The Tresidders commissioned Adams to illustrate the winter sports that were being developed in Yosemite in the late 1920s.

It was then that the all-year highway from Merced was paved, the Ahwahnee Hotel was opened, and the Yosemite Ski School was founded. The sports in the Valley—ski-joring, sleighing, ice-skating, dog-sledding and skiing—were the subjects of Adams' 1929 photographs.

In 1930, he made a long ski trip to the High Sierra with the Tresidders and the recently hired Austrian ski-instructor, Jules Fritsch. It was this "ski-experience" that he described in the *Sierra Club Bulletin* of 1931 and illustrated with several of the photographs in the exhibition. Ansel Adams' words are apposite to his photographs of the immensity and purity of the snow-covered mountains above Yosemite at a time when few people made tracks there:

"To us, four motes on an Earth-gesture of high stone, it appeared that great mountain spirits had assumed white robes of devotion and were standing in silence before the intense sun. . . . "

All of the photographs in the exhibition are original prints; the negatives were destroyed in a darkroom fire in 1937. Most of them are on loan to the Stanford Museum from Mr. Thomas W. Weisel of San Francisco. Others come from the collection of Mrs. Oliene Tresidder Mintzer of Menlo Park.

The Stanford Museum is open to the public Tuesday through Friday from 10 a.m. to 5 p.m.; Saturday and Sunday from 1 to 5 p.m. It is closed on Mondays. Admission is free. Docent tours can be arranged by calling 497-3469.

Concert marks Church's 80th

Herbert Nanney, University organist and professor of music, will perform at 2:30 p.m. Sunday, Jan. 23, in Memorial Church in a free recital to commemorate the 80th anniversary of the dedication of the church.

Nanney will perform works by Buxtehude (*Prelude and Fugue in G minor*); J. S. Bach (*Deck Thyself, My Soul, with Gladness* and *Toccata and Fugue in D minor*); Mozart (*Andante for Small Mechanical Organ*); Mendelssohn (*Sonata No. 1 in F minor*); Brahms (two Chorale Preludes); Darke (*Brother James' Air*); and Franck (*Chorale in A minor*).

Seventeen organ students have received Doctor of Musical Arts degrees from Stanford under Nanney's tutelage.

I-Center films on Australia

The International Center's winter quarter Other Cultures film series continues its Australian Mini-Film Festival at 7:30 p.m. Thursday, Jan. 20, with the second in a series of three documentaries on the Australian film industry.

Passionate Industry: 1920-30 moves us along through the filmmaking of that decade. Also to be shown is *Where Dead Men Lie*, a tale by Australian literary figure Henry Lawson. It portrays Australia's pioneers and the heartbreak of life in the Outback.

Members of the Stanford Community are invited to learn more about what has become one of the world's most outstanding motion picture industries, and enjoy some of the delights of Australia via special door prizes and Australian wine tasting.

There is no charge, but a 75 cent donation is requested at the door.

Whitehouse gives concert Jan. 30

Stanford's Music Department presents flautist Shelley Whitehouse in a free concert at 8 p.m. Sunday, Jan. 30, in Dinkelspiel Auditorium. Joining her will be David Achenbach, harpsichord, and Kris Speer, bassoon.

The program will include Blavet's *Sonata No. 4* and Bach's *Sonata in C Major*, both for flute and harpsichord; Beethoven's *Trio for flute, bassoon, and piano; Cantabile and Presto* by Enesco, *Soliloquy* by Rogers, and *Sonata* by Poulenc.

Whitehouse is a sophomore at Stanford majoring in music and political science. She studies flute with Frances Blaisdell. Achenbach is a graduate student in music; Speer is a junior majoring in music and earth sciences.

Japanese film showings slated

Three free public showings of Japanese films are planned at Stanford at 7:30 p.m. Thursdays, Jan. 27, Feb. 10, and Feb. 24, in Room 41, Building 420 Jordan Hall, at Stanford.

The series is jointly sponsored by the Center for East Asian Studies, the History Department, East House, and Okada House.

Jan. 27: "Red Bear (Akahige) (1965)," directed by Akira Kurosawa; with Toshiro Mifune, Yuzo Kayama. A tale of the internship of a vain young doctor in a slum clinic who gradually learns humility and gains strength under the tutelage of a gruff, heroic older doctor.

Feb. 10: "I Was Born, But. . .(Umarete wa Mita Keredo) (1932)," directed by Yasujiro Ozu; with Hideo Sugawara, Tokkankozo. Silent comedy of middle-class manners and mores in 1930s Japan. Two small boys must adjust to recognition of the fact that their father is a company employee whose boss's son they are told to play with.

Feb. 24: "Fires on the Plain (Nobi) (1959)," directed by Kon Ichikawa; with Eiji Funakoshi, Mickey Curtis. Bleak story of the close of the Pacific War in the Philippines, marked by Ichikawa's ironic humor. Retreating Japanese soldiers fight starvation and embittered Philippinos.

Harlan Hokin

Hokin to direct vocalist concert

Vocal music of the "High Middle Ages: The Old Way and The New Way" will be presented by Stanford's Music Department at 8 p.m. Sunday, Jan. 23, in Dinkelspiel Auditorium.

Directing the concert will be Harlan Hokin, tenor and newly appointed lecturer in early voice at Stanford. Performing with him will be singers Michael Collver, Paul Vorwerk, and Vismaya Lhi. Maria Walsh will accompany on the vielle, an early instrument similar to the viola.

Hokin describes vocal music of this era as "some of the most interesting music of all time. . .with spectacular displays of vocal technique." The first half of the program will be *Ars Nova*, or The New Way: music by 14th-century poet/composers Jacopo de Bologna and Guillaume de Machaut.

The second half of the program will be *Ars Antiqua*, or The Old Way: 12th-century church music from Notre Dame, including Gregorian chants, liturgical pieces, and a very rarely heard four-part organum.

Hokin received his B.A. in music from UC-Berkeley, then spent three years studying early music at the Schola Cantorum in Basel, Switzerland with Thomas Binkley and Andrea von Ramm. He has performed with Sequentia in Europe and La Corte Musical in Berkeley.

Collver is a well-known counter-tenor who performs widely in Europe. Vorwerk is presently director of choral activities at UC-Santa Cruz, on leave from Cal Arts in Valencia.

Tickets are $4 general admission, $2 students and senior citizens.

Ferguson, Lawler duo-guitar fete

Stanford's Music Department presents duo-guitar ensemble Charles Ferguson and Timothy Lawler in concert at 8 p.m. Saturday, Jan. 22, in Dinkelspiel Auditorium.

Ferguson is Stanford's lecturer in guitar and a graduate of Columbia and California Institute of the Arts. Lawler teaches guitar in San Mateo and graduated from the San Francisco Music Conservatory.

The duo will perform works by Pachelbel, Lawes, Bach, Mozart, Myers, Duarte (a former teacher of Lawler's), Riera, Barrios, and Carulli.

Tickets are $4 general admission, $2 for students and senior citizens,

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Jan. 19 to cover the week of Mon., Jan. 31 through Sun., Feb. 6.

MONDAY, JANUARY 24

Biological Science Seminar: Talk by Dr. Stewart Thompson. 4:15 p.m. Room T-175,Herrin Hall-Biological Sci.

Computer Science Lecture: "Iterative Algorithms and Software for Large Sparse Linear Systems" by David Young, Univ. of Texas at Austin. 4:15 p.m. Margaret Jacks Hall,Third Floor Lounge.

Biological Sciences Seminar: "The Molecular Basis of a Stereotyped Behavior" by Dr. Richard Scheller. 4:15 p.m. Room T-175 Herrin Hall,Dept. of Biological Sciences.

Stanford Student Jewish Appeal Workshop: "Israel's Social Needs". 7 p.m. History Corner Rm.34.

Forsythe Memorial Lecture: "Technologies for Learning" by Prof. Rai Reddy of Carnegie Mellon University. 7:30 p.m. Skilling Aud.

Film Society: "Magnificent Ambersons" (1942) and "Holidays" (1938). 7:30 p.m. Kresge Aud. $2.00.

TUESDAY, JANUARY 25

Bechtel International's Tuesday Luncheon/Lecture Series: Mariusz Ziomecki, former senior editor of Kultura, one of Poland's national weeklies. Noon. I-Center. $2.50 includes hot lunch;brown baggers welcome.

STARTS: Crochet Class with instructor Karen Springen. Noon-1 p.m. Tresidder Union rm. 132. $8 for 8 weeks.

Stanford Museum of Art Lunch Tours: "The Glory of Greece". 12:15 p.m. Stanford Museum.

Feminist Studies Dept. Lecture: "In and Out of Harm's Way: Arrogance and Love" by Marilyn Frye, University of Michigan. 4 p.m. 305 History Corner.

Stanford Alumni Assoc. Seminar: "Hemingway and Fitzgerald" by Prof. Arturo Islas. 7:30 p.m. Call Rita å 497-2021 for location.

Center for East Asian Studies Chinese Film Fesival: "Fifteen String of Cash" (1956). 7:30 p.m. Memorial Aud. $1.50 donation.

Physics Dept. 1983 Schiff Memorial Lecture: "Atomic Clocks" by Prof. Norman Ramsey, Harvard Univ. 8 p.m. Physics Lecture Hall,rm. 100.

CROW and Lively Arts: Piano Recital Featuring Women Composers: Sylvia Glickman, Director of Chamber Music, Haverford College. 8 p.m. Dinkelspiel Aud. Tickets Available through Tresidder ticket office.

WEDNESDAY, JANUARY 26

Latin American Studies Lecture: "Recent Spanish American Theater" with Prof. Rene de Costa, Dept. of Romance Languages and Literature, Univ. of Chicago. Noon. 582 Alvarado Row-Bolivar House.

Chemical Engineering Lecture: "Selectivity in Xylene Isomerization: Configurational Diffusion in Zeolite" by Prof. James Wei, Dept. of Chemical Engineering, MIT. 4:15 p.m. Chem. Engineering Conference Rm.

Forsythe Memorial Lecture: "Unsolved Problems in Artificial Intelligence" by Prof. Rai Reddy of Carnegie-Mellon University. 7:30 p.m. Skilling Aud.

Lively Arts at Stanford: "Practical Musical Consideration—A Discussion from a Journalistic Point of View" by Harold C. Schonberg, Cultural Correspondent, New York Times. 8 p.m. Dinkelspiel Aud. $5.50,students $4.

Lively Arts at Stanford: Harold Schonberg Lecture. 8 p.m. Dinkelspiel Aud. $5.50;$4.00 students.

THURSDAY, JANUARY 27

Stanford Geothermal Program Lecture: "High Temperature Well Testing Instruments" by Sally M. Benson, Lawrence Berkeley Lab. 1:15 p.m. Mitchell Bldg. Rm. B67.

Condensed Matter Physics Seminar: "Correlation length and fluctuation in inhomogeneous superconductors", Bernard Giovannini, University of Geneva, Switzerland. 4:15 p.m. Applied Physics 200.

Risk Analysis Seminar Series: "Safety Trade-offs on the Three Mile Island Clean up" with Prof. Howard Raiffa, Harvard Univ. 4:15 p.m. Terman Aud.

Forsythe Memorial Lecture: "Task Oriented Computer Architectures" by Prof. Rai Reddy, Carnegie-Mellon Univ. 4:15 p.m. Jordan 40.

Solid Mechanics Seminar: "Nonlinear Soil Structure Interaction" with Dr. Jeremy Isenberg, Weidlinger Associates, Menlo Park. 4:15 p.m. Skilling Aud.

Center for Teaching and Learning: "Specialization: Where did it come from and what it's doing to our professional lives" — a panel discussion. 4:15 p.m. Tresidder 271. Free.

Latin American Film Series: "From the Ashes . . . Nicaragua Today.". 7 p.m. Casa Zapata.

Australian Mini Film Festival: "Now You're Talking" and "Australia in the 80's." Door prizes, Australian beer and wine tasting. 7:30 p.m. I-Center. .75 donation.

Center for East Asian Studies Chinese Film Festival: "Li Shuangshuang" (1962). (English subtitles). 7:30 p.m. Memorial Aud. $1.50 donation.

CERAS, EAST House Film: "Red Beard," starring Toshiro Mifune. 7:30 p.m. Blg. 420,Rm. 41.

Stanford Hillel Presents: Bill Graham . 7:30 p.m. TBA.

FRIDAY, JANUARY 28

Applied Mathematics Lecture: "Four Tricky Problems from Mechanics," by Prof. Stuart Antman, Univ. of Maryland. 3:15 p.m. Room 380-c(Mathematics Corner).

Materials Science and Engineering Colloquium: "Hot Wall Epitaxy of Semiconductor Films" by Prof. Adolpho Lorez-Otero, Univ. of Linz, Austria. 3:30 p.m. Peterson Laboratory-Rm. 550A.

Lively Arts Concert: Lucy Shelton, soprano. Twice Naumberg Winner. 8 p.m. Dinkelspiel Aud. $8.50,$7.50,student $3 less.

Stanford Law School Film Society: "Little Women". 8 p.m. Kresge Aud. $1.50.

STARTS/GSA Great Directors Film Series: "Anticipation of the Night" by film maker, Stan Brakhage. 8 p.m. Geology Corner,Rm. 320. $2.50.

SATURDAY, JANUARY 29

Women's Swimming and Diving: vs. USC. 1 p.m. DeGuerre Pool.

Women's Lacrosse: vs Palo Alto/San Jose. 10 a.m., 11 a.m. Maloney Field.

Women's Rugby: vs. California. 11 a.m. Maloney Field.

Dept. of Athletics: Harlem Globetrotters. 2 p.m. Maples Pavillion. $8.50,$7.50,$6.50.

Black Liberation Film Festival: "Black Girl" by Senegalese director Ousmane Sembene. 7 and 9:15 p.m. Terman Aud. $1.50.

SUNDAY, JANUARY 30

Memorial Church: Public Worship by Bernard Brown of the University of Chicago. 11 a.m. Memorial Church.

University Public Worship: R.G. Hamilton-Kelly, Dean of the Chapel. 11 a.m. Memorial Church.

EXHIBITS

Photographs by Maria Pease. Tressider Union Upstairs Lobby. Jan. 1 - Jan. 31.

"The Big Sqeeze" and other works by artist Dolly DuPrau. I-Center. Jan. 5 - Jan. 30.

Recent Acquisitions. Paintings, drawings, sculpturess and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. Jan. 11 - Feb. 20.

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Meidel Rm. Jan. 18 - March 20.

Now you can look up calendar on computer file

Starting this week, you'll notice that the Public Events Calendar on our back page has a new format. It's now being computer-generated, and the change involves more than what you see on the printed page..

Are you wondering what films will be shown on campus next weekend?

Do you want to know where and when a particular speaker will be giving a lecture?

Or perhaps you would like to know what musical events are on the calendar for the next couple of months.

If you have access to CIT's IBM timesharing system, you can find the answers to questions like these at any time.

PUBLIC EVENTS is a SPIRES subfile that was developed by CIT's Departmental Information Systems Group. It is used to print the calendar in *Campus Report*, and its contents may also be viewed by anyone with a WYLBUR account and elementary SPIRES knowledge.

The PUBLIC EVENTS file contains all the types of events that appear in *Campus Report*, such as lectures, sports events, and art exhibits. In addition, information about a contact person and handicapped access is provided.

As with the printed version of the calendar, there is a separate entry for each event. When multiple performances are given, such as with a play, there will be a separate record for each performance.

Events are entered into the computer whenever the Public Events staff receives a notification form; thus, you are not limited to looking at events of the current week, but may search up to two months in advance.

To access the online events calendar, logon to a terminal, call SPIRES, and enter the command SELECT PUBLIC EVENTS. You may type SHOW SEARCH TERMS to see a list of words that can be used in searching the file. You may also BROWSE the terms to see a sample of possible values. When you have found the information you want, it can either be displayed at the terminal or printed on paper.

Above is *Landscape with a Cottage by a Large Tree,* an etching by Rembrandt van Rijn which may be seen at the Stanford Art Gallery in Collecting for Stanford: Recent Acquisitions for the Stanford Museum. The exhibition is designed to spotlight the Museum's areas of particular strength and to illustrate the significance of the new acquisitions in the context of long-term collecting interests. The exhibition will be at the Gallery through Feb. 20.

Entrepreneurs' spirit thrives amid students

From computer programming to cookie shops, from earthquake engineering to popular recordings, Stanford students are putting their ideas to work by starting their own companies in Silicon Valley.

Perhaps most symbolic of the new generation of student entrepreneurs is John Halamka, who recently founded Colossus Computers, a computer hardware and software company that last year grossed $100,000.

He works out of the basement in the home of the late Stanford Emeritus Provost Frederick Terman, world famed as the father of Silicon Valley. Running a company is "a lot more fun than classes," he said. Halamka is a student member of Stanford's Committee on Research. Named after D.F. Jones's novel on the first computer to run the Earth, his systems greet users with an audible "This is the voice of Colossus."

A senior majoring in political science, public policy, and medical microbiology, Halamka has done computer programming for economists Arthur Laffer and Milton Friedman, and physicist Edward Teller. One of his latest clients is McGraw Hill. Former staff editor of *The Chaparral*, a campus humor magazine, he has 20 customers and carries a full load of 20 academic units.

Because of his apparent closeness to the great Stanford engineering professor, Terman's descendants have asked Halamka to write a biography of Terman's life. He may do so this summer.

Halamka is just one of the many Stanford students who are finding that, with enough energy and insight, they can become their own bosses.

Last April, more than 500 Stanford students—more than four percent of all those at the University—attended the first Stanford Conference on Entrepreneurship and listened to the advice of Silicon Valley's most famous young entrepreneur—Steven Jobs, 27, chairman of Apple Computers, Inc.

Panel hears plea for more graduate aid

America risks its world intellectual leadership unless the "steady erosion" in support for its most talented graduate students is reversed, a spokesman for the nation's top universities warned Tuesday, Jan. 25.

Robert M. Rosenzweig, president-elect of the Association of American Universities (AAU) delivered a joint statement from the AAU, the Association of Graduate Schools, the Council of Graduate Schools, and the National Association of State Universities and Land Grant Colleges to the National Commission on Student Financial Assistance, meeting at Stanford University.

He offered "a simple and clear prescription" for national policy on graduate education: "Attend to the education and training of the nation's best young minds or fall behind those nations that do."

Since 1968, he reported, the number of federally funded graduate fellowships has "declined precipitously," from 51,000 to less than 10,000.

Fellowship support in the arts, humanities, and certain social sciences is "almost totally lacking," he added.

Growing dependence on loans has increased the debt burden upon graduate students "to a degree that may begin turning students away from low or moderate paying fields or discourage them from pursuing graduate education altogether," he warned.

"The nation cannot assume the availability of a sufficient cadre of highly trained scientists and scholars unless national policy provides incentives adequate to bring about that result.

"The guiding philosophy for government policy. . .should be to maintain continuity of training to assure over time a 'critical mass' of talented individuals broadly distributed across the range of academic disciplines."

Home computers cut TV time by half hour per day here

Home computers reduce television viewing by more than a half hour daily, a study of 77 computer families at Stanford shows.

"This change represents a rather major shift in the use of time. It suggests that home computers may be more addictive than television," Prof. Everett M. Rogers, Hugh M. Daley and Thomas D. Wu declare in a new report, "The Diffusion of Home Computers—An Exploratory Study," published by the Stanford Institute for Communication Research.

More than half the families studied (56 percent) reported no change, but four out of 10 (40 percent) said they decreased their viewing by an average of 1.5 hours daily.

The average U.S. household has TV turned on about six hours per day. A separate study of Stanford faculty and staff this fall indicated their sets were on only 2.7 hours per day.

When asked what changes their home computer had caused, the most common response was "facilitates my work" (29 percent), followed by "increased my awareness of the computer world" (17 percent), "changes my recreational activities" (14 percent), "saves time" and "allows me to spend time at home" (12 percent each).

The Stanford study is one of the first comprehensive analyses of the diffusion of home computers to be publicly reported. It was conducted by 59 students as a class project in Communication 167-267 and Values, Technology and Society 172.

People

RLG's new chief, Richard McCoy, reports for work

Richard McCoy, the new president of the Research Libraries Group, arrived at RLG's corporate headquarters in Jordan Quad at Stanford to assume his new post Jan. 17.

McCoy comes to RLG with substantial experience in the field of information systems and data processing management at the University of Wisconsin, in the Wisconsin state government, and in the federal government.

Most recently he served as director of the State Office of Information Systems Management in the Wisconsin Department of Administration, on assignment to the state from the University of Wisconsin, and in a staff assignment for the secretary of that department.

McCoy holds degrees in engineering, management, and applied computing from Wisconsin. He held positions there as director of administrative data processing and director of academic computing.

Other appointments include a period as coordinator of computing activities (Office of Administration, Executive Office of the President of the U.S.), and as assistant to the secretary (Wisconsin Department of Health and Social Services).

He has a decade of instructing and consulting in computing management for Stanford, the State University of New York at Albany, and other participants in the EDUCOM consortium of universities.

McCoy succeeds Patricia Battin, who has served as RLG's president since last summer. She was on loan from her post as vice-president and university librarian at Columbia.

McCoy and his wife, Elizabeth, will make their home at Peter Coutts Hill initially.

Mrs. McCoy was a student at Stanford in the 1950s and later lived in San Francisco. She will pursue her weaving interests and may renew her previous interest in children's library work.

Richard McCoy

The Research Libraries Group, Inc., a nationwide network of research institutions, is a corporation owned and operated by its members. The partnership was founded in 1974 to provide a framework within which these institutions could seek long-term solutions to the chronic fiscal, staffing, and support problems common to all research libaries.

Through its four chief programs—Shared Resources, Collection Management and Development, Preservation, and Technical Systems and Bibliographic Control—the consortium is working to create an open-ended system of software, hardware, cooperative agreements, and coordinated procedures that will enable libraries to fulfill their age-old mission of collecting, organizing, preserving, and providing information.

Diane McAfoos

Diane McAfoos of the Hoover Institution has been elected to "Outstanding Young Women of America."

She graduated magna cum laude, Phi Beta Kappa, from Mount Holyoke College in May. A psychology major, her thesis on "Coping with Divorce: Attributions of Responsibility" involved extensive interviews with young women in the community. McAfoos was a Sarah Williston scholar, a Mary Lyon scholar, and a member of Psi Chi, national psychology honor society, and Sigma XI, the Scientific Research Society of America.

At the Hoover Institution she is secretary and assistant to senior research fellow, Admiral James B. Stockdale.

Faculty openings

Aero-Astro research professor sought

The Department of Aeronautics and Astronautics seeks a highly-qualified candidate for the position of professor, research. The position requires a Ph.D. degree along with further original research contributions in a field closely associated with aeronautics and astronautics. The candidate's capability for generating and pursuing creative research programs should be widely recognized.

It is important that the candidate have five to ten years R&D management experience involving the formulation and successful implementation of research programs in aeronautics, including theoretical, experimental as well as computational aspects. Also highly desirable is previous affiliation with a major university.

Interested persons should respond promptly by sending curriculum vitae and names of at least four references to Prof. Daniel Bershader, Department of Aeronautics and Astronautics, Durand Building, Stanford University, Stanford, Calif. 94305.

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

Ready help available from students in the Department of Statistics

Gotta little problem involving statistics?

If you are a researcher who is not a statistician, the answer is usually, yes. The Stanford Department of Statistics has relief on the way.

The department has formed the Statistical Consulting Service, made up of nine graduate students and Prof. Jerome Friedman. The service is entirely free. All that's necessary is to show up at room 109 at Sequoia Hall, Wednesday, and Friday, between 2 and 4 p.m. and Tuesday, 1-3. There is usually no wait for service.

The consultation is limited to the "broad university community" Friedman says, "and we don't do homework."

The service has been running since the fall. The consultants, each of whom can get three hours of course credit for the work, have been meeting with five to eight clients a week. The clients are frequently graduate students with research problems, but not always.

One client was a member of the administration who wanted to do a survey to determine which stores would be most profitable per square foot at the Stanford Shopping Center. The consultants advised her on how to go about the research.

Another researcher wanted to find out how much money flowed out of the East Palo Alto community. This researcher believed that the area had a negative economy and wanted to find out how to prove it. He also wanted to know what stores might stem that flow. The consultants in this case could not think of a scientifically sound way of doing this study.

A researcher in the Music Department obtained assistance in work determining the "attack" time of musical instruments—the time it takes for a listener to perceive the sound from the instrument.

Each week the consultants meet as a group to discuss the week's problems. Each problem is analyzed by the group, and if there are further thoughts, the client is contacted.

Friedman says that many other universities have similar programs, some of them quite large, profit-making establishments. The Stanford effort is just for the community; if commercial concerns begin using the service, the department would have to establish fee rates, etc., which it is reluctant to do.

Graduate student Trevor Hastie said the students enjoy the service; some even work without the credit, if their course requirements are already filled.

The service can be reached at 497-2623 during the consulting hours.

GeoRef sets open house in Earth Sciences Library

The data base GeoRef will be available to faculty, staff, and students for free searching from 9 a.m. to 3 p.m. Thursday, Jan. 27, in the Branner Earth Sciences Library.

A representative of the American Geological Institute, the producers of GeoRef, will give a demonstration and discuss the various searching capabilities of GeoRef at 3 p.m. the same day in Room 111 of the Mitchell Building.

GeoRef is the online version of the following indices: Bibliography and Index of North American Geology; Bibliography of Theses in Geology; Geophysical Abstracts; Bibliography and Index of Geology Exclusive of North America; and the Bibliography and Index of Geology.

The data base is of particular interest to those involved in the research areas of geology, geochemistry, geophysics, mineralogy, paleontology, petrology, and seismology.

It is searchable online by author, original titles, translated titles, country of publication, subject keywords, sources of publication, conference location, longitude, latitude, publisher, language, and date.

GeoRef is international in coverage, with approximately 40 percent of the indexed items originating in the U.S. It organizes and indexes papers from more than 4,500 serials and other publications representative of the interests of the 18 professional geological earth science societies that are members of the American Geological Institute.

For more information, call Earth Sciences Librarian Charlotte Derkson, ext. 7-2746.

Wolfgang Panofsky

Wolfgang Panofsky was inadvertently omitted from last week's list of those serving as an advisory group on selection of **Bob Rosenzweig's** successor as vice-president for public affairs.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Student film-makers guided by famed Hollywood producer

BY DONALD STOKES

A Stanford professor and his students are making movies with the professional stamp.

For 10 years Julian Blaustein has been helping tyro film-makers at the University to see how it is done. He directs Stanford's Film and Television Production Center, part of the Department of Communication.

Blaustein, a graduate of the Boston Latin School and of Harvard, came to Stanford after 35 years in the motion picture industry.

He produced dozens of major movies, employed many of the superstars from Laurence Olivier to Marilyn Monroe, from Bette Davis to James Stewart.

But he is impatient with backward looks at past successes. He is far more intent on the movies which he and his graduate students are producing today.

In a campus interview he described some of the movies now being made at the Stanford Center. He is proud of the fact that all of them will have great usefulness to wide sections of the public.

Reluctantly, he agreed to look backward long enough to compare today's movies with those of yesterday.

The well-known producer at one time had 11 other producers working under him, and brought in an important movie every two weeks. He still has strong views on present motion pictures. He thinks:

* The romantic movie is due for a comeback.
* There is a shortage of great romantic female stars today, but plenty of male stars.
* Movies suffer today from the fact that nonprofessionals head most of the motion picture corporations.

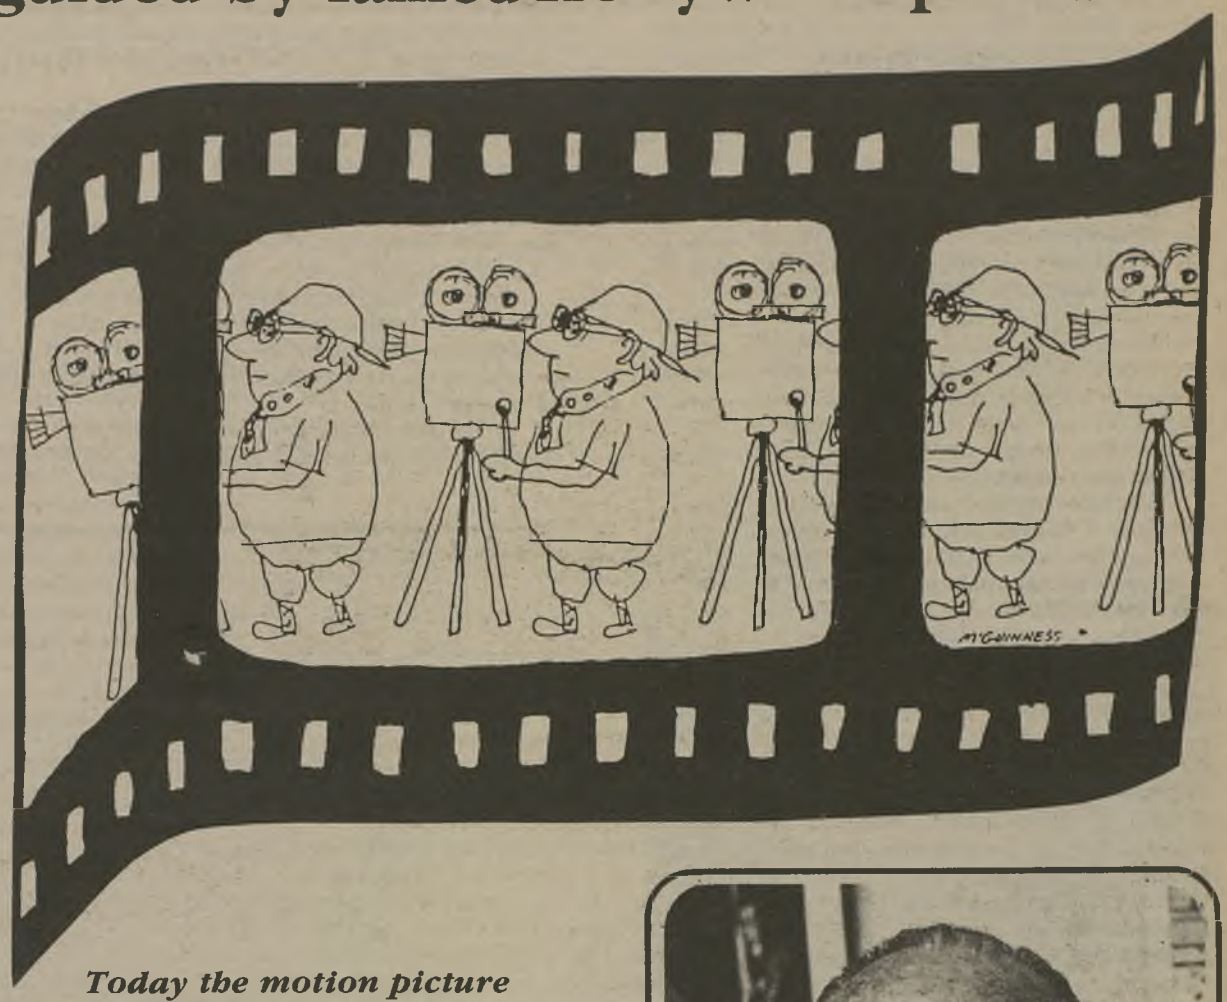
Blaustein turned to his principal interest, the Film and Television Production Center. Here, graduates who are studying production work for their advanced degree.

"We make movies that cover a wide range of human interest," he said. "We draw on many of the rich resources of Stanford and its faculty.

"The film 'One in Eleven' deals with breast cancer. It was produced by Kate Spohr, who worked with Prof. Henry Kaplan, the world-famous research authority on Hodgkins disease and director of Stanford's Cancer Biology Research Laboratory.

"Judy Karp produced what we hope will be the first in a series of movies dealing with the emotional problems faced by many students. It was made in collaboration with Dr. David Dorosin, director of Stanford's Counseling and Psychological Services.

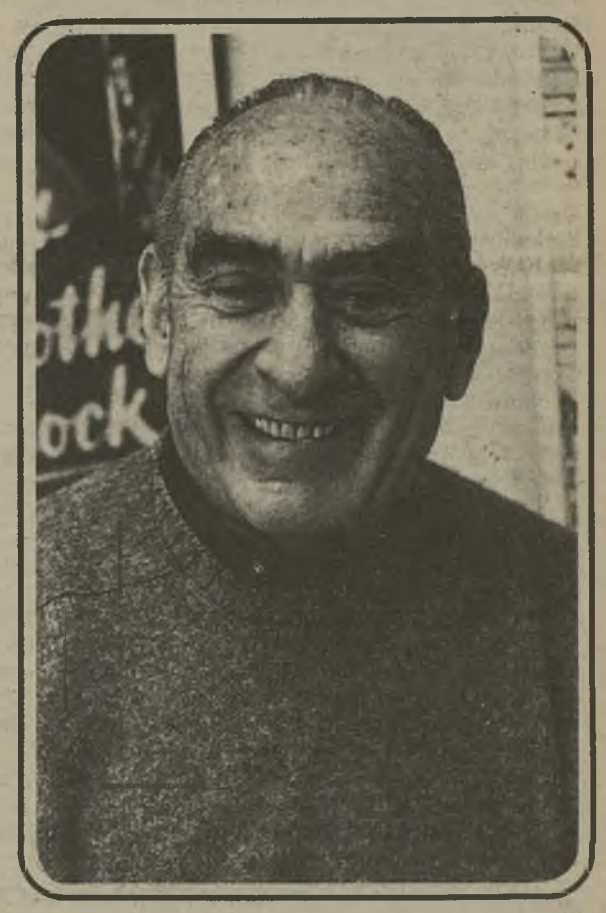
"Two Nobel Prize winners, Profs. Arthur Kornberg and Paul Berg, and Prof. Roger Kornberg, worked with Joe Sachs on 'Just What is DNA?' which is the first of a planned series on the vocabulary of biochemistry. Berg appears in the movie.



"The biggest medical problem in the U.S. today is that of the heart. Richard Heus worked with Dr. Robert DeBusk, director of our cardiac rehabilitation program, on 'Take Heart' and 'The Next Step.'

Our graduates tackle all sorts of subjects of wide interest. Anne Makepeace produced, as her thesis project, a film about the Moonies, called 'Moonchild.'

"Currently, Marilyn Waterman is completing post-production work on 'Rodin's Balzac,' a film that examines the sculptor's trials in the creation of the famous masterwork. Waterman is collaborating with Prof. Albert Elsen, one of the world's leading authorities on Rodin. It is possible that this will be the first of several movies on Rodin and his work."



Not all of the movies made by graduates are documentaries. Keith Jones has selected for his thesis a fictional subject, "American Dream," on which shooting will start shortly.

Within the Communication Department, the students work with Profs. Henry Breitrose, Ron Alexander and Kris Samuelson, as well as with Blaustein.

Today the motion picture companies are run by men—and some women—who have never had the experience of actually making a picture from start to finish.

—Julian Blaustein

Many graduates of the Center are now working in the film industry, mostly in the documentary field. For those interested in feature and fiction films there is an M.A. program in screenwriting.

Blaustein, who is responsible for the program, believes that writing offers the best chance for new people to break into the Hollywood film industry.

"It is hopeless to expect to become, say, a producer or director as an entry level job, even for outstanding production students.

"Writing is the best opportunity, but also the most difficult challenge. Our program does not pretend to teach people how to write, but it does offer a chance for a student with talent to develop it."

Noted figures in the film world who will meet with students this quarter include Guy McElwine, president of Columbia Pictures; Jack Lemmon; Sydney Pollack, director of "Tootsie"; Jeff Berg, president of International Creative Management, largest talent agency in the world; and Carl Freeman of "River Kwai" fame.

The department also offers screenwriting fellowships to graduate students. They were made possible by a gift from Mrs. Don Nicholl and her late husband. "The fellowships are something of a halfway house between school and professional life," says Blaustein, who supervises the program.

"We are working very hard to arrange for some of the films produced at Stanford to be shown on commercial or public TV.

"I admire the young people who are attracted to our film courses. They know they are entering a very difficult industry."

"When our graduates go out into the marketplace they will find a scene that is radically different from the peak years of the industry. The people who put up the money for the production of pictures these days do not permit anything like the power that used to be given to producers and directors.

"The money men took it very much to heart when 'Heaven's Gate' proved to be such an utter disaster that the corporation owning United Artists simply sold the complete firm and got out of the movie business.

When the studio system broke down in 1950, it did so to the point where the studios were no longer the activators of projects. A corporation which owned the studio and also a chain of theaters as ready channels for distribution could no longer simply allocate money to a producer and say, 'Go make this picture.'

"Money is what the movies are all about, just as money is the lifeblood of all business. When the

continued on next page

Blaustein/ continued from page 3

movie business began to suffer under the new laws the studios grew very nervous about making long-term commitments. Many of the directors, writers and artists who worked on contract were let go.

"Today the motion picture companies are run by men—and some women—who have never had the experience of actually making a picture from start to finish.

"Today's head of MGM was a former lawyer in its legal department; the chief executive officer of the company is also an attorney. An oilman purchased 20th Century Fox, and it is no longer a public company. And so on throughout the industry.

"The procedure these days is that the producer generates a project, then offers it either to venture capitalists or to a newstyle motion picture corporation, which examines the project purely as a dollars and cents proposition.

"The effect of this system has generally been deleterious, because it limits the number of movies that can be made. There are some very good producers who are no longer creative administrators. Instead, they have to be entrepreneurs.

The important thing today is to get the money for your picture. After that you hold your breath. In former days the studios wanted pictures and we made them. There was continuity, and a much greater volume of movies.

"I grew up in the industry when producers such as David Selznick put their stamp on everything, including wardrobe, sets and music. They were busy in all the critical areas such as story selection, working with the writers and director (including the hiring of the director), the editing, and of course the casting and working with the players.

"That was not all by a long way. The producer usually worked with the sales force and the distribution campaign. A good producer was a creative administrator. He knew not only how to save money, but also how to spend it."

In view of all the changes in the industry, an interviewer asked, is it still possible for great motion pictures to be made?

"Sure. Movies are still made by people, and the best movies are made by the best people. Of course, here we get into defining terms. What is 'great?' It is largely in the eye of the beholder.

"It cannot be gauged by the box office receipts. Often that is very far from being the yardstick. One of the most offensive movies I have ever seen is 'Porky's,' which is a very big success.

In view of the fact that most films today are made by comparatively small teams which sell their productions to the major corporations, is this a deterrent to the making of first-class movies?

"That depends on the people making them. I was in independent production from 1955 to 1973, and during those 18 years I released through Columbia, MGM, United Artists and Universal.

"You can imagine the difficulties of making such a movie as 'Khartoum,' a costume piece which was set in the Sudan and called for large crowd scenes. I had three top stars—Heston, Olivier and Richardson. I set up an office in London and put together the staff as needed. We solved the problems as they came along."

Mass audiences are waiting for great romantic films, Blaustein believes. "I am convinced that a huge audience here and abroad is waiting to see a really good romantic movie. Even 'Love Story,' made a few years ago, was a major hit, although it was too saccharine for my taste.

"People like to laugh, to cry, to be scared, even to hate. Touch their emotions and they will come back again and again.

"But whom do we have today to play the heroine in a romantic love story? Jane Fonda, who is a little bit past it? Barbra Streisand? Meryl Streep perhaps. Why am I having all this trouble trying to think of romantic leading ladies? Because there are so few.

"Just think of the days when millions of people all over the world would stand in line to get into their local moviehouse simply because there was a Bette Davis picture, or a Garbo, a Norma Shearer, Crawford, Colbert, Irene Dunn, Carole Lombard, Loretta Young. . . you name her. They were all whopping stars.

"Where are their successors? Sure, there was Marilyn Monroe, the biggest movie attraction since World War II. I made the first picture in which she played a leading role ('Don't Bother to Knock,' with Richard Widmark and Anne Bancroft). But who else has there been, what other women whose presence in a film guarantees its success?

"Marilyn had that indefinable quality of stardom. The secret of her appeal was her vulnerability, which came through on the screen. And her sex appeal, of course—a combination of innocence and sensuality.

"What was the secret of Marlene Dietrich? Certainly she was never a great actress. What was Garbo's? Perhaps it was that she seemed to be a well of enormous promise."

When our graduates go out into the marketplace they will find a scene that is radically different from the peak years of industry. The people who put up the money for the production of pictures these days do not permit anything like the power that used to be given to producers and directors.

—Julian Blaustein

The man who for 35 years had accurately sensed the pulse of the entertainment world asked himself another question: "Why are there male stars today, but very few female? Perhaps because we have lived with wars, or threats of wars, for so long that the public responds to heroes.

"A fundamental problem is that not enough movies are being made to generate opportunities to develop new stars. Too much control is in the hands of a very small group of major names, such as Clint Eastwood, Paul Newman, Robert Redford and Burt Reynolds. They can write their own tickets.

"I think that when another Tyrone Power or Errol Flynn comes along the public will roll over and play dead for him.

"Just imagine the effect on today's public if, for example, 'Wuthering Heights' were to come out again today with the equivalent of Olivier and Merle Oberon.

Is there any formula for success in the film industry?

"If there is a formula it has eluded everybody. The same executive at Columbia who approved the making of 'Kramer versus Kramer' and 'The Blue Lagoon,' which were hits, also turned down 'E.T.' "

Does a producer try to hit some nerve in the public which brings a galvanic response?

"If you do hit such a nerve you try to keep on hitting it. That is why we have 'Rocky' 1, 2 and 3; 'Jaws' 1 and 2; 'Amityville' 1 and 2. We get a new James Bond picture every two years because the public likes Bond.

"James Bond is an industry, not a series of movies. Cubby Broccoli, who produces them, produces nothing else. I would guess that the Bond pictures will outlive him.

"Sometimes the public nerve is hit because a movie deals with an emerging social problem, as in 'Kramer versus Kramer.' That dealt with the problems of a single father.

"Pictures like that, and 'Ordinary People,' are popular if they are well-made. 'Kramer' would never have been financed if it had not been for Dustin Hoffman's interest. Similarly, 'Ordinary People' probably wouldn't have been done if Robert Redford had not supported it."

Blaustein's career began as soon as he was separated from the U.S. Army in 1946. He was invited out to California to meet David O. Selznick, who was looking for somebody to function as his editorial supervisor.

"Before the war I had headed the story departments of Universal and Paramount Pictures. During the war I was in charge of units that made over 200 documentary films for the Army, and I dealt with every facet of production."

Blaustein's association with Selznick was most fruitful. Among the pictures made during that time were two Alfred Hitchcock classics, "Spellbound," and "The Parradine Case."

"I had the privilege of working with Hitchcock, who was already the master of suspenseful story-telling."

In 1949 Blaustein became a producer at 20th Century Fox, where Daryl F. Zanuck was the great power. For two of the six years Blaustein was there he was executive producer, supervising from 22 to 24 productions a year.

Stars whose names are still household words were part of the teams built up by Blaustein. His first major picture starred James Stewart in "Broken Arrow." This later became a TV series that ran for eight years. Burt Lancaster starred in the second, "880."

So it went on, with Loretta Young, Paul Douglas, Patricia Neal and many of the other great names of Hollywood. All told, Blaustein produced at least 24 pictures of note, with stars whose names are familiar to the world.

They include Marlon Brando, Jean Simmons and Merle Oberon (in "Desiree"); Kirk Douglas ("The Racers"); Bette Davis ("Storm Center"); Jack Lemmon, Kim Novak and Hermione Gingold ("Bell, Book and Candle"); Gary Cooper and Charlton Heston ("Wreck of the Mary Deare"); and Charles Boyer ("Four Horsemen of the Apocalypse").

In 1955 he went into independent production, releasing through four of the major studios.

Many of his films are rerun today on TV. Asked whether he benefited from this he replied, "Sometimes, but not always. For example, I was on salary when I made 'Broken Arrow' so I earned nothing from the subsequent TV series."

In spite of his preoccupation with his work at Stanford, Blaustein keeps up his contacts in the film world and maintains his interest in what is being produced and by whom.

He is optimistic about the room for romantic films in an industry which is thriving on science fiction and violence. A recent film, "An Officer and a Gentleman," is in Blaustein's view the first old-fashioned boy-meets-girl story in a very long time.

"Take out the explicit sex scenes, and it might have been made 30 years ago," he says.

Maybe love is just around the corner, as the lyric promises.

Dancer Bella Lewitzky's fine art: a lifelong California collaboration

BY MILLICENT DILLON

Modern dance is the one American art form in which, from its inception, women have been the dominant force.

So said dancer Bella Lewitzky in a lecture at Stanford recently, part of the series on "Women in the Performing Arts," sponsored by the Center for Research on Women and the Lively Arts at Stanford.

A major contemporary choreographer, founder of her own company, and one of the leading concert performers in the U.S. for many years until her retirement, Lewitzky is the best illustration of her own thesis.

She is distinguished from all of her colleagues in the field, however, by one crucial fact. Accepted lore in the American dance field has it that to make one's way in the American dance world, one must first go to New York.

Lewitzky was born in California, studied in California, formed her group in California, and has done all of her major work here.

Asked why she never went to New York, Lewitzky responded in a campus interview, "I just never went. I never had any desire to. I love California, which is an excellent reason to have stayed here.

"If I could not practice my art here, I would certainly get up and move. But as long as I can work here, I'm very content to stay."

Out of that staying she has evolved an art unique to her and to the landscape she grew up in—direct, without pretense, incorporating strong opposing forces, unified, intelligent and witty.

Lewitzky was born on a Utopian Socialist Commune in the Mojave Desert, the daughter of idealistic Russian immigrants. "My father was a true humanitarian," she recalls. "He made the word come alive in the way he lived his life."

The colony had its own educational system, "something similar to what Montessori is now," she said. It had its own bakery, grew its own food, and had its own newspaper—for which Lewitzky's father was the political cartoonist. "It was completely self-sufficient except for one small detail.

"It was in the Mojave desert and they had neglected to secure the water rights. And one day the peach grower who lived in the mountains above turned off the tap. So they had to leave."

Members of the colony moved to Louisiana, where it lasted for over 60 years.

When it left California, however, Lewitzky's father chose to stay. "We moved to San Bernardino. My father, being the sweetly loving but unrealistic individual he was, did what all vaudevillians wanted to do in the old days. He started a chicken ranch.

"He knew nothing about chickens and he knew nothing about ranching. He dearly loved people but ranching is not a place where you meet people."

There was another way in which Lewitzky's father was not a traditional rancher. He could not bear the thought of attacking weasels, the traditional enemies of chicken ranchers.

"Weasels are very clever little animals who, like the finest physician, attack a hen at the jugular. It's very tidy, very instant. They take the top of the skull off, they only eat the brain and that's all.

"My father thought that this was a remarkable feat. When all of the other ranchers would say, 'We've got to get together to hunt for weasels. Will you join us, Mr. Lewitzky?' he declined.

"And where do you think the weasels lived? On the Lewitzky ranch. They would romp over our dog. They didn't destroy much, they just killed to live. It wasn't wanton bloodshed.

"It was a wonderful childhood, chickens aside," said Lewitzky. "I have never cared much for fowl of any kind."

She recalled her childhood on the ranch as a "Paradise" playing outside most of the year, without physical restraints, making up her own games with other children, making up her own dances. By age seven she decided to be a dancer, though she had never seen anyone perform.

"But later I did see some extraordinary performances right in San Bernardino. A very enterprising woman established in this basically arid railroad town an opera house.

"And then, in the nearest city, Redlands, a woman by the name of Grace Mullen, aided by the generosity of a rich Socialist family, presented a series of performances by artists in a fine new amphitheater."

During her high school years, Lewitzky saw a performance by dancer Maude Allen, a contemporary of Isadora Duncan. "I can still remember the shape and color of her dances. I thought she was wonderful."

She also saw Lester Horton, who was later to become her mentor, perform with the Japanese dancer Michio Ito.

"Michio Ito was a charismatic man, a wonderful performer, who was deported as an alien spy during World War II. I doubt very much that he was a spy though I'm in no position to say exactly. But certainly his interests were not at all political.

"He taught in Japan and died in Japan. His work is currently being revived and restaged in New York."

After high school Lewitzky went to study with the Lester Horton Dance Group in L.A. She progressed rapidly and soon became a major member of the company.

From the late 1930s on Horton was forced to do commercial work in order to support the company and himself. He choreographed for films and for vaudeville and, as Lewitzky remembers, he once had the company do a New York performance.

"We were hired to do a supper club performance called 'The Folies Bergere.' I hated every moment of it. I didn't like club work. I didn't like commercial dance. Also I was no good at it. I was never that kind of 'female beef trust—flashy dancer.' I was basically a dramatic concert performer.

"I also hated New York. And we were all so innocent. We moved into an inexpensive hotel and the first night we were awakened by a banging and crashing on the door, someone yelling, 'Gladys or Mary or whatever, let me in.'

"It turned out we were staying in a hotel for whores. The next day we moved to a quieter place."

Soon after the war began, the Horton company disbanded. Lewitzky was married to Newell Taylor Reynolds, whom she had met when he was a member of the company.

"Newell entered the dance company, thinking it was a form of glorified athletics. He found out dance had very little to do with athletics so he left. He liked competitive sports. Dance is not—should not be—though it sometimes is—a competitive sport."

At the end of the war Horton and Lewitzky founded Dance Theater in Los Angeles, with the cooperation of art director Bill Bowne and Newell Reynolds, now an architect.

In later years Lewitzky founded her own company. Still based in Los Angeles, it is actively engaged in the National Endowment for the Arts touring program and has toured extensively in the U.S. and Europe to great critical acclaim. Her company has performed repeatedly at Stanford.

Lewitzky's work has been defined by some critics as abstract. She accepts the label for want of a better one, though in fact she is resistant to labels of all kinds.

Even as a child, first making up dances, Lewitzky worked with form, shape, and motion, not with story or realistic detail.

Bella Lewitzky

"Maybe I began working this way so early because in the living room of our house was set up an easel with my father's paintings on it.

"He was a tremendous admirer of Cezanne. His own painting was abstract though it recognizably imitated the external form he was working with. I was able to see very early that what the world meant to him, his perception of it, could be put on canvas through this kind of abstraction."

In any case, she adds, objectivity in art is almost impossible to achieve. "The moment you take a piece instead of the whole, you've already altered its state. In that sense, all artists abstract, no matter how objective they try to be."

To Lewitzky both the earlier "Dance Theater" and her own company have been the outcome of a true collaboration with Horton, with her husband, with her dancers, with designers such as Rudi Gernreich, and many others.

She herself has continued to be the guiding force of her work, however. One critic recently described her dances as "true to her deeply entrenched principles of movement theater and ever faithful to the call of her own conscience."

Lewitzky thinks of her work as a "continuation of my childhood, where I was doing what I wanted to do. My life just went on unfolding that way.

"I am basically a noncompetitive person. I am not without ambition, but I am totally without interest in competition."

Letters to the editor

On not meeting the Queen: Chace suggests reading great works as substitute

Editor, *Campus Report*:

James Boswell's *Life of Johnson* relates the happy story of Johnson's dignity upon meeting his King. The king in question was George III, soon to become notorious in the American Colonies. The year was 1767 and Johnson, by then famous as a dictionary-maker, essayist, and poet, had never sought to meet the King, but clever and generous friends of his thought the encounter would be worth a memorable story or two. It was.

Boswell, the manipulative biographer, was one such friend. He had for long engineered implausible meetings with unlikely people, including himself with Voltaire and himself again with Johnson and a variety of natives of the Hebrides. But a meeting with the King, with Royalty? The appeal was irresistible.

So, when it was known that both the King and the eminent man of letters would be in the vicinity of the library of the Queen's house, Johnson found himself surprised to see, at his elbow, the King. Conversation of an odd sort briefly ensued, one subject being, then as now, Oxford. The King, responsive to the obvious opportunity, praised Johnson's achievements, but the man of letters, observing decorum, responded with silence. On being asked later by Sir Joshua Reynolds why he had said nothing, Johnson answered: "When the King had said it, it was to be so. It was not for me to bandy civilities with my sovereign." Boswell remarks that Johnson's silence showed a "nice and dignified sense of true politeness."

Johnson's appraisal of the situation—of how one encounters royalty and retains one's dignity—is worth our modern—and local—attention. Just some two hundred years ago one of the greatest talkers and conversationalists of all time declined the opportunity to talk to royalty. Why? Because Johnson, a wise man, knew there was no easy chatting with a George or, we may speculate, with any of George's successors.

That is because Johnson was not, like Boswell, a "leveller." Boswell owed the distinction of his career to the fact that he *was* a leveller. He believed he could meet everyone from Voltaire to the lowliest prostitute and make them all one with him. He was, in this sense, an American. The glory of the American sensibility is that it presumes to be on a perfectly equal footing with anyone or anything, and that it is best, when encountering the strikingly different, to believe that it is very much like oneself.

Johnson thought otherwise, and so he "bandied no civilities." Royalty, he knew, is not just a human being capped with crown or tiara. Indeed, it isn't human at all. It is symbolic.

So, if meeting the Queen, it is good to keep in mind that one does not meet a person; one meets a Presence. This Presence has nothing to do with conversation or opinions, or casual reflections. It has to do with the declaration of Fact; as Johnson said, "When the King had said it, it was to be so." For one hears, from the voice of royalty, not the speculations of a perceptive English traveller; one hears the voice, purposefully made toneless, of an Entity, purposefully made bland. To be a Queen is to know that one will never have to carry the awkward burden of personality.

But burdens of many other sorts are carried by the Queen: cliches, banalities, innocuous opinions and anesthetized reflections. To be a very good Queen is to recognize the clear and present danger of being interesting. Therefore it is crucial, if meeting a Queen, to accept the unAmerican idea that it is best to look through Her, for She is most certainly looking directly through you. What She sees is anybody's guess, but what you see, unobstructed by human interest, is a long vista of English hopes, dreams, fantasies, history and possibility.

This makes conversation intensely difficult. Hence Johnson's polite silence. But if one finds American impulses, Boswellian impulses, overwhelming, and if one must bandy a civility or two, the wise leveller will obey a few guidelines.

The first is knowing that many, *many* topics of conversation are thoroughly unsuitable. They include Argentina, Exocet missiles, Prince Andrew's vacations, the weakening of the pound, spies, Margaret Thatcher, unannounced nocturnal visitors, and absolutely anything whatsoever to do with Ireland. These are political and personal matters, and the characteristic attribute of a Symbol is that it transcends both.

Suitable topics are exquisitely few in numbers; they may be grouped under one heading: the Queen's pleasure. Thus conversation may appropriately proceed: "We are pleased to welcome you to Stanford." The Response: "We are pleased to be here." The Opening: "Would you care to have something to eat?" The Response: "That would be very, very nice." The Opening: "Stanford is a large private university, one with some 12,000 students." The Response: "How pleasant."

In progressing thus through what could be an exceedingly long afternoon, the Visit, by virtue of its total oddity, will serve some important purposes for us all. It will, first, remind us of the essentially egalitarian atmosphere of this University. For to be invited or to be uninvited to the function will amount to the same thing. Neither group will have an advantage, for neither will "meet" the queen. Symbols are not met; they are regarded from distances, long and short.

The second advantage of the Visit will be to emphasize the importance of symbols. Once the Queen has been among us, even if fleetingly, we are on our way toward developing a taste for the symbolic. And where, then, might we go to satisfy such a taste? We should probably not ask to see the King of Spain, or to have lunch on a regular basis with Saudi princes.

A vastly cheaper and easier thing to do than to bandy civilities is to turn to the single greatest repository of symbols in the world: poetry, literature in general. There we will find memorable and powerful things. No more than the Queen will they be interested in us, even if we are deeply attracted to them. But that makes no difference. Hamlet, Cleopatra and Oedipus, Ulysses, Antigone, and Lear: all royal and all charged with rich meaning. We can see in them the reality of age, youth, courage, foolishness, weakness and fate. Getting to know them will not cost us the tedious formalities of a long lunch. And knowing them will help to do what we and our attentive presidential host have wanted to do for some time at Stanford: strengthen our understanding of the humanities.

So: Welcome, from afar, to this very peculiar, foreign and rewarding presence.

William M. Chace
Professor of English

How a student made Bill Kimball's day —a simple 'thank you' was all it took

The following correspondence may be one of a kind—a student writing to say something positive to the Board of Trustees. It so touched Trustee William Kimball that he suggested the exchange for Campus Report.

Dear Sirs:

My four years at Stanford are coming to a close. I went into the Financial Aids office last quarter to find out where the scholarship I had been receiving for the past four years was coming from. I found out that the Board of Trustees for the University was making the award.

I would like to take this opportunity to thank you for providing me with a chance to attend such a fine institution. I know that without financial assistance I never would have been able to attend Stanford. I would like to commend your endeavors in providing a quality education to all deserving students.

I know that this may sound tacky, but I wonder how many times we stop to think about those "vague nebulous entities" who are committed to assisting us with our careers, educations, and lives. I know the Board of Trustees is not a "vague nebulous entity" but rather an integral part of the functioning of Stanford. Your work and numerous meetings have meaning and purpose for the students here at Stanford.

Once again, thank you for your assistance. My life has been improved by my experience here at Stanford. I laud your efforts in continuing your work to maintain Stanford as one of the top educational institutions in the country.

Albert E. Cota
Senior, English

Dear Mr. Cota:

It was a genuine pleasure to receive your very kind letter of January 11th. It made my day!

I should hasten to let you know that the Board of Trustees is the body which awarded the aid you received because it came from the unrestricted funds donated to the University rather than funds designated specifically for financial aid. These unrestricted funds are used in part for financial aid despite the pressing need for them elsewhere because of the University's unswerving commitment to admissions without regard to financial need. The board fully supports this use of unrestricted funds.

That does not change the intent of your letter, I hope; it certainly does not alter the warmth or appreciation in my response. You've very much brightened our year! Thank you for taking the time to write.

William R. Kimball
President, Board of Trustees

Blood bank seeks donors at Law School Friday, Feb. 4

The Stanford University Blood Bank will accept donations from 10 a.m. to 4 p.m. Friday, Feb. 4, in the Law School's student lounge and Room 172.

Faculty and staff are urged to give blood and, whenever possible, to announce the drive to students and colleagues.

Call 497-7831 to schedule an appointment or simply drop in during the above hours at the Law School.

Supton: Feminist studies as teaching

Editor, *Campus Report*:

Dean Norm Wessells' letter about the tenure process discusses the way university service is counted in tenure decisions. Although it is understandable that the dean could not discuss details of his office's recent denial of tenure to Prof. Estelle Freedman, it would be important to know whether Prof. Freedman's work on the Feminist Studies Program is seen as "service" or "teaching" in evaluating her for tenure. It can be argued that development of curriculum and design of courses is part of a faculty member's teaching responsibilities.

Prof. Freedman is a primary architect of the Feminist Studies Program. She influenced significantly the curriculum for the major and the content of courses within the major. She has worked zealously to develop a core curriculum that is academically rigorous and consistent with the ideals of feminist scholarship and research. Prof. Freedman's shaping influence is reflected not just in the courses that are part of the Feminist Studies curriculum, nor in the shape of the major, but in the standards of scholarship she sets for her students and colleagues.

Prof. Estelle Freedman's qualities of mind and dedication to feminist scholarship influenced the intellectual interests and scholarly pursuits of her colleagues on the faculty. Prof. Nan Keohane (now president of Wellesley College) and Diane Middlebrook (currently a fellow at the Bunting Institute at Radcliffe) were just beginning to do work in the field of feminist studies when they served with Prof. Freedman on the committee to design the new Feminist Studies Program. Both credit Prof. Freedman with influencing their own intellectual development and interest in feminist scholarship. With Prof. Shelly Rosaldo, Prof. Freedman served as a leader to and a teacher of other faculty members at Stanford as well as to students in this new area of interdisciplinary study.

I have been heartened in recent years to hear President Kennedy and Dean Wessells speak publicly in support of CROW, *Signs*, and the Feminist Studies Program. It has also been encouraging to hear renewed commitment to affirmative action goals, which Dean Wessells' letter on tenure states can come into play at crucial points in some tenure decisions. As a member of the Feminist Studies Committee, I hope that those responsible for reviewing the decision in Prof. Freedman's case view her work in developing the Feminist Studies Program as part of her excellent record of teaching, not merely as service to the University, and reverse a decision that makes some of us wonder whether the commitments to feminist scholarship and affirmative action can be affirmed when they count most.

Alice Supton
Assistant Dean of Student Affairs
for Residential Education

Music librarians: people of many skills, diverse talent

BY JULIA SOMMER

Stanford University Libraries employ some 97 librarians and 275 support staff who work to support the teaching and research that goes on at Stanford. Following is a report on one branch's staff.

Music Library staff, (l to r): Aurora Perez, Beth Rebman, Lynne Toribara, Erna Wilson, Diane Greeley, Mimi Tashiro, Anne Witherell, Gina Balestracci, Leroy Kromm.

'I'm interested in computers and libraries, as well as music, and a Master of Library Science looked like it might allow me to use all my skills.
—Lynne Toribara

Music librarians have to be two people—musicians and librarians.

One of 10 branch libraries on campus, the Music Library requires all its staff, both librarians and support staff, have a working knowledge of music performance and the scholarly aspects of music.

Music Librarian Jerry Persons, recently promoted to senior librarian, is a good case in point. Besides his Master of Library Sciences (MLS) degree from the University of Michigan, he has a B.S. in music education, an M.M. in performance, and substantial graduate work toward a Ph.D. in musicology.

"While a graduate assistant in Wichita State's Music Library, I discovered I enjoyed library work more than any other part of the music program," he explains. "You have to understand the academic music program in order to provide good library support."

The Music Library, located on the second floor of the Knoll, is one mile from Green Library, where Persons' supervisors work. "Some branch librarians feel isolated," he says, "but I enjoy the walk to Green and back. It gets me off my duff!"

Beth Rebman is head of the music cataloging unit located within the Music Library but reporting directly to the Cataloging Department in Green. She has worked in music cataloging since 1971, and before that was a reference librarian in Meyer Library. "I was chosen for that job primarily because of my music background," she recalls.

"The Music Library's catalog includes all music books and journals, regardless of their location on campus, and the only catalog for scores and sound recordings," explains Rebman. "Music catalogers are the only catalogers not located in Green because we have to refer constantly to material here in the Music Library. And the scores and recordings catalogs are the only catalogs on campus not also located in Green. We're unique in many ways."

Rebman has an MLS from Michigan. She also has a B.A. in music history, an M.A. in music from Stanford, and studied organ and harpsichord for one year in Germany.

Baroque dance and music have become Rebman's specialty, and she has taught the weekly dance lab for Music 269 (Baroque Performance Practices) since 1978.

Mimi Tashiro recently left the music cataloging unit to become assistant music librarian. She supervises all Music Library support staff. Tashiro, too, has an MLS from Michigan. She also has a B.A. in music and an M.A. in musicology.

"Michigan is one of the very few library schools in the country that offers courses specifically in music librarianship," she explains. "I was doubtful about pursuing a Ph.D. in musicology, and music librarianship provided a nice mixture of what I'm interested in, plus it gives me the academic environment I enjoy."

Lynne Toribara is both half-time music copy cataloger and Stanford graduate music student. She is writing her Ph.D. dissertation on late Baroque violin ornamentations, but last year took a leave to get her MLS at UC-Berkeley.

"I'm interested in computers and libraries, as well as music, and an MLS looked like it might allow me to use all my skills," she says. "Berkeley is one of the few library schools where you can specialize in computer applications."

Toribara has applied to Stanford Libraries for a grant to catalog Center for Computer Research in Music and Acoustics (CCRMA) material and add it to the Research Libraries Group data base. She is already cataloging for CCRMA on a volunteer basis.

"Everyone at the Music Library is very independent," she notes. "Most of us have been associated with the Music Department for many years. Extensive knowledge of the field, familiarity with its research tools, and experience with library procedures make for a much more efficient flow of library materials." Some graduate students can't tear themselves away from the Music Library even after they receive their degrees.

Anne Witherell, part-time cataloger, received her Ph.D. in 1980; her dissertation was on 18th-century dance.

"Actually, I'm a freelance trombonist," she explains, "but I love working in the Music Library and it pays the rent. All musicians need 'day work' to pay the bills."

Witherell has been working in the Music Library for 10 years. Before that she worked in the library at the Eastman School of Music, where she received her B.M. in trombone.

"My teachers at Eastman told me I would never be able to make a living as a trombonist because I was a woman, so I didn't try. (How times have changed!) But after receiving my Ph.D., I got so many good trombone jobs that I gave up looking for a university teaching position! I sub for the Oakland and San Jose symphonies, and play regularly with West Bay Opera, Scholar Opera, Schola Cantorum, and many other groups.

Witherell also teaches trombone at UC-Santa Cruz, Bethany Bible College, and privately.

"I enjoy working with the computer in the library," she says. "Stanford was a pioneer in using RLIN, so we suffered more than others. UC-Berkeley's Music Library will soon begin using RLIN, and their staff are coming to us now for training and 'empathy' sessions."

Erna Wilson has worked in music cataloging for 16 years. Her studies at the Academy of Music in Vienna were interrupted by Hitler, and she was forced to flee to the U.S. alone at age 18.

"I didn't continue my musical studies in this country, but I've always been a keen appreciator," she says. "I go to many concerts, the opera and especially voice recitals. Romantic music is my specialty.

"One has to know music in order to catalog it," Wilson says. "It is a very specialized field. This is a very demanding but rewarding job. You have to love music, otherwise you wouldn't be in the field. My languages help too, of course."

Kent Underwood handles acquisition of records and microforms. He is also completing his Ph.D. dissertation on 15th- and 16th-century lute music and performing. "It's good to have a part-time job so closely related to your field of study," he points out.

Underwood works with the RLIN system and reports: "It's working pretty well now. There were big problems at first because the libraries wanted the system to run before it could walk."

Elaine Moise also combines Ph.D. research and part-time work in the Music Library. She handles scores search, acquisition, and reference. Her dissertation is on 17th-century Italian vocal music.

Anne Hesterman is an undergraduate music major stopping out for the year. She started working weekends at the Music Library while a junior at Gunn High School in Palo Alto.

"I enjoy library work. . . it's a useful skill to have, and working here is helping me make decisions," she says. "I'm exposed to people who are using their music in many different and exciting ways." Hesterman orders, receives, and searches serials. She is also on Tresidder's graphic art staff,

Does Facilities and Services listen to customers? Surveys will tell them

More students believe various aspects of the food provided by the University Food Service to be good rather than poor, but most believe them to be fair according to a recent survey.

The survey is the first in a project designed to measure the responsiveness to their customers of the various diversions of the University's Facilities and Services organization.

"The program is an outgrowth of the recently completed Organization and Management Study of the University," according to Associate Vice-President Jason Mavis.

In addition to Housing and Food Service, the responsiveness of the Facilities Project Management, Procurement, Operations and Maintenance and Word Graphics Divisions of Facilities and Services will also be measured.

Jack Albrecht, assistant director of facilities and services, is project manager, and George P. Barbour, Jr., of Public Management Consulting Associates of Palo Alto, is providing consulting services.

"We may conduct as many as 11 different surveys because of the diversity of services provided and customers served," said Albrecht.

Surveys to measure the responsiveness of the Housing Department of Housing and Food Services, Purchasing and Contracts, Stores, Commissary and Facilities Project Management will be released soon, with surveys of Operations and Maintenance and the various parts of Word Graphics following this spring.

The surveys will be taken at least annually, and in some cases, more frequently. They will provide information to the management of these operations, and serve as a resource for evaluating changes and making improvements in the ways in which Facilities and Services responds to the needs of the University.

The Food Service survey was conducted on December 2. About three-fourths of the students attending the evening meal in all locations served by the University Food Service responded to the questionnaire. In addition to 39 questions requesting evaluation of Food Service policy and response issues, demographic questions in class, meal plan and sex were also asked. The questionnaires were kept separate by location. Comments were solicited, and about one-third of the 2,092 questionnaires contained comments.

According to Ed Scoles, director of housing and food service, and Maxine Anderson, manager of University Food Service, both broad and specific insights into the provision of food services have been gained as a result of the survey. Many changes that could be made immediately have already occurred, and other, more far reaching recommendations are being studied for possible implementation at a later date.

"Although all recommendations cannot be implemented in their entirety because of constrained resources," Mavis said, "the data received will give guidance to our managers on the allocation of those resources that are available. We anticipate that this will be an outcome of all the surveys yet to be taken."

The way it was....

David Starr Jordan vs the roadhouses: those were the good old days

75 YEARS AGO (1908)

The Board of Trustees secured a decree from the Superior Court of Santa Clara County authorizing the Board to withdraw $15 million of the University endowment from the eastern railroad securities in which it was invested and to reinvest the same in San Francisco and Bay region realty.

* * * *

In an attempt to abate what he termed "the greatest single influence for evil about Stanford University," President Jordan appealed to the Board of Supervisors of San Mateo County to refuse to renew the liquor licenses of Charles Veyer of Menlo Park and of Walter Jellich, who conducted the "Wunder" roadhouse on the Los Trancos road. The Supervisors decided that the charges were too general and declined to revoke the licenses.

* * * *

President K. L. Fenton of the Senior Class honored F. R. Lanagan, captain of the varsity track team, and Miss E. N. Hill, captain of the senior women's basketball team, by appointing them to the flower committee, to decorate the Stanford tomb each Sunday. The custom was started by the Class of 1905 in March of that year, shortly after Mrs. Stanford's death.

50 YEARS AGO (1933)

The Student Emergency Employment Fund Committee, appointed by Acting-President Swain, began a strenuous program of money- and job-hunting to alleviate the emergency wants of needy students. A flood of students were seeking loans of $14 with which to pay the fees not covered by their tuition notes and many were out of work and hungry.

* * * *

The Board of Athletic Control cut salaries by 10 percent for all members of the coaching staffs, grounds workers, and office employees to avoid a deficit caused by declining football receipts.

* * * *

The Bawlout for winter quarter, the directory of students and faculty, revealed that there were 3.6 students for every faculty member. Of the 3,043 students registered, 2,331 were from California, 634 from other states, and 79 from foreign countries. Mary, Dorothy, and Elizabeth were the most popular names of the girls. Robert, John, and William led for men.

25 YEARS AGO (1958)

A faculty committee selected 63 students from a total of 197 applicants to attend the first semester of a Stanford campus abroad, Stanford in Germany, in Beutelsbach (near Stuttgart), on the basis of grades, class distribution and linguistic skills.

* * * *

Planning for a married student apartment program began. Married students who flocked to Stanford and other universities following World War II were recognized as a permanent part of the student population. A survey showed that 1,532, nearly one-fifth, of Stanford's students were married. Their children number 1,579. Stanford had had since its inception the goal of housing as large a proportion of its student body as possible.

* * * *

The Sixth Annual Military Ball, presented by all three Stanford ROTC units, at the Palace-Sheraton Hotel was attended by 1,100 persons. The cadets and midshipmen were in uniform for the occasion. The coed Queen and her escort dined at the Fort Scott Officers' Club at the San Francisco Presidio before the dance.

The Stanford Historical Society

Music Librarians...

continued from page 7

and is redecorating Tresidder's cafeteria.

Hesterman and Moise share Kathy Bain's full-time job while Bain is on maternity leave. Bain received a B.M. in violin and an M.M. in music education, then taught music in South Africa for one year. She came to work in the Music Library five years ago when she couldn't find a job teaching strings in the local schools.

Gina Balestracci, in charge of circulation, is a frequent performer in Music Department concerts, along with her graduate student husband, gambist Roland Hutchinson.

"My father started me in music when I was quite young. I began playing the organ in grade school and picked up tuba and percussion in high school," she recalls.

Balestracci received a B.M. in music history and literature adding recorders and bass viol to her repertoire. She worked in libraries during high school, college, and at MIT for three years after graduation before moving to Stanford.

"Getting this job at the Music Library was a grand stroke of luck," she says. "It's the perfect job for me." Eventually Balestracci wants to get a Ph.D. in musicology. In the meantime, besides her full-time job and concertizing, she has become proficient on the shawm and harpsichord.

Diane Greeley is Gina's assistant. A flutist, she recently graduated from the University of Santa Clara with an emphasis on music.

Leroy Kromm is a half-time cataloger of sound recordings, but perhaps better known as a fine baritone soloist and music director at the First United Methodist Church in Palo Alto. He also teaches voice at the University of Santa Clara.

Kromm received a B.A. and M.A. in voice and a B.S. in music education from the University of Illinois at Urbana. He worked in the Music Library at Urbana for four years, doing exactly what he's doing now.

"I enjoy the steadiness and security of this job," says Kromm, "And I don't have to use my voice too much!"

The Music Library is open to all Stanford identification card-holders. Records may not be checked out, but listening facilities are provided. To find out more about the Music Library, call 497-2463.

The Music Library's sister institution, the Archive of Recorded Sound, is located on the ground floor of the Knoll.

Barbara Sawka has been archivist there since 1977. Before that she worked at Yale's Collection of Historical Sound Recordings, one of the best in the country.

"Since the Archive contains spoken word and historical recordings as well as music, my degree in French, combined with music and other humanities courses in college, provide a good background for my work with users from many disciplines," Sawka notes. "And I've played the flute since age 10."

Her assistant, Aurora Perez, came to the Bay Area from Texas expressly to take advantage of the active music scene here.

In Texas, Perez performed Latin music for 10 years, singing and playing the guitar. Now she plays with "Blue Moon," a Palo Alto-based rhythm and blues band, and writes blues and jazz songs of her own.

"I've wanted to work in the Archive ever since I came to Stanford," says Perez. "It's an enlightening place for a musician, and I enjoy learning about the history of recording."

We must tax consumption, not income, urges Michael Boskin

During this decade, Congress should continue moving toward taxes on consumption, rather than income, Stanford economist Michael Boskin said Thursday, Jan. 20, in Washington, D.C.

Faced with a "frightening" slowdown in long-term growth, he said, "we need to change our society from one that borrows in order to consume to one which saves in order to promote its future well-being."

Congress should integrate the corporate and personal tax, remove all saving or reinvestment from the tax base, and greatly simplify the tax code and business decisions, he declared.

"All saving and investment—whether in plant and equipment, in human beings, or in quasi-public goods provided through charitable contributions—(should) be deductible from a comprehensive measure of income," he said. "The remaining direct consumption would be the proper tax base."

Personal exemptions would reflect a basic level of consumption under such a plan.

"We have been gradually moving toward a hybrid of an income and expenditure tax in our personal tax system for many years," Boskin noted. Liberalized provisions for Individual Retirement Accounts (IRA's) permit tax savings until they are used for consumption, for example.

How to increase savings

Integrating the personal and corporate income tax would eliminate double taxation of income for corporate sources and double taxation of other kinds of personal savings, he noted. It would be much simpler to administer than a value-added or national sales tax.

While "by no means a panacea," a consumption tax system would probably increase overall savings and investment. It should be supplemented with sensible spending policies, moves to control the deficit, and increased government investment in research, Boskin said.

Emphasizing the need to get the U.S. back toward its traditional long-term growth rate of two percent annually, he noted that even small differences in growth rates can "drastically alter" a society in relatively short periods.

"The United Kingdom, growing at about one percentage point less than did the U.S., France and Germany managed to transform itself from the wealthiest society on earth toward the end of the 19th Century to a relatively poor member of the Common Market today."

Steering committee chairman of Stanford's Center for Economic Policy Research, Boskin testified before the Senate Finance Subcommittee on Savings, Pensions, and Investment Policy and also addressed the American Council for Capital Formation. His comments came one day after public disclosure of the sharpest drop in national production since 1946.

Abysmal economic growth

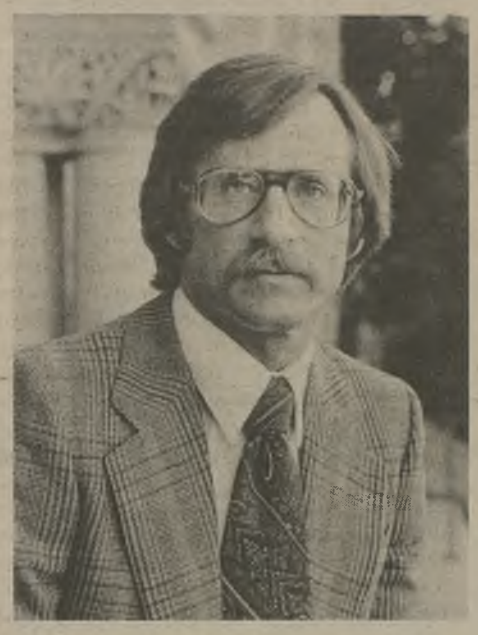
America's recent economic growth has been "simply abysmal," Boskin said. The average annual increase in labor productivity in the private business sector, between cyclical peaks, has fallen from 3.6 percent in 1948-53 to 0.6 percent in 1973-79.

Once the nation comes out of the recession, the net national saving rate needs to be increased by at least 50 percent, he said.

"Our problem is a general lack of capital formation and technological innovation—not low rates of capital formation in specific industries," he said. The share of gross national product devoted to net productive investment has fallen from 4.1 percent in 1965-69 to 2.2 percent in 1975-79.

Research and development expenditures as a share of GNP have fallen from 2.9 percent in 1965 to 2.2 percent in 1978.

"We have not been adding enough capital to our capital stock," Boskin said. "We have not been generating enough new technology and embedding it into our capital stock and our labor force."



Impending fiscal deficits

Boskin's own studies suggest that the net savings rate in the U.S. is about seven percent. But the best long-term rate for society may be twice that level.

Heavy taxation of capital income, government deficits, and social insurance programs all contribute to the current low savings rate.

"There is probably no greater contributor to our sluggish investment and innovation, our overvalued dollar, and our lack of competitiveness in many overseas markets, than our enormous impending fiscal deficits," he said.

Achieving long-term balance between government revenues and expenditures is needed to substantially reduce real interest rates, decrease the amount of foreign capital pouring into the U.S., and help restore a "sensible value" to the dollar, he added.

Michael Boskin

Increased saving is essential to fuel long-term technological change and economic growth. As research and development expenditures increase, the rate of new product innovation is likely to rise.

A substantial amount of "learning-by-doing" follows, Boskin said. "As new investment occurs, new techniques of production become apparent which would not otherwise have been discovered."

The rate of investment and technological change may increase even further if it is difficult or impossible to "embed new technology in old capital," he added.

"General knowledge produced in basic research may be commercially exploitable in many areas," but government investment in research and development is needed to realize its full potential value to society, he said. It is "disheartening" that government investment has been "falling sharply" except in areas associated with the national defense buildup.

Tax laws not neutral

Present tax laws are not neutral in their impact on different kinds of investment, he noted. When taxes are taken into account, for example, it may be more profitable for an individual to buy a personal computer than to invest in knowledge and skills, since the direct cost of doing so is not generally depreciable. College tuition is not deductible or recoverable.

"If this trend continues for a span of time, we run the risk of misallocating our investment and underinvesting in the ...human capital...necessary to take advantage of the growth of new technologies."

Barton Bernstein's warning

Artificial heart may sidetrack more useful programs

So far, the artificial heart research program has been "riddled with unrealistic promises" about gains in scientific knowledge and the quality of life, says Stanford history Prof. Barton Bernstein.

"Conceived in the early 1960s amid widespread euphoria, and promoted by leading heart surgeons and biotechnicians, the federal program was supposed to cost $40 million and develop a fully implantable heart within five years," he notes.

"Now the program is more than a decade behind schedule and the total cost has soared 500 percent.

"Even the most optimistic proponents do not think there will be a fully implantable device until the end of the 1980s, at the earliest. Some experts close to the program think that goal will not be achieved for at least a generation."

Bernstein questions whether the U.S. can afford the artificial heart program, particularly if it results in the continuing neglect of heart disease prevention and other more effective programs, such as prenatal care and nutrition.

"It has been estimated that the device, the operation and the hospital care (for an artificial heart) would cost $100,000 per recipient in the first year after implantation," he declares.

"With projections of the number of recipients ranging from 16,000 to 66,000 each year, the total annual cost would run between $1.6 and $6.6 billion.

"If the artificial heart is perfected and the government is unwilling to pay for the operations of all who need it, the device

Barton Bernstein

will be available only to the wealthy, who already receive better care than the poor do. . . .

"It was a desire to avoid this unfairness that impelled the federal government to fund all kidney dialysis treatments in the U.S. . . .

"There are serious doubts that the artificial heart will make the lives of heart patients significantly better if it should become widely available. Being tethered to air hoses may not be much better than being bedridden.

"The experience of dialysis patients is relevant here. They have a suicide rate that is eight times that of the general population. Many of them are depressed and unable to work. And the promise of a power system (for the artificial heart) remains just that—a promise."

So far $200 million has been spent developing the artificial heart. Budget requests have been routinely approved after hearings lasting two hours, on the average.

"With the artificial heart still in the experimental stage and a totally implantable device at least a decade away, now is the time for a probing public dialog about the costs—economic and social—of developing this device," says Bernstein.

"Admittedly, there is little glamour in preventive medicine. Sometimes its findings require us to reconsider the structure of our society and the injuries we quietly suffer in the name of economic necessity.

"That is why heroic medicine has often seemed more attractive. It does not prompt demands for social reform or for the elimination of hazards in the workplace, and it represents a triumph of skilled physicians and technology over illness and nature.

"But such triumphs can be costly and shortsighted."

Bernstein participates in a program on biomedical innovations, including the artificial heart, at the Stanford Medical School. His views are developed in the Jan. 22 issue of *The Nation* magazine.

Latest measure of status: how many semiconductor chips in your home?

continued from page 1

Support came from the Stanford Center for Information Technology, the Hewlett-Packard Company Foundation, and TRW Corporation.

In becoming aware of computers, deciding to buy, and actually getting their computers going, respondents relied more on friends, working colleagues, computer stores and other interpersonal channels than on mass media, the survey found.

Among media sources, hobby magazines were most often mentioned as affecting brand choice, with newspapers and popular magazines less influential. TV was mentioned only rarely.

So far, home computer buys have relied increasingly on interpersonal sources of information. But this decentralized pattern of diffusion may change.

"Brands, such as IBM and Atari, which have been prominently advertised in the mass media have a much higher salience than (computer) ownership alone would predict," the report notes. "Indeed, the growing consumer market for home computers and the entrance of large firms, including Japanese corporations, into the competition, bodes toward increased centralization."

Home computer owners knew an average of about five home computer owners before making their purchase. They reported talking to an average of about 13 other people in the previous month about their computers, showing it to an average of five others in the same period.

Home computer owners reported encouraging an average of eight other people to buy a home computer.

Nearly two-thirds of the owners reported encountering problems with their computer, yet more than two thirds indicated they were very satisfied with their machines. They took an average of about a month before feeling comfortable with their computer.

Home computers may be rapidly diffused in the future because of the rising number of information sources and channels of influence, the increased number of brands known, interpersonal influence, and a decline in the time needed to adopt this innovation, the report said.

But home computer diffusion may be taking place within relatively wealthy, upper income families.

The most common uses of home computers were entertainment and word processing, each mentioned by more than half the owners. More than 30 percent reported some usage for business management, database access, and home budgeting.

In most households, the computer was used between five and 20 hours per week, with average use topping 17 hours a week. One fourth of the families reported using computers more than 25 hours per week.

Computer use increases

More than half the respondents reported an increase in home computer use over time, while 14 percent reported a decrease in use. Entertainment dominated children's computer use almost to the exclusion of other uses.

More than two-thirds of the computer owners said they saved time, while one third found computers saved money.

The home computer is generally seen to have a relative advantage over traditional alternatives both in home recreation and personal or work-related financial activity.

"Though the computer is used in the home, more than a third of the advantages mentioned. . .were related to work or business," the report observed. "Many of the more expert adopters, however, saw the limitations of the home computer, in comparison to larger computers, as important negative considerations."

Prior to purchase, price was the biggest barrier to home computer purchase, despite an average annual income of $35,000 among respondents. Next to cost, anticipated difficulties in learning to use computers was the biggest barrier to purchase.

In general, the mass media appear to have a greater role earlier in the innovation decision process, while friends become the most important source of knowledge at the decision stage and in the choice of brand.

Competition from TV

When it comes to home entertainment, "the largest obstacle to the home computer is the present saturation of the U.S. market with tried and proven home entertainment fare," the report said.

"Passive enjoyment of dramatic, humor and music programming on TV or radio, records or videodiscs, videotape or home movies, may have more appeal than the interactive requirements of computer games. Their interactive element seems to provide the greatest attraction for youth. The explosion of the arcade video game market provides striking evidence of this."

While computer prices now have become competitive with other home electronics, there may be some doubt over the availability of software to provide sustained satisfaction from computer games.

"Perhaps the best single measure of status in today's information society is the number of semiconductor chips per household, perhaps in a watch or radio," the report commented.

"The average American home probably has from eight to ten chips and a very modern one probably has 15 to 18. This index of information-power is much lower in the developing countries of Latin America, where there may only be one or two chips per household."

Copies of the report may be ordered from the Institute for Communication Research, Stanford University, Stanford, Ca. 94305.

U.S. should subsidize grad education—Rosenzweig

continued from page 1

The government should provide "fully subsidized, merit based" support to the most exceptional students in all academic disciplines, he said. These should fully support living expenses and "reflect a realistic recognition of competing market forces." He cited proposed fellowships of $12,000 each in the Defense Department budget for fiscal 1983 as "exemplary."

Full funding of 450 portable merit fellowships, already authorized in Title IX of the Higher Education Act of 1980, is "an essential first step" which would symbolize "the inherent worth of pursuit of knowledge in all disciplines," he added.

Modest programs of institutional fellowships, awarded on the basis of merit by the National Science Foundation and other agencies, would help maintain strong academic departments, he added. To assure merit, some variant of the national research service awards program might be used; these incorporate peer review by a national panel.

Graduate student research assistantships, included in peer-reviewed faculty research projects, are "one of the most effective means for supporting research training in the sciences and engineering," he added.

The NSF and National Institutes of Health have strongly supported the use of graduate students in this fashion.

But "as costs have risen rapidly some federal program officials and some faculty are emphasizing short-term research productivity by employing postdoctoral research staff at the expense of younger doctoral candidates," he observed. While understandable, this trend "will have a serious negative impact on the number of doctorate trained personnel" if it continues.

Funds to support graduate students under the college work-study program should be "substantially increased," he added. Teaching assistantships partially funded through work-study can help both studies and "hard-pressed teaching budgets of the university."

As graduate scholarship and fellowship programs have declined, guaranteed student loans have begun to provide essential support. But the size of loans accrued by many students produce "enormous financial burdens that hamper them for years" after graduation.

The higher interest rates proposed in the new Auxiliary Loans to Assist Students (ALAS) program would aggravate this problem.

Federal and university policy makers should consider ways of reducing the debt burden or at least adjusting payment schedules according to ability to pay. Substantial expansion of work-study programs might enable graduate students to reduce their dependence on loans.

Federal rules concerning financial independence of graduate students from their parents now make it "exceedingly difficult" to establish independence during the senior year in college. This means many prospective graduate students must look for a year of "stopgap employment" before continuing their academic work. The rules should be revised to permit graduate students to be considered independent when they enroll, providing they meet current criteria from that time forward.

To maintain a "critical margin of excellence" in graduate education, he concluded, "a substantially expanded, balanced set of merit fellowships awarded to the most talented students and the strongest academic department represents the most significant commitment to quality that the federal government can provide" in all academic disciplines.

Project grant support for graduate student research assistants would foster close student-faculty interaction "responsible for the uniquely vigorous and innovative nature of American science and engineering," he added.

"The guaranteed student loan program is essential because of the current breadth of its impact."

Current federally funded graduate fellowships total 9,168. The agencies, purpose, and total for each program are: Health and Human Services, national research service awards, 4,800; National Science Foundation, science and engineering, 1,477; Department of Education, graduate and professional opportunity program and public service, 1,200; U.S. information Agency, Fulbright-Hays grants for Americans studying abroad, 990; Department of Education, foreign language and area fellowships, 635; and Department of Defense, engineering, 66, a new program for 1983.

Soon to leave his current position as vice-president for public affairs at Stanford, Rosenzweig coauthored a recent AAU study on *Research Universities and Their Patrons*, a study of university-government-business relations. This emphasized the need for stable, long-term support of the nation's best students at the graduate level.

Emission standards won't impact auto industry

Proposed cuts in auto emission standards would have "minimal impact" on car prices, sales, and employment, according to Timothy F. Bresnahan, assistant professor of economics at Stanford.

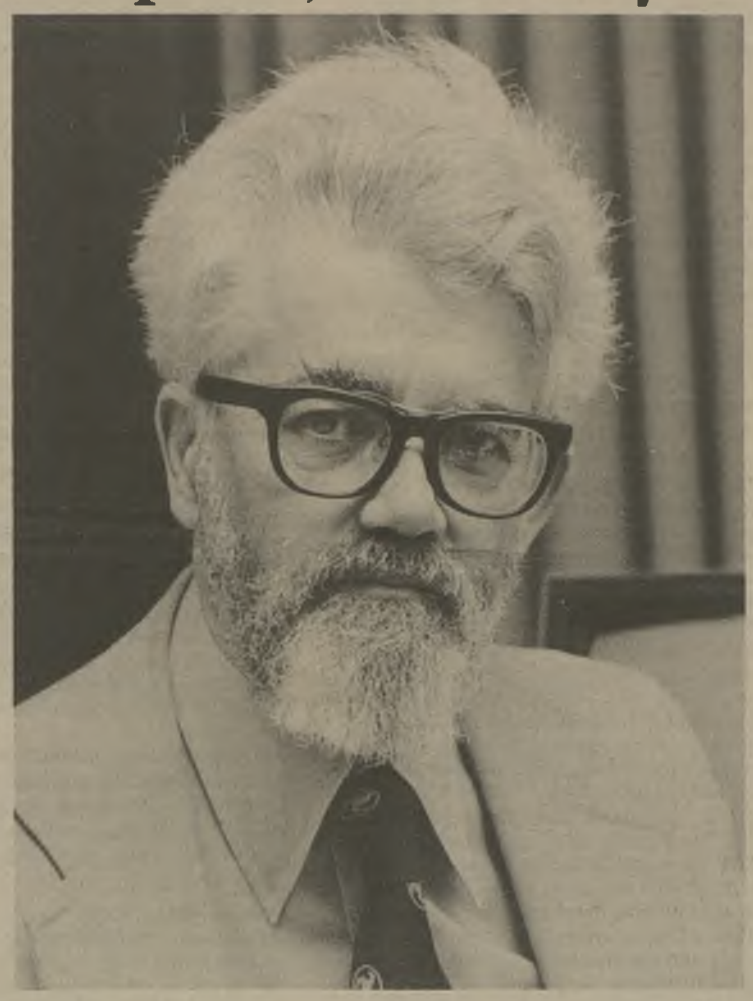
"Assuming regulatory relief were coming on stream right now, the effect on employment would be 2,500 jobs—one third of one percent of those employed—out of a quarter million unemployed in the auto industry," he declares in a working paper circulated by the Center for Economic Policy Research at Stanford.

"Similarly, a one-third decline in real interest rates—to levels that would still be spectacularly high by historical standards—would have more than 10 times the impact of the proposed (emission standards) regulatory relief on the true cost of automobiles to the end user."

The effects of any change of emission standards for carbon monoxide and for oxides of nitrogen would come "too late to to help the current auto industry crisis," he adds.

In Congressional testimony, Ford projected a savings of $80 per car from loosened standards, Chrysler $125, Volkswagen of America $135, American Motors $200, and GM $165 to $360.

Overall, Bresnahan believes, a cost savings of $100 to $150 per car is probably the most reasonable estimate.



About 80 percent of this saving might be passed through to consumers—or roughly one to one and a half percent of the average retail price of $10,000 per car.

The lower price would have only a very small impact on sales, ranging from as little as one third of one percent to as much as two thirds of one percent.

Even under the most extreme set of assumptions—a two percent cost saving, all of which was passed through to consumers—rolling back emissions standards would yield less than 15,000 auto industry jobs.

Future shock a 'popular misconception,' McCarthy says

Technological change impact small now compared to period of 1890 to 1920

Leo McCarthy

Future shock is simply a popular misconception, says Prof. John McCarthy, Stanford computer scientist and pioneer in artificial intelligence.

"There's been a slowdown in technological change that affects everyday life," McCarthy told about 150 persons attending a Grads in Common panel discussion on "Coping with the Information Explosion."

Between 1890 and 1920, McCarthy suggested, people experienced much more technological change in their daily lives. Electricity, telephones, automobiles, airplanes and radio all hit the popular market.

In recent decades, only television has had a "really basic" impact, he said. New methods of birth control were important, but earlier means existed for the same purpose.

Computers will enable people to "get rid of a lot of paper," could greatly expand the free press, and have interesting applications in holding popular representatives more accountable for keeping their promises, he suggested.

There's been a "large drop" in the caliber of public debate between the Lincoln-Douglas and the Ford-Carter exchanges, McCarthy said. Where long questions once received thoughtful answers, now questions simply trigger a "key word" search of material canned from previous speeches.

"There's a lot of hit-and-run journalism," he added. "Things are said knowing there will be no answer."

Computers might change that. "Imagine every person had the right to vote on every issue, but could delegate that right to others" to the point where those with half a million proxies or more might serve in Congress, he suggested. Individuals could still retain the right to withdraw their proxy, of course.

No computer revolution

"There's been a lot of talk about the Computer Revolution since 1950 but it hasn't happened—yet," McCarthy said. By the turn of the century, however, there could be another "wave of inventions" comparable to those of the late 1900s.

Computers can make it much easier and cheaper to publish information, especially if means can be devised for users to pay authors, he observed.

The physical characteristics of microcomputers are far less important than the public information systems to which they are connected, he added.

Instead of making government documents available in Washington, D.C., reading rooms—where wealthy firms can hunt for competitors secrets—the information should be stored and made available on computer systems.

Stanford itself might well spend the millions now planned for an improved computer network, called SUNet, to get more library information in computer-readable form, he added.

McCarthy once suggested to Ed David, President Nixon's science adviser, that the U.S. use $2.5 billion in rupees blocked in India to have unemployed people there type the world's great literature into computers.

Paul Kaufman, special assistant to the director of Stanford's Center for Information Technology, noted that the culture of the information age has been "manufactured."

"We live amid unparalleled self-consciousness of this information revolution." he added. "You'll have to ask historians whether workers in England several hundred years ago went around saying to each other: 'By God, we're in the Industrial Revolution!

" 'How does it feel to you, George?

" 'Well, I don't know, Alph. . . .

Information age dawns

"At the official media dawn of the information age, a commercial suggested that 'If your boss or your family asked what you did all day, tell them that you "managed information." '

"Many executives and bureaucrats must have been relieved. For years they felt secretly guilty—being completely unable to explain to others, not to speak of themselves, what they did at the office.

" 'By God, that's right,' they must have said. 'That's what I really do! I manage information.'

"TV commercials, which had for so long featured macho portraits of sweaty loggers and thirsty fishermen, now portrayed a new breed of Americans—the data wranglers. . . .

"More than half the work force is engaged in the manipulation of signs and symbols. But leaving the brutal toils of the fields, mills, and factories has not made life easier for us. And it is only now that the casualties are staggering in—those left shell shocked by the information explosion, debilitated, simply unable to log on any more. . . .

"There is a specter haunting the information economy: the prospect of class divisions between the information rich and the information poor; the prospect that the business of mining our intellectual gold, creating as it is now called 'intellectual property' will have unforeseen consequences for the creating and diffusion of our cultural values."

Divergent ways of thinking

In the universities there are widely divergent ways of thinking about information. Engineers and scientists put a high value on measuring things, bit by bit. "Something is there or it is not," as Kaufman put it. Data is correctly viewed as an entity apart from its users.

A contrasting vision comes from therapists, who are apt to view information as a process fusing the observer and the observed.

While it has become easier to generate, transmit and transform bits of information, this does not necessarily make individuals or society more effective.

"What is needed is a clearer view of the values, of intentions—the subjective side of the information process. . . .

"Many organizations are beginning to see that productivity in the information age is akin to creativity. So they are looking more at what can be done to understand the dynamics of interpretation and intuitive judgment," Kaufman said.

"Perhaps it is our fate in Western technological society, with our traditional faith in objectivity, to have begun first by mastering the ability to produce data, in its broadest sense.

"Having done that, we are faced with understanding how data is turned into information, through interaction with someone to whom the data means something.

"Finally, looking to the source of that meaning, we will begin to look at values and knowledge."

Information technology can help, "not only by pointing us to the new and timely, but also pointing us to what is old and timeless: the unrevealed source of our individual creativity."

Giuliana Lavendel, manager of the Technical Information Center for Xerox Palo Alto Research Center, agreed that many managers are "shell shocked" by the sheer mass of information. Some rely on "serendipity, friends, television and what their wives say at night," she observed. But many also can obtain personally useful information through prompt access to more than 200 data banks nationally.

Trained as a classicist, she "lives among a lot of Renaissance people" who enjoy literature and music as well as computers and high technology.

Disagreeing with McCarthy, she said "I can't imagine anything having a deeper influence on daily life" than local area computer networks.

These help "people make friends with others whom they may never see, provide access to important people who may otherwise be unreachable," she said. Social life, views of knowledge, and ways of thinking can be deeply affected.

Associate Prof. Barbara Gelpi of the Stanford English Department, editor of *Signs: Journal of Women in Culture and Society*, urged the graduate students in her audience to pool resources across disciplines.

While it is important to have a scholarly base, "unless there is interdisciplinary work, a specialized field can become sterile and even wrong," she said.

"Poets don't just read other poets." In fact, poet Sylvia Plath found that reading others' poetry was bad for her own writing. Poetry should be read and understood in the context of a particular time, society and culture.

While most people in universities do not believe in the possibility of broadly talented Renaissance men and women, they still judge achievement in individualistic terms.

Many minds may go into the writing of a book, but "the name on the front is still the P.I. (principal investigator,)" she observed. Universities still need to find better ways of judging and crediting work done by groups of people.

Grads in Common

Sponsored by the Center for Teaching and Learning and the Graduate Student Association, Grads in Common is a new organization which seeks to bring students together from a wide variety of disciplines.

It will sponsor a panel discussion on "Specialization: Where Did It Come From and What's It Doing to Our Lives?" at 4:15 p.m. Thursday, Jan. 27, in the Tresidder Lounge.

Participants will include Prof. Sidney Drell, deputy director of the Stanford Linear Accelerator Center; Prof. Anne Mellor, English, chair of feminist studies; Prof. Ian Watt, English, director of the Stanford Humanities Center; and Prof. Malcolm McWhorter, electrical engineering, director of ethics of development in a global environment (EDGE).

Grads in Common plans informal coffee hours from 3:30 to 5 p.m. Thursdays, Feb. 3, 10, and 17, in the Alumni Room of the Old Union Clubhouse, across the courtyard from the Nitery.

Further information about the organization may be obtained from 497-1326. —**Bob Beyers**

Kennedy: Schools have become magnet for public discontent

Following is the major portion of a talk on "The Schools and Their Future: Who Will Lead?" by President Donald Kennedy, given to the California School Superintendents Association, Jan. 20:

Public confidence in the venture for which you are responsible is a necessary (though not a sufficient) condition for successful leadership of the schools themselves.

And all agree, I think, that public confidence in education is at disastrously low ebb. Our fellow citizens are unhappy about two decades of decline in standardized test scores; they're frightened by antisocial behavior in the schools and the resulting disciplinary problems; they are puzzled by the stubborn persistence of inequities in access to public education of quality; and they're chagrined or outraged by functional illiteracy and the practices that appear to encourage it—curricula that neglect critical basic skills and academic management that permits students to leave the system with less-than-minimal competence.

One hears these complaints everywhere. But I think we will be mistaken if we focus on the specifics, and fail to recognize that underlying them is a kind of lesion in faith. I want to spend a few minutes trying to examine the etiology of that lesion, in order to explain why there is such a mismatch between our collective expestations of the educational process and what it is prepared to deliver.

We are, to begin with, a society that sets great store by institutional solutions to problems, especially if they are rather technical, and most especially if they are public. After all, we have grown our public sector at an extraordinary rate in this century. We have a record of having successfully attacked problems ranging from agricultural innovation to major episodes of unemployment and poverty with public sociotechnical experiments.

The zenith of our faith in such intervention may have been reached in the educational and social reforms of the late 1950s and 1960s. Our expectations in those days were pretty grand; we thought that we could solve the problems of access and improve quality at the same time; we thought we could revise all the science curricula in the high schools at once; we believed that massive interventions with the very young, if critically timed, could entirely abolish a cohort of the supposedly uneducable.

And we were developing a set of expectations about the schools that went far, far beyond their role in educating. We wanted them to do things that heretofore had been thought the tasks of parents, of churches, of neighborhoods, of aunts and uncles, quite probably even of the Boy Scouts and the Army.

In short, we made the schools a magnet for the overdrawn expectations of a society that looks to public institutions for too many solutions to too many different problems.

When the technological fixes didn't work, or didn't work as expected, there was substantial disillusionment. Nowhere was it more prominent than among the technicians themselves.

Social scientists, often the same ones who over-promised two decades ago, are now casting doubt upon the efficacy of *anything* that was done in the name of the Great Society. Having spawned a great array of reforms, the applied social scientists have now made a cottage industry out of making the case that they don't work. It would be an amusing illustration of academic make-work were it not providing so much ammunition for a neo-conservative political movement.

As a matter, of fact, the current assertions that Headstart, busing, and all those other programs don't accomplish anything at all are just as phony as the earlier claims that they would solve everything.

Bold experiments

We have made a number of bold experiments in public education in this country, and the record of their accomplishment and failure is going to be very difficult to sort out. I expect we will wind up rather less encouraged than we were in the beginning, and a whole lot happier than we are now. The fact remains, though, that today critics of these experiments are in the driver's seat, and most of our fellow citizens believe that we are now victims of some national foolishness.

That is one cause of the lesion. The second, I think, is a damaging and national withdrawal of public respect from public service. I've tried hard to explain this, and I can't.

It seems only yesterday that the very best young people I taught at Stanford were committing themselves to spend time in the Peace Corps, thinking about working in public health, and asking about the Foreign Service examinations. I'm happy to report that, on our campus at least, that spirit isn't dead; but I do have to confess that it's a lot less visible. And nationally the situation strikes me as very bad.

For nearly a decade of American life, scarcely a single good word about "government work" can be heard from the most highly-placed sources. Instead, the bureaucracy has become a scapegoat for everything that doesn't work in this society, and in two straight presidential campaigns the candidates have vied with one another in heaping scorn upon the apparatus they hoped soon to inherit. It is small wonder that people who work in the public sector are dispirited.

And teachers are in many ways the most visible "public servants"; what applies to the others in the way of public attitude applies to them.

What are the consequences of this lesion in faith? One of them, I suspect, is the appalling lack of favor teaching careers are now finding. I find it plausible, even likely, that the mistrust of public service and its extension to teaching are responsible for the low proportion of able college students who intend to make teaching a career. Two years ago, for example, students entering college who intended to enter the teaching profession had average SAT scores 65 points below the average for all high school seniors bound for college. This in itself, of course, tends to reinforce public mistrust of the schools, and the spiral deepens.

Punishing the school

Another consequence has been taking place at the polls. The defeat of school bond measures; the failure of special taxes; and the passage of statewide measures (like Proposition 13 here) that are generally damaging to public institutions, including the schools, are important outcomes of the loss of public faith. And then, the predictable deterioration of performance leads in turn to further criticism: by punishing the schools for not doing what we want, we make them worse. It is a strange system of discipline.

What can we do to begin to reverse this trend, and to restore the public's regard for public education? That is, clearly a collective responsibility—no group can do it alone. The Seven Springs Study entitled, "Restoring Confidence in Public Education," prepared by Fred and Grace Hechinger, puts it this way:

> "The decline of confidence in public education. . .unfortunately. . .is treated largely as if it were a side issue, subordinated to such central questions as the economy or national security—one to be dealt with by school boards, school superintendents, teachers and perhaps those citizens who, as parents, have a personal interest in the matter. We have long been convinced that this is a dangerously shortsighted view of the problem. The history of both public education and of the fortunes of a democratic society persuades us that the schools are not peripheral institutions. They are at the center of society."

I am convinced that the leaders of institutions of higher education can play a useful role in the task of restoration. At earlier times, university presidents (perhaps most memorably Conant of Harvard) were important national spokesmen for the values and importance of schools and schooling. More recently, they have been strangely silent on these matters, and I think that is unfortunate. Only if the best institutions care about schools—and, incidentally, about their own schools of education—will the public think that they are worth caring about. And surely nothing could be more clearly the business of America's academic leaders.

This view is certainly not mine alone. A number of universities and university presidents have recently undertaken strong initiatives with regard to secondary schools. The President of Yale, Mr. Giamatti, has extended an effort to involve Yale faculty with the New Haven schools, through the Yale/New Haven Teacher Institute, and has convened a conference next month to explore how schools and colleges can work together better in the future. The education commissioners of virtually all the states will attend. At Berkeley, Chancellor Heyman has made strong efforts to move that university's School of Education into active service with the public schools, including a major mathematics curriculum project revision. Harvard's president, Derek Bok, has actively joined the Carnegie study of the American high school, and he and I are planning a meeting of several university presidents in which we will explore alternative ways of supporting education.

At Stanford, our efforts have been heavily conditioned by the fact that we have a successful and prestigious School of Education, with a new and creative Dean. I've found myself surprised that despite these advantages, there was less collaboration than I thought desirable between members of that School's faculty and other faculty members at Stanford.

Indeed, it struck me as surprising that you could collect a large number of faculty members outside the School of Medicine who would claim a serious academic interest in health policy, and yet that only a few faculty members outside the School of Education would identify an equally serious interest in educational policy. A strange result, I thought, in view of the real parity between these two matters on our national agenda.

Accordingly, we conceived a major effort whereby we might accomplish several desirable things at once. First, we wanted to develop some strong interactions with neighboring school districts in order to ask some fundamental questions about how things are really working in the schools, and how they might be improved. We hoped we could learn some things that would be useful to these and other districts in the future.

Second, we wanted to chart in a more thoughtful way, the future of our own School of Education, by discovering how it can be more productively involved in the really central problems of the educational system. As byproducts, we hoped for two additional things: a deeper and more extensive involvement of the Stanford faculty outside the School of Education with the school, and with educational problems generally; and a strong public message that Stanford wa *sinstitutionally* interested in the schools and prepared to extend itself to help out.

Here is how we have organized Stanford and the Schools project, which is under the general direction of Dean Mike Atkin and me. There are six project groups.

One is on testing and teaching; it seeks to understand how tests and their content are linked to curricular objectives, how tests can be evaluated, and how they can be applied effectively in improvement.

The second is on curriculum—not what the descriptions and lesson plans say the curriculum is, but what is *really* is as teachers lay it out in the classroom. Indeed, one of the central objectives of this group is to find out how much disparity there is between what we say we're doing and what is really happening.

A third is on teacher education; it seeks to understand what the role of schools of education in universities like ours might be with regard to the preparation of teachers, how better collaboration might be fostered between institutions and practitioners, and how we get the results of research about teaching into practice.

A fourth looks at the design of secondary schools, and tries to understand how the major external forces acting to shape the high school may suggest new policies.

There is a project on personal responsibility. It seeks to examine which of the several extra-academic obligations of the public schools are pursued and which not, and how we might reassess the school's responsibility for these areas.

There is, finally, a project on education and technology, whose goals are adequately indicated by the title.

School district cooperation

For all project groups, we've recruited participation from the Stanford faculty outside the School of Education, although the effort is lead primarily from within it. We have the full cooperation of several school districts—Milpitas, Mountain View-Los Altos, San Francisco, San Jose, San Mateo.

We have attracted people like John Gardner, Fred Hechinger, Shirley Hufstedler, Robert Maynard, Albert Shanker, Paul Simon, and David Saxon to serve on a national advisory board. We have attracted strong foundation support for the work of the projects. I am, in short, very gratified by the success we've had—at least in the early going—in persuading people that the problem is a terribly important one, and that we have something to contribute to its solution.

I would be happy to describe this project in further detail, but I think enough is enough; I'll be glad if you ask me questions about it at the end. My point in this brief description is merely to indicate to you that we are serious about what we are doing, that we do not believe the problems can be solved by airy pronouncements from on high, and that we are prepared for a long course involving considerable cooperation. I think that is also the attitude of the other university presidents who have indicated their determination to work on the problem. What are some reasonable outcomes to hope for?

First, I think it will be helpful if we can succeed in reawakening the interest in our own faculties in what the schools are doing. One can argue that the post-Sputnik science curriculum reforms of the late 1950s and 1960s accomplished less than they might have, and indeed that they sometimes rode off in the wrong direction. They also managed some significant improvements, and they brought to secondary school science teaching a new enthusiasm and new pride. Much of that, I think, came from the new sense of connection many of them had to the colleges and to the research community.

Second, I hope we can encourage stronger commitments on the part of the private commercial sector in the future of the schools. Without that, it will be impossible to achieve the restoration of confidence in schools by the middle class in this country—the basic essential if they are to achieve what this society expects of them.

The alternative probably will not be the death of public education. But it almost certainly *will* be a retreat from the bold moves toward education for all that we made in the post war period, and a tacit admission that we are prepared to educate only the more fortunate of our young people, and to tolerate the perpetuation of a permanent underclass in

Student entrepreneurs—lots of 'em—making big money at Stanford

continued from page 1

The Center for Entrepreneurship now is planning a second conference this April to foster ties between academia and industry.

Harvard and Dartmouth students recently have organized similar entrepreneurial groups.

"For the next 20 years, we're going to see a renaissance in smaller business ventures," Steven C. Brandt, senior lecturer in Stanford's Graduate School of Business said in a recent campus interview.

"I think there is a more serious interest today for students to take positions in less traditional businesses." Brandt is the author of a new book on *Entrepreneuring: The Ten Commandments for Building a Growth Company* ($12.95, 190 pp.).

Entrepreneurs who have started their own technical firms are featured in Electrical Engineering Seminar 205. Seminar leader Robert Melen, consulting professor of electrical engineering, says enrollment has doubled in the last four years to more than 150. "Students from outside the engineering realm have even been joining my class," Melen noted.

A Stanford entrepreneur himself, Melen founded Cromemco Computers, named after his campus dormitory, Crothers Memorial.

Stanford students and faculty have been heavily involved in entrepreneuring ventures, especially in engineering and computer science. Some examples:

Gekee Fiber Optics, a Palo Alto-based fiber optics company, was recently cofounded by Brett Kingstone, a recent graduate in economics, and George Hara, an MBA student who became a master's student in electrical engineering. Kingstone reports $1 million in sales for 1982 and predicts that this year's total will rocket to $5 million. Clients include Walt Disney's Epcot in Florida.

While Hara and his brother are the technical know-how behind the company's success, it is Kingstone who has aggressively marketed Hara's contribution to fiber optics technology.

Former undergraduate owner of a bedding firm on the Peninsula, he personally surveyed student entrepreneurs at several campuses across the country, but found Silicon Valley a more active than the rest.

In addition to cofounding Gekee Fiber Optics, Kingstone has written a book, *The Student Entrepreneur's Guide: How to Start and Run Your Own Part-Time Small Business* (Ten Speed Press, Berkeley, Calif., $5.95).

Kingstone has also started his own publishing company, Dupie Press, so that he could publish and market the work of former *Stanford Daily* cartoonist Gil Morales.

Earthquake Safety, a "hotline" designed to help homeowners actually get ready in advance for the Big One, was established last May by David Hedman, a Stanford undergraduate in engineering and economics. Since then, it has distributed 20,000 packets of basic earthquake and disaster preparedness information to homeowners, mainly in the Bay Area. Hedman also has organized student engineers and others to do individual home inspections (at $75 each) for 5,000 customers. Now he's working with officials from 20 different cities, organizing meetings with attendance as high as 1,000 homeowners, to show step-by-step how to reduce risks from a major quake. Recently covered for three days by a *National Geographic* TV crew, Hedman acquired a 1,000 square-foot warehouse, plans to open an office in Los Angeles later this spring, and projects company revenue at $750,000 this year.

Western Data Systems was founded by Dan Leonard, a Stanford graduate student in mechanical engineering. According to Leonard, Stanford is "really fertile for the widely contagious entrepreneurial spirit. You discuss optical memory one day, computer interfaces the next," he emphasized.

Juan Bardina, a graduate student in mechanical engineering, is president of Technomex, Inc., a company which manufactures a washing machine that cleans microprocessor chips for Silicon Valley firms. Its decontamination process cleans chips by injecting a chemical "soap" along with deionized water, then dries the chip with nitrogen. Because of the specific nature of his new company, Bardina claims that there is no competition yet. "Last year, my company made $1 million, and in 1983 we hope to make about $3 million.

Robert Whalen, also a Stanford graduate in mechanical engineering, has founded Ability Designs, Inc. Whalen had the idea to develop and market an inflatable bathing device for handicapped people. Working with Stanford's Technology Licensing Office, he has teamed up with the family of a Colorado quadraplegic to design the device. "The reward isn't money, but just doing something well," he said.

Joel Walls, a Ph.D. student in geophysics, is director and one of the principal founders of Core Analysis and Petrophysical Services, Inc. in Mountain View. "Our company started out as the result of a perceived demand on the part of oil companies for proprietary research on a confidential basis," he said.

Robert Horstmeyer, a recent Stanford graduate, has formed a Palo Alto company called Advanced Drilling, Inc. Horstmeyer has developed and marketed a land drill that can dig oil wells sideways or even uphill.

Called the Robot Drill (TM), it uses hydraulics to grip the sides of the hole it is digging. This enables the drill bit to go off in almost any direction. "The idea was that there's got to be a better way to drill holes in the ground rather than using an 80-year-old technology which is essentially brute force," said Harold C. Nissley, chairman of Advanced Drilling, Inc. Prototypes were made and tested on campus, and the University given shares in the firm.

Liberal arts students also are taking some clever ideas of their own to the marketplace. Some examples:

Amazing Events Unlimited

Stanford students Mark Breier, Jeff Heyman and Eddie Poplawski are helping companies and individuals throw the "perfect party." They've started a creative events company called Amazing Events Unlimited and will do "almost anything" to create the personality and pizzaz that people will remember. "The nature of the events are attention getting and to make people smile," says Breier.

At a posh Woodside party, Amazing Events supplied a "butler" who hotly pursued imaginary pests with a flyswatter and a "maid" who mixed drinks with her thumb. When they "argued" over the aesthetics of a "valuable" oil painting, she took it off the wall and smashed it over his head. The guests were horrified, but their hosts were happy.

"How to College"

Two freshman dorm buddies, Bill Jeakle and Eugene Reardon, decided to "do something big" one summer. Convincing their families and three of their friends to invest $15,000 in their new ideas they established their own publishing company and went on to print and distribute *How to College: A Humorous Guide to the Four Years* (208 pp., $4.95, P.O. Box 3710, Stanford, Calif. 94305).

They're quickly selling the initial 6,000 copies that were printed. "If we're successful on the grass roots level, then maybe we can attract a major distributor, said Reardon, an economics major at Stanford. Contributing mightily to the guide were writer Ed Wyatt and *Stanford Daily* cartoonist Phillip Chalk.

Gummy Bears

After capturing the hearts of hundreds of Stanford Sierra Campers and the minds of three entrepreneurial Stanford students, German-made Gummy Bears moved into Silicon Valley, threatening to upset the balance of trade and maybe the stomachs of overindulgent Americans.

The highly popular candies were cleverly sandwiched between the covers of a book, *Gummy Bear Goes to Camp* ($3.95, 44 pp.) published a year ago by Bob Moog, Anne Boreta, and Sue Cashel.

The manufacturer provided 5,000 free sample bags for the first edition, which was marketed through candy stores and other nontraditional outlets. The sales have now financed Moog through the first year of the Stanford Graduate School of Business.

Following their entrepreneurial instincts and keeping their wits about them, four young liberal arts graduates have produced a fast-selling record, "The MBAs Born to Run Things."

The quartet, whose only live performances were making the recording and meeting the media, go by the names Franklin Mint, Manny Hanover, T. Bill Raitt, and Holden Gaines.

They describe themselves as "the world's first happily pro-business rock and roll band" with a "neo-conservative" outlook.

The opening lyric in their first song, "The MBAs Theme" puts it this way:

We like to eat out, and drive fast cars,
We take our dates to expensive bars,
Proud of our country's business roots,
Just a four-piece band in three-piece suits

(Lyrics copyright 1982, Thrice Music Inc. used with permission).

Other songs, ranging from new wave rock to gospel and disco, include "Inside Information," "Jesus H. Chrysler," and "Take This Pink Slip and Beat It (You Don't Work Here Any More)," management's response to the popular "Take This Job and Shove It."

According to Holden Gaines, better known to his 1982 Stanford classmates as Steve Kessler, the idea started with a spoof review, "The Rise and Fall of a Rock Band, the MBAs" published in the *Stanford Chaparral*, the student humor magazine. This drew a seven-line mention on the front page of the *Wall Street Journal* (Aug. 27, 1981), with a response so strong that the writers decided to whip out some lyrics, pick up a band, and start selling pressings on their own. Hitting the market just before Christmas, they sold more than 1,000 copies from push carts in front of the Pacific Stock Exchange and on Wall Street. Copies may be ordered at $8.98 each from Box 1903 Grand Central Station, New York, N.Y. 10163.

"We just don't crack jokes unless we can ring every chuckle into our cash register, **Cornell Lantern** editor Joey Green notes in a new college humor review, *Hell Bent on Insanity*, coauthored with Bruce Handy, former editor of the *Stanford Chaparral*, published by Holt, Rinehart and Winston. Today's economy calls for "survival of the wittiest," Handy comments.

The Stanford Game

In a bull session at a Mountain View pizzeria, former Stanford undergraduates Heidi Roizen and Timothy Draper dreamed of transforming their alma mater into a board game.

Roizen and Draper, who now work for Tandem computers and Hewlett-Packard respectively, realized this dream in September 1981 when 2,500 board games were produced for $13,000. "Tim and I had originally expected to spend about $5,000," said Roizen, "but as we wandered through the process of

this society.

Last Sunday's *New York Times* contained an account of attendance in the New York City public schools; it asserted, on the basis of what appeared to be reliable figures, that one-third of the pupils in that system are chronic absentees. One can look at that circumstance in at least three ways. One can say, "Fine, the schools work better without them." Or one can say, "Well, given the correspondence of that number with the increased proportion of school-aged children enrolled in the past couple of decades, these are quite probably the children who, a generation ago, we simply weren't trying to educate." Or one can say, "That is unacceptable; I want to be part of a society which insists on solving that problem." I hope you agree that this last view is the one we must take.

Medical Center MEMO

To recapture humanism in medical education today. . .

Faculty and students explore challenges, deficiencies

Getting humanism back into medical education was the key concept that emerged at a Stanford University School of Medicine symposium Jan. 22.

The symposium, which discussed aspects of the general professional education of the physician, was spurred by the Association of American Medical Colleges' ongoing national study of medical education in the United States.

Three panels, made up of faculty and students, considered separate aspects of medical education including essential knowledge, fundamental skills, and personal qualities, values and attitudes of physicians.

What panelists concluded is that humanism begins to be eliminated starting with the "pre-med syndrome" before students even start medical school.

Almost 90 percent of pre-medical students major in science, said Dr. Robert Cutler, professor of neurology and associate dean of medical education. "Is that emphasis necessary?" he asked.

"Students know what they need to get into medical school and that dictates the way they become," said Dr. Lawrence Mathers, pediatrics intern at Stanford University Hospital. "Until the admissions standards are changed to consider other qualifications besides facts and numerical scores, nothing will change."

"Medical school requirements should not interfere with students' undergraduate education," added Dr. Saul Rosenberg, professor of medicine. "Their education needs to be broad and diverse, including all areas and not just science. They do need basic scientific facts to be able to proceed with their medical education, but they don't necessarily need A's in those courses, nor do they need to get involved in other activities such as research or hospital work.

"Students coming into medical school know lots of facts," continued Rosenberg, who took a year-long sabbatical to research the problems of pre-medical students competing to get into medical school. "But they are deficient in other skills such as communication, observation, problem-solving, and judgement-making. These are the skills involved in everyday practice as a physician, not the facts.

"Pre-medical students are too concerned with their grade point averages, and come out too narrow-minded," Rosenberg concluded. "Pre-meds who are nerds become medical students who are nerds become doctors who are nerds and parents and spouses who are nerds."

Mechanized admissions

The lack of humanism is apparent in the admission procedures as well as requirements, Mathers added. "It's impossible to find out if a student will be a good doctor on the basis of an hour-long interview. And Stanford, having incorporated a computer to do preliminary screening of applicants, is moving towards a more mechanized, less personal admissions approach."

The lack of humanism continues once the students get to medical school,

panelists noted, in the manner that fundamental clinical skills are taught. The physician-patient relationship needs to be nurtured in courses, said Aria Dibiase, third-year medical student.

"Students don't get enough preparation in these skills. On their clerkships they have the most responsibility to talk with the patients. There is a lack of good role models. Students need to be taught how to be educators and communicators as part of being a physician," she added.

"The clinical experience always starts with an introduction, taking the history, having the patient disrobe and doing the physical exam. At the end of this initial encounter the physician can tell the patient what to do," said Dr. Mark Perlroth, associate professor of medicine. "A special bond needs to be created between patient and physician in order to be effective. Without it, everything else—knowledge, facts—is useless."

Dr. Edward Shortliffe, assistant professor of medicine, stressed the need for medical students to become familiar with computer technology because of its increasing use in medicine. "Students and physicians need to be familiarized with computers or they will be disenfranchised from the practice of medicine," he predicted.

In response to criticism that computers would make medicine even less personal, Shortliffe argued that the time saved by using computers would, in fact, give physicians more time to spend helping their patients adapt emotionally to their conditions.

Dr. Harold Sox, Jr., associate professor of medicine, stressed the need to educate students in clinical decision-making as another fundamental skill. "Students are not being adequately prepared for today's situation of limited resources. They need to be encouraged to make decisions that will allow them to give the highest quality of care for less cost," he said.

Teaching methods

Rather than concentrate only on what students need to be taught, said Dr. Kelley Skeff, assistant professor of medicine, the method of teaching should also be considered. "We need to consider the skills and approaches of individual teachers, and the effect on learners," he said.

"With increasing emphasis on attracting a diverse group of learners, we need to diversify teaching methods because everyone does not respond the same way. We need to assist the faculty by creating an environment in which their individual traits, such as humanism, can be brought out to the utmost."

Perhaps the ultimate area in which humanism is ignored, panelists contended, is with the medical students themselves.

"About 26 percent of the fourth-year Medical School class is in counseling at Cowell Student Health Center," said Dr. Harvey Weinstein, assistant clinical professor of psychiatry. He identified medical students' greatest problems as depression, lack of self-concept and anxiety, and education's impact on personal relationships.

Minority students have even more stress, said Brisbain Daniel, second-year medical student, because they are forced to deal with overt and covert racism. Teaching assistants avoid their laboratory tables, there are few minority faculty members to serve as role models, and it is difficult to find housing and acceptance in the local community, he said.

Personal needs neglected

"Physicians take on a great deal of responsibility for society's characteristics, and for having mass amounts of knowledge. They are constantly performing—in school, on hospital rounds—and are always under scrutiny. They are taught to put their own needs last, and are encouraged, and rewarded, for ignoring time," Weinstein explained. "There's a discrepancy between physicians' caring for others and caring for themselves.

"My concerns about medical education," Weinstein continued, "are that it doesn't teach students to learn about feelings, and it doesn't give them time to assimilate feelings and experiences and to deal with personal problems. This attitude—humanism—needs to be built into the curriculum, and the faculty has to be taught how to teach it."

"We act as though our patients have no needs of us other than an accurate diagnosis and a treatment," summarized Dr. Allen Barbour, Medical School ombudsman. "We act as though our feelings will simply get in the way of our more important cognitive judgements and that it is okay to ignore the human condition and problems of our patients and each other.

"The main impediment to the growth of these desirable traits in our students is our total emphasis on facts, figures, techniques, and academic excellence combined with a corresponding exclusion of caring, understanding, empathy, collaboration, feelings, or an honest awareness of all that is human in our interactions.

"We could make a big step forward by affirming these qualities clearly as ideals; by looking for them in admission interviews; by practice in our interactions with patients, students, and all others; and by active discussion at rounds and other opportunities."

—Shirley Kraus

Several therapies of use in treating anxiety disorders

Psychiatrists have come to agree that anxiety disorders, such as claustrophobia, fear of heights, or agoraphobia, are not merely symptoms of other diseases as was once thought, but rather are separate diseases.

They also agree that separate treatments are necessary to treat anxiety disorders, and in the last decade or so several have been developed.

What the psychiatric community does not agree on is which of these treatments is the most effective. Some of psychiatry's leading authorities shared their experiences with their preferred treatments—behavior therapy, drug therapy, or psychotherapy—at a recent symposium at Stanford University.

Anxiety disorders, or phobias, are triggered by events coming from within the patient, such as fear of eating solid food; or from outside the patient, such as fear of snakes.

What starts out as a simple fear may develop into a severe disease, said Dr. David Sheehan, Harvard assistant professor of psychiatry and director of the hypnosis and psychosomatic medicine unit at Massachusetts General Hospital.

A patient may start out experiencing dizzy spells, for example, he explained. These dizzy spells become more concentrated, eventually causing the patient to become hypochondriacal.

Patients often attach that hypochondria to a concrete situation, such as a simple phobia. "I'm feeling dizzy," the logic goes, "because of my fear of spiders." This simple phobia, fear of spiders, may expand to social phobias, fear of groups, to agoraphobia and multiphobias. The end stage is often depression, Sheehan continued, which can result in suicide.

Because of this progression, anxiety disorders need to be treated.

"Many patients think they're the only ones with these fears," said Dr. Walton Roth, associate professor of psychiatry and chief of the psychiatric consultation service at the Palo Alto Veterans Administration Center. "They think they are just disasters. They're relieved when they find out this isn't so."

Treatments have developed in three major areas. Dr. W. Stewart Agras, professor of psychiatry and director of the behavioral medicine program at Stanford, said research shows behavioral therapy is effective in treating anxiety disorders.

Systematic desensitization—having patients imagine the phobia until they learn to relax—is more effective than the more traditional psychotherapy, he said. Implosion therapy—having patients start off in the worst possible situation—is also effective.

Exposure important

The best behavioral therapy treatment, however, is exposure to the feared situation, Agras' research showed. Exposure increased the time patients were able to spend in the situation. Their heart rates decreased also, proving that the longer patients were exposed to the situation, the more comfortable they grew.

Behaviorial therapy combined with drug therapy—anti-depressant drugs specifically—had even better results, Agras continued.

"By themselves, the drugs have little effect. But the combination with behavior therapy has a great effect," he said.

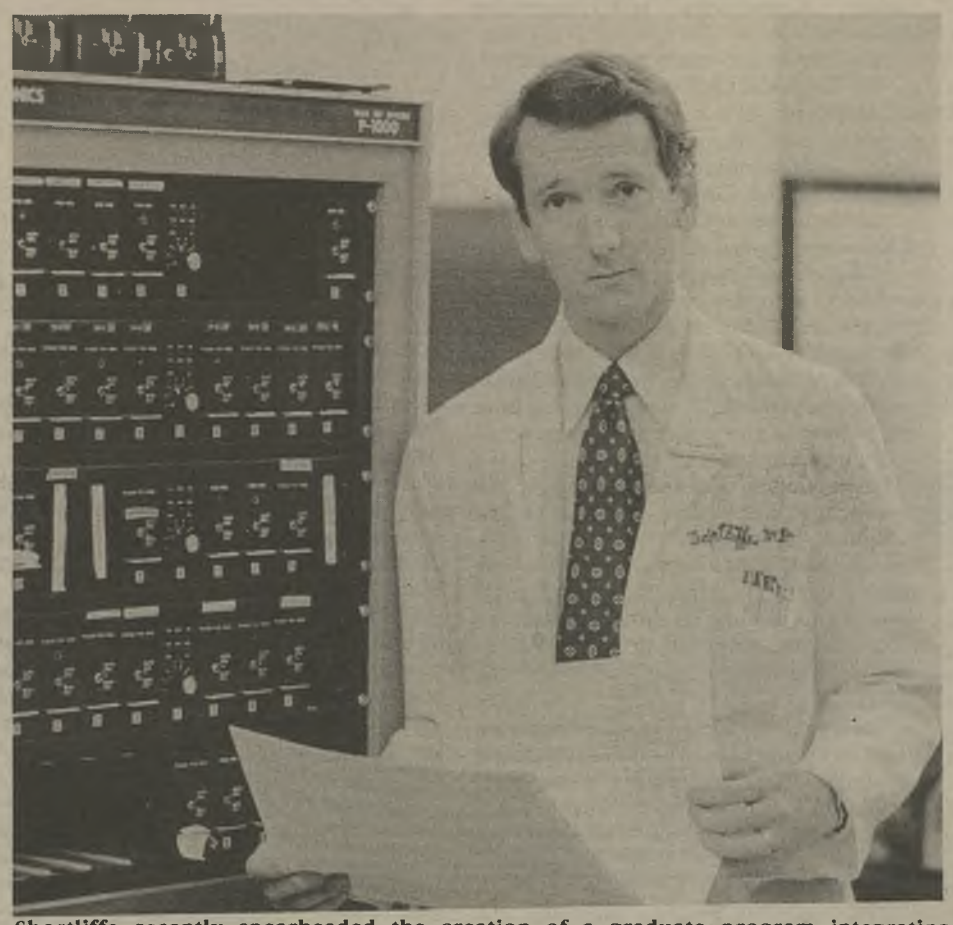
"The active ingredient in behavior therapy is that it is real life," Sheehan concurred.

Dr. Alan Skolnikoff, associate clinical professor of psychiatry at the University of California, San Francisco and training and supervisory analyst at San Francisco Psychoanalytic Institute, however, said psychotherapy is the desired treatment for most phobias.

"The phobia is just a cover-up for a much larger anxiety," he explained. "Uncovering that anxiety through psychotherapy cures the phobia in the process."

Skolnikoff advocated transcendental meditation and other relaxation techniques also as anxiety-reducers.

Dr. Robert Fowles, assistant professor of medicine and director of the noninvasive cardiovascular laboratory at the VA, brought up another controversial issue. Whether mitral valve prolapse is a symptom or cause of anxiety disorders has been questioned since the condition was first diagnosed among soldiers in 1871.



Mitral valve prolapse is a condition in which the valve regulating blood flow between the left ventricle and left atrium fails to do so efficiently. This causes a backflow of blood in the heart, which in turn may cause circulatory problems.

It may cause "funny sensations" that may cause anxiety among patients, Fowles said, but research at Stanford has shown that the presence of mitral valve prolapse is not necessarily connected to anxiety disorders.

"It doesn't matter what anxiety disorder treatment is used, just so the patients get better," Sheehan concluded.

The physician's treatment should aim to get rid of the immediate symptoms with medication; eliminate the phobic behavior with behavior therapy; eliminate any underlying causes with psychotherapy; and finally encourage long-term control of the phobia with patient education, he said.

—Shirley Kraus

Shortliffe recently spearheaded the creation of a graduate program integrating medicine and computer science.

Kaiser Foundation names Shortliffe one of this year's Faculty Scholars

Dr. Edward Shortliffe, assistant professor of medicine and computer science at Stanford, has been named a Henry J. Kaiser Family Foundation Faculty Scholar in General Internal Medicine.

The foundation said the award provides a $50,000 annual grant for three years, with an option by the giver to renew for two more years. The annual grant includes $35,000 for salary support and $15,000 in unrestricted funds to support research.

The primary research effort of Shortliffe—one of four academic physicians nationwide to receive one of this year's Kaiser grants—is the SUMEX-AIM Computing Resource, which is developing computer systems to aid physicians make difficult and sophisticated diagnoses of patients. Shortliffe is the chief physician scientist on the project.

The holder of both a Ph.D. in medical information sciences (computers) and an M.D. from Stanford, Shortliffe recently spearheaded the creation of a graduate program integrating medicine and computer science.

Other recipients this year—the third Kaiser has awarded the five-year honor—are Drs. Randall Cebul, the University of Pennsylvania, Philiadelphia; Mark Cullen, Yale University, New Haven, Conn.; and Daniel Singer, Harvard University, Boston.

The Stanford recipient joined the faculty in 1979 as an assistant professor.

The foundation, based in Menlo Park, Calif., was founded in 1948 as a charitable trust by the late industrialist Henry J. Kaiser.

In 1982, the foundation authorized grants of more than $15 million to support efforts in the field of medicine and health.

Cohen's royalties to fund fellowships

Royalties awarded to Dr. Stanley Cohen, professor of genetics, for his role as co-inventor of specific gene splicing and cloning methods, will be pumped back into education to fund fellowships for young scientists, Dr. Dominick Purpura, dean of the Stanford School of Medicine, announced last week.

The initial contribution of more than $150,000 is the beginning of an endowment, named the "Bernard Cohen Fellowhip Fund" in memory of Cohen's father, intended to "provide long-term support for postdoctoral trainees at Stanford," Cohen said.

"One of the greatest needs in any area of science today is to support the training of young scientists," he said. "With the cutback in federal funds for training purposes, that need has become especially acute in recent years."

Postdoctoral students throughout the School of Medicine and Department of Biology will be eligible to apply to the Fund, which will be administered by the Dean's Fellowship Fund committee.

To date, $1.4 million in gross revenue has accrued from the 73 genetic engineering firms licensed to use techniques described in the first Cohen/Boyer patent, which was issued in December, 1980.

Cohen's personal share of this revenue constitutes seed money for the endowment.

The patent covers fundamental techniques that Cohen and Dr. Herbert Boyer of the University of California, San Francisco developed to rearrange the genes of common bacteria.

By inventing ways to replicate genes that code for desired traits within microorganisms, Cohen and Boyer developed a powerful tool for investigating the organization and function of genes.

The techniques also made possible the construction of "bacterial factories," new sources of medically useful, but difficult to obtain products such as insulin, human growth hormone, and the anti-viral drug interferon.

The United States Patent Office has not yet approved a second Cohen/Boyer patent, which would license the intermediate products of the techniques.

But the revenues used to set up the Bernard Cohen Fellowship Fund will not be affected by the Patent Office's ultimate decision on the second patent, according to Niels Reimers, director of Stanford's office of technology licensing.

Born in Perth Amboy, New Jersey, in 1905, Bernard Cohen was a merchant with "a great deal of interest in science," according to his son.

"He was a remarkable man and an inventor of sorts," Cohen said. "I wanted to honor his memory."—**Deborah Franklin**

Consortium moves into Health Research Policy Bldg

Members of the Consortium for Health Research and Policy at Stanford will move to new headquarters in the campus building which formerly housed the Medical Microbiology Department, now located in the Fairchild Building. The move is scheduled for completion Feb. 1.

In all, about 75 persons will be stationed in the renovated building. Designed by architect John Northway (of Stoecker and Northway, Inc.), the renovation is intended to give a physical boost to the concept of group health planning as conceived by the Consortium for Health Research and Policy.

Located at the north end of the Basic Sciences Building across Campus Drive from the Medical Center, the site had originally been a part of the Stanford Museum, until after the 1906 earthquake when it was approved by the Trustees for use by the basic medical sciences.

President Donald Kennedy now has approved a new name for the building, to be known henceforth as the Health Research Policy Building.

Among other renovations, the Schultz Auditorium has been remodeled for the academic functions to be housed in the building. Project manager for construction was David Jerome of University Facilities.

Included in the move will be the entire Department of Family, Community and Preventive Medicine, except for the Division of International Health.

Count D. Gibson, Jr., chairman of the department, explained that the two components until now housed at 703 Welch Road—the Division of Health Services Research and the Primary Care Associate Program—will be joining the rest of the department as a result of the move.

Director John Farquhar, Dr. Stephen Fortmann, and administrator Lillian O'Toole from the Stanford Heart Disease Prevention Program will also be moving with their office staffs to the building.

Co-director of the SHDPP, Nathan Maccoby of Communications, along with the program's community education group, will move from their present location in Cypress Hall. And all SHDPP postdoctoral fellows, presently scattered at Cypress and throughout the Medical Center, will join the group as well.

(Drs. Peter Wood and William Haskell, and the rest of the SHDPP staff, will remain at 730 Welch Road.)

Drs. James Fries and Halsted Holman of the Division of Immunology will also be included in the move. Fries and Holman are responsible for the Stanford Arthritis Center, including the American Rheumatism Association Medical Information System. The Clinical Scholars Program, directed by Holman, will move as well.

About two years old, the Consortium is a group of Medical School faculty members joined with colleagues from other Stanford University departments to focus their separate research programs on issues of national health policy and service. The group is open to all faculty members concerned with health planning research who wish to actively support the Consortium.

Dr. John Bunker, professor of family, community and preventive medicine and director of the Division of Health Services Research, is convener of the seven-member governing council of the Consortium.

The existing programs of the Consortium include SHDPP, the Stanford Arthritis Center (including the American Rheumatism Association Medical Information System), the Midpeninsula Health Service, and the Department of Family, Community and Preventive Medicine.

Also the health management program at the Graduate School of Business, the multidisciplinary research training program on organizations and mental health, the ambulatory care research program of the Division of General Internal Medicine, and the National Bureau of Economic Research.

"The Consortium includes faculty members who are at the forefront of research and analysis in disease prevention, health economics, legislative reform, technology assessment, the organization and delivery of health care, and physician and patient—or provider and consumer—behavior," Bunker said.

He explained that the research of the Consortium emphasizes the role of the consumer, or patient. "We are taking a close look at how we may improve the quality of life, rather than simply attempting to prolong its duration. And we are also by necessity taking a hard look at cost analysis and system design," he added.

"Research in these areas require, in addition to medicine, a variety of social science skills, including economics, sociology, psychology and communications. Hence there is the need for an interdisciplinary research center," Bunker concluded.

The Board of Trustees approved the $1.5 to $2 million remodeling project in October, 1981, aiming to move many of the Consortium's key members into a single office complex. An open house will be held in about a month. —Lisa Ames

Richard Goode

SMASH lecture

"Seashells, Vulcans, and the treatment of hearing loss" is the topic of this Friday's S*M*A*S*H lecture, to be given 4:30 p.m. Jan. 28 in Fairchild Auditorium, by Dr. Richard Goode, professor of surgery.

All interested members of the Medical Center community are invited. The presentation will be followed by a TGIF gathering in the Fairchild lobby.

Volunteers Needed. . .

Diabetes study seeks answers

Are high carbohydrate diets really effective in controlling diabetes?

Volunteers are needed to help answer this question by participating in research conducted by Dr. Gerald Reaven and associates at the clinical research center at Stanford University Hospital.

To be eligible for this study, volunteers must have non-insulin treated diabetes; be currently treated by diet or oral agent; be between 20 and 69 years old; and be otherwise in good health.

Participants will be offered the following free of charge: evaluation of blood sugar, insulin, lipids (cholesterol and triglycerides), routine health evaluation including liver and kidney function test, cardiogram, physical exam, dietary evaluation and meals during the entire study.

Anyone interested or wishing further information should call Dr. Clarie Hollenbeck or Dr. George Liu at 497-6973 between 9 a.m. and 5 p.m., or Ann Coulston, R.D., at 497-5430 between 9 a.m. and 12 noon.

SUH reduces staffing costs

Guidelines to reduce staffing costs, such as temporary reductions in workdays or reduced workweeks, were outlined to Stanford University Hospital department heads Tuesday, Jan. 18.

No employees are being laid off their jobs at this time. "We want to do everything possible to avoid layoffs," said Sheldon King, executive vice president and director.

Cost reductions are necessary because of low patient census during the past few months, said King. He cited the distressed economy as a cause of the low census. With high unemployment rates, more people are delaying elective procedures and keeping hospital stays to a minimum.

Hospital use throughout California has been dropping steadily since 1980, according to a recent quarterly report by the California Health Facilities Commission. The number of patients discharged from hospitals in Santa Clara County was down 3.3 percent in October 1982, compared to the same quarter in 1981, and the number of patient days of care was down 9.0 percent.

Because of reduced needs, some patient care units at Stanford have been closed and staff asked to take an extra day off periodically.

The new staffing guidelines are not related to whether the Hospital receives a contract from the state to treat Medi-Cal patients. The Hospital is still waiting to hear whether or not a contract will be awarded to Stanford. In the meantime, the Hospital is continuing to admit authorized Medi-Cal patients.

More severe cost reduction measures may be considered in the event the Hospital does not receive a Medi-Cal contract or if low census figures continue, King said. In that case, administrators would try to set a specific monetary goal for reductions.

The Hospital employs 4,497 people, including more than 1,400 nurses.

Some Hospital departments, such as Nursing, Housekeeping, Respiratory Therapy and others, have staffing cost reduction plans already working. Some nurses, for example, have been asked to take one day off each month. The new guidelines are meant to assist department heads throughout the Hospital in examining and dealing with alternative ways they can reduce staffing as they consider appropriate to their area.

In some departments, employees may be asked to take reduced workdays on a temporary basis. In other departments reduced workweeks might be recommended.

Before reduced workweeks are put in effect in a department, said King, affected employees will be given at least two weeks written notice. They would be able to use Paid Time Off (PTO) or Absent Time (time off without pay) to cover the days reduced from their previous schedule.

At this time, employees whose hours are reduced will still remain eligible for benefits, even though their hours may fall to less than the 50 percent benefit requirement.

Department heads will work with their line administrators and the Director of Personnel before any plans are presented to employees.

Other alternatives, which will be evaluated by individual departments and implemented on an as-needed basis, include:

- extending the period that jobs are held open before authorization to hire is given. Job vacancies are now held open for 30 working days. The new guidelines call for an additional 30 calendar days vacancy period;
- increased scheduling of PTO or Absent Time before a shift is completed, releasing employees from their jobs early;
- contacting employees at home if it appears at the start of a shift that the full amount of scheduled staff will not be needed.

In all of the alternatives, employees would be asked to voluntarily participate, depending on the department's needs. If there are not enough volunteers, then there may be mandatory reductions, based on seniority, which may ultimately affect all employees. —Barbara Battino

Social Services celebrates 70 years of much change

Social workers have been helping patients and their families in Stanford University Hospital programs for 70 years. Now, as seen above, social worker Beth Garifalos (right) chats with eight-year hemodialysis patient Evelyn Tahl.

Two-pound premature infants weren't struggling to stay alive in incubators when Marie Jorgensen became the Hospital's first social worker in May, 1913.

Jorgensen's duties, from the scanty records which remain, probably centered on ameliorating financial hardship and providing general hygiene information for about 1,000 patients that first year at Lane Hospital. That was Stanford's San Francisco teaching hospital before the medical campus moved in 1959.

Jorgensen's formal career as a social worker began at Stanford only eight years after what is regarded as the nation's first Social Services Department was established at Massachusetts General Hospital in Boston.

Now it is 70 years later, and social workers Charlene Canger and Rose Grobstein bristle at the stereotype of a social worker—the smiling bearer of a wicker basket of goodies or money for the humble poor.

Although they often help families find financial resources, they said most of their work involves family issues which are changing as rapidly as science constantly pushes the state of medical technology.

In fact many of the most important changes have occurred not since Jorgensen rode in a carriage to work. Instead, the most dramatic years may have come between 1962, when Grobstein helped start the first intensive care nursery (ICN) at Stanford, and the present when Canger is the full-time social worker in the ICN under Grobstein's supervision.

Some of the changes will be discussed by Canger and child psychiatrist Charley Zenah at a seminar for ICN professionals scheduled at Stanford on Jan. 28. The seminar is part of a year-long celebration as Social Services at Stanford celebrates its 70th anniversary.

"The preemie babies of 1962 are not the preemie babies of 1983," said Canger.

"It used to be that babies were critically ill and then either died or got well quickly."

But now the babies are smaller, less developed, "and we are finding that they sometimes go from being acutely ill to a long period of chronic illness."

Although they are saved at a premature age and low birth weight that would have been inconceivable five years ago, they go home with serious physical problems which the family must deal with.

Being realistic

"We have to help the families go home with a greater degree of uncertainty. . . .The support which is needed is more extensive, and by necessity, our jobs become more complex," Canger continued.

"Nobody says life is fair," reads the sign in Grobstein's office. It's a summary of her battle for realism.

"Fairness is a real issue," interjected Canger. "You'd be surprised at the number of parents who say after the death of an infant: 'But I took such good care of myself.' Or sometimes they'll grieve that their baby is dead or deformed 'while that mother who didn't even want a child had a healthy baby.' "

Grobstein's battle to help patients deal realistically with issues began, she said, when she was a young social worker more than 40 years ago in the coastal hills of Oregon.

"I visited one particular family whose unclean house I thought might jeopardize the health of a newborn child. So another social worker and I brought cleaning materials up to their cabin one month and helped them clean up.

"When I returned a month later the place was just as dirty as before. It was then I realized that people had to do for themselves."

Helping patients and their families, Canger and Grobstein explained, is a major duty of the Hospital's 21 social workers.

"But we also have a role at helping the other members of our teams—including doctors and nurses—cope with the stresses of the environment," said Canger.

"In the ICN one recent week we had six (premature infant) deaths. The amount of stress this produced could have been intolerable for all of us. But we were able to talk."

Helpful meetings

Discussion among staff was begun in what ICN physicians and nurses have lauded as an innovative pilot program under Grobstein's direction in the mid 1960s.

A study was under way at that time to learn whether contact between preemies and their mothers would foster bonding without being a safety risk.

Dr. Philip Sunshine, professor of pediatrics and director of the ICN, said the experiment produced some tensions and feelings of competition between the mothers and nurses, who previously had had a "monopoly" on the infants' attentions.

Grobstein initiated frequent staff meetings for the nurses and doctors, a tradition which was expanded to deal with other tensions in the unit. These meetings continue today under the informal leadership of Canger.

Grobstein has left the ICN for a role as chief pediatric social worker but she still sees clients, among them participants in a genetic counseling program.

"That's an attempt to deal with problems before they appear in the nursery," Grobstein said.

Although terminating a birth is sometimes an option, Grobstein said her role can often be helping families to prepare for a birth where prenatal testing has revealed damage or a genetic defect.

Grobstein said she came to Stanford from a job with an adoption agency in San Jose "because I was looking for some answers. I wanted to do some research and the opportunity was here at Stanford."

Results of her subsequent research include more than 14 authored or co-authored articles and book chapters, as well as an appointment as a lecturer both in Stanford's department of family, community and preventive medicine, and at the School of Health and Medical Sciences at the University of California, Berkeley.

—Mike Goodkind

Medical Center Calendar

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservation required. Call 497-6389.

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard call 497-6389.

WEDNESDAY, JANUARY 26

American Heart Association—Fifth Biannual Symposium on Cerebrovascular Disease: Speakers will include Stanford faculty members. 8:30 a.m. to 5 p.m., LeBaron Hotel, 1350 N. First Street, San Jose. Registration deadline has passed. For further information, call the AHA at (408) 247-8555.

Divisions of Clinical Pharmacology and Cardiology Seminar: "Predicting Lidocaine Levels in Patients with Acute Ischemic Heart Disease"—Dr. Samuel Vozeh (Syva Corp., Basel, Switzerland). 4 p.m., M112.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "The Fringe Scanner: A New Flow Cytometer for High Resolution Measurements of Chromosomes"—Dr. Richard Norgren (Lawrence Livermore Laboratory). 4:15 p.m., McCullough 134.

Div. of Hematology Noon Conference: "A Working Formulation for Non-Hodgkin's Lymphoma"—Dr. Ronald Dorfman. Noon, S102d.

Dept. of Structural Biology Seminar: "The Structure of A Voltage-Gated Pore, Matrix Porin"—Dr. R. Michael Garavito (Biozentrum, Switzerland). Noon, Fairchild Bldg., D102.

THURSDAY, JANUARY 27

Dept. of Clinical Social Work: "Couples Therapy"—Cleo Eulau, L.C.S.W. 8:30 a.m., TF122-C (Psychiatry building).

Nursing Educational Services Critical Care Course Level II: "Acute Myocardial Infarction." 8 a.m. to 4:45 p.m., Faber Auditorium, Children's Hospital.

Dept. of Pharmacology Seminar: "DNA Methylation, Differentiation and Transformation"—Dr. Peter Jones (USC). 4:15 p.m., Pharmacology Library R358.

Dept. of Medicine Grand Rounds: "New Approaches to Treating TIA and Preventing Stroke"—Dr. Henry Barnett. 8:30 a.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "Recent Advances in the Molecular Biology of Polio Virus"—Dr. David Baltimore (MIT Center for Cancer Research). Noon, M104.

Dept. of Biochemistry Industrial Affiliates Program Seminar: "Mung Bean Nuclease—An Alternative to S-1"—Dr. Harry Osterman (P. L. Biochemicals, Inc., Milwaukee, Wisconsin). Noon, M316.

FRIDAY, JANUARY 28

Dept. of Structural Biology Seminar: "Monoclonal Antibodies to Tumor Antigens"—Dr. Gerard Evan (Depts. of Microbiology and Immunology, UCSF). Noon, Fairchild Bldg., D102.

Dept. of Pediatrics Grand Rounds: "Pathogenesis of *E. coli* Urinary Tract Infection"—Dr. Stanley Falkow, 8 a.m., M106.

SATURDAY, JANUARY 29

"Medical and Health Care Uses of Cable Television"—A community conference sponsored by the Palo Alto Medical Foundation and Stanford University Hospital. 8:30 a.m. to 1 p.m., Palo Alto Medical Foundation Auditorium. Reservations are required. For further information, call Carroll Harrington at 326-0882.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear.

Academic Council

TO MEMBERS OF THE ACADEMIC COUNCIL
NOTICE OF MEETING
Thursday, February 3, 1983

A meeting of the Academic Council will be held on Thursday, February 3, 1983 beginning at 4:15 p.m. in Room 290, School of Law.

Agenda for the meeting will be as follows:

1. Minutes of the Council meeting held on October 8, 1982. (Draft minutes below.)
2. Memorial Resolutions:
   Loren R. Chandler
   Anthony E. Sokol
   James T. Watkins IV
3. Report from the Senate Chairman.
4. Report from the President: Indirect Costs.
5. Report from Dean F. Hargadon: Undergraduate Admissions.
6. Unfinished Business.
7. New Business.
8. Adjournment.

Clara N. Bush
Academic Secretary

DRAFT MINUTES OF THE MEETING
OF THE ACADEMIC COUNCIL
OCTOBER 8, 1982
SUBJECT TO APPROVAL

A special convocation of the Academic Council was held on Friday, October 8, 1982 beginning at approximately 4:20 p.m. in Dinkelspiel Auditorium, with President Donald Kennedy presiding.

After calling the meeting to order, President Kennedy announced that early that morning the University and the United Stanford Workers (USW) negotiating teams had reached tentative agreement on a new contract, and that union membership would meet the next day to consider ratification of that contract.

He then thanked those present for attending the Academic Council convocation, and turned the meeting over to Provost Albert Hastorf for the announcements of special awards to members of the faculty.

ANNOUNCEMENTS OF FACULTY AWARDS

In his opening remarks, Provost Hastorf welcomed new members of the Academic Council, as well as the new Academic Secretary, and expressed special thanks to Assistant Provost Noel Kolak for organizing the special convocation and to the nearly 200 Academic Council members present for their attendance.

This is the 91st year since classes began at Stanford on October 1, 1891. The Founding Grant was in 1885; the cornerstone was laid in 1887, and instruction began in 1891. The faculty that first year numbered 17; there were 559 students (a 33:1 student/faculty ratio). It is no surprise that, the second year, there were 29 on the faculty, a 33:1 ratio being clearly intolerable to both faculty and students. Presently, the Academic Council membership at Stanford is 1,272. The student/faculty ratio is now approximately 10:1, with 6,600 undergraduates, and 5,500 graduate students (780 of these terminal graduate students.)

He then turned to the recognition of a number of Stanford faculty who had been given national awards in the past year:

Arthur Schawlow, Physics, was awarded a Nobel Prize.

Calvin Quate, Applied Physics, was awarded the Rank Prize of England.

Stanford now has on its faculty two MacArthur Fellows:

Persi Diaconis, Statistics
Charles Bigelow, Art and Computer Science

Stanley Cohen, Genetics, was awarded the Wolf Prize.

The Stanford faculty now includes 75 members of the National Academy of Sciences, our most prestigious scientific organization, which was founded in 1863.

Two Stanford faculty members were appointed to that Academy this past year:

Leonard Herzenberg, Genetics

Harold Mooney, Biological Sciences

This past year, seven members of our faculty were elected to the American Academy of Arts and Sciences, an organization founded in 1780 by John Adams. These included:

Paul Brest, Law
Herbert Clark, Psychology
Paul Ehrlich, Biological Sciences
Victor Fuchs, Economics
Harold Mooney, Biological Sciences
Calvin Quate, Applied Physics
Osward Villard, Electrical Engineering

Now almost 10 percent of our Academic Council members are members of the American Academy of Arts and Sciences.

Three members of the Stanford Medical School faculty were appointed this year to the National Institute of Medicine:

William Dement, Psychiatry and Behavioral Sciences
Avram Goldstein, Pharmacology
Dominick Purpura, Neurobiology, Neurology, and Dean

Nine Stanford faculty members were awarded Guggenheim Fellowships for 1982-83:

John Bender, English
Gordon Craig, History (Emeritus)
Michael Fayer, Chemistry
Paul Green, Biological Sciences
Joseph Greenberg, Anthropology
Richard Snow, Education and Psychology
Ann Swidler, Sociology
Michael Wald, Law
Robert Wilson,Graduate School of Business

Four members of the Academic Council were appointed to the highest honor the institution can award to its own, endowed chairs:

Eugene Farber, appointed the Jane and Hugh S. Center Professor of Dermatology

Dominick, Purpura, Neurobiology and Neurology, appointed to the Carl and Elizabeth Naumann Professorship, and Dean of the School of Medicine

John Hart Ely, appointed Richard E. Lang Professor of Law, and Dean of the School of Law

Seymour Martin Lipset, Professor of Political Science and Sociology and Senior Fellow of the Hoover Institution, appointed the Caroline S.G. Munro Professor of Political Science

Two other major awards this institution presents to its own are the Dinkelspiel and Gores Awards, announced at Commencement each year. This past year, the Dinkelspiel Awards for contributions to undergraduate education went to:

Donald Abbott, Biological Sciences and Hopkins Marine Station
Kathleen Namphy, English

Gores Awards for teaching last year went to:
Roy Maffly, Medicine
Edward Spofford, Classics

Provost Hastorf then turned to the School Deans, who were to announce awards made to faculty members last year within their Schools.

Dean Dominick Purpura, School of Medicine, announced the following School awards:

The Arthur L. Bloomfield Award in Recognition of Excellence in Teaching of Clinical Medicine:
William Watson, Clinical Dermatology

Henry J. Kaiser Family Foundation Awards for Excellence in Teaching:
Patricia Gross, Structural Biology
Stanley Falkow, Medical Microbiology
Ronald Merrell, General Surgery
Jon Kosek, Clinical Pathology

Special Henry J. Kaiser Family Foundation Award for Oustanding and Innovative Contributions to Medical Education:
Henry Jones, Diagnostic Radiology.

Dean John Hart Ely, School of Law, announced that the Law School has only one award for excellence in teaching, the John Bingham Hurlbutt Award. It was presented this year to **Eric W. Wright,** Visiting Professor from Santa Clara Law School. Professor Wright is a graduate of Stanford Law School, the son of a distinguished Stanford Law Professor, and the recipient of an excellence in teaching award from his home university last year as well as this one from Stanford.

Dean Norman Wessells, School of Humanities and Sciences, announced this year's recipients of the Dean's Awards for Distinguished Teaching, originated in 1975 by Dean Halsey Royden. They included:

Ivan Sag, Linguistics
David Wellbery, German Studies
Steven Boxer, Chemistry
Richard Schupbach, Slavic Languages and Literature
Anne Mellor, English

He also announced research grants awarded to humanists as the first recipients of funding from the Pew Memorial Trust. The following scholars received awards:

Arnold Davidson, Philosophy
John Felstiner, English
Stephen Ferruolo, History
Gregory Freidin, Slavic Languages and Literatures
William Leben, Linguistics
Suzanne Lewis, Art
Arnold Rampersad, English
Lewis Spitz, History
Peter Stansky, History

Associate Dean Eugene Webb, Graduate School of Business, announced that the School of Business does not present formal teaching awards, but noted a number of awards recently presented to his colleagues in the School in other domains.

William Beaver recently won the Alpha Kappa Psi National Accounting Award for outstanding contribution to the accounting literature, the fourth of those awards in a row he has won.

John Cox, Finance, has been awarded the Batterymarch Fellowship, one of three given each year nationally in this field. Another Stanford Business School colleague, **Douglas Breeden,** held it the year before.

Serge Taylor, Public Policy and Management, has been awarded the American Political Science Association's Leonard D. White Award for best doctoral dissertation in the field of public administration.

He closed by reminding the Council that their colleague, **George Schultz,** termed "a part-time Business School faculty member" by the *Stanford Daily*, had been recently appointed U.S. Secretary of State.

William Kays, School of Engineering, announced a number of awards for excellence in teaching and advising.

The premiere award for excellence in undergraduate teaching is a student-nominated award. Tau Beta Pi, the student honorary society makes the choice. This year the award went to **Robert Carlson,** Industrial Engineering and Engineering Management.

In 1980-81, a School award for distinguished advising was instituted. This past year, the award went to:

Henry Parker, Civil Engineering
Robert Helliwell, Electrical Engineering

At the departmental level, the Department of Industrial Engineering and Engineering Management made an Outstanding Teacher award. **James Hodder** was the recipient.

The Department of Aeronautics and Astronautics made an Excellence in Teaching Award to **Donald Baganoff.**

Finally, the Department of Industrial Engineering and Engineering Management made a very special award, the W. Grant Ireson Faculty Service Award, to **James Jucker.**

Dean J. Myron Atkin, School of Education, announced the 1981-82 recipients of the School's Excellence in Teaching awards, presented each year at the Commencement ceremony. Student votes, which determine the recipients of these awards, are based on a number of factors, including intellectual challenge, breadth and depth of the substantive issues presented, theory building, practical applications, respect for student input, and quality of instructional materials. Last June, awards went to two professors:

Nel Noddings, Curriculum, Philosophy of Education and Mathematics Education

Robert Politzer, Foreign Language Education and Romance Linguistics

Dean Allan Cox, School of Earth Sciences, announced that the newly-established award for Excellence in Teaching in the School of Earth Sciences had been won the first year by **James C. Ingle, Jr.,** Geology. Professor Ingle was especially commended for his large undergraduate course for non-majors, The Oceans, one of the best-recieved such courses at Stanford.

After thanking the Provost and Deans for their

continued on next page

Council...

continued from page 18

recognition of these significant faculty awards of the past year, President Kennedy proceeded to the regular agenda of the quarterly Academic Council meeting.

The minutes of the last meeting of the Academic Council held on April 9, 1982 were approved as published in draft form in *Campus Report* of September 29, 1982.

The following memorial resolution was presented to the Council.

MEMORIAL RESOLUTION
FRIEDRICH W. STROTHMANN
(1904-1982)

Professor Kurt Mueller-Vollmer presented a resolution in memory of the late Friedrich W. Strothmann, Emeritus Professor of German, who died in June 10, 1982. The resolution, which was prepared by Professors Walter F.W. Lohnes, (chairman), Lawrence V. Ryan, and Kurt Mueller-Vollmer, was adopted by the Council in the customary manner.

REPORT FROM THE CHAIRMAN OF THE SENATE

Professor Alexander L. Fetter, Chairman of the Fifteenth Senate, presented a report on the activities of the Fourtheenth Senate during spring quarter 1981-82. The full text of Chairman Fetter's report is given below.

REPORT FROM THE PRESIDENT

President Kennedy focused his remarks on the overall state of the faculty, with particular attention to what must be done to maintain and improve its quality.

He pointed out that within the past decade there has been an imposing improvement in faculty quality, by any recognized standard, and especially commended the care with which Stanford chooses, fosters, and retains the very best of its young faculty. Over the past two decades, the proportion of young faculty promoted to tenure at Stanford has remained relatively stable and relatively high (between a third and half of them).

This strategy had clear advantages. First, the average quality of the faculty at any given moment is higher, because of the care taken in selecting the most promising junior professors. Second, younger faculty members feel encouraged to build for the future here. Third, more of the senior faculty have had their productive years at Stanford, with the advantages of continuity and stable affiliation.

Current trends make this practice more difficult to sustain, however. After two decades of rapid growth, the tenure line faculty at Stanford in the recent past has grown at a rate of only about one percent a year. Mandatory retirement age has risen to 70. The result has been an alarming shift in the tenure ratio and the average age of Stanford faculty. For every year that passes, we gain about one year in average faculty age. In 1971, 65 percent of the Stanford faculty was tenured; a decade later, the proportion had risen to 72 percent.

If current legislation to uncap mandatory retirement should succeed, universities will be forced to a complete reappraisal of their tenure policies.

Affirmative action, the effort to improve the composition of the faculty while improving its quality, is obviously affected by these demographic facts. Closing off opportunities at the junior level would significantly impede progress. Last year was the most successful year in Stanford's history in increasing the number of tenured women and in appointing new women to the faculty. Even so, only 117 of Stanford's over 1,200 Academic Council members are women, and only 48 of the 836 tenured faculty are women.

Success in appointing members of ethnic minority groups was less encouraging, but still 15 percent of last year's total Academic Council appointments went to members of minority groups. Implementing the report of the faculty Committee on Affirmative Action this year will make such considerations a central concern in every new departmental search.

To attract and retain the very best young faculty, Stanford's offers must be both professionally attractive and financially feasible. Faculty salaries have improved somehwat relative to our competition over recent years. Housing problems, however, will continue to require attention. Much has been done recently, but more imaginative solutions must still be sought.

The faculty recruits, retains, and promotes its new members, and sets the intellectual and social conditions that determine the attractiveness of the environment. Stanford now has vastly improved scholarly resources, a superb student body, and an increasingly powerful tradition of accomplishment.

In closing, President Kennedy commented that he came to Stanford 22 years ago as an assistant professor. The development of faculty quality over that nearly quarter-century has been truly extraordinary. As a faculty, he said "we have come far enough to know that there is still more to do and that we can do it."

(The full text of President Kennedy's report may be found in *Campus Report* for October 13, 1982.)

Following the President's remarks, he was asked if the advancing average age of tenured professors might not be related to some degree to Stanford's increased prestige academically over this period. Why should this development be called 'alarming'?

President Kennedy responded that age and productivity may have some discoverable statistical relationships, but the concern here is that this trend of increased average faculty age (at a rate of one year for each three years that passes) will inevitably lead us into difficulties if it goes unchecked.

There being no further business to come before the Council, the meeting adjourned at 5:35. The President and the Provost hosted an informal wine and cheese reception following the meeting.

Clara N. Bush
Academic Secretary

MEMORIAL RESOLUTION
LOREN R. ("YANK") CHANDLER
1895 - 1982

Born on a farm near Fresno, April 22, 1895, Loren R. ("Yank") Chandler soon learned to appreciate nature as well as hard work. Even at an early age he wanted to be a doctor, and enrolled at Stanford where he received his B.S. degree in 1920 and his M.D. degree in 1925. After an internship and residency in surgery at Stanford's Lane Hospital, he practiced surgery and taught as a voluntary assistant professor until he was appointed as Dean of the School of Medicine by President Ray Lyman Wilbur in 1933; he became a full professor of surgery in 1938. He guided the School through the years of depression and of World War II, then stepped down in 1953.

Dean Chandler believed that faculties should be comprised of experts who could teach, that committees were too unwieldy to manage a medical school, and that it might be hazardous to rely too heavily upon funds from government. His years were those in which the school had a wide reputation for excellence in clinical medicine; science at the bedside was not neglected, and he himself published a score of papers on surgical topics.

During his tenure, morale of faculty and students remained high despite the Depression and World War II. The former had led to the collapse of plans for a new school in San Francisco, and after the war Chandler had to rebuild the faculty and review the teaching procedures which had been disturbed by the war-time accelerated program. It was then, too, that the Board of Trustees revised its earlier plans as to the site of the school.

During such turbulence, Dean Chandler was showing his leadership away from Stanford too. He became president of the Association of American Medical Colleges (1941-42) and of the California Academy of Medicine (1942). He was president of the San Francisco Surgical Society (1948) and of the Pacific Coast Surgical Association (1954-55). He was a member of the San Francisco Medical Society, the California Medical Association, and the American Medical Association (AMA).

Chandler served on countless local, state, and national organizations, as well as many federal commissions. In 1950, he was one of three physicians sent by the AMA to study the effects of the British National Health Service Act; "it would be folly," they concluded, "to contend that a similar plan of nationalized medicine is needed in the United States." In 1955, Dr. Chandler served as consultant during the construction of the Albert Schweitzer Hospital in Haiti; he organized its staff and stayed on for a few months as chief surgeon. Later, he was chief of surgery at the Palo Alto Veterans Administration Hospital.

Dean Chandler advocated prepaid medical care and championed the development of the California Physician Service and Blue Cross. He also favored the spread of medical and other scientific knowledge to the lay public through newspapers and other media.

Always popular, he was to be found annually at reunions, happily reminiscing in the center of admiring groups of returning alumni of the 21 classes graduated from the medical school during his tenure. He believed that the post-war shift of population to the Peninsula made the move of the medical school from San Francisco inevitable.

In 1959, Dr. Chandler was made honorary fellow of Stanford University, and in that year he wrote a seven page review of events of the medical school during his tenure; Chandler concluded "There has been much talk of moving the medical school but unfortunately this school cannot be moved. . . . The old school as it has been known will close this summer. A new school. . .will be born in September, 1959, on the Stanford campus. The King is dead. Long live the King."

Dr. Chandler died October 16, 1982. He leaves his wife, Elva Beal Chandler; a son, Craig; a daughter, Loran McIvor; seven grandchildren and one great grandchild. He leaves in addition a long list of Stanford alumni who will be forever grateful for his leadership.

David A. Rytand, *Chairman*
Robert A. Chase
Roy B. Cohn

MEMORIAL RESOLUTION
ANTHONY E. SOKOL
(1897-1982)

Anthony E. Sokol was born in Vienna, Austria, in 1897. His career was immensely varied, both before and after he came to Stanford in 1929. World War I sent him into the Austrian-Hungarian Navy as a young officer. The collapse of that navy led him first to study naval architecture and then to join the Royal Dutch Steamship Company as an officer stationed in Batavia, Java. This nautical background had long-lasting consequences for Tony's teaching, writing, and administrative career at Stanford.

Tony's fluency in at least five languages brought him to the United States in 1924 to teach languages, especially German, at Mississippi State Teachers College. After a brief return to Vienna, where he studied philosophy and history, he came to Stanford in 1929 as a teaching assistant in the Department of Germanic Languages. He obtained his Ph.D. in 1932, and was appointed Assistant and then Associate Professor in that department.

World War II brought a sharp shift of emphasis in Tony Sokol's career. His knowledge of the Dutch and Malay languages, as well as of Indonesia, led to his becoming codirector, with Professor John Dodds, of Stanford's Far Eastern Area and Language Program, one of the Army's Specialized Programs in anticipation of post-war occupation of the Pacific and Southeast Asian islands. This in turn led to his helping organize and administer the post-war Pacific-Asiatic and Russian Program, an interdisciplinary area studies program for undergraduates. When Stanford organized a new Department of Asiatic and Russian Studies in 1945, Tony became Executive Head and Professor of Asiatic Studies. That department was reorganized in 1957 for Asian Languages only, at which time he transferred to the Hoover Institution and, in 1958, to the Department of Political Sciences as Professor of International Security Affairs.

As Tony's title suggested, he never lost interest in naval and military power in world affairs. He was a prolific writer on a variety of cultural and historical subjects, but the works for which he is best known were *Sea Power in the Nuclear Age* (1962) and an official history of the Austrian Navy entitled *The Imperial and Royal Austro-Hungarian Navy* (1968). The latter, translated and reprinted in an elaborate illustrated edition in Austria, was a huge sales success and led to his being awarded by the Austrian Government in 1976 the highly prestigious decoration, The Cross of Honor, First Class, in Science and Art. He was, indeed, a major contributor to the study of naval power and history.

In addition to Tony's special interest in international affairs, he actively pursued a wide range of teaching and writing in the history of civilization. He worked, while a Fulbright Professor at the University of Vienna, to further a better understanding of American culture among Europeans. He had an early interest in the historic status of women, teaching in 1968 a freshman seminar on "The Position of Women in Historical Societies." His collection of slide pictures of distinguished and attractive women was impressive, and indeed his final writing was on a text to accompany possible publication of the collection. As another phase of his broad range of interests, he contributed a collection of hundreds of volumes to the Austrian National Library and the Austrian War Archives.

What does not emerge from a review of Tony's professional achievements is the fact that he was a warm and charming associate whose good humor was ever-present. His students found him always interested in them as persons, and the added close acquaintance that came with teaching twice at Stanford in Austria, after his

MEMORIAL RESOLUTION
JAMES T. WATKINS IV
(1907-1982)

James T. Watkins IV was born in 1907 in San Francisco. His paternal great grandfather, a famous sea captain, had established the family in California. His mother and father were both physicians. In 1938 he married Elise Gettier, a Smith College alumna, who survives him, as do his brother, Dr. Sherman Watkins, and several nieces and nephews. He died suddenly on September 27, 1982 while in France on vacation.

Before enrolling at Stanford in 1925 Watkins graduated from the San Diego Army and Navy Academy. Having received his A.B. degree from Stanford in 1929, Watkins taught English at a high school in Japan for two years, and subsequently political science at the Central China college for another two years. He then returned to Stanford for graduate study, receiving his A.M. degree in 1934, and his Ph.D. degree in 1941. His principal mentor was Professor Graham Stuart, who remained a life-long friend. While retaining an interest in the Far East, Watkins focused on international relations and, more particularly, on international organization, which he considered to be a promising step in establishing a stable and peaceful community of nations. In pursuit of this interest he spent two years at the Graduate Institute of International Studies at Geneva, working on his dissertation on "China and the League of Nations." Prior to receiving his Ph.D. he taught at the University of Chicago (1938-41). From 1941 to 1943 he was on the faculty of Ohio State University.

Watkins' academic career was interrupted between 1943 and 1946 by his service in the U.S. Navy, in which he attained the rank of Lieutenant Commander. After attending the Naval School of Military Government and Administration at Columbia University, he arrived in Okinawa in March 1945 shortly after the invasion of the island had begun. In December 1945 he became Government Officer for the Military Government of the Ryukyus. He devoted himself to his work, which involved preparations for the establishment of an indigenous administrative organization, in the spirit of a patriot who expected from his country adherence to high standards. Jim was always proud of his endeavors during this period and of the friends he had made in Okinawa. Intending to write a monograph on this American experience in military government he amassed a great deal of material, but his intention fell short of fruition because of his untimely death.

In July 1946, Jim was discharged. On leaving the Navy, he was appointed Assistant Professor at his Alma Mater. He became a full professor in 1953, served as Executive Head of his department from 1950 to 1958, and chaired the International Relations Program from 1947 to 1971. He was a visiting professor at the University of Washington (1948), at the University of Tokyo (1950) and at the University of California at Santa Barbara (1951). He became professor emeritus in 1973.

Professor Watkins began publishing during World War II. He contributed two chapters to an Army symposium volume on Japan (1942) and while in the Navy wrote a monograph on Taiwan (1944). He also published articles in the *American Political Science Review* (1942) and *Social Forces* (1943). After the war he wrote on the settlement with Japan in *Commonwealth* (1950), and coauthored three prophetic articles on control of the Panama Canal in *Foreign Affairs* (1959) and the *Nation* (1960 and 1964). He coauthored a textbook, *General International Organization* (1956), and contributed a chapter to a book on *Control of Foreign Relations in Modern Nations* (1957). For many years he was on the executive committee of the Institute of World Affairs, occasionally serving as director of its annual meetings and contributing to the *Proceedings* which the Institute published. Left unfinished are the above-mentioned monograph on the occupation of Okinawa, and a manuscript on "Mysticism in Walter Pater's *Marius, the Epicurean*," which Professor Watkins considered his "main work."

Jim's life as student, teacher, and alumnus spanned more than half of Stanford's existence and in part explains his unique place in her history. He had known every President of Stanford, from David Starr Jordan on. The rest lies in his character, his values, and his style. Of no one is it truer that "style is the man himself." Patrician in bearing, language, and tastes, he was saved from pompousness by an enduring and endearing self-deprecatory wit. For whom else has a memorial service concluded with a serenade by the Leland Stanford Junior University Marching Band?

His values were distilled from the history of Western civilization, of which he was a life-long student. Deeply religious, and fascinated by Christian mysticism, he was not pious, and indeed to the pious might have seemed occasionally irreverent. He was a patriot, but a discriminating one, whose judgment of his country's conduct was tempered by idealism and by the historian's sense of the limitations of the current ruling dogma of national sovereignty in international relations. Innately conservative, he nonetheless realized that change is not only prudent but often necessary in the affairs of men and of states.

His character was formed by adherence to the stern classical virtues, softened by the compassion of the later humanistic tradition, in whose literature through wide reading and remarkable memory he was at home. Demanding of himself, he was charitable toward the waywardness of others.

He thought of himself foremost and always as a teacher, and gloried not in the title of professor but in the opportunities if afforded him. Inspirational in the classroom, he was capable of lapidary and memorable language which countless numbers of his former students recall and quote. Proud of his most accomplished students, he was even more delighted when he succeeded in showing "under-achievers" how to reach their true potential. But he never equated good teaching simply with brilliant classroom performance. Without children of his own he, like the University's founders, thought of all Stanford students (not just those who had studied with him) as his children. No student in distress of mind, body or estate was beyond his concern or turned to him, as many did, without receiving his help; indeed, he quietly sought out those who needed it. One fruit of these efforts is the James T. Watkins Discretionary Fund, established and supported by some of his former students, and now to be perpetuated.

As an alumnus his devotion to Stanford transcended mere rational respect for it as an institution and surmounted every difficulty and disappointment in its daily life. Two beneficiaries of his efforts show his attention both to Stanford's past and to its future. After his retirement he was the moving spirit and founding president of the Stanford Historical Society, now flourishing. It is doubtful that any faculty member in his time was more constantly and deeply involved with the Stanford Alumni Association's activities in behalf of the future welfare of the University. For many years he was the director of the sparklingly successful Alumni Conference program, an early experiment in the concept of "continuing education" in which the Stanford Alumni Association has been a notable pioneer in American higher education. Near the end of his life he said half ruefully and half jestingly that he had finally concluded that he couldn't run Stanford. In truth, he had never tried to. But he never ceased in his efforts to sustain and advance it as a university of high degree.

CHAIRMAN FETTER'S REPORT TO THE ACADEMIC COUNCIL OCTOBER 8, 1982

During spring quarter, under the chairmanship of Professor David Abernethy, the Fourteenth Senate heard a report from Professor Charles Lyons on the first full year's operation of the Western Culture program as a University requirement. The program seems to be running well, even though the various tracks still differ on the importance of the core list of books that should provide a common intellectual element. With few exceptions, the different tracks attract a good number of regular faculty members as teachers, but there is some concern about providing suitable released time. Another problem is the heavy teaching load of lecturers in the program: preparation, classroom time, and correcting examinations and essays leave them little time for their own scholarly work.

Several times during the quarter, President Kennedy commented on the potential effects on universities of developments in Washington. Two matters were of particular importance. First, financial support for students, at both the undergraduate and graduate level, depends on final congressional decisions about student support. If some of the proposed federal economies actually occur, they will affect all students—particularly those in private institutions. Second, federal support for research carried out by small businesses promises to reduce the universities share of federal funds for basic research.

As is usual in spring quarter, the Senate heard reports from Dean Lieberman and Provost Hastorf on affirmative action for graduate students, research associates, and faculty appointments. Stanford's overall achievement in recruiting minority graduate students is good, but close inspection shows that the overall percentage is skewed by outstanding recruitment of our professional schools. Our achievement in recruiting minority students for Ph.D. programs is less impressive, but that may reflect economic self-interest in these days of shrinking opportunities for faculty positions.

Affirmative action for women faculty is improving (although slowly). For minority faculty, 1981-82 was our best recent year. Continued effort will be needed, however, as there is some evidence that the minority pool is decreasing.

The discussion of faculty affirmative action raised the issue of evaluating scholarly progress. Women and minority faculty members are likely, in increasing numbers, to carry out nontraditional scholarship. As yet, we have no clear basis for evaluating the quality of such research.

The Senate heard a report by Dr. David Weber on the University Libraries. In terms of what can be bought by the budgeted funds, the libraries remain healthy because the recent marked increase in costs has now moderated. In contrast, the problem of a large backlog of materials waiting to be processed stimulated critical discussion. Dr. Weber explained that the new system had led to unanticipated delays, exacerbated by the loss of stored information owing to the failure of magnetic disks. At the time of the report, the acquisition of an IBM 3081 computer dedicated solely to the Research Libraries Group was expected to improve the situation; some weeks later, President Kennedy announced that library processing had speeded up. We may expect that the subsequent performance will be reported to the Senate during coming months.

Provost Hastorf announced a restructuring of the administrative support for undergraduate education. For the past decade, the Dean of Undergraduate Studies has had the responsibility for undergraduate programs. Acting on the recommendations of an *ad hoc* committee, Provost Hastorf decided that the direct responsibilities for undergraduate academic programs (including faculty appointments and budgetary decisions) will henceforth reside in the H & S deanery, with Professor Carolyn Lougee as the new associate dean for undergraduate programs. The general oversight of undergraduate education and its coordination across schools (along with other Vice-Provostial duties) will remain with Professor Herant Katchadourian, the vice-provost for undergraduate education. In response to questions, Provost Hastorf assured the Senate that the restructuring reaffirms support for undergraduate education. Separating these functions clarifies the position of undergraduate studies, whose dean earlier served both as administrator and advocate.

The report of the *ad hoc* committee on the adjunct professoriate occupied several Senate meetings. This subject arose from a request by the School of Medicine to change the titles of its adjunct professors. Preliminary discussion in the Senate revealed that the adjunct professoriate raised other problems, and the Senate appointed a review committee, chaired by Professor John Merryman. The conclusions and recommendations of that committee were accepted by the Senate. In brief, the Senate agreed to change the titles of "Adjunct Professor" and "Professor of Clinical Subject" to reflect more clearly the functions of these faculty members. The new titles will read, for example, "Professor of Classics (Teaching)" or Professor of Anesthesia (Clinical)." In addition, the Senate adopted the committee's recommendation that this non-tenure line (as it will be known) should include an additional rank of Associate Professor. The committee also considered whether the Principal Investigator (PI) status should extend beyond the ranks of the Academic Council. It concluded that such an extension was inconsistent with the Academic Council's responsibility for the scholarly program of the University. In contrast, some members of the Senate urged the creation of an additional rank in the research staff with the PI privilege, since certain large research projects could

continued on page 22

Entrepreneurs...

continued from page 13

starting this company, it got to be more expensive."

Their company motto is actually pitched to the parents of Stanford students: "Put your kid through Stanford for only $20."

The "Cookie Habit"

In 1977, a journalism undergraduate at Stanford had the idea to start her own cookie store in the Stanford Shopping Center. "It took many proposals to the Shopping Center's leasing committee, but they eventually went for the idea and allowed us to move in," said Marcia Hadeler. She and her sister, Marlowe Savelle, now run a thriving business.

"Klutzes"

Four years ago. three Stanford graduates pooled their resources to author and publish *Juggling for the Complete Klutz* ($8.95). At last count, the book had sold 400,000 copies and has spawned the creation of a new publishing business, called Klutz Press.

Running their business from a two-story house that they now rent in Palo Alto, founders John Cassidy, B.C. Rimbeaux, and Darrel Hack decided to publish and distribute the book themselves. After having their original manuscript turned down by several large publishing firms. Klutz Press has recently published its second book, *The Hackey-Sack Book*, which already has sold 30,000 copies. "At this point," said Cassidy, "we'll be ready to rest on our laurels in a few more years."

Silver Label Recording

John DiLoreto, an electrical engineer now enrolled in the Graduate School of Business, runs a recording studio, Silver Label Recording, out of his home. A former marketing manager for Itel's microprocessor development systems, he's also a member of the rock band Crossfire.

"I feel comfortable on stage," he told the *Palo Alto Weekly*, "but I'm even more qualified behind a mixing console." Such groups as the Grateful dead and the Kingston Trio trace their origins to the Peninsula.

Wasp venom

Bill Hoskins, a masters student in exploratory geophysics, collects and freezes thousands of yellow jacket wasps so that their venom can be processed and then be used as a vaccination drug for people who are allergic to wasp stings. His wasps are worth $700 a pound, Hoskins thinks that the 10 pounds he collected last summer will pay off half of his living expenses for the year.

Graduate student indebtedness seems to be part of the degree

Roughly half the nation's college graduates eventuallv pursue some form of graduate education, according to a new study of recent trends in graduate and professional education.

The study was prepared for the National Commission on Student Financial Assistance by Assistant Prof. Michael Garet of the Stanford School of Education, Project Director Paul Butler-Nalin of the Stanford Graduate Division and the Consortium on Financing Higher Education, and Scott Bassage, graduate student in education at Stanford.

During the past decade, both federal and foundation fellowships for graduate students have declined and, in some cases, disappeared. Universities have partially compensated for this loss by committing a larger share of their funds to graduate support. Federal work-study funds also have been increasingly applied to graduate students.

Graduate participation in federally guaranteed student loan programs has risen, as have the cumulative debts incurred by graduate students.

A recent survey of graduate students at Princeton showed educational loans for those who have borrowed range from $4,600 to $7,000.

A recent Stanford survey shows more than half the graduate students responding expect to carry total educational debt—graduate and undergraduate-averaging $9,500. About 60 percent of doctoral students and 70 percent of those at the master's level expect to have educational debts by the time they get their degree.

Cumulative graduate loans incurred by doctoral students averaged $5,500 after 3.3 years of study. Those enrolled in Master of Arts programs averaged $7,250 and those in Master of Science programs $5,600.

These figures are consistent with results obtained by the Fund for Improvement of Post-Secondary Education and institutional data, the researchers note.

The magnitude of debt suggests that "generally graduate students are frugal borrowers," the authors note. "Doctoral students are accumulating debt at a more modest rate per year than master's students, but have several more years of study to finance.

"Master's students, on the other hand, appear to borrow more, probably due to the fact that less support is available to them.

"The strong impression. . .is that educational debt financing has become an integral part of graduate studies across the whole range of graduate degree programs in the arts and sciences, humanities and engineering."

No systematic attempt has been made to determine the full extent of graduate student borrowing nationally, but the researchers estimate that in fiscal 1981 more than a half million graduate students borrowed $1.02 billion through guaranteed student loans; 66,300 graduate students borrowed $15.8 million through national direct student loans; and 49,000 were partially supported by work-study funds totalling $27.5 million.

The report includes the following description of aggregate trends in graduate study nationally:

a. The number of doctorates awarded each year reached a peak of about 34,000 in 1972-73, and it has declined by roughly 2,000 since then.

b. The number of Master's degrees awarded each year reached a peak of about 318,000 in 1976-77, and it has declined by more than 15,000 since then.

c. The number of first-professional degrees awarded each year (primarily degrees in medicine and law) has increased throughout the decade, and it is expected to increase somewhat beyond the number currently granted (about 70,000).

d. More than half of the students in Master's and doctoral programs are enrolled part-time. First-professional enrollment, however, remains predominantly full-time.

e. According to two indicators of demand for graduate education (number of applications and admissions test volume), the demand for graduate education has declined somewhat since the mid-'70s.

f. The proportion of women among graduate students has risen steadily over the past decade, from about 40 percent to nearly 50 percent.

g. Foreign students constitute an increasing proportion of graduate enrollment and degrees conferred, and, if trends in undergraduate education are any indication, this proportion is likely to continue to grow. Foreign participation appears particularly large in certain disciplines—for example, engineering, the sciences, and economics.

Trends in enrollment and degrees granted differ across graduate disciplines. In the biological sciences, enrollments and graduate degrees have increased over the past decade, while, in the physical sciences, they have declined.

In engineering, enrollments have increased, but the number of doctorates granted has declined. The humanities have remained stable, while the pattern in the social sciences is mixed.

Device produces laser-like light

Chemists working at Stanford have constructed a laser-like light source capable of producing extremely short wave-length ultraviolet radiation using off-the-shelf hardware.

The device makes it possible for scientists in almost any laboratory to study a regime important for research.

The device represents the first broadly tunable coherent (laser-like) light source producing extreme vacuum ultraviolet light (XUV), light of so short a wavelength that no window materials are known to transmit this light. If the light is aimed at any solid material—glass, quartz, sapphire, it will be absorbed and none will shine through.

It is also the first time such a coherent tunable light source has been produced in a laboratory. Generally scientists have had to go to large synchrotron radiation sources at places like the Stanford Synchrotron Radiation Laboratory (SSRL) to get XUV.

The work will be published in an upcoming issue of *Chemical Physics Letters*. It has been supported by the National Science Foundation and the Office of Naval Research.

"It's good for so much, I almost don't know where to start," said Richard N. Zare, Shell distinguished professor of chemistry at Stanford, the team leader.

"Its advantages are that it has been done in the laboratory with all commercially-existing materials. Anyone can do it; and moreover, they will.

"It represents a practical breakthrough for the generation of this very difficult wavelength in the laboratory."

The work was performed by Zare, two Stanford postdoctoral students, Ernesto E. Marinero and Charles T. Rettner, and by Dr. Andrew H. Kung, managing scientist of the San Francisco Laser Center, a joint operation between Stanford and UC-Berkeley.

XUV is ultraviolet radiation shorter than 104 nanometers (a nanometer is one billionth of a meter). This is the region where the hydrogen molecule, the commonest molecule in the universe, first absorbs energy.

"At this wavelength many materials ionize," Zare said. "Some are excited, and others fall apart. It's a region which chemists have wanted to get into because there's so much action."

The Stanford method takes light at 300 nanometers produced from a dye laser, and triples it by focusing the light into argon gas.

"The laser is a pulsed high intensity source," Zare said. "The gas is injected into a vaccum chamber in tiny puffs, much like gasoline vapor is injected into a car engine by the carburator nozzle.

"Using such a pulsed nozzle valve whose opening and closing is synchronized with the firing of the laser, wavelengths have been generated and tuned continously between 97 and 102 nanometers."

"One can envision that some, not all, synchrotron experiments can now be done with advantage in the lab," he said; and he added, "some entirely new experiments are now possible because of the exceptional brightness and wavelength purity of this new light source."

Carpools

Carpool wanted to Santa Cruz from Palo Alto M, W, F. Call Mark, 856-2428.

Ride needed SF-Stanford-SF Glen Park/Diamond Heights. Call Brandt, 7-1171.

Join existing carpool. Leaves Homestead and Foothill Expressway to Stanford. M-F, 8-5. Call Jeannette, 7-9627.

I'm looking for a carpool between S.F. and Stanford (preferably from the Haight-Ashbury) 4-5 days/week, approx. 9-5. Please call Nora at 431-9649 eves.

Looking for two persons to join a Mission Noe Valley-Stanford Univ. carpool. M-F, 8-5. Call John, 821-1665, or Yinon, 431-0951.

Radiological hazards panel

The Administrative Panel on Radiological Hazards Control will meet from 2:30 to 4:30 p.m. Thursday, Feb. 3, in Room 132 of Tresidder Union, according to chairman Prof. Wray Huestis, chemistry.

The meeting is open to all who are interested.

Proof of new evolution theory buried in Ethiopia?

Donald Johanson, the anthropologist who is now embroiled in one of the nastiest personal and professional feuds in all of science, said Monday, Jan. 17, he hoped to return to his "dig" in Ethiopia despite the fact he and all other scientists were thrown out of that country late last year.

Johanson, founder of the Institute of Human Origins in Berkeley, is the discoverer of Lucy, the three-million-year-old fossil remains of a female, who Johanson and others believe to be the earliest known discernible ancestor of homo sapiens. He has found other fossils as well which have convinced him that the widely-accepted family tree of human evolution needed correction.

Johanson told a class in Stanford's Human Biology Program that the proof of his theory is probably still buried in the Ethiopian rift valley.

"If I had a choice to work anywhere in the world, that's where I want to go," he said. "Ethiopia is really the hot spot."

Lucy, who is between 3 and 3.3 million years old (the dating is part of the dispute), is believed by Johanson and Tim White at UC-Berkeley to represent a hitherto unidentified species of hominid which they call Australopithecus afarensis. They believe afarensis is the ancestor of humanity, not Australopithecus africanus, as most anthropologists believed.

This put them into scientific conflict with many in their field, particularly the family of Louis Leakey in Kenya, which has its own version of the human family tree.

Other factions in the anthropological community have joined in the dispute. Public charges of grave-robbing, fossil stealing and CIA spying have flown across the anthropological community.

Last year Johanson and others were told that they could not dig in Ethiopia until the government rewrote its antiquities regulations, and 18 of them were told to leave the country. This exacerbated the animosity between the warring camps.

An article in the recent issue of *Science* magazine suggests that the disputes between the scientists played a role in the Ethiopian action. Johanson, for one, admitted in a book he coauthored, that he took a femur bone from an Ethiopian grave site for comparison with his fossils. The article quotes an Ethiopian student as saying this played a role in the government's action.

"I really did want a femur," Johanson told the class. "There was this graveyard. I talked to some of the people around there because I didn't want to get into trouble. They said it was an old grave, nobody knows whose it is. There were bones all over the place. We went out there and we looked at the bone, we compared the bone and we returned that bone.

"I addressed that question when I was there in December to the Ethiopian government. There is a faction of students which is associated with this guy (John) Kalb (a geologist at the University of Texas at Austin) who had dragged this up. . .and it's really a campaign by three or four people who would like to sort of smear our reputation, to do whatever they can."

Kalb was thrown out of Ethiopia on charges he was an agent of the Central Intelligence Agency. Kalb denied the charges.

"We brought up these points," Johanson told the students. "Essentially they said, definitely this had nothing to do with it."

Johanson said the government is trying to rewrite its regulations on antiquities which had been written under the old Imperial regime.

"They want to make stipulations about involving more and more Ethiopian students and Ethiopian scholars. Up to this point we have not been able to train Ethiopians, because the previous government really didn't allow many of these people to travel." Several students are being trained now.

Johanson told the class that fossils like Lucy are "borrowed" from the Ethiopians. After five years they have been returned to the National Museum in Addis Ababa.

"I was in Addis in the end of November, at which time I worked on part of the collection. It is well curated. . .it's a very primitive museum, it's nothing elaborate. But they're Ethiopian antiquities and they belong to Ethiopia."

Johanson said the period between two and three million years could hold the clue to whether this theory is correct. Very few fossils from that period have been found. The dispute over the age of Lucy, he said, doesn't change his theory.

One area that might hold important fossils is called the Awash, but until the government lifts its ban, no one will be able to get into that area. The feuding scientists also will have to decide which of several expeditions has priority in the Awash.

"If you try to do a job right and try to do it throughly it provokes not so much praise, as it does criticism and jealousy," he said.

—Joel Shurkin

Senate/ continued from page 20

benefit from having senior members of the research staff able to serve as Principal Investigators. The Senate declined to adopt this proposal and, instead, approved the committee's recommendation.

In 1982-83, the Senate looks forward to a comprehensive report from a provostial committee on our overseas studies program, as well as reports from the various committees of the Academic Council.

This is a good opportunity to thank faculty and staff who serve on these committees, which have been firmly guided for the past eight years by the Academic Secretary, Professor Eric Hutchinson. I know that the Senate of the Academic Council joins me in expressing gratitude for his devotion and diligence, and in welcoming Professor Clara Bush as his successor.

Susan Rosse, daughter of economist, dies Jan. 22 in automobile accident

Susan Rosse, 28, research assistant at Lawrence Berkeley Laboratory, was killed early Saturday, Jan. 22, in a one-car accident on the Bay Bridge.

She was returning home to Berkeley from a family reunion in Palo Alto with her parents, Stanford Prof. and Mrs. James Rosse. She suffered massive head injuries and never regained consciousness before dying at Providence Hospital in Oakland.

Memorial services were held at 2 p.m. Tuesday, Jan. 25, at Stanford Memorial Church. Burial followed at Alta Mesa cemetery in Palo Alto. The family welcomed friends at home afterward.

Rosse graduated from Crescent Park elementary school, Jordan junior high, and Palo Alto High School. She received her bachelor's degree in economics from Stanford in 1976 and her master's from UC-Berkeley, where she worked with the environmental resources group. She was particularly interested in economic and environmental concerns in developing countries, and planned to become a staff scientist at LBL.

Besides her father, an economist, and her mother, Janice, an accountant for Hewlett-Packard, she is survived by her sister, Anne, a Stanford freshman, and two brothers, Stewart, a financial aids officer for Stanford Medical School, and Jay, a student at Grinnell College.

The family prefers memorial contributions to charities of individual choice or to the Stanford Class of 1976.

A. Clark Griffin dies in Texas

Dr. A. Clark Griffin died suddenly after a brief illness on Dec. 13 in Smithville, Tex., at the age of 64.

Known to many in the Stanford community, Griffin came to Stanford as a research associate in biochemistry in 1947, shortly after receiving his Ph.D. in biochemistry at the University of Wisconsin. In 1954 he accepted an appointment as director of biochemical research in the M.D. Anderson Hospital and Tumor Institute of the University of Texas System. From 1955 to 1961 he held a concurrent appointment as professor of biochemistry in Baylor University. In 1981, on retirement form the M.D. Anderson Hospital, he became director of the University of Texas Cancer Research Center at Smithville, Tex.

Contracts and grants

Following is a selected list of government and nongovernment contracts and grants of $200,000 and over, received for the months of September and October:

FEDERAL

New Contracts

Robert H. Cannon and Thomas O. Binford, aeronautics and astronautics, "End-Point Control of Flexible Robots, Path Calculation and Tracking Hand Control," $902,009 from the Department of the Air Force for 3.5 years.

Arthur I. Bienenstock and Herman Winick, Stanford Synchrotron Radiation Laboratories, "SSRL Operations and Capital Equipment," $14,500,000 from the Department of Energy for 2 years.

John Ross, chemistry, "Experimental and Theoretical Research on Efficiency of Chemical, Thermal and Coupled Processes," $336,000 from the Department of Energy for 3.5 years.

William E. Spicer and Ingolf E. Lindau, Stanford Synchrotron Radiation Laboratories, "Beam Line and Associated Work," $1,375,619 from the Department of the Navy for 2 years.

Contracts—Amendments

Calvin F. Quate, W. W. Hansen Laboratories, "Acoustic Microscopy at Cryogenic Temperatures," $215,814 from the Department of the Navy for 2 years.

Charles H. Kruger, Robert H. Eustis, Morton Mitchner, and Sidney A. Self, mechanical engineering, "A High Magnetic Field MHD Generator Program," $330,000 from the Department of Energy for 1 year.

James D. Plummer, Stanford Synchrotron Radiation Laboratories, "Computer Aided Design of Integrated Circuit Fabrication Processes for VLSI Devices," $2,832,011 from the Defense Advance Research Agency for 3 years.

New Grants

James O. Leckie, civil engineering, "Spectroscopic, Kinetic and Thermochemcial Study of Transition Metal Adsorption at the Oxide/Aqueous Interface," $254,000 from the Environmental Protection Agency for 2 years.

Grants—Amendments

Peter M. Banks, Stanford Electronics Laboratories, "Study of the Dynamics of Atmosphere, Ionosphere and Magnetosphere Interactions," $200,000 from NASA for 1 year.

Denis A. Baylor, neurobiology, "Neural Signalling in the Retina," $280,344 from NIH for 1 year.

James P. Collman, chemistry, "Reversible Oxygen Electrode: Collaborative Search for New Catalysts and Physical Textures," $200,000 from NSF for 1 year.

Robert F. Kallman, radiology, "Training Program in Cancer Biology," $443,802 from NIH for 1 year.

John Farquhar, Nathan Maccoby, and Peter D. Wood, "Stanford Five City Multi-Factor Risk Reduction Study," $1,178,471 from NIH for 1 year.

John Farquhar, Nathan Maccoby, and Peter D. Wood, "Stanford Five City Multi-Factor Risk Reduction Study," $1,010,293 from NIH for 1 year.

Gerald J. Lieberman, Provost's Office, "Graduate Fellowship Program," $1,188,896 from NSF for 5 years.

James D. Meindl, electrical engineering, "Fast Turn-Around Facility for Very Large Scale Integration of Capital Equipment," $756,000 from the Defense Advance Research Agency for ½ year.

Kenneth Melmon, medicine, "Conjugated Vasoactive Agents as a New Class of Drugs," $328,176 from NIH for 1 year.

Walter E. Meyerhof, physics, "Atomic, Molecular and Plasma Physics Program," $256,200 from NSF for 2 years.

Allen M. Peterson, Stanford Electronics Laboratories, "SETI Instrument Systems Research," $270,000 from NASA for 1 year.

Norman E. Shumway and Stuart E. Jamieson, cardiovascular surgery, "Orthotopic Heart Transplantation," $349,525 from NIH for 1 year.

NON-FEDERAL

New Grants

Bernard Roth, mechanical engineering, "The Kinematics of Robotic Systems," $791,371 from Systems Development Foundation for 5 years.

American role in El Salvador vigorously debated

Withdrawal of U.S. aid from El Salvador would give "complete control" to Roberto D'Aubuisson, leader of the Constituent Assembly, and "the worst elements in the government would soon take over," a State Department official said Thursday, Jan. 13, at Stanford.

This spontaneous remark by Melvin Levitsky, senior deputy assistant secretary of state, came toward the end of a two-hour panel session attended by more than 400 in Kresge Auditorium.

Armando Olivas, director of public affairs for Christian Legal Aid, a human rights group working with the Catholic Church in El Salvador, said: "They would become desperate. . .D'Aubuisson would make many mistakes, and these would be his last."

Patricia Weiss Fagen, human rights activist just returned from El Salvador, said simply "as long as the Salvadorean government is run by the military, human rights will not be respected. Stable democratic institutions won't survive."

America's primary objective has to be peace through negotiated settlement, she added.

'Dirty war'—ADA chief

Father Robert Drinan, Georgetown University professor of law, president of Americans for Democratic Action, and former Massachusetts Congressman, said the U.S. should end its support for "the hidden, dirty war" in El Salvador.

"Our country has intervened on the wrong side of history," just as it did in Vietnam, he added, drawing the most sustained applause of any speaker.

President Reagan is involved in "gunboat diplomacy," he declared. "This is a war against the campesinos (poor rural farmers) and in favor of the 14 families" who ruled El Salvador.

A liberation theologist, Drinan said most of those opposed to the regime are not communists, Cubans or Marxists. The Catholic Church has been persecuted and all those who want reform have been repressed.

Olivas said more than 8,000 political assassinations were reported in 1980, nearly 12,000 in 1981, and almost 6,000 last year. While these admittedly imprecise statistics have been cited as signs of progress, he added, in fact the level of violence rises and falls in ways that show "the apparatus of the state. . .is responsible for repression. . . . Nothing has changed."

Collective assassinations continue, and most victims are tortured before they are killed.

Fagen agreed that "the structures are still very much intact for murders." She works with the Refugee Policy Group in Washington and heads Amnesty International's Refugee Committee.

Schools closed, teachers killed

Individual security "remains in jeopardy" throughout El Salvador, and democratic institutions are being destroyed by war. One third of the nation's primary and secondary schools have been closed, 1,400 teachers brought into the cities from the countryside, and hundreds of teachers have been slain or have disappeared.

While "both sides are responsible for the deaths" most of the violence is perpetrated by pro-government forces, she indicated. When her group interviewed a member of El Salvador's new human rights commission, he freely acknowledged he was a member of the national police and described all other human rights groups as "subversive."

While U.S. diplomats are trying to exercise a moderating influence on the regime, she said, the dominant American concern for "winning" the civil war is simply "incompatible with human rights."

In his prepared remarks Levitsky said "We do not ignore the considerable problems which continue to exist in El Salvador.

"There continue to be abuses by government forces of the civilian population. The judicial system is in disarray. There have been attempts by forces on the extreme right to reversed established reforms by the Duarte government and by the Magana government which succeeded it. That has been particularly true with regard to the program of land reform which we support.

"But we have seen over the last two or three years a decrease in the level of violence against civilians on the part of the Salvador armed forces. There has been a free and fair election for a constituent assembly. . . .

"We will continue our economic and security assistance programs as long as the following goals remain in place:

"* Continuation of economic and land reforms;

"* Further efforts to curb abuses of authority by the government security forces;

"* Maintenance of a reasonable timetable for the electoral process and further development of a democratic political process;

"* Providing the opportunity to those elements of the left which wish to participate peacefully in the democratic process. We support a dialogue between the government and those forces."

Despite thousands of political assassinations, Fagen noted, there have been only two cases in which alleged abuses by the military were investigated, both involving American victims.

Robert Wesson, senior research fellow at the Hoover Institution, said it was "a mistake" for the U.S. to get involved in El Salvador, but now "there is no easy answer, no easy way out."

He described the thousands of assassinations as "little more than pimples" on the face of the country's basic problems. Disagreeing with Drinan, he said the war was not started by President Reagan, but goes back historically at least 50 years. No matter who runs for President in 1984 "it is very likely U.S. intervention will not end" after the election.

The program is sponsored jointly by the Stanford Central American Action Network, a voluntary organization; The Koret Fund; and the Latin American studies program at Stanford.

New machine may be able to detect life in outer space

Scientists at Stanford University are perfecting a prototype of a machine which may become the most powerful radio signal receptor of its kind, capable of receiving radio signals from the galaxy and detecting possible life outside our solar system.

Known as a "multichannel spectrum analyzer," scientists hope that this powerful "ear" will allow them to receive signals from intelligent life in our galaxy.

Development of the machine is part of the Search for Extra-Terrestrial Intelligence program (SETI), run by the National Aeronautics and Space Administration (NASA).

"The idea of SETI is to try and detect radio signals that might be transmitted by other civilizations out in the galaxy," explains program head Dr. John Billingham. "We believe on many different grounds that life is widespread in the universe and that intelligent life is widespread."

The machine is being built under the supervision of Stanford Electrical Engineering Prof. Alan Peterson and researcher Ivan Linscott in collaboration with NASA's Ames Research Center in Mountain View and the Jet Propulsion Lab in Pasadena.

Once the prototype is completed, it will be taken down to NASA's Goldstone Observatory in the Mojave Desert. There, it will be hooked up with NASA's Deep Space Network radio telescope.

The device will work by separating the radio spectrum into 74,000 channels and analyzing the signals. Using a "sophisticated data processing system," the machine will aide the project's researchers in distinguishing signals which occur naturally in the galaxy from any that might be artificial.

After extensive testing, the machine will be sent to the Arecibo Observatory in Puerto Rico, where the largest radio telescope in the world is located, for testing. It will return to Stanford for modifications, and then go through another round of testing. After about five years, said Billingham, about six machines will be built with a capacity of anywhere from 10 to 100 million channels.

Editor of *Economist* says that both U.S. and Britain face huge structural shifts in their 'sick' industries

Both British Prime Minister Margaret Thatcher and President Reagan face "very great danger of giving good (economic) policies a bad name—if they fail," a British editor said Friday, Jan. 14.

Andrew Knight, editor of *The Economist*, spoke at an advisory board meeting of the Stanford Center for Economic Policy Research.

Both leaders have "changed the terms of debate in ways which even some of their opponents welcome," he said.

Both the British and American economies face "huge structural shifts" with "terminally ill" industries, like steel, he added. These have been compressed in a two- to five-year period where two or three decades might have been more appropriate for the change.

They problems may well prove "extremely intractable" for both Thatcher and Reagan—as well as their successors, he declared.

The greatest difference between Thatcher and Reagan is the Falklands, which gave her "a new lease on political life," Knight said. "That's a very important economic fact."

The current harsh economic realities could lead to a political and social polarization similar to the Depression era in America, he noted.

In Britain, "large numbers of the business community complain because life is so hard," Knight said. "In New York, I heard reputable bankers say 'What's wrong with inflation?" Large foreign debts provide the basis for "a vested interest in the re-ignition of inflation," he noted. This would permit payment of the loans in depreciated currency.

Both countries "certainly have a vested interest in return to (economic) growth," Knight said.

If both Thatcher and Reagan were to suffer political defeat "in sour circumstances," he added, "they will have failed largely because of what's going on around them" rather than because of "what they tried to do."

Although it has recently agreed to modest cuts, the Reagan Administration may be the first to seek "massive increases in defense spending financed by tax cuts," he quipped.

Whether Thatcher has held the government deficit steady, reducing it as a share of gross national product, Reagan has not, he noted. Thatcher has increased taxes by three percent as a share of national income.

The U.S. saving rate remains "remarkably low" by international standards.

In Britain, the recession has cut the inflation rate in half—to about six percent—"a remarkable achievement," Knight said. But declining inflation now is threatened by "the fall of the pound" in international money markets.

While it has dropped from $2.40 to $1.60 against the dollar it "probably is too high now," he added.

Unlike Reagan, Thatcher does not have to worry about any idea of financial collapse in the banking community. British banks, once chastised "by papers like ours" of a "heads in the sand" attitude on foreign lending "now smell like roses," Knight said.

The new French Socialist government "went straight for government reflation," nationalizing industry and incurring "enormous deficits," Knight said. As a result the French franc "would have collapsed" without strong protective measures by the government and "massive help" from West Germany.

Knight serves as a member of the CEPR advisory board. William Hewlett has been elected its chairman, effective next September, succeeding Edmund Littlefield. CEPR is directed by Prof. James Rosse, economics.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

15003-LL (JCC:5588) LIFE SCI RES ASST I: Irregular schedule; asst in production & assay of monoconal antibodies, incl establishment of primary cell cultures fr both malignant & normal human tissue; maintenance & subpassage of continuous lines; fusion of cells in presence of polyethylene glycol; selection of hybrid cells in media containing metabolic inhibitor cloning in semisolid media & by limiting dilution in microwell liquid cultures; solid-phase radioimmunoassays; enzyme-linked immunosorbent assays; will make theoretical contributions to project based upon academic bkground; QUALIFICATIONS: BS in Biology in order to understand of & exp w/ immunology & immunologic tests & procedures; exp w/ cell culture, esp w/ liquid suspension cultures of lymphoid or other nonadherent cells.; C05; $1670-2086.

15002-LL (JCC:5588) LIFE SCI RES ASST I: Irregular schedule; asst in production & assay of monoconal antibodies, incl establishment of primary cell cultures fr both malignant & normal human tissue; maintenance & subpassage of continuous lines; fusion of cells in presence of polyethylene glycol; selection of hybrid cells in media containing metabolic inhibitor cloning in semisolid media & by limiting dilution in microwell liquid cultures; solid-phase radioimmunoassays; enzyme-linked immunosorbent assays; will make theoretical contributions to project based upon academic bkground; QUALIFICATIONS: BS in Biology in order to understand of & exp w/ immunology & immunologic tests & procedures; exp w/ cell culture, esp w/ liquid suspension cultures of lymphoid or other nonadherent cells.; C05; $1670-2086.

17031-TC (JCC:5596) LIFE SCI RES ASST II: Primary respon for independent design & implementation of various sleep res projs, incl cardiac function, respiration, & gastro-intestinal sys studies during wake & sleep on infants, children, adults, & the elderly; respon for the development & implementation of new res & data analysis strategies & tech; compile & interpret data; write up results for scientific publication; train new personnel & schedule work assignments of staff; QUALIFICATIONS: exp working w/ subjs, data analysis, & collection methods, sleep technology; BS degree or equiv edu & exp; must have CPR certificate; working knowl of computers required; working knowl of varied testing & recording instruments.; C06; $1854-2312.

28216-LL (JCC:6860) OTHER RES ASST II: 50%, Tue-Wed, 8-5; Thur, 8-12; act as Nurse Assessor/-Proj Coord for Stanford Arthritis Ctr Proj #12, Arthritis Health Professionals; identifying Proj patients; developing & maintaining Proj files; reviewing & abstracting VA clinical records; obtaining informed consent; admininstering baseline data & outcome questionnaires to Proj patients at 6 month intervals; acting as liaison between Proj patients & VA; QUALIFICATIONS: willing to travel to patient homes in order to administer questionnaires & perform health testing; possess effective commu skills, verbal & written; able to interact w/ peers, other professionals, & patients; nursing degree & at least 1 yr prev related exp or at least 3 yrs related work exp; some bkground in survey res, programming, data analysis, and/or health assessment preferable.; C06; $927-1156.

19646-DS (JCC:8880) MISC PROFESSIONAL: 50% or 75%; act as Music Guild Program Coordinator; liaison between volunteers & univ agencies; oversee volunteer mgmt of membership drives, benefit fund raisers, community outreach programs; serv as consultant & admininstrator to Guild officers, board & committees; QUALIFICATIONS: at least 1 yr dir exp in volunteer mgmt, fundraising, arts admin or equiv exp; knowl of music helpful; knowl of Stanford community and/or other academic environ desirable; must work effectively w/ faculty, staff, students & a diverse group of volunteers; requires independent decision-making, judgment & originality in identifying needs, determining alternatives & organizing Guild membership; typ own corresp & oversee record keeping for Guild operations.; C04; $756-940.

31840-VW (JCC:1954) Dir of Principal Gifts: Reports to VP of Development; respon incl identifying & qualifying prospects for gifts to Stanford of $5 million & above, & for insuring their solicitation; development & production of detailed strategy documents for each prospect; maintaining a detailed record of progress of each solicitation; advisor to VP of Development regarding the status of all principal solicitations incl the effect univ policy may have relative to attitudes & interest of Principal Prospect group; QUALIFICATIONS: 10 yrs or equiv exp at highest levels of Univ Fundraising; excel verbal & written commu skills; extensive regular interaction w/ Trustees, Univ President & chief academic officers; demonstrated effectiveness in constructing strategic solicitation plans for gifts of extra-ordinary size; Stanford exp desirable.; N11; EN.
